

PART IN DEFENCE OF LEGITIMATE DISSENT 1996

In 1997 I had been put on an RCMP threat assessment list, but it was not until 1998, when there was an Inquiry into what happened at APEC, that I found out. When there is an inquiry, the RCMP are required to release their files. One morning I received a phone call from a member of the media. She asked me if I knew that I was on the list. She said she was going to write a piece about the national leader of the Green Party being on the list. I asked her to send me the evidence and she faxed me the following:

CLASSIFIED SE

OTHER ACTIVISTS

 <p>DOB: 1953-09-19 Potential to be Violent HIV Positive AIDS Activist, White male, 175cm, 64lb, brown hair, brown eyes</p>	 <p>DOB: 1961-11-21 AIDS Activist</p>	 <p>DOB: 1963-06-23 Lesbian activist / anarchist White, female, 180cm, 93.5kg, brown hair, very masculine</p>	 <p>DOB: 1966-11-21 Anarchist / activist</p>	 <p>DOB: 1971-04-3 Activist</p>

I thought that it would be better for me to release the information; which I did. After years of going through numerous channels in 2022, I still do not know the reason for being put on this list. I believe that, over the years, I have engaged in legitimate dissent so I decided to compile a document in the form of an affidavit and dedicated it the RCMP letting the reader determine if I have been a threat; and if so, to whom?

The following is part four of a five part compilation of events from 1980 to 2005, at which time, I was invited to appear before the senate to make a presentation. NOTE: for a quick read, search for () which begins each item or by month which is written twice

January January 1996

() THAT in 1996, We were not successful in getting funding for the second phase of the Brazil/ Canada Project. We were extremely disappointed.

I mused in defence of our project: “That when fragmentation of issues fails, the lack of certainty of success should not be used to ignore the potential for exploring the complexity and interdependence of issues:”

And “Where simple solutions fail to address urgency of issues, the value of complexity should not be denied, avoided or rejected.”

Or “Where the rigour of disciplinary boundaries is inadequate, interdisciplinary approach could be a benefit.”

This project reminds me of the obstacles I had to face in my dissertation in interdisciplinary studies.

My topic was exploring the avoidance of complexity and how simplistic models are imposed on complexity of thought. I was proposing alternative modes of expression evaluating. While trying to understand the reason for avoidance complexity, I did a content analysis of 'complexity' finding it was associated with cognitive dissonance and that there were even warnings about avoiding "the morass of complexity."

For my doctorate, I went through the graduate calendar searching for professors who were going beyond the limits of their disciplines and approached them. There were professors from: Philosophy, Language Arts (Semiotics), Experimental Music, Mathematics, Psychology, Computer Science Linguistic and Art History. They agreed to support me providing they were not the only advisers.

AN INTERDISCIPLINARY DOCTORATE COULD ONLY BE WITH ADVISERS FROM TWO DISCIPLINES

The Deputy Dean who was the one tasked with evaluating interdisciplinary proposals for a doctorate in interdisciplinary studies, informed me that an interdisciplinary doctorate could only be between two disciplines. The only previous Interdisciplinary doctorate dissertation submitted at the University of Victoria, involved the two disciplines of Psychology and Physical Education.

I had a number professors agreed to support me, providing that they were not the only advisers.

The deputy dean who was overseeing interdisciplinary doctorates then informed me that interdisciplinary would need to involve two departments so I went through the Fine arts and Linguistics Departments.

Then he told me that I had to have all the professors involved commit to give me directed study courses within three years; they all agreed to do that.

Then there was the question about what would constitute an interdisciplinary review of the literature, I proposed expanding on a review of the literature within the courses that I had taken but that was not accepted. I finally co-authored with my principal.

We contacted Cambridge University to ask what train of thought should constitute an interdisciplinary review of the literature. They responded that they had no idea. I co-authored with Dr Gary Miller in Mathematics; a submission that drew upon the most relevant literature in my dissertation. This was accepted.

Then what would constitute an interdisciplinary bibliography : I proposed Pearce's concept of Unlimited Semiosis; that was also accepted.

I finally fulfilled the requirements in September, 1995 and my oral in January 1996 and graduated with a doctorate in interdisciplinary studies in 1995.

() THAT In reference to the Canada /Brazil Project Proposal failure, I decided in 2022, that it is never too late to go through access to information to find out the real reason for the refusal and I will try to contact Diane Sabil, the former EDSP contact.

() THAT IN 1996, in January, I wrote a comment about the Precaution Principle being the most important principle that was agreed to in the Rio Declaration, the Convention on Biological Diversity and the UN Framework Convention on Climate Change. The Precautionary Principle in the Rio Declaration reads, Where there are threats of serious or irreversible damage, [to the environment and human health] *

In the Convention on Biological Diversity, it further states, "where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty [that it is harmful should not be used as a reason for postponing measures to avoid or minimize such a threat"

And under chapter IV, PRINCIPLES of the UN Framework Convention on Climate Change, it reads:

"there was the obligation: to take precautionary measures to anticipate, prevent or minimize the causes of climate change and mitigate its adverse effects. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures. (UNFCCC, 1992)

Dear Fritz and Wendy

- What I can offer by way of expertise:

As a sessional lecturer in Global Issues in the Environmental Studies Program at the University of Victoria, I have been carrying out a content analysis of International instruments. From the analysis of international instruments, I have initiated a program called "Principle-Based Education". In this program, students examine issues within the context of established international principles related to the preserving and protecting of the environment, the guaranteeing of respect for human rights, the ensuring of social equity and the fostering of peace.

- What would I like to take home:

Undertaking of a project that would be beyond regional divisions, I would like to suggest possibly the development of standards for evaluating what constitutes legitimate environmental education. Institutions are being flooded with questionable material under the guise of environmental education. I would be willing to draft a discussion piece and submit it for your approval, and then circulate it to the membership of the Commission for discussion. If accepted, we could then endorse these standards at the meeting in Montreal.

- The problem I am trying to solve:

For over 50 years, states have undertaken obligations through conventions, treaties and covenants, and created expectations through declarations, General Assembly resolutions, and conference action plans. What needs to be done now is to establish an educational program which would delineate what would constitute discharging these obligations or what would constitute fulfilling these expectations.

STP

Abstract

"Principle-Based Education: Environmental Education for Civil Society"

I completed a 350-page book called the "Charter of Obligations" for the UN Conference on Women in Beijing, and I also have prepared a 170-page commentary on the Habitat Agenda for the Conference in Istanbul. Both of these conferences have significant articles related to the environment. Drawing upon these two publications, as well as from the work I have done on the UNCED

documents and other international instruments, I have further developed the program on Principle-Based Education for application to “civil society”: The term “civil society” has been consistently used at United Nations for fora. It is essential (if “civil society” is to play a significant international role), that the designation of what would constitute civil society would depend on the adherence to international principles established throughout the United Nations system. I have prepared materials based on international principles for the education of civil society and I would like to make a short presentation at the Commission meeting on the educational materials that I have developed for civil society.

() THAT in 1996 I wrote a “Report on Beijing: Failure to discharge obligations”. Victoria: British Columbia Council for International Cooperation (BCCIC) Report. Russow, J. (1995). Charter of Obligations: interdependence of human rights, peace, and environmental issues.

() THAT in January 1996, I Presented a paper on “The Platform of Action in the Context of Previous International Obligations. Praxis/Nexus Conference, Victoria, B.C.

() THAT in 1996

I WROTE A PIECE ABOUT THE RELEVANCE OF INTERDISCIPLINARY STUDIES RELATED TO MY DISSERTATION

Interdisciplinary applications must occur because problems exist in one field which the theories and methods of other disciplines can address (Raskin et al (1987).

There does not yet appear to be general recognition that the full acceptance of interdisciplinary is dependent upon the acceptance of a principle that will guide alternative modes of thinking, of composing, of expressing, of interacting, and of displaying academic rigour. This acceptance could mean moving beyond the current practice of requiring adherence to traditional preconceived academic models.

Interdisciplinarity could be conceived as accommodating significant connections among disciplines around an entity — all units that you write about: existing things, phenomena, objects, concepts, themes etc. Connections that may arise, out of necessity, from thinking, composing, expressing and interacting within an entity-field— the shifting universe of discourse. Interdisciplinarity encompasses

a different mode of thinking, of composing of expressing, of interacting, as well as of displaying academic rigour.

Although there is a growing acceptance of the importance of . The academic rigour of interdisciplinarity has, however, been generally accepted only when an inter-disciplinarian has a well-grounded background in one discipline and has been able to accommodate interdisciplinarity within preconceived academic models. There still appears to be a well-entrenched belief that going beyond disciplinary boundaries and traditional models with no grounding in one discipline is a non-academic dilettante pursuit devoid of academic rigour. There does not yet appear to be general recognition that there is a form of that is beyond all disciplinary boundaries and traditional models; and that there could be a different concept of academic rigour displayed through the deepening of understanding and knowledge of an interdependence of aspects within an entity field.

Academics often call for the need to integrate disciplines, to grasp the interdependence of aspects, to explore the complexity of a topic and to make connections etc. However, rather than facilitating the expression and communication of the resultant complexity and inter-disciplinarity, academics often discourage and complexity by requiring inter-disciplinarity to adhere to traditional models of thinking, composition, expression, evaluation, and academic rigour.

Composition Theorists also call for the need to discover during the composing process; yet they fail to recognize that the conceptual transformation and meaning development occurring during the composing process could contribute to a state of inexpressible complexity at the required time of submission of a piece.

In my dissertation a theoretical foundation for an alternative principle to guide modes of thinking about composing, expressing and interacting with complexity and inter-disciplinarity is proposed; the principle is developed and the extent of the opportunities offered and needs served require this principle be explored.

The Principle proposed in this dissertation is developed not to replace but rather to displace the traditional models so as to allow for the accommodation of alternative modes of thinking, composing, expressing and interacting.

This dissertation has been as much about researching what constitutes an interdisciplinary dissertation as it has been about the development and exploration of an alternative principle of expression and interaction. For example, it was necessary to determine what would constitute an interdisciplinary candidacy exam, an interdisciplinary review of the literature, interdisciplinary vocabulary, etc.

In order for full acceptance of inter-disciplinarity to occur, there must be a concomitant acceptance of additional or supplemental concepts of thinking: of composing, of expressing, of interacting and of academic rigour.

Instruction for Inter-disciplinarity (Complexity and Uncertainty)¹

In recent years there has been increased interest in the problem of understanding, expressing and communicating complexity and uncertainty. Often inter-disciplinarity has been proposed as a solution to this problem; yet the concept of interdisciplinarity has often been narrowly interpreted as being simply the linking of disciplines.

() THAT in 1996, I drafted and circulated a resolution related to extinguishing logging licenses in catchment areas: extinguishing of the right in the manner of a “profit a prendre” on the grounds of failure of the Government to enforce and failure of forest company to comply with the forest act.

EXHIBIT

Aware of the deep concern expressed through Agenda 21, United Nations Conference on Environment and Development about the impact of “environmentally destructive model of development” on fragile ecosystems containing community watersheds.

Aware also of the need for prevention so as to avoid costly subsequent measures to rehabilitate, treat and develop new water supplies.

" Freshwater is a unitary resource. Long-term development of global freshwater requires holistic management of resources and a recognition of the inter-connectedness of the elements related to freshwater and freshwater quality. There are few regions of the world that are still exempt from the problems of loss of potential sources of freshwater supply, degraded water quality and pollution of surface and groundwater sources. Major problems affecting the water quality of rivers and lakes arise, in variable order of importance, according to different situations, from inadequately treated domestic sewage, inadequate controls on the discharges of industrial waste waters, loss and destruction of catchment areas and ill-considered siting of agricultural practices. This gives rise to the leaching of nutrients and pesticides. Aquatic ecosystems are disturbed and living freshwater resources are threatened. ...Erosion, degradation, deforestation and desertification, have led to increased land degradation and the creation of reservoirs has, in some cases, resulted in adverse effects on ecosystems. Many of these problems have arisen from a development model that is environmental destructive and from a lack of protection. Ecological and human health effects are the measurable consequences... There is a widespread lack of perception of the linkages between the development, management use and treatment of water resources and aquatic ecosystems. A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 fresh water)

Noting with the acknowledgment at UNCED of the degradation of forests due to environmentally harmful mismanagement:

Forests worldwide have been and are being threatened by uncontrolled degradation and conversion to other types of land uses, influenced by increasing human needs, agricultural expansion and environmentally harmful mismanagement, including, for example, lack of adequate forest-fire control and anti-poaching measures, unsustainable commercial logging, overgrazing and... the impacts of loss and degradation of forests are in the form of soil erosion, loss of biological diversity, damage to wildlife habitats and degradation of watershed areas, deterioration of the quality of life and reduction of the options for **[ecologically sound and socially equitable]** development. (11.12. Deforestation, Agenda 21, UNCED, 1992)

Mindful also of the recommendations from UNCED about strengthening legislative measures to prevent encroachment on existing and potentially usable catchment areas and rehabilitation of catchment areas (18.40 a v, UNCED, 1992); and of the recommendation to rehabilitate important but degraded catchment areas (18.40 a iv, UNCED, 1992); about applying the “polluter pays” principle (18.40 b i, UNCED, 1992);

Mindful of the acknowledgment at UNCED of the increased Loss of biodiversity through ecologically unsound practices

Despite mounting efforts over the past 20 years, the loss of the world' biological diversity, mainly from habitat destruction, over-harvesting, pollution and the inappropriate introduction of foreign plants and animals has continued. Urgent and decisive action is needed to conserve and maintain genes, species and ecosystems, with a view to the sustainable management and use of biological resources. Capacities for the assessment, study and systematic observation and evaluation of biodiversity need to be reinforced at national and international levels. (15.3., Biodiversity Agenda 21, UNCED, 1992)

(III) "In-situ conservation" means the conservation of ecosystems and natural habitats and the maintenance and recovery of viable populations of species in their natural surroundings and, in the case of domesticated or cultivated species, in the surroundings where they have developed their distinctive properties (Definition, Convention on Biological Diversity, UNCED, 1992)

Realizing the importance of maintaining public control over catchment lands in the Greater Victoria Water district:

Understanding that Fletcher Challenge or the company that has recently taken over its assets, has part of its TFL 46 in the catchment area

Mindful that, for years, Fletcher Challenge has been permitted, through non enforcement of Sections 59,60, and 61 the Forest Act, to cause harm to the natural environment as assessed by the contributing to loss and reduction of biodiversity, the destruction of fish habitat, the degradation of the soil, the causing of erosion and landslides

Noting that, Fletcher Challenge’s right in the manner of “profit a prendre”, is conditional on complying with the Forest Act, and that Fletcher Challenge

has been in violation of several sections of the Forest Act related to the protection of the environment

Concerned that, there is currently a proposal to provide an alternative site for Fletcher Challenge in a comparable area of crown land

BE IT RESOLVED THAT, THE RIGHT IN THE MANNER OF A “PROFIT A PRENDRE” BE EXTINGUISHED IN THE SECTION OF TFL 46 IN THE CATCHMENT AREA, AND THAT NO OTHER AREA OF CROWN LAND BE GIVEN IN EXCHANGE

BE IT FURTHER RESOLVED THAT THE GOVERNMENT OF BRITISH COLUMBIA PROCEED AGAINST FLETCHER CHALLENGE FOR COMPENSATION FOR PAST ENVIRONMENTAL DEGRADATION OF THE CATCHMENT AREA AND THUS FOR REHABILITATION OF THIS AREA

() RESOLUTION RELATED TO EXTINGUISHING LOGGING LICENCES IN CATCHMENT AREA: EXTINGUISHING OF THE RIGHT IN THE MANNER OF A “PROFIT A PRENDRE” ON THE GROUNDS OF FAILURE OF GOVERNMENT TO ENFORCE AND FAILURE OF FOREST COMPANY TO COMPLY WITH THE FOREST ACT

() THAT in 1996, I completed an IUCN questionnaire related to the IUCN

Commission on Education and Communication

ATTENTION: Frits Hesselink

Dear Frits, and Wendy

Jan 13, 1996

Since I had to complete my oral exam for my doctorate, I have not had the time to thoroughly examine the draft mandate. I would like, however, to make a few comments, to propose a short presentation for the Commission AGM meeting in Montreal, and to suggest a project.

A. Comments on Draft Mandate

RE SUSTAINABLE DEVELOPMENT

At the 1994 IUCN AGM, the term “sustainable development” (was strongly debated at one of the plenaries. A decision was made to include a statement that referred to “conserve the integrity and diversity of nature and to ensure that any use of natural resources is equitable and ecologically sustainable”. The mission statement is more in line with the expression “socially equitable and environmentally sound development”, which was used in the ICPD document.

(2) Purpose

I would suggest “ a framework of socially equitable and environmentally sound development”;

(3). Objectives

(e) to fulfill the role of education and public awareness envisioned in Chapter 36 of Agenda 21

4. Terms of Reference

If possible perhaps you could include “conservation of integrity of significant ecosystems” and “prevention of ecological degradation”.

(i) .. in conservation of ecosystems, prevention of environmental degradation, promotion of (Best Ecologically Sound Techniques - BEST) and socially equitable and environmentally sound development (also inter-transfer of technologies — recognizing important contributions from South)

- (j)... conservation of significant ecosystems and prevention of ecological degradation
- (k) encourage the implementation of international obligations related to the conservation of ecosystems and to the prevention of ecological degradation
- (l) disseminate information about international principles such as the precautionary principle, the anticipatory principle, the reverse onus principle, the polluter pay principle, the assessment of environmental costs principle, the ecosystem integrity principle, etc.

B. Presentation for the commission meeting in Montreal

I completed a 350 page book called the "Charter of Obligations" for the Conference in Beijing. I would be interested in linking the principles in this book with a project for "the Environmental Education of Civil Society" in a short presentation.

C. Suggestion for activity of CEC

1. Undertaking of a project that would be beyond regional divisions. I would like to suggest, possibly the development of a set of guidelines or code for evaluating what constitutes legitimate environmental education. Institutions are being flooded with questionable material in the guise of environmental education. I would be willing to draft a discussion piece and submit it for your approval and then circulate it to the membership of the Commission. We could then endorse this code or guidelines at the meeting in Montreal.

I am looking forward to seeing you both again

All My Best,
Joan

() **THAT in 1996**, January, I applied for a grant from the Boris Laskin foundation

EXHIBIT

BORIS LASKIN APPLICATION FOR FUNDING

1997. DISCHARGING OBLIGATIONS AND FULFILLING EXPECTATIONS FOR HUMAN RIGHTS: STATE COMPLIANCE THROUGH A FRAMEWORK OF PRINCIPLES:

For over 50 years, member states of the United Nations have incurred obligations through the founding Charter of the United Nations, through treaties, conventions and covenants and member states have created expectations through declarations, conference action plans and General Assembly Resolutions. These obligations and expectations have been reflected in international instruments undertaking to guarantee the enshrining of and respect for human rights; to preserve, protect and conserve the environment; to prevent conflict and war; to

achieve social justice and to enable socially equitable and environmentally sound development.

Now that the final conference—the Habitat II Conference) of the series of major United Nations conferences has occurred, it is important to do a synthesis of the major obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; and of the major expectations created through conference agendas and action plans, declarations and General Assembly resolutions. The compiling of this information is proposed in this research project, and will be carried out in a series of phases culminating with a series of books, educational materials, advocacy documents for the 50th anniversary of the Universal Declaration of Human Rights in 1998, and for the culmination of the decade dedicated to international law, in 1999.

At the World Conference on Human Rights the member states of the United Nations expressed their concern about the urgency of the global human rights situation in the following way:

The conference expresses its dismay and condemnation that gross and systematic violations and situations that constitute serious obstacles to the full enjoyment of all human rights continue to occur in different parts of the world. Such violations and obstacles include, ... torture and cruelty, inhuman and degrading treatment or punishment, summary and arbitrary executions, disappearances, arbitrary detentions, all forms of racism, racial discrimination and apartheid, foreign occupation and alien domination, xenophobia, poverty, hunger and other denials of economic, social and cultural rights, religious intolerance, terrorism, discrimination against women and lack of the rule of law. (S. 30., World Conference on Human Rights, 1993)

Yet, although the World Conference on Human Rights recommends that on the 50th Anniversary of the Universal Declaration of Human Rights “special attention should be paid to assessing the progress towards the goal of universal ratification of international human rights treaties and protocols adopted within the framework of the United Nations system” (Art. 100, Vienna Declaration, World Congress on Human Rights), the member states did not undertake to ratify all international human rights treaties and protocols for the 50th Anniversary.

At the United Nations Conference: the UN Conference on Women: Equality, Development and Peace, members states would only go as far as undertaking to:

Work actively towards ratification or accession to and implement international and regional human rights treaties; (230a)

At the Habitat II Conference, the delegate from Romania strongly advocated that the member states sign and ratify all human rights instruments, as well as enact the necessary legislation to ensure compliance (personal communication, at Habitat II). Yet the member states of the United Nations in Istanbul agreed not to sign and ratify all legally binding international human rights instruments but to “reaffirm [their] our commitment to ensure the full realization of the human rights set out in international instruments... to reaffirm that all human rights-civil cultural, economic, political and social are universal indivisible, interdependent and interrelated. (Art 22).

What is essential for the 50th anniversary of the Universal Declaration is not just “assessing the progress towards ratification”, “working actively towards” or “reaffirming a commitment” but the actual universal ratification is the universal ratification of all international human rights treaties and protocols; along with the undertaking to enact the necessary legislation for the discharging of the obligations under these treaties.

The purpose of this project is two-fold: to carry out interdisciplinary research in Canada which will have an impact internationally, and to extract principles from international documents in order to have an impact on educating for human rights in Canada. The first purpose will involve carrying out the necessary interdisciplinary research to give support to leading international agencies and NGOs to launch an international research campaign of human rights compliance. This campaign of compliance would call upon States to sign what they have not yet signed, to ratify what they have not yet ratified and to enact the necessary legislation to ensure compliance. The second purpose of this research proposal is to expand the knowledge of human rights in Canada by informing students in the school system as well as members of the public about what has been agreed to internationally. This research-based campaign will have two principal objectives:

OBJECTIVES

1. To prepare a synthesis of human rights obligations incurred and expectations created through international instruments; to extract principles from these international instruments, to determine what would constitute adherence to, and fulfillment of, these principles and to prepare a substantial lobby document to support the call for States to sign and ratify all human rights instruments, and for States to enact the necessary legislation to discharge treaty obligations and to ensure compliance for the 50th anniversary of the Universal Declaration of Human Rights. In addition, a future objective will be to extend this campaign to include international agreements in the area of peace and environment, and to call for the institution in 1999—the culmination of the decade devoted to international law, of an international court of compliance where citizens could take evidence of state non-compliance.

2 To extend and further develop principle-based education— a method of teaching human rights issues within a Framework of International Principles, and to conduct workshops across Canada, to initiate and participate in special events related to the 50th Anniversary of the Universal Declaration of Human Rights.

MEANS TO ACHIEVE OBJECTIVES THROUGH THE GRANT PROPOSAL

MEANS TO ACHIEVE OBJECTIVE 1

RESEARCH BACKGROUND

My concern for human rights stems from an early childhood experience 50 years ago in 1946, in New York, when my father was working at the United Nations. At that time many of the United Nations delegates had to be housed in the Lido Beach Hotel on Long Island because the colored and black delegates could not be appropriately accommodated on Long Island. This act of discrimination left a lasting impression on me.

For over twenty years I have been carrying out research on policy documents both internationally and nationally in the areas of human rights, environment and peace. I initiated the Global Compliance Research Project in 1994, and the associated Global Compliance Research Institute. In 1994-95, the Global Compliance Research (GCR) project received a \$50,000 CIDA grant to (a) carry out a content analysis of international agreements, and to prepare a compilation of the research for distribution at the UN Conference on Women: Equality, Development and Peace, and (b) set up an international network of women. At the New York Prep Com for the UN Conference on Women, the GCR Project circulated a 100-page draft version of the “Charter of Obligations” along with a resolution calling for state compliance with obligations and expectations (Global Compliance Resolution). Also, at the Prep Com, the GCR Project had the opportunity of addressing the UN Commission on the Status of Women; on the necessity of linking the Platform of Action with precedents reflecting obligations and expectations, and on the necessity of States’ undertaking to discharge obligations and fulfill expectations at the co-incidence of the UN Conference on Women and the 50th anniversary of the United Nations. The GCR project also addressed the plenary, held in the General Assembly, of the UN Congress on Public International Law.

The GCR Project completed the “Charter of Obligations” which had become a 350-page compilation in English (and a 200-page French version) of 50 years of obligations incurred, and expectations created internationally through international agreements. The Charter of obligations placed a number of the contentious bracketed sections of the Platform of Action in the context of previous obligations incurred and expectations created. The

Charter was classified as research material and was approved for official distribution as a research document to every state delegation at the Fourth UN conference on Women: Equality, Development and Peace. The purpose of the Charter was to inform and remind states at the UN conference that many of the presumably forward-looking statements in the bracketed sections were little more than what states had already agreed to through previous obligations and expectations, and to encourage states to undertake new commitments beyond past precedents. The purpose of the Charter was not only to encourage states to move beyond what they had already agreed to but to persuade the non-Governmental Organizations to not ask for less than states were already obliged to do through previously negotiated, signed, or ratified conventions, treaties and covenants, or less than states were expected to do through adopted Conference Agendas and Action plans or through passed General Assembly Resolutions. The GCR project also prepared a set of three 4' x 5' Global Compliance charts with the states of the United Nations across the top and human rights, peace, and environment international instruments down the side. For this chart, information was gathered on which states had not signed, which states had signed but not ratified, and which states had both signed and ratified. This chart was placed in the NGO lounge at the UN Conference on Women, and displayed at numerous conferences and meetings including the March 1996 meeting of the UN Commission on the Status of Women. A copy of the charts is in the Women's Centre library at the United Nations in New York. The GCR project gave a workshop on the project at the NGO Forum, and co-conducted a workshop on "Bringing the Conventions to the Grassroots": The essence of the GCR project has been to call upon states to translate the words of rhetoric into the action of compliance, implementation and enforcement.

In June, 1995, at the "We the Peoples" Conference in San Francisco, the GCR Project initiated a workshop on the Global Compliance resolution, and circulated the Global Compliance Resolution; the Global Compliance resolution was adopted by the plenary and forwarded to the Secretary General of the United Nations, Dr. Boutros Boutros Ghali, who subsequently sent a letter of support for the resolution (See enclosed correspondence). The Global Compliance resolution called upon states to demonstrate the political will on the 50th Anniversary to the United Nations to discharge 50 years of obligations by signing what they have not yet signed, by ratifying what they had not yet ratified, by enacting the necessary legislation to ensure compliance and implementation, and to fulfilling 50 years of expectations by conforming to Conference Action Plans and General Assembly Resolutions. Letters with a Global Compliance Resolution were sent to all the state contacts for the UN 50th Anniversary. The Compliance resolution was also circulated in Beijing, and at the Habitat II Conference, and at other international, national and local meetings, conferences and workshops.

The GCR project also participated at the follow-up meeting of UN Commission on the Status of Women in New York in March 1996. The GCR project proposed, at one of the plenaries that was examining the proposed optional protocol to be linked to the Convention on the Elimination of all Forms of Discrimination against Women, a call for an International Court of Compliance where citizens could take evidence of state non-compliance with all international obligations incurred or expectations created. The GCR Project organized a workshop on the International Court of Compliance at the United Nations, presented the proposal to the NGO in the NGO briefing session, and then circulated a petition to state delegations.

The GCR Project also participated in the Habitat II Conference, and prepared a 150-page book, "A comment on the Habitat II Agenda: Moving Beyond Habitat I to discharging obligations and fulfilling expectations"; this book included the articles of the Habitat II Agenda in sequence, placing each of the bracketed sections of the draft Habitat II Agenda in the context of Habitat I, and in the context of previous obligations and expectations. This document was distributed to state delegations at the Habitat II Conference in Istanbul. At this conference, the GCR Project initiated a Global Compliance Caucus where the Global Compliance resolution and the petition for an International Court of Compliance were reviewed, revised and distributed, chaired the urbanization caucus, and was on the editorial committee for preparing the NGO submission to Committee II. The GCR Project also made several interventions to Committee II on the need for Mandatory International Normative Standards (MINS) to drive BEST (Best Environmentally Sound Traditions) Practices. Another intervention was on the need to substantially reduce the military budget and transfer the funds — thus released, as had been undertaken in numerous General Assembly resolutions and in recent conference action plans, to address inequality and further human rights and social justice, and thus ensure the right to shelter, the right to food, the right to safe drinking water, the right to universal health care, the right to education and the right to work in socially equitable and environmentally sound employment are fully protected, guaranteed and implemented. A one-page position piece on reducing and transferring the military budget was presented as an intervention at the NGO presentation to Committee II, and was approved for circulation to the state delegations in the General Assembly, Committee I and Committee II.

At the end of the of the Beijing and Habitat conferences, the GCR Project had a network of over 100 representatives from over 70 states worldwide. It is undertaking to increase this representation to over 130 states. There is a network of over 20 women in Canada, involving activists, representatives from Universities and research institutions from a wide range of disciplines. The GCR Project is currently revising the Charter of Obligations, incorporating issues raised in Beijing and Habitat II, and adding

additional international obligations and expectations omitted in the previous publication or incurred or created through recent international agreements.

The Global Compliance Research Institute arose from the Global Compliance Research Project; this institute is intended to bring retired academics from a wide range of disciplines, particularly interdisciplinary thinkers, with recent graduate students to work together on various projects related to the interdependence of human rights, environment, and peace issues, and to recommend policy.

OBJECTIVE 1: RESEARCH FOR THE BORIS LASKIN PROJECT

In the proposed research project, I will be examining international documents in more depth, and consulting with members in the GCR with Diane Pask, a professor of Law at the University of Calgary, on what would constitute adherence to project across Canada, in particular these principles, on what is the nature of the systemic constraints that are preventing states from discharging obligations, and from fulfilling expectations. The interaction between principle and cultural relativism will also be examined in depth.

MEANS TO ACHIEVE OBJECTIVE 2

RESEARCH BACKGROUND FOR PROJECT

For years, I have been involved with education and advocacy in the area of human rights: from addressing human rights issues in Franco's Spain, through developing workshops on a multicultural approach to history, through reviewing multicultural educational material; through researching and advocating the need for world history courses to replace Western civilization courses; through speaking at anniversaries of the Universal Declaration of Human Right, through organizing and participating in workshops on racism and on the dissemination of hate literature, through co-founding the Vancouver Island Human Rights Coalition, to preparing the background research material for, and being the litigant in a successful charter challenge of the BC Education Act endorsing bible reading in the school classroom.

In 1985 for a Master's degree in curriculum development in Education, in collaboration with the Vancouver Human Rights Coalition and funded by the Secretary of State, I wrote a book on "A Method of Teaching Human Rights. This method was called issue-principle analysis and synthesis —principle-based education. Principle-based education is a method of examining issues within a framework of internationally agreed-to principles. This approach was also interdisciplinary in that human rights were linked with peace and environment and social justice issues. In 1993, I prepared a complex diagram 4' X 6' on a delineation of what human rights have been guaranteed through international instruments, and what rights still need to be addressed; this diagram was

distributed to the Canadian delegation, and to senior participants in the World Conference on Human Rights (see enclosed correspondence).

OBJECTIVE 2: RESEARCH FOR THE BORIS LASKIN PROJECT

To address the urgency of the global situation, for over 50 years, the United Nations and member states of the United Nations, have incurred obligations through conventions, treaties, and covenants, and have created expectations through declarations, conference action plans, and General Assembly resolutions. This urgency is reflected in the continued degradation of the environment, production of arms and the escalation of conflict and war, violation of human rights, and the inequitable distribution of resources. From international instruments, such as the Universal Declaration of Human Rights, the Charter of the United Nations, the Convention on the Rights of the Child, the international Covenant on Social, Cultural and Economic Rights, the International Covenant on Civil and Political Rights, and Agenda 21—the action plan from United Nations Conference on Environment and Development, principles can be extracted and a complex of principles representing an expression of international concern about the need to address the urgent global situation can be discerned. This complex of globally adopted principles has become the foundation for a program called “Principle-based” education.

In principle-based education, global /local issues are examined through selecting, examining and exploring issues within a principle-based framework. In principle-based education, students are encouraged to examine and to appreciate the full complexity and interdependence of global /local issues within a framework of internationally agreed-to principles. The emphasis in the program is on becoming knowledgeable about the principles and their application, on investigating the implications of these principles, on analyzing and synthesizing information on current issues in the light of these agreed to principles, on clarifying these principles and on proposing a range of possible solutions to practical problems emerging from the issues. In the program students will be encouraged to investigate local issues within this framework of principles.

The program will entail the following processes: (1) examining principles enunciated in primary source material (international documents); (2) Examining human rights in local and global issues; (3) compiling actual cases studies and hypothetical case studies; (4) engaging in analytical processes of issue-principle analysis drawing upon a wide range of processes in creative and critical thinking; (5) investigating a wide range of local and global concerns; (6) thinking about the complexity and interdependence of issues within the framework of international principles; (7) proposing solutions and resolutions based on the full examination of the principles and issues; (8) integrating themes, principles and issues, and linking these principles with various disciplines; (9) determining appropriate moments for integrating issues into the curriculum; (10) developing lesson plans and educational materials based on issue-principle analysis; (11) applying knowledge of global and local issues; (12) Determining the linking of issues and principles to

"organizers" within the curriculum such as those in principles of human rights and cultural relativism; (13) encouraging the development of a responsible attitude towards local/ global issues; (14) Fostering working cooperatively and independently within interdisciplinary thought (see Annex 1 for an description of the Components of principle-based educational framework).

DISSEMINATION OF RESULTS OF THE RESEARCH PROJECT:

PURPOSE/OBJECTIVE 1

- Establishment of an extensive data base of research material available through disks
- Publication of a framework of principles to be circulated internationally.
- Presentations at various meeting leading up to the 50th Anniversary of the Universal Declaration of Human Rights across Canada

PURPOSE/OBJECTIVE 2

- Development of draft educational material will be submitted to Ministries of Education across Canada, distributed at workshops across Canada, and then internationally possibly through United Nations agencies (see enclosed correspondence from UNDP)
- A final publication, on principle-based education, incorporating the input from the workshops will be prepared and circulated

FEBRUARY FEBRUARY 1996

() THAT in 1996 I attended, on behalf of professor Rod Dobell, a special meeting over in Vancouver with Jag Maini, the Minister of Forests, Patrick Moore, and others including a forester from New Zealand .

Jag Maini opened the meeting with the following: "It is just like old times when we all met in Rio." I believe I was the only one there that did not meet with him in Rio. [I had been there distributing Peter McCalister's film which demonstrated the devastation of BC forests caused by clear cutting]

When Patrick Moore introduced himself, he inserted in the introduction that he was now "reasonable" another member obviously a colleague of Moore also described himself as a former environmentalist but now he was reasonable. " Being reasonable" was obviously a code word for willingness to compromise. I was tempted to say I am an environmentalist and I am not reasonable about what is happening in the BC forests. I introduced myself, however, as coming from Uvic because I had been asked by Rod Dobell to attend in his place. I raised numerous issues related to the non-compliance with commitments made at Rio, about Canada's ill-conceived proposal at Rio and about the flaws in the forest

principles document and the destruction of BC forests through clear-cutting. I also suggested a possibility of forest protocols linked to the legally binding Conventions on Biological Diversity and the UN Framework Convention on Climate Change

MARCH MARCH

1996

() THAT in 1996 March, before going to the Commission on the Status of Women (CSW) in New York, I spent a few days promoting my son Lorick's tapes [my son Lorick offered to pay my way to New York and I agreed to promote his tape] I first went to the Bitter End Cafe and met with a promoter and told him about owning the Café Hibou in Ottawa where we had promoted, from 1996-1972, many of the same performers as the Bitter End. I left a tape with him. I then went to a café near the Bitter End and persuaded the manager to play Lorick's tape. A guy with long red hair came over to me and said he really liked the tape and ask if he could have one; I was surprised when he said he worked at the World Bank.

Then I went to Sony where there was so much security one would think it was Fort Knox.

Then on to Warner brothers and waited there until someone asked to see xxx who was a promoter. I then went to the desk and asked if I could leave a disc. I asked if I could leave a tape for xxx. I heard from him and he said he liked the tape but no commitment.

() 1996, March, I went to the World Bank Office in New York to find out about the latest World Bank "literature" that I could criticize. While I was examining the material, which was general PR material about the World Bank, I was told that the World Bank was downsizing in New York and I could take whatever publications I wished from their library. I selected about 50 books, and left.

() THAT in 1996 I attended the fortieth session of CSW which was held on MARCH 11 - 22

(I FOLLOW-UP SESSION, TO BEIJING,

At one of the sessions, there was a discussion about an Optional Protocol being linked to the Platform of Action. At this session for which there was a panel of legal experts, I proposed that we lobby for an Optional Protocol linked to all international agreements, and for an International Court of Compliance to which citizens could take evidence of state and corporate non-compliance. This proposal was well received, and I began to circulate a petition for an International Court of Compliance and linked it with the International Decade Devoted to the Furtherance of International Law.

() THAT in 1996 for the CSW 40, I prepared the Covenant of Implementations in the form of a scroll to evaluate one year after Beijing if the governments were beginning to implement their commitments and asked women to evaluate the commitment made to implement what they agreed to implement. I went through the whole document and placed every article that referred to implement into the scroll. I unfurled the scroll in my work shop in New York Article 21. **The implementation of the Platform for Action requires commitment from Governments and the international community. By making national and international commitments for action, including those made at the Conference, Governments and the international community recognize the need to take priority action for the empowerment and advancement of women.**

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 60 (P) **FORMULATE AND IMPLEMENT POLICIES AND PROGRAMMES THAT ENHANCE THE ACCESS OF WOMEN AGRICULTURAL AND FISHERIES PRODUCERS (INCLUDING SUBSISTENCE FARMERS AND PRODUCERS, ESPECIALLY IN RURAL AREAS) TO FINANCIAL, TECHNICAL, EXTENSION AND MARKETING SERVICES;** PROVIDE ACCESS TO AND CONTROL OF LAND, APPROPRIATE INFRASTRUCTURE AND TECHNOLOGY IN ORDER TO INCREASE WOMEN'S INCOMES AND PROMOTE HOUSEHOLD FOOD SECURITY, ESPECIALLY IN RURAL AREAS AND, WHERE APPROPRIATE, ENCOURAGE THE DEVELOPMENT OF PRODUCER-OWNED, MARKET-BASED COOPERATIVES;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 60 (p) **Formulate and implement policies and programmes that enhance the access of women agricultural and fisheries producers (including subsistence farmers and producers, especially in rural areas) to financial, technical, extension and marketing services;** provide access to and control of land, appropriate infrastructure and technology in order to increase women's incomes and promote household food security, especially in rural areas and, where appropriate, encourage the development of producer-owned, market-based cooperatives; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 61 (b) Strengthen analytical capacity in order to more systematically strengthen gender perspectives and integrate them into the design and implementation of lending programmes, including structural adjustment and economic recovery programmes;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 62(b) Engage in lobbying and establish monitoring mechanisms, as appropriate, and other relevant activities **to ensure implementation of the recommendations on poverty eradication outlined in the Platform for Action**

and aimed at ensuring accountability and transparency from the State and private sectors; (STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

(A) DEVELOP AND IMPLEMENT EDUCATION, TRAINING AND RETRAINING POLICIES FOR WOMEN, ESPECIALLY YOUNG WOMEN AND WOMEN RE-ENTERING THE LABOUR MARKET, TO PROVIDE SKILLS TO MEET THE NEEDS OF A CHANGING SOCIOECONOMIC CONTEXT FOR IMPROVING THEIR EMPLOYMENT OPPORTUNITIES;

Article 84. By Governments, in cooperation with employers, workers and trade unions, international and non-governmental organizations, including women's and youth organizations, and educational institutions: (a) Develop and implement education, training and retraining policies for women, especially young women and women re-entering the labour market, to provide skills to meet the needs of a changing socioeconomic context for improving their employment opportunities; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

EDUCATIONAL INDICATORS IMPLEMENTING MEASURES TO ELIMINATE DIFFERENCES BETWEEN WOMEN AND MEN BOYS AND GIRLS

OPPORTUNITIES IN EDUCATION AND TRAINING

Article 89(a) Contribute to the evaluation of progress achieved, using educational indicators generated by national, regional and international bodies, and urge Governments, **in implementing measures, to eliminate differences between women and men, boys and girls with regard to opportunities in education and training and the levels achieved in all fields, particularly in primary and literacy programmes; (STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 107 (w) Promote and ensure household and national food security, as appropriate, and implement programmes aimed at improving the nutritional status of all girls and women **by implementing the commitments made in the Plan of Action on Nutrition of the International Conference on Nutrition, 16/ including a reduction world wide of severe and moderate malnutrition among children under the age of five by one half of 1990 levels by the year 2000, giving special attention to the gender gap in nutrition, and a reduction in iron deficiency anemia in girls and women by one third of the 1990 levels by the year 2000;**
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

**PREVENTING DISASTERS AND REDUCING ENVIRONMENTAL HAZARDS
PRECAUTIONARY APPROACH**

Article 108 (n) **Reduce environmental hazards that pose a growing threat to health, especially in poor regions and communities; apply a precautionary approach, as agreed to in the Rio Declaration on Environment and Development**, adopted by the United Nations Conference on Environment and Development, 17/ and include reporting on women's health risks related to the environment in monitoring the implementation of Agenda 21; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY**

ASSIST WOMEN AND THEIR FORMAL AND INFORMAL ORGANIZATIONS TO ESTABLISH AND EXPAND EFFECTIVE PEER EDUCATION AND OUTREACH PROGRAMMES AND TO PARTICIPATE IN THE DESIGN OF THESE PROGRAMS

109(j) Assist women and their formal and informal organizations to establish and expand effective peer education and outreach programmes and to participate in the design, implementation and monitoring of these programmes; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 111(d) Develop goals and time-frames, where appropriate, for improving women's health and for planning, **implementing, monitoring and evaluating programmes, based on gender-impact assessments using qualitative and quantitative data disaggregated by sex, age, other established demographic criteria and socio- economic variables;** **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 167. By Governments: **(a) Enact and enforce legislation to guarantee the rights of women and men to equal pay for equal work or work of equal value;**
(b) Adopt and implement laws against discrimination based on sex in the labour market, especially considering older women workers, hiring and promotion, the extension of employment benefits and social security, and working conditions; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 167 (k) Revise and implement national policies that support the traditional savings, credit and lending mechanisms for women; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 168 (h) Review, reformulate, if necessary, and **implement policies, including business, commercial and contract law and government regulations, to ensure that they do not discriminate against micro, small and medium-scale enterprises owned by women in rural and urban areas;** **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 168 (i) Analyse, advise on, coordinate and implement policies that integrate the needs and interests of employed, self-employed and entrepreneurial women into sectoral and inter-ministerial policies, programmes and budgets;
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 169 (d) Ensure that women's priorities are included in public investment programmes for economic infrastructure, such as water and sanitation, electrification and energy conservation, transport and road construction. Promote greater involvement of women beneficiaries at the project planning and implementation stages to ensure access to jobs and contracts.
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 171. By multilateral funders and regional development banks, as well as bilateral and private funding agencies, at the international, regional and sub-regional levels: **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 171 (a) Review, where necessary reformulate, **and implement policies, programmes and projects, to ensure that a higher proportion of resources reach women in rural and remote areas;** **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 180. By Governments, employers, employees, trade unions and women's organizations:

(a) Implement and enforce laws and regulations and encourage voluntary codes of conduct that ensure that international labour standards, such as International Labour Organization Convention 100 on equal pay and workers' rights, apply equally to female and male workers; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

appropriate COOPERATIVE technology

Article 180 (m) Set specific target dates for eliminating all forms of child labour that are contrary to accepted international standards and **ensure the full enforcement of relevant existing laws and, where appropriate, enact the legislation necessary to implement the Convention on the Rights of the Child and International Labour Organization standards**, ensuring the protection of working children, in particular, street children, through the provision of appropriate health, education and other social services;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

PROMOTE THE IMPLEMENTATION OF, EXECUTE, MONITOR, EVALUATE, ADVOCATE AND MOBILIZE SUPPORT FOR POLICIES THAT PROMOTE THE ADVANCEMENT OF WOMEN

Article 198. National machineries for the advancement of women have been established in almost every Member State to, inter alia, design, **promote the implementation of, execute, monitor, evaluate, advocate and mobilize support for policies that promote the advancement of women.** National machineries are diverse in form and uneven in their effectiveness, and in some cases have declined. Often marginalized in national government structures, these mechanisms are frequently hampered by unclear mandates, lack of adequate staff, training, data and sufficient resources, and insufficient support from national political leadership.

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 203. A national machinery for the advancement of women is the central policy-coordinating unit inside government. Its main task is to support government-wide mainstreaming of a gender-equality perspective in all policy areas. The necessary conditions for an effective functioning of such national machineries include: **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 209 (c) Involve centres for women's studies and research organizations in developing and testing appropriate indicators and research methodologies to strengthen gender analysis, as well as in monitoring and evaluating the implementation of the goals of the Platform for Action; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 253 (a) Ensure opportunities for women, including indigenous women, to participate in environmental decision-making at all levels, including as managers, designers and planners, and as implementers and evaluators of environmental projects;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 243 (e) Take measures to integrate a gender perspective in the design and implementation of, among other things, environmentally sound and sustainable resource management mechanisms, production techniques and infrastructure development in rural and urban areas; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 254 (d) Establish strategies and mechanisms to increase the proportion of women, particularly at grass-roots levels, involved as decision makers, planners, managers, scientists and technical advisers and as beneficiaries in the design, development and implementation of policies and programmes for natural resource management and environmental protection and conservation; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 254 (i) Develop programmes to involve female professionals and scientists, as well as technical, administrative and clerical workers, in environmental

management, develop training programmes for girls and women in these fields, expand opportunities for the hiring and promotion of women in these fields and implement special measures to advance women's expertise and participation in these activities; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 256 (i) Develop programmes to involve female professionals and scientists, as well as technical, administrative and clerical workers, in environmental management, develop training programmes for girls and women in these fields, expand opportunities for the hiring and promotion of women in these fields and implement special measures to advance women's expertise and participation in these activities; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 256 (l) Ensure that clean water is available and accessible to all by the year 2000 and that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds. **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

PROMOTING COORDINATION AMONG...

Article 259 (d) Promote coordination within and among institutions to implement the Platform for Action and chapter 24 of Agenda 21 by, inter alia, requesting the Commission on Sustainable Development, through the Economic and Social Council, to seek input from the Commission on the Status of Women when reviewing the implementation of Agenda 21 with regard to women and the environment.

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

274(a) By States that have not signed or ratified the Convention on the Rights of the Child, take urgent measures towards signing and ratifying the Convention, bearing in mind the strong exhortation made at the World Conference on Human Rights to sign it before the end of 1995, and by States that have signed and ratified the Convention, ensure its full implementation through the adoption of all necessary legislative, administrative and other measures and by fostering an enabling environment that encourages full respect for the rights of children; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

CREATE A SOCIAL, ECONOMIC AND INTELLECTUAL CLIMATE BASED ON EQUALITY BETWEEN WOMEN AND MEN.

289. Non-governmental and grass-roots organizations have a specific role to play in creating a social, economic, political and intellectual climate based on equality between women and men. Women should be for Action. in the internal dynamics of institutions and organizations, including values, behaviour, rules and procedures that are inimical to the advancement of women. Sexual harassment should be eliminated. should have strong and clear mandates and the authority, resources and for Action. Their methods of operation should ensure efficient and effective

implementation of the Platform. There should be a clear women and men as a basis for all actions. **STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

When I returned to Victoria, I circulated the scroll by email.

March 1996

() **THAT** I drafted a Declaration of Implementation based on the Covenant of Implementation—delineation of all the references made to “implement” in the Platform of Action, which I presented in the fall of 1995, and then distributed at the Commission on The Status of Women (CSW) meeting in New York

POST BEIJING DECLARATION OF IMPLEMENTATION MARCH 11 1996

WELCOMING the commitment in the Platform of Action (1995) to take special measures to ensure women’s equal access to and full participation in the decision-making process, and to promote the full and equal participation of women in power structures and decision making at all levels and at all areas, including international;

AFFIRMING the equal access to and full participation of women in the decision making of international affairs within the United Nations, women call upon the member states of the United Nations to fulfill 50 years of obligations by signing what they have not signed, by ratifying what they have not ratified, by enacting legislation to ensure compliance and by implementing the necessary measures for discharging these obligations. In addition, women in Beijing called upon states to undertake new commitment that might be necessary for the discharging of these obligations and for the creation of a world of peace, where the fulfillment of basic needs and human rights to food, shelter, education, health and safety are guaranteed as inalienable and fundamental rights. Women also call for a redefinition of development based on equitable and ecological principles;

REAFFIRMING the recognition of the equal rights of men and women (Charter, United Nations, 1945);

REAFFIRMING the recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world (Preamble, Universal Declaration of Human Rights, 1948);

REAFFIRMING that the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of

the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom (Preamble, Universal Declaration of Human Rights, 1948);

REAFFIRMING that Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, **sexual orientation, family structure**, or other status. (Art. 2, The Universal Declaration of Human Rights, 1948), CLARIFYING that the term “other status” is an open term which includes forms of discrimination that are now prevalent such as that on the grounds of “sexual orientation” and “family structure”, and that in the future the term “other status” will include future unanticipated forms of discrimination.

CONVINCED that sovereign rights shall not be used to justify the continuation of a practice that is in violation of human rights, is ecologically destructive, contributes to violence, conflict and war, or increases the threat to peace;

REAFFIRMING the Convention on the Rights of the child that, in accordance with the principles proclaimed in the Charter of the United Nations, recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world:

REAFFIRMING that [the provision] [Provide] of access to safe and healthy shelter is essential to a person's physical, psychological, social and economic well-being and should **shall** be a fundamental part of national and international action. The right to adequate housing as a basic human right is enshrined in the Universal Declaration of Human rights and the International Covenant on Economic, Social and Cultural rights (7.6, Settlement, Agenda 21, UNCED, 1992)

REAFFIRMING that every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Art. 1. Universal Declaration on the Eradication of Hunger and Malnutrition, 1974) **The need for society to properly channel its resources in ways that will eradicate hunger rather than exacerbate it.**

PROCLAIMING that It is a fundamental responsibility of Governments to work together for higher food production and a more equitable and efficient distribution

of food between countries and within countries. Governments should **shall** initiate immediately a greater concerted attack on chronic malnutrition and deficiency diseases among the vulnerable and lower income groups. In order to ensure adequate nutrition for all, Governments *should formulate appropriate* **[shall ensure]** food and nutrition policies **[are]** integrated in overall socioeconomic and agricultural development plans based on adequate knowledge of available as well as potential food resources (Sect. 2, Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

REAFFIRMING that The States parties to the present Covenant recognize the right of everyone to social security, including social insurance (Art. 9., International Covenant on Economic, Social and Cultural Rights, 1966)

REAFFIRMING that The States... recognize the right of everyone to an adequate standard of living. for himself **[herself]** and his **[her]** family, including adequate food, clothing and housing and to the continuous improvement of living conditions. the states parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)

MINDFUL that while distinct cultural traditions contribute to the wealth of global diversity, no cultural or religious practices that are in violation of fundamental human rights shall be tolerated by the global civil society;

CONCURRING that indigenous and tribal peoples shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. the provisions of the Convention shall be applied without discrimination to male and female members of these peoples. (Art. 3 Convention (no. 169) concerning indigenous and Tribal Peoples in Independent countries);

MINDFUL that since the first United Nations Conference on the Environment in Stockholm in 1972 we have come to realize that the threats to the biosphere which sustains all life on this planet have increased in rate, magnitude and scale beyond expectation; inaction is negligent; the international community has enough information about the pending state of ecological irreversibility that it must act immediately;

Mindful of the spirit, principles, aims and functions of the World Charter for Nature adopted by the General Assembly of the United Nations at its thirty-seventh session as a rule of ethics in respect of the human environment and the conservation of natural resources, (Preamble, Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992);

CONCURRING that every form of life is unique, warranting respect regardless of its worth to man [Humanity], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (∞ World Charter of nature, 1982)

RECOGNIZING That Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (World Charter of Nature, 1992);

COMMITTED to the invoking of the precautionary principle, as enunciated in the Biodiversity Convention:

where there is a threat of serious or irreversible damage, lack of full scientific certainty *should shall* not be used as a reason for postponing measures to avoid or minimize such a threat (from the Biodiversity Convention, 1992);

COMPLYING with the non-transference principle from the Rio Declaration States should **shall** effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, 1992);

CONCURRING with the assessment in recent international instruments that significant responsibility for the current urgency of the global situation lies in a current model of development which contributes to the increase of conflict, to the escalation of war, to the violation of human rights, to the destruction of the environment and to the denial of equality and equity;

CONCURRING that the current model of development reflects the unbridled power and practices of transnationals which have contributed to the increase of conflict, to the escalation of war, to the violation of human rights, to the degradation of the environment, and to exploitative development;

RECOGNIZING the need to Enact legislation to allow conscientious objectors to redirect the military portion of the state budget to peaceful purposes (Conscience Canada, Peace tax Campaign, War Resisters International);

REAFFIRMING the urgent need to reinforce the endeavours of all States and international action in the area of the reduction of military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981);

MINDFUL that as agreed in 1972 at Stockholm weapons of mass destruction must be eliminated, and that as recognized through numerous UN General Assembly Resolutions, the military budget must be frozen at 1981 levels (as decided in 1981 through General Assembly resolutions), and that the largest proportion of the military budget shall be used to achieve and maintain peace, to restore degraded ecosystems and to provide restitution to those having been impacted by war;

RECALLING the Declaration of the 1980s as the Second Disarmament Decade, which provides that during this period renewed efforts should be made to reach agreement on the reduction of military expenditures and the reallocation of resources thus saved to economic and social development, especially for the benefit of developing countries, (Preamble, UN Resolution 36/82 1981, Reduction of Military Budgets);

COMMITTED to establishing a time-table for phasing out fossil fuel and nuclear energy and for the rapid development of solar and other forms of non-polluting energy, and for more efficient energy use; (Nobel Laureate, UNCED, 1992);

RECOGNIZING that outstanding obstacles and systemic constraints have prevented the establishment of the international political will necessary to discharge previous obligations and to undertake new commitments, and that many of these obstacles and systemic constraints arise from the current economic model of development;

CONVINCED that in 1996, on the first post-50 anniversary of the United Nations, the member states of the United Nations must ensure that the previous 50 years of obligations are fully discharged, and be willing to make additional commitments which might be necessary to finally bring about fulfillment of the ideals of the United Nations — a world free from the scourge of war, a world of equality for all humanity and a world worthy of passing on to future generations;

We, the state members of the United Nations pledge that we will, in 1996, on October 24th on the first post-50th Anniversary of the United Nations move into the next stage of the United Nations: the stage of compliance, implementation and enforcement in which we fulfill the original objectives of the United Nations and establish a civil community of global compliance, equality, peace and justice.

- We will sign what we have not yet signed,
- We will ratify what we have not yet ratify,
- We will enact the necessary legislation to ensure compliance, and

• **We will enforce and monitor the enforcement of our international obligations.**

DRAWN FROM THE COMMITMENTS to IMPLEMENT MADE FROM THE BEIJING PLATFORM OF ACTION:

ARTICLE 5. STATES PARTIES SHALL TAKE ALL APPROPRIATE MEASURES:
(A) TO MODIFY THE SOCIAL AND CULTURAL PATTERNS OF CONDUCT OF MEN AND WOMEN, WITH A VIEW TO ACHIEVING THE ELIMINATION OF PREJUDICES AND CUSTOMARY AND ALL OTHER PRACTICES WHICH ARE BASED ON THE IDEA OF THE INFERIORITY OR THE SUPERIORITY OF EITHER OF THE SEXES OR ON STEREOTYPED ROLES FOR MEN AND WOMEN;

Article 21. **The implementation of the Platform for Action requires commitment from Governments and the international community. By making national and international commitments for action, including those made at the Conference, Governments and the international community recognize the need to take priority action for the empowerment and advancement of women.**

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 60 (P) **FORMULATE AND IMPLEMENT POLICIES AND PROGRAMMES THAT ENHANCE THE ACCESS OF WOMEN AGRICULTURAL AND FISHERIES PRODUCERS (INCLUDING SUBSISTENCE FARMERS AND PRODUCERS, ESPECIALLY IN RURAL AREAS) TO FINANCIAL, TECHNICAL, EXTENSION AND MARKETING SERVICES;** PROVIDE ACCESS TO AND CONTROL OF LAND, APPROPRIATE INFRASTRUCTURE AND TECHNOLOGY IN ORDER TO INCREASE WOMEN'S INCOMES AND PROMOTE HOUSEHOLD FOOD SECURITY, ESPECIALLY IN RURAL AREAS AND, WHERE APPROPRIATE, ENCOURAGE THE DEVELOPMENT OF PRODUCER-OWNED, MARKET-BASED COOPERATIVES;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 60 (p) Formulate and **implement policies and programmes that enhance the access of women agricultural and fisheries producers (including subsistence farmers and producers, especially in rural areas) to financial, technical, extension and marketing services**; provide access to and control of land, appropriate infrastructure and technology in order to increase women's incomes and promote household food security, especially in rural areas and, where appropriate, encourage the development of producer-owned, market-based cooperatives; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 61 (b) Strengthen analytical capacity in order to more systematically strengthen gender perspectives and integrate them into the design and implementation of lending programmes, including structural adjustment and economic recovery programmes;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 62(b) Engage in lobbying and establish monitoring mechanisms, as appropriate, and other relevant activities **to ensure implementation of the recommendations on poverty eradication outlined in the Platform for Action and aimed at ensuring accountability and transparency from the State and private sectors**; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

(A) DEVELOP AND IMPLEMENT EDUCATION, TRAINING AND RETRAINING POLICIES FOR WOMEN, ESPECIALLY YOUNG WOMEN AND WOMEN RE-ENTERING THE LABOUR MARKET, TO PROVIDE SKILLS TO MEET THE NEEDS OF A CHANGING socioeconomic CONTEXT FOR IMPROVING THEIR EMPLOYMENT OPPORTUNITIES;

Article 84. By Governments, in cooperation with employers, workers and trade unions, international and non-governmental organizations, including women's and youth organizations, and educational institutions: (a) Develop and implement education, training and retraining policies for women, especially young women and women re- entering the labour market, to provide skills to meet the needs of a changing socioeconomic context for improving their employment opportunities; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

EDUCATIONAL INDICATORS**IMPLEMENTING MEASURES TO ELIMINATE DIFFERENCES BETWEEN WOMEN AND MEN BOYS AND GIRLS****OPPORTUNITIES IN EDUCATION AND TRAINING**

Article 89(a) Contribute to the evaluation of progress achieved, using educational indicators generated by national, regional and international bodies, and urge

Governments, **in implementing measures, to eliminate differences between women and men, boys and girls with regard to opportunities in education and training and the levels achieved in all fields, particularly in primary and literacy programmes; (STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 107 (w) Promote and ensure household and national food security, as appropriate, and implement programmes aimed at improving the nutritional status of all girls and women **by implementing the commitments made in the Plan of Action on Nutrition of the International Conference on Nutrition, 16/ including a reduction world wide of severe and moderate malnutrition among children under the age of five by one half of 1990 levels by the year 2000, giving special attention to the gender gap in nutrition, and a reduction in iron deficiency anemia in girls and women by one third of the 1990 levels by the year 2000;**
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

PREVENTING DISASTERS AND REDUCING ENVIRONMENTAL HAZARDS PRECAUTIONARY APPROACH

Article 108 (n) **Reduce environmental hazards that pose a growing threat to health, especially in poor regions and communities; apply a precautionary approach, as agreed to in the Rio Declaration on Environment and Development, 17/ and include reporting on women's health risks related to the environment in monitoring the implementation of Agenda 21; (STRONGLY AGREE 1 2 3 4 5 STRONGLY**

ASSIST WOMEN AND THEIR FORMAL AND INFORMAL ORGANIZATIONS TO ESTABLISH AND EXPAND EFFECTIVE PEER EDUCATION AND OUTREACH PROGRAMMES AND TO PARTICIPATE IN THE DESIGN OF THESE PROGRAMS

109(j) Assist women and their formal and informal organizations to establish and expand effective peer education and outreach programmes and to participate **in the design, implementation and monitoring of these programmes;**
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 111(d) Develop goals and time-frames, where appropriate, for improving women's health and for planning, **implementing, monitoring and evaluating programmes, based on gender-impact assessments using qualitative and quantitative data disaggregated by sex, age, other established demographic criteria and socioeconomic variables;**
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 167. By Governments: **(a) Enact and enforce legislation to guarantee the rights of women and men to equal pay for equal work or work of equal value;**

(b) Adopt and implement laws against discrimination based on sex in the labour market, especially considering older women workers, hiring and promotion, the extension of employment benefits and social security, and working conditions; (STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 167 (k) Revise and implement national policies that support the traditional savings, credit and lending mechanisms for women;
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 168 (h) Review, reformulate, if necessary, and **implement policies, including business, commercial and contract law and government regulations, to ensure that they do not discriminate against micro, small and medium-scale enterprises owned by women in rural and urban areas;**
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 168 (i) Analyse, advise on, coordinate and implement policies that integrate the needs and interests of employed, self-employed and entrepreneurial women into sectoral and inter-ministerial policies, programmes and budgets;
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 169 (d) Ensure that women's priorities are included in public investment programmes for economic infrastructure, such as water and sanitation, electrification and energy conservation, transport and road construction. Promote greater involvement of women beneficiaries at the project planning and implementation stages to ensure access to jobs and contracts.
(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 171. By multilateral funders and regional development banks, as well as bilateral and private funding agencies, at the international, regional and sub-regional levels: **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 171 (a) Review, where necessary reformulate, **and implement policies, programmes and projects, to ensure that a higher proportion of resources reach women in rural and remote areas;** **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 180. By Governments, employers, employees, trade unions and women's organizations:

(a) Implement and enforce laws and regulations and encourage voluntary codes of conduct that ensure that international labour standards, such as International

Labour Organization Convention 100 on equal pay and workers' rights, apply equally to female and male workers; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

appropriate COOPERATIVE technology

Article 180 (m) Set specific target dates for eliminating all forms of child labour that are contrary to accepted international standards and **ensure the full enforcement of relevant existing laws and, where appropriate, enact the legislation necessary to implement the Convention on the Rights of the Child and International Labour Organization standards**, ensuring the protection of working children, in particular, street children, through the provision of appropriate health, education and other social services;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

PROMOTE THE IMPLEMENTATION OF, EXECUTE, MONITOR, EVALUATE, ADVOCATE AND MOBILIZE SUPPORT FOR POLICIES THAT PROMOTE THE ADVANCEMENT OF WOMEN

Article 198. National machineries for the advancement of women have been established in almost every Member State to, inter alia, design, **promote the implementation of, execute, monitor, evaluate, advocate and mobilize support for policies that promote the advancement of women**. National machineries are diverse in form and uneven in their effectiveness, and in some cases have declined. Often marginalized in national government structures, these mechanisms are frequently hampered by unclear mandates, lack of adequate staff, training, data and sufficient resources, and insufficient support from national political leadership.

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 203. A national machinery for the advancement of women is the central policy-coordinating unit inside government. Its main task is to support government-wide mainstreaming of a gender-equality perspective in all policy areas. The necessary conditions for an effective functioning of such national machineries include: **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 209 (c) Involve centres for women's studies and research organizations in developing and testing appropriate indicators and research methodologies to strengthen gender analysis, as well as in monitoring and evaluating the implementation of the goals of the Platform for Action; **(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

Article 253 (a) Ensure opportunities for women, including indigenous women, to participate in environmental decision-making at all levels, including as managers, designers and planners, and as implementers and evaluators of environmental projects;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 243 (e) Take measures to integrate a gender perspective in the design and implementation of, among other things, environmentally sound and sustainable resource management mechanisms, production techniques and infrastructure development in rural and urban areas;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 254 (d) Establish strategies and mechanisms to increase the proportion of women, particularly at grass-roots levels, involved as decision makers, planners, managers, scientists and technical advisers and as beneficiaries in the design, development and implementation of policies and programmes for natural resource management and environmental protection and conservation;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 254 (i) Develop programmes to involve female professionals and scientists, as well as technical, administrative and clerical workers, in environmental management, develop training programmes for girls and women in these fields, expand opportunities for the hiring and promotion of women in these fields and implement special measures to advance women's expertise and participation in these activities;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 256 (i) Develop programmes to involve female professionals and scientists, as well as technical, administrative and clerical workers, in environmental management, develop training programmes for girls and women in these fields, expand opportunities for the hiring and promotion of women in these fields and implement special measures to advance women's expertise and participation in these activities;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

Article 256 (l) Ensure that clean water is available and accessible to all by the year 2000 and that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds.

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

PROMOTING COORDINATION AMONG...

Article 259 (d) Promote coordination within and among institutions to implement the Platform for Action and chapter 24 of Agenda 21 by, inter alia, requesting the Commission on Sustainable Development, through the Economic and Social Council, to seek input from the Commission on the Status of Women when

reviewing the implementation of Agenda 21 with regard to women and the environment.

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

274(a) By States that have not signed or ratified the Convention on the Rights of the Child, take urgent measures towards signing and ratifying the Convention, bearing in mind the strong exhortation made at the World Conference on Human Rights to sign it before the end of 1995, and by States that have signed and ratified the Convention, ensure its full implementation through the adoption of all necessary legislative, administrative and other measures and by fostering an enabling environment that encourages full respect for the rights of children;

(STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)

CREATE A SOCIAL, ECONOMIC AND INTELLECTUAL CLIMATE BASED ON EQUALITY BETWEEN WOMEN AND MEN.

289. Non-governmental and grass-roots organizations have a specific role to play in creating a social, economic, political and intellectual climate based on equality between women and men. Women should be for Action. in the internal dynamics of institutions and organizations, including values, behaviour, rules and procedures that are inimical to the advancement of women. Sexual harassment should be eliminated. should have strong and clear mandates and the authority, resources and for Action. Their methods of operation should ensure efficient and effective implementation of the Platform. There should be a clear women and men as a basis for all actions. **STRONGLY AGREE 1 2 3 4 5 STRONGLY DISAGREE)**

socially equitable

Several key concepts and principles have emerged from the recent international conferences such as UNCED, ICPD, World Human Right conference, The UN Conference on Women: Equality, Development and peace; concept that will impact on the role of women in socially equitable and environmentally sound development. These concepts and principles What constitutes implementations of these concepts and principles has to become an integral part of an educational program .

praxis Through what has often been described as a linking of theory and practice or principle and action needs to be conveyed .

In this project one of the aspects of the programs to encourage the meaningful and equal access and participation of women in capacity building and development will be a community based educational program. This proposed educational program

will draw upon the need for the respecting of local traditions and practices within the context of equitable and ecological principles.

ARTICLE 5. STATES PARTIES SHALL TAKE ALL APPROPRIATE MEASURES:
(A) TO MODIFY THE SOCIAL AND CULTURAL PATTERNS OF CONDUCT OF MEN AND WOMEN, WITH A VIEW TO ACHIEVING THE ELIMINATION OF PREJUDICES AND CUSTOMARY AND ALL OTHER PRACTICES WHICH ARE BASED ON THE IDEA OF THE INFERIORITY OR THE SUPERIORITY OF EITHER OF THE SEXES OR ON STEREOTYPED ROLES FOR MEN AND WOMEN;

custom

Article 73. **Discrimination in girls' access to education persists in many areas, owing to customary attitudes**, early marriages and pregnancies, inadequate and gender-biased teaching and educational materials, sexual harassment and lack of adequate and physically and otherwise accessible schooling facilities. Girls undertake heavy domestic work at a very early age. Girls and young women are expected to manage both educational and domestic responsibilities, often resulting in poor scholastic performance and early drop-out from the educational system. This has long-lasting consequences for all aspects of women's lives.

Article 119. Violence against women is a manifestation of the historically unequal power relations between men and women, which have led to domination over and discrimination against women by men and to the prevention of women's full advancement. **Violence against women throughout the life cycle derives essentially from cultural patterns, in particular the harmful effects of certain traditional or customary practices and all acts of extremism linked to race, sex, language or religion that perpetuate the lower status accorded to women in the family, the workplace, the community and society.** Violence against women is exacerbated by social pressures, notably the shame of denouncing certain acts that have been perpetrated against women; women's lack of access to legal information, aid or protection; the lack of laws that effectively prohibit violence against women; failure to reform existing laws; inadequate efforts on the part of public authorities to promote awareness of and to enforce existing laws; and the absence of educational and other means to address the causes and consequences of violence. Images in the media of violence against women, in particular those that depict rape or sexual slavery as well as the use of women and girls as sex objects, including pornography, factors contributing to the continued prevalence of such violence, adversely influencing the community at large, in particular children and young people.

Article 125 (k) Adopt all appropriate measures, especially in the field of education, to modify the social and cultural patterns of conduct of men and women, and to eliminate prejudices, customary practices and all other practices based on the idea of the inferiority or superiority of either of the sexes and on stereotyped roles for men and women;

Article 232. By Governments:

(a) Give priority to promoting and protecting the full and equal enjoyment by women and men of all human rights and fundamental freedoms without distinction of any kind as to race, colour, sex, language, religion, political or other opinions, national or social origins, property, birth or other status;

(d) Review national laws, including customary laws and legal practices in the areas of family, civil, penal, labour and commercial law in order to ensure the implementation of the principles and procedures of all relevant international human rights instruments by means of national legislation, and revoke any remaining laws that discriminate on the basis of sex and remove gender bias in the administration of justice;

* Article 180. **(b) Enact and enforce laws and introduce implementing measures,**

including means of redress and access to justice in cases of non-compliance, to prohibit direct and indirect discrimination on grounds of sex, including by reference to marital or family status in relation to access to employment, conditions of employment, including training, promotion, health and safety, as well as termination of employment and social security of workers, including legal protection against sexual and racial harassment;

Article 258 (c) Ensure the full compliance with relevant international obligations, including where relevant, the Basel Convention and other conventions relating to the trans-boundary movement of hazardous wastes (which include toxic wastes) and the IAEA Code of Practice relating to the movement of radioactive wastes; enact and enforce regulations for environmentally sound management related to safe storage and movements; consider taking action towards the prohibition of those movements which are unsafe and insecure and ensure the strict

control and management of hazardous wastes and radioactive waste, in accordance with relevant international and regional obligations and eliminate the exportation of such wastes to countries that, individually or through international agreements, prohibit their importation;

ELIMINATE ∞, PROHIBIT*

ARTICLE 2. STATES PARTIES CONDEMN DISCRIMINATION AGAINST WOMEN IN ALL ITS FORMS, AGREE TO PURSUE BY ALL APPROPRIATE MEANS AND WITHOUT DELAY A POLICY OF ELIMINATING DISCRIMINATION AGAINST WOMEN AND, TO THIS END, UNDERTAKE:

(A) TO EMBODY THE PRINCIPLE OF THE EQUALITY OF MEN AND WOMEN IN THEIR

NATIONAL CONSTITUTIONS OR OTHER APPROPRIATE LEGISLATION IF NOT YET

INCORPORATED THEREIN AND TO ENSURE, THROUGH LAW AND OTHER APPROPRIATE

MEANS, THE PRACTICAL REALIZATION OF THIS PRINCIPLE;

(B) TO ADOPT §APPROPRIATE§ LEGISLATIVE AND OTHER MEASURES, INCLUDING

SANCTIONS WHERE APPROPRIATE, PROHIBITING ALL DISCRIMINATION AGAINST

WOMEN;

Article 61. By multilateral financial and development institutions, including the World Bank, the International Monetary Fund and regional development institutions, and through bilateral development cooperation:

(a) In accordance with the commitments made at the World Summit for Social Development, seek to mobilize new and additional financial resources that are both adequate and predictable and mobilized in a way that maximizes the availability of such resources and uses all available funding sources and mechanisms with a view to contributing towards the goal of poverty eradication and targeting women living in poverty.;

(b) Strengthen analytical capacity in order to more systematically strengthen gender perspectives and integrate them into the design and implementation of lending programmes, including structural adjustment and economic recovery programmes;

- 61 (d) Ensure that structural adjustment programmes are designed to minimize their negative effects on vulnerable and disadvantaged groups and communities and to assure their positive effects on such groups and communities by preventing their marginalization in economic and social activities and devising measures to ensure that they gain access to and control over economic resources and economic and social activities; take actions to reduce inequality and economic disparity;
- (e) Review the impact of structural adjustment programmes on social development by means of gender-sensitive social impact assessments and other relevant methods, in order to develop policies to reduce their negative effects and improve their positive impact, ensuring that women do not bear a disproportionate burden of transition costs; complement adjustment lending with enhanced, targeted social development lending

69. By Governments, intergovernmental organizations, academic and research institutions and the private sector:

- (a) Develop conceptual and practical methodologies for incorporating gender perspectives into all aspects of economic policy-making, including structural adjustment planning and programmes;

DEBT FORGIVENESS

Article 61 (c) Find effective development-oriented and durable solutions to external debt problems in order to help them to finance programmes and projects targeted at development, including the advancement of women, inter alia, **through the immediate implementation of the terms of debt forgiveness agreed upon in the Paris Club in December 1994, which encompassed debt reduction, including cancellation or other debt relief measures and develop techniques of debt conversion applied to social development programmes and projects in conformity with Platform priorities;**

Principles will be conveyed to the community by drawing upon local analogy and cultural

the challenge with this program will be to essence of the program will be to expand the traditional roles through expanding a range of options without
How we are going to do it

() THAT in 1996 march, Conducted a workshop on the petition calling for “An international Court of Compliance” at the United Nations (Committee room B), New York. 1996

EXHIBIT:

**1996 March 16
PETITION
CALLING FOR
AN INTERNATIONAL COURT OF COMPLIANCE**

RECOGNIZING that for fifty years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant on Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED that the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence,, and the citizens have a legitimate expectation that the government will discharge this obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

Contact. Dr. Joan E. Russow, Global Compliance Research Project, 1230 St. Patrick St. Victoria, B.C. V8S 4Y4, CANADA. Tel/FAX (604) 598-0071. E-mail. Russow@uvaix.uvic.ca

This petition was presented at a workshop on Friday, March 15, 1996 at the United Nations, New York; introduced to the plenary of the NGO briefing meeting on March 18, 1996, and circulated among state delegates.

() THAT in 1996 with a delegation from the Voice of Women, I met with the disarmament committee, and with UNIFEM.

() THAT in 1996, I went to a Human rights meeting and met with meet with the commissioner on Human Rights

ONLY UNGA RESOLUTIONS GUFFAW

() in 1996 THAT in 1996 during the CSW with the Voice of Women, I went to the Canadian Mission and met with Bob Fowler the Canadian ambassador to the UN

COMMENT I suggested that the military budget should be reduced in line with the 1981 General Assembly Resolution and he demonstrated no respect for the General Assembly {Fowler was the conservative defence minister who was implicated in the Somali inquiry and then awarded with being the ambassador to the UN}

() THAT in 1996, I Presented a paper, on "Principle-based economics at the University of Victoria: moving from vested interest economics". This was a spoof on the hypothetical reformed position of the World Bank

COMMENT

Workshop organized by the Vancouver Island Public Interest Research Group, University of Victoria.

As a lecturer in Environmental Studies, I was invited by Vancouver Island Public Interest Research (VIPIRG) to be on a panel at the University on the future of the Economics Department at the University. My panel was the concluding panel. I was planning on synthesizing the comments that I had heard during the day. However, the representative on the Panel from the Department of Economics, made an opening remark: "Economists are like meteorologists they report and predict but they do not influence", and I decided that I would play on the fact that I had been to the downsizing of the World Bank in New York and do a spoof. I started my presentation with " I have just returned from the downsizing of the World Bank in New York, and the World Bank has decided that they will no longer be like a meteorologist just observing and reporting but that they will actually influence the course of governments, and they have decided to move away from vested interest economics to principle-based economics. I then began to describe a set of international principles that were now to become part of the conditions for lending practices of the World Bank. To give authenticity to my spoof I asked the audience if they knew about the leaked memo by the former President Summers where he stated:" It made good economic sense to transfer the dirty industries to the least developed countries. One of the students paraphrased the memo in even harsher terms than I would have. I concluded my presentation and the first question was " Perhaps the World Bank has changed but what about...?" I realized that perhaps some member of the audience had believed me. I pointed out that I was being facetious. There was certainly one member of the audience who appreciated the Spoof--a representative from Adbusters who asked me if I would be interested in writing a piece for Adbusters, which I did.

What happens at this type of University presentations students leave in the middle of the presentations to attend class. A graduate student in Economics told me that one of her colleagues told her that the World Bank had changed its policy and that it was going to be engaging in conditional funding based on compliance with principles. I began to worry that I had started a rumour that the World Bank had actually changed and that might reduce resistance to its policies; it might delude World Bank opponents into thinking that the Bank Might have changed.

COMMENT ON HABITAT II AGENDA

Based on the version taken off the internet in March 1996

COMMENTS ON BRACKETED SECTIONS AND PROPOSALS FOR REVISIONS OF THE HABITAT II AGENDA

NOTE: JARGON [*] AND BUZZ WORD [\$], EUPHEMISMS [£] UNNECESSARY COMPLICATION [%], OR VEILED INTENTION ALERT. IN MANY SECTIONS INCLUDING SOME THAT HAVE ALREADY BEEN NEGOTIATED THE LANGUAGE IN HABITAT II APPEARS TO BE AN UNFORTUNATE JARGONIZATION OF MORE PROFOUND ORDINARY LANGUAGE. OFTEN THE MARGINALIZED MEMBERS OF SOCIETY ARE EXCLUDED FROM GENUINE INVOLVEMENT AND PARTICIPATION INTO THE DECISION MAKING PROCESS THROUGH THE INTRODUCTION OF JARGON ETC. [TO BE ADDED]

PART 1 PREAMBLE

1. We recognize that **years of accrued state obligations to improve the quality of life through recognizing the right to shelter, the right to social security, the right to equality, the right to peace and the right to a safe environment have not yet been discharged. In 1974 through General Assembly resolutions we recognized “united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of an New International Economic Order, 1974).**

DOCUMENTATION OF PRECEDENT

RE: ESTABLISHING A NEW INTERNATIONAL ECONOMIC ORDER AS ADVOCATED IN HABITAT 1 (REFERENCE TO A 1974 GENERAL ASSEMBLY RESOLUTION IGNORED IN HABITAT II)

To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 4, Habitat I)

Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas, between regions and within regions themselves. Governments should adopt policies ;which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

We affirm the imperative need **and urgency** to improve the quality of human settlements which profoundly affects the daily lives and well-being of *our* people. There is a sense of great opportunity and hope that a new world can be built in

which economic development, social development and environmental protection as interdependent and mutually reinforcing components of *sustainable development* **socially equitable and environmentally sound development** can be realized through solidarity and cooperation within and between countries, and through effective partnerships at all levels. International cooperation and universal solidarity, guided by the ~~[[purposes and]]~~ principles of the Charter of the United Nations, **and by over 50 years of obligations accruing through Conventions, Treaties, and Covenants; and by over 50 years of expectations arising through Declarations, Conference action plans and General Assembly Resolutions** *In a spirit of partnership*, are crucial in order to improve the quality of life of the peoples of the world. **The constant vigilance by individuals and organizations of civil society is essential and should be facilitated through the undertaking by states to discharge previous obligations and fulfill previous expectations; and through the establishment of an International Court of Compliance where citizen can take evidence of state non-compliance.**

DOCUMENTATION OF PRECEDENT:

RE: PROMOTING NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY

Solemnly proclaim our united determination to work urgently for the Establishment of a New International Economic Order based on equity, sovereign equality, interdependence, common interest and co-operation among all States, irrespective of their economic and social systems which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development and peace and justice for present and future generation... (Preamble, Declaration on the Establishment of a new international economic order, 1974)

RE: ADVOCATING LOCAL SERVICES AND HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women

and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

DOCUMENT OF PRECEDENTS:

RE: UNDERTAKING TO GUARANTEE RIGHTS

In compliance with the fundamental obligations laid down in article 2 of this Convention, States Parties undertake to prohibit and to eliminate racial discrimination in all its forms and to *guarantee* ensure the right of everyone, without distinction as to race, colour, or national or ethnic origin, to equality before the law, notably in the enjoyment of the following rights:

- (a) The right to equal treatment before the tribunals and all other organs administering justice;
- (b) The right to security of person and protection by the State against violence or bodily harm, whether inflicted by government officials or by any individual, group or institution;
- (c) Political rights, in particular the rights to participate in elections--to vote and to stand for election--on the basis of universal and equal suffrage, to take part in the Government as well as in the conduct of public affairs at any level and to have equal access to public service;
- (d) Other civil rights, in particular:
 - (i) The right to freedom of movement and residence within the border of the State;
 - (ii) The right to leave any country, including one's own, and to return to one's country;
 - (iii) The right to nationality;
 - (iv) The right to marriage and choice of spouse;
 - (v) The right to own property alone as well as in association with others;
 - (vi) The right to inherit;
 - (vii) The right to freedom of thought, conscience and religion;
 - (viii) The right to freedom of opinion and expression;
 - (ix) The right to freedom of peaceful assembly and association;
- (e) Economic, social and cultural rights, in particular:

- (i) The rights to work, to free choice of **meaningful** employment, to just and favourable conditions of work, to protection against unemployment, to equal pay for equal work, to just and favourable remuneration;
 - (ii) The right to form and join trade unions;
 - (iii) The right to housing;
 - (iv) The right to public health, medical care, social security and social services;
 - (v) The right to education and training;
 - (vi) The right to equal participation in cultural activities;
- (f) The right of access to any place or service intended for use by the general public, such as transport, hotels, restaurants, cafes, theatres and parks.
(Elimination of all forms of discrimination, 1965)

ARTICLE 1 bis

Recognizing that it is only through the discharging at the global level of years of state obligations and through fulfilling at the global level of years of expectations that the goals of Habitat can be achieved

ARTICLE 2

The purpose of the second United Nations Conference on Human Settlements (Habitat II) is to address two themes of equal global importance: **the right to Adequate- shelter for all and Sustainable human settlements development. *in an urbanizing world.* The rights of Human beings limited by the carrying capacity of the ecosystem** are at the centre of concerns for **socially equitable and environmentally sound *sustainable* development**, including shelter for all **and socially equitable and environmentally sound *sustainable* settlements**, and they are entitled to a healthy and *productive meaningful* life in harmony with nature. As to the first theme, a large segment of the world's population lacks shelter and sanitation, particularly in developing countries. **Another segment of the world's population in developed countries has been experiencing the problem of urban sprawl, widening gaps between the rich and the poor, excessive environmental destruction as a result of unsustainable models of development.** We recognize that **the right to social security and [the right to adequate housing, as affirmed in the International Covenant of Cultural, Economic and Cultural rights, reaffirmed in the Convention of Elimination of all Form of Discrimination, reaffirmed in Chapter 7 of Agenda 21, and reaffirmed in the International Conference on Population and Development, 1994) which includes]** access to **affordable, accessible, inclusive, free-from illegal forced evictions, security of tenure, and environmentally sound, and safe and healthy shelter and basic services** is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of our urgent actions for the more than one billion people without decent living conditions. **We also recognized that there already exists a state obligation in international law to enshrine and guarantee this right, and that this state obligations has not yet been fully discharged by any of the member states of the United Nations.** Our objective is to achieve adequate shelter for all and especially for the deprived urban and rural poor **and landless poor** through an enabling approach to the development and improvement of shelter that is environmentally sound. **Our objective is also to strive to change peoples' attitudes towards the people in poverty and other marginalized groups, and towards those that are different. People in poverty should never be blamed for their condition, and there should be trust in not fear of those that are different.**

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE WASTEFUL AND ECOLOGICAL DESTRUCTIVENESS OF URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

- (i) securing legislation, legal instruments and regulations;
- (iv) active participation of a well-informed public
- (v) protection of ecosystems and critical land
- (ix) Integration and improvement of squatter and marginal settlements. (Habitat I)

RE: PLACING AN OBLIGATION TO PROVIDE ADEQUATE SHELTER AND SERVICES - AS A BASIC HUMAN RIGHT

Adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO PEOPLE IN POVERTY AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

As to the second theme, socially **equitable and environmentally sound** development **of healthy, safe and environmentally sound communities-settlements** combines **social equity and environmentally sound development with** environmental protection and full *economic development, social development and environmental protection*, with full respect for all human rights and fundamental freedoms, including the right to development, and offers a means to achieving a world of greater stability and peace, built on ethical *and spiritual* vision. **To achieve this vision states shall undertake to ensure compliance with a body of established international principles by establishing mandatory international normative standards (MINS) related to the ensuring of social justice, the enshrining and guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, and the preventing of conflict and war. MINS shall be used to drive industry to adopt BEST (Best Environmentally Sound Traditions) practices.**

DOCUMENTATION OF PRECEDENTS

RE: EXERCISING EFFECTIVE CONTROL OVER TRANSNATIONAL CORPORATIONS

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I

RE: STATE REQUIREMENT TO ENSURE COMPLIANCE

states to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws” (Section 167 Platform of Action UN Conference on Women: Equality, Development and Peace).

[Democracy, and transparent, representative and accountable governance and administration throughout society *in all sectors of society* are indispensable foundations for the realization of **socially equitable and environmentally sound sustainable** development. However, the lack of **socially equitable and environmentally sound** development and the existence of widespread absolute poverty inhibit the full and effective assurance of the enjoyment of human rights and render fragile democracy and popular participation.]

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOR PARTICIPATION

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be **ensured guaranteed**. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize *productive meaningful* employment. (III 11, Habitat I)

RE: ADVOCATING THE EXPRESSION “SOCIALY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT” TO REPLACE THE EXPRESSION “SUSTAINABLE DEVELOPMENT”

The expression “socially equitable and environmentally sound development” was used in the International Conference on Population and Development:.

None the less, the effective use of resources, knowledge and technologies is conditioned by political and economic obstacles at the national and international levels. Therefore, although ample resources have been available for some time, their use for socially equitable and environmentally sound development has been seriously limited” (Preamble 1.1. International Conference on Population and Development, 1994)

NOTE: [In the Habitat Agenda the expression “environmentally sound” is used as often as Sustainable Development—a term that reflected neither the real equitable nor environmental component so necessary in development.]

ARTICLE 3

3. Recognizing the global nature of these issues, the international community, in convening Habitat II, has decided that **the collective political will to discharge previous obligations, and to fulfill previous expectations, as well as the undertaking of new commitment is essential for achieving these goals. a concerted global approach could greatly enhance progress toward achieving these goals. As recognized in Agenda 21 (UNCED) [The cross-national and global impacts of unsustainable patterns of production and consumption, particularly in industrialized countries, environmental degradation, demographic changes, widespread and persistent poverty, and social and economic inequality are clearly visible.]. As also confirmed through Environmental Conventions such as the Vienna Convention on Ozone Depletion with the Montreal Protocol, the Convention on Biological Diversity and the Framework Convention on Climate Change, the global community has undertaken to discharge its international obligations related to conserving and protecting the environment through banning ozone depleting substances, through preserving biodiversity, and through reducing and eliminating climate change agents. It is recognized that the discharging of these obligations is essential to the establishment of socially equitable and environmentally sound community development.**

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF UNSUSTAINABLE PATTERN OF CONSUMPTION

...the major cause of the continued deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992), and reaffirmed in Art. 37 of the Platform of Action, UN Conference on Women: Equality, Development and Peace)

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are

most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

**RE: ACKNOWLEDGING THE IMPACT ON AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT)
(Sections from Habitat I)**

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resources; without public control land is a prey to speculation and urban encroachment. (Habitat I)

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation. (Habitat I)

(c) Such control may be exercised through

(i) Zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;

(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises; (Habitat I)

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

RESTRUCTURING LAND OWNERSHIP

recommendation D 5

patterns of ownership

(i) Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

(c) special attention should be paid to:

(i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;

- (ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;
- (iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;
- (iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.
- (v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority; (Habitat I)

The sooner communities, and local governments, *partnerships among the public, and private and community sectors* join efforts to create comprehensive, bold and innovative **plans strategies** for shelter and human **communities settlements**, the better the prospects will be for the safety, health and well-being of people and the brighter the outlook for solutions to global environment and social problems. **As previously recognized in Habitat I, communities should take more control over the planning and ownership of public lands and that greater benefit should accrue to the public from the sale of land.**

RE: REDISTRIBUTING BENEFITS TO THE PUBLIC

Recommendation D3

Recapturing plus value.

- (a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to the public at large the benefits of the unearned increase in land values. (Habitat I)
- (b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community), unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies. (Habitat I)

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land; (Habitat I)

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices; (Habitat I)

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start; (Habitat I)

RE: CONSERVING OF ENERGY

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)
Human settlements are consuming more and more energy just when Humanity *mankind* has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources. (Habitat I)

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 (Habitat I)

(iv) emphasizing where possible the use of renewable over non-renewable energy sources and the rationalization of technologies which are currently known to be hazardous to the environment. (Habitat I)

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification, and district heating and cooling, including the utilization of solar and geothermal energy and heat pumps as appropriate. (Habitat I)

ARTICLE 4

4. **Having acknowledged the applicability of previous international instruments to the Habitat II Agenda, having been forced to acknowledge that many previous obligations have not been discharged and expectations have not been fulfilled including those arising from Habitat I, and having considered the experience since the United Nations Conference on Human Settlements (Habitat I), held in Vancouver, Canada, in 1976, Habitat II reaffirms the results from relevant conventions, treaties covenants, declarations, resolutions and conference action plans recent world conferences and has developed them into an agenda for human communities settlements: the Habitat Agenda. Among many of the relevant obligations included in Habitat II are those existing in the following Conventions or Conventions: The Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, the International Covenant of Cultural, Economic, Cultural Rights, the Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of All Forms of Discrimination Against Women, along with all the Conventions and Treaties related to the Environment and Peace, In addition, Habitat II incorporates expectations arising from General Assembly resolutions, Declarations and conference action plans from recent conferences such as Agenda 21 from the United Nations Conference on Environment and Development -- The Earth Summit -- held in Rio de Janeiro in 1992, produced Agenda 21. At this Conference, the international community agreed to a framework for the sustainable development of human communities settlements. and other conference action plans from Each of the other conferences, including the Fourth World Conference on Women (Beijing, 1995); the World Summit for Social Development (Copenhagen, 1995); the International Conference on Population and Development (Cairo, 1994); the Global Conference on the Sustainable Development of Small Island Developing States (Barbados, 1994); and the World Conference on Human Rights (Vienna, 1993), as well as the World Summit on Children (New York, 1990) and the World Conference on Education for All (Jomtien, Thailand, 1989) and Habitat I also address important socially equitable and environmentally sound development social, economic and environmental issues, including components of the sustainable development agenda, for which successful implementation requires action at the local, national and international levels. The Global Strategy for Shelter to the Year 2000, adopted in 1988, which emphasizes the need for improved production and delivery of shelter, revised national housing policies, and an enabling means of ensuring adequate shelter strategy, offers useful guidelines for the realization of adequate shelter for all in the next century.**

ARTICLE 5

During the course of history, urbanization has been associated with economic and social progress, *the promotion of literacy and education, the improvement of the*

general state of health, greater access to social services, and cultural, political and religious participation. Unfortunately urbanization and progress have also been associated with increased violations of human rights, unmitigated environmental degradation, perpetuated unsustainable patterns of economic consumption, widened gaps between the rich and poor (the enfranchised and disenfranchised), increased abuse of the marginalized, and increased incidents of conflict, violence and crime. The growth of cities and towns causes social, economic and environmental changes that go beyond city boundaries, through urban sprawl The growth of cities and towns causes social, economic and environmental changes that go beyond city boundaries, through urban sprawl and industrial conversion of productive land and of areas worthy of preservation.

Cities and towns have been engines of growth **often beyond the carrying capacity of the ecosystem that contains them** and incubators of civilization or **destroyers of culture** and have facilitated or **repressed** the evolution of knowledge, culture and tradition, *as well as of industry and commerce.* Urban **communities settlements**, properly planned *and managed*, **in harmony with rural communities, within the carrying capacity of the ecosystem and within a system of preserved ecosystems could** hold the promise for **socially equitable and environmentally sound** human development and for **the preservation of nature and for** protection of the world's natural resources through their ability to support large numbers of people while limiting their impact on the natural environment. Habitat II deals with all settlements - large, medium and small - and reaffirms the need for universal improvements in living and working conditions. **While** decentralized, participatory planning *and management which* are important features of a successful urban future, **the planning should be grounded in fundamental principles related to the enshrining and guaranteeing of human rights, the ensuring of social justice, the preserving, protecting and conserving of the environment, and the promoting of peace. It should be acknowledged that although there has been some increased participation by individuals and groups of civil society in bringing about the necessary global changes for the establishment of socially equitable and environmentally sound development of communities, there is a long way to go to achieve the necessary *Democratization has enhanced such access and meaningful participation and involvement for* **of civil society actors, and for public-private partnerships;****

ARTICLE 6

6. To overcome current problems and to ensure *future progress in the improvement of economic, social and environmental conditions* **socially equitable and environmentally sound** *in* human settlements, we must begin with a recognition of the challenges facing cities and towns. According to current projections, by the turn of the century, more than three billion people - one-half of the world's population - will live and work in urban areas. The most serious problems confronting cities and towns and their inhabitants include **severe**

environmental degradation resulting from either lack of mandatory regulations that drive industry, or from institutional governments/industry collusion that weakens the resolve to establish or enforce regulations; inadequate financial resources to promote socially equitable and environmentally sound development, lack of meaningful employment opportunities in BEST practices, spreading homelessness and expansion of squatter settlements, increased poverty and a widening gap between rich and poor arising from the imposition of over-consumptive models of development and of ill-conceived structural adjustment programs, growing insecurity and rising crime rates caused by the failure to ensure social equity including the positive human rights of the right to social security, health care, shelter, food etc.

DOCUMENTATION OF PRECEDENTS

RE: GENERATING OF MEANINGFUL EMPLOYMENT

In fact, the very construction of the physical components of human settlements- be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of meaningful employment, instead of being treated as a residual of so-called “productive” activities. (Chapt II A. 5 Habitat 1)

RE: PREVENTING WASTE AND MISUSE OF RESOURCES IN WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

RE: REDUCING OF AVAILABLE RESOURCES THROUGH EXCESSIVE MILITARY EXPENDITURES

Excessive military expenditures, including global military expenditures and arms trade or trafficking, and investments for arms production and acquisition have reduced the resources available for social development. As a result of the debt burden and other economic difficulties, many developing countries have undertaken structural adjustment policies. **Moreover, there are structural adjustment**

programmes that have been poorly designed and implemented, with resulting detrimental effects on social development. The number of people living in poverty has increased disproportionately in most developing countries, particularly in the heavily indebted countries, during the last decade. (Art. 15 Platform of Action, UN Conference on Women: Equality, Development and Peace, 1995)

**RE: REASSESSING STRUCTURAL ADJUSTMENT PROGRAMS
Ensuring continued provision of basic services to the poor and needy**

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ACCOMMODATING THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through natural or *man-made* anthropogenic** catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: PREVENTING CRIME

Reaffirming that crime prevention and criminal justice should be considered in the context of...social and cultural systems

Reaffirms that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

inadequate and deteriorating building stock, services and infrastructure, lack of health and educational facilities, improper land use, insecure land tenure, rising traffic congestion, increasing pollution, lack of green spaces, inadequate water supply and sanitation, uncoordinated urban development, and an increasing vulnerability to disaster **including for example the continued production of toxic, hazardous and atomic wastes , the continued reliance on non-renewable sources of energy or on unsafe sources of energy such as that of civil nuclear energy, the continued visits of nuclear powered military vessels in urban ports and of the continued development and testing of nuclear weapons.**

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING PUBLIC CONTROL AND BENEFIT FROM LAND

D. Land (Agenda item 10 (d))

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice; if unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people can only be achieved if land is used in the interests of society as a whole (Habitat I)

2. Instead, the pattern of land use should be determined by the long-term interests of the community, especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment and a crucial link in an often delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies. (Habitat I)

Recommendation D1

Land resource

a Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest is the single most important means of improving the capacity of human settlements to absorb changes and movements in population, modifying their internal structure and achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered. (Habitat I)

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal regions and other areas subject to the impact of development, recreation and tourism activities. (Habitat I)

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore Governments must maintain full jurisdiction and exercise complete sovereignty over such and exercise complete over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed by foreign nations which enjoy the benefits while preventing its rational use. (Habitat I)

All of these have seriously challenged the capacities of governments, particularly those of developing countries, at all levels to realize *economic development, social development and environmental protection, which are interdependent and mutually reinforcing components of **socially equitable and environmentally sound development***, the framework for our efforts to achieve a higher quality of life for all people. Rapid rates of international and internal migration to, as well as population growth in, cities and towns, and unsustainable patterns of production and consumption raise these problems in especially acute forms. In these cities and towns, large sections of the world's urban population live in inadequate conditions and are confronted with serious problems, including environmental problems, that are exacerbated by inadequate planning *and managerial capacities*, and **by unsustainable patterns of production and consumption** lack of investment *and technology* in **BEST (best environmentally sound Traditions) practices (prevention technology that does it right the first time)**; too often **environmentally unsound technologies have been introduced as a result of north/south transfer and then the “coupling” clean-up technologies are introduced. The continued introduction of these ecologically unsound technologies contributes to environmental degradation, undue stress on the disadvantaged, over-dependency on external “solutions” that could be**

equally bad or even worse than the problem they were intended to solve. These ecologically unsound technologies and technological fixes perpetuate a cycle of attempted rectification of error, and contribute to insufficient mobilization of financial resources to ecologically sound technologies and inappropriate allocation of financial resources to ecologically unsound technologies such as non-renewal sources of energy or to the production of substances and activities that cause environmental degradation and are harmful to human health. In the Rio Declaration states were urged to prevent the transfer of substances and activities that could cause environmental degradation or be harmful to human health to other states; this would mean that no state should transfer substances such as toxic, hazardous, or atomic wastes or activities that would produce these wastes to other states.

DOCUMENTATION OF PRECEDENTS RELATED TO TRANSFER OF HARMFUL SUBSTANCES

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

RE: RECOGNIZING THE DAMAGE TO HEALTH AND THE ENVIRONMENT CAUSED BY EXPORT OF BANNED OR PERMANENTLY WITHDRAWN PRODUCTS

Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT SOME PRODUCTS HAVE BEEN SEVERELY RESTRICTED BECAUSE TOXIC EFFECTS ON HEALTH AND THE ENVIRONMENT

Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have been severely restricted in their consumption and/or sale owing to

their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should **shall** effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

RE: REFUSING TO ACCEPT PERMISSION TO BE HARMED

No support shall be given for the justification of the transfer of harmful substances to human health and to the environment on the grounds that the recipient state has granted permission for this transfer.

Under no circumstances shall a State agree to accept hazardous, toxic, or atomic wastes from another State. Also under no circumstances shall a State that has less stringent regulations be called upon to accept activities or substances that are deemed to be ecologically unsafe and unsound in another State that has more stringent regulations. Similarly, this principle shall also apply within a state where industry or a government within a state seeks to deposit toxic, hazardous or atomic wastes in different areas of the State, in particular on indigenous lands or in areas in which the disenfranchised members of the population live.

as well as by a lack of social and economic opportunities.

In the case of international migration, migrants have **[particular]** needs for housing and basic services, education, **meaningful** employment, and social integration

without a loss of cultural identity, and they are to be given adequate protection and attention within host countries.

DOCUMENTATION OF PRECEDENTS

RE: CONTINUED INSUFFICIENT PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include people in poverty small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to shall* eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should **shall** pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women,

women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to [quality] education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, place of birth, **nature of residence** or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

- The right to life of migrant workers and members of their families shall be protected by law (Art. 9)
- No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).
- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)
- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).
- Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983)

ARTICLE 7

7. In the process of globalization and growing interdependence, rural settlements represent a great challenge and opportunity for renewed **socially equitable and environmentally sound** developmental initiatives at all levels and in all fields. Many rural settlements, however, are facing a lack or an *inadequacy of economic opportunities* **inadequate infrastructure of environmentally sound practices**, especially **meaningful** employment, and of infrastructure and services, particularly those related to water, sanitation, health, education, communication, ecologically-**sound public** transportation and **ecologically safe and sound renewable** energy. Appropriate efforts and **BEST practices technologies** for rural development can

help to reduce, inter alia, imbalances, unsustainable practices, poverty, isolation, environmental pollution and insecure land tenure. Such efforts can contribute to improving the linkage of rural settlements with the mainstream of economic, social and cultural life, to assuring sustainable communities and safe environments, and to reducing pressures on urban growth.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING RADICAL REVERSAL OF TRANSPORTATION TRENDS (

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents. (Habitat I)

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles. (Habitat I)

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel. (Habitat I)

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles (Habitat I)

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic; (Habitat I)

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution (Habitat I)

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system. (Habitat I)

RE: RECOGNIZING IMPACT OF INCREASED AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE; DEVELOPING MASS TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 8

8. Cities, towns and rural settlements are linked through the **environment, transportation, energy and through** the movements of goods, , resources and people. Urban-rural linkages have a crucial importance for the sustainability of human settlements. As rural population growth has outpaced the generation of **meaningful** employment and economic opportunities, rural-to-urban migration has steadily increased, particularly in developing countries, which has put enormous pressure on urban infrastructure and services already under serious stress. It is urgent to eradicate rural poverty and to improve the quality of living conditions, as well as to create **meaningful** employment and educational opportunities in rural settlements, regional centres and secondary cities. Full advantage must be taken of the complementary contributions and linkages of rural and urban areas **through socially equitable and environmentally sound development. by balancing their different economic, social and environmental requirements.**

ARTICLE 9

9. More people than ever are living in absolute poverty and without adequate shelter. Inadequate shelter and homelessness are growing plights in many countries **including the most affluent countries of the North**, threatening standards of health, security and even life itself. ~~[[Everyone *should* shall be entitled to an adequate-~~ **high standard of living, including adequate—affordable, accessible, safe and healthy food, clothing and inclusive adequate — affordable, accessible, safe and environmentally sound, with**

tenure security housing, and to the continuous improvement of living conditions.] All the states signatory to the international Covenant of Social Cultural and Economic Rights have “recognize the right of everyone to an adequate standard of living, including food, clothing and housing” (Art. 11.1 International Covenant of Economic, Social and Cultural Rights — ICESCR, 1966). In addition, states have undertaken the international obligation to recognize the “right of everyone to social security (Art. 9), and “the right of everyone to the enjoyment of the highest attainable standard of physical and mental health” (Article 12, ICESCR).

DOCUMENTATION OF PRECEDENT

RE: PROVIDING FOR THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through natural or *man-made* anthropogenic catastrophes, and especially by the act of foreign and internal aggression.** In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: ACKNOWLEDGING ADEQUATE SHELTER AND SERVICES - BASIC HUMAN RIGHT. OBLIGATION ON GOVERNMENTS TO ENSURE ADEQUATE SHELTER

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: PROMOTING OF EQUITABLE DISTRIBUTION OF BENEFITS

(b) Human settlements policies should aim to improve the condition of human settlements particularly by promoting a more equitable

distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4,b Habitat I)

(c) this can be done through:

- (i) the location of public sector investments;
- (ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups
- (iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas
- (iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived
- (v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;
- (vi) Measures to improve the quality of life of *vulnerable marginalized* groups which have special needs-such as children, the elderly, the handicapped and the disabled. Such measure include provision of basic social services, adequate shelter and social and physical access to facilities. (Habitat I)

Recommendation C 11

Infrastructure policy

- (a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.
- (b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.
- (c) this implies
 - (i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population
 - (ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures; (Habitat I)

9 bis. The rapidly increasing number of displaced persons including refugees, other displaced persons in need of international protection and internally displaced

persons, as a result of natural and human-made disasters in many regions of the world, is aggravating the shelter crisis, highlighting the need for a speedy solution to the problem on a durable basis.

9 ter. Acknowledging that often the lack of respect and trust of youth, and the exclusion of youth from the decision making process have contributed to a reciprocal lack of trust on the part of youth, and thus affirming that t *The rights and needs of children and youth and of future generations have to be taken fully into account [recognizing the rights, duties and responsibilities of parents and other persons legally responsible for children, consistent with the Convention on the Rights of the Child].* Special attention needs to be paid to participatory processes dealing with the shaping of cities, towns and neighbourhoods; this is in order to secure the living conditions of children and of youth and to make use of their insight, creativity and thoughts on the environment. Special attention must be paid to shelter needs of **vulnerable children from marginalized groups**, such as street children, refugee children and children who are victims of sexual exploitation.

DOCUMENTATION FOR PRECEDENT

RE: RECOGNIZING THE PROFOUND IMPORTANCE OF PARTICIPATION OF YOUTH

- Recognizing the profound importance of the direct participation of youth in shaping the future of *mankind humanity* and the valuable contribution that youth can make in the implementation of the new international economic order based on equity and justice,
- Considering it necessary to disseminate among youth the ideals of peace, respect for human rights and fundamental freedoms, human solidarity and dedication to the objectives of progress and development, social and cultural advancement of peoples, the implementation of the new international economic order, the preservation of world peace and the promotion of international co-operation and understanding (The General Assembly Resolution 36/28 International Youth Year: Participation, Development, Peace, 1981)

ARTICLE 10

10. *Although All many countries, particularly developing countries, lack the necessary legal, institutional, financial, technological and human resources to respond adequately to rapid urbanization., many local authorities are taking on these challenges with open, accountable and effective leadership and are eager to bring people into the sustainable and the political will to achieve socially equitable and environmentally sound development process.* Enabling structures that facilitate independent initiative and creativity, and that encourage the wide range of **genuine community involvement and participation partnerships,**

including with the **members in private sector enterprises that are advocating strong mandatory regulations to facilitate and drive socially equitable and environmentally sound development**, within and between countries, should be promoted. Furthermore, empowering all people, especially *[(members of)] vulnerable marginalized* and disadvantaged groups and people living in poverty, to participate equally and effectively in all activities related to human settlements is the basis for civic engagement, facilitated by the national authorities. Indeed, the Habitat Agenda provides a framework to enable people to take responsibility for the promotion and creation of **socially equitable and environmentally sound human sustainable human settlements**.

10 bis. [Human settlements problems are of multidimensional nature that has its main roots in poverty and underdevelopment and, in many countries, is aggravated by the scarcity of resources. It is recognized that human settlements are not isolated from the social and economic development of countries and that they cannot be set apart from the need for a favourable international framework for sustained economic growth and sustainable development.]

ARTICLE 11

11. There are critical differences regarding human **communities settlements** in different regions and countries and within countries. These differences, specific situations and varying capacities of each community and country need to be taken into account in the implementation of the Habitat Agenda. **Even though these critical differences exist there are overarching principles that have been agreed to internationally within which to group these differences; these principles are related to the enshrining and the guaranteeing of human rights, the preserving, protecting and conserving of the environment, the ensuring of social justice and the enabling of socially equitable and environmentally sound development.** *[(International, regional, sub-regional and national institutional arrangements, including the enhancement of the Commission on Human Settlements and the United Nations Centre for Human Settlements (Habitat) as the global focal points and allocation of resources, are central to the implementation of the Habitat Agenda.].* **In addition, it is essential that UNCHS recognize that the successful implementation of Habitat II depends on the necessity of examining the interdependence of issues and continually work with agencies involved in Environment, Human Rights, and Peace promotion.**

ARTICLE 12

12. The Habitat Agenda is a global call to action at all levels. It offers, within a framework of goals and principles, **previous obligations incurred and expectations created and new commitments undertaken**, a positive vision of **socially equitable and environmentally sound development of sustainable**

human settlements -- where all have adequate shelter, a healthy and safe environment, basic services, and *productive*, **environmentally sound** and freely chosen **meaningful** employment. The Habitat Agenda will guide all efforts to **finally** turn this vision, **which has been articulated through multiple international forums for over 50 years** into reality.

**PART II.
GOALS AND PRINCIPLES, OBLIGATIONS, AND EXPECTATIONS**

ARTICLE 13

13. We, the States participating in the United Nations Conference on Human Settlements (Habitat II) [~~are have undertaken committed to~~ a political, economic, environmental, ethical and spiritual vision of human settlements based on the principles of equality, solidarity, partnership, human dignity, respect and cooperation, through obligations incurred and expectations created in international instruments. ~~We]adopt the We undertake to observe the *goals and principles*, discharge obligations and fulfill expectations inherent in ensuring the right to of adequate shelter for all as agreed in previous international instruments and to socially equitable and environmentally sound human settlements. *sustainable human settlements development in an urbanizing world.* [We believe that the observance of principles, the discharging of obligations and the fulfilling of expectations *attaining these goals will promote ensure* a world more stable and free from injustice and conflict and contribute to just, comprehensive and lasting peace and to global equitable economic and social development and environmental protection.] [Civil, ethnic and religious strife, violation of human rights, nuclear armament, armed conflicts, alien and colonial domination, foreign aggression and occupation, international economic imbalance, coercive economic measures, poverty, organized crime, and terrorism in all its forms are destructive to socially equitable and environmentally sound development *sustainable human settlement development* and should therefore be renounced by all States.] At the national level we will reinforce and attain peace by *promoting ensuring* tolerance, non-violence and respect for diversity, and by settling disputes by peaceful means, by undertaking to reduce the production of arms, moving towards the ultimate elimination of arms production, and to discharge the obligation to eliminate the production and testing of weapons of mass destruction. At the local level, the prevention of crime and the promotion of sustainable communities are essential to the attainment of safe and secure societies. Crime prevention through social justice, equity and equality including the right to social security, the right to shelter and satisfaction of basic needs within a community of trust. *development is essential to crime prevention one crucial key to these goals.* At the international level, we will *promote ensure* international peace and security by undertaking immediately the substantial reduction the global military budget to that of 1981 the year in which there was a general assembly resolution calling for the freezing and reducing of the military budget and make and support all efforts to settle international disputes by peaceful means in accordance with the Charter of the United Nations.] We reaffirm and are guided by the purposes and principles of the Charter of the United Nations and by over 50 years of~~

obligations incurred and expectations undertaken through international instruments and we reaffirm our commitment to ensure the realization of the human rights set out in international instruments [including the right to adequate housing as provided for] in the Universal Declaration on Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of all Forms of Discrimination against Women and the Convention on the Rights of the Child [*, taking into account that the right to adequate housing should shall be realized progressively*]. We reaffirm that all human rights - civil, cultural, economic, political and social - are universal, indivisible and interdependent and interrelated. We subscribe to the following principles and goals to guide us in our actions.

ARTICLE 14

14. Equitable human settlements are those in which all people, without discrimination of any kind as to race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age**, language, religion **or conviction**, political or other opinion, *national or, social origin*, property, *birth, nature of residency* or other status have equal access to safe and **healthy** housing, infrastructure, health services, adequate food and water, education and open spaces. In addition, such human settlements provide equal opportunity for a *productive meaningful* and freely chosen livelihood; equal access to economic resources[*, including the right to inheritance*],/As agreed in the **Convention on the Elimination of All Forms of Discrimination** 5 d (vi) The right to inherit;

ARTICLE 16

16. [*Sustainable socially equitable and environmentally sound development is essential to human settlements development, while giving full consideration for the needs and necessities of achievement of economic growth in all countries, particularly in developing countries. Special consideration needs to be given to the specific situation of countries with economies in transition.*] Human settlements shall be planned, developed and improved in a manner that takes full account of **sustainable socially equitable and environmentally sound** development principles **observed and expectations created and all its components, as set out** in Agenda 21 and other related outcomes of the United Nations Conference on Environment and Development. Sustainable human settlements development ensures **socially equitable and environmentally sound economic development, meaningful** employment opportunities and social **justice progress**, in harmony with the environment. It incorporates, among the principles of the Rio Declaration which are equally important and other outcomes of the United Nations Conference on Environment and Development, that of the precautionary *approach principle*,

pollution prevention, respect for the carrying capacity of ecosystems, and preservation of natural heritage and socially equitable and environmentally sound opportunities for future generations. Production, consumption and transportation should be **developed** *managed* in ways that protect and conserve the stock of resources while drawing upon them. Science and technology have a crucial role in shaping sustainable human settlements and sustaining the ecosystems they depend upon. **As expressed in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of Humanity from 1975, there is continued concern “that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamentals”.** Sustainability of human settlements entails their balanced geographical distribution or other appropriate distribution in keeping with national conditions, promotion of **socially equitable and environmentally sound development** *economic and social development*, and human health and education, the **conservation and protection of** *maintenance* of biodiversity *promotion of economic and social development*, human health and education, and cultural diversity, as well as air, water, vegetation and soil qualities at standards sufficient to sustain human life and well-being for all time.

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 6 Habitat I)

Re: Precautionary principle

The expression “the Precautionary Principle” is used throughout the UNCED documents in Agenda 21, Convention on Biological Diversity, The Framework Convention on Climate Change, and the Rio Declaration

RE: ENSURING ENVIRONMENTAL AND CULTURAL PRESERVATION

It is the responsibility of Governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy, linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity** *mankind*. (III 2, Habitat I)

RE: PRESERVING OR PROTECTING NATURAL HERITAGE

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)
- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)
- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

RE: PROTECTING ENVIRONMENT AS COMMON HERITAGE

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of **humanity** *mankind* and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired ;by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

RE: PROCLAIMING USE OF SCIENTIFIC AND TECHNOLOGICAL DEVELOPMENT FOR STRENGTHENING INTERNATIONAL PEACE AND SECURITY

PROCLAIMING that all States shall promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975),

ARTICLE 17

17. The quality of life of the people depends, among other economic, social, environmental and cultural factors, on the physical conditions and spatial characteristics of our villages, towns and cities. City lay-out and aesthetics, land-use patterns, population and building densities, transportation and ease of access for all to basic goods, services and public amenities have crucial bearing on the livability of settlements. This is particularly important to *vulnerable marginalized* and disadvantaged persons, many of whom face barriers in access to shelter and in participating in shaping the future of their settlements. People's needs for community and their aspirations for more livable neighbourhoods and settlements should guide the process of **planning**, and **designing, management and maintenance** of human settlements. Objectives of *this endeavour* include protecting public health, providing for safety and security conditions, education, and social integration, promoting equality, respect for diversity and cultural identities, **increased ing** accessibility for persons with disabilities, and **preserv~~ing~~ation** of natural heritage and cultural heritage—historic, spiritual, religious and culturally significant buildings and districts, respecting local landscapes and treating the local environment with respect and care **through**

living within the carrying capacity of the ecosystem. [The preservation of **natural heritage** and historical monuments and buildings, particularly in the case of those declared by UNESCO as part of the **cultural and natural patrimony** of humanity, should be assisted through international cooperation.] **including states undertaking to sign and ratify the convention on the Protection of Cultural and Natural Heritage, and to enact the necessary legislation to ensure that significant cultural and natural heritage are protected and presented for international world heritage designation.**² It is also of crucial importance that spatial diversification and mixed uses of types of housing and services be promoted at the local level in order to meet the diversity of needs and expectations.

DOCUMENTATION OF PRECEDENTS

RE: PRESERVING, PROTECTING AND ENHANCING OF THE ENVIRONMENT

Every State has the right to exercise full and permanent sovereignty over its wealth, natural resources and economic activities, adopting the necessary measures for the planning ... of its resources, providing for the protection, preservation and enhancement of the environment. (II 8 Habitat I)

RE: PRESERVING OF NATURAL HERITAGE

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of mankind [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 19

19. All people have basic rights and must also accept their responsibility to respect and protect the rights of others - including **the rights of** future generations - and to contribute actively to the common good. **Socially equitable and environmentally sound Sustainable** human settlements are those that, inter alia, generate a sense of citizenship and identity, cooperation and dialogue for the common good, and a spirit of voluntarism and civic engagement, where all people are encouraged and have equal opportunity **for genuine community involvement and participation including the participation of those who have usually been marginalized from**

the decision making process to participate in decision-making and development. Governments at all appropriate levels, including local authorities, have a responsibility to ensure access to education and to protect their population's health, safety and general welfare. This requires, as appropriate, establishing policies, laws and regulations for both public and private activities, encouraging responsible private activities in all fields, facilitating community groups' participation, adopting transparent procedures, encouraging public-spirited leadership and public-private—**individuals and enterprises that engage in BEST (Best environmentally sound Traditions) practices or socially equitable and environmentally sound development— cooperation partnerships**, and helping people to understand and exercise their rights and responsibilities through open and effective participatory processes, universal education and information dissemination.

ARTICLE 20

*20. **Partnerships Cooperation** among countries and among **all individuals and groups in society actors** within countries from public, *private*, voluntary, and community-based organizations, the cooperative sector, non-governmental organizations and individuals are essential to the achievement of **socially equitable and environmentally sound sustainable** human settlements **Genuine community involvement and participation in decision making from the determining of the terms of reference and throughout the process is essential to achieving socially equitable and environmentally sound human settlements. To be inclusive particularly for the benefit of groups that are usually marginalized all decision making processes shall avoid jargon, buzz words, euphemism, unnecessary compilation or veiled intention.** *development and the provision assurance of adequate shelter for all and basic services. Partnerships can integrate and mutually support objectives of broad-based participation through, inter alia, forming alliances, pooling resources, sharing knowledge, contributing skills and capitalizing on comparative advantages of collective actions. The processes can be made more effective by strengthening civil organizations at all levels. Every effort must be made to encourage collaboration and partnership of all sectors of society and among all actors in decision-making processes as appropriate. **

ARTICLE 21

21. Solidarity with those who are less fortunate, disadvantaged and *vulnerable marginalized groups*, including people living in poverty, as well as **commitment to tolerance, non-discrimination and cooperation among all people, families and communities are foundations for social cohesion. Solidarity, cooperation and assistance should be enhanced by the international community as well as by States and all other relevant institutions and bodies actors** to respond to challenges **of socially equitable and environmentally sound development in human settlements development.** The international community and governments

at all appropriate levels are called upon to **discharge obligations and fulfill expectations** through enacting the necessary legislation to **ensure socially equitable and environmentally sound development** *the promote sound and effective policies and instruments, thereby* and through strengthening cooperation among governments and non-governmental organizations, as well **through providing as to mobilize** complementary resources to meet these challenges.

ARTICLE 22

22. [To safeguard the global needs and rights *interest* of present and future generations in human settlements including the right to a safe environment, the right to natural heritage, the right to social security and shelter, and to socially equitable and environmentally sound development including social justice is one of the fundamental goals of the international community. The implementation of the Global Plan of Action will require a willingness to make the necessary attitudinal changes, particularly in relation to respecting and trusting the present generation of youth, and in relation to ensuring the rights of the present generation of youth, of marginalized people in global societies, and the rights of future generations; and a flow of new and additional financial support from different sources including from reducing of the global military budget and from deferred taxes from corporations including transnational corporations and to transfer resources to developing countries in order to cover the incremental costs of the socially equitable and environmentally sound actions they have to undertake to address *deal with human settlements* problems and to accelerate socially equitable and environmentally sound development *sustainable development*.] In additions compensation shall be sought from corporations that have violated human rights, caused environmental degradation, and contributed to conflict and war.

DOCUMENTATION OF PRECEDENT

RE DESIGNATING OF HERITAGE OF OUTSTANDING INTEREST

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

- Reaffirming that *man* **[humans]** must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: CONSERVING BIODIVERSITY FOR FUTURE GENERATIONS

- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

**Part III.
OBLIGATIONS DISCHARGED, EXPECTATIONS FULFILLED AND
COMMITMENTS UNDERTAKEN**

[The Global Plan of Action *is* shall be revised to be *drawn up* in full conformity with the purposes and principles of the Charter of the United Nations, and with the over-51 years of obligations incurred in Treaties, Conventions, and Covenants, and of expectations created in Declarations, General Assembly Resolutions and Conference Agendas. *The implementation of the recommendations contained in this plan of action is the sovereign right of each State consistent with national laws and development priorities, as well as with full respect for the various religious, ethical values, cultural backgrounds and philosophical convictions of its people, and in conformity with universally recognized international human rights.*]/4 The implementation of the recommendations in this plan of action should reflect sovereign equality as specified in the original Charter of the United Nations. Sovereign equality does not mean that states have the sovereign right to not comply with obligations or fulfill expectations from previous international instruments.

COMMENT ON OBLIGATIONS AND EXPECTATION

We are mindful *that since* the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Treaties, Covenants, Conventions, and have created expectations reflected in Declarations, General Assembly Resolutions, and Conference Agendas, and that if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been ensured, preservation and protection of the environment could have been preserved, protected and conserved, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Cognizant that only when these obligations are discharged and expectations fulfilled will we have the global community that is socially equitable and environmentally sustainable.

RECOGNIZING that for fifty-one years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant on Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

States undertake to introduce the following resolution in the General Assembly.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

ARTICLE 23

23. [Embracing the foregoing principles of compliance and equality through the discharging of obligations, through the fulfillment of expectations and through the undertaking of commitments we, as participating States in this Conference, *commit ourselves* undertake to implement the Habitat Agenda including through sub-national, national, sub-regional and regional plans of action and other policies and programmes drafted and executed in cooperation with all individuals and members of civil society that embrace the international principles related to enshrining and guaranteeing human rights, to preserving, protecting and preserving the environment, and to ensuring social justice and the prevention of conflict and war **key actors** at all levels and supported by the international community. In implementing these commitments we shall give special attention to the circumstances and needs of people who are homeless, living in poverty, or are in some other way disadvantaged or marginalized *vulnerable*, especially those who are women, children, older people, indigenous people, displaced people or people with disabilities.]/6 In addition, we recognize *taking into account* that there shall be respect for nature beyond human purpose and that human beings are crucial in the promotion of *are at the centre of concerns* for *sustainable* socially equitable and environmentally sound development, including adequate shelter for all and sustainable human settlements development, and they are entitled to a healthy and *productive meaningful* life in harmony with nature.]/5

A. ADEQUATE SHELTER FOR ALL

ARTICLE 24

24. [We reaffirm our *commitment to the progressive realization* obligation to ensure enactment of the right to adequate— affordable, accessible, tenure security, safe, healthy and environmentally sound— housing, as set out in numerous international instruments. In this context, we recognize the fundamental obligation of governments to enable people to obtain shelter and to protect and improve dwellings and neighbourhoods, and to foster and facilitate genuine involvement and participation in the development of the community.] We commit ourselves to the goal of improving living and working conditions on an equitable and sustainable basis, so that everyone will have adequate shelter which is healthy, safe, secure, accessible and affordable and which includes basic services, facilities and amenities and the enjoyment of freedom from discrimination in housing and legal security of tenure. We shall implement and promote this objective in a manner fully consistent with human rights standards./7

DOCUMENT FOR PRECEDENT

RE: PRESERVING LAND RIGHTS OF INDIGENOUS PEOPLES

i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

RE: CONDEMNING DISPLACEMENT OF NATIVE POPULATION

(e) In all occupied territories, changes in the demographic composition, or the transfer or uprooting of the native population, and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. the heritage and national identity must be protected. Any policies that violate these principles must be condemned.

RE: ESTABLISHING SUFFICIENT PROTECTING OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE; ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should **shall** pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to *[[quality]]* education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, birth or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983

DOCUMENTATION OF PRECEDENTS

RE: AFFIRMING THE RIGHT TO EDUCATION

- Recalling its resolutions 34/170 of 17 December 1979, 35/191 of 15 December 1980 and 36/152 of 16 December 1981 on the right to education,
- Recalling the International Covenant on Economic, Social and Cultural Rights, adopted by its resolution 2200 A (XXI) of 16 December 1966, which recognizes the right of everyone to education,
- Bearing in mind the importance of the Convention against Discrimination in Education, adopted on 14 December 1960 by the General Conference of the United Nations Educational, Scientific and Cultural Organization (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: REAFFIRMING THE IMPORTANCE OF IMPLEMENTING THE RIGHT TO EDUCATION

Reaffirming the paramount importance of the implementation of the right to education for the full development of the human personality and for the enjoyment of other fundamental human rights and freedoms (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: AFFIRMING THE RIGHT OF EDUCATION FOR ALL REGARDLESS OF STATUS

Recalling that, since its establishment, the United Nations Educational, Scientific and Cultural Organization has constantly striven for effective realization of the right to education and equality of educational opportunities for all, without distinction as to race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, economic status or birth and that, for many years past, activities directed to securing the right to education and the extension and improvement of educational and training systems in Member States, more particularly in the developing countries, have occupied a central place in that organization's programme (GA Resolution, The Right to Education 37/178 17, December 1982)

RE: AFFIRMING UNIVERSAL ACCESS TO EDUCATION

We commit ourselves to promoting and attaining the goals of universal and equitable access to quality education, the highest attainable standard of scholarly, academic, ethical, physical and

mental health, and universal access of all to primary health care, making particular efforts to rectify inequalities relating to social conditions, and without distinction as to race, tribe, national origin, gender, age or disability, **sexual orientation, family structure and other status in the achievement of socially equitable and environmentally-sound development** (Commitment 6, ICPD)

To this end, at the national level, we will:

B. Emphasize lifelong learning by seeking to improve the quality of education to ensure that people of all ages are provided with useful knowledge, reasoning ability, skills and ethical and social values required to develop their full capacities in health and dignity. In this regard, women and girls should be considered a priority group. (ICPD)

Recognize and support the right of indigenous people to education in a manner that is responsive to their specific needs, aspirations and cultures, and ensure their full access to health care (g Commitment 6, ICPD)

Develop broad-based education programmes that promote and strengthen respect for all human rights and fundamental freedoms, including the right *to development* to **socially equitable and environmentally-sound development**, promote the values of tolerance, responsibility and respect for the diversity and rights of others, and provide training in peaceful conflict resolution, in recognition of the United Nations Decade for Human Rights Education (1995-2005, Commitment 6, ICPD)

Education is a basic human right and an essential tool for achieving the goals of equality, development, **environmental integrity** and peace (71 Platform of Action).

RE: RESTRUCTURING OF EDUCATIONAL SYSTEM:

The United Nations, through its almost 50 years of operation, has strongly supported the development of international instruments to address the violation of human rights, the escalation of war and conflict, the degradation of the environment, and the denial of equality/equity (including specifically gender Equality/equity) and social justice. Similarly, states have undertaken obligations through international conventions treaties, resolutions, to address these issues.

In most of the international documents there has been provision for educating the global community in a way that would achieve the “goals of justice”. To legitimately reflect these issues in education, requires a complete restructuring of the educational system. The global community should begin to embrace a new vision of education that fosters a commitment to addressing the above issues, along with a stimulation of thinking, in a non-evaluative collaborative environment.

Equal access to an educational system that is inequitable, competitive and hierarchical will not provide the necessary changes to address the issues facing the global community. Equal access plus a complete restructuring of the educational system is essential.

To achieve the above vision, and to discharge international obligations related to the promotion of socially equitable and environmentally-sound development, peace, and respect for human rights, the international community must move from an inequitable, hierarchical, biased, and competitive, model dependent educational system —a system that reproduces the current socioeconomic, political global structure to a new vision of education that is one of tolerance cooperation and intellectual stimulation.

RE: ENSURING UNIVERSAL ACCESS TO HEALTH CARE

Ensure, on a basis of equality of men and women, universal access to health-care service, including those related to reproductive health care, which include family planning and sexual health. reproductive health-care programmes should provide the widest range of services without any form of coercion (Principles 8 International Conference on Population and Development, 1994)

ARTICLE 25 j

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE PRIORITY OF SOCIAL SERVICES

Recommendation C 15
Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:
(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;
(Recommendation C 15, Habitat I)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

[(k) Protecting within the national context, the traditional rights to land and other resources of pastoralists, fishery workers and nomadic and indigenous people and strengthening land management;]

[(l) Avoiding forced illegal evictions, when possible; when unavoidable, to strive for rehabilitation.]

B. SUSTAINABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND HUMAN SETTLEMENTS

ARTICLE 26

[26. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *the goal of socially equitable and environmentally sound sustainable human settlements in an urbanizing world* by developing economies that will preserve, protect and conserve the environment, and that will make efficient use of limited resources, through BEST practices, within the carrying capacity of ecosystems and by providing all people with equal opportunities for a healthy, safe and *productive meaningful* life in harmony with nature and with natural and cultural heritage and spiritual and cultural values, ensuring social justice *progress*.

DOCUMENTATION OF PRECEDENTS

RE: BEING WITH THE CARRYING CAPACITY OF ECOSYSTEMS

Recommended extensively throughout all literature on Ecology and the Environment. The need for socially equitable and environmentally sound development within the carrying capacity of ecosystems is an essential principle of sustainability.

ARTICLE 27

27. We further *commit ourselves to the objectives of:* recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the following:

(a) *Promoting ensuring* socially integrated human settlements, combating segregation, discriminatory and other exclusionary policies and practices and recognizing and respecting the rights of all, *especially women and the poor* ; including those who have been discriminated on the basis of gender, sex sexual orientation, marital status, age, disabilities, race, tribe, or culture, colour, ethnicity, national, ethnic or social origin, nationality, place of birth, refugee or immigrant status, aboriginal ancestry, religion or conviction, language, political or other opinion, socioeconomic conditions, nature of residency and other status

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE INHERENT DIGNITY OF ALL MEMBERS OF THE HUMAN FAMILY AS BEING THE FOUNDATION OF FREEDOM, JUSTICE AND PEACE

Recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the World (Preamble, Universal Declaration of Human Rights, 1948)

RE: ENSURING EQUALITY BEFORE THE LAW

All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law shall prohibit any discrimination and guarantee to all persons equal and effective protection against discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status (Art. 26, International Covenant on Civil and Political Rights, 1966)

RE; ENCOURAGING TOLERANCE AND ELIMINATING OF ALL FORMS OF DISCRIMINATION

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, **sexual orientation, family structure**, or other status. (Art. 2, The Universal Declaration of Human Rights, 1948)

RE: BEING CONVINCED THAT ANY DOCTRINE OF SUPERIORITY BASED ON RACIAL DIFFERENTIATION IS SCIENTIFICALLY FALSE...

Convinced that any doctrine of superiority based on racial differentiation is scientifically false, morally condemnable, socially unjust and dangerous, and that there is no justification for racial discrimination, in theory or in practice, anywhere (Preamble, International Convention on the Elimination of All Forms of Racial Discrimination, 1965)

RE: STRENGTHENING LEGAL FRAMEWORKS FOR ACCESS TO LAND AND OWNERSHIP...IN PARTICULAR FOR WOMEN

Consider strengthening/developing legal frameworks for land management, access to land resources and land ownership - in

particular, for women - and for the protection of tenants (3.8.h Combating Poverty, Agenda 21, UNCED, 1992)

RE: UNDERTAKING ACTIONS TO PROMOTE FOOD SECURITY

Undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.8. l., Combating Poverty, Agenda 21, UNCED 1992)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO THE POOR AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ELIMINATING THE PRACTICE OF ADDING POVERTY PROGRAMS AS AN AFTERTHOUGHT

How can poor and traditionally excluded people gain an integral role in economic development that addresses squarely the poverty and inequality that is crippling the hemisphere? Poverty programs should not be added to development strategies as an afterthought. Poor people, small farmers and small businesses must be treated as potential generators of wealth and engines of economic growth. Critical issues of food security, land tenure and agricultural policy for the majority of the region's farmers (PROMISES TO KEEP The Unfinished Agenda for Human Rights and Economic Justice in the Americas, 1994)

ARTICLE 27 b-h

(b) Ensuring the acknowledging and harnessing the potential of the informal sector, *where appropriate*, in providing housing and services for the people in poverty *poor*;

(c) Ensuring *Promoting* changes in production and consumption patterns and settlements structures that will protect **natural environment natural resources - including water, air, bio-diversity, energy and land - providing a healthy living environment for all;**

(d) Ensuring *Promoting spatial development* the development of spatial patterns that reduce transport demand, as well as that create *creating* efficient, effective and environmentally sound publicly owned transportation systems that improve accessibility to work, goods, services and amenities;

(e) Preserving natural ecosystems and protecting agricultural *productive* land in urban and rural areas and protecting fragile ecosystems from the negative impacts of human settlements;

(f) Preserving, protecting and maintaining natural, historic and cultural heritage, including traditional shelter and settlements patterns and *pathways*, as appropriate, as well as landscapes and urban flora and fauna in open and green spaces;

DOCUMENTATION OF PRECEDENTS.

RE: PRESERVATION OF HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

Noting the recognition of the World Heritage committed meeting in 1993 when the committee recognized the protection of cultural pathways

(g) Ensuring cooperative socially equitable and environmentally sound development and meaningful employment *Enabling competitive and sustainable economic development that will attract investments, generate employment and provide revenues for human settlements development;*

(h) *Alleviating* preventing and eliminating undesired impacts of structural adjustment and economic transition on human settlements by undertaking to develop a socially equitable and environmentally sound alternative with genuine community participation and involvement; and

COMMENT

RE: RE-EXAMINING THE IMPACT OF STRUCTURAL ADJUSTMENT PROGRAMS

Increasing negative impact of structural adjustment programs
The international debt crisis, which has forced nations to undergo structural adjustment programs, has undermined nation states to implement or maintain food security policies. Increased trade liberalization, with the World Trade Agreement will further restrict the nation state from implementing food security policies. The negative consequences of structural adjustment programmes have had negative consequences such as increased poverty, unemployment, social disintegration, health care decline, environmental degradation, reduced access to education, and escalation of conflict. (Global Compliance Research Project)

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING REVIEW OF STRUCTURAL ADJUSTMENT

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: CRITICIZING OF STRUCTURAL ADJUSTMENT PROGRAMS

Concerned about the negative impact on the poor, especially women and children, of the International Monetary Fund and World Bank structural adjustment policies (Women's Action Agenda, 1992)

In many countries, in particular in developing and least-developed countries, [structural adjustment,] [the deterioration of public health systems, a decrease in public health spending and in some cases, increasing privatization of health care systems without appropriate guarantees of universal access] further reduce health care availability. This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles including within the family and the community are often not acknowledged and as such do not receive the necessary social, psychological and economic

support (93 Advanced Draft Platform of Action, UN Conference on Women, 1995)

RE: CONTRIBUTING OF STRUCTURAL ADJUSTMENT TO DETERIORATION OF PUBLIC HEALTH SYSTEMS

In many countries, especially in developing countries, in particular the least developed countries, a decrease in public health spending and, in some cases, structural adjustment, contribute to the deterioration of public health systems. In addition, privatization of health-care systems without appropriate guarantees of universal access

to affordable health care, further reduces health-care availability.

This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles, including their roles within the family and the community, are often not acknowledged; hence they do not receive the

necessary social, psychological and economic support (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: ASSESSING IMPACT OF STRUCTURAL ADJUSTMENT ON WOMEN AND GIRL CHILDREN

22. Macro and micro-economic policies and programmes, including structural adjustment, have not always been designed to take account of

their impact on women and girl children, especially those living in poverty. Poverty has increased in both absolute and relative terms, and

the number of women living in poverty has increased in most regions. There are many urban women living in poverty; however, the plight of women living in rural and remote areas deserves special attention given

the stagnation of development in such areas. In developing countries, even those in which national indicators have shown improvement, the majority of rural women continue to live in conditions of economic underdevelopment and social marginalization (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: PROPOSING DEBT FORGIVENESS

Find effective development-oriented and durable solutions to external debt problems in order to help them to finance programmes and projects targeted at development, including the advancement of women, inter alia, through the immediate

implementation of the terms of debt forgiveness agreed upon in the Paris Club in December 1994, which encompassed debt reduction, including cancellation or other debt relief (Habitat II) measures and develop techniques of debt conversion applied to social development programmes and projects in conformity with Platform priorities; (61 c Platform of Action. UN Conference on Women: Equality, Development and Peace)

. ARTICLE 27 J

(i) Preventing and reducing the impact of natural and human-made disasters on human communities *settlements*, by enshrining the notion of healthy community as “healthy, safe and environmentally sound communities,” by eliminating patterns of consumption and development that have increased societal vulnerability to disasters, by promoting and funding BEST practices, and by embracing a culture of safety.

DOCUMENTATION OF PRECEDENTS

RE: PROMOTING A CULTURE OF SAFETY

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(7.60, Disasters)

This principle involves the commitment to act to prevent rather than to [correct]

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(Agenda 21, 7.60)

Profoundly concerned that the situation of children in many parts of the world remains critical as a result of inadequate social conditions, natural disasters, armed conflicts, exploitation, illiteracy, hunger and disability, and convinced that urgent and effective national and international action is called for **and needed** (Preamble, Convention on the Rights of the Child, 1989)

RE: PREVENTING DISASTER

The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation

will significantly enhance our ability to achieve real progress in **preventing** *mitigating* disasters through the transfer of **Best Ecologically Sound Traditions** *technology* and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention on Natural Disaster, 1994).

RE: RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL DISASTERS

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability ...(A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

RE: RECOGNIZING DISASTER PREVENTION...BETTER THAN DISASTER RESPONSE

Disaster prevention, *mitigation and preparedness* **are** better than disaster response in achieving the goals and objectives of the Decade. Disaster response alone is not sufficient, as it yields only temporary results at a very high cost. We have followed this limited approach for too long.

This has been further demonstrated by the recent focus on response to complex emergencies which, although compelling, should not divert from pursuing a comprehensive approach. Prevention contributes to lasting improvement in safety and is essential to integrated disaster management (3 a Convention on Natural Disaster, 1994).

RE: DEVELOPING A GLOBAL CULTURE OF PREVENTION

Development of a global culture of prevention as an essential component of an integrated approach to disaster reduction; (9 a The World Conference on Natural Disaster Reduction, 1994)

RE: INCORPORATING DISASTER PREVENTION...IN DEVELOPMENT PLANNING

Incorporate disaster reduction prevention *or mitigation* in socioeconomic development planning based on the

assessment of the risk (11a i The World Conference on Natural Disaster Reduction, 1994)

**RE: STIMULATING GENUINE COMMUNITY INVOLVEMENT...
REDUCING VULNERABILITY OF COMMUNITIES TO NATURAL
DISASTERS**

Stimulate genuine community involvement and empowerment of women and other socially disadvantaged groups at all stages of disaster management programmes in order to facilitate capacity building, which is an essential precondition for reducing vulnerability of communities to natural disasters (11 q Convention on Natural Disaster Reduction, 1994).

**RE: EXPRESSING THE POLITICAL COMMITMENT
TO...THROUGH LEGISLATION....AT [GLOBAL] NATIONAL,
COMMUNITY LEVEL**

Express the political commitment to reduce their vulnerability, through declaration, legislation, policy decisions and action at the highest level, which would require the progressive implementation of disaster **prevention assessment and reduction** plans at the **global** national and community levels (11 a Convention on Natural Disaster Reduction 1994)

**RE: EXTENDING THE CONCEPT OF DISASTER REDUCTION TO
COVER NATURAL AND OTHER DISASTER SITUATIONS
INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL
DISASTERS (NA-TECHS)**

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries (B i Convention on Natural Disaster, 1994)

**RE; RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE
POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL
DISASTERS**

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged

groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability, if planned and managed in a way to ameliorate the social and economic conditions of the affected groups and communities. (A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

C. Means of Discharging Obligations and Fulfilling Expectations *Enabling Action*

ARTICLE 28

28. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the *We commit ourselves to the strategy of enabling all key actors, in the public, private and the community sectors, the genuine involvement and participation of individuals and groups of civil society to play an effective role - at national, state/provincial, metropolitan and local levels-in the socially equitable and environmentally sound development of human settlements and shelter development.*

ARTICLE 29

29. We further ensure *commit ourselves to the objectives of:*

(a) *Exercising public authority and The using of public resources with openness transparency and accountability;*

(b) *The Decentralizing within a framework of overarching international principles, authority and resources, as appropriate, as well as functions and responsibilities to the level most effective in addressing needs of people in their settlements;*

(c) *Promoting The establishing of institutional and legal frameworks and capacity-building conducive to civic engagement and to inclusive genuine community involvement and participation in socially equitable and environmentally sound development of settlements broad-based participation in human settlements development;*

(d) *The providing of capacity-building for the socially equitable and environmentally sound development of human settlements management and development;*

(e) *The supporting of institutional and legal enabling frameworks for mobilizing providing financial resources for socially equitable and environmentally sound development of human settlements sustainable shelter and human settlements development;* and

(f) *The promoting equal access to reliable information, utilizing, where appropriate, modern communications technology and networks.]*

[Gender Equality

29 bis.. We recognize that through international agreements we have incurred obligations related to the equality of women from the inception of the United Nations Charter and throughout subsequent human rights documents, and we recognize that further expectations have recently been created in the Platform of Action from the UN Conference on Women: Equality, Development and Peace, we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *We commit ourselves to the goal of gender equality in human settlements development. We further commit ourselves to the objectives of ensure:*

(a) Integrating gender perspectives in human settlement-related policies, programmes and projects, and the promotion of the full and equal participation of women in human settlement planning and decision-making; and

(b) Developing methodologies for incorporating gender perspectives in shelter planning, development and evaluation, such as the collection, analysis and dissemination of gender-disaggregated data and information, and the development of gender-based indicators.]

D. Financing shelter and human settlements

[30. We commit ourselves to **undertake to strengthening** existing financial mechanisms and, *where appropriate, developing new sources of funding mechanisms* for financing the implementation of the Habitat Agenda, **such as funding from a substantial reduction of the global military budget, from deferred taxes from corporations or transnationals, or from compensation for environmental degradation.**

COMMENT:

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget and a resolution to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81.

which will mobilize increased sources of finance - public, private, multilateral and bilateral - at international, regional, national and local levels; and will promote the efficient, effective and accountable resource allocation and management.]

[31. We further commit ourselves to the objectives of :

(a) Stimulating national and local economies, through **ensuring socially equitable and environmentally sound development enabling competitive and sustainable economic development, that will attract public and international financial resources and private investments, generate employment and increase revenues, providing a stronger financial base to support shelter and human settlements development;**

(b) Strengthening fiscal and financial management capacity, at all levels, to fully develop the taxation base, pricing mechanisms and other sources of revenue;

(c) Enhancing public revenue through the use, as appropriate, of fiscal instruments which are conducive to environmentally friendly practices, in order to promote direct support for **socially equitable and environmentally sound development sustainable human settlements;**

(d) Strengthening regulatory and legal frameworks such as **MINS 1997 to drive the development, promotion and implementation of BEST (Best Environmentally Sound Traditions) practices to enable markets to work and to facilitate independent initiative and creativity, as well as to encourage a wide range of partnerships to finance shelter and human settlements development;**

(e) Promoting increased equitable access to credit for all;

(g) targeting, where appropriate, subsidies to those who are not served by the market, and promoting appropriate credit mechanisms and other instruments to address their needs.]

E. International cooperation/12

ARTICLE 32

[32. We commit ourselves - in the interests of international peace, security, justice and stability - to **reduce the global military budget by 50 % and to reallocate the financial resources saved from the reduction to economic and social as undertaken through General Assembly Resolutions in 1981. In addition we commit to enhancing international cooperation and partnerships which will assist in the to implement implementation of the national and the global plans of action and the attainment of the goals of the Habitat Agenda, by contributing to and participating in multilateral, regional and bilateral cooperation programmes and institutional arrangements and technical and financial assistance programmes; by the interchange of BEST (Best Environmentally Sound Traditions) practices exchange of appropriate**

technology; by the collection, analysis and dissemination of information about shelter and human settlements, and by international networking.]

ARTICLE 33

[33. We further commit ourselves to the objectives of:

(a) Striving for the fulfillment of the accepted target of 0.7 per cent of gross national product for official development assistance for **socially equitable and environmentally sound development**, as soon as possible, as well as increasing, within it, the share for funding for **socially equitable and environmentally sound development, human settlements and shelter development;**

(b) Using resources and economic instruments in an effective, efficient and equitable manner, at the local, national, regional and international levels; and

(c) Promoting responsive international cooperation between public, *private* **BEST practices enterprises** and non-profit, non-governmental and community organizations.]

F. Assessing the discharging of obligations and the fulfillment of expectations *progress*

ARTICLE 34

[34. We commit ourselves to monitor and evaluate, within our own countries, efforts to implement national plans of action, striving to ensure efficiency and effectiveness in meeting the goals of adequate shelter for all and sustainable human settlements development.] **In addition we also commit to discharge our previous obligations incurred through Conventions, Treaties and Covenants by signing what we have not yet signed, ratifying what we have not yet ratified, enacting legislation to ensure compliance, and establishing an enforcement infrastructure to ensure the discharging of these obligations and the fulfilling of these expectations, and we commit to fulfilling previous expectations created through Declarations, General Assembly Resolutions and Conference action statements. To demonstrate our commitment to over 50 years of obligations and expectations we also commit to the establishment of an International Court of Compliance where citizens can take evidence of state non-compliance with obligations and expectations. For this purpose we pledge to support a General Assembly Resolution in the 51 session of the United Nations to commemorate the culminating of the Decade devoted to the promotion and furtherance of International Law.**

ARTICLE 35

[35. We further commit ourselves to the objective of enhancing the role and strengthening the institutional capacity of UNCHS (Habitat) as an agency of coordination and cooperation assisting the Member States of the United Nations to monitor and evaluate the implementation of the Habitat Agenda, using *shelter and urban indicators and best* **BEST (Best Environmentally Sound Traditions)** practices as a basis for assessing global conditions and trends in shelter and **socially equitable and environmentally sound development human settlements development.**]

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

A. Introduction

ARTICLE 36

36. Twenty years ago in Vancouver, at the First United Nations Conference on Human Settlements (Habitat I), the world community adopted an agenda for human settlements development. Since then, there have been remarkable changes in population and social, political, environmental and economic circumstances **that could have with the needed international and national political will have permitted the fulfillment of the expectations of Habitat I. affect strategic outlook.** These changes have led many Governments to adopt and promote enabling policies to facilitate actions by individuals, families, communities and the private sector to improve human settlements conditions. However, it is estimated that at least 1 billion human beings still lack adequate shelter and are living in unacceptable conditions of poverty, mostly in developing countries.

ARTICLE 37

37. While the rate of population growth is on the decline, during the past twenty years world population has increased from about 4.2 billion to about 5.7 billion, with nearly one third under 15 years of age, and an increasing number of people living in towns, cities, and mega-cities. By the turn of the century, humankind will be crossing a threshold where over 50 per cent of the population live in urban areas. Meeting the needs of the nearly 2 billion more people expected in the coming two decades and managing human settlements towards sustainability will be a daunting task. In developing countries, in particular, rapid urbanization and the growth of towns, cities, and mega-cities, where public and private resources tend to concentrate, represent new challenges and at the same time new opportunities: there is a need to address the root causes of these phenomena, including rural to urban migration.

ARTICLE 38

38. [Globalization of the world economy and deepening interdependence among nations presents challenges and opportunities as well as risks and uncertainties for the future of the world economy. As a result, the level of economic development has increased in some countries, while the situation in a large number of them remains critical and uncertain. At the same time, the gap between developing and developed countries, the poor and rich - countries as well as people - has widened. New communications technology makes information much more widely accessible and accelerates all processes of change. In many societies, new issues of social cohesion and personal security have emerged and the issue of solidarity has become

central. Poverty, unemployment, environmental degradation, social disintegration and the increasing movement of people, as well as intolerance and violence have also emerged as critical factors. We must keep these new conditions in view as we draw up **plans for socially equitable and environmentally sound human settlements strategies** for the first two decades of the twenty-first century.

ARTICLE 39

39. While Habitat II is a Conference of States and there are many things national Governments can do to enable local communities to solve problems, the **people actors** who will determine success or failure in improving the **condition of human settlements condition** are mostly found at the community level *in* with the public, *private the BEST practices enterprises, and the individuals and groups of civil society non-profit sectors*. It is they, local authorities, **in Best practices enterprises and other [stakeholders], individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society** who are on the front line in achieving the goals of Habitat II. **Although the principles and standards arising from obligations and expectations should be established at the international level,** structural causes of the problems have often to be dealt with at the national and sometimes the international level, **progress the discharging of obligations and the fulfillment of expectations** will depend to a large degree on local authorities, **with genuine community involvement and participation civic engagement and the forging of partnerships** at all levels of government with the *private sector the BEST practices enterprises, and the individuals and groups of civil society, such as* the cooperative sector, non-governmental and community-based organizations., *workers and employers and civil society at large.*

ARTICLE 40

40. Habitat II is one in an extraordinary series of World Conferences held under the auspices of the United Nations over the past five years. All addressed important issues of people-centred **sustainable socially equitable and environmentally sound development**. **These Conferences, though significant, should not minimize the extensive obligations previously incurred by states in conventions, treaties and covenants, and the extensive expectations created in Declarations, General Assembly resolutions and other pre-1992 conference action plans.** It is easy with short institutional memory to ignore past obligations and expectations. Habitat II provides a unique opportunity to incorporate significant obligations and expectations from pre-1992 international instruments with post-1992 international instruments including **the four previous conferences in this series.** *including sustained economic growth and equity, for which successful implementation requires action at all levels, particularly at the local level. Strategies on social, economic, environmental, disaster reduction, population, disability and gender issues will have to be*

implemented in urban and rural areas and, in particular, where the problems are acute and generate tension.

ARTICLE 41

41. In Habitat II, Governments at all levels, **the BEST practices enterprises**, and **the individuals and groups of civil society** *the community and the private sector* considered how the achievement of the two principal goals of "Adequate shelter for all" and "socially equitable and environmentally sound *Sustainable* human settlements *development in an urbanizing world*" can be furthered at the local level through an enabling process in which individuals, families and their communities play a central role **through genuine community involvement and participation**. **The implementation of the Habitat Global Plan of Action requires the genuine involvement and participation of governments at all levels, the BEST practices enterprises, and the individuals and groups of civil society** *This is what is special about the Habitat II Global Plan of Action and its strategies for implementation. Implementation of these measures will need to be adapted to the specific situation of each country and community.*

ARTICLE 42

42. *The strategy of* **The implementation of** the Global Plan of Action is **dependent** *based on enabling* **cement the involvement and participation of citizens in a process that is honest, genuine and open transparency and participation**. *Under this strategy,* **government** efforts are based on establishing legislative, institutional and financial frameworks that will enable **the BEST practices enterprises**, and **the individuals and groups of civil society** to fully contribute **to socially equitable and environmentally sound development** *[sustainable development, including sustained growth]* and enable all women and men to work with each other and in their communities with Governments at all levels, **to establish terms of reference**, determine collectively their future, decide on priorities for action, identify and allocate resources fairly and *build partnerships* **work cooperatively** to achieve common goals. **This cooperative process will set up** the conditions for women and men to exercise their individual rights and responsibilities equally and to engage their abilities effectively in activities that will improve and sustain their living environments (b);

Enablement creates:

(a) A situation in which the full potential and resources of all actors in the shelter production and improvement process are mobilized;

Article 42 (c)

42 (c) The conditions for organizations and institutions to interact and network, **building fostering and ensuring genuine community involvement and**

participation *partnerships* for socially equitable and environmentally sound development [*sustained economic growth and sustainable development*];

...

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

B. Adequate shelter for all/14

ARTICLE 44

44. [Since the adoption of the Universal Declaration of Human Rights in 1948, the right to adequate housing has been recognized as an important component of the right to an adequate standard of living. All nations without exception have *some form of an obligation to provide for in the shelter sector, as exemplified by their creation of ministries of housing or agencies, by their allocation of funds for the housing sector and by their policies, programmes and projects.*]

[The provision of adequate housing for everyone requires action not only by governments, but by **all society working cooperatively sectors of society**, including the **BEST practices enterprises**, and **the individuals and groups of civil society private sector, non-governmental organizations**, local authorities, as well as by international organizations (community)] *Within the overall context of an enabling approach, Governments* should take appropriate action [in order to promote, protect and, ensure *the progressive realization of the enactment of the right to adequate housing.*] These include, but are not limited to **ensuring the following**:

1. *Providing Adequate* legal protection from, and effective remedies against discrimination of any kind in housing as to *race, colour, sex, language, religion, political or other opinion, national or social origin, [[property, birth or other status];* race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin**, **nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age**, language, religion **or conviction**, political or other opinion, *national or, social origin*, property, *birth*, **nature of residency** or other status
2. *Providing* Legal security of tenure and equal access to land among all, including women and those living in poverty, as well as effective protection [from illegal forced evictions]/15;
3. *Adopting* Policies aimed at making housing habitable, affordable and accessible, including for those who are unable to secure adequate housing through their own means, by inter alia:
 - a) Expanding the supply of affordable housing through *appropriate* regulatory measures, **including rent control** and market incentives;

- b) Increasing affordability through provision of subsidies and rental and other forms of housing assistance to people living in poverty;
- c) Supporting community-based, cooperative and non-profit rental and owner occupied housing programmes;
- d) Promoting supporting services to homeless and other *vulnerable marginalized* groups;
- e) *Mobilizing Providing* innovative [~~domestic~~] financial and other resources - public and private - for housing and community development;
- f) Creating and promoting market based incentives to encourage the private sector to meet the need for affordable rental and owner occupied housing;
- g) Promoting **socially equitable and environmentally sound** *sustainable spatial* development patterns and **environmentally sound** transportation systems that improve accessibility to goods, services amenities and work.

4. Effective monitoring and evaluation of housing conditions including the extent of homelessness and inadequate housing and, in consultation with the affected population, to formulate and adopt appropriate housing policies and implement effective *strategies* means and plans to address these problems.

ARTICLE 47

47. International and national cooperation at all levels will be both necessary and beneficial in promoting adequate shelter for all. This is especially needed in areas that are affected by war or by natural, industrial or technological disasters, and in situations in which reconstruction and rehabilitation needs surpass national resources.

ARTICLE 48

48 ter. [To ensure the continuing *progress* discharging of obligations and the fulfilling of expectations in the enactment of the right to *toward realizing* an adequate standard of living for all, national and local governments , *as appropriate*, should adopt:

(a) Provisions to ensure:

(i) freedom from discrimination based on race, ethnicity, gender, family composition, and disability status in housing and credit markets, and specifically, recognition that the right to an adequate standard

of living pertains to every person, including those in female-headed households; and

(ii) legal security of tenure and equal access to land among all, including women and people living in poverty;

(b) Policies aimed at making housing habitable, affordable, and accessible, including:

(i) creation of *market-based* incentives to encourage the **BEST practices enterprises** to meet the need for affordable rental housing and home ownership;

48 (ii) promoting spatial development patterns and **safe and environmentally sound public transportation systems** that improve accessibility to goods, services and amenities;

NOTE WORDING ALREADY AGREED TO IN ARTICLE 44 G

DOCUMENTATION OF PRECEDENTS

RE: PREVENTING AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: PROVIDING SAFE AND *LESS POLLUTING* BEST PRACTICES — BEST ECOLOGICALLY SOUND TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 48 (iii—viii)

(iii) *mobilizing* providing innovative sources of domestic finance - public and private - for housing and community development;

(iv) expanding the supply of affordable housing through appropriate regulatory and market incentives;

(v) promoting socially equitable and environmentally sound development through working cooperatively with genuine community involvement and participation *sustainable economic development through community partnerships*;

(vi) increasing affordability through provision of rental assistance to people living in poverty, and through establishing, and extending rent controls;

(vii) supporting community-based programmes that provide shelter and supportive services to the homeless;

48 (viii) **Preserving, protecting and maintaining historical and cultural and Natural heritage, and urging non-party states to sign and ratify the Convention on the Protection of Cultural and Natural Heritage]**

DOCUMENTATION OF PRECEDENT.

RE: PROTECTING HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 51 (b-h)

51 (b) **[Take full account of the need for Ensure socially equitable and environmentally sound *sustained economic growth, of sustainable development principles and of the basic needs for human development and health*];/17**

(c) Encourage the development of environmentally sound and affordable construction methods and production and distribution of building materials, including strengthening the indigenous building materials industry, based as far as possible on locally available resources;

(d) Promote the free exchange of information on the entire range of the environmental health aspects of construction, including the development and dissemination of databases on the adverse environmental effects of building materials, through the collaborative efforts of **governments and individuals and groups of civil society**. *the private and public sectors.*

52 (g) Encourage the development of environmentally sound and affordable construction methods, and production and distribution of building materials, including strengthening the local building materials industry, based as far as possible on locally available resources;

(h) Promote, *where appropriate*, the use of labour-intensive construction and maintenance **BEST practices technologies** that generate **meaningful** employment in the construction sector for the underemployed labour force found in most large cities, at the same time promoting the development of skills in the construction sector.

ARTICLE 53

53. In many countries, *markets serve as the primary housing delivery mechanism*, and hence their effectiveness and efficiency are important to the goal of **sustainable socially equitable and environmentally sound** development. It is the responsibility of Governments to create an enabling framework for a well-functioning housing market. The housing sector should be viewed as an integrating market in which trends in one segment affect performance in other segments. Government interventions are required to address the needs of disadvantaged and **vulnerable marginalized** groups, who are insufficiently served by markets.

ARTICLE 55 (d)

55 D ~~[(d) Apply transparent, comprehensive, easily accessible and progressive taxation and incentive mechanisms to stimulate efficient, environmentally sound and equitable use of land, and exploit the full potential of land-based and other forms of regulations and taxation in mobilizing financial resources for service provision by local authorities;]~~

ARTICLE 57 (c)

57 ~~[(c) Encourage the multiplicity and diversity of intervention of all [stakeholders,] individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process~~

~~*men and women alike, acting within the market system;]*~~ (d) Develop a legal framework of land use aimed at balancing the need for construction with the protection of the environment, minimizing risk and diversifying uses;

ARTICLE 58

58. To eradicate legal and social barriers to the ~~equal and equitable~~ access to land, especially the access of women, people with disabilities and other *vulnerable marginalized* groups, Governments, at the appropriate levels, in partnership with the private sector, non-governmental organizations, the cooperative sector, and community-based organizations should:

ARTICLE 58a

(a) Address the cultural, ethnic, religious, social and disability-based causes that result in the creation of barriers that lead to segregation and exclusion, including by encouraging **principle-based education founded upon international principles related to promoting and fully enshrining and guaranteeing respect for human rights; to preserving, conserving and protecting the environment; to creating a global structure that respects the rule of law, to achieving a state of peace through prevention and peaceful resolution of conflicts; justice and security, and to participating in socially equitable and environmentally sound development. and training for peaceful conflict resolution;**

ARTICLE 59 e

59 (e) *Capitalize on Draw upon* the potential contribution of key ~~stakeholders~~ in the private formal and informal sectors, and support the engagement of non-governmental organizations, community organizations and the private sector in participatory and collective initiatives and mechanisms appropriate to conflict resolution; **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process**

ARTICLE 63

63. To facilitate **equitable** access to housing for those not served by existing finance mechanisms, Governments *should review and rationalize, where appropriate, systems of subsidies by policies that will ensure their viability, [equity] and transparency, thus allowing that* many people without access to credit and land to enter the market.

(e) Ensuring access to basic infrastructure and services

ARTICLE 65

65. To safeguard the health, safety, welfare and improved living environment of all people and to provide adequate and affordable basic infrastructure and services, Governments at the appropriate levels, including local authorities, should promote:

(a) The supply of and access to adequate quantities of safe drinking water;

[(b) Adequate sanitation and [technically] [environmentally sound] waste systems management, based on perceiving “waste” as a resource, and on drawing upon innovative traditional practices.

ARTICLE 66

66. To ensure the [equitable] provision of basic infrastructure and service delivery systems, Governments at the appropriate levels, including local authorities, should:

(a) Work with all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision related to** *in* providing serviced land and *in* to allocating adequate space for basic services, as well as for recreational and open space in the development of new schemes and the upgrading of existing ones;

(g) Promote dialogue among all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision** to help provide basic services and infrastructure.

ARTICLE 69

69. To respond effectively to the requirements for **healthy and environmentally safe and sound** *appropriate* planning, design, construction, maintenance, and rehabilitation of shelter, infrastructure and other facilities, Governments at the appropriate levels should:

(a) Encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology;**

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING THE USE OF NATURAL MATERIALS

In cases where natural materials can satisfy the requirements of market, new investment for the expansion of the capacity to produce synthetic materials and substitutes *should shall* not be made (3 a xii,

Food, Programme of Action for the establishment of a New International Economic Order, 1974)

RE: SUPPORTING ENDOGENOUS TECHNOLOGY

Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefor be:

- (iii) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating employment and income.
- (iv) Conceived to utilize traditional techniques suitable adapted to new materials
- (v) emerging from original indigenous research
- (vi) Planned so as to take full account of their environmental impact

(Habitat I)

ARTICLE 70

70. To promote and support an adequate supply of locally produced, environmentally sound, affordable, and durable basic building materials, Governments at the appropriate levels, in cooperation with all other *stakeholders, individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision*] should:

- (a) Where appropriate, encourage and support the establishment and expansion of environmentally sound, small-scale local building materials industries and the expansion of their production and commercialization through, inter alia, legal and fiscal incentives, provision of credit, research and development, and information;

(b) As required, provide policies and guidelines to facilitate fair market competition for building materials with enhanced participation of local *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.** and establish a public mechanism to enforce them;

(c) Promote information exchange and flow of appropriate, environmentally sound, affordable and accessible building technologies and facilitate the **inter-transfer of BEST (Best Ecologically Sound Traditions) practices technology recognizing that in many cases traditional practices could be the most ecologically sound.**

(d) With *adequate* attention to safety needs, **and BEST (Best Environmentally Sound Traditions) Practices**, reformulate and adopt building standards and by-laws, **and to ensure compliance to safety and Best practices, where appropriate**, to promote and permit the use of low-cost **endogenous** building materials in housing schemes, as well as by using such materials in public construction works;

(e) Where appropriate, promote partnerships with the private sector and non-governmental organizations to create mechanisms for the commercial production and distribution of basic building materials for self-help construction programmes;

(f) Evaluate on a regular basis *the progress the discharging of obligations and the fulfilling of expectations made in the pursuit of the above pertinent to the above* objectives.

ARTICLE 71a

71 *[(a) Intensify and support research efforts to find substitutes for or optimize the use of non-renewable resources, particularly fossil fuels, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;]*

Reaffirm the obligation undertaken in 1981 through the General Assembly Resolution at the UN Conference on New and renewable Sources of Energy to move through “the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy. In addition establish a time-table for the phasing out of the use of fossil fuel and of civil nuclear energy as proposed in the 1992 Nobel Laureate Declaration.

RE: DEVELOPING SAFE AND SOUND RENEWABLE ENERGY SOURCES

cooperate to increase the availability of capacity, capabilities and relevant technologies ...for utilizing and producing environmentally [safe and] sound renewable energy resources, such as solar, wind, geothermal, hydro-power and biomass,... Each resource should be utilized in a manner that ... minimizes environmental stress and health impacts, (Section 9. Subsection 9 g Agenda 21, March 1992)

RE: DEVELOPING NEW AND RENEWABLE SOURCES OF ENERGY

Convinced of the importance of developing new and renewable sources of energy in order to contribute to meeting requirements for continued economic and social development, particularly in the developing countries, through, inter alia, the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy, Stressing that the primary responsibility for promoting the development and utilization of new and renewable sources of energy rests with individual countries, that in this regard international co-operation is indispensable and should be directed to assist and support national efforts; that developed countries bear a special responsibility to ensure that both their bilateral and multilateral efforts contribute actively to this end and that other countries in a position to do so should also continue to promote efforts in this regard, (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: RECOGNIZING THE URGENT NEED FOR TRANSFERRING NEW AND RENEWABLE SOURCE OF ENERGY TO DEVELOPING COUNTRIES

Recognizing the urgent need for adopting effective measures to facilitate the transfer and adaptation of technology from developed to developing countries in particular and for mobilization of financial resources for the development of new and renewable sources of energy in developing countries (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: PHASING OUT OF FOSSIL FUEL AND NUCLEAR ENERGY
to establish a time-table for phasing out fossil fuel and nuclear energy and for the rapid development of solar and other forms of non-

polluting energy, and for more efficient energy use (Nobel Laureate Declaration, UNCED, 1992)

RE: RECOGNIZING THE ADVERSE EFFECTS OF CLIMATE CHANGE

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof (Framework Convention on Climate Change, 1992).

RE: TREATING WASTE AS A RESOURCE

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I)

(b) In the development of human settlements the quality of the environment must be preserved. Pollution should be prevented by ;minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and

measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)

(vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

ARTICLE 72

72. *Vulnerability is the inability to compete on an equal basis for resources and opportunities. Vulnerability Marginalization* is often caused by *the marginalization in and exclusion from the socioeconomic mainstream and decision-making processes*. If *vulnerability marginalization* is to be **eliminated reduced**, there is a need to *improve and ensure the discharging of obligations* to recognize the right of *access by members of vulnerable marginalized groups to healthy, safe and environmentally sound shelter, to social security, the right to be free from hunger, the right to be free from hunger as undertaken by states parties to the International Covenant of Social, Cultural and Economic Rights 1966. This would include access to finance, infrastructure, basic social services, safety nets and a genuine community involvement and participation in decision-making processes from the determining of the terms of reference and throughout the process.* [. [Depending on local conditions in the housing sector and the availability of legal protections *ensuring guaranteeing equal access to resources and opportunities, vulnerable marginalized individuals come from disadvantaged groups, such as people living in poverty, homeless persons, older persons, women, youth, children (particularly street children), persons with disabilities, [documented] migrants, internally displaced persons, people affected by natural and technological disasters and environmental degradation, minorities and indigenous peoples.*] With regard to shelter, members of *vulnerable marginalized groups* are especially at risk when they may have no security of tenure or where they lack basic services or face disproportionate environmental and health impacts, or because they may be excluded, either inadvertently or deliberately, from the housing market and services.

DOCUMENTATION OF PRECEDENT

RE: INCLUDING MIGRANTS IN LIST OF DISADVANTAGED GROUPS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

72 ter. ~~[Inadequate shelter or lack of shelter contributes to a loss of dignity and health in the lives of refugees.]~~ There is a need to strengthen the support for the international protection of and assistance to refugees, especially refugee women and refugee children who are particularly vulnerable. Actions

RE: ACCORDING REFUGEES THE SAME TREATMENT AS IS ACCORDED TO CITIZENS GENERALLY

Except where this Convention contains more favourable provisions, a Contracting State shall accord to refugees the same treatment as is accorded to [citizens] generally. (Article 7, 1., Convention Relating to the Status of Refugees, 1951).

RE: ACCORDING THE SAME TREATMENT AND PUBLIC RELIEF TO REFUGEES

The Contracting States shall accord to refugees lawfully staying in their territory the same treatment with respect to public relief and assistance as is accorded to their nationals (Article 23, Convention Relating to the Status of Refugees, 1951).

ARTICLE 73

73. To remove barriers and eradicate discrimination in the provision of

shelter, Governments at the appropriate levels, including local authorities, *should shall*:

(c) *Work with the private sector* **Ensure that** cooperatives and local communities and other *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision work to raise the awareness of the need to** eliminate prejudice and discrimination in housing transactions and provision of services;

ARTICLE 74

74. To provide for the shelter needs of *vulnerable marginalized* groups, Governments at appropriate levels, including local authorities, in cooperation with all *[stakeholders]*, **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision as appropriate, should shall**:

(a) *Provide, where appropriate, targeted and transparent* **Ensure that** subsidies, social services and various types of safety nets **are provided** to the most *vulnerable marginalized* groups;

(b) Work with **the BEST practices enterprises**, and **the individuals and groups of civil society** *the private and non-profit sectors and including* community-based organizations *and other actors* to provide adequate shelter for members of *vulnerable marginalized* groups, making special efforts to remove all physical constraints to the independent living of persons with disabilities and of older persons;

(c) Strive to provide special living facilities and shelter solutions for members of *vulnerable marginalized* groups, as appropriate, such as shelters for women subjected to violence or shared living arrangements for persons with mental or physical disabilities;

(d) Provide an environment that enables *vulnerable marginalized* groups to participate in the social, economic and political life of their community and country.

ARTICLE 75

75. To reduce **marginalization of individuals and groups vulnerability**, Governments at appropriate levels, including local authorities, should:

(a) Work with non-governmental organizations and community-based organizations to assist members of *vulnerable marginalized* groups to obtain secure tenure;

(b) Composite [Enact and enforce laws to protect people from illegal evictions]; and **to retain, and if not in place, to institute rent-control systems.**

(b) [Protect by law all people from illegal evictions, including dismantling of rent-control systems, and, where evictions are unavoidable, ensure that they are strictly according to the law];

(b ter.)

(c) Promote and support self-help housing programmes and initiatives;

(d) *Promote, where appropriate, Ensure* compliance with and enforcement of all health and environmental laws, *especially* in low-income areas with *vulnerable marginalized* groups

DOCUMENTATION OF PRECEDENT

RE: ENSURING CORPORATE COMPLIANCE WITH THE LAW;

“all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” (UN Conference on Women: Equality, Development and Peace. Section 167).

(d bis.) Facilitate actions aimed at, inter alia, ensuring legal security of tenure, capacity-building, and improving access to credit, which, apart from subsidies and other financial instruments, can provide safety nets that reduce *vulnerability marginalization*;

(e) Pursue policies that will provide information to and consultation with *vulnerable marginalized* groups;

(f) Facilitate the availability of legal information and assistance to *vulnerable marginalized* groups;

(g) Promote the use of tools for disaster prevention, mitigation, and preparedness in order to reduce the vulnerability of populations to natural, man-made and technological disasters. -----

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

C. Sustainable human settlements development in an urbanizing world
Article 76—

ARTICLE 76

76. [Rapid urbanization, the concentration of urban population in large cities, the sprawl of cities into wider geographical areas and the rapid growth of mega-cities are among the most significant transformations of human settlements.] By the year 2000 more than half of the world's population will live in urban areas and approximately 40 per cent of them will be children. Urban areas will strongly influence the world of the twenty-first century, and urban and rural populations will be increasingly interdependent for their economic [,environmental] and social well-being. Among the economic and social factors influencing this process are population growth and voluntary and involuntary migration, real and perceived **meaningful** employment opportunities, cultural expectations, changing consumption and production patterns and serious imbalances and disparities among regions.

ARTICLE 77

77. [77 ter. Given the magnitude of the challenges that human settlements pose, society must value and take advantage of the wisdom, knowledge and skills of every person. **To draw upon the wisdom, knowledge and skills of citizens is the basis for genuine community involvement and participation. Individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision should be involved in the decision making process. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the implementation and evaluation of the process.**

Urban settlements *hold a held the* promise for human development and protection of the world's natural resources through their **potential** ability to support large numbers of people while limiting their impact on the natural environment. Yet, *many* cities are witnessing harmful patterns of growth, of production and consumption, of land use and of mobility, as well as degradation of their physical structure. Such problems are often synonymous with soil, air and water pollution, waste of resources and destruction of natural resources. Some human settlements are also subject to limited water supply, sanitation, drainage, and to dependency upon toxic and non-renewable energy fuel sources and irreversible loss of bio-diversity. Many of these trends are aggravated or accelerated by high population growth and the magnitude of rural-to-urban migration. **[As recognized in Agenda**

21 UNCED Demographic factors, combined with poverty and lack of access to resources *[[in some areas]]* and excessive consumption and wasteful production patterns in others/unsustainable patterns of production and consumption, particularly in industrialized countries, cause or exacerbate problems of environmental degradation and resource depletion and thus inhibit *sustainable socially equitable and environmentally sound development.*] Therefore, a largely urbanized world implies that *sustainable socially equitable and environmentally sound* development will depend very largely on the capacity of urban and metropolitan areas to manage production and consumption patterns, and the transport and waste disposal systems needed to preserve the environment.

ARTICLE 78

78. *In the process of urbanization, Policies and programmes for socially equitable and environmentally sound sustainable development* of human settlements in both rural and urban areas require strong sub-national governmental institutions working in partnership with all *[[stakeholders]]. individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process.* Such institutions are still weak in many countries, and their effectiveness is threatened by increasing problems of political regionalism and ethnic strife. All of these concerns and demands require a regional and cross-sectoral approach to human settlements planning which places emphasis on rural/urban linkages and treats villages and cities as two ends of a human settlements continuum in a common ecosystem.

ARTICLE 79

79. Increasingly, cities have a network of linkages that extends far beyond their boundaries. *[[Sustainable Socially equitable and environmentally sound urban development should consider the carrying capacity of the entire ecosystem supporting such development, including the prevention and mitigation of adverse environmental impacts occurring outside urban areas]].* The unsafe disposal of waste leads to the degradation of the natural environment: aquifers, coastal zones, ocean resources, wetlands, natural habitats, forests and other fragile ecosystems are affected, as are the homelands of the indigenous people. *[[Trade in hazardous, toxic and atomic waste and substances shall should not be carried out . In accordance with relevant international agreements by parties to those agreements]].* Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems.

RE: DEFINING OF BIODIVERSITY AND ECOSYSTEM

Biodiversity” is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

“Ecosystem” means a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Convention on Biological Diversity, UNCED, 1992). Biodiversity is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

RE: REDUCING LOSS OF BIOLOGICAL DIVERSITY

The loss of biological diversity may reduce the resilience of ecosystems to climatic variations and air pollution damage. Atmospheric changes can have important impacts on forests, biodiversity, and freshwater and marine ecosystems, as well as on economic activities, such as agriculture (9.16., Atmosphere, Agenda 21, 1992)

RE: RECOGNIZING INCREASED MARINE ENVIRONMENT DEGRADATION

Degradation of the marine environment can result from a wide range of sources. Land-based sources contribute 70% of marine pollution, while maritime transport and dumping-at-sea activities contribute 10 % each (Marine, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING THE URGENCY FOR CONSERVING AND PRESERVING NATURE AND NATURAL RESOURCES

Man Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and preserving nature (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)World Charter of Nature, 1982)

Social impact assessment takes into account affordability, accessibility, access to work, transport and services, environmental, health and security considerations. (CP)

ARTICLE 80

80. The diversity of types of human settlements is a key component to creating just and sustainable societies. The living and working conditions in all human settlements, including regional urban centres, rural service centres, rural hamlets, rural communities, market towns and villages, must be improved, with particular emphasis on shelter, social and physical infrastructure, and services. The maintenance and development of rural settlements require sustainable agriculture and **ecologically sound forest practices forestry activities** and improved agricultural **BEST practices technologies**, economic diversification and expanded **meaningful** employment opportunities created by encouraging appropriate and environmentally **sound sustainable** investment in industry and related economic production and service activities.

ARTICLE 81

81. International cooperation, including city-to-city cooperation, is both necessary and mutually beneficial in promoting **socially equitable and environmentally sound sustainable** human settlements *development*. Depending on the context and needs of the cities, towns and villages within each country and region, special attention should be paid to the most critical issues, such as changing production and consumption patterns; **as requiring the phasing out of non-renewable or unsafe sources of energy, and** the conserving of energy and the promoting of efficiency; **as ensuring socially equitable and environmentally sound resource and land use sustainable resource and land-use management**; Other critical issues are **the eradicating of poverty eradication**; **the stabilizing of population with necessary reproductive choice and social programs, the providing of universal health care**; **the ensuring of a safe ,environmentally sound water supply, sanitation and waste as resource system management**; **the preventing of disaster prevention, mitigation, preparedness and management**; **the preserving and protecting of cultural, natural and historical heritage**; **the preserving, protecting and conserving of the environmental protection**; **the driving of industry to embrace BEST practices**; **the establishing** of infrastructure; and basic services, such as health and education facilities and services. Habitat II provides an opportunity **to explore the interdependence of these issues within a framework of obligations incurred and expectations created, and** to focus on the effect that current patterns of human settlement development will have on our ability **to discharge the obligations incurred through Conventions, Treaties and Covenants, and to fulfill the expectations created through Declarations, General Assembly Resolutions and Conference Action Statements. achieve the objectives established at recent United Nations conferences.** Close attention to trends in urban development is essential to the viability of **socially equitable and environmentally sound sustainable** human settlements development in rural and urban areas alike.

ARTICLE 82

[[82 Land is essential for the provision of food, water and energy for many living systems, and it is critical to human activity. In rapidly growing urban areas, access to land is rendered increasingly difficult by the potentially competing demands of housing, industry, commerce, infrastructure, transport, agriculture and the need for open spaces and green areas, and the protection of fragile ecosystems. The rising costs of urban land and other factors prevent persons living in poverty and members of other *vulnerable marginalized* and disadvantaged groups from gaining access to suitable land, the location of which does not pose economic, environmental or health risks to the residents because of such reasons as proximity to polluting industrial facilities in appropriate geographical conditions or susceptibility to natural disasters. Bringing the development of urban areas into harmony with the natural environment, **especially within the carrying capacity of the ecosystem** and the overall system of settlements is one of the basic tasks to be undertaken in achieving a **socially equitable and environmentally sound sustainable** urbanized world. The *tools means to for achieving* a physically more balanced development include not only specific urban and regional policies and legal, economic, financial, cultural and other measures, but also innovative methods of urban planning and design and of urban development, **and revitalization and management**. National, sub-national and local policies and problems need to be integrated. [The precautionary principle/*approach* and the use of environmental and social impact assessment are essential].

bis. Land-use is closely related to water resource management because of the critical need to protect aquifers and other fresh-water resources from harmful effects of human settlements. Special attention should be paid to **ensuring that trade in hazardous, including atomic, and toxic wastes and substances should not be carried out, and to guiding potentially hazardous activities away from the fragile areas. Oceans and the atmosphere should be protected from land-based sources of pollution, where appropriate.]** Through mandatory international normative standards (INS, 1997), states shall invoke and ensure compliance with the precautionary principle. States shall ensure, as agreed in the Platform of Action, UN Conference on Women, that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).

DOCUMENT OF PRECEDENTS

RE: PROVIDING ACCESS TO WATER

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered ;by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

RE: INVOKING THE PRECAUTIONARY PRINCIPLE

The precautionary principle has been enunciated in international documents since at least the 1972 United Nations Conference on Humans and the Environment (Stockholm Convention), where it appeared in a rudimentary form; it was then reinforced in the 1982 UN Resolution 37/7, the World Charter of Nature, and then re-enunciated throughout the UNCED documents.

The precautionary principle has been enunciated ” as follows:

where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation

(version of precautionary principle in BC Working Group on Developing Criteria for Standards, 1994)

The precautionary principle shall be applied to all potentially harmful emissions, contaminants, agents of pollutants, or re concentrated substances—created through imbalance in biogeochemical cycles. States shall ensure that in all their activities and in the activities of corporations including transnational corporations there is adherence to the anticipatory principle. In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international

agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). In the international documents different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

DOCUMENTATION OF PRECEDENTS

RE: ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (World Charter of Nature)

RE: ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

Undertake measures to prevent soil erosion and promote erosion-control activities in all sectors. (13.16 Fragile ecosystem, Agenda 21)

RE: ENSURING CRADLE-TO-GRAVE

taking into account the cradle-to-grave approach to the management of hazardous wastes, in order to identify options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction (20.20 e Hazardous wastes, Agenda 21)

RE: ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

RE: ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products. (19.15 e, Toxic Chemicals, Agenda 21)

risk reduction involves broad-based approaches to reducing the risks of toxic chemicals, taking into account the entire life cycle of the chemicals. (19.45, Toxic chemicals, Agenda 21)

RE: ENSURING CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

RE: ENSURING RESPONSIBLE CARE

Industry should be encouraged to (19.51 Toxic chemicals)) "develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

RE; REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

RE; INVOKING THE ANTICIPATORY PRINCIPLE

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a trans-boundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

ARTICLE 83

83 Many cities are using peripheral land for urban-related purposes in a wasteful manner while existing serviced land and infrastructure may not be adequately developed and used. To avoid unbalanced, unhealthy and unsustainable growth of human settlements, it is necessary to promote land-use patterns that minimize transport demands, save energy and protect open and green spaces. Appropriate urban density and mixed land-use guidelines

are of prime importance for urban development. National, sub-national and local policies and development plans must be carefully re-examined to ensure optimal land use and geographically better balanced economic development, including the protection of indispensable agricultural land; land that sustains biodiversity, water quality and groundwater recharge; fragile areas, including coastal areas; and other sensitive areas in need of protection. Green spaces and vegetation cover in urban and peri-urban areas are essential for biological and hydrological balance and economic development. Vegetation creates natural habitats and permits a better absorption of rainwater by natural means, which implies savings in water management. Green areas and vegetation also play an important part in reducing air pollution and in creating more suitable climatic conditions, thereby improving the living environment in cities. Healthy and environmentally sound agricultural activities and the provision of common land should be integrated into the planning of urban and peri-urban areas.

ARTICLE 84e

84 (e) **Encourage Ensure genuine community involvement and participation among the public, private and voluntary sectors and other *[[stakeholders of individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]* in the caring for and the using *managing* land resources for socially equitable and environmentally sound *sustainable* urban development; Urban and rural communities will not be environmentally sound until states shall undertake to ensure the phasing out of hazardous, toxic and nuclear activities, and actively promote and funding Best Environmentally Sound Technology (BEST).**

[(e bis.) Promote urban planning, housing and industrial siting initiatives that ban and thus prevent *discourage* the siting of hazardous, toxic or nuclear industrial facilities in residential areas;] in any sensitive ecosystem, or eventually in any location. No toxic, hazardous or atomic wastes shall be produced after 1997. States shall immediately reduce and eventually eliminate the production of toxic, hazardous and atomic wastes, and states shall promote and fund active conversion to BEST (Best Environmentally Sound Traditions) practices.

[(e ter.) Seek to prevent or *minimize* pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that ban *discourage* the *disproportionate* siting of polluting industrial facilities, and in particular the disproportionate siting of industrial facilities in areas inhabited by people living in poverty or members of other *vulnerable* marginalized and disadvantaged groups;]

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States *should shall* effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

ARTICLE 84f & i

84 f*(f) Develop and support the implementation of improved land-**care and use management** practices that deal comprehensively with competing urban land requirements for housing, industry, commerce, infrastructure, transport, green spaces and forested areas, taking into account the need of spaces for everyday activities such as playgrounds, **wilderness, forests**, parks, sports and recreation areas and areas suitable for gardening and urban agriculture;

(i) Institutionalize a participatory approach to **socially equitable and environmentally sound sustainable** human settlements through the development and support of **means and methods strategies and mechanisms** that encourage open and inclusive dialogue among all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, with special attention to the needs and priorities of women, minorities, children, youth, people with disabilities, older persons and persons living in poverty and exclusion;

ARTICLE 85

85. To develop and support improved and integrated land- **care and use management**, Governments at the appropriate levels, including local authorities, *should shall*:

(a) Develop integrated land information and mapping systems;

[[b) *Consider, as appropriate, Establishing local structures, such as commissions and tribunals for the enforcement of **land management socially equitable and environmentally sound** laws and regulations in order to make enforcement and appeals more **equitable, efficient and effective;***]

[[c) Develop the land market through the establishment of an effective and environmentally sound legal framework in order to mobilize/which encompasses lands with diverse tenure systems];

(d) Develop, with the participation of all *[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]*, comprehensive and environmentally sound land-care/use *strategies* at the local level.

ARTICLE 86

86. Promoting equitable, socially viable, **environmentally sound** and stable human settlements is inextricably linked to reducing and eradicating poverty. We share the concerns of the First United Nations Decade for the Eradication of Poverty which also acknowledges *[[the increasing feminization of poverty]*. Poverty has various manifestations, which include homelessness and inadequate housing. The eradication of poverty requires, inter alia, sound macroeconomic policies **linked to BEST practices** aimed at creating **meaningful** employment opportunities, equal and universal access to economic opportunities, (and special efforts to facilitate such access for the disadvantaged); education and training that will promote sustainable livelihoods through freely chosen *productive meaningful* employment and work, and basic social services, including health facilities. *However, Although* there are no universal solutions which can be applied, **there are principles reflected in obligations incurred and expectations created through international instruments that can provide a framework for assisting in the achieving of the vision of Habitat II.** People living in poverty must be empowered through freely chosen participation in all aspects of political, economic and social life. Other *key elements of actions to reduce poverty a poverty reduction strategy* include *policies geared to ensuring**[[reducing inequalities, increasing opportunities, providing access to resources and [meaningful employment] income;*]] providing social protection for those who cannot support themselves; recognizing the special needs and skills of women; developing human resources; improving and making more accessible infrastructure, including communication facilities; and *[[taking comprehensive national responsibility for meeting]]* the basic needs of all.

ARTICLE 87

87. To promote **and provide** [equitable] *the provision of services* in human settlements,
Governments at the appropriate level, including local authorities, **shall should**:

[(a) Formulate and implement integrated settlement development policies which ensure equal access to and maintenance of basic services, including those related to the provision of food security; education; **meaningful** employment and livelihood; primary **and universal** health-care, including reproductive and sexual health care and services; safe drinking water and sanitation; adequate— **affordable, accessible, healthy and safe, environmentally sound** shelter with tenure- security; and access to open and green spaces; giving special priority to the needs and rights of women and children who often bear the greatest burden of poverty;] **As already committed to in the UNCED documents and in the Platform of Action UN Conference on Women: Equality, Development and Peace.**

DOCUMENTATION ON PRECEDENTS

RE: ENSURING FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty UNCED)

RE: PROVIDING FOOD SECURITY

Accepting and implementing the concept of forward planning of food aid

All donor countries **shall should accept and** implement the concept of forward planning of food aid and *make all efforts to provide* commodities and/or financial assistance that will ensure adequate quantities of grains and other food commodities (Section 12 Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: COOPERATING IN THE PROVISION OF FOOD AID

Co-operating in the provision of food aid for meeting emergency and nutritional needs as well as for stimulating rural employment through development projects (Section 12, Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: PROMOTING HEALTH CARE

Governments should establish measures that will directly or indirectly set up an effective primary health care and maternal health care system accessible to all " (3.7.e Combating Poverty)

the provision of a safe water supply and sanitation and the promotion of a safe food supply and proper nutrition. Particular attention should be directed towards food safety, with priority placed on the elimination of food contamination; comprehensive and sustainable water policies to ensure safe drinking water and sanitation to preclude both microbial and chemical contamination; and promotion of health education...education and appropriate services regarding responsible planning of family size... values... (6.3. Protecting and promoting health UNCED)

RE: PROVIDING ACCESS TO HEALTHY SHELTER

Access to safe and healthy shelter is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of national and international action. The right to adequate housing as a basic human right is enshrined in the Universal Declaration of Human rights and the International Covenant on Economic, Social and Cultural rights. (7.6, Settlement, UNCED)

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. (3.7.o Combating Poverty, UNCED)

" provide the poor with access to fresh water and sanitation (3.7. p Combating Poverty, UNCED)

"provide the poor with access to primary education.(3.7.q Combating Poverty, UNCED)

RE: IMPROVING HEALTH AND ENVIRONMENT

The improvement of human health is one of the most important objectives of development. The deterioration of environmental quality, notably air, water and soil pollution owing to toxic chemicals, hazardous wastes, radiation and other sources, is a matter of growing concern. ..Malnutrition, poverty, poor human settlements, lack of good-quality potable water and inadequate sanitation facilities add to the problems of communicable and non-communicable diseases. As a consequence, the health and well-being of people are exposed to increasing pressures. (16.12 Biotechnology, UNCED)

RE: SATISFYING BASIC HUMAN NEEDS OF DRINKING WATER

freshwater resources are an essential component of the earth's hydrosphere and an indispensable part of all terrestrial ecosystems. (18.7 Fresh water, UNCED)

Priority must be given to the sustenance of land/water ecosystems, with particular attentions to wetlands and biodiversity, and the satisfaction of basic human needs for drinking-water, health protection and food security. (18.8. Fresh water, UNCED)

"One in three people in the developing world still lacks these two (safe drinking-water and sanitation) more basic requirements for health and dignity. (18.58 Freshwater UNCED)

"Water is a finite resource, essential for the sustenance of life on earth (18.2 Freshwater UNCED)

"water is needed in all aspects of life (18.6 fresh water UNCED)

ARTICLE 87 b

(b) Where appropriate, re-direct public resources to enable community-based *management provision* of services and infrastructure and promote the participation of *the private sector, local business entrepreneurs that engage in service industries and BEST practices*, local residents, including people living in poverty, women, people with disabilities, indigenous people and members of disadvantaged groups, in the identification of public service needs, spatial planning and the design, provision and maintenance of urban infrastructure and open and green spaces.

ARTICLE 88

88. To promote social integration, Governments at the appropriate level, including local authorities, recognizing the importance of volunteer contributions and in close cooperation with non-governmental organizations, community-based organizations, the cooperative sector and public and private foundations, **shall should:**

(a) Prohibit ~~[[all]]~~ discriminatory, exclusionary practices related to shelter, employment and access to social and cultural facilities;

(b) Offer opportunities and physical spaces to encourage positive interaction among culturally diverse groups;

(c) Involve marginalized and /or disadvantaged groups and individuals in the planning, decision-making, monitoring and assessment related to human settlements development;

~~[[d)] Encourage, in cooperation with relevant *[stakeholder individuals and organizations of civil society with a wide range of experience and expertise,],* the development of school curricula geared to conscious understanding and cooperation among diverse cultural groups, through the promotion of principle-based education—education based on the~~

fundamental principles underlying International documents related to enshrining and guaranteeing respect for human rights, to preserving, protecting and conserving the environment, to enabling social justice, to achieving a state of peace; justice and security, and to participating in socially equitable and environmentally sound development.]

ARTICLE 90

General

90. In order to promote the genuine involvement and participation of women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process.

gender-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, in collaboration with women's groups and other [stakeholders [90 bis. [In order to develop the full potential of the youth and prepare them to take a responsible role in the development of human settlements, Governments at the appropriate levels, including local authorities and in partnership with private sector, non-governmental youth organizations and other non-governmental organizations as well as community-based organizations, should:

[90 ter. In order to promote disability-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, should:

(a) Adopt, *where appropriate*, by-laws, standards and norms and develop planning guidelines that take into consideration the needs and situations of and in consultation with **women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process, and ensure their genuine involvement and participation from the determination of the terms of reference and throughout the planning of human settlements, development of human settlements and decision making processes about human settlements.**

[(a) Integrate youth concerns into all relevant national, sub-national and local policies, strategies, programmes and projects;

[(a bis.) Enable youth by supporting and valuing their ability to play an active and creative role in building sustainable communities;

(b) Promote representative structures, *while ensuring full and equal participation women's [and equal opportunities for]* and equal access to **all levels of education and training of for women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized in or from the educational system.**

Data Generation

[(c) Generate and disseminate disaggregated data, while ensuring that such statistics are collected, compiled, analyzed and presented by age, sex and work status; set up monitoring mechanisms in government structures and integrate the results into mainstream policies for sustainable human settlements developments;

Equal access

(d) Eliminate legal and customary barriers, where they exist, to women's equal access to and control of land and finance

[e) Ensure equal access to housing, land and public services in the urban and rural areas in line with the International Convention on the Elimination of All Forms of Discrimination against Women.]

[f) Develop policy and guidelines and provide services that would enable persons with disabilities to be housed in community-based settings;

[g) Promote equal access to all levels of education and skills development for persons with disabilities;

[(h) Provide equal access to basic education, while paying special attention to people living in poverty and to youth living in rural areas, and addressing constraints created by distance, lack of educational facilities and social or economic barriers;

(i) Promote equal access to all levels of education for girls, **youth, young with young** and women;

Equal opportunity

(j.) Foster economic policies that have a positive impact on the **meaningful** employment and income of women workers in both the formal and informal sectors and adopt specific measures to address women's unemployment, in particular their long-term unemployment;

[k) Develop and implement programmes that enable people with disabilities to have an equal opportunity to realize an income sufficient to attain an adequate standard of living;

(l) Promote representative structures, ensuring full and equal opportunities for participation of persons with disabilities;

[m) Take special action to reduce the drop-out rate at all levels of education through increased relevance and quality education, and to facilitate the access of school leavers to sustainable livelihood and meaningful employment;

Genuine involvement and participation in decision-making

(n) Develop policy guidelines and programmes that encourage and actively pursue the involvement of women's groups in all aspects of community development related to environmental infrastructure and the provision of basic urban services and encourage women's own cooperatives, as well as their membership in other cooperatives;

(o) Recognize that women, as primary family caregivers, spend a greater proportion of time in the home and community [and therefore, as experts in their own home and community, should participate fully and equally in all aspects of community development, especially environmental infrastructure and basic services];

[p) Consider in the planning process that persons with disabilities are often involved in the informal sector and use their homes for business or market activities.]

[q) Recognize that people with disabilities are experts in their own housing and community requirements and should be decision-makers, designers and implementers of them;

Enhance awareness of issues

[(r) Enhance community awareness of issues facing homeless and refugee women, especially those issues related to physical and sexual abuse, and design appropriate community responses;]

[(s) Enhance community awareness of health care issues facing persons with disabilities, such as physical and sexual abuse and substance abuse, and design appropriate community responses;

Establish programmes

(t) Establish programmes that address the ~~severe/absolute~~ poverty found among rural women, focusing on their need for adequate shelter and **meaningful** employment;

Encourage awareness-raising

~~[(u) Encourage awareness-raising campaigns and other actions developed and implemented by youth that are aimed at promoting the appreciation by the youth of historical, natural and cultural heritage and at increasing their consciousness of the environmental values and environmental implications of their consumption and behavioral choices, especially those related to sustainable human settlements development.]~~

ARTICLE 91

91. To prevent and reduce violence and crime, especially at the local levels, Governments, **working cooperatively in partnership with all** ~~stakeholders~~ **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who have been excluded through fear and mistrust**], should:

(a) Design, create and maintain livable human settlements that encourage the use of public spaces as centres of community life so that they do not become places for criminal activity;

~~[(a bis.) **Guarantee Ensure** basic education to all;] [(a ter.) Assist crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and result in crime, including by addressing poverty and inequality as the two basic components of the social development approach;]~~

(b) Encourage youth and children, in particular street children, to become ~~stakeholders~~ **i] involved** in **determining** their own future and their community's future through education, recreation, and job training and counseling that can attract *private sector investment support from individuals and organizations of civil society support from non-profit organizations*; **Children and youth shall be respected and trusted.**

(b bis.) Enhance women's safety in communities through the promotion of a gender perspective in crime prevention policies and programmes by increasing in those responsible for implementing these policies the knowledge and understanding of the causes, consequences and mechanisms of violence against women;

(c) Establish programmes designed to improve the skills of local leadership in group facilitation, conflict resolution and intervention;

(d) As appropriate, promote personal security and reduce fear by improving police services, making them more accountable to the communities they serve, and by encouraging and facilitating, whenever appropriate, the formation of lawful community-based crime prevention measures and systems;

(e) Provide accessible, affordable, impartial, prompt and humane local systems of justice by, inter alia, facilitating and strengthening, where appropriate, existing traditional institutions and procedures for the resolution of disputes and conflicts;

(e bis.) Encourage the establishment of programmes and projects based upon voluntary participation, especially of children, youth and older persons, to prevent violence, including violence in the home, and crime;

(e ter.) The concerted and urgent action to dismantle international and national sex trafficking networks.

ARTICLE 93

93. [**Socially equitable and environmentally sound** *Sustainable* human settlements depend on the creation of a better environment for human health and well-being, which will improve the living conditions of people and decrease disparities in their quality of life. People are entitled to a healthy and *productive meaningful* life in harmony with nature; furthermore, improved health can also contribute more to economic and social development.]

ARTICLE 94

The health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease. Children's well-being is a particularly reliable indicator for healthy urban environments. Measures to prevent ill health and disease are as important as the availability of appropriate medical treatment and care. It is, therefore, essential to take a holistic approach to health, whereby both prevention and care are placed within the context of the environmental policy, supported by effective management systems and plans of action incorporating targets that reflect local needs and capacities. [Education for all is a fundamental requirement for enabling women and men, young and old, to gain from improved practices and make use of and demand appropriate infrastructure and health and environmental services.]

ARTICLE 95

* [95. Many pollution-related risks to health are particularly high in urban areas, as well as in low-income areas, because of higher concentrations of pollutants from, inter alia, industry, traffic, fumes from cooking and heating devices, overcrowding and inadequate solid and liquid waste management. Environmental risks in the home and the work place may have a disproportionate impact on women's health because of women's different susceptibility to the toxic effects of various chemicals and given the nature of tasks that women frequently undertake. Environmental risks in the home may also have a disproportionate impact on children, and on future generations.]

(a) 95 bis. Many environmental contaminants, such as radioactive materials and persistent organic pollutants, work their way into the food chain and eventually into human beings, thus compromising the health of present and future generations.

DOCUMENTATION OF PRECEDENT

RE: ENSURING THE PRESERVATION OF SPECIES AND ECOSYSTEMS FOR THE BENEFIT OF PRESENT AND FUTURE GENERATIONS

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: NOT COMPROMISING THE ABILITY OF FUTURE GENERATIONS TO MEET THEIR OWN NEEDS

Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

(b) [95 ter. Unsustainable and wasteful production and consumption patterns [particularly in industrialized countries] also lead to increasing problems in waste management. It is essential to intensify efforts aimed at minimizing the production and discharge of waste, and at recycling and reuse as much as

possible, and disposing of the remainder in an environmentally sound manner. This will require changes in attitudes and consumption patterns, as well as in the design of buildings and neighbourhoods as well as innovative, efficient and sustainable modalities for waste management.]

(c) [95 quart. The design of the built environment is recognized as having an impact on people's well-being and behaviour and, thereby, on people's health. Good design in new housing and in upgrading and rehabilitation is important for the creation of sustainable living conditions. The large-scale development of high-rise housing can affect the micro-climate in an adverse way; it often has an alienating effect on social life; it reduces children's access to safe outdoor play; and it is difficult to maintain and operate such a habitat. The large-scale development of high-rise housing requires proper maintenance, regular technical inspection, and social control and safety measures.]

ARTICLE 96

96. To improve the health and well-being of all people throughout their life span, particularly the people living in poverty, Governments at the appropriate levels, including local authorities, *and in partnership with the genuine involvement and participation of other [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, shall *should*:

(a) Develop and implement national, sub-national and local health plans or strategies and strengthen environmental health services to prevent, mitigate and respond to diseases and ill health from poor conditions in living and working environments and the conditions of people living in poverty;

(b) Adopt measures to prevent and control air, water and soil pollution and to reduce noise levels, *where appropriate*, and develop, and develop and ensure access to appropriate preventive and curative health care systems in order to tackle related health problems; Ensure adequate research to assess how and to what extent women and children are particularly susceptible or exposed to environmental degradation and hazards, including, as necessary, research and data collection on specific groups of women and children, particularly women with low income, indigenous women and women belonging to minorities;

(c) Improve shelter conditions so as to mitigate health and safety risks, particularly risks to women, older persons, children and people with disabilities, which are associated with activities in the home;

(d) Build capacity at all levels for effective environmental health management, **develop** and implement programmes to ensure availability of access to a full range of affordable, **universal** [good quality/basic] health care services for women [throughout their life span, including reproductive health care]; **establish** *Develop* criteria for maximum permitted safe noise exposure levels and promote noise assessment control as part of environmental health programmes;

(e) Raise awareness of the inter-dependencies between environment and health and develop within communities the knowledge, attitudes and practices needed to improve personal and community health, with special attention to hygiene;

[(e bis.) Promote, where appropriate, planning and good design in human settlements, both in new developments and in upgrading and rehabilitation, while emphasizing aesthetic qualities as well as environmentally safe and sound *and sustainable* technical and functional qualities, enriching and enlightening the overall quality of life of the people;]

(f) Establish processes to increase the exchange of information **about BEST practices**, experience and technical assistance among national, sub-national and local governments, [(including among governments at the same level)] and *across sectors* for environmental health improvements;

[(f bis.) Ensure that due priority is given and adequate resources made available, at the national, regional and international levels, to combat the threat to individuals and public health posed by the rapid spread of HIV/AIDS globally and by the re-emergence of major diseases, such as tuberculosis, malaria, onchocerciasis (river blindness) and diarrhoea diseases, in particular, cholera;]

(g) Promote safe and healthy work place conditions for men and women.

ARTICLE 97

97 . To improve environmental conditions and reduce industrial and domestic waste and other forms of health risks in human settlements, Governments at the appropriate levels and in partnership with all [*stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.*] shall *should*:

(a) Develop and implement national and local [*sustainable socially equitable and environmentally sound development plans and*] policies and specific cross-sectoral programmes addressing all relevant chapters of Agenda 21.,

and in particular to ensure the fulfillment of expectations that arose from Agenda 21 These should be action-oriented and have clear targets and schedules;

(b) Develop laws and policies that specify appropriate ambient environmental quality levels and set targets for environmental improvements and identify instruments for their achievement appropriate to national and sub-national priorities and conditions;

(c) Establish, equip and build capacity for monitoring and evaluating compliance with environmental regulations and effectiveness of enforcement at all levels;

[(d) Set high mandatory international normative environmental standards and technical regulations so as to drive and facilitate the selection and development of BEST (Best Ecologically Sound Traditions) practices appropriate technologies and their appropriate use;]

[(d bis.) Identify and address, as appropriate, the disproportionately high and adverse effects of policies and programmes on the human health or the environment of the people in poverty poor, minorities and other vulnerable marginalized populations;]

(
(d) Develop criteria and methodologies for the assessment of environmental impacts and resource requirements at the local level throughout the life cycle of products and processes;

(e) Provide incentives and disincentives to promote the use of clean production and energy- and water-saving processes and technologies **such as BEST practices that, among other things, can increase economic opportunities in the area of environmental technology, environmental clean-up and Environmentally sound friendly activities and products and can improve the attractiveness and competitiveness of human settlements for economic investments of other BEST practices;**

(f) Provide guidelines and training for the application of procedures for the assessment of environmental health impacts;

[(g) Undertake strategic environmental impact assessments of for development projects that may significantly have significant adverse environmental effects or that may affect the quality of the environment;]

(h) Support mechanisms **for working cooperatively with consultations and partnerships among [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly**

those marginalized members of society who may be adversely affected by any decision. 7] to prepare and implement local environmental plans and local Agenda 21's and specific *cross-sectoral integration of environmental health programmes*;

(i) Raise awareness of environmental issues and develop within communities the knowledge, attitudes and practices needed **for socially equitable and environmentally sound sustainable human settlements development**;

(j) In cooperation with the international community, promote the protection of the living environment and strive to restore contaminated land, air and water to levels acceptable for **socially equitable and environmentally sound sustainable human settlements**.

DOCUMENTATION OF PRECEDENT

RE: DEVELOPING PROCEDURES FOR ENVIRONMENTAL IMPACT ASSESSMENT— CRADLE TO GRAVE APPROACH, AND ENVIRONMENTAL AUDITS

Governments,...should develop procedures for environmental impact assessment, taking into account the cradle to grave approach, including environmental audits (Agenda 21, 20.19 e)

ARTICLE 98

98 [(a) Promote the conservation and *sustainable socially equitable and environmentally sound use of urban and peri-urban biodiversity, including forests, local habitats and species biodiversity*; the protection of biodiversity should be included within local **socially equitable and environmentally sound sustainable development planning activities**;

(aa) Incorporate the following principles *and strategies* in developing this integrated approach: the precautionary principle, the ecosystem *approach primacy principle*, pollution prevention principle, staying-within-the-carrying-capacity principle, and **avoidance of ecological footprint principle**;

(a) Promote practices and consumption patterns that will conserve and protect freshwater and saltwater resources and top soil, as well as air and soil quality;

(a bis.) Ensure that clean water is available and accessible to all human settlements by the year 2000 through, inter alia, the adoption and improvement of technology, and ensure that environmental protection and

conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds;

DOCUMENTATION OF PRECEDENTS

RE: CONSERVING BIODIVERSITY

To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)

RE: PREVENTING LONG TERM DECLINE OF BIODIVERSITY

The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)

[(b) Protect existing forests, ensure environmentally sound forestry practices in areas designated for forestry, resources and promote afforestation around and within human settlements in order to fulfill basic needs relating to energy, construction, recreation and food security;

ARTICLE 98 e

98 (e) Ensure adequate the opportunity for genuine community involvement and participation *public participation* by all [*stakeholders* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision,] at all levels of environmental decision-making, including in determining the “terms of reference” and throughout the decision making process]

DOCUMENTATION OF PRECEDENTS

RE: ENSURING GENUINE PUBLIC PARTICIPATION E.(AGENDA ITEM 10 E)

Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize *productive meaningful* employment. (III 11, Habitat I)

RE: MOBILIZING PARTICIPATION IN DECISION-MAKING

Participation is an integral part of the political processes of decision-making; in a field as complex as human settlements, it is also a necessity because the task is too great for Governments to accomplish without mobilizing the interest of inhabitants, using their ingenuity and skills and harnessing otherwise untapped resources. (III 17, Habitat I)

RE: ENSURING THE BENEFICIARY IS A PARTICIPANT IN COLLECTIVE DECISIONS

Public participation is the dynamic incorporation of the people in the economic, social and political life of a country which would ensure that the beneficiary is an effective participant in collective decisions with regard to the common good. (III 28, Habitat I)

RE: PROVIDING DIRECT INVOLVEMENT IN DECISIONS

A co-operative effort of the people and their Governments is a prerequisite for effective action on human settlements. The magnitude and intractability of the problems are too great for Governments to act alone. Citizen participation should be an integral part of the decision-making processes on the full range of human settlement issues. Citizens must be provided opportunities for direct involvement in the decisions that profoundly affect their lives. Such participation can heighten citizen awareness of the complexity and inter-relatedness of the problems and the urgent need for concerted action. Involvement of citizens can also be an important means of making creative use of their ingenuity and skills, thus making effective use of often untapped resources. (III 39, Habitat I)

RE: INVOLVING RESIDENTS IN THE MAKING OF DECISIONS

Participation can be conceived, from the top downwards, as the involvement of the higher echelons of government in the decision-making of smaller groups; laterally, as the co-operation between parallel or competing sectoral interests; or, from the base upwards, as the direct involvement of residents in the making of decisions and implementation of programmes which concern them. The first two forms of participation are the basis of strategies, planning procedures, implementation of programmes and, in general, management of human settlements; the last, under the label of popular participation, is becoming an indispensable element of a truly democratic process. (III 40, Habitat I)

RE: PROVIDING OPPORTUNITIES FOR EARLY AND CONTINUING INVOLVEMENT IN THE SELECTION OF ALTERNATIVES

Citizen participation, by definition, cannot be achieved by fiat. But it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. The inaccessibility of information and the absence of appropriate mechanisms for the expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration (III 73 Habitat I)

ARTICLE 98 ter

[98 ter. Water resources in communities management in human settlements presents an outstanding challenge of sustainable *socially equitable and environmentally sound* development. It combines the challenge of securing for serves all the basic human need of a reliable supply of safe drinking water and *meeting the competing the needs of businesses that engage in socially equitable and environmentally sound development and Best practices with local materials. Industry and Agriculture, which are* is crucial to *socially equitable and environmentally sound economic* development and food security and food self-sufficiency, without compromising the ability of future generations to meet their water needs. *Meeting this challenge requires an integrated approach to water resources management that takes cognizance of the links between water, sanitation and health, between the economy and the environment, between cities and their hinterland, and harmonizes land-use planning and housing policies with water sector policies and ensures a comprehensive and coherent approach to setting and enforcing realistic standards. A strong political commitment, cooperation across disciplines and sectors, and an active partnership of all [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] will be essential to integrated water resources management. To this end, Governments, at the appropriate levels, and in partnership with other [stakeholder community-minded citizens and groups with a wide range of experience and expertise” including some members of the community that will be socially and environmentally disadvantaged by the decisions], should:*

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOOD SECURITY AND FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

ARTICLE 99

[99. In a globalizing economy, the increasing occurrence of the transferring of substances or activities that cause environmental degradation or that are harmful to human health to other states (in violation of principle 14 of the Rio Declaration) and the increasing occurrence of trans-boundary pollution and the transfer across national borders and regions of technologies hazardous — including toxic and nuclear technologies — to the environment represent a serious threat to the environmental conditions of human settlements and the health of their inhabitants. Governments should therefore cooperate to develop further bilateral and multilateral legal mechanisms to implement Principle 13 of the Rio Declaration regarding "liability and compensation for adverse effects of environmental damage caused by activities within their jurisdiction or control to areas beyond their jurisdiction." In this context, States should be guided by Principle 16 of the Rio Declaration which encourages the approach that the polluter should in principle bear the cost of pollution. The international community, international organizations and Governments should also seek appropriate preventive measures in cases of clear risk of major environmental accidents with trans-boundary effects.] in addition citizens can legitimately expect that states will comply with Principle 14 of the Rio Declaration which calls for the prevention of the transfer of substances and activities that are harmful to human health or to the environment to other states, and to principle 15 which calls for the

invoking of the precautionary principle which states that where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.

DOCUMENTATION OF PRECEDENT

RE: PROMOTING NEW AND RENEWABLE ENERGY

The basic and ultimate objective of this programme area is to reduce adverse effects on the atmosphere from the energy sector by promoting policies or programmes, as appropriate, to increase the contribution of environmentally safe and sound and cost effective energy systems, particularly new and renewable ones, through less polluting and more efficient energy production, transmission, distribution and use. This objective should reflect the need for equity, adequate energy supplies and increasing energy consumption in developing countries; and the need to take into consideration the situations of countries that are highly dependent on income generated from the production, processing and export, and/or consumption of fossil fuels and associated energy-intensive products and/or the use of fossil fuels for which countries have serious difficulties in switching to alternatives, and of countries highly vulnerable to adverse effects of climate change. (9:11 Atmosphere, UNCED)

RE: RESPECTING THE ATMOSPHERE THROUGH ENERGY ALTERNATIVES

Energy is essential to economic and social development and improved quality of life. Much of the world's energy, however, is currently produced and consumed in ways that could not be sustained if technology were to remain constant and if overall quantities were to increase substantially. The need to control atmospheric emissions of greenhouse and other gases and substances will increasingly need to be based on efficiency in energy production, transmission, distribution and consumption, and on growing reliance on environmentally sound energy systems, particularly new and renewable sources of energy./1/ All energy sources will need to be used in ways that respect the atmosphere, human health, and the environment as a whole (9.9. Atmosphere, UNCED).

ARTICLE 100

[100. The use of energy is essential in urban centres for transportation, services, *industrial BEST practices production*, and household and office

activities. Current dependence on fossil-fuel-based energy sources in most urban centres leads to climate change, air pollution, and consequential environmental and human health problems, and *[may]* represent a serious threat to **socially equitable and environmentally sound development. sustainable development.** Sustainable energy production and use *can be enhanced by encouraging* shall be undertaken through energy conservation, energy efficiency, by such means as pricing policies, fuel switching, alternative energy, mass transit and public awareness, and through the phasing out of the use of non-renewable or unsafe sources of energy. The socially equitable and environmentally sound development of Human settlements and energy policies should be actively coordinated. Regulations driving the phasing out of non-renewable and unsafe sources of energy will be essential to foster the promotion and development of BEST practices in the area of renewable environmentally sound alternative energy sources.

DOCUMENTATION OF PRECEDENTS

RE: INCREASE AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: DEVELOPING SAFE, MORE EFFICIENT AND LESS POLLUTING TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

(c) Promote **energy conservation and** energy-efficient systems, for example, by introducing or supporting innovative energy-efficient measures in the generation, distribution and use of energy, such as combined heating and cooling systems that make use of waste heat recovery, and co-generation of heating and electricity **providing co-generation is not used to justify the continued use of non-renewable or unsafe energy.** ;

(d) **Promote through regulations use of renewable sources of energy** and *Encourage and* research, development and use of non-motorized or low-

energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy; **developed states shall not transfer non-renewable, obsolete, or unsafe sources of energy to developing states.**

(e) Encourage countries, in particular developing countries, to cooperate in exchanging knowledge, experience and know-how in the phasing out of lead gasoline, including the use of biomass ethanol as an environmentally sound substitute;

(f) Introduce or amend user charges and/or other measures to promote the efficient use of household energy;

(g) Stimulate, through fiscal incentives or other measures, and adopt energy-efficient and environmentally sound technologies in the rehabilitation of existing industries and services and in the construction of new ones;

(h) *Support programmes for* **Undertake** the **prevention**, reduction and neutralization of emissions of polluting gases, originating in the generation, transportation and use of energy;

(i) Provide for public education and media campaigns to encourage recycling, reuse and reduced energy consumption, **and to prepare the public for the required changes needed for the phasing out of non-renewable unsafe sources of energy;**

(j) Encourage the use of solar heating, cooling and electric technologies, energy efficient design, ventilation, and improved insulation of buildings, to reduce the consumption of energy in buildings, **by requiring the phasing out of non-renewable unsafe sources of energy;**

(k) Encourage the **cautious** use of safe industrial and agricultural waste products and other types of low-energy and recycled building materials in construction **providing that this “environment industry” is not used to justify the continued production of toxic, hazardous, or atomic wastes, or to discourage the needed change to the production of safe renewable resources from production;**

(l) Encourage and promote the development and dissemination of new and environmentally sound technologies, including the reduction of metal compounds as part of transportation fuels, and good practices in the use of energy.

ARTICLE 101 b

101 (b) Introduce energy-pricing policies and use regulatory measures to drive the phasing out of non-renewable unsafe energy and to promote use of renewable and safe sources of energy, and the conservation of energy; and to improve efficiency of energy use in human settlements, while ensuring that people living in poverty and their families are not disadvantaged;

DOCUMENTATION OF PRECEDENTS

RE: DEVELOPING ALTERNATIVE ENVIRONMENTALLY SAFE AND SOUND TECHNOLOGIES

"To develop and apply pollution control and measurement technologies for stationary and mobile sources of air pollution and to develop alternative environmentally [safe and] sound technologies; (see trans-boundary) (9.24 a Atmosphere)

RE: PROMOTING ALTERNATIVE ENERGY

Promote pilot plans and projects consisting of electrical, mechanical and thermal power (gasifiers, biomass, solar driers, wind-pumps and combustion systems) that are appropriate and likely to be adequately maintained. (14.95 a. Agriculture)

ARTICLE 104 f

104 (f) **Promote, regulate, and enforce BEST—Best Ecologically Sound Traditions— practices, and , during conversion,** promote, regulate, and enforce quiet, use-efficient and low-polluting technologies, including fuel-efficient engine and emissions controls and fuel with a low level of polluting emissions and impact on the atmosphere and **actively fund and promote** other alternative forms of energy;

ARTICLE 109

109. Urban economies are integral to the process of economic transformation and development. They are a prerequisite for the creation of a diversified economic base capable of generating **meaningful** employment opportunities. Many new jobs will need to be created in urban areas. Cities currently generate more than half of national economic activities worldwide. If other factors, such as population growth of and migration to cities, are addressed effectively through, inter alia, **requiring cities not to exceed the carrying capacity of the ecosystem that sustains them**, urban planning and control of the negative impacts of urbanization, cities could develop the capacity to maintain their productivity, to improve the living conditions of their residents and to manage natural resources in an ecologically sustainable way through **the establishment and enforcement of mandatory standards drawn from international principles in United Nations instruments industry, together with trade and services, will** provides the main impetus to this

process. **by driving businesses to engage in socially equitable and environmentally sound practices.**

ARTICLE 110

110. Cities have traditionally served as economic centres and have become the primary providers of services. As engines of economic growth and development they function within a network of supporting economic activities located in their surrounding peri-urban and rural areas. For this reason, specific actions also need to be taken to develop and maintain efficient and affordable transport, information and communications systems and linkages with other urban centres and with rural areas and to seek reasonably balanced patterns of development, both geographically and economically. Rapid changes in production technologies and in trade and consumption patterns will lead to changes in urban spatial structures that, notwithstanding their nature, need to be addressed.

ARTICLE 111

111. Economic development and the provision of services can be enhanced through improved human settlements activities such as urban revitalization, construction, upgrading and maintenance of infrastructural facilities, and building and civil works. These activities are also important growth factors in the generation of employment, income and efficiency in other sectors of the economy. In turn, in combination with appropriate environmental protection policies, they result in the sustainable improvement of the living conditions of city residents as well as of the efficiency and productivity of countries.

Actions

ARTICLE 112

112. To establish an effective financial base for **socially equitable and environmentally sound** urban development **within the carrying capacity of the ecosystem**, Governments at the appropriate levels, including local authorities, in cooperation with trade unions, consumer organizations, **BEST practices enterprises business**, trade, and the financial sector, including *the* cooperatively organized **enterprises business sector** and non-governmental organizations, as appropriate, should:

(a) Formulate and implement financial policies which stimulate a broad range of urban **meaningful** employment opportunities;

(b) Encourage the formation of new public-private sector partnerships for institutions that are privately owned and managed but public in their function and purpose, and promote transparency and accountability of their operation.

ARTICLE 113

113. To provide opportunities for *productive meaningful* employment **and investment in BEST practices** *private investment*, Governments at the appropriate levels, including local authorities, in consultation with workers' and employers' organizations, chambers of commerce, industry, trade, consumer organizations, professional associations, and the financial sector, including the cooperative sector, and in the context of comprehensive urban planning, should:

(a) Implement **socially equitable and environmentally sound** *sustainable* urban development policies that take account of and respond effectively to the needs of locally owned enterprises **which engage in BEST practices**, and are not detrimental to the natural and human environment;

(b) Facilitate access to all levels of education and training;

(c) Promote an adequate supply and the environmentally sound allocation of sufficiently serviced land for the needs *of the business community, with due regard to the needs* of the small and medium sized-enterprises **which engage in BEST—Best Environmentally Sound Technology—practices**;

(d) Offer opportunities for urban economic activities by facilitating, **through regulatory schemes**, the access of new and emerging **socially equitable and environmentally sound** businesses, and small and medium-sized enterprises, including the informal sector, to credit and finance, and by streamlining legal and administrative procedures;

(e) Facilitate, where appropriate, the opportunity for urban horticulture; and encourage citizens **to convert lawns and other ecologically unsound use of land to indigenous plant reserves or into food producing areas; local markets and distribution of food to those in need.**

(f) Assist informal-sector enterprises to **embrace BEST practices** *become more productive and through the establishment of MINS 1997 they will have the opportunity of being* progressively integrated into the formal economy, **or of eventually replacing the “formal economy” that has been based on non-renewable use of energy, and on environmentally unsound technology**;

(g) Consider designating select areas for redevelopment within urban centres by providing packages of fiscal and financial incentives along with appropriate regulatory arrangements and the development of partnerships.

ARTICLE 114

114. To improve opportunities, **through regulatory schemes**, for the **small BEST practices enterprises** *businesses* and the micro-enterprise and cooperative sectors, Governments at the appropriate levels, including local authorities, in

consultation with non-governmental organizations, community-based organizations, financial and vocational training institutions, should, as appropriate:

(a) **Discourage and phase-out activities that contribute to environmental degradation, to the violation of human rights, to the proliferation of arms or to the production of toxic, hazardous or atomic wastes, and facilitate the extension to the informal sector the protection of human rights in the field of labour and promote respect for the relevant International Labour Organization conventions, including those on the prohibition of forced and child labour, the freedom of association, the right to organize and bargain collectively, and the principle of non-discrimination;**

(b) Promote and strengthen, as appropriate, programmes which integrate credit, finance, vocational training and technological transfer programmes of **BEST practices** in support of small and micro-enterprises and enterprises in the cooperative sector, particularly those developed and utilized by women, **providing that the technology transfer does not undermine endogenous practices;**

(c) Encourage fair treatment of the informal sector, promote the use of environmentally sound practices, and encourage links between financial institutions and non-governmental organizations that support the informal sector where it exists, and encourage financial institutions to **use Mandatory International Normative standards (MINS) to be the basis for conditional funding and to drive industry to BEST practices;**

(d) Integrate, where appropriate, the needs of the growing informal sector within planning, **and design and management systems**, including by promoting its **genuine involvement and participation** in the planning and decision-making process, and by strengthening its linkages with the formal economy;

(e) Promote training for small and micro-enterprises and enterprises in the cooperative sector, and support them in their efforts to improve their products, services, technology and distribution networks, and to identify new market opportunities.

ARTICLE 115

115. To strengthen urban economies *so they may be competitive in a globalizing economy*, Governments at the appropriate levels, including local authorities, in consultation with all *[[stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]*, should, inter alia:

(a) Improve education and enhance job training **in meaningful employment** in order to improve the quality of the local work-force;

(b) Support the re-structuring of local **enterprises industries**, where appropriate, and develop urban infrastructure and services, promote a reliable, efficient and environmentally sound supply of energy and enhance telecommunication networks;

(c) Review and revise, as appropriate, the regulatory framework in order **to drive BEST practices** and to attract private investment;

(d) Prevent crime **not through increasing incarceration but through the strengthening of social programs** and enhance public safety in order to make urban areas more attractive for economic, social and cultural activities;

(e) Encourage sound financial **and BEST** practices at all levels of Government;

(f) Promote legislative action that may be necessary to implement the above.

ARTICLE 116

116. To *alleviate prevent* the adverse impacts of measures for structural and economic transition, Governments at the appropriate levels, including, where appropriate, local authorities, **shall should**:

(a) Promote an integrated approach by promoting socially equitable and environmentally sound *addressing the social, economic and environmental consequences of reforms on the needs human settlements development needs*; **ensuring that genuine community involvement and participation shall be involved in determining the needs of the community in particular those of the people in poverty and marginalized groups.**

(b) Promote the *integrated functioning of inclusive housing markets* so as to avoid segregation of the social housing sector;

(c) Implement appropriate basic social programmes and adequate resource allocation, in particular those measures affecting people living in poverty, people with disabilities, other *vulnerable marginalized* segments of society, micro-enterprises and other **socially equitable and environmentally sound small enterprises businesses**;

(d) **Provide for genuine community involvement and participation in finding alternatives to the current ill-conceived structural adjustment**

programmes *Review the impact of structural adjustment on social development by paying particular attention to gender-sensitive assessments;*

(e) *Design policies to promote* **Ensure** a more equitable and enhanced access to income and resources;

(f) Support, as appropriate, public and private enterprises in their efforts to adapt to the changing requirements of **BEST practices and of cooperative decision making processes which reflect genuine community involvement and participation** *technological and human resources development.*

9. Balanced development of settlements in rural regions

ARTICLE 117

117. Urban and rural areas are interdependent economically, socially and environmentally. At the turn of the century, a substantial proportion of the world's population will continue to live in rural settlements, particularly in developing countries. In order to achieve a *more* **socially equitable and environmentally sound sustainable** future for the earth, these rural settlements need to be valued and supported. **Although in many cases**, insufficient infrastructure and services, lack of environmentally sound technology, and pollution resulting from the adverse impacts of unsustainable industrialization and urbanization contribute significantly to the degradation of the rural environment, in other cases it is the environmentally sound endogenous practices with local materials that offer the solution to the means of living within the carrying capacity of the ecosystem. Additionally, the lack of **appreciation of** employment opportunities in rural areas increases rural-to-urban migration **often to less meaningful employment** and results in a loss of human capacity in rural communities. Policies and programmes for the *sustainable* **socially equitable and environmentally sound** development of rural areas that integrate rural regions into the national economy require strong local and national institutions for the planning *and management* of human settlements that place an emphasis on rural-urban linkages, **that appreciates the innovative and environmentally sound traditional practices of the rural areas**, and that treat villages and cities as two ends of a human settlements continuum.

ARTICLE 118

118. Rural populations, including indigenous people, play an important role in **demonstrating to urban populations practices of living within the carrying capacity of the ecosystem, in providing evidence of BEST practices**, in ensuring food security and in sustaining the social and ecological balance over large tracts of land in many nations and thus contribute significantly to the task of protecting biodiversity and fragile ecosystems and to the sustainable use of biological resources.

Actions

ARTICLE 119

119. To promote *sustainable, socially equitable and environmentally sound* development of rural settlements and to reduce rural-to-urban migration, governments at the appropriate levels, including local authorities, **shall should:**

- (a) Promote the active **genuine involvement and** participation of all *[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly, those marginalized members of society who may be adversely affected by any decisions]]*, including those in isolated and remote communities, in ensuring the integrated consideration of the environmental, social and economic objectives of rural development efforts;
- (b) Take appropriate measures to improve living and working conditions in regional urban centres, small towns and rural service centres;
- (c) Foster a sustainable and diversified agricultural system in order to have vibrant rural communities;
- (d) *Provide infrastructure, services and incentives for investment in rural areas;*
- (e) Promote education and training in rural areas to facilitate **meaningful** employment and the use of BEST (**Best Environmentally Sound Traditions**) *practices appropriate technology.*

ARTICLE 120

120. To promote **BEST (Best Environmentally Sound Traditions) practices** *the utilization of new and improved endogenous technologies* and appropriate traditional practices in rural settlements development, Governments at the appropriate levels, including local authorities, in cooperation with the private sector, should:

- (a) Improve access to information on agricultural production, marketing and pricing in rural and remote areas by using, inter alia, advanced and accessible communication technologies;
- (b) In cooperation with farmers' organizations, women's groups and other *[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized*

members of society who may be adversely affected by any decision.]], promote research and the dissemination of research findings in traditional, new and improved technologies for, inter alia, agriculture, aquaculture, forestry and agroforestry.

ARTICLE 121

121. In establishing policies **for socially equitable and environmentally sound development sustainable regional development and management**, governments at the appropriate levels, including local authorities, should:

(a) Promote education and training programmes and establish procedures for the full participation of rural and indigenous people in the setting of priorities for balanced and ecologically viable regional development;

(b) Make full use of geographic information systems and environmental assessment methods for the preparation of environmentally sound regional development policies;

(c) Implement regional and rural development plans and programmes based on needs and economic viability, **[consistent with the goal of socially equitable and environmentally sound sustainable development]**;

(d) Establish an efficient and *transparent open* system for the allocation of resources to rural areas based on people's needs, **[consistent with the goal of sustainable socially equitable and environmentally sound development]**.

DOCUMENTATION OF PRECEDENTS

(From Russow, J. (1995) Charter of Obligations,

RE: PROMOTION OF TRADITIONAL METHODS OF AGRICULTURE

the promotion of ...systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife *care management*, which use, maintain or increase biodiversity (15.5 d Biodiversity, Agenda 21 UNCED 1992)

RE: UNDERTAKING PROJECTS WITH EMPHASIS ON TRADITIONAL ENVIRONMENT PRACTICES

Consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental *management* practices or systems that have a good impact on the environment (13.21, Fragile Ecosystem Agenda 21, UNCED, 1992)

RE: COLLECTING AND RECORDING INFORMATION ON INDIGENOUS CONSERVATION

Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c., Agriculture., Agenda 21 UNCED 1992)

RE: FOSTERING TRADITIONAL METHODS AND KNOWLEDGE

Governments....*should shall*... Recognize and foster the traditional methods and the knowledge of indigenous *people peoples* and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (Unbracketed section in New York Prep Com, changed in final version. 15.4, g Biodiversity, Agenda 21, UNCED, 1992)

RE: PROMOTING COLLABORATIVE RESEARCH WITH INDIGENOUS PEOPLE

Promotion of collaborative research programmes especially in developing countries, to support activities outlined in this programme area, with particular reference to cooperation with local and indigenous people (**s**) and their communities in the conservation of biological diversity and sustainable use of biological resources, as well as the fostering of traditional methods and knowledge of such groups in connection with these activities (16.7 b, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING BENEFICIAL TRADITIONAL HEALTH CARE

Acknowledge and encourage beneficial traditional health care, especially that practised by indigenous women, with a view to preserving and incorporating the value of traditional health care in the provision of health services, and support research directed to achieve this aim (Art.111 Advance Unedited Draft Declaration and Platform for Action, May, 15, 1995)

ARTICLE 122

122. To strengthen [*sustainable* **socially equitable and environmentally sound development and**] **meaningful** employment opportunities in impoverished rural areas, Governments at the appropriate levels, including local authorities, should:

(a) Stimulate rural development by enhancing **meaningful** employment opportunities, providing educational and health facilities and services, improving housing, strengthening technical infrastructure for **BEST (Best Environmentally Sound Traditions) practices**, and encouraging rural enterprises and sustainable agriculture;

(b) Establish priorities for regional infrastructure investments based on *opportunities for economic return*, social equity and environmental quality and on the promoting **BEST (Best Environmentally Sound Traditions) practices** ;

(c) Encourage the private sector to develop and strengthen contract-based wholesale markets and marketing intermediaries for rural products so as to improve and/or establish a cash-flow and futures contract economy in rural areas;

(d) Promote equitable and efficient access to markets as well as, where appropriate, pricing and payment systems for rural products, especially of food items consumed in urban areas, **providing that rural areas will not be used for exploitative cash crops for foreign states as has often been done as a result of forced adherence to structural adjustment programmes;**

(d bis.) Promote products from rural areas in urban markets and rural service centers by improving the access to market information and distribution centres and networks;

(e) Reduce significantly or eliminate environmentally harmful **technologies**, subsidies and other programmes, such as those which stimulate the excessive use of pesticides and chemical fertilizers, and price control or subsidy systems that perpetuate unsustainable practices and production systems in rural and agricultural economies.

ARTICLE 123

123. An integrated approach is required to promote balanced and mutually supportive urban-rural development. To achieve this objective, governments at the appropriate levels, including local authorities, with the support of the relevant international and regional institutions, should:

(a) Provide an appropriate legal, fiscal and organizational framework that is suitable to strengthen the networks of small- and medium-sized settlements in rural areas;

(a bis.) Facilitate the development of efficient communication and distribution infrastructure for the exchange of information, labour, goods, services and capital between urban and rural areas;

(b) Promote broad cooperation among local communities to find integrated solutions for land-use, transport and environmental problems in an urban-rural context;

(c) *Pursue -Ensure genuine community involvement and participation participatory approach to balanced and mutually supportive urban-rural development, based on a continuous dialogue among the* **[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]** involved in urban-rural development.

10. Disaster prevention, mitigation, preparedness and post-disaster rehabilitation capabilities

ARTICLE 124

124. The impact on people and human settlements of natural and human-made disasters is on the increase. Disasters are frequently caused by vulnerabilities created by human actions, **such as the consumption and production of ozone-depleting substances, of green-house gas emissions, of toxic, hazardous and atomic wastes;** such as uncontrolled or inadequately planned human settlements, lack of basic infrastructure and the occupation of disaster-prone areas, **and such as the continued production of arms and weapons of mass destruction, and the continued visits of nuclear powered vessels in urban ports.** Armed conflicts also have consequences that affect human settlements and the country as a whole and call for specific rehabilitation and reconstruction processes that may necessitate international involvement, at the request of the Government of the concerned country. The impact of such disasters and emergencies is especially severe in countries where prevention, preparedness, mitigation and response capacities are ineffective in dealing with such situations.

ARTICLE 125

125. **The most efficient and effective disaster response is to ensure first and foremost through a concerted effort that prevention of potential known adverse consequences (preventable disasters) will occur. In cases where there is no possibility to prevent the potential disaster,** The most efficient and effective disaster preparedness systems and capabilities for post-disaster response are usually provided volunteer contributions and local authority actions at the neighbourhood level. These can operate independently and irrespective of reduced, damaged or destroyed infrastructure or capacity elsewhere. Specific

actions are also required at the appropriate levels of Government, including local authorities, **in cooperation and partnership with the private sector** and in close coordination with all community groups, to put into place disaster preparedness and response capacities that are coordinated in their planning but flexible in their implementation. The reduction of vulnerability **in the area of anthropogenic disasters**, as well as the capacity to respond to disasters is directly related **to the degree of willingness on the part of government to drive industry through regulations to ban and prevent potentially disastrous technologies; and on the part of financial institutions to refuse to fund disaster-possible technologies** and to some extent the degree of decentralized access to information, communication, and decision-making and the control of resources. National and international cooperation networks can facilitate rapid access to specialist expertise, which can help to build capacities for disaster **prevention and reduction** and, to provide early warning of impending disasters and to mitigate their effects. Women and children are the most affected in situations of disaster, and their needs should be considered in all stages of disaster **prevention and in restoration after disasters management**. Women's active involvement in disaster **prevention and in restoration after disasters planning and management** should be encouraged.

Actions:

ARTICLE 126

126. In improving natural and human-made disaster prevention, preparedness, mitigation and response, Governments at the appropriate levels, including local authorities, and in close consultation and cooperation with such entities as insurance companies, non-governmental organizations, community-based organizations, organized communities, the academic, health and scientific communities, **shall should**:

(a) **Legislate regulations that would ban and prevent technologies that could lead to disasters, and develop**, adopt and enforce appropriate norms and by-laws for land-use, building and planning standards, that are based on professionally established **assessments** of hazard and of vulnerability **assessments**;

(a bis.) **Ensure that serious public concern about an activity or technology that could lead to preventable disaster be taken into consideration and the activity or technology shall be prevented or banned, and ensure that the participation in preparing and planning for non-preventable disaster planning and management of all [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society such as:]** including women, children, the elderly, and people with disabilities, in recognition of their particular vulnerability to human-made and natural disasters;

(b) **Ensure regulations that will prevent preventable anthropogenic disasters and encourage continued *mobilization of* domestic and international resources for disaster reduction activities for non-preventable disasters;**

(c) Promote and disseminate information on disaster-resistant construction methods and technologies for buildings and public works in general;

(d) Devise programmes to facilitate, where possible, voluntary relocation and access by all people to less disaster-prone areas;

(e) Develop training programmes on disaster-resistant construction methods for designers, contractors and builders. Some programmes should be directed particularly to small enterprises, which build the great majority of housing and other small buildings in the developing countries;

(f) Take measures to upgrade, where necessary, the resistance of important infrastructure, lifelines and critical facilities, in particular where damage can cause secondary disasters and/or constrain emergency relief operations.

[[126 bis.] Given that since the development of nuclear technology the most significant preventable anthropogenic disaster has been the preventing of nuclear-related disasters, and given that the outcome of nuclear disasters, including from nuclear arms and nuclear civil reactors, has had irreversible consequences that cannot be considered to have been remediated other than by forced reallocation ; and continues to have unexpected consequences; the global community, if it is to embark upon the prevention of preventable disaster, shall prevent the continued production of nuclear arms, the mining of uranium for the producing of nuclear arms, the testing of nuclear arms, the circulating and harbouring of nuclear-armed or nuclear-powered military vessels, and the using of civil nuclear reactors. It should be noted that at the 1972 UN Conference on Human Environment (UNCHE) held in Stockholm the states globally adopted the commitment in Article 26 to “eliminate the production of weapons of mass destruction” and twenty years later a Nobel Laureate Declaration called for the phasing out of civil nuclear reactors. As a consequence of the development and testing of nuclear weapons, disasters with irreversible environmental consequences have occurred and communities have been displaced, there has to be an acknowledgment that there is no acceptable remediation to these nuclear disasters. The least that can be done for those who have been affected by nuclear disasters is to ensure there is a need for the safe resettlement of displaced populations especially those from *for* small island developing States and coastal regions. There also has to be an acknowledgment that there is no real restoration of sites that have been exposed to radiation from

nuclear disasters, otherwise the perpetuation of the belief in the possibility of restoration could justify the continued nuclear associated technologies. and the restoration of economic activity to the affected areas, especially for small island developing States and coastal regions. Noting the special responsibility towards those people of the former United Nations Trust Territories who have been adversely affected as a result of the nuclear-weapons tests conducted during the period of the Trusteeship, all Governments and international organizations that have expertise in the field of cleanup and disposal of radioactive contaminants, should consider giving appropriate assistance as may be required for remedial purposes in areas affected by radioactive contamination from nuclear weapons programmes.]

ARTICLE 127

(a) Pursue the objectives of prevention of major technological accidents and the limitation of their consequences, inter alia, through land use policies, **through the banning of technologies and preventing activities that could lead to disasters**, and promotion of safe technology **promotion of BEST (Best Environmentally Sound Traditions) practices**. Prevention of disaster requires the establishment of **Mandatory, International Normative Standards (MINS)** that will drive industry to engage in **BEST practices**. Voluntary standards, such as ISO 14,000 environmental management standards which evaluate nothing more than the corporations' compliance with self-selected environmental policy, without reference to external normative standards of performance, will be less affective than **MINS** for promoting **BEST practices** and thus for preventing anthropogenic disasters. In the interim, during the phase-out period, the potential environmental and social costs shall no longer be externalized from the operation of the industry/military activities.

(b) **Ensure that dangerous activities are phased out and replaced by safe and environmentally sound practices, and in the interim, take the necessary measures in order to control the siting of new developments surrounding dangerous industrial activities that may be liable to increase the risk of the effects of a major accident by appropriate consultation procedures to facilitate the implementation of the policy established under sub-paragraph (a) above;**

(c) Introduce a clear definition of roles and responsibilities and of communication channels among the various key functions of disaster preparedness and prevention including assessment, monitoring, prediction, prevention, relief, resettlement, and emergency response;

(d) Promote and encourage broad-based participation in disaster **prevention and** preparedness activities by giving to the population living in the vicinity of a dangerous activity adequate and regular information on the potential hazards

(e) **Strengthen, and/or develop global, regional and local resolve and political will to prevent preventable disasters by ensuring the phasing out of technologies that could lead to disasters, and to provide early-warning systems to alert populations in case of a major non-preventable occurrences technological accident, and impending disasters.**

ARTICLE 128

128. In preparing for and implementing post-disaster relief, rehabilitation, reconstruction and resettlement, Governments at the appropriate levels, including local authorities, in partnership with all *[stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society]*, shall *should*:

(a) Establish or strengthen disaster preparedness and response systems, **in the case of non-preventable disasters**, that clearly define roles and responsibilities of, and communication channels between, the various functions and actors in disaster preparedness, and in post-event disaster management, including emergency management, relief and rehabilitation;

(b) Devise exercises to test emergency response and relief plans and promote research on the technical, social and economic aspects of post-disaster reconstruction and adopt effective strategies and guidelines for post-disaster reconstruction;

(c) Establish reliable communications, and response and decision-making capabilities, including at the national, local and community levels;

(d) Establish contingency plans, *management and* assistance systems and arrangements for rehabilitation, reconstruction and resettlement;

(e) Strengthen scientific and engineering capacities for damage assessment and monitoring and for special rehabilitation and reconstruction techniques;

(g) Identify and support approaches to cope with the urgent shelter requirements of returnees and internally displaced persons;

(h) Identify approaches to minimize interruption to attendance in schools;

(i) Support work for immediate removal of anti-personnel land mines following the cessation of armed conflict;

(j) Ensure that the particular needs of women, children, persons with disabilities and *vulnerable* **marginalized** groups are considered in all communications, rescue, relocation, rehabilitation, and reconstruction;

(k) Promote a cultural dimension in post-disaster rehabilitation processes.] -

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

D. Capacity-building and institutional development

1. Introduction

ARTICLE 129 j

(j) Reinforce measures to eradicate corruption **and institutional collusion between corporations including transnationals and state governments** and ensure greater **openness** *transparency*, efficiency and **genuine** community **involvement and participation in the preservation of the environment and in the use** *management* of local resources, **within the framework of Mandatory International Normative Standards (MINS);**

(k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation, particularly to share good **BEST (Best Environmentally Sound Traditions) practices** and innovative approaches to **socially equitable and environmentally sound** *sustainable* human settlements *management*;

(l) Develop, in cooperation with UNCHS (Habitat), associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise, **especially BEST practices.**

ARTICLE 130 (2)

2. Decentralization shall be carried out within a framework of globally agreed to principles drawn from the body of United Nations instruments related to the enshrining and guaranteeing of human rights, the preserving, and protecting the environment and the fostering of peace and cooperation. Globally established mandatory standards based on these principles shall be established

Decentralization and strengthening of local authorities and their associations/networks

131. To ensure effective decentralization and strengthening of local authorities and their associations/networks **within a framework of international principles based on the enshrining and guaranteeing of respect for human rights, the preserving, conserving and protecting the environment, the ensuring of social equity and justice, and the enabling of peace and prevention of war,** Governments at all appropriate levels, including local authorities, **shall should:**

(a) Adopt and adapt, *as appropriate*, policies and legal frameworks from other Member States that are effectively implementing decentralization **while adhering to international principles, and contribute innovative local practices to other states that could benefit from this insight;**

(b) Review and revise, as appropriate, legislation **to ensure compliance with international obligations**, increase local autonomy **participation** in decision-making, implementation, and resource mobilization and use, especially with respect to human **rights, allocation of funding for socially equitable and environmentally sound development** *technical and financial resources and local enterprise development*, within the overall framework of **international**, national, and local principles, obligations and undertakings *social, economic and environmental strategy* **and encourage genuine community involvement and participation in decision-making regarding their safe, healthy and environmentally sound communities** *city neighbourhood or dwellings*;

(c) Seek **additional funding from reducing the military budget, and from requiring corporations including transnational corporations to pay deferred taxes, and thus support** local authorities reviewing revenue generating mechanisms;

(d) Facilitate the inter-transfer of **BEST (Best Environmentally Sound Traditions) Practices** *exchange of technology, experience and management expertise* between local authorities in the delivery of services, expenditure control, resource mobilization, partnership-building and local enterprise development with **businesses that comply international obligations and demonstrate BEST practices, that have not violated human rights, caused environmental degradation or contributed to violence and conflict.**, *inter alia*, through technical twinning and **inter-transfer** *exchange* of experience programmes, **recognizing that the solutions to socially equitable and environmentally sound development could be found throughout the world;**

(e) Enhance the performance of local authorities **by requiring BEST practices**, and by undertaking comparative analysis of, and disseminating of innovative **BEST** practices in, the delivery, operation and maintenance of public goods and services, **and in fostering and developing** *and in exploiting the fiscal other* potential of their cities;

(f) *Help institutionalize* **Ensure and implement** broad-based participation in decision-making and management processes at the local level **with genuine community involvement and participation in determining the terms of reference and in having input throughout the process;**

(g) **Ensure and** strengthen the capacity of local authorities **to seek, respect and rely on genuine community involvement and participation** *engage the local private and* community sectors in goal-setting and establishing local priorities and environmentally sound standards for infrastructure development and services delivery, and local **socially equitable and environmentally sound development economic development**;

(h) Promote **genuine community involvement and participation in a** policy dialogue ~~between~~ **among** all levels of Government, **within a framework of governance principles, the private and community sectors** to improve planning and coordination **in implementing socially equitable and environmentally sound development**;

(i) Collect, analyze and disseminate, through **public channels**, as appropriate, comparative data on the performance of local authorities in providing for the needs of their citizens; **and facilitate the opportunity for citizens to present evidence of non-compliance with obligations through national and international mechanisms**

(j) Reinforce measures to increase the participation of **indigenous peoples, migrant workers, women, children and youth and other disenfranchised groups**. Eradicate corruption and ensure greater transparency **through efficient genuine community involvement and participation** in the **socially equitable and environmentally sound development** of local resources;

(k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation **within a framework of international principles** particularly to share good **BEST** practices and innovative approaches to **socially equitable and environmentally sound development sustainable human settlements management**; and

(l) Develop, in cooperation with UNCHS (Habitat), **and other UN agencies**, associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise. from diverse cultures, ethnic and historical backgrounds.

3. Participation, civic engagement and Government responsibility

ARTICLE 132

132. **Socially equitable and environmentally sound development Sustainable human settlements development** requires the active engagement **of individuals and organizations** of civil society —**those members of society that advocate the enshrining and guaranteeing of the respect for human rights, the**

preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and the enabling of socially equitable and environmentally sound development. *organizations, as well as the broad-based participation of all people.* It equally requires responsive, transparent and accountable governmental structures at all levels. Civic engagement and responsible government both necessitate the strengthening of **genuine community involvement and participation** *participatory mechanisms*, including access to justice and community-based action planning, which will ensure that all voices are heard, including particularly women, youth, children and elderly and all other vulnerable marginalized groups (UNICEF) in identifying problems and priorities, setting goals, exercising legal rights, determining service standards, mobilizing resources and implementing policies, programmes and projects.

ARTICLE 133

133. To encourage and support civic engagement and the fulfillment of government **obligations, expectations, duties, commitments, undertakings and** responsibilities, national governments, local authorities and/or civil society organizations, as appropriate, should put into effect institutional and legal frameworks which facilitate and enable broad-based **genuine involvement and participation of all citizens people** in decision-making, **including in the determining of the terms of reference and in having input throughout the decision making process, implementation** and monitoring of human settlements *strategies*, policies and programmes, **and in presenting evidence through legal channels of non-compliance with obligations and expectations**; these institutional and legal frameworks would be specifically aimed at; *inter alia*:

- (a) **Ensuring protecting** the basic human right to hold and express opinions and to disseminate ideas and information;
- (b) Permitting, and facilitating the formation of independent non-governmental community local, national and international organizations **representing a civil society which advocates the enshrining and guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and thus the enabling of socially equitable and environmentally sound development.**
- (c) Providing full, timely and comprehensible information, without undue financial burden to the applicant;

(d) **undertaking education and training programs that promote the ensuring of social justice, the preservation, conservation and protection of the environment, the enshrining and guaranteeing respect for human rights, and the elimination of conflict and war, and that are based on significant principles drawn from United Nations conventions, treaties, covenants, declarations, conference action plans and General Assembly Resolutions.**

DOCUMENTATION OF PRECEDENT;

RE: PROVIDING SOCIAL SERVICES IN HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

(e) establishing regular **opportunities for genuine community involvement and participation** *and broad-based consultative mechanisms as individuals and organizations of civil society for involving civil society—both women and men* in the decision-making process, including in the determination of terms of reference and in having input throughout the process for all major policies, plans and programmes that will affect their lives (*e bis.*); in addition, removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;

(f) establishing agenda-setting **for genuine community involvement and participation** *participatory mechanisms enabling citizens individuals, to ensure that communities and individuals and organizations of civil society organizations* to play a pro-active, constructive and substantive role in identifying and formulating new policies, plans and projects, **and in determining the terms of reference and in having input throughout the policy formation and the plans and projects development;**

(g) fostering an understanding of contractual relationships **between NGOs and businesses that observe the enshrining and guaranteeing of respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and the preventing of conflict and war, and the ensuring of socially equitable and environmentally sound development and BEST practices, and non-governmental organizations (NGOs) sectors to acquire the skills for participating in and developing projects that will benefit all people negotiating effective partnerships for project implementation, development and management that will maximize benefits to all people;**

(h) promoting equality, **social justice**, and *equity fairness*, *incorporate by incorporating* gender and age considerations and ~~involve~~ **involving marginalized** and low-income groups **including people with disabilities, migrant workers, indigenous peoples** through institutional measures to ensure their interests are represented in policy and decision-making processes, and through such techniques as advocacy training and seminars including ~~the development of those that develop~~ *mediating and consensus-building skills* ~~to~~ **and** facilitate effective networking and alliance formation;

ARTICLE 133 e

(i) **Ensuring Improving** access to judicial and administrative channels for affected **persons and (UNICEF) disadvantaged and marginalized** groups to challenge, or seek redress **from decisions that deny social justice, that destroy the environment, that violate human rights, that are destructive to human health and well-being, or that contribute to war and conflict from socially and environmentally harmful decisions and actions;** including legal mechanisms to ensure that **all (UNICEF) State bodies both national and local (UNICEF)** remain legally accountable for their actions, in accordance with their social *and* environmental and **human rights** obligations as defined in both national legislation and **in international conventions, treaties, covenants, declarations, conference action plans and general assembly resolutions. Affected individuals shall, after exhausting all domestic remedies, have access to an International Court of Compliance to bring evidence of state non-compliance. Removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;**

(i) bis **Ensuring** access, when all domestic channels have been exhausted, or when there is no legitimate domestic remedies in place, to an International Court of Compliance where affected persons and groups can seek redress for decisions that deny social justice, that destroy the environment, that violate human rights or that contribute to war and conflict. Broadening the procedural right of individuals and civil society to take legal actions on behalf of affected communities or groups which do not have the resources or skills to take such action themselves, and promoting the

representation of inter-generational interests, including children and future generations in decision-making processes.

(j) Facilitating access to legal services by people living in poverty (Canada) low-income and marginalized groups through provision of facilities such as legal aid and free legal advice centres. In addition access to reliable scientific and medical expertise without undue financial burden to the applicant should be provided.

(k) Strengthening **the capacity of international United Nations bodies to establish mandatory international normative standards-and-regulations (MINS) based on fundamental principles enshrined in international customary law; and providing opportunities for local authorities and individuals and groups of civil society organizations to review social, economic and environmental policies affecting their communities and to set local priorities and contribute to the setting of local standards, based on the mandatory international normative standards, for services in such areas basic education, public safety drug-abuse awareness and environmental management: environmental protection and pollution prevention, social justice and basic needs and rights —right to housing, food, safe drinking water, social security, education and universal health care and safety as basic education, child care(EU), public enshrine the right to primary health care—free emergency health care including treatment completion and foster best practices for health promotion and disease prevention recognizing the value of traditional and natural remedies and to universal health care, water for domestic, agricultural and industrial use, public infrastructure,(FAO) public safety, drug- abuse awareness and environmental protection and pollution prevention management;** (133)

ARTICLE 134

134. *Human settlements managers need to draw on the skills and resources of a diversity of people and institutions at many levels coupled with genuine community involvement and participation are essential for socially equitable and environmentally sound development of human settlements.* Scarcity of suitably qualified personnel *and* weakness of institutional systems *and* technical capacity, **as well as unwillingness to draw upon the individuals and groups from civil society that are experienced and aware of the physical and social service community facilities, that are active in the preservation, conservation and protection of the environment and that are advocates of social justice and human rights** are among the main obstacles to the improvement of human settlements in many countries. **In addition, the use of BEST (Best Environmentally Sound Traditions) practices based on principles of socially equitable and environmentally sound development in *new skills, know-how and technology in all aspects of developing community based planning of***

human settlements planning and management will be necessary. In countries where change is rapid there is a need for governments and the international community to ensure the effective development and transfer of leadership skills, *management* expertise and experience **in guaranteeing the respect for human rights, in preserving, conserving and protecting the environment, in promoting peace and social justice, and in advocating BEST practices, know-how and technology.**

Actions

ARTICLE 135

135. To improve **the planning and development of socially equitable and environmentally sound** human settlements *management*, governments at all appropriate levels, including local authorities and their associations, **shall should:**

(a) Support training programmes for administrators and civic officials at all levels, as appropriate, **and enhance leadership qualities of individuals and organizations of civil society and promote the inclusion of women and young people, and marginalized members of society in staff structures and decision-making;**

(b) Establish *private-public, community, urban-rural sector, BEST practices enterprises business* and economic forums to facilitate the transfer of expertise *management know-how* and experience;

(c) Develop and implement and comprehensive training, education **in socially equitable and environmentally sound and human resources** development policies and programmes involving a wide range of **individuals and groups of civil society including the participation of academics**, local authority associations, *academic, research, training and educational institutions* and the **BEST practices enterprises private sector** focusing on:

(i) The **furthering of genuine community involvement and participation** *development of a multi-sectoral approach* to human settlements development, **which includes the participation of women, migrant workers, minority groups, indigenous peoples and other usually marginalized individuals and groups;**

(ii) The **cooperative decision making process** where there is a **continual drawing upon the experience and expertise of members of the community** *The training of trainers to develop a core capacity for institution-strengthening and capacity-building;* **including women, youth, elderly and members of disadvantaged or marginalized groups.**

(iii) The development of local capacity to define needs and undertake or commission applied research, particularly in social and environmental impact assessments, local **socially equitable and environmentally sound development growth and creation of meaningful employment job creation**, and to *incorporate* apply the findings from the research *in management systems* in socially equitable environmentally sound human settlements;

(d) Develop information systems for the exchange, transfer and sharing of experience, expertise, know-how and **BEST practices in socially equitable environmentally sound human settlements technology in human settlements management**

(e) *Encourage, as appropriate, the involvement of private-sector entities in improving public-sector management and administration and the formation of entities that are public in their function, private in their management and publicly-privately funded; and*

(e) develop information systems for **networking and accessing resources in a timely manner, and for** the exchange, transfer and sharing of experience, expertise, know-how and **BEST practices technology related to** *in human settlements management*;

(f) **help develop principle-based decision making processes to enable mediation programmes in conflict resolution between competing agents in the access to, distribution and use of resources and spaces in settlements.**

4. Metropolitan planning

ARTICLE 136

136. Although **there are the managers of human settlements face** many common challenges **in urban and rural human settlements**, *those responsible for the management and development of metropolitan areas and mega-cities face unique problems caused by the size and complexity of their tasks and responsibilities. Among the characteristics of metropolitan areas that require special skills to handle are* their ethnically **religiously** and culturally diverse populations; their large concentrations of urban poverty **within economically deprived zones (NGO Composite)**; their extensive infrastructure...networks and transportation and communications systems; their role in national, regional and international production and consumption cycles, economic development, trade and finance; and their potential for severe environmental degradation. Large metropolitan areas and mega-cities also represent the largest potential risks of human, material and production-capacity loss in case of natural and human-made disasters and **the greatest negative impacts of the global economy and of structural**

adjustment programmes on local economies. In some countries, the lack of a metropolitan-wide authority creates difficulty in urban management.

Actions

ARTICLE 137

137. To address the special needs of metropolitan areas, Governments at all the appropriate levels, including local authorities, **shall should:**

- (a) **Ensure and promote metropolitan-wide planning in socially equitable and environmentally sound development and management strategies; which include individuals and organizations of civil society with those members of society that are using marginalized in the planning process.**
- (b) Monitor and analyze the effectiveness and efficiency of metropolitan structures and administrative systems, and incorporate the results into public policies for dealing with macroeconomic, social and environmental issues;
- (c) Create a legislative framework and adopt organizational structures that ensure coordinated and efficient delivery of services *delivery*, **provision** of resource *mobilization* and *sustainable* **socially equitable and environmentally sound** development throughout metropolitan areas;
- (d) Strengthen the capacity and mandates of metropolitan authorities to deal effectively with issues of regional and national importance, such as the **use of land, energy and water resources management, the preservation, protection and conservation of the environment management, and** the access to adequate social infrastructures, transportation and communications, trade and finance, and social integration;
- (e) Develop, **a coalition of individuals and groups of civil society with varying areas of experience and expertise to collaborate with a** professional staff trained in the technical aspects of planning and development of primary infrastructure and emergency prevention and planning;
- (f) Facilitate and promote policy dialogue and the exchange of experience, expertise, know-how and **BEST practices technology among** metropolitan authorities **with individuals and groups of civil society including women and numerous marginalized groups** in such areas as transportation and communications, waste **prevention, reduction, resource-reversion waste, and mitigation, management,** energy conservation, social welfare and environmental **preservation, protection and conservation management.**

5. Domestic financial resources and economic instruments

ARTICLE 139

139. Financing the future of urban development and sustaining the economic viability of cities represents a particular challenge which will require innovative systems of finance at national and local levels. Effective **cooperation partnerships** between the public and **BEST practices enterprises** are needed which combine local taxes on production and consumption with fiscal incentives for investment by *industry, commerce, trade and the private service sector*. **BEST practices enterprises with local materials and that provide socially equitable and environmentally sound meaningful employment** New forms of municipal finance are needed to meet the future needs of urban economic development and the costs of supporting infrastructure and services. **In addition funding shall be sought from the reduction of the military budget and from requiring the payment of deferred taxes from industry. It is thus necessary to reduce military expenditures and production in order to finance programs for habitat (NGO Composite).**

BACKGROUND

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget and a resolution to reallocate resources saved from the proposed reduction to economic and social needs In 1994 States, in adopting the statement from the International Conference on Population and Development, concurred that the attainment of “quantitative and qualitative goals of the present Programme of Action clearly require additional resources, some of which could become available from a reordering of priorities at the individual, national and international levels. However, none of the actions required—nor all of them combined— is expensive in the context of either current global development or military expenditures.(Article 1.19) In 1995, Similarly, states in adopting the statement from the Social Development Summit endorsed the calling for “the reallocation of military spending to ensure a greater pocket of resources to expand public services. Again, in 1995, member states of the United Nations reconfirmed these commitments by adopting the Platform of Action at the UN conference on Women, Equality, Development and Peace. In the Platform of Action States have made a commitment to maintain “ peace and

security at the global, regional and local levels, together with the prevention of policies of aggression ... and the resolution of armed conflict” (Art. 14) and to reduce “...military expenditures “ (Art. 15)., states have also made a commitment to the “prevention and resolution of conflicts”(art 15) and to “increase and hasten, ... the conversion of military resources and related industries to development and peaceful purposes (145a)

In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). Yet, through sympathetic administrations states have for years failed to ensure corporate compliance with national laws, codes and regulations, and international agreements. States have continued to provide subsidies and tax deferrals to corporations, a large proportion of whom have engaged in socially inequitable and environmentally unsound development.

Actions

ARTICLE 140

140. To strengthen the national and local economic and financial base with a view to addressing the needs of **socially equitable and environmentally sound sustainable** human settlements *development*, Governments at all appropriate levels, including local authorities, **shall should**:

(a) Strengthen, as appropriate, the capacity of local authorities to attract **BEST practices** investments;

(b) Adopt macroeconomic policies and frameworks which encourage increased domestic savings and facilitate their use in housing, basic infrastructure and **other socially equitable and environmentally sound settlements** development;

(c) Develop efficient, equitable and buoyant sources of national and local revenues, including taxation, user charges, tariffs and betterment fees **levies** to promote national and local capacity for capital investment in housing, infrastructure and basic services; and devise, as appropriate, new financial instruments **which are conditional on mandatory international normative standards (MINS) including the penalizing penalize of environmental damage arising from both**

production and consumption of environmentally unsound activities (NGO Composite);

(d) Enhance national and local tax collection capabilities and expenditure control **to reduce cost attainment ? and increase tax effort for revenue maximization** (NGO Composite)

(e) *Strive for full cost recovery of urban services through user charges, while at the same time* Addressing the needs of the **people living in poverty poor, inter alia**, through pricing policies and, where appropriate, by *transparent* subsidies;

(f) Support local efforts to encourage voluntary private and community sector partnerships and participation in building, operating and maintaining basic infrastructure and services **which employ gender and marginalized group sensitive policies, and address the needs of marginalized groups and empower women with financial resources for home acquisition** (NGO Composite);

(g) *Rationalize and* Facilitate local authorities' access to national, regional and international capital markets and specialized lending institutions, including, *inter alia*, instituting municipal credit rating and credit systems, **which ensure that women and members of marginalized groups have genuine involvement and participation are integral in program in the development of socially equitable and environmentally sound human settlements** bearing in mind the borrower's capacity to repay the debt;

(h) Facilitate the role of local authorities in **working cooperatively forming partnerships with the private**, community and cooperative sectors and institutions for local development by **BEST practices enterprises development**;

(i) Institutionalize budget mechanisms, where appropriate, and accounting to enable local authorities to engage in medium- and long-term investment programmes;

(j) Establish *transparent* open systems and procedures to ensure financial accountability;

(k) Institutionalize, where appropriate, *transparent, open*, inter-governmental transfer **methods mechanisms** that are timely, predictable and performance- and need-based; and

(l) Attract **BEST practices enterprises private and community** investment to urban development.

(m) use a reduction of national military budgets to fund local programmes for human settlement as agreed through General Assembly Resolutions.

6. Information and communications

ARTICLE 141

141. Recent developments in information technology, in conjunction with the liberalization of trade and the free flow of capital on a global scale, **are bringing will bring** about radical changes in the roles and functions of cities, and their decision-making and resource allocation processes. Those Governments that make the necessary investments in information technology and infrastructure and enable and empower their citizens to make effective use of such technology can expect to foster tremendous **additional** productivity gains in industry, trade and commerce. **However in many countries these productivity gains have benefited only a fortunate few, while contributing to increasing income inequality and unemployment. Furthermore, these technologies are only available to those who can afford them and place the substantial majority of people who do not have access at an increasing disadvantage in a competitive global economy. In addition, there has been an unprecedented dependency on computer technology as the panacea for organizing infrastructures, and as noted recently the global conversion to accommodate the date transfer into the year 2000 will cost the global community at least \$400 billion US It is recognized that this improved information technology should be appropriately and optimally has the potential to be** utilized to preserve and share **cultural and** moral values and enhance and improve education, training **development of meaningful employment programmes for women and marginalized groups, has the potential to contribute to** public awareness of the social, economic and environmental issues affecting the quality of life, and **has the potential to** facilitate access by all *key actors and* communities to the exchange of habitat practices, including those which uphold the rights of children, women **disabled, frail elderly, displaced,** and other *vulnerable marginalized groups to genuine community involvement and participation in developing socially equitable and environmentally sound human settlements. context of growing urbanization.*

Actions

ARTICLE 142

142. To improve the capacity to **use exploit** these innovations **to enhance the public good**, governments **at all appropriate levels including** and local authorities **shall should:**

(a) **Develop, upgrade, and maintain** information infrastructure and technology **with a healthy skepticism about the role of this technology** and encourage their use by all levels of Government, public institutions and *civil society organizations* **individuals and groups of civil society; caution should be exercised in becoming too dependent on this technology.**

(b) **develop and implement a training program for women, men of all ages and for members of marginalized groups** in the use, **ways and means** of information technology; (Composite NGO)

(c) Develop methods of sharing experiences through electronic means, such as the Internet, networks and libraries of local initiatives and the dissemination of **information on BEST (Best Environmentally Sound Technique)** practices;

(d) **Implement programs that** encourage participation of children, youth, **women, the elderly, people in poverty, and other members of marginalized groups** in the use of public libraries and communication networks (NGO Composite);

(e) Facilitate the learning process through the dissemination of both successful and unsuccessful experiences in human settlements taken from governments, public **institutions, BEST practices enterprises, corporations, including transnationals, private and community organizations sectors;**

(f) **Establish Encourage** policies that make information technology and services available and more accessible to the general public; and

(g) Ensure *Guarantee* the free flow of, and access to, information in all areas of public policy, decision-making, resource allocation, **and social developments which impact women, children and marginalized groups (NGO Composite).**

(h) **Assure market competition and broad public access in the provision of information technology and media services by strictly limiting concentrations of private ownership and control; and by maintaining public information technology and media facilities for those who otherwise lack access (NGO Composite).**

(i) **implement policy measures to assure that the benefits of productivity gains are broadly shared and contribute to livelihood creation rather to increased unemployment.**

142 bis. That dissemination of experiences that contribute to facilitate the access to adequate housing for all and the development of sustainable human settlements is helpful in the formulation of public policies on human settlements development. National governments, in partnership with social actors, should:

(a) Promote the selection of urban management practices which stand out by their positive impact in improving habitat, by their use of participatory modes of organization and operation, by their sustainable and lasting character, and by their tendency to become universal;

(b) Set up structures for the selection of the best practices with participation by non-governmental organizations active in the urban development field;

(c) Promote dissemination of the selected practices locally, nationally, regionally and internationally, in an integrated manner.

Part IV.
**GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF
 IMPLEMENTATION**
E. International cooperation and coordination (143 -157 IN BRACKETS)

1. Introduction

ARTICLE 143

[143. The goals of ensuring adequate shelter for all and making human settlements and communities **environmentally sound, productive, healthy, safe, more equitable and sustainable** contribute to achieving world peace, development, stability and justice. International cooperation takes on added significance and importance in the light of recent trends in the globalization and the interdependence of the world economy. There is an urgent need to redefine and resuscitate the existing processes and structure of cooperation and to evolve new and innovative forms of cooperation with a view to enabling humankind to face the challenges posed by the development of rural and urban areas. **There is urgency to redefine development and move towards a new “international economic order” based on socially equitable and environmentally sound development. This new order may require the political will to reduce the global military budget by 50% (from the current 800 billion to 400 billion which it was in 1981 when there was a UN General Assembly resolution to freeze and reduce the military budget) at with the undertaking to transfer the peace dividend to socially equitable and environmentally sound development. The states of the world must firmly adhere to the principle endorsed in the United Nations Conference on Human Environment where states agreed to eliminate weapons of mass destruction, which by definition would include nuclear weapons as well and chemical and biological. Additionally, the global community must undertake to condemn the continued mining of uranium for weapons production, the use of civil nuclear reactors whose waste is a scourge for future generations and the use of plutonium from former nuclear weapons sites as a fuel for nuclear reactors. Thus** there is a need for the political will of all States as well as specific action by the international community to establish and inspire new forms of cooperation, partnership, coordination and investment (including the local private sector), in order to contribute effectively to the provision and improvement of shelter conditions in human settlements (especially in developing countries), taking into account the diversity of the needs of human settlements among countries.

144. **Although** the formulation and implementation of strategies for human settlements development are the responsibility of each country at the national and local levels and should take into account the economic, social and environmental diversity of conditions in each country; **fundamental principles derived from the obligations incurred in the United Nations Conventions, Treaties, Covenants**

and from the expectations created in the United Nations Declarations Conference; action plans and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development.

The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of mandatory international normative standards-and-technical regulations (MINS) that will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development. Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real cooperation based on the highest tenable principles.** This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive corporations including transnationals *private sector* to participate in socially equitable and environmentally sound development; *participation in the shaping of international cooperation.*** The international community, (including multilateral financial institutions) **has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments. In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, States undertook to ensure that all corporations (including transnational corporations), comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions; including those related to the environment, and other relevant laws”. In addition, the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes and which continue to perpetuate the old world order of over-consumption, inequity and environmental destruction and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for BEST environmentally sound technology that *environment to ensure that additional resources to reinforce national efforts to foster an enabling environment to* and achieve the objectives of adequate shelter**

for all and the **socially equitable and environmentally sound sustainable development** of human settlements.

ARTICLE 144 bis

144 bis. [International cooperation assumes added significance and importance in the wake of recent trends in the globalization of the world economy on the one hand and the continued deterioration of the plight of developing countries on the other hand. The problems resulting from poverty, urbanization, lack of adequate shelter including social housing, rapid population growth, rural-urban migration, economic stagnation and social instability are especially acute.]

ARTICLE 145

145. [In recent years disparities in economic growth, environmental degradation, and labour-market asymmetries have increased international migration, and have impacted on spatial distribution of cities' population entailing the imbalances of human resources among countries of origin and countries of destination.] Innovative approaches and frameworks for international cooperation in human settlements development and management must be sought and developed to include the active participation of all levels of government, the **segment of private sector which is driven by high global mandatory regulations and standards** and cooperative sectors, non-governmental organizations and community-based organizations; in decision-making, policy formulation and resource allocation, implementation and evaluation. These approaches and frameworks should also include new and improved forms of cooperation and coordination between and among multilateral financial institutions, international organizations and various organs and bodies of the United Nations system, including south-south, north-south and south-north exchanges of best practices, the continuous development of policy, **and planning and management** tools and instruments such as the application of shelter and urban indicators, human resources development and institutional capacity-building. **In this new global partnership at all levels decisions will be guided by principles reflected in International instruments endorsed by the states within the global system.**

ARTICLE 145 bis

145 bis. These innovative approaches should also include new forms of cooperation and partnerships between multilateral and bilateral assistance agencies on the one side, and **individuals and groups of civil society and local authorities**, on the other, based on the **adherence to principles related to the enshrining and guaranteeing of the respect for human rights, the preservation, protection and conservation of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,**

Principles of local implementation of mandatory standards and regulations should guide "decentralized cooperation". This implies recognition of the capacity of local authorities to develop international relations and cooperation, with the existing legal frameworks of each country, their right to devote their own resources for that purpose and to be associated in the process of defining international human settlements policies. Governments, as well as bilateral and multilateral aid-agencies, should commit themselves to encourage decentralized cooperation between local authorities as well as the strengthening of networks of associations of local authorities.

EVIDENCE OF PRECEDENT

RE: REDUCING OF DISPARITIES

4. It is of paramount importance that national and international efforts give priority to improving the rural habitat. In this context, efforts should be made towards the reduction of disparities between rural and urban areas, as needed between regions and within urban areas themselves, for a harmonious development of human settlements. (III 4 Habitat I)

2. Enabling international context

ARTICLE 146

146. *The process of Urbanization has resulted from a development model that has been based primarily on economic progress. Socially equitable and environmentally sound human settlements will result from a cooperative and collective undertaking to ensure social justice; to enshrine and guarantee the respect for human rights, to preserve, conserve and protect the environment and to prevent of conflict and war; is linked to economic development, social development and environmental protection. The promoting of BEST (Best Environmentally Sound Traditions) practices, the preserving and protecting of the environment, the ensuring of social justice are interdependent and mutually reinforcing components of sustainable socially equitable and environmentally sound development. The provision of adequate shelter for all and sustainable socially equitable and environmentally sound human settlements development are increasingly influenced by the global economy. In this context, it is imperative to enable requires all countries, especially developing countries, to improve living and working conditions in human settlements to draw upon endogenous BEST practices with international funding to assist in developing traditional practices. The international funding should be provided to stimulate BEST practices. This calls for an enabling international environment and integrated approaches at national and international levels which take account of the efforts of countries to implement*

*programmes of economic reform or economic transition. Furthermore, **BEST practices** technological developments are leading to major changes in the structure of **meaningful** employment. *[It should be recognized that in social and economic terms the housing sector is a productive sector and should be treated on an equal basis with other productive sectors. Achievement of the goal of sustainable human settlements development at the global level would depend on fair and durable solutions of, inter alia, the issues of finance, debt, trade and transfer of technology.]**

ARTICLE 147

147. The international community should support governments in their efforts **to promote socially equitable and environmentally sound** *to cope with the impact of these changes on human settlements within a framework of **cooperation and collectiveness** enabling strategies.* The international community *should shall* promote:

(a) *The establishment of **Openness, equity, cooperativeness and mutually benefit open, equitable, cooperative and mutually beneficial international economic environment;***

(b) *The co-ordination of macroeconomic policies at all levels to achieve an international financial system that is conducive to stable and **sustained economic growth** and **socially equitable and environmentally sound** development;*

(c) *An international financial system that is more conducive to stable and **socially equitable and environmentally sound sustainable** human settlement **development** through, inter alia, a higher degree of stability in international financial markets, a reduction of the risk of financial crisis, and lower real interest rates;*

(d) *An environment in all countries, [including developing economies, economies in transition and developed economies,] that attracts foreign and domestic direct investment and encourages savings;*

(e) **BEST (Best Environmentally Sound Traditions) practices** *development, productive investment and expanded access to open and dynamic markets in the context of an open, equitable, secure, non-discriminatory, predictable, transparent and multilateral rule-based international trading system, [and to technologies for all people, especially those living in poverty and the disadvantaged and marginalized, as well as for the least developed countries];*

(f) Capacity building through **BEST practices** in developing countries in all regions, particularly African countries and the least developed countries: and in countries with economies in transition;

(g) The strengthening and improvement of *technical and* financial assistance to developing countries in all regions to promote *sustainable socially equitable and environmentally sound* development and overcome hindrances to their full and effective **genuine involvement and** participation in the world economy.

ARTICLE 148

148. With specific reference to *sustainable socially equitable and environmentally sound* human settlements *development* and the provision of shelter, the international community **shall should**:

(a) Ensure that the benefits of **the global economy economic growth** improve people's quality of life in all nations, regardless of where people live;

(b) *Mobilize Provide* national and international financial resources for shelter provision and **socially equitable and environmentally sound sustainable** human settlements *development*;

(c) Facilitate increased access by all levels of government, by **BEST practices enterprises, and by individuals and groups of civil society including those usually marginalized by society and the private sector in developing countries and countries with economies in transition** to international financial resources to enable them to attract investment in shelter and infrastructure for *sustainable socially equitable and environmentally sound* human settlements *development*;

(d) In a manner consistent with national legislation, seek to increase the ability of local authorities, non-governmental organizations and **BEST practices enterprises the private sector** to link *directly with global capital markets, in accordance with prudential safeguards in those markets*, to finance their shelter and infrastructure programmes *and to establish international and local mechanisms and instruments to facilitate risk sharing and credit enhancement for investing agencies - local, regional and national*;

(e) Promote strategies to ensure substantial, well-directed *public and private* investments in **BEST practices** in shelter, infrastructure and health, education and other basic services, including through the provision of *appropriate technical and* financial assistance;

[(f) Encourage international cooperation, in order to address the negative impact of international migration through *technical* assistance, **BEST practices** *management know-how*, exchange of information as well as by ensuring equitable wages and working conditions for both migrant and native workers.]

[(g) Continue to provide support to refugees in order to meet their needs, and to assist in assuring them a just, durable solution in accordance with relevant United Nations resolutions and international law, noting that sustainable human settlements can only be established for them on their land of origin.]

3. Financial resources and economic instruments

ARTICLE 149

149. The **need and the** demand for shelter *and infrastructural services in human settlements* is continuously increasing. *Communities and countries, especially developing countries, have difficulties in mobilizing adequate financial resources to meet rapidly rising costs of shelter, services, and physical infrastructure.* [New and additional financial resources, from various sources, are necessary to achieve the goals of adequate shelter for all and **socially equitable and environmentally sound sustainable** human settlements *development* in an urbanizing world. The existing resources available to developing countries - public, private, multilateral and bilateral - need to be enhanced through appropriate and flexible mechanisms and economic instruments to support sustainable human settlements development.]

ARTICLE 150

150. Implementation of the Habitat Agenda, particularly in developing countries of all regions, especially those in Africa and the least developed countries, will need additional financial resources *to be mobilized* at national and international levels and more effective development cooperation and assistance. This will require, inter alia:

ARTICLE 150 (a—z)

General

[150. (a) Translating the commitments of Habitat II into financial implications for the provision of adequate shelter and **socially equitable and environmentally sound** human settlements *development* in developing countries in all regions, particularly those in Africa and the least developed countries;

(b) Promoting assistance for shelter and human settlement activities in favour of *vulnerable marginalized* groups, such as refugees and internally displaced persons, documented migrants and the homeless through specific targeted grants and other assistance programmes;

15 The highest priority should be placed on the rehabilitation of expelled and homeless people who have been displaced by natural or man-made catastrophes, and especially by the act of foreign aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

Official financial resources

(c) Raising the priority of adequate shelter for all and **socially equitable and environmentally sound *sustainable*** human settlements *development* among multilateral and bilateral donors *and mobilizing their support* for national, sub-regional and regional plans of action of developing countries, especially for interested beneficiary countries;

(d) Striving to fulfil the 0.7 percent of GDP target and the 0.15 percent of GNP target for assistance to the least developed countries as soon as possible, and to increase, where appropriate, the share of funding for **socially equitable and environmentally sound *sustainable*** human development programmes;

(e) Achieving the agreed targets of 0.7 percent of GNP for overall official development assistance (ODA), and 0.15 percent of GNP for assistance to the least developed countries, as soon as possible, and no later than the year 2000, and increasing the share of funding for adequate shelter and **socially equitable and environmentally sound** development programmes in human settlement, commensurate with the scope and scale of activities required to achieve the objectives and goals of the Habitat Agenda;

(f) Replacing *Striving to ensure that* structural adjustment programmes with programmes that would respond to the needs of those who have been indebted as a result of over-consumptive models of development inconsistent with **socially equitable and environmentally sound** development. *sustainable human settlements development*;

(g) Inviting the international financial institutions to examine innovative approaches with **genuine community involvement and participation** to assisting low-income countries with a high proportion of multilateral debt, with a view to alleviating their debt burden;

Partnerships Cooperative participation

(h) Encouraging multilateral development institutions and donors to support nations in their effort to pursue enabling strategies through which national and local governments, communities and **BEST practices enterprises** *the private and cooperatives sectors can form can work collectively and cooperatively together* *partnerships to participating in providing shelter and sustainable socially equitable and environmentally sound human settlements activities;*

(i) Inviting multilateral and bilateral donors to support countries, particularly developing countries, in their efforts to pursue enabling strategies through which governments, local authorities, communities, and the private and cooperative sectors can form partnerships to participate in the provision of adequate shelter, including social housing and sustainable human settlements development activities;

(j) Exploring ways and means to strengthen support and expand south-south cooperation based on the concept of triangular cooperation, partnership between developing and developed countries, as well as enhanced cooperation among developing countries;

(k) Consolidating solidarity of the international community and its organizations to provide adequate shelter for all and sustainable human settlements development for people living under foreign occupation;

Improving the effectiveness of financial resources

(l) Striving to enhance the effectiveness of existing ODA and other external financial flows through improving coordination between **policies and among of** donors and **mandatory international normative standards derived from obligations, and expectations from international United Nations instruments and agreements** *operational activities, and through better coherence between those flows and internal sustainable human settlements strategies;* those practices related to socially equitable and environmentally sound development.

(m) Supporting programmes that increase the effectiveness and **openness** *transparent utilization of public and private resources, reduce*

wasteful and untargetted expenditure and increase access to housing and services for people living in poverty;

(n) Recognizing the negative effect of excessive military expenditures, trade in arms, especially of those arms that are particularly injurious or have indiscriminate effects such as land mines whose use should be banned, and excessive investment for arms production and acquisition. The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget (UN General Assembly 36/81). Also, in 1981 the UN General Assembly undertook to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81).

DOCUMENTATION OF PRECEDENT:

RE; PREVENTING WASTE AND MISUSE OF RESOURCES FOR WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

(o) Giving preference, wherever possible, to the *use utilization* of competent national experts or, where necessary, of competent experts from within the sub-region or region or from other developing countries, in projects and programmes design, preparation and implementation, and to the building of local expertise where it does not exist; **and at all times there shall be genuine community involvement and participation;**

(p) Maximizing projects and programmes efficiency by keeping overhead costs to a minimum;

(q) Integrating practical measures for **preventing and reducing** disaster-vulnerability in development programmes and projects, in particular construction of buildings and communication systems, financed by the international community, and ensuring that such measures become an integral part of feasibility studies and project identification;

Private Non-exploiting enterprises financial resources

(r) Developing economic policies to promote *and mobilize* domestic savings and attract external resources for **socially equitable and environmentally sound *productive* investments within a context of BEST practices driven by MINS 1997**, and seeking innovative sources of funding, both public and non-exploiting enterprises *private*, for adequate shelter and **socially equitable and environmentally sound *sustainable* human settlements development programmes, while ensuring their effective utilization;**

(s) Strengthening financial *and technical* assistance for **BEST practices and community-based development and self-help programs**, and strengthen cooperation among governments at all levels, community organizations, cooperatives, formal and informal banking institutions, *private BEST practices* enterprises and international institutions, with the aim of *mobilizing* providing local savings, promoting the creation of local financial networks, and increasing the availability of credit and market information to low-income individuals, people in poverty, women, and *vulnerable* marginalized and disadvantaged groups for shelter and **socially equitable and environmentally sound human settlements development;**

(t) Facilitating access to global finances for governments and local authorities which are initiating or are involved in **working cooperatively with BEST practices enterprises, and with individuals and groups of civil society including individuals and groups that are usually marginalized from the decision making process and *public-private partnership* programmes;**

(u) Establishing and supporting linkages of informal credit mechanisms to the global pool of resources and increasing access by a majority of the population to housing finance through participatory processes involving communities, non-governmental organizations, credit unions, global financial institutions and other relevant actors;

Existing economic instruments

(v) Attracting international flows of public finances for **providing shelter *provision* and socially equitable and environmentally sound human settlements development** through appropriate economic instruments;

(w) *Considering means to facilitate foreign private sector investment in sustainable human settlements projects, particularly in the areas of infrastructure and transportation, for example by way of BOT schemes;*

(x) Assisting countries, particularly developing countries, in implementing effective and equitable pricing mechanisms for adequate shelter and **socially equitable and environmentally sound settlements** human settlements, infrastructure and services to induce greater flows of *private*, domestic and global funds, while ensuring *openness transparent* and *targeted* subsidies for people living in poverty;

(y) Examining appropriate debt-equity swapping measures in favour of shelter and infrastructure development in human settlements;

Innovative economic instruments

(z) Developing innovative sources of funding, *both public and private*, for **socially equitable and environmentally sound human settlements development**, and creating a *supportive environment support for the mobilization of resources by individuals and groups of civil society*, including beneficiary and individual voluntary contributions;

Special financing needs/issues

(aa) Providing assistance for shelter and **socially equitable and environmentally sound** human settlement *development activities in favour of* for people living in poverty, particularly women, and **vulnerable marginalized** groups, such as refugees, internally displaced persons, people with disabilities, street children, migrants and the homeless through specific targeted grants;

(bb) Promoting assistance for shelter and human settlement activities in favour of **vulnerable marginalized** groups, such as refugees and internally displaced persons, documented migrants and the homeless through specific targeted grants and other assistance programmes;

(cc) Recognizing the need for shelter and **socially equitable and environmentally sound** human settlements *development* in order to address the special conditions of some countries experiencing natural and human-made disasters and the urgent need to reconstruct their economies and **communities human settlements**;

(dd) Implementing the commitments of the international community to the special needs and vulnerabilities of human settlements in the small island developing States, in particular by providing effective means, including adequate, predictable, new and additional resources for **programmes for socially equitable and environmentally sound human settlements programmes**, in accordance with the Declaration of Barbados

and on the basis of relevant provisions of the Programme of Action for the Sustainable Development of Small Island Developing States;

(ee) Providing international support and assistance to the land-locked developing countries and their neighbour transit [?] developing countries in their efforts to implement the outcome of Habitat II, taking into account the challenges and problems characteristic to those countries;

(ff) Agreeing on a mutual commitment between interested developed and developing country partners to allocate, on average, 20 per cent of ODA and 20 per cent of the national budget, respectively, to basic social programmes;

(gg) Providing soft loans and grants to enable all nations to specifically address the needs of *vulnerable marginalized groups*.]

4. Technology Transfer and Information Exchange

ARTICLE 151

151. [The use and transfer of environmentally sound *technologies practices* which have a profound impact on consumption and production patterns is one of the prerequisites for **socially equitable and environmentally sound sustainable human settlements development**. Advanced **BEST (Best Environmentally Sound Traditions) practices and appropriate technologies** and the knowledge-based systems which support their application offer new opportunities for more efficient use of human, financial and material resources, *more sustainable industrial practices* and new sources of **meaningful** employment. International agencies, including UNCHS (Habitat), have an essential role in disseminating and facilitating access to information on **BEST practices available technologies** and options for their transfer. It is understood that the transfer of *technology BEST practices* includes assurances of adequate protection of intellectual property and mutually agreed allocation of *commercial* benefits; **particularly those benefits that shall accrue to developing countries for traditional practices including those related to biodiversity, and biotechnology**].

ARTICLE 152

152. The international community, in promoting and facilitating the transfer of technology and expertise in support of the implementation of national plans of action, should:

(a) Establish and reinforce, as appropriate, global networks among all [stakeholders] individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society to facilitate information exchange on environmentally sound technologies particularly those related to shelter and human settlements;

(b) Ensure that the process of technology transfer is fair and avoids dumping of environmentally unsound technologies on the recipients, and also avoids the replacing of significant **endogenous BEST practices; in addition, the promotion of clean-up technology which has been used to justify the continuation of the production of hazardous, toxic or atomic wastes undermines the development of BEST practices, and should be discouraged so that the emphasis will be on prevention practice—doing it right the first time.**

(c) [Facilitate] [Develop and intensify] technical cooperation with and among all regions including south - south cooperation in order to exchange experiences particularly on best practices, foster the development of technology and technical skills and to increase the efficiency of shelter and human settlements policies and management, with backing of coordinated and complimentary support from multilateral and bilateral arrangements;

(c bis.) Ensure use of appropriate technology and production of local building materials;

(d) Place special emphasis on the funding, and promotion and dissemination of applied research and innovation in all areas which could contribute to enhancing the capabilities of developing countries particularly those in Africa and least developed countries, to provide shelter, urban services, infrastructure and amenities to their communities;

(d bis.) Support the development of international, sub-regional and regional networks of research, production, dissemination and commercialization institutions for locally produced building materials;

(e) [Enhance the identification and dissemination of new and promising technologies related to human settlements which generate **meaningful** employment and lower cost of infrastructure, make basic services more affordable, and minimize detrimental environmental impacts, and identify specific roles for existing United Nations organizations, [especially UNCHS (Habitat)] which would promote these goals].

5. Technical Cooperation

ARTICLE 153

153. [To face the challenges of the rapidly urbanizing world, there is need to ensure that international and regional networks facilitate more effectively the exchange and transfer of knowledge and experience on institutional, legal and regulatory framework, and to disseminate best practices on sustainable human settlements in rural and urban areas. UNCHS (Habitat) should [play central role] and act as catalyst in mobilizing technical cooperation. Opportunities for improved dissemination and exchange of ideas on technical cooperation at national and regional levels could be explored.]

ARTICLE 154

154. More specifically, the international community should:

(a) Establish, [within existing resources] cost-effective global human settlement information networks in the form of permanent and "electronic conferences" which will contain updated information and the Global Plan of Action, best practices, as well as *progress* **Obligations discharged/Expectations fulfilled** reports on the implementation of national plans of action;

(b) Through global human settlements information networks, assist Governments at all levels, all major groups of actors and international development agencies, in assessing information and policies, strategies, programmes and projects on sustainable human settlements development and shelter provision;

(c) [Under the leadership of the Commission on Human Settlements, and supported by the United Nations regional economic commissions and UNCHS (Habitat), develop awareness-building and information activities to ensure that human settlements development issues in general and concerted policy and programme responses to urbanization in particular, are brought into the mainstream of the development objectives of the international community and national Governments];

(d) Develop and strengthen, with a view to supporting and facilitating national and local efforts in human settlements management, capacity-building programmes and promote exchange of experiences and policy responses to urbanization and integration of regional development within the framework of national development strategies;

(e) Through the secretariat of the United Nations Commission on Human Settlements, UNCHS (Habitat), supported by information gathered by United Nations regional economic commissions, develop capacity building strategies in order to enhance the capabilities of national and local authorities to identify and analyze critical human settlements issues; to formulate and effectively implement policies and programmes which respond to them; and to efficiently manage the process of settlements development at the local levels;

(e *bis.*) Through appropriate institutions, continue to promote capacity-building in developing countries with effective utilization of national experts;

(f) Continue to support technical cooperation programmes aimed at mitigating the effects of natural and human-made disasters, as well as reconstruction activities in affected countries;

(g) Enable UNCHS (Habitat), [within existing resources], to provide technical, legal and institutional assistance to Governments at all appropriate levels upon request, in particular, in closer cooperation with UNDP's capacity building efforts.

ARTICLE 155

6. *Institutional cooperation*

155. The task of pursuing the goals of adequate shelter for all and sustainable human settlements development, in the face of increasing global economic interaction, necessitates international cooperation of public and private institutions operating in the areas of human settlement development, whereby resources, information and capacities are pooled for a more effective response to human settlements problems.

ARTICLE 156

156. [The Habitat Agenda adds new elements to the agenda for national actions and international cooperation, reaffirming, building on the **obligations incurred in Conventions, Treaties and Covenants, and on expectations created through Declarations, Conference Action plans, and General Assembly Resolutions, as well as on the results of the recent major United Nations conferences. Governments confirm the need for a coordinated follow-up of the major world conferences, including Habitat II. The very nature of urban challenges requires an integrated approach to *sustainable socially equitable and environmentally sound* development and thus increased cooperation and coherence. Existing intergovernmental bodies within the United Nations system should be used to promote communication and coordination between governments, international bodies - including those of the United Nations system and the Bretton Woods system, as well as other relevant [stake-holders] - and to strengthen a common perception of human settlements priorities].**

156 bis. [Implementation of The Habitat Agenda should take place within a coordinated framework which ensures that all the United Nations' **obligations incurred in Conventions, Treaties and Covenants, and all the**

United Nations' expectations created through Declarations, Conference Action plans, and General Assembly Resolutions, Conferences are comprehensively followed-up and the agreed programmes of action fully implemented, monitored and reviewed, together with the results of other obligations and expectations from previous international instruments, as well as of other recent United Nations Conferences where they are related to human settlements, particularly the World Summit for Children, the United Nations Conference on Environment and Development, the World Conference on Human Rights, the World Conference on Natural Disaster Reduction, the Global Conference on the Sustainable Development of Small Island Developing States, the World Summit for Social Development, the International Conference on Population and Development, and the Fourth World Conference on Women. This will require better coordination and cooperation between multilateral and bilateral partners and joint programming, leading to increased and more effective cooperation between UNCHS and other entities within and outside the United Nations system].

ARTICLE 157

157. The United Nations family of agencies, including the Bretton Woods institutions, the regional and sub-regional development banks and funds and bilateral support agencies [where appropriate] **shall should:**

(a) **Undertake to require Mandatory International Standards-and-technical-regulation (MINS) drawn from international principles reflected in obligations incurred by states in Conventions, Treaties, and Covenants, and in expectations created in Declarations, General Assembly Resolution, and Conference action plans as a condition for funding; and establish and strengthen, where appropriate, cooperative mechanisms means to integrate into their policies, programmes and operations, socially equitable and environmentally sound sustainable human settlements development including commitments and actions, particularly those from The Habitat Agenda and taking into account the expectations created through outcome of the relevant sections of other recent United Nations Conferences, Declarations and General Assembly Resolutions;**

(b) Establish and strengthen **counterparts and cooperation partnerships** with international associations of local authorities, non-governmental and community-based organizations and with all other *[stakeholders individuals and organizations of civil society drawing upon a wide range of experience and expertise, including that from marginalized members of society to achieve the goals of the Conference;*

(c) Develop activities aimed at strengthening the capacity of local authorities;

(d) Intensify their cooperation with non-governmental organizations, voluntary groups and community associations, and with **BEST practices enterprises *private*** and cooperative **groups sectors** in **socially equitable and environmentally sound *sustainable*** human settlements *development*;

(e) Support **cooperative programmes with genuine community involvement and participation** *public-private partnerships* in **providing shelter delivery, services provision** and other **socially equitable and environmentally sound *development activities for sustainable*** human settlements;

(f) Encourage **genuine community involvement and participation** *the involvement of all actors* at local level in reaching agreements and local measures, programmes and actions necessary to implement The Habitat Agenda, Global Plan of Action and national plans of action including through Local Agenda 21 processes as mandated by the United Nations Conference on Environment and Development.]

unsustainable patterns of production and consumption raise these problems in especially acute forms. (Art. 6)

Part IV.**GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION****F. Implementation and follow-up of the Global Plan of Action****(Paragraphs 158 - 185 bracketed)***(The following paragraph is to be incorporated into section F in square brackets)*

[Set up an advisory centre to identify appropriate financial institutions such as ADB and World Bank to avail themselves to assist member states to secure financial assistance/funding for the implementation of shelter and human settlements programmes.]

Note on Part IV, Chapter F: 158 - 184. The entire paper was bracketed.

1. Introduction

ARTICLE 158

[158. **Before governments undertake new commitments they shall be made aware of relevant existing obligations incurred through Conventions, Treaties, and Covenants and of relevant expectations created through Declarations, Conference Action Plans and General Assembly Resolutions. The initial commitment shall be for states to fulfill years of previous obligations by signing what they have not yet signed, ratifying what they have not yet ratified, enacting legislation to ensure compliance, and establishing an enforcement infrastructure to ensure discharging of these obligations. 1987-1997 is the Decade for International Law and during this decade it would be appropriate for states to finally undertake to discharge their accrued obligations. The long-term impact of the commitments made by Governments and the international community at Habitat II will depend on the implementation of actions agreed upon at all levels including local, national and international levels. Also, national plans of action and/or other relevant national programmes and actions on sustainable human settlements development and shelter provision will need to be developed or strengthened, where appropriate, and their implementation will need to be monitored and evaluated by Governments and their partners at the national level in *sustainable development* socially equitable and environmentally sound development. Similarly *progress in* implementing— the discharging of obligations and the fulfilling of expectation— the Global Plan of Action needs to be assessed, with a view to encouraging and enabling all *stakeholders* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by non-fulfillment of expectations from the Global Plan of Action.]**

2. Implementation at the national level

ARTICLE 158 bis

158 bis. Governments have the primary responsibility of implementing the Global Plan of Action. Governments, as central partners, will create and strengthen effective partnerships with families, communities, local authorities, the private sector, non-governmental organizations, women, youth, elderly, *vulnerable marginalized* groups and indigenous people(s) in each country. National mechanisms should be installed or improved, as appropriate, to coordinate actions at all relevant government levels which have impact on human settlements and to assess this impact prior to governmental actions. Local authorities should be supported in their approach to implement this Global Plan of Action inasmuch as local action is

required. All appropriate participatory mechanisms, including Local Agenda 21, should be developed and employed.

It should be recognized that many of the provisions necessary for achieving socially equitable and environmentally sound development and for ensuring ecologically sustainable communities were already evident in Agenda 21, and that what is necessary is the political will of states to enact the necessary legislation and mandatory international normative standards-and0regulations to ensure compliance. In the Platform of Action, in Beijing in Art. 167, states undertook to ensure that corporations including transnationals comply with existing national and international law.

3. Implementation at the international level

ARTICLE 159

159. The effective implementation of the outcome of the United Nations Conference on Human Settlements (Habitat II) should take into account the **integration social equity and justice of sustainable human settlements development** with broader environmental, social and economic considerations into the concept of socially equitable and environmentally sound development. The main actors at the global level for the implementation and follow-up of the Habitat Agenda will continue to be Member States of the United Nations, the United Nations General Assembly, the Economic and Social Council, the Secretary-General of the United Nations, the United Nations Commission on Human Settlements and its Secretariat, the United Nations Centre for Human Settlements (Habitat), and all other specialized agencies of programmes in the United Nations system engaged in activities pertaining to the provision of adequate shelter for all and sustainable human settlements development in an urbanizing world.

4. Tracking implementation —the discharging of obligations and the fulfilling of expectations progress —on the Global Plan of Action

ARTICLE 160

160. The implementation of the Habitat agenda will require the **discharging of obligations incurred in Conventions, Treaties, and Covenants and the fulfilling of expectations created in Declarations, Conference action plans and General Assembly Resolutions. Member States of the United Nations shall exert concerted efforts to achieve the implementation implement of the Habitat Agenda through bilateral, sub-regional, regional and international mechanisms for cooperation as well as through the United Nations system and the Bretton Woods institutions. The lending policy of the Bretton Woods institutions shall be determined by a set of principles extracted from a body of international instruments.**

ARTICLE 161

161. **The General Assembly, as the highest intergovernmental body— reflecting the democratic will of member states— is the principal policy-making and appraisal organ of international conference agreements. The habitat II Conference is the final conference in a series of five dealing with environment, human rights, population, women (equality, development and peace). The series of conferences reflect, in many cases, a refinement of thought about global issues, and a synthesis of the essential principles emerging from the expectations created in all the conference action plans, as well as from the obligations incurred in Convention, Treaties, and Covenants shall be undertaken in 1997 in recognition of the culmination of the decade devoted to the promoting and furthering of international law. In additions in honour of this decade concerted effort should be made to call upon states to sign what they have not yet signed, to ratify what they have not yet ratified, to enact the necessary legislation to ensure compliance, and to enforce the legislation to ensure the discharging of obligations and the fulfillment of expectations. Concerted effort should also be made to establish an International Court of Compliance where citizens could take evidence of state non-compliance with obligations and expectations. At the Special Session of the General Assembly convened for 1997 for the purpose of an overall review and appraisal of Agenda 21, due attention should be given to the issue of human settlements in the context of *sustainable socially equitable and environmentally sound* development. The General Assembly is the principal policy-making and appraisal organ on matters relating to the follow-up of Habitat II. At the Special Session of the General Assembly convened for 1997 for the purpose of an overall review and appraisal of Agenda 21, due attention should be given to the issue of human settlements in the context of *sustainable socially equitable and environmentally sound* development. Also, the Assembly should include the follow-up to the Conference in its agenda as an item entitled "Implementation of the Outcome of the Second United Nations Conference on Human Settlements (Habitat II)". In its fifty-first session, it should review the outcome of the conference as well as the steps required to implement the Habitat Agenda;**

ARTICLE 162

162. **The General Assembly should hold a special session in the year 2006 for an overall mid-term review and appraisal of the implementation of the outcome of Habitat II and should consider further actions and initiatives.**

ARTICLE 163

163. **The Economic and Social Council, in accordance with its role under the Charter of the United Nations and with relevant General Assembly Resolutions and ECOSOC decisions should in 1997 in respect for the culmination of the decade devoted to the respect and furtherance of international law, should assist in the promotion of the need for states to discharge obligations arising from Conventions, Treaties, and Covenants, and to fulfill expectations arising from General Assembly Resolutions, Declarations, and Conference action plans . The Economic and Social Council, in accordance with its role under the Charter of the United Nations and with relevant General Assembly Resolutions and ECOSOC Decisions, would oversee system-wide coordination in the implementation of the Global Plan of Action and make recommendations in this regard. The Council should be invited to review at its substantive session in 1997 the implementation of the Global Plan of Action. As coordinating body, the Council should be invited to review, in 1997, the role and functioning of the Commission on Human Settlements; taking into account the need for synergy and effective coordination with other related commissions and conference follow-up, and with a view to ensure a clear division of labour and coordination of multi-year programmes of work. In addition, it should consider dedicating one high-level segment before the year_2001 to human settlements and implementation of the Global Plan of Action with the active involvement and participation, inter alia, of the specialized agencies, including the World Bank and IMF.**

ARTICLE 164

164. **The Economic and Social Council (ECOSOC), may convene meetings of high-level representatives to promote international dialogue on the critical issues pertaining to adequate shelter for all and sustainable human settlements development as well as on policies for addressing them through international cooperation.**

ARTICLE 165

165. **The ECOSOC, in the context of its role under the Charter of the United Nations vis-à-vis the General Assembly and in accordance with the relevant General Assembly resolutions, would facilitate system-wide coordination in the implementation of the outcome of Habitat II and make recommendations in this regard. It should look at ways to strengthen, consistent with the mandates of the Charter of the United Nations, the role and authority, structures, resources and processes of ECOSOC, for bringing economic and social development agencies into a closer working relationship with it so that it can review *progress made towards implementing the implementation—the discharging of obligations and the fulfilling of expectations—the outcome of Habitat II.***

ARTICLE 166

166. The General Assembly and ECOSOC should support the establishing of Mandatory International Standards-and-technical-regulation (MINS) drawn from international principles reflected in obligations incurred by states in Conventions, Treaties, and Covenants, and in expectations created in Declarations, General Assembly Resolution, and Conference action plans . The MINS 1997 commemorates the culmination of the Decade for the respect and furtherance of international law. MINS 1997 should assist the development banks to drive socially equitable and environmentally sound development for the fulfilling of the expectations in Habitat II Agenda. The General Assembly and ECHOIC should promote sub-regional and regional cooperation in the implementation of the Habitat Agenda. In this regard, the regional commissions, in cooperation with the regional intergovernmental organizations and banks, should convene meetings at the highest political levels to review the implementation—the discharging of obligations and the fulfilling of expectations—the outcome of Habitat II. , exchange views on their respective experiences, particularly in the best practices, and adopt appropriate measures. The regional commissions should report to the Council on the outcome of such meetings.

167. As a functional commission assisting the Economic and Social Council, the Commission on Human Settlements should have an important role in monitoring, within the United Nations system, the implementation of the Global Plan of Action.

ARTICLE 168

168. The mandate of the Commission will be strengthened and expanded to incorporate and implement the Habitat Agenda. Similarly UNCHS (Habitat) will be strengthened and revitalized in accordance with the relevant resolutions of the General Assembly with a view to enabling it to effectively implement the expanded mandate contained in the Habitat Agenda under the overall policy direction of the United Nations Commission on Human Settlements. UNCHS should be evolved into a highly competent technical secretariat capable of implementing the Habitat Agenda. For the purpose, UNCHS (Habitat) will be restructured and strengthened to deal effectively with the Habitat Agenda.

ARTICLE 175

175. The Secretary General is invited to ensure effective coordination of the implementation of the Global Plan of Action, and adequate consideration of human settlements needs in all activities of the United Nations. The Administrative Committee on Coordination (ACC) should review its

procedures at the inter-agency level to ensure system-wide coordination and full participation of its entities in the implementation of the Global Plan of Action. These entities should examine their programmes to determine how they can best contribute to the coordinated implementation of the Global Plan of Action. ACC should be invited to establish a task force on The Habitat Agenda. UNCHS (Habitat) should be added to the membership of ACC and to the task force on The Habitat Agenda.

ARTICLE 176

176. The Secretary General is invited to continue to ensure effective functioning of the United Nations Centre for Human Settlements (Habitat). In conjunction with the review of the mandate of the Commission on Human Settlements, the functions of the Centre should be assessed by the Economic and Social Council.

ARTICLE 177

177. The important role of the Committee on Economic, Social and Cultural Rights in monitoring those aspects of the Statement of principles *Principals* and Commitment on Global Plan of Action that relate to compliance, by States Parties, with the International Covenant on Economic, Social and Cultural Rights should be emphasized. **It is recognized that discharging of obligations under the ICESCR and fulfilling expectations enunciated in the Habitat Agenda require the concomitant discharging of previous obligations and fulfilling of previous expectations. These obligations have been incurred under Conventions, Treaties and Covenants and these expectations have been created through General Assembly Resolution, Declarations and other Conference action plans related to the guaranteeing of human rights, the preserving, protecting and conserving the environment, the fostering of peace, and the enabling of socially equitable and environmentally sound development. It is only when these obligations have been discharged and the expectations fulfilled that the global community will achieve the socially equitable and environmentally sound global settlements.**

ARTICLE 178

178. To strengthen their support for actions at the national level and to enhance their contributions to an integrated and coordinated follow-up by the United Nations,

specialized agencies and other organizations of the United Nations system should identify the specific actions they will undertake to meet the priorities identified in the Global Plan of Action.

ARTICLE 179

179. In order to improve the efficiency and effectiveness of United Nations organizations in providing support to the efforts for the provision of adequate shelter for all and sustainable human settlements development at the national level, and to enhance their capacity to achieve the objectives of Habitat II, there is a need to renew, reform and revitalize the various parts of the United Nations system, in particular its operational activities. All specialized agencies and related organizations of the United Nations system are invited to strengthen and adjust their activities, programmes and medium-term strategies, as appropriate, to take into account the follow-up to Habitat II. Relevant governing bodies should review their policies, programmes, budgets and activities in this regard.

(a) The United Nations Development Programme (UNDP) should enhance its efforts to support the implementation of The Habitat Agenda through its network of field offices;

(b) The International Labour Office (ILO) should coordinate and support concrete actions at the policy and programme levels for the implementation of the Habitat Agenda with regard to the expansion and protection of **socially equitable and environmentally sound meaningful employment and work;**

(c) The United Nations Children's Fund (UNICEF) should consider integrating its Urban Basic Service Programmes, the Mayors Defenders of Children Initiative, and the Decentralization of the UNICEF National Plans of Action with the Habitat Agenda through broad partnerships for sustainable community development and community management;

(d) The United Nations Conference on Trade and Development (UNCTAD) should contribute to analyzing and monitoring major trends of urbanization and impact of urban and rural policies in connection with changes in the global economic environment;

(e) The United Nations Environment Programme (UNEP) should develop and promote policies to enhance the environment and integrate environmental considerations in human settlements development and adequate shelter for all and catalyze action to achieve these goals at the international, regional, sub-regional and national levels;

(f) The United Nations Fund for Population Activities (UNFPA), in coordination and cooperation with other United Nations entities, should pursue activities related to basic social services for all;

(g) *The United Nations Industrial Development Organization (UNIDO), in implementing the Habitat Agenda, should address areas which require the competitiveness of export-oriented enterprises and competitive local and national enterprise growth;*

(h) The World Health Organization (WHO), should in the implementation of The Habitat Agenda, be guided by the global importance of health issues, the linkage of those issues to sustainable human settlements and adequate shelter, and the close relationship between public health and basic urban and rural services and the need to place human beings at the centre of development.

ARTICLE 180

180. International financial institutions, should be proactive and be involved with driving BEST endogenous practices through requiring that funding being conditional on compliance with (MINS 1997) — mandatory, international, normative standards and technical regulation drawn from international instruments and in this way ensure funding *contribute to the mobilization of resources* for the implementation of The Habitat Agenda. To this end, the relevant institutions are urged to take the following measures:

(a) The World Bank, the International Monetary Fund, the regional and sub-regional development banks and funds and all other international finance organizations, *should shall undertake to require mandatory international normative standards (MINS) drawn from principles in international instruments as a condition to funding projects; In addition they should further integrate adequate shelter for all and sustainable human settlement development goals in their policies, programmes and operations, including by giving higher priority to these goals, where applicable, in their lending programmes;*

(b) The Bretton Woods institutions and other organizations and bodies of the United Nations system, should work together with concerned countries particularly developing countries to improve policy dialogues and develop new initiatives to ensure socially equitable and environmentally sound development, *that structural adjustment programmes promote sustained economic growth with particular attention to the necessity to provide adequate—affordable, accessible, safe and environmentally sound, with tenure security shelter for all and socially equitable and environmentally sound, sustainable human settlement development to people living in poverty and vulnerable marginalized groups;*

(c) The United Nations system, shall actively institute mandatory international normative standards (MINS) in 1997—the last year of the decade dedicated to the promotion and the furthering of international law, and ensure that the Bretton Woods institutions be guided by these international standards in accessing to the legitimacy of project to be funded. *Including:* The Bretton Woods institutions and specialized agencies, should expand and improve their cooperation in the field of adequate shelter for all and **socially equitable and environmentally sound sustainable** human settlements *development* to ensure that the efforts are complementary and, where possible, should combine resources in joint initiatives for adequate shelter for all and **socially equitable and environmentally sound sustainable** human settlements development build around the objectives of Habitat II;

(d) The World Trade Organization (WTO) should consider how it might through promoting and requiring adherence to the principles established in international instruments drive *contribute to* the implementation of The Habitat Agenda, including activities in cooperation with the United Nations system, and specifically the promotion of BEST (Best Environmentally Sound Traditions) practices.

ARTICLE 181

5. Indicators, best practices and performance evaluation

181. It is essential to evaluate the impact of policies, means *strategies* and actions on the provision of adequate shelter and the achievement of **socially equitable and environmentally sound development sustainable** human settlements development. The results of these evaluations will be considered by the relevant United Nations functional commissions; including the United Nations Commission on Human Settlements. UNCHS (Habitat), together with other relevant organizations, will establish an appropriate process for analyzing and monitoring major trends of urbanization and the impact of urban policies. In particular, information on the impact of urbanization on *vulnerable* marginalized and disadvantaged groups (including children), should be collected.

ARTICLE 182

182. All those responsible for ensuring the implementation *partners of* The Habitat Agenda, including: local authorities, the **BEST practices enterprises, private sector** and communities, will regularly monitor and evaluate their own performances in the implementation of The Habitat Agenda through comparable **socially equitable and environmentally sound development human settlements and performance standards, shelter indicators** and documented *best* BEST practices, the guidelines for which will be provided by UNCHS (Habitat). The data collection and analysis

capabilities of all by those responsible for ensuring the implementation of Habitat II *these partners* will be strengthened and assisted at national, sub-regional and global levels, and there will be an opportunity for individuals and groups of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision to take evidence of state non-compliance to an International Court of Compliance.

ARTICLE 183

183. As part of their commitment to strengthening their existing shelter- and settlements-related data collection and analysis capabilities, governments at the appropriate levels, (including local authorities), should continue to identify and disseminate best practices, develop performance standards related to *and apply shelter and socially equitable and environmentally sound human settlements development indicators*. *This Performance standards* and mandatory international normative standards (MINS) and *other relevant information, as appropriate*, will be used for assessing the national implementation of the global plan of action. Such information could be considered within the framework of an appropriate consolidated reporting system of the United Nations; taking into account the different reporting procedures in the economic, social and environmental fields **under MINS 1997**.

ARTICLE 184

184. UNCHS (Habitat) will be designated as the Global Habitat Observatory to promote, monitor and evaluate the trends and *progress in the implementation—the discharging of obligations and the fulfilling of expectations* —of The Habitat Agenda through locally, nationally and regionally supported indicators and best practices programmes. It should continue to produce and publish the Global State of Human Settlements Report and other periodical monitoring and evaluation publications to track the progress on the implementation of The Habitat Agenda.

ARTICLE 185

185. UNCHS as focal point should:

(a) Set up an advisory secretariat/centre to assist Member States in developing their national housing and urban indicators for at least one major city;

(b) Set up a research centre to assist member States in undertaking studies and research on **BEST (Best Environmentally Sound Traditions) practices, and in particular, *sustainable approaches and BEST endogenous practices methods concerning, using local building materials and traditional construction practices technology*** and disseminate such information to all Member States.]

END

Preliminary comment based on having only had an opportunity to look at the Habitat document for a couple of days.

Apart from the following reference in Article 2 of the Habitat II Agenda to Habitat I as having occurred there is no reference in the Habitat II agenda to Habitat I.

4 Having considered the experience since the United Nations Conference on Human Settlements (Habitat), held in Vancouver, Canada, in 1976, Habitat II r

There were many far reaching substantive provisions in Habitat I that should have formed the basis from which Habitat II could reach further.

The Habitat II Agenda is calling for commitments often in areas where states have undertaken previous obligations which they have never discharged. Habitat II agenda, like so many recent conference agendas is not sufficiently acknowledging previous obligations from the precedents of legally binding conventions, treaties, covenants and from "ethical expectations" from Declarations and general assembly resolutions. In the case of Habitat II, the obligations undertaken in Habitat I, have been virtually ignored.

An integrated human settlement policy:

- (i) be formulated through a truly interdisciplinary approach, concurrently with policies in relation to other aspects of social and economic development
- (ii) be consistent with the preservation, restoration and improvement of the natural and man-made environment; cognizant of the positive role of environment in national economic and social development.
- (v) be considered in all efforts to implement the New International Economic Order

Many of the obligations are communicated in the following ways:

(1) through the use of strong change language:

In many cases, the concepts might be included but the language is stronger in the habitat I document than in the Habitat II Agenda

In many cases, the concepts conveyed by the language in Habitat I are not included in Habitat II

(2) through condemnation of practices

Many of the inequitable and ecologically unsound practices that were condemned in Habitat I are no longer condemned in the Habitat Agenda

(3) through proposal of solutions and actions

Many of the solutions proposed in Habitat I go beyond what States are prepared to agree to in Habitat II

BRIEF CONTENT ANALYSIS OF HABITAT I

ADEQUATE SHELTER

Adequate shelter and services - basic human right

8. adequate shelter and services are a basic human right which places an obligation on governments to ensure their attainment by all people; beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance, is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

adequate shelter...places an obligation

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavor to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT) "SPECULATION" "NOT USED IN HABITAT II

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resources; without public control, land is a prey to speculation and urban encroachment.

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation.

(c) Such control may be exercised through:

(i) zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;

(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises;

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

Recommendation D3

Recapturing plus value.

(a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to the public at large, the benefits of the unearned increase in land values.

(b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community), unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies.

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land;

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices;

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start;

BASIC NEEDS

Recommendation C 12

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered ;by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

CONSERVATION

Conservation and recycling technologies

21 Due attention should be given to implementation of conservation and recycling technologies. (III 21 Habitat 1)

CONSUMPTION (CONDEMNATION)

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

DISARMAMENT (NOT in TEXT HABITAT II)

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament; part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

Armament Arms 150 in brackets in Habitat II

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

3. Economic development should lead to the satisfaction of human needs and is a necessary means towards achieving a better quality of life, provided that it contributes to a more equitable distribution of its benefits among people and nations. In this context particular attention should be paid to the accelerated transition in developing countries from primary development to secondary development activities, and particularly to industrial development.

ENDOGENOUS TECHNOLOGY

18. Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefore be:

- (kk) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating **meaningful** employment and income.
- (iv) Conceived to utilize traditional techniques suitable adapted to new materials
- (v) emerging from original indigenous research
- (vi) Planned so as to take full account of their environmental impact

ENVIRONMENTAL AND CULTURAL PRESERVATION

2. It is the responsibility of governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy; linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity mankind**. (III 2, Habitat I)

Energy renewable [NO MENTION OF SOLAR MENTIONED IN HABITAT II]

Recommendation C. 5

NOTE "RENEWABLE" is mentioned in 3 sections 71, 100 101 which are all still in brackets

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)

Human settlements are consuming more and more energy just when mankind has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources.

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design and management and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 Habitat i)

(iv) emphasizing, where possible, the use of renewable over non-renewable energy sources and the rationalization of technologies which are currently known to be hazardous to the environment.

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification and district heating and cooling; including the utilization of solar and geothermal energy and heat pumps as appropriate.

ENVIRONMENT AS COMMON HERITAGE (NOT IN TEXT) OF HABITAT II)

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of mankind and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired ;by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

EQUITABLE DISTRIBUTION

3. Economic development should lead to the satisfaction of human needs and is a necessary means towards achieving a better quality of life, provided that it contributes to a more equitable distribution of its benefits among people and nations. In this context particular attention should be paid to the accelerated transition in developing countries from primary development to secondary development activities, and particularly to industrial development. (II, 3 Habitat I)

b) Human settlements policies should aim to improve the condition of human settlements particularly ;by promoting a more equitable distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4,b Habitat I)

(c) this can be done through:

(i) the location of public sector investments;

- (ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups
- (iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas
- (iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived
- (v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;
- (vi) Measures to improve the quality of life of *vulnerable marginalized* groups which have special needs-such as children, the elderly, the handicapped and the disabled. Such measure include provision of basic social services, adequate shelter and social and physical access to facilities.

Recommendation C 11

Infrastructure policy

- (a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.
- (b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.
- (c) this implies
 - (i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population
 - (ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures;

HOMELESS OF THOSE DISPLACED BY NATURAL OR

15 The highest priority should be placed on the rehabilitation of expelled and homeless people who have been displaced by natural or *man-made anthropogenic* catastrophes, and especially by the act of foreign aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

INDIGENOUS PEOPLES

- i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

Condemnation of displacement of native population

(e) In all occupied territories, changes in the demographic composition or the transfer or uprooting of the native population and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. The heritage and national identity must be protected. Any policies that violate these principles must be condemned.

INFORMATION ACCESS

(c) This implies

(vi) development and use of methods for assessing economic, social and environmental impacts from proposed projects in a form useful to the public;

(vii) Consideration of land use characteristics including ecological tolerances and optimum utilization of land so as to minimize pollution, conserve energy, and protect and recover resources;

(viii) Undertake the necessary studies on precautions that can be taken to safeguard life and property in case of natural disaster.

INTERDISCIPLINARY APPROACH ADVOCATED

(i) be formulated through a truly interdisciplinary approach, concurrently with policies relation to other aspects of social and economic development(Rec. A 2, Habitat I)

LAND OWNERSHIP

recommendation D 5

patterns of ownership

(a) Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

(c) special attention should be paid to:

(i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;

(ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;

(iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;

(iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.

(v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority;

(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved.

MEANINGFUL EMPLOYMENT [NOT IN HABITAT II TEXT] EMPLOYMENT

5. In fact, the very construction of the physical components of human settlements—be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of **meaningful** employment, instead of being treated as a residual of so-called “productive” activities. (Chapt. II A. 5 Habitat)

NEW INTERNATIONAL ECONOMIC ORDER (REFERENCE TO 1974 RESOLUTION IGNORED IN HABITAT II)

4. To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 14, Habitat I)

14. Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas, between regions and within regions themselves. Governments should adopt policies ;which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

NUCLEAR DISARMAMENT (see ALSO section on Waste related to choices of energy)

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control; in particular in the field of nuclear disarmament. Part of the resources, thus released, should

be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

PUBLIC PARTICIPATION E.(AGENDA ITEM 10 E)

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

17. Participation is an integral part of the political processes of decision-making; in a field as complex as human settlements, it is also a necessity because the task is too great for Governments to accomplish without mobilizing the interest of inhabitants, using their ingenuity and skills and harnessing otherwise untapped resources.

28. Public participation is the dynamic incorporation of the people in the economic, social and political life of a country which would ensure that the beneficiary is an effective participant in collective decisions with regard to the common good.

39. A co-operative effort of the people and their Governments is a prerequisite for effective action on human settlements. The magnitude and intractability of the problems are too great for Governments to act alone. Citizen participation should be an integral part of the decision-making processes on the full range of human settlement issues. Citizens must be provided opportunities for direct involvement in the decisions that profoundly affect their lives. Such participation can heighten citizen awareness of the complexity and inter-relatedness of the problems and the urgent need for concerted action. Involvement of citizens can also be an important means of making creative use of their ingenuity and skills, thus making effective use of often untapped resources.

40 Participation can be conceived from the top downwards as the involvement of the higher echelons of government in the decision-making of smaller groups; laterally, as the co-operation between parallel or competing sectoral interests; or, from the base upwards, as the direct involvement of residents in the making of decisions and implementation of programmes which concern them. The first two forms of participation are the basis of strategies, planning procedures, implementation of programmes and, in general, management of human settlements; the last, under the label of popular participation, is becoming an indispensable element of a truly democratic process.

73 Citizen participation, by definition, cannot be achieved by fiat but it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. The inaccessibility of information and the absence of appropriate mechanisms for the expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration

PARTICIPATION OF WOMEN

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

PROVIDING FOR THE PROTECTION, PRESERVATION AND ENHANCEMENT OF THE ENVIRONMENT (Preservation of the environment is not used in Habitat II)
... providing for the protection, preservation and enhancement of the environment. (II, 8 Habitat I)

REDUCTION OF DISPARITIES

4. It is of paramount importance that national and international efforts give priority to improving the rural habitat. In this context, efforts should be made towards the reduction of disparities between rural and urban areas, as needed between regions and within urban areas themselves, for a harmonious development of human settlements. (III 4 Habitat I)

PRIORITY OF SOCIAL SERVICES

Recommendation C 15

Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:

(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;

PUBLIC CONTROL AND BENEFIT FROM LAND (NO MENTION OF PUBLIC CONTROL IN HABITAT II AGENDA

D. Land (Agenda item 10 (d)

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice. If left unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people, can only be achieved if land is used in the interests of society as a whole.

2. Instead, the pattern of land use should be determined by the long-term interests of the community; especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment as well as a crucial link in an often delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies.

Recommendation D1

Land resource management:

(a) Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest, is the single most important means of improving the capacity of human settlements to absorb changes and movements in population; modifying their internal structure and achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered.

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation.

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal regions and other areas subject to the impact of development, recreation and tourism activities.

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore governments must maintain full jurisdiction and exercise complete sovereignty over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed by foreign nations which enjoy the benefits while preventing its rational use.

SOCIAL JUSTICE (TERM NOT USED IN HABITAT II)

1. *Mankind*: **Humanity** must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national governments and international community; aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people, and the special needs of disadvantaged groups (especially children, women and the infirm), in order to ensure the provision of health, services, education, food and employment within a framework of social justice (Habitat I)

TRANSFER OF TECHNOLOGY QUALIFIED

19. Access should be granted, on more favourable terms, to modern technology which should be adapted, as necessary, to the specific economic, social and ecological conditions and to different stages of development of the developing countries. Efforts must be made to ensure that the commercial practices governing the transfer of technology are adapted to the needs of the developing countries and to ensure that buyers' rights are not abused. (III 19 Habitat I)

TRANSNATIONAL CORPORATIONS (NO MENTION OF TRANSNATIONALS IN HABITAT II AGENDA)

17. Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I)

TRANSPORTATION (NO CONDEMNATION OF THE AUTOMOBILE IN HABITAT II AGENDA)

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents.

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles.

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel.

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic;

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system.

TRANSNATIONALS

17. Control over transnationals (NO PROVISION FOR CONTROL OVER TRANSNATIONALS)

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I

WASTE = RESOURCES

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates,

together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a)

(b) In the development of human settlements the quality of the environment must be preserved. Pollution should be prevented by minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource.

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load;

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste;

(iii) Innovative use of unavoidable waste as a by-product

(vi) Use of sources of energy which have a low or no waste production

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society;

URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

(i) securing legislation, legal instruments and regulations;

(iv) active participation of a well-informed public

(v) protection of ecosystems and critical land

(ix) Integration and improvement of squatter and marginal settlements.

WASTE = RESOURCES

Recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete. (Rec. C 13 (a)

(b) In the development of human settlements the quality of the environment must be preserved. Pollution should be prevented by minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource.

(i) adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load;

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste;

(iii) innovative use of unavoidable waste as a by-product

(vi) use of sources of energy which have a low or no waste production

(vii) re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society;

() THAT IN 1996, at Globe, I spoke out on indigenous issues and was asked after for a copy of my presentation

THAT in 1996, at Globe, I spoke out at GEF meeting about corporate control of the United Nations. Because of the infiltration of corporation through classifying themselves as NGOs

() THAT in 1996, at globe, at one press conference, a Chinese government representative was giving a presentation. I asked him about nuclear industry and the purchase of CANDU reactors.

I also mentioned that I had been in China and I thought that the North had a lot to learn from China about "environmentally sound technology" and I asked him why they were purchasing environmentally unsound technology such as civil nuclear energy--CANDU reactors. A representative from External Affairs, who had introduced the Chinese representative, attempted to shuffle the Chinese representative out.

() THAT in 1996, at Globe:

As a member of the media I had the opportunity to interview Lawrence Good from the World Bank. I told him about the spoof that I had done on the World Bank about their embracing principle based economics. He seemed somewhat interested in conditional funding.

() THAT in 1996, I went to sessions on regulations at Globe 96 and opposed the introduction of the self- regulatory notion of ISO 14,000.

() THAT in 1996, I Prepared and circulated resolutions related to Forest protocols linked with existing conventions; (i) Mandatory International Normative Performance based standards, environmentally sound forest practices to not defeat the purpose of Convention on Biological Diversity, and the purpose of the Climate Change Convention. These resolutions were submitted to the Administrator of the Intergovernmental Panel on Forests to be circulated at the Geneva meeting.

Monsanto's CEO was at the GLOBE 96 meeting in Vancouver. He was waxing poetic about the way through environmental reporting in consultation with environmental groups he had taken such environmental care that Monsanto had avoided law suits. I rose to the microphone unfortunately, and said that I was surprised that he had not been sued for misrepresentation, and I referred to their numerous misrepresentations related to genetically engineered foods and crops. At the end, I also mentioned Monsanto's role in developing nuclear weapons [I had actually confused Monsanto with another firm]. He was very confused but could not deny that Monsanto was involved with nuclear weapons.

() THAT in 1996, I proposed a POST- 50
1996 GLOBAL COMPLIANCE RESOLUTION building on the 1995 resolution

We had prepared the following draft resolution for the “We the Peoples Conference: The Role of Civil Society in the History and Future of the United Nations”. This resolution called upon states, at the June 26,1995 UN Affirmation Ceremony, to pledge to discharge fifty years of obligations.

This resolution was adopted by the plenary at the Conference, and the assembly agreed that the resolution should be passed on to Dr. Boutros Boutros Ghali who subsequently addressed the plenary. We recently received a letter of support from Dr. Boutros Boutros Ghali:

Thank you for sharing with me the “Global Compliance Resolution” whose spirit reaffirms the commitment of people the world over to the principles enshrined in the Charter of the United Nations (*signed, Boutros Boutros-Ghali July 5, 1995*)

Since then, on September 13, a version of the Global Compliance resolution was officially distributed to all delegations of the member States at the United Nations at the United Nations Conference on Women: Equality, Development and Peace. The Global Compliance resolution was distributed again to all delegations of the member States of the United Nations on September 15; on the final day of the conference.

A proposed resolution for October 24 was sent to all the UN 50th Anniversary representatives. A response was received from Dr. Sohreh Tabatabai, the Coordinator, Fiftieth Anniversary Secretariat:

I regret that it is not possible for us to arrange for presentation of the Global compliance Resolution to the General Assembly. As resolutions may be introduced only by Member States ...

You may be interested to learn that the special commemorative session of the General Assembly planned for 22-24 October is expected to endorse a Declaration rededicating Member States to achieving the goals of the United Nations Charter.

COMMENT

States have continually been prepared to dedicate themselves to achieving the goals of the united nations charter. they are, however, not prepared to discharge years of obligations and expectations. the global compliance resolution calls upon states to discharge years of obligations and fulfill

years of expectations which if discharged and fulfilled would demonstrate the dedication of states to achieving the goals of the united nations.;

1996. Globe 96- five days **March 1996** At the session at Globe 1996 on regulations I challenged the head of Stewardship from Oaxaca about the forest stewardship project. I asked about their position on clear-cutting; I was dismayed when he responded: "Not everyone was opposed to clear cutting."

I interview Good from the World Bank and told him about the Spoof. He indicated that the same dialogue is going on within the World Bank about whether or not there should be conditional funding. He informed that when the World Bank was established it was agreed that the World Bank would not apply conditions to funding. Later on, I attended a presentation from the World Bank, where the representative argued that under no circumstances should there be conditional funding.

() THAT in 1996, I attended Globe 96 as a reporter for the Changing Times.

() in 1996 At the session at Globe 1996 on regulations I challenged the head of Forest Stewardship Project from Oaxaca about the forest stewardship project. When I asked about their position on clear-cutting, he said: "That not everyone was opposed."

() THAT in 1996 at Globe 1996 I interviewed Lawrence Good from the World Bank and told him about the Spoof. . BEING SILENT IS JUST AS POLITICAL A STATEMENT AS IT IS TO STAND UP FOR THE PEACE MOVEMENT."

Trial judges typically avoid grave problems caused by the federal government.

However, out of fear of appearing "political", Judge Ulf Panzer of a District Court in Hamburg, West Germany said this about judges:

Fearing to be political: "[Let's not deceive ourselves. Being silent is just as political a statement as it is to stand up for the peace movement." Speaking on behalf of 800 West German judges and prosecutors, Judge Panzer said: "German judges were silent 50 years ago, when the Third Reich began to install its regime of injustice, and later became a docile instrument of the Nazis and their immense crimes. Being silent today, we feel, would make judges guilty once again." He said, he sees "a certain parallel to the American judges. They have put up with the atrocities of the Vietnam War in complete silence, as far as I know. Some judges look upon necessity as an elusive and mysterious defense, not applicable to pragmatic affairs". In *People v. Weber*, the court held "the exact confines of the necessity defense remain clouded." But that is not the case. The Principle of Necessity has been developed extensively in this country and the requisite elements have been expressed numerous times. The requisite elements of

necessity to prevent nuclear ecocide and nuclear genocide proposed above will give ample guidelines for jurors to weigh the factual issues raised.

Reasonableness is an essential concept in the necessity principle
 Did the defendant reasonably believe a greater harm was about to occur? Were there reasonable alternatives? Was the act reasonably necessary to prevent the harm ?

The greater the harm, the more reasonable it is to do something to prevent it even if the likelihood of success is small

PART 1 PREAMBLE

1. We recognize that **years of accrued state obligations to improve the quality of life, through recognizing the right to shelter, the right to social security, the right to equality, the right to peace and the right to a safe environment have not yet been discharged. In 1974, through General Assembly resolutions, we recognized “united determination to work urgently for the establishment of a new international Economic order based on equity...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of an New International Economic Order, 1974).**

DOCUMENTATION OF PRECEDENT

RE: ESTABLISHING A NEW INTERNATIONAL ECONOMIC ORDER AS ADVOCATED IN HABITAT 1 (REFERENCE TO A 1974 GENERAL ASSEMBLY RESOLUTION IGNORED IN HABITAT II)

To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 4, Habitat I)

Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas; between regions and within regions themselves. Governments should adopt policies; which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

We affirm the imperative need **and urgency** to improve the quality of human settlements which profoundly affects the daily lives and well-being of *our* people. There is a sense of great opportunity and hope that a new world can be built in

which economic development, social development and environmental protection as interdependent and mutually reinforcing components of *sustainable development* **socially equitable and environmentally sound development**, can be realized through solidarity and cooperation within and between countries, and through effective partnerships at all levels. International cooperation and universal solidarity, guided by the ~~[[purposes and]]~~ principles of the Charter of the United Nations, **and by over 50 years of obligations accruing through Conventions, Treaties, and Covenants; and by over 50 years of expectations arising through Declarations, Conference action plans and General Assembly Resolutions in a spirit of partnership**, are crucial in order to improve the quality of life of the peoples of the world. **The constant vigilance by individuals and organizations of civil society is essential and should be facilitated through the undertaking by states to discharge previous obligations and fulfill previous expectations; and through the establishment of an International Court of Compliance where citizens can take evidence of State non-compliance.**

DOCUMENTATION OF PRECEDENT:

RE: PROMOTING NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY

Solemnly proclaim our united determination to work urgently for the establishment of a New International Economic Order based on equity, sovereign equality, interdependence, common interest and co-operation among all States; irrespective of their economic and social systems which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development and peace and justice for present and future generation... (Preamble, Declaration on the Establishment of a new international economic order, 1974)

RE: ADVOCATING LOCAL SERVICES AND HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the

special needs of disadvantaged groups especially children, women and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

DOCUMENT OF PRECEDENTS:

RE: UNDERTAKING TO GUARANTEE RIGHTS

In compliance with the fundamental obligations laid down in article 2 of this Convention, States Parties undertake to prohibit and to eliminate racial discrimination in all its forms and to *guarantee* ensure the right of everyone, without distinction as to race, colour, or national or ethnic origin, to equality before the law, notably in the enjoyment of the following rights:

- (a) The right to equal treatment before the tribunals and all other organs administering justice;
- (b) The right to security of person and protection by the State against violence or bodily harm, whether inflicted by government officials or by any individual, group or institution;
- (c) Political rights, in particular the rights to participate in elections--to vote and to stand for election--on the basis of universal and equal suffrage, to take part in the Government as well as in the conduct of public affairs at any level and to have equal access to public service;
- (d) Other civil rights, in particular:
 - (i) The right to freedom of movement and residence within the border of the State;
 - (ii) The right to leave any country, including one's own, and to return to one's country;
 - (iii) The right to nationality;
 - (iv) The right to marriage and choice of spouse;
 - (v) The right to own property alone as well as in association with others;
 - (vi) The right to inherit;
 - (vii) The right to freedom of thought, conscience and religion;
 - (viii) The right to freedom of opinion and expression;
 - (ix) The right to freedom of peaceful assembly and association;
- (e) Economic, social and cultural rights, in particular:

- (i) The rights to work, to free choice of **meaningful** employment, to just and favourable conditions of work, to protection against unemployment, to equal pay for equal work, to just and favourable remuneration;
 - (ii) The right to form and join trade unions;
 - (iii) The right to housing;
 - (iv) The right to public health, medical care, social security and social services;
 - (v) The right to education and training;
 - (vi) The right to equal participation in cultural activities;
- (f) The right of access to any place or service intended for use by the general public, such as transport, hotels, restaurants, cafes, theaters and parks.
(Elimination of all forms of discrimination, 1965)

ARTICLE 1 bis

Recognizing that it is only through the discharging, at the global level, of years of state obligations and through fulfilling at the global level of years of expectations that the goals of Habitat can be achieved

ARTICLE 2

The purpose of the second United Nations Conference on Human Settlements (Habitat II) is to address two themes of equal global importance: **the right to adequate shelter for all and sustainable human settlements development.** *In an urbanizing world, the rights of Human beings limited by the carrying capacity of the ecosystem,* are at the centre of concerns for **socially equitable and environmentally sound sustainable** development; including shelter for all **and socially equitable and environmentally sound sustainable** settlements and they are entitled to a healthy and *productive meaningful* life in harmony with nature. As to the first theme, a large segment of the world's population lacks shelter and sanitation; particularly in developing countries. **Another segment of the world's population in developed countries has been experiencing the problem of urban sprawl, widening gaps between the rich and the poor and excessive environmental destruction as a result of unsustainable models of development.** We recognize that **the right to social security and [the right to adequate housing], as affirmed in the International Covenant of Cultural, Economic and Cultural rights, reaffirmed in the Convention of Elimination of all Form of Discrimination, reaffirmed in Chapter 7 of Agenda 21, and reaffirmed in the International Conference on Population and Development, 1994) [which includes] access to affordable, accessible, inclusive, free-from illegal forced evictions, security of tenure, and environmentally sound, and safe and healthy shelter and basic services is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of our urgent actions for the more than one billion people without decent living conditions. We also recognized that there already exists a state obligation in international law to enshrine and guarantee this right, and that this state obligation has not yet been fully discharged by any of the member states of the United Nations.** Our objective is to achieve adequate shelter for all and especially for the deprived urban and rural poor **and landless poor** through an enabling approach to the development and improvement of shelter that is environmentally sound. **Our objective is also to strive to change peoples' attitudes towards the people in poverty and other marginalized groups, and towards those that are different. People in poverty should never be blamed for their condition, and there should be trust in- not fear of those that are different.**

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE WASTEFUL AND ECOLOGICAL DESTRUCTIVENESS OF URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

- (i) securing legislation, legal instruments and regulations;
- (iv) active participation of a well informed public
- (v) protection of ecosystems and critical land
- (ix) Integration and improvement of squatter and marginal settlements. (Habitat I)

RE: PLACING AN OBLIGATION TO PROVIDE ADEQUATE SHELTER AND SERVICES - AS A BASIC HUMAN RIGHT

Adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (3.8 Habitat I)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO PEOPLE IN POVERTY AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

As to the second theme, socially **equitable and environmentally sound** development **of healthy, safe and environmentally sound communities-settlements** combines **social equity and environmentally sound development with** environmental protection and full *economic development, social development and environmental protection*, with full respect for all human rights and fundamental freedoms, including the right to development, and offers a means to achieving a world of greater stability and peace, built on ethical *and spiritual* vision. **To achieve this vision states shall undertake to ensure compliance with a body of established international principles by establishing mandatory international normative standards (MINS) related to the ensuring of social justice, the enshrining and guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, and the preventing of conflict and war. MINS shall be used to drive industry to adopt BEST (Best Environmentally Sound Traditions) practices.**

DOCUMENTATION OF PRECEDENTS

RE: EXERCISING EFFECTIVE CONTROL OVER TRANSNATIONAL CORPORATIONS

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I

RE: STATE REQUIREMENT TO ENSURE COMPLIANCE

states to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws” (Section 167 Platform of Action UN Conference on Women: Equality, Development and Peace).

[Democracy, and transparent, representative and accountable governance and administration throughout society *in all sectors of society* are indispensable foundations for the realization of **socially equitable and environmentally sound sustainable** development. However, the lack of **socially equitable and environmentally sound** development and the existence of widespread absolute poverty inhibit the full and effective assurance of the enjoyment of human rights and render fragile democracy and popular participation.]

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOR PARTICIPATION

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be **ensured guaranteed**. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize *productive meaningful* employment. (III 11, Habitat I)

RE: ADVOCATING THE EXPRESSION “SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT” TO REPLACE THE EXPRESSION “SUSTAINABLE DEVELOPMENT”

The expression “socially equitable and environmentally sound development” was used in the International Conference on Population and Development:.

None the less, the effective use of resources, knowledge and technologies is conditioned by political and economic obstacles at the national and international levels. Therefore, although ample resources have been available for some time, their use for socially equitable and environmentally sound development has been seriously limited” (Preamble 1.1. International Conference on Population and Development, 1994)

NOTE: [In the Habitat Agenda the expression “environmentally sound” is used as often as Sustainable Development—a term that reflected neither the real equitable nor environmental component so necessary in development.]

ARTICLE 3

3. Recognizing the global nature of these issues, the international community, in convening Habitat II, has decided that **the collective political will to discharge previous obligations, and to fulfill previous expectations, as well as the undertaking of new commitment is essential for achieving these goals.** *A concerted global approach could greatly enhance progress toward achieving these goals.* **As recognized in Agenda 21 (UNCED)** [The cross-national and global impacts of unsustainable patterns of production and consumption, particularly in industrialized countries, environmental degradation, demographic changes, widespread and persistent poverty, and social and economic inequality are clearly visible.]. **As also confirmed through Environmental Conventions such as the Vienna Convention on Ozone Depletion, with the Montreal Protocol, the Convention on Biological Diversity and the Framework Convention on Climate Change, the global community has undertaken to discharge its international obligations related to conserving and protecting the environment through banning ozone depleting substances, through preserving biodiversity, and through reducing and eliminating climate change agents. It is recognized that the discharging of these obligations is essential to the establishment of socially equitable and environmentally sound community development.**

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF UNSUSTAINABLE PATTERN OF CONSUMPTION

...the major cause of the continued deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992), and reaffirmed in Art. 37 of the Platform of Action, UN Conference on Women: Equality, Development and Peace)

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are

most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

**RE: ACKNOWLEDGING THE IMPACT ON AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT)
(Sections from Habitat I)**

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resources; without public control land is a prey to speculation and urban encroachment. (Habitat I)

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation. (Habitat I)

(c) Such control may be exercised through

(i) zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;

(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises; (Habitat I)

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

RESTRUCTURING LAND OWNERSHIP

recommendation D 5

patterns of ownership

(i) Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

(c) special attention should be paid to:

(i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;

- (ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;
- (iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;
- (iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.
- (v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority;
(Habitat I)

The sooner communities, and local governments, *partnerships among the public, and private and community sectors* join efforts to create comprehensive, bold and innovative **plans strategies** for shelter and human **communities settlements**, the better the prospects will be for the safety, health and well-being of people and the brighter the outlook for solutions to global environment and social problems. **As previously recognized in Habitat I, communities should take more control over the planning and ownership of public lands and that greater benefit should accrue to the public from the sale of land.**

RE: REDISTRIBUTING BENEFITS TO THE PUBLIC

Recommendation D3

Recapturing plus value.

- (a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to the public at large the benefits of the unearned increase in land values. (Habitat I)
- (b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community), unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies. (Habitat I)

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land; (Habitat I)

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices; (Habitat I)

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start; (Habitat I)

RE: CONSERVING OF ENERGY

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)
Human settlements are consuming more and more energy just when Humanity *mankind* has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources. (Habitat I)

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 (Habitat I)

(iv) emphasizing where possible the use of renewable over non-renewable energy sources and the rationalization of technologies which are currently known to be hazardous to the environment. (Habitat I)

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification, and district heating and cooling, including the utilization of solar and geothermal energy and heat pumps as appropriate. (Habitat I)

ARTICLE 4

4. **Having acknowledged the applicability of previous international instruments to the Habitat II Agenda, having been forced to acknowledge that many previous obligations have not been discharged and expectations have not been fulfilled including those arising from Habitat I, and having considered the experience since the United Nations Conference on Human Settlements (Habitat I), held in Vancouver, Canada, in 1976, Habitat II reaffirms the results from relevant conventions, treaties covenants, declarations, resolutions and conference action plans recent world conferences and has developed them into an agenda for human communities settlements: the Habitat Agenda. Among many of the relevant obligations included in Habitat II are those existing in the following Conventions or Conventions: The Universal Declaration of Human Rights, the International Covenant of Civil and Political Rights, the International Covenant of Cultural, Economic, Cultural Rights, the Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of All Forms of Discrimination Against Women, along with all the Conventions and Treaties related to the Environment and Peace. In addition, Habitat II incorporates expectations arising from General Assembly resolutions, Declarations and conference action plans from recent conferences such as Agenda 21 from the United Nations Conference on Environment and Development -- The Earth Summit -- held in Rio de Janeiro in 1992, produced Agenda 21. At this Conference, the international community agreed to a framework for the sustainable development of human communities settlements. and other conference action plans from Each of the other conferences, including the Fourth World Conference on Women (Beijing, 1995); the World Summit for Social Development (Copenhagen, 1995); the International Conference on Population and Development (Cairo, 1994); the Global Conference on the Sustainable Development of Small Island Developing States (Barbados, 1994); and the World Conference on Human Rights (Vienna, 1993), as well as the World Summit on Children (New York, 1990) and the World Conference on Education for All (Jomtien, Thailand, 1989) and Habitat I also address important socially equitable and environmentally sound development social, economic and environmental issues, including components of the sustainable development agenda, for which successful implementation requires action at the local, national and international levels. The Global Strategy for Shelter to the Year 2000, adopted in 1988, which emphasizes the need for improved production and delivery of shelter, revised national housing policies, and an enabling means of ensuring adequate shelter strategy, offers useful guidelines for the realization of adequate shelter for all in the next century.**

ARTICLE 5

During the course of history, urbanization has been associated with economic and social progress, *the promotion of literacy and education, the improvement of the general state of health, greater access to social services, and cultural, political and*

religious participation. Unfortunately, urbanization and progress have also been associated with increased violations of human rights, unmitigated environmental degradation, perpetuated, unsustainable patterns of economic consumption, widened gaps between the rich and poor (the enfranchised and disenfranchised), increased abuse of the marginalized and increased incidents of conflict, violence and crime. The growth of cities and towns causes social, economic and environmental changes that go beyond city boundaries, through urban sprawl and industrial conversion of productive land and of areas worthy of preservation.

Cities and towns have been engines of growth often beyond the carrying capacity of the ecosystem that contains them; and incubators of civilization or destroyers of culture; and have facilitated or repressed the evolution of knowledge, culture and tradition, as well as of industry and commerce.

Urban communities settlements, properly planned and managed in harmony with rural communities, within the carrying capacity of the ecosystem and within a system of preserved ecosystems, could hold the promise for socially equitable and environmentally sound human development and for the preservation of nature and for protection of the world's natural resources through their ability to support large numbers of people while limiting their impact on the natural environment. Habitat II deals with all settlements - large, medium and small - and reaffirms the need for universal improvements in living and working conditions. While decentralized, participatory planning and management (which are important features of a successful urban future); the planning should be grounded in fundamental principles related to the enshrining and guaranteeing of human rights, the ensuring of social justice, the preserving, protecting and conserving of the environment and the promoting of peace. It should be acknowledged that although there has been some increased participation by individuals and groups of civil society in bringing about the necessary global changes for the establishment of socially equitable and environmentally sound development of communities. There is a long way to go to achieve the necessary Democratization which has enhanced such access and meaningful participation and involvement for of civil society actors, and for public-private partnerships;

ARTICLE 6

6. To overcome current problems and to ensure *future progress in the improvement of economic, social and environmental conditions socially equitable and environmentally sound* in human settlements, we must begin with a recognition of the challenges facing cities and towns. According to current projections, by the turn of the century, more than three billion people - one-half of the world's population - will live and work in urban areas. The most serious problems confronting cities and towns and their inhabitants include **severe environmental degradation resulting from either lack of mandatory regulations that drive industry, or from institutional governments/industry**

collusion that weakens the resolve to establish or enforce regulations; inadequate financial resources to promote socially equitable and environmentally sound development, lack of meaningful employment opportunities in BEST practices, spreading homelessness and expansion of squatter settlements, increased poverty and a widening gap between rich and poor arising from the imposition of over-consumptive models of development and of ill-conceived structural adjustment programs, growing insecurity and rising crime rates caused by the failure to ensure social equity including the positive human rights of the right to social security, health care, shelter, food etc.

DOCUMENTATION OF PRECEDENTS

RE: GENERATING OF MEANINGFUL EMPLOYMENT

In fact, the very construction of the physical components of human settlements- be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of meaningful employment, instead of being treated as a residual of so-called “productive” activities. (Chapt II A. 5 Habitat 1)

RE: PREVENTING WASTE AND MISUSE OF RESOURCES IN WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. Part of the resources thus released, should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

RE: REDUCING OF AVAILABLE RESOURCES THROUGH EXCESSIVE MILITARY EXPENDITURES

Excessive military expenditures, including global military expenditures and arms trade or trafficking, and investments for arms production and acquisition have reduced the resources available for social development. As a result of the debt burden and other economic difficulties, many developing countries have undertaken structural adjustment policies. **Moreover, there are structural adjustment programmes that have been poorly designed and implemented, with resulting detrimental effects on social development. The number of people living in poverty has increased disproportionately in most developing countries,**

particularly in the heavily indebted countries, during the last decade. (Art. 15 Platform of Action, UN Conference on Women: Equality, Development and Peace, 1995)

RE: REASSESSING STRUCTURAL ADJUSTMENT PROGRAMS
Ensuring continued provision of basic services to the poor and needy

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ACCOMMODATING THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through** natural or *man-made* **anthropogenic** catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: PREVENTING CRIME

Reaffirming that crime prevention and criminal justice should be considered in the context of...social and cultural systems

Reaffirms that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

Inadequate and deteriorating building stock, services and infrastructure, lack of health and educational facilities, improper land use, insecure land tenure, rising traffic congestion, increasing pollution, lack of green spaces, inadequate water supply and sanitation, uncoordinated urban development, and an increasing

vulnerability to disaster including for example the continued production of toxic, hazardous and atomic wastes , the continued reliance on non-renewable sources of energy or on unsafe sources of energy such as that of civil nuclear energy, the continued visits of nuclear powered military vessels in urban ports and of the continued development and testing of nuclear weapons.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING PUBLIC CONTROL AND BENEFIT FROM LAND

D. Land (Agenda item 10 (d))

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice; if unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people can only be achieved if land is used in the interests of society as a whole (Habitat I)

2. Instead, the pattern of land use should be determined by the long-term interests of the community, especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment and a crucial link in an often delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies. (Habitat I)

Recommendation D1

Land resource

a Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest is the single most important means of improving the capacity of human settlements to absorb changes and movements in population, modifying their internal structure and achieving a more

equitable distribution of the benefits of development whilst assuring that environmental impacts are considered. (Habitat I)

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal regions and other areas subject to the impact of development, recreation and tourism activities. (Habitat I)

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore Governments must maintain full jurisdiction and exercise complete sovereignty over such and exercise complete over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed by foreign nations which enjoy the benefits while preventing its rational use. (Habitat I)

All of these have seriously challenged the capacities of governments, particularly those of developing countries, at all levels to realize *economic development, social development and environmental protection, which are interdependent and mutually reinforcing components of socially equitable and environmentally sound development*, the framework for our efforts to achieve a higher quality of life for all people. Rapid rates of international and internal migration to, as well as population growth in, cities and towns, and unsustainable patterns of production and consumption raise these problems in especially acute forms. In these cities and towns, large sections of the world's urban population live in inadequate conditions and are confronted with serious problems, including environmental problems, that are exacerbated by inadequate planning *and managerial capacities*, and **by unsustainable patterns of production and consumption** lack of investment *and technology* in **BEST (Best Environmentally Sound Traditions) practices (prevention technology that does it right the first time)**; too often **environmentally unsound technologies** have been introduced as a result of north/south transfer and then the “coupling” clean-up technologies are introduced. The continued introduction of these ecologically unsound technologies contributes to environmental degradation, undue stress on the disadvantaged, over-dependency on external “solutions” that could be equally bad or even worse than the problem they were intended to solve. **These ecologically unsound technologies and technological fixes perpetuate a cycle of attempted rectification of error, and contribute to** insufficient mobilization of financial resources **to ecologically sound technologies** and inappropriate allocation of financial resources **to ecologically unsound**

technologies such as non-renewal sources of energy or to the production of substances and activities that cause environmental degradation and are harmful to human health. In the Rio Declaration states were urged to prevent the transfer of substances and activities that could cause environmental degradation or be harmful to human health to other states; this would mean that no state should transfer substances such as toxic, hazardous, or atomic wastes or activities that would produce these wastes to other states.

DOCUMENTATION OF PRECEDENTS RELATED TO TRANSFER OF HARMFUL SUBSTANCES

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

RE: RECOGNIZING THE DAMAGE TO HEALTH AND THE ENVIRONMENT CAUSED BY EXPORT OF BANNED OR PERMANENTLY WITHDRAWN PRODUCTS

Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT SOME PRODUCTS HAVE BEEN SEVERELY RESTRICTED BECAUSE TOXIC EFFECTS ON HEALTH AND THE ENVIRONMENT

Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have been severely restricted in their consumption and/or sale owing to their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should **shall** effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

RE: REFUSING TO ACCEPT PERMISSION TO BE HARMED

No support shall be given for the justification of the transfer of harmful substances to human health and to the environment on the grounds that the recipient state has granted permission for this transfer.

Under no circumstances shall a State agree to accept hazardous, toxic, or atomic wastes from another State. Also under no circumstances shall a State that has less stringent regulations be called upon to accept activities or substances that are deemed to be ecologically unsafe and unsound in another State that has more stringent regulations. Similarly, this principle shall also apply within a state where industry or a government within a state seeks to deposit toxic, hazardous or atomic wastes in different areas of the State, in particular on indigenous lands or in areas in which the disenfranchised members of the population live.

as well as by a lack of social and economic opportunities.

In the case of international migration, migrants have **[particular]** needs for housing and basic services, education, **meaningful** employment, and social integration without a loss of cultural identity, and they are to be given adequate protection and attention within host countries.

DOCUMENTATION OF PRECEDENTS

RE: CONTINUED INSUFFICIENT PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include people in poverty small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should *shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to [quality] education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, place of birth, **nature of residence** or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

- The right to life of migrant workers and members of their families shall be protected by law (Art. 9)
- No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).
- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)
- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).
- Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983)

ARTICLE 7

7. In the process of globalization and growing interdependence, rural settlements represent a great challenge and opportunity for renewed **socially equitable and environmentally sound** developmental initiatives at all levels and in all fields. Many rural settlements, however, are facing a lack or an *inadequacy of economic opportunities* **inadequate infrastructure of environmentally sound practices**, especially **meaningful** employment, and of infrastructure and services, particularly those related to water, sanitation, health, education, communication, ecologically-**sound public** transportation and **ecologically safe and sound renewable** energy. Appropriate efforts and **BEST practices technologies** for rural development can help to reduce, inter alia, imbalances, unsustainable practices, poverty, isolation, environmental pollution and insecure land tenure. Such efforts can contribute to improving the linkage of rural settlements with the mainstream of economic, social and cultural life, to assuring sustainable communities and safe environments, and to reducing pressures on urban growth.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING RADICAL REVERSAL OF TRANSPORTATION TRENDS (

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents. (Habitat I)

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles. (Habitat I)

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel. (Habitat I)

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles (Habitat I)

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic; (Habitat I)

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution (Habitat I)

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system. (Habitat I)

RE: RECOGNIZING IMPACT OF INCREASED AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so

badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE; DEVELOPING MASS TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 8

8. Cities, towns and rural settlements are linked through the **environment, transportation, energy and through** the movements of goods, resources and people. Urban-rural linkages have a crucial importance for the sustainability of human settlements. As rural population growth has outpaced the generation of **meaningful** employment and economic opportunities, rural-to-urban migration has steadily increased, particularly in developing countries, which has put enormous pressure on urban infrastructure and services already under serious stress. It is urgent to eradicate rural poverty and to improve the quality of living conditions, as well as to create **meaningful** employment and educational opportunities in rural settlements, regional centres and secondary cities. Full advantage must be taken of the complementary contributions and linkages of rural and urban areas **through socially equitable and environmentally sound development. by balancing their different economic, social and environmental requirements.**

ARTICLE 9

9. More people than ever are living in absolute poverty and without adequate shelter. Inadequate shelter and homelessness are growing plights in many countries **including the most affluent countries of the North**, threatening standards of health, security and even life itself. ~~[Everyone *should* shall be entitled to an adequate- high standard of living, including adequate—~~ **affordable, accessible, safe and healthy food, clothing and inclusive adequate — affordable, accessible, safe and environmentally sound, with tenure security housing, and to the continuous improvement of living conditions.] All the states signatory to the international Covenant of Social Cultural and Economic Rights have “recognize the right of everyone to an adequate standard of living, including food, clothing and housing” (Art. 11.1 International Covenant of Economic, Social and Cultural Rights — ICESCR, 1966).** In addition, states have undertaken the international obligation to recognize the “right of everyone to social security (Art. 9), and “the right of

everyone to the enjoyment of the highest attainable standard of physical and mental health” (Article 12, ICESCR).

DOCUMENTATION OF PRECEDENT

RE: PROVIDING FOR THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through** natural or *man-made* **anthropogenic** catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: ACKNOWLEDGING ADEQUATE SHELTER AND SERVICES - BASIC HUMAN RIGHT. OBLIGATION ON GOVERNMENTS TO ENSURE ADEQUATE SHELTER

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: PROMOTING OF EQUITABLE DISTRIBUTION OF BENEFITS

(b) Human settlements policies should aim to improve the condition of human settlements particularly by promoting a more equitable distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4,b Habitat I)

(c) this can be done through:

(i) the location of public sector investments;

- (ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups
- (iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas
- (iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived
- (v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;
- (vi) Measures to improve the quality of life of *vulnerable marginalized* groups which have special needs-such as children, the elderly, the handicapped and the disabled. Such measure include provision of basic social services, adequate shelter and social and physical access to facilities. (Habitat I)

Recommendation C 11

Infrastructure policy

- (a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.
- (b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.
- (c) this implies
 - (i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population
 - (ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures;
 (Habitat I)

9 bis. The rapidly increasing number of displaced persons including refugees, other displaced persons in need of international protection and internally displaced persons, as a result of natural and human-made disasters in many regions of the world, is aggravating the shelter crisis, highlighting the need for a speedy solution to the problem on a durable basis.

9 ter. **Acknowledging that often the lack of respect and trust of youth, and the exclusion of youth from the decision making process have contributed to a reciprocal lack of trust on the part of youth, and thus affirming that t** *The rights and needs of children and youth and of future generations have to be taken fully into account [recognizing the rights, duties and responsibilities of parents and other persons legally responsible for children, consistent with the Convention on the Rights of the Child].* Special attention needs to be paid to participatory processes dealing with the shaping of cities, towns and neighborhoods; this is in order to secure the living conditions of children and of youth and to make use of their insight, creativity and thoughts on the environment. Special attention must be paid to shelter needs of **vulnerable children from marginalized groups**, such as street children, refugee children and children who are victims of sexual exploitation.

DOCUMENTATION FOR PRECEDENT

RE: RECOGNIZING THE PROFOUND IMPORTANCE OF PARTICIPATION OF YOUTH

- Recognizing the profound importance of the direct participation of youth in shaping the future of *mankind* **humanity** and the valuable contribution that youth can make in the implementation of the new international economic order based on equity and justice,
- Considering it necessary to disseminate among youth the ideals of peace, respect for human rights and fundamental freedoms, human solidarity and dedication to the objectives of progress and development, social and cultural advancement of peoples, the implementation of the new international economic order, the preservation of world peace and the promotion of international co-operation and understanding (The General Assembly Resolution 36/28 International Youth Year: Participation, Development, Peace, 1981)

ARTICLE 10

10. *Although All many countries, particularly developing countries, lack the necessary legal, institutional, financial, technological and human resources to respond adequately to rapid urbanization., many local authorities are taking on these challenges with open, accountable and effective leadership and are eager to bring people into the sustainable and the political will to achieve socially equitable and environmentally sound development process.* Enabling structures that facilitate independent initiative and creativity, and that encourage the wide range of **genuine community involvement and participation partnerships**, including with the **members in private sector enterprises that are advocating strong mandatory regulations to facilitate and drive socially equitable and environmentally sound development**, within and between countries, should be promoted. Furthermore, empowering all people, especially [members of]

vulnerable marginalized and disadvantaged groups and people living in poverty, to participate equally and effectively in all activities related to human settlements is the basis for civic engagement, facilitated by the national authorities. Indeed, the Habitat Agenda provides a framework to enable people to take responsibility for the promotion and creation of **socially equitable and environmentally sound human sustainable human** settlements.

10 bis. [Human settlements problems are of multidimensional nature that has its main roots in poverty and underdevelopment and, in many countries, is aggravated by the scarcity of resources. It is recognized that human settlements are not isolated from the social and economic development of countries and that they cannot be set apart from the need for a favourable international framework for sustained economic growth and sustainable development.]

ARTICLE 11

11. There are critical differences regarding human **communities settlements** in different regions and countries and within countries. These differences, specific situations and varying capacities of each community and country need to be taken into account in the implementation of the Habitat Agenda. **Even though these critical differences exist there are overarching principles that have been agreed to internationally within which to group these differences; these principles are related to the enshrining and the guaranteeing of human rights, the preserving, protecting and conserving of the environment, the ensuring of social justice and the enabling of socially equitable and environmentally sound development.** [International, regional, sub-regional and national institutional arrangements, including the enhancement of the Commission on Human Settlements and the United Nations Centre for Human Settlements (Habitat) as the global focal points and allocation of resources, are central to the implementation of the Habitat Agenda.]. **In addition, it is essential that UNCHS recognize that the successful implementation of Habitat II depends on the necessity of examining the interdependence of issues and continually work with agencies involved in Environment, Human Rights, and Peace promotion.**

ARTICLE 12

12. The Habitat Agenda is a global call to action at all levels. It offers, within a framework of goals and principles, **previous obligations incurred and expectations created and new commitments undertaken**, a positive vision of **socially equitable and environmentally sound development of sustainable** human settlements -- where all have adequate shelter, a healthy and safe environment, basic services, and *productive*, **environmentally sound** and freely chosen **meaningful** employment. The Habitat Agenda will guide all efforts to

finally turn this vision, **which has been articulated through multiple international forums for over 50 years** into reality.

**PART II.
GOALS AND PRINCIPLES, OBLIGATIONS, AND EXPECTATIONS**

ARTICLE 13

13. We, the States participating in the United Nations Conference on Human Settlements (Habitat II) [~~are have undertaken committed to~~ a political, economic, environmental, ethical and spiritual vision of human settlements based on the principles of equality, solidarity, partnership, human dignity, respect and cooperation, through obligations incurred and expectations created in international instruments. *[We adopt the]* We undertake to observe the *goals and principles*, discharge obligations and fulfill expectations inherent in ensuring the right to of adequate shelter for all as agreed in previous international instruments and to socially equitable and environmentally sound human settlements. *sustainable human settlements development in an urbanizing world.* *[We believe that]* the observance of principles, the discharging of obligations and the fulfilling of expectations *[attaining these goals will promote ensure* a world more stable and free from injustice and conflict and contribute to just, comprehensive and lasting peace and to global equitable economic and social development and environmental protection.] *[Civil, ethnic and religious strife, violation of human rights, nuclear armament, armed conflicts, alien and colonial domination, foreign aggression and occupation, international economic imbalance, coercive economic measures, poverty, organized crime, and terrorism in all its forms are destructive to]* socially equitable and environmentally sound development *[sustainable human settlement development and should therefore be renounced by all States.]* At the national level, we will reinforce and attain peace by *promoting ensuring* tolerance, non-violence and respect for diversity, and by settling disputes by peaceful means, by undertaking to reduce the production of arms, moving towards the ultimate elimination of arms production, and to discharge the obligation to eliminate the production and testing of weapons of mass destruction. At the local level, the prevention of crime and the promotion of sustainable communities are essential to the attainment of safe and secure societies. Crime prevention through social justice, equity and equality including the right to social security, the right to shelter and satisfaction of basic needs within a community of trust. *development is essential to crime prevention one crucial key to these goals.* At the international level, we will *promote ensure* international peace and security by undertaking immediately the substantial reduction the global military budget to that of 1981 the year in which there was a general assembly resolution calling for the freezing and reducing of the military budget and make and support all efforts to settle international disputes by peaceful means in accordance with the Charter of the United Nations.] We reaffirm and are guided by the purposes and principles of the Charter of the United Nations and by over 50 years of

obligations incurred and expectations undertaken through international instruments and we reaffirm our commitment to ensure the realization of the human rights set out in international instruments [including the right to adequate housing as provided for] in the Universal Declaration on Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of all Forms of Discrimination against Women and the Convention on the Rights of the Child [*, taking into account that the right to adequate housing should shall be realized progressively*]. We reaffirm that all human rights - civil, cultural, economic, political and social - are universal, indivisible and interdependent and interrelated. We subscribe to the following principles and goals to guide us in our actions.

ARTICLE 14

14. Equitable human settlements are those in which all people, without discrimination of any kind as to race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age**, language, religion **or conviction**, political or other opinion, *national or, social origin*, property, *birth, nature of residency* or other status have equal access to safe and healthy housing, infrastructure, health services, adequate food and water, education and open spaces. In addition, such human settlements provide equal opportunity for a *productive meaningful* and freely chosen livelihood; equal access to economic resources, [*including the right to inheritance*], **As agreed in the Convention on the Elimination of All Forms of Discrimination 5 d (vi) The right to inherit;**

ARTICLE 16

16. [*Sustainable socially equitable and environmentally sound development is essential to human settlements development, while giving full consideration for the needs and necessities of achievement of economic growth in all countries, particularly in developing countries. Special consideration needs to be given to the specific situation of countries with economies in transition.*] Human settlements shall be planned, developed and improved in a manner that takes full account of **sustainable socially equitable and environmentally sound** development principles **observed and expectations created and all its components, as set out** in Agenda 21 and other related outcomes of the United Nations Conference on Environment and Development. Sustainable human settlements development ensures **socially equitable and environmentally sound economic development, meaningful** employment opportunities and social **justice progress**, in harmony with the environment. It incorporates, among the principles of the Rio Declaration which are equally important and other outcomes of the United Nations Conference on Environment and Development, that of the precautionary *approach principle*,

pollution prevention, respect for the carrying capacity of ecosystems, and preservation of natural heritage and socially equitable and environmentally sound opportunities for future generations. Production, consumption and transportation should be **developed** *managed* in ways that protect and conserve the stock of resources while drawing upon them. Science and technology have a crucial role in shaping sustainable human settlements and sustaining the ecosystems they depend upon. **As expressed in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of Humanity from 1975**, there is continued concern “that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamentals”. Sustainability of human settlements entails their balanced geographical distribution or other appropriate distribution in keeping with national conditions, promotion of **socially equitable and environmentally sound development** *economic and social development*, and human health and education, the **conservation and protection of** *maintenance* of biodiversity *promotion of economic and social development*, human health and education, and cultural diversity, as well as air, water, vegetation and soil qualities at standards sufficient to sustain human life and well-being for all time.

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 6 Habitat I)

Re: Precautionary principle

The expression “the Precautionary Principle” is used throughout the UNCED documents in Agenda 21, Convention on Biological Diversity, The Framework Convention on Climate Change, and the Rio Declaration

RE: ENSURING ENVIRONMENTAL AND CULTURAL PRESERVATION

It is the responsibility of Governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy, linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity** *mankind*. (III 2, Habitat I)

RE: PRESERVING OR PROTECTING NATURAL HERITAGE

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)
- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)
- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

RE: PROTECTING ENVIRONMENT AS COMMON HERITAGE

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of **humanity** *mankind* and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

RE: PROCLAIMING USE OF SCIENTIFIC AND TECHNOLOGICAL DEVELOPMENT FOR STRENGTHENING INTERNATIONAL PEACE AND SECURITY

PROCLAIMING that all States shall promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975),

ARTICLE 17

17. The quality of life of the people depends, among other economic, social, environmental and cultural factors, on the physical conditions and spatial characteristics of our villages, towns and cities. City lay-out and aesthetics, land-use patterns, population and building densities, transportation and ease of access for all to basic goods, services and public amenities have crucial bearing on the livability of settlements. This is particularly important to **vulnerable marginalized** and disadvantaged persons, many of whom face barriers in access to shelter and in participating in shaping the future of their settlements. People's needs for community and their aspirations for more livable neighborhoods and settlements should guide the process of **planning**, and **designing, management and maintenance** of human settlements. Objectives of *this endeavour* include protecting public health, providing for safety and security conditions, education, and social integration, promoting equality, respect for diversity and cultural identities, **increased ing** accessibility for persons with disabilities, and **preservation** of natural heritage and cultural heritage—historic, spiritual, religious and culturally significant buildings and districts, respecting local landscapes and treating the local environment with respect and care **through**

living within the carrying capacity of the ecosystem. [The preservation of natural heritage and historical monuments and buildings, particularly in the case of those declared by UNESCO as part of the cultural and natural patrimony of humanity, should be assisted through international cooperation.] including states undertaking to sign and ratify the convention on the Protection of Cultural and Natural Heritage, and to enact the necessary legislation to ensure that significant cultural and natural heritage are protected and presented for international world heritage designation. 12

It is also of crucial importance that spatial diversification and mixed uses of types of housing and services be promoted at the local level in order to meet the diversity of needs and expectations.

DOCUMENTATION OF PRECEDENTS

RE: PRESERVING, PROTECTING AND ENHANCING OF THE ENVIRONMENT

Every State has the right to exercise full and permanent sovereignty over its wealth, natural resources and economic activities, adopting the necessary measures for the planning ... of its resources, providing for the protection, preservation and enhancement of the environment. (II 8 Habitat I)

RE: PRESERVING OF NATURAL HERITAGE

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of mankind [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 19

19. All people have basic rights and must also accept their responsibility to respect and protect the rights of others - including **the rights of** future generations - and to contribute actively to the common good. **Socially equitable and environmentally sound Sustainable** human settlements are those that, inter alia, generate a sense of citizenship and identity, cooperation and dialogue for the common good, and a spirit of voluntarism and civic engagement, where all people are encouraged and have equal opportunity **for genuine community involvement and participation including the participation of those who have usually been marginalized from**

the decision making process to participate in decision-making and development. Governments at all appropriate levels, including local authorities, have a responsibility to ensure access to education and to protect their population's health, safety and general welfare. This requires, as appropriate, establishing policies, laws and regulations for both public and private activities, encouraging responsible private activities in all fields, facilitating community groups' participation, adopting transparent procedures, encouraging public-spirited leadership and public-private—**individuals and enterprises that engage in BEST (Best environmentally sound Traditions) practices or socially equitable and environmentally sound development— cooperation partnerships**, and helping people to understand and exercise their rights and responsibilities through open and effective participatory processes, universal education and information dissemination.

ARTICLE 20

20. Partnerships Cooperation* among countries and among **all individuals and groups in society actors within countries from public, *private*, voluntary, and community-based organizations, the cooperative sector, non-governmental organizations and individuals are essential to the achievement of **socially equitable and environmentally sound sustainable** human settlements. **Genuine community involvement and participation in decision making, from the determining of the terms of reference and throughout the process, is essential to achieving socially equitable and environmentally sound human settlements. To be inclusive particularly for the benefit of groups that are usually marginalized all decision making processes shall avoid jargon, buzz words, euphemism, unnecessary compilation or veiled intention.**

development and the provision assurance of adequate shelter for all and basic services. *Partnerships can integrate and mutually support objectives of broad-based participation through, inter alia, forming alliances, pooling resources, sharing knowledge, contributing skills and capitalizing on comparative advantages of collective actions. The processes can be made more effective by strengthening civil organizations at all levels. Every effort must be made to encourage collaboration and partnership of all sectors of society and among all actors in decision-making processes as appropriate. **

ARTICLE 21

21. Solidarity with those who are less fortunate, disadvantaged and *vulnerable marginalized groups*, including people living in poverty, as well as **commitment to tolerance, non-discrimination and cooperation** among all people, families and communities are foundations for social cohesion. Solidarity, cooperation and assistance should be enhanced by the international community as well as by States and all other relevant **institutions and bodies actors** to respond to challenges **of socially equitable and environmentally sound development in human settlements development**. The international community and governments at

all appropriate levels are called upon to **discharge obligations and fulfill expectations** through enacting the necessary legislation to **ensure socially equitable and environmentally sound development** *the promote sound and effective policies and instruments, thereby* and through strengthening cooperation among governments and non-governmental organizations, as well **through providing as to mobilize** complementary resources to meet these challenges.

ARTICLE 22

22. [To safeguard the global needs and rights *interest* of present and future generations in human settlements including the right to a safe environment, the right to natural heritage, the right to social security and shelter, and to socially equitable and environmentally sound development including social justice is one of the fundamental goals of the international community. The implementation of the Global Plan of Action will require a willingness to make the necessary attitudinal changes, particularly in relation to respecting and trusting the present generation of youth, and in relation to ensuring the rights of the present generation of youth, of marginalized people in global societies, and the rights of future generations; and a flow of new and additional financial support from different sources including from reducing of the global military budget and from deferred taxes from corporations including transnational corporations and to transfer resources to developing countries in order to cover the incremental costs of the socially equitable and environmentally sound actions they have to undertake to address *deal with human settlements* problems and to accelerate socially equitable and environmentally sound development *sustainable development*.] In additions compensation shall be sought from corporations that have violated human rights, caused environmental degradation, and contributed to conflict and war.

DOCUMENTATION OF PRECEDENT

RE DESIGNATING OF HERITAGE OF OUTSTANDING INTEREST

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: CONSERVING BIODIVERSITY FOR FUTURE GENERATIONS

- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

Part III.

OBLIGATIONS DISCHARGED, EXPECTATIONS FULFILLED AND COMMITMENTS UNDERTAKEN

[The Global Plan of Action *is* shall be revised to be *drawn up* in full conformity with the purposes and principles of the Charter of the United Nations, and with the over-51 years of obligations incurred in Treaties, Conventions, and Covenants, and of expectations created in Declarations, General Assembly Resolutions and Conference Agendas. *The implementation of the recommendations contained in this plan of action is the sovereign right of each State consistent with national laws and development priorities, as well as with full respect for the various religious, ethical values, cultural backgrounds and philosophical convictions of its people, and in conformity with universally recognized international human rights.*]/4 The implementation of the recommendations in this plan of action should reflect sovereign equality as specified in the original Charter of the United Nations. Sovereign equality does not mean that states have the sovereign right to not comply with obligations or fulfill expectations from previous international instruments.

COMMENT ON OBLIGATIONS AND EXPECTATION

We are mindful *that since* the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Treaties, Covenants, Conventions, and have created expectations reflected in Declarations, General Assembly Resolutions, and Conference Agendas, and that if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been ensured, preservation and protection of the environment could have been preserved, protected and conserved, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Cognizant that only when these obligations are discharged and expectations fulfilled will we have the global community that is socially equitable and environmentally sustainable.

RECOGNIZING that for fifty-one years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

States undertake to introduce the following resolution in the General Assembly.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

ARTICLE 23

23. [Embracing the foregoing principles of compliance and equality through the discharging of obligations, through the fulfillment of expectations and through the undertaking of commitments we, as participating States in this Conference, *commit ourselves* undertake to implement the Habitat Agenda including through sub-national, national, sub-regional and regional plans of action and other policies and programmes drafted and executed in cooperation with all individuals and members of civil society that embrace the international principles related to enshrining and guaranteeing human rights, to preserving, protecting and preserving the environment, and to ensuring social justice and the prevention of conflict and war **key actors** at all levels and supported by the international community. In implementing these commitments we shall give special attention to the circumstances and needs of people who are homeless, living in poverty, or are in some other way disadvantaged or marginalized *vulnerable*, especially those who are women, children, older people, indigenous people, displaced people or people with disabilities.]/6 In addition, we recognize *taking into account* that there shall be respect for nature beyond human purpose and that human beings are crucial in the promotion of *are at the centre of concerns* for *sustainable* socially equitable and environmentally sound development, including adequate shelter for all and sustainable human settlements development, and they are entitled to a healthy and *productive meaningful* life in harmony with nature.]/5

A. ADEQUATE SHELTER FOR ALL

ARTICLE 24

24. [We reaffirm our *commitment to the progressive realization* obligation to ensure enactment of the right to adequate— affordable, accessible, tenure security, safe, healthy and environmentally sound— housing, as set out in numerous international instruments. In this context, we recognize the fundamental obligation of governments to enable people to obtain shelter and to protect and improve dwellings and neighbourhoods, and to foster and facilitate genuine involvement and participation in the development of the community.] We commit ourselves to the goal of improving living and working conditions on an equitable and sustainable basis, so that everyone will have adequate shelter which is healthy, safe, secure, accessible and affordable and which includes basic services, facilities and amenities and the enjoyment of freedom from discrimination in housing and legal security of tenure. We shall implement and promote this objective in a manner fully consistent with human rights standards./7

DOCUMENT FOR PRECEDENT

RE: PRESERVING LAND RIGHTS OF INDIGENOUS PEOPLES

i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

RE: CONDEMNING DISPLACEMENT OF NATIVE POPULATION

(e) In all occupied territories, changes in the demographic composition, or the transfer or uprooting of the native population, and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. the heritage and national identity must be protected. Any policies that violate these principles must be condemned.

RE: ESTABLISHING SUFFICIENT PROTECTING OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE; ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and

rehabilitation of victims. Countries *should take full measures* to shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should **shall** pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to **[quality]** education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, birth or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983

DOCUMENTATION OF PRECEDENTS

RE: AFFIRMING THE RIGHT TO EDUCATION

- Recalling its resolutions 34/170 of 17 December 1979, 35/191 of 15 December 1980 and 36/152 of 16 December 1981 on the right to education,
- Recalling the International Covenant on Economic, Social and Cultural Rights, adopted by its resolution 2200 A (XXI) of 16 December 1966, which recognizes the right of everyone to education,
- Bearing in mind the importance of the Convention against Discrimination in Education, adopted on 14 December 1960 by the General Conference of the United Nations Educational, Scientific and Cultural Organization (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: REAFFIRMING THE IMPORTANCE OF IMPLEMENTING THE RIGHT TO EDUCATION

Reaffirming the paramount importance of the implementation of the right to education for the full development of the human personality and for the enjoyment of other fundamental human rights and freedoms (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: AFFIRMING THE RIGHT OF EDUCATION FOR ALL REGARDLESS OF STATUS

Recalling that, since its establishment, the United Nations Educational, Scientific and Cultural Organization has constantly striven for effective realization of the right to education and equality of educational opportunities for all, without distinction as to race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, economic status or birth and that, for many years past, activities directed to securing the right to education and the extension and improvement of educational and training systems in Member States, more particularly in the developing countries, have occupied a central place in that organization's programme (GA Resolution, The Right to Education 37/178 17, December 1982)

RE: AFFIRMING UNIVERSAL ACCESS TO EDUCATION

We commit ourselves to promoting and attaining the goals of universal and equitable access to quality education, the highest attainable standard of scholarly, academic, ethical, physical and

mental health, and universal access of all to primary health care, making particular efforts to rectify inequalities relating to social conditions, and without distinction as to race, tribe, national origin, gender, age or disability, **sexual orientation, family structure and other status in the achievement of socially equitable and environmentally-sound development** (Commitment 6, ICPD)

To this end, at the national level, we will:

B. Emphasize lifelong learning by seeking to improve the quality of education to ensure that people of all ages are provided with useful knowledge, reasoning ability, skills and ethical and social values required to develop their full capacities in health and dignity. In this regard, women and girls should be considered a priority group. (ICPD)

Recognize and support the right of indigenous people to education in a manner that is responsive to their specific needs, aspirations and cultures, and ensure their full access to health care (g Commitment 6, ICPD)

Develop broad-based education programmes that promote and strengthen respect for all human rights and fundamental freedoms, including the right *to development* to **socially equitable and environmentally-sound development**, promote the values of tolerance, responsibility and respect for the diversity and rights of others, and provide training in peaceful conflict resolution, in recognition of the United Nations Decade for Human Rights Education (1995-2005, Commitment 6, ICPD)

Education is a basic human right and an essential tool for achieving the goals of equality, development, **environmental integrity** and peace (71 Platform of Action).

RE: RESTRUCTURING OF EDUCATIONAL SYSTEM:

The United Nations, through its almost 50 years of operation, has strongly supported the development of international instruments to address the violation of human rights, the escalation of war and conflict, the degradation of the environment, and the denial of equality/equity (including specifically gender Equality/equity) and social justice. Similarly, states have undertaken obligations through international conventions treaties, resolutions, to address these issues.

In most of the international documents there has been provision for educating the global community in a way that would achieve the “goals of justice”. To legitimately reflect these issues in education, requires a complete restructuring of the educational system. The global community should begin to embrace a new vision of education that fosters a commitment to addressing the above issues, along with a stimulation of thinking, in a non-evaluative collaborative environment.

Equal access to an educational system that is inequitable, competitive and hierarchical will not provide the necessary changes to address the issues facing the global community. Equal access plus a complete restructuring of the educational system is essential.

To achieve the above vision, and to discharge international obligations related to the promotion of socially equitable and environmentally-sound development, peace, and respect for human rights, the international community must move from an inequitable, hierarchical, biased, and competitive, model dependent educational system —a system that reproduces the current socioeconomic, political global structure to a new vision of education that is one of tolerance cooperation and intellectual stimulation.

RE: ENSURING UNIVERSAL ACCESS TO HEALTH CARE

Ensure, on a basis of equality of men and women, universal access to health-care service, including those related to reproductive health care, which include family planning and sexual health. Reproductive health-care programmes should provide the widest range of services without any form of coercion (Principles 8 International Conference on Population and Development, 1994)

ARTICLE 25 j

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE PRIORITY OF SOCIAL SERVICES

Recommendation C 15
Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:
(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;
(Recommendation C 15, Habitat I)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

[(k) Protecting within the national context, the traditional rights to land and other resources of pastoralists, fishery workers and nomadic and indigenous people and strengthening land management;]

[(l) Avoiding forced illegal evictions, when possible; when unavoidable, to strive for rehabilitation.]

B. SUSTAINABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND HUMAN SETTLEMENTS

ARTICLE 26

[26. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *the goal of socially equitable and environmentally sound sustainable human settlements in an urbanizing world* by developing economies that will preserve, protect and conserve the environment, and that will make efficient use of limited resources, through BEST practices, within the carrying capacity of ecosystems and by providing all people with equal opportunities for a healthy, safe and *productive meaningful* life in harmony with nature and with natural and cultural heritage and spiritual and cultural values, ensuring social justice *progress*.

DOCUMENTATION OF PRECEDENTS

RE: BEING WITH THE CARRYING CAPACITY OF ECOSYSTEMS

Recommended extensively throughout all literature on Ecology and the Environment. The need for socially equitable and environmentally sound development within the carrying capacity of ecosystems is an essential principle of sustainability.

ARTICLE 27

27. We further *commit ourselves to the objectives of:* recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the following:

(a) *Promoting ensuring* socially integrated human settlements, combating segregation, discriminatory and other exclusionary policies and practices and recognizing and respecting the rights of all, *especially women and the poor*; including those who have been discriminated on the basis of gender, sex sexual orientation, marital status, age, disabilities, race, tribe, or culture, colour, ethnicity, national, ethnic or social origin, nationality, place of birth, refugee or immigrant status, aboriginal ancestry, religion or conviction, language, political or other opinion, socioeconomic conditions, nature of residency and other status

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE INHERENT DIGNITY OF ALL MEMBERS OF THE HUMAN FAMILY AS BEING THE FOUNDATION OF FREEDOM, JUSTICE AND PEACE

Recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the World (Preamble, Universal Declaration of Human Rights, 1948)

RE: ENSURING EQUALITY BEFORE THE LAW

All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law

shall prohibit any discrimination and guarantee to all persons equal and

effective protection against discrimination on any ground such as race,

colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status (Art. 26, International Covenant of Civil and Political Rights, 1966)

RE; ENCOURAGING TOLERANCE AND ELIMINATING OF ALL FORMS OF DISCRIMINATION

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, **sexual orientation, family structure**, or other status. (Art. 2, The Universal Declaration of Human Rights, 1948)

RE: BEING CONVINCED THAT ANY DOCTRINE OF SUPERIORITY BASED ON RACIAL DIFFERENTIATION IS SCIENTIFICALLY FALSE...

Convinced that any doctrine of superiority based on racial differentiation

is scientifically false, morally condemnable, socially unjust and dangerous, and that there is no justification for racial discrimination, in

theory or in practice, anywhere (Preamble, International Convention on the Elimination of All Forms of Racial Discrimination, 1965)

RE: STRENGTHENING LEGAL FRAMEWORKS FOR ACCESS TO LAND AND OWNERSHIP...IN PARTICULAR FOR WOMEN

Consider strengthening/developing legal frameworks for land management, access to land resources and land ownership - in

particular, for women - and for the protection of tenants (3.8.h Combating Poverty, Agenda 21, UNCED, 1992)

RE: UNDERTAKING ACTIONS TO PROMOTE FOOD SECURITY

Undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.8. l., Combating Poverty, Agenda 21, UNCED 1992)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO THE POOR AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ELIMINATING THE PRACTICE OF ADDING POVERTY PROGRAMS AS AN AFTERTHOUGHT

How can poor and traditionally excluded people gain an integral role in economic development that addresses squarely the poverty and inequality that is crippling the hemisphere? Poverty programs should not be added to development strategies as an afterthought. Poor people, small farmers and small businesses must be treated as potential generators of wealth and engines of economic growth. Critical issues of food security, land tenure and agricultural policy for the majority of the region's farmers (PROMISES TO KEEP The Unfinished Agenda for Human Rights and Economic Justice in the Americas, 1994)

ARTICLE 27 b-h

(b) Ensuring the acknowledging and harnessing the potential of the informal sector, *where appropriate*, in providing housing and services for the people in poverty *poor*;

(c) Ensuring *Promoting* changes in production and consumption patterns and settlements structures that will protect **natural environment *natural resources* - including water, air, bio-diversity, energy and land - providing a healthy living environment for all;**

(d) Ensuring *Promoting spatial development* the development of spatial patterns that reduce transport demand, as well as that create *creating* efficient, effective and environmentally sound publicly owned transportation systems that improve accessibility to work, goods, services and amenities;

(e) Preserving natural ecosystems and protecting agricultural *productive* land in urban and rural areas and protecting fragile ecosystems from the negative impacts of human settlements;

(f) Preserving, protecting and maintaining natural, historic and cultural heritage, including traditional shelter and settlements patterns and *pathways*, as appropriate, as well as landscapes and urban flora and fauna in open and green spaces;

DOCUMENTATION OF PRECEDENTS.

RE: PRESERVATION OF HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

Noting the recognition of the World Heritage committed meeting in 1993 when the committee recognized the protection of cultural pathways

(g) Ensuring cooperative socially equitable and environmentally sound development and meaningful employment *Enabling competitive and sustainable economic development that will attract investments, generate employment and provide revenues for human settlements development;*

(h) *Alleviating preventing and eliminating* undesired impacts of structural adjustment and economic transition on human settlements by **undertaking to develop a socially equitable and environmentally sound alternative with genuine community participation and involvement; and**

COMMENT

RE: RE-EXAMINING THE IMPACT OF STRUCTURAL ADJUSTMENT PROGRAMS

Increasing negative impact of structural adjustment programs
The international debt crisis, which has forced nations to undergo structural adjustment programs, has undermined nation states to implement or maintain food security policies. Increased trade liberalization, with the World Trade Agreement will further restrict the nation state from implementing food security policies. The negative consequences of structural adjustment programmes have had negative consequences such as increased poverty, unemployment, social disintegration, health care decline, environmental degradation, reduced access to education, and escalation of conflict. (Global Compliance Research Project)

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING REVIEW OF STRUCTURAL ADJUSTMENT

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: CRITICIZING OF STRUCTURAL ADJUSTMENT PROGRAMS

Concerned about the negative impact on the poor, especially women and children, of the International Monetary Fund and World Bank structural adjustment policies (Women's Action Agenda, 1992)

In many countries, in particular in developing and least-developed countries, [structural adjustment,] [the deterioration of public health systems, a decrease in public health spending and in some cases, increasing privatization of health care systems without appropriate guarantees of universal access] further reduce health care availability. This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles including within the family and the community are often not acknowledged and as such do not receive the necessary social, psychological and economic support (93 Advanced Draft Platform of Action, UN Conference on Women, 1995)

RE: CONTRIBUTING OF STRUCTURAL ADJUSTMENT TO DETERIORATION OF PUBLIC HEALTH SYSTEMS

In many countries, especially in developing countries, in particular the least developed countries, a decrease in public health spending and, in some cases, structural adjustment, contribute to the deterioration of public health systems. In addition, privatization of health-care systems without appropriate guarantees of universal access

to affordable health care, further reduces health-care availability.

This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles, including their roles within the family and the community, are often not acknowledged; hence they do not receive the

necessary social, psychological and economic support (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: ASSESSING IMPACT OF STRUCTURAL ADJUSTMENT ON WOMEN AND GIRL CHILDREN

22. Macro and micro-economic policies and programmes, including structural adjustment, have not always been designed to take account of

their impact on women and girl children, especially those living in poverty. Poverty has increased in both absolute and relative terms, and

the number of women living in poverty has increased in most regions. There are many urban women living in poverty; however, the plight of women living in rural and remote areas deserves special attention given

the stagnation of development in such areas. In developing countries, even those in which national indicators have shown improvement, the majority of rural women continue to live in conditions of economic underdevelopment and social marginalization (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: PROPOSING DEBT FORGIVENESS

Find effective development-oriented and durable solutions to external debt problems in order to help them to finance programmes and projects targeted at development, including the advancement of women, inter alia, through the immediate implementation of the terms of debt forgiveness agreed upon in the Paris Club in December 1994, which encompassed debt

reduction, including cancellation or other debt relief (Habitat I) measures and develop techniques of debt conversion applied to social development programmes and projects in conformity with Platform priorities; (61 c Platform of Action. UN Conference on Women: Equality, Development and Peace)

. ARTICLE 27 J

(f) Preventing and reducing the impact of natural and human-made disasters on human communities settlements, by enshrining the notion of healthy community as “healthy, safe and environmentally sound communities,” by eliminating patterns of consumption and development that have increased societal vulnerability to disasters, by promoting and funding BEST practices, and by embracing a culture of safety.

DOCUMENTATION OF PRECEDENTS

RE: PROMOTING A CULTURE OF SAFETY

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(7.60, Disasters)

This principle involves the commitment to act to prevent rather than to [correct]

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(Agenda 21, 7.60)

Profoundly concerned that the situation of children in many parts of the world remains critical as a result of inadequate social conditions, natural disasters, armed conflicts, exploitation, illiteracy, hunger and disability, and convinced that urgent and effective national and international action is called for **and needed** (Preamble, Convention on the Rights of the Child, 1989)

RE: PREVENTING DISASTER

The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation will significantly enhance our ability to achieve real progress in **preventing mitigating** disasters through the transfer of **Best**

Ecologically Sound Traditions *technology* and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention on Natural Disaster, 1994).

RE: RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL DISASTERS

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development socially equitable and environmentally-sound development* can contribute to reduction of this vulnerability ...(A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

RE: RECOGNIZING DISASTER PREVENTION...BETTER THAN DISASTER RESPONSE

Disaster prevention, *mitigation and preparedness are is* better than disaster response in achieving the goals and objectives of the Decade. Disaster response alone is not sufficient, as it yields only temporary results at a very high cost. We have followed this limited approach for too long.

This has been further demonstrated by the recent focus on response to complex emergencies which, although compelling, should not divert from pursuing a comprehensive approach. Prevention contributes to lasting improvement in safety and is essential to integrated disaster management (3 a Convention on Natural Disaster, 1994).

RE: DEVELOPING A GLOBAL CULTURE OF PREVENTION

Development of a global culture of prevention as an essential component of an integrated approach to disaster reduction; (9 a The World Conference on Natural Disaster Reduction, 1994)

RE: INCORPORATING DISASTER PREVENTION...IN DEVELOPMENT PLANNING

Incorporate disaster reduction prevention *or mitigation* in socioeconomic development planning based on the assessment of the risk (11a i The World Conference on Natural Disaster Reduction, 1994)

**RE: STIMULATING GENUINE COMMUNITY INVOLVEMENT...
REDUCING VULNERABILITY OF COMMUNITIES TO NATURAL
DISASTERS**

Stimulate genuine community involvement and empowerment of women and other socially disadvantaged groups at all stages of disaster management programmes in order to facilitate capacity building, which is an essential precondition for reducing vulnerability of communities to natural disasters (11 q Convention on Natural Disaster Reduction, 1994).

**RE: EXPRESSING THE POLITICAL COMMITMENT
TO...THROUGH LEGISLATION....AT [GLOBAL] NATIONAL,
COMMUNITY LEVEL**

Express the political commitment to reduce their vulnerability, through declaration, legislation, policy decisions and action at the highest level, which would require the progressive implementation of disaster **prevention assessment and reduction** plans at the **global** national and community levels (11 a Convention on Natural Disaster Reduction 1994)

**RE: EXTENDING THE CONCEPT OF DISASTER REDUCTION TO
COVER NATURAL AND OTHER DISASTER SITUATIONS
INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL
DISASTERS (NA-TECHS)**

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries (B i Convention on Natural Disaster, 1994)

**RE; RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE
POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL
DISASTERS**

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability, if planned and managed in a way to ameliorate the social and economic conditions of the

affected groups and communities. (A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

C. Means of Discharging Obligations and Fulfilling Expectations *Enabling Action*

ARTICLE 28

28. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the *We commit ourselves to the strategy of enabling all key actors, in the public, private and the community sectors, the genuine involvement and participation of individuals and groups of civil society to play an effective role - at national, state/provincial, metropolitan and local levels-in the socially equitable and environmentally sound development of human settlements and shelter development.*

ARTICLE 29

29. We further ensure *commit ourselves to the objectives of:*

(a) *Exercising public authority and The using of public resources with openness transparency and accountability;*

(b) *The Decentralizing within a framework of overarching international principles, authority and resources, as appropriate, as well as functions and responsibilities to the level most effective in addressing needs of people in their settlements;*

(c) *Promoting The establishing of institutional and legal frameworks and capacity-building conducive to civic engagement and to inclusive genuine community involvement and participation in socially equitable and environmentally sound development of settlements broad-based participation in human settlements development;*

(d) *The providing of capacity-building for the socially equitable and environmentally sound development of human settlements management and development;*

(e) *The supporting of institutional and legal enabling frameworks for mobilizing providing financial resources for socially equitable and environmentally sound development of human settlements sustainable shelter and human settlements development;* and

(f) *The promoting equal access to reliable information, utilizing, where appropriate, modern communications technology and networks.]*

[Gender Equality

29 bis.. We recognize that through international agreements we have incurred obligations related to the equality of women from the inception of the United Nations Charter and throughout subsequent human rights documents, and we recognize that further expectations have recently been created in the Platform of Action from the UN Conference on Women: Equality, Development and Peace, we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *We commit ourselves to the goal of gender equality in human settlements development. We further commit ourselves to the objectives of ensure:*

(a) Integrating gender perspectives in human settlement-related policies, programmes and projects, and the promotion of the full and equal participation of women in human settlement planning and decision-making; and

(b) Developing methodologies for incorporating gender perspectives in shelter planning, development and evaluation, such as the collection, analysis and dissemination of gender-disaggregated data and information, and the development of gender-based indicators.]

D. Financing shelter and human settlements

[30. We commit ourselves to **undertake to strengthening** existing financial mechanisms and, *where appropriate*, developing new sources of funding *mechanisms* for financing the implementation of the Habitat Agenda, such as funding from a substantial reduction of the global military budget, from deferred taxes from corporations or transnationals, or from compensation for environmental degradation.

COMMENT:

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget and a resolution to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81.

which will mobilize increased sources of finance - public, private, multilateral and bilateral - at international, regional, national and local levels; and will promote the efficient, effective and accountable resource allocation and management.]

[31. We further commit ourselves to the objectives of :

(a) Stimulating national and local economies, through **ensuring socially equitable and environmentally sound development enabling competitive and sustainable economic development, that will attract public and international financial resources and private investments, generate employment and increase revenues, providing a stronger financial base to support shelter and human settlements development;**

(b) Strengthening fiscal and financial management capacity, at all levels, to fully develop the taxation base, pricing mechanisms and other sources of revenue;

(c) Enhancing public revenue through the use, as appropriate, of fiscal instruments which are conducive to environmentally friendly practices, in order to promote direct support for **socially equitable and environmentally sound development sustainable** human settlements;

(d) Strengthening regulatory and legal frameworks such as **MINS 1997 to drive the development, promotion and implementation of BEST (Best Environmentally Sound Traditions) practices to enable markets to work and to facilitate independent initiative and creativity, as well as to encourage a wide range of partnerships to finance shelter and human settlements development;**

(e) Promoting increased equitable access to credit for all;

(g) targeting, where appropriate, subsidies to those who are not served by the market, and promoting appropriate credit mechanisms and other instruments to address their needs.]

E. International cooperation/12

ARTICLE 32

[32. We commit ourselves - in the interests of international peace, security, justice and stability - to **reduce the global military budget by 50 % and to reallocate the financial resources saved from the reduction to economic and social as undertaken through General Assembly Resolutions in 1981. In addition we commit to enhancing international cooperation and partnerships which will assist in the to implement implementation of the national and the global plans of action and the attainment of the goals of the Habitat Agenda, by contributing to and participating in multilateral, regional and bilateral cooperation programmes and institutional arrangements and technical and financial assistance programmes; by the interchange of BEST (Best Environmentally Sound Traditions) practices exchange of appropriate**

technology; by the collection, analysis and dissemination of information about shelter and human settlements, and by international networking.]

ARTICLE 33

[33. We further commit ourselves to the objectives of:

(a) Striving for the fulfillment of the accepted target of 0.7 per cent of gross national product for official development assistance **for socially equitable and environmentally sound development**, as soon as possible, as well as increasing, within it, the share for funding for **socially equitable and environmentally sound development human settlements and shelter development;**

(b) Using resources and economic instruments in an effective, efficient and equitable manner, at the local, national, regional and international levels; and

(c) Promoting responsive international cooperation between public, *private* **BEST practices enterprises** and non-profit, non-governmental and community organizations.]

F. Assessing the discharging of obligations and the fulfillment of expectations *progress*

ARTICLE 34

[34. We commit ourselves to monitor and evaluate, within our own countries, efforts to implement national plans of action, striving to ensure efficiency and effectiveness in meeting the goals of adequate shelter for all and sustainable human settlements development.] **In addition we also commit to discharge our previous obligations incurred through Conventions, Treaties and Covenants by signing what we have not yet signed, ratifying what we have not yet ratified, enacting legislation to ensure compliance, and establishing an enforcement infrastructure to ensure the discharging of these obligations and the fulfilling of these expectations, and we commit to fulfilling previous expectations created through Declarations, General Assembly Resolutions and Conference action statements. To demonstrate our commitment to over 50 years of obligations and expectations we also commit to the establishment of an International Court of Compliance where citizens can take evidence of state non-compliance with obligations and expectations. For this purpose we pledge to support a General Assembly Resolution in the 51 session of the United Nations to commemorate the culminating of the Decade devoted to the promotion and furtherance of International Law.**

ARTICLE 35

[35. We further commit ourselves to the objective of enhancing the role and strengthening the institutional capacity of UNCHS (Habitat) as an agency of coordination and cooperation assisting the Member States of the United Nations to monitor and evaluate the implementation of the Habitat Agenda, using *shelter and urban indicators and best* **BEST (Best Environmentally Sound Traditions)** practices as a basis for assessing global conditions and trends in shelter and **socially equitable and environmentally sound development human settlements development.**]

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

A. Introduction

ARTICLE 36

36. Twenty years ago in Vancouver, at the First United Nations Conference on Human Settlements (Habitat I), the world community adopted an agenda for human settlements development. Since then, there have been remarkable changes in population and social, political, environmental and economic circumstances **that could have with the needed international and national political will have permitted the fulfillment of the expectations of Habitat I. affect strategic outlook.** These changes have led many Governments to adopt and promote enabling policies to facilitate actions by individuals, families, communities and the private sector to improve human settlements conditions. However, it is estimated that at least 1 billion human beings still lack adequate shelter and are living in unacceptable conditions of poverty, mostly in developing countries.

ARTICLE 37

37. While the rate of population growth is on the decline, during the past twenty years world population has increased from about 4.2 billion to about 5.7 billion, with nearly one third under 15 years of age, and an increasing number of people living in towns, cities, and mega-cities. By the turn of the century, humankind will be crossing a threshold where over 50 per cent of the population live in urban areas. Meeting the needs of the nearly 2 billion more people expected in the coming two decades and managing human settlements towards sustainability will be a daunting task. In developing countries, in particular, rapid urbanization and the growth of towns, cities, and mega-cities, where public and private resources tend to concentrate, represent new challenges and at the same time new opportunities: there is a need to address the root causes of these phenomena, including rural to urban migration.

ARTICLE 38

38. [Globalization of the world economy and deepening interdependence among nations presents challenges and opportunities as well as risks and uncertainties for the future of the world economy. As a result, the level of economic development has increased in some countries, while the situation in a large number of them remains critical and uncertain. At the same time, the gap between developing and developed countries, the poor and rich - countries as well as people - has widened. New communications technology makes information much more widely accessible and accelerates all processes of change. In many societies, new issues of social cohesion and personal security have emerged and the issue of solidarity has become

central. Poverty, unemployment, environmental degradation, social disintegration and the increasing movement of people, as well as intolerance and violence have also emerged as critical factors. We must keep these new conditions in view as we draw up **plans for socially equitable and environmentally sound human settlements strategies** for the first two decades of the twenty-first century.

ARTICLE 39

39. While Habitat II is a Conference of States and there are many things national Governments can do to enable local communities to solve problems, the **people actors** who will determine success or failure in improving the **condition of human settlements condition** are mostly found at the community level *in* with the public, *private* the **BEST practices enterprises**, and **the individuals and groups of civil society non-profit sectors**. It is they, local authorities, **in Best practices enterprises and other [stakeholders], individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society** who are on the front line in achieving the goals of Habitat II. **Although the principles and standards arising from obligations and expectations should be established at the international level**, structural causes of the problems have often to be dealt with at the national and sometimes the international level, **progress the discharging of obligations and the fulfillment of expectations** will depend to a large degree on local authorities, **with genuine community involvement and participation civic engagement and the forging of partnerships** at all levels of government with the *private sector* the **BEST practices enterprises**, and **the individuals and groups of civil society, such as** the cooperative sector, non-governmental and community-based organizations., *workers and employers and civil society at large*.

ARTICLE 40

40. Habitat II is one in an extraordinary series of World Conferences held under the auspices of the United Nations over the past five years. All addressed important issues of people-centred **sustainable socially equitable and environmentally sound** development. **These Conferences, though significant, should not minimize the extensive obligations previously incurred by states in conventions, treaties and covenants, and the extensive expectations created in Declarations, General Assembly resolutions and other pre-1992 conference action plans.** It is easy with short institutional memory to ignore past obligations and expectations. Habitat II provides a unique opportunity to incorporate significant obligations and expectations from pre-1992 international instruments with post-1992 international instruments including **the four previous conferences in this series.** *including sustained economic growth and equity, for which successful implementation requires action at all levels, particularly at the local level. Strategies on social, economic, environmental, disaster reduction, population, disability and gender issues will have to be*

implemented in urban and rural areas and, in particular, where the problems are acute and generate tension.

ARTICLE 41

41. In Habitat II, Governments at all levels, **the BEST practices enterprises**, and **the individuals and groups of civil society** *the community and the private sector* considered how the achievement of the two principal goals of "Adequate shelter for all" and "socially equitable and environmentally sound *Sustainable* human settlements *development in an urbanizing world*" can be furthered at the local level through an enabling process in which individuals, families and their communities play a central role **through genuine community involvement and participation**. **The implementation of the Habitat Global Plan of Action requires the genuine involvement and participation of governments at all levels, the BEST practices enterprises, and the individuals and groups of civil society** *This is what is special about the Habitat II Global Plan of Action and its strategies for implementation. Implementation of these measures will need to be adapted to the specific situation of each country and community.*

ARTICLE 42

42. *The strategy of* **The implementation of** the Global Plan of Action is **dependent based on enabling the involvement and participation of citizens in a process that is honest, genuine and open transparency and participation**. *Under this strategy,* **government** efforts are based on establishing legislative, institutional and financial frameworks that will enable **the BEST practices enterprises**, and **the individuals and groups of civil society** to fully contribute **to socially equitable and environmentally sound development [sustainable development, including sustained growth]** and enable all women and men to work with each other and in their communities with Governments at all levels, **to establish terms of reference**, determine collectively their future, decide on priorities for action, identify and allocate resources fairly and *build partnerships* **work cooperatively** to achieve common goals. **This cooperative process will set up** the conditions for women and men to exercise their individual rights and responsibilities equally and to engage their abilities effectively in activities that will improve and sustain their living environments (b);

Enablement creates:

(a) A situation in which the full potential and resources of all actors in the shelter production and improvement process are mobilized;

Article 42 (c)

42 (c) The conditions for organizations and institutions to interact and network, **building fostering and ensuring genuine community involvement and**

participation *partnerships* for **socially equitable and environmentally sound development** [*sustained economic growth and sustainable development*];

...

Part IV.

GLOBAL PLAN OF ACTION: **STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION**

B. Adequate shelter for all/14

ARTICLE 44

44. [Since the adoption of the Universal Declaration of Human Rights in 1948, the right to adequate housing has been recognized as an important component of the right to an adequate standard of living. All nations without exception have *some form of an obligation to provide for in the shelter sector, as exemplified by their creation of ministries of housing or agencies, by their allocation of funds for the housing sector and by their policies, programmes and projects.*]

[The provision of adequate housing for everyone requires action not only by governments, but by **all society working cooperatively sectors of society**, including the **BEST practices enterprises**, and **the individuals and groups of civil society private sector, non-governmental organizations**, local authorities, as well as by international organizations (community)] *Within the overall context of an enabling approach, Governments should take appropriate action [In order to promote, protect and, ensure the progressive realization of the enactment of the right to adequate housing.]* These include, but are not limited to **ensuring the following**:

1. *Providing Adequate* legal protection from, and effective remedies against discrimination of any kind in housing as to *race, colour, sex, language, religion, political or other opinion, national or social origin, [property, birth or other status]*; race, tribe, or culture, **colour, ethnicity, national ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age, language, religion or conviction, political or other opinion, national or, social origin, property, birth, nature of residency** or other status
2. *Providing* Legal security of tenure and equal access to land among all, including women and those living in poverty, as well as effective protection [from illegal forced evictions]/15;

3. *Adopting* Policies aimed at making housing habitable, affordable and accessible, including for those who are unable to secure adequate housing through their own means, by inter alia:

a) Expanding the supply of affordable housing through *appropriate* regulatory measures, **including rent control** and market incentives;

b) Increasing affordability through provision of subsidies and rental and other forms of housing assistance to people living in poverty;

c) Supporting community-based, cooperative and non-profit rental and owner occupied housing programmes;

d) Promoting supporting services to homeless and other *vulnerable marginalized* groups;

e) *Mobilizing Providing* innovative [*domestic*] financial and other resources - public and private - for housing and community development;

f) Creating and promoting market based incentives to encourage the private sector to meet the need for affordable rental and owner occupied housing;

g) Promoting **socially equitable and environmentally** sound *sustainable spatial* development patterns and **environmentally sound** transportation systems that improve accessibility to goods, services amenities and work.

4. Effective monitoring and evaluation of housing conditions including the extent of homelessness and inadequate housing and, in consultation with the affected population, to formulate and adopt appropriate housing policies and implement effective *strategies* means and plans to address these problems.

ARTICLE 47

47. International and national cooperation at all levels will be both necessary and beneficial in promoting adequate shelter for all. This is especially needed in areas that are affected by war or by natural, industrial or technological disasters, and in situations in which reconstruction and rehabilitation needs surpass national resources.

ARTICLE 48

48 ter. [To ensure **the continuing progress discharging of obligations and the fulfilling of expectations in the enactment of the right to toward realizing** an adequate standard of living for all, national and local governments , *as appropriate*, should adopt:

(a) Provisions to ensure:

(i) freedom from discrimination based on race, ethnicity, gender, family composition, and disability status in housing and credit markets, and specifically, recognition that the right to an adequate standard of living pertains to every person, including those in female-headed households; and

(ii) legal security of tenure and equal access to land among all, including women and people living in poverty;

(b) Policies aimed at making housing habitable, affordable, and accessible, including:

(i) creation of *market-based* incentives to encourage the **BEST practices enterprises** to meet the need for affordable rental housing and home ownership;

48 (ii) promoting spatial development patterns and **safe and environmentally sound public transportation systems** that improve accessibility to goods, services and amenities;

NOTE WORDING ALREADY AGREED TO IN ARTICLE 44 G

DOCUMENTATION OF PRECEDENTS

RE: PREVENTING AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: PROVIDING SAFE AND LESS POLLUTING BEST PRACTICES — BEST ECOLOGICALLY SOUND TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 48 (iii—viii)

(iii) *mobilizing providing* innovative sources of domestic finance - public and private - for housing and community development;

(iv) expanding the supply of affordable housing through appropriate regulatory and market incentives;

(v) promoting **socially equitable and environmentally sound development through working cooperatively with genuine community involvement and participation** *sustainable economic development through community partnerships*;

(vi) increasing affordability through provision of rental assistance to people living in poverty, **and through establishing, and extending rent controls**;

(vii) supporting community-based programmes that provide shelter and supportive services to the homeless;

9 0heritage, and urging non-party states to sign and ratify the Convention on the Protection of Cultural and Natural Heritage]

DOCUMENTATION OF PRECEDENT.

RE: PROTECTING HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 51 (b-h)

51 (b) *[Take full account of the need for* **Ensure socially equitable and environmentally sound** *sustained economic growth, of sustainable development principles and of the basic needs for human development and health]*;17

(c) Encourage the development of environmentally sound and affordable construction methods and production and distribution of building materials, including strengthening the indigenous building materials industry, based as far as possible on locally available resources;

(d) Promote the free exchange of information on the entire range of the environmental health aspects of construction, including the development and dissemination of databases on the adverse environmental effects of building materials, through the collaborative efforts of **governments and individuals and groups of civil society**. *the private and public sectors.*

52 (g) Encourage the development of environmentally sound and affordable construction methods, and production and distribution of building materials, including strengthening the local building materials industry, based as far as possible on locally available resources;

(h) Promote, *where appropriate*, the use of labour-intensive construction and maintenance **BEST practices technologies** that generate **meaningful** employment in the construction sector for the underemployed labour force found in most large cities, at the same time promoting the development of skills in the construction sector.

ARTICLE 53

53. In many countries, *markets serve as the primary housing delivery mechanism*, and hence their effectiveness and efficiency are important to the goal of *sustainable* **socially equitable and environmentally sound** development. It is the responsibility of Governments to create an enabling framework for a well-functioning housing market. The housing sector should be viewed as an integrating market in which trends in one segment affect performance in other segments. Government interventions are required to address the needs of disadvantaged and *vulnerable* **marginalized** groups, who are insufficiently served by markets.

ARTICLE 55 (d)

55 D [(d) Apply transparent, comprehensive, easily accessible and progressive taxation and incentive mechanisms to stimulate efficient, environmentally sound and equitable use of land, and exploit the full potential of land-based and other forms of **regulations and taxation** in mobilizing financial resources for service provision by local authorities;]

ARTICLE 57 (c)

57 [(c) Encourage the multiplicity and diversity of intervention of *all* [*stakeholders,*] **individuals and organizations of civil society with a wide range of experience and expertise**, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining

the terms of reference and having input throughout the decision making process

men and women alike, acting within the market system;] (d) Develop a legal framework of land use aimed at balancing the need for construction with the protection of the environment, minimizing risk and diversifying uses;

ARTICLE 58

58. To eradicate legal and social barriers to the *[equal and equitable]* access to land, especially the access of women, people with disabilities and other *vulnerable marginalized* groups, Governments, at the appropriate levels, in partnership with the private sector, non-governmental organizations, the cooperative sector, and community-based organizations should:

ARTICLE 58a

(a) Address the cultural, ethnic, religious, social and disability-based causes that result in the creation of barriers that lead to segregation and exclusion, including by encouraging **principle-based education founded upon international principles related to promoting and fully enshrining and guaranteeing respect for human rights; to preserving, conserving and protecting the environment; to creating a global structure that respects the rule of law, to achieving a state of peace through prevention and peaceful resolution of conflicts; justice and security, and to participating in socially equitable and environmentally sound development. and training for peaceful conflict resolution;**

ARTICLE 59 e

59 (e) *Capitalize on Draw upon* the potential contribution of *key [stakeholders] in the private formal and informal sectors, and support the engagement of non-governmental organizations, community organizations and the private sector in participatory and collective initiatives and mechanisms appropriate to conflict resolution; individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process*

ARTICLE 63

63. To facilitate **equitable** access to housing for those not served by existing finance mechanisms, Governments *should review and rationalize, where appropriate, systems of subsidies by policies that will ensure their viability, [equity] and transparency, thus allowing that* many people without access to credit and land to enter the market.

(e) Ensuring access to basic infrastructure and services

ARTICLE 65

65. To safeguard the health, safety, welfare and improved living environment of all people and to provide adequate and affordable basic infrastructure and services, Governments at the appropriate levels, including local authorities, should promote:

(a) The supply of and access to adequate quantities of safe drinking water;

[(b) Adequate sanitation and *[technically]* [environmentally sound] waste systems management, based on perceiving “waste” as a resource, and on drawing upon innovative traditional practices.

ARTICLE 66

66. To ensure the [equitable] provision of basic infrastructure and service delivery systems, Governments at the appropriate levels, including local authorities, should:

(a) Work with all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision related to** *in* providing serviced land and *in to* allocating adequate space for basic services, as well as for recreational and open space in the development of new schemes and the upgrading of existing ones;

(g) Promote dialogue among all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision** to help provide basic services and infrastructure.

ARTICLE 69

69. To respond effectively to the requirements for **healthy and environmentally safe and sound** *appropriate* planning, design, construction, maintenance, and rehabilitation of shelter, infrastructure and other facilities, Governments at the appropriate levels should:

(a) Encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology;**

RE: SUPPORTING THE USE OF NATURAL MATERIALS

In cases where natural materials can satisfy the requirements of market, new investment for the expansion of the capacity to produce synthetic materials and substitutes *should shall* not be made (3 a xii, Food, Programme of Action for the establishment of a New International Economic Order, 1974)

RE: SUPPORTING ENDOGENOUS TECHNOLOGY

Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefore be:

(kk) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating employment and income.

(iv) Conceived to utilize traditional techniques suitable adapted to new materials

(v) emerging from original indigenous research

(vi) Planned so as to take full account of their environmental impact (Habitat

l)

ARTICLE 70

70. To promote and support an adequate supply of locally produced, environmentally sound, affordable, and durable basic building materials, Governments at the appropriate levels, in cooperation with all other *[stakeholders, individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision]* should:

(a) Where appropriate, encourage and support the establishment and expansion of environmentally sound, small-scale local building materials industries

and the expansion of their production and commercialization through, inter alia, legal and fiscal incentives, provision of credit, research and development, and information;

(b) As required, provide policies and guidelines to facilitate fair market competition for building materials with enhanced participation of local *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.** and establish a public mechanism to enforce them;

(c) Promote information exchange and flow of appropriate, environmentally sound, affordable and accessible building technologies and facilitate the **inter transfer of BEST (Best Ecologically Sound Traditions) practices technology recognizing that in many cases traditional practices could be the most ecologically sound.**

(d) With *adequate* attention to safety needs, **and BEST (Best Environmentally Sound Traditions) Practices**, reformulate and adopt building standards and by-laws, **and to ensure compliance to safety and Best practices, where appropriate**, to promote and permit the use of low-cost **endogenous** building materials in housing schemes, as well as by using such materials in public construction works;

(e) Where appropriate, promote partnerships with the private sector and non-governmental organizations to create mechanisms for the commercial production and distribution of basic building materials for self-help construction programmes;

(f) Evaluate on a regular basis *the progress the discharging of obligations and the fulfilling of expectations made in the pursuit of the above pertinent to the above* objectives.

ARTICLE 71a

71 [(a) Intensify and support research efforts to find substitutes for or optimize the use of non-renewable resources, particularly fossil fuels, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;]

Reaffirm the obligation undertaken in 1981 through the General Assembly Resolution at the UN Conference on New and renewable Sources of Energy to move through “the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy. In addition establish a time-table for the

phasing out of the use of fossil fuel and of civil nuclear energy as proposed in the 1992 Nobel Laureate Declaration.

DOCUMENTATION OF PRECEDENTS

RE: DEVELOPING SAFE AND SOUND RENEWABLE ENERGY SOURCES

cooperate to increase the availability of capacity, capabilities and relevant technologies ...for utilizing and producing environmentally [safe and] sound renewable energy resources, such as solar, wind, geothermal, hydro-power and biomass,... Each resource should be utilized in a manner that ... minimizes environmental stress and health impacts, (Section 9. Subsection 9 g Agenda 21, March 1992)

RE: DEVELOPING NEW AND RENEWABLE SOURCES OF ENERGY

Convinced of the importance of developing new and renewable sources of energy in order to contribute to meeting requirements for continued economic and social development, particularly in the developing countries, through, inter alia, the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy, Stressing that the primary responsibility for promoting the development and utilization of new and renewable sources of energy rests with individual countries, that in this regard international co-operation is indispensable and should be directed to assist and support national efforts; that developed countries bear a special responsibility to ensure that both their bilateral and multilateral efforts contribute actively to this end and that other countries in a position to do so should also continue to promote efforts in this regard, (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: RECOGNIZING THE URGENT NEED FOR TRANSFERRING NEW AND RENEWABLE SOURCE OF ENERGY TO DEVELOPING COUNTRIES

Recognizing the urgent need for adopting effective measures to facilitate the transfer and adaptation of technology from developed to developing countries in particular and for mobilization of financial resources for the development of new and renewable sources of energy in developing countries (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: PHASING OUT OF FOSSIL FUEL AND NUCLEAR ENERGY
to establish a time-table for phasing out fossil fuel and nuclear energy
and for the rapid development of solar and other forms of non-
polluting energy, and for more efficient energy use (Nobel Laureate
 Declaration, UNCED, 1992)

RE: RECOGNIZING THE ADVERSE EFFECTS OF CLIMATE CHANGE

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof (Framework Convention on Climate Change, 1992).

RE: TREATING WASTE AS A RESOURCE

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I)

(b) In the development of human settlements the quality of the environment must be preserved. Pollution should be prevented by ;minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)
 (vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

ARTICLE 72

72. *Vulnerability is the inability to compete on an equal basis for resources and opportunities. Vulnerability Marginalization* is often caused by *the marginalization in and exclusion from the socioeconomic mainstream and decision-making processes. If vulnerability marginalization is to be eliminated reduced*, there is a need to *improve and ensure the discharging of obligations* to recognize the right of *access by members of vulnerable marginalized groups to healthy, safe and environmentally sound shelter, to social security, the right to be free from hunger, the right to be free from hunger as undertaken by states parties to the International Covenant of Social, Cultural and Economic Rights 1966. This would include access to* finance, infrastructure, basic social services, safety nets *and a genuine community involvement and participation in* decision-making processes *from the determining of the terms of reference and throughout the process.* [. [Depending on local conditions in the housing sector and the availability of legal protections *ensuring guaranteeing* equal access to resources and opportunities, *vulnerable marginalized individuals* come from disadvantaged groups, such as people living in poverty, homeless persons, older persons, women, youth, children (particularly street children), persons with disabilities, [documented] migrants, internally displaced persons, people affected by natural and technological disasters and environmental degradation, minorities and indigenous peoples.] With regard to shelter, members of *vulnerable marginalized* groups are especially at risk when they may have no security of tenure or where they lack basic services or face disproportionate environmental and health impacts, or because they may be excluded, either inadvertently or deliberately, from the housing market and services.

DOCUMENTATION OF PRECEDENT

RE: INCLUDING MIGRANTS IN LIST OF DISADVANTAGED GROUPS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

72 ter. ~~[Inadequate shelter or lack of shelter contributes to a loss of dignity and health in the lives of refugees.]~~ There is a need to strengthen the support for the international protection of and assistance to refugees, especially refugee women and refugee children who are particularly vulnerable. Actions

RE: ACCORDING REFUGEES THE SAME TREATMENT AS IS ACCORDED TO CITIZENS GENERALLY

Except where this Convention contains more favourable provisions, a Contracting State shall accord to refugees the same treatment as is accorded to [citizens] generally. (Article 7, 1., Convention Relating to the Status of Refugees, 1951).

RE: ACCORDING THE SAME TREATMENT AND PUBLIC RELIEF TO REFUGEES

The Contracting States shall accord to refugees lawfully staying in their territory the same treatment with respect to public relief and assistance as is accorded to their nationals (Article 23, Convention Relating to the Status of Refugees, 1951).

ARTICLE 73

73. To remove barriers and eradicate discrimination in the provision of shelter, Governments at the appropriate levels, including local authorities, *should shall:*

(c) *Work with the private sector* **Ensure that** cooperatives and local communities and other *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision work** to *raise the awareness of the need to* eliminate prejudice and discrimination in housing transactions and provision of services;

ARTICLE 74

74. To provide for the shelter needs of *vulnerable marginalized* groups, Governments at appropriate levels, including local authorities, in cooperation with all *[stakeholders]*, **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision as appropriate, should shall:**

(a) *Provide, where appropriate, targeted and transparent* **Ensure that** subsidies, social services and various types of safety nets **are provided** to the most *vulnerable marginalized* groups;

(b) Work with **the BEST practices enterprises, and the individuals and groups of civil society** *the private and non-profit sectors and including* community-based organizations *and other actors* to provide adequate shelter for members of *vulnerable marginalized* groups, making special efforts to remove all physical constraints to the independent living of persons with disabilities and of older persons;

(c) Strive to provide special living facilities and shelter solutions for members of *vulnerable marginalized* groups, as appropriate, such as shelters for women subjected to violence or shared living arrangements for persons with mental or physical disabilities;

(d) Provide an environment that enables *vulnerable marginalized* groups to participate in the social, economic and political life of their community and country.

ARTICLE 75

75. To reduce **marginalization of individuals and groups** *vulnerability*, Governments at appropriate levels, including local authorities, should:

(a) Work with non-governmental organizations and community-based organizations to assist members of *vulnerable marginalized* groups to obtain secure tenure;

(b) Composite [Enact and enforce laws to protect people from illegal evictions]; and **to retain, and if not in place, to institute** rent-control systems.

(b) [Protect by law all people from illegal evictions, including dismantling of rent-control systems, and, where evictions are unavoidable, ensure that they are strictly according to the law];

(b ter.)

(c) Promote and support self-help housing programmes and initiatives;

(d) *Promote, where appropriate, Ensure* compliance with and enforcement of all health and environmental laws, *especially* in low-income areas with *vulnerable marginalized* groups

DOCUMENTATION OF PRECEDENT

RE: ENSURING CORPORATE COMPLIANCE WITH THE LAW;

“all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” (UN Conference on Women: Equality, Development and Peace. Section 167).

(d bis.) Facilitate actions aimed at, inter alia, ensuring legal security of tenure, capacity-building, and improving access to credit, which, apart from subsidies and other financial instruments, can provide safety nets that reduce *vulnerability marginalization*;

(e) Pursue policies that will provide information to and consultation with *vulnerable marginalized* groups;

(f) Facilitate the availability of legal information and assistance to *vulnerable marginalized* groups;

(g) Promote the use of tools for disaster prevention, mitigation, and preparedness in order to reduce the vulnerability of populations to natural, man-made and technological disasters. -----

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

C. Sustainable human settlements development in an urbanizing world
Article 76—

ARTICLE 76

76. [Rapid urbanization, the concentration of urban population in large cities, the sprawl of cities into wider geographical areas and the rapid growth of mega-cities are among the most significant transformations of human settlements.] By the year 2000 more than half of the world's population will live in urban areas and approximately 40 per cent of them will be children. Urban areas will strongly influence the world of the twenty-first century, and urban and rural populations will be increasingly interdependent for their economic [,environmental] and social well-being. Among the economic and social factors influencing this process are population growth and voluntary and involuntary migration, real and perceived **meaningful** employment opportunities, cultural expectations, changing consumption and production patterns and serious imbalances and disparities among regions.

ARTICLE 77

77. [77 ter. Given the magnitude of the challenges that human settlements pose, society must value and take advantage of the wisdom, knowledge and skills of every person. **To draw upon the wisdom, knowledge and skills of citizens is the basis for genuine community involvement and participation. Individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision should be involved in the decision making process. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the implementation and evaluation of the process.**

Urban settlements *hold a held the* promise for human development and protection of the world's natural resources through their **potential** ability to support large numbers of people while limiting their impact on the natural environment. Yet, *many* cities are witnessing harmful patterns of growth, of production and consumption, of land use and of mobility, as well as degradation of their physical structure. Such problems are often synonymous with soil, air and water pollution, waste of resources and destruction of natural resources. Some human settlements are also subject to limited water supply, sanitation, drainage, and to dependency upon toxic and non-renewable energy fuel sources and irreversible loss of bio-diversity. Many of these trends are aggravated or accelerated by high population growth and the magnitude of rural-to-urban migration. **[As recognized in Agenda**

21 UNCED Demographic factors, combined with poverty and lack of access to resources *[[in some areas]]* and excessive consumption and wasteful production patterns in others/*unsustainable patterns of production and consumption, particularly in industrialized countries, cause or exacerbate problems of environmental degradation and resource depletion and thus inhibit sustainable socially equitable and environmentally sound development.*] Therefore, a largely urbanized world implies that *sustainable socially equitable and environmentally sound* development will depend very largely on the capacity of urban and metropolitan areas to manage production and consumption patterns, and the transport and waste disposal systems needed to preserve the environment.

ARTICLE 78

78. *In the process of urbanization, Policies and programmes for socially equitable and environmentally sound sustainable development of human settlements in both rural and urban areas require strong sub-national governmental institutions working in partnership with all [stakeholders]. individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process.* Such institutions are still weak in many countries, and their effectiveness is threatened by increasing problems of political regionalism and ethnic strife. All of these concerns and demands require a regional and cross-sectoral approach to human settlements planning which places emphasis on rural/urban linkages and treats villages and cities as two ends of a human settlements continuum in a common ecosystem.

ARTICLE 79

79. Increasingly, cities have a network of linkages that extends far beyond their boundaries. *[Sustainable Socially equitable and environmentally sound urban development should consider the carrying capacity of the entire ecosystem supporting such development, including the prevention and mitigation of adverse environmental impacts occurring outside urban areas].* The unsafe disposal of waste leads to the degradation of the natural environment: aquifers, coastal zones, ocean resources, wetlands, natural habitats, forests and other fragile ecosystems are affected, as are the homelands of the indigenous people. *[Trade in hazardous, toxic and atomic waste and substances shall should not be carried out . /in accordance with relevant international agreements by parties to those agreements].* Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems.

DOCUMENTATION OF PRECEDENTS

RE: DEFINING OF BIODIVERSITY AND ECOSYSTEM

Biodiversity” is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

“Ecosystem” means a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Convention on Biological Diversity, UNCED, 1992). Biodiversity is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

RE: REDUCING LOSS OF BIOLOGICAL DIVERSITY

The loss of biological diversity may reduce the resilience of ecosystems to climatic variations and air pollution damage. Atmospheric changes can have important impacts on forests, biodiversity, and freshwater and marine ecosystems, as well as on economic activities, such as agriculture (9.16., Atmosphere, Agenda 21, 1992)

RE: RECOGNIZING INCREASED MARINE ENVIRONMENT DEGRADATION

Degradation of the marine environment can result from a wide range of sources. Land-based sources contribute 70% of marine pollution, while maritime transport and dumping-at-sea activities contribute 10 % each (Marine, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING THE URGENCY FOR CONSERVING AND PRESERVING NATURE AND NATURAL RESOURCES

Man Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and preserving nature (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)World Charter of Nature, 1982)

Social impact assessment takes into account affordability, accessibility, access to work, transport and services, environmental, health and security considerations.
(CP)

ARTICLE 80

80. The diversity of types of human settlements is a key component to creating just and sustainable societies. The living and working conditions in all human settlements, including regional urban centres, rural service centres, rural hamlets, rural communities, market towns and villages, must be improved, with particular emphasis on shelter, social and physical infrastructure, and services. The maintenance and development of rural settlements require sustainable agriculture and **ecologically sound forest practices forestry activities** and improved agricultural **BEST practices technologies**, economic diversification and expanded **meaningful** employment opportunities created by encouraging appropriate and environmentally **sound sustainable** investment in industry and related economic production and service activities.

ARTICLE 81

81. International cooperation, including city-to-city cooperation, is both necessary and mutually beneficial in promoting **socially equitable and environmentally sound sustainable** human settlements *development*. Depending on the context and needs of the cities, towns and villages within each country and region, special attention should be paid to the most critical issues, such as changing production and consumption patterns; **as requiring the phasing out of non-renewable or unsafe sources of energy, and** the conserving of energy and the promoting of efficiency; **as ensuring socially equitable and environmentally sound resource and land use sustainable resource and land-use management**; Other critical issues are **the eradicating of poverty eradication; the stabilizing of population with necessary reproductive choice and social programs, the providing of universal health care; the ensuring of a safe ,environmentally sound water supply, sanitation and waste as resource system management; the preventing of disaster prevention, mitigation, preparedness and management; the preserving and protecting of** cultural, natural and historical heritage; **the preserving, protecting and conserving of the environmental protection;the driving of industry to embrace BEST practices; the establishing** of infrastructure; and basic services, such as health and education facilities and services. Habitat II provides an opportunity **to explore the interdependence of these issues within a framework of obligations incurred and expectations created, and** to focus on the effect that current patterns of human settlement development will have on our ability **to discharge the obligations incurred through Conventions, Treaties and Covenants, and to fulfill the expectations created through Declarations, General Assembly Resolutions and Conference Action**

Statements. *achieve the objectives established at recent United Nations conferences.* Close attention to trends in urban development is essential to the viability of **socially equitable and environmentally sound sustainable** human settlements development in rural and urban areas alike.

ARTICLE 82

[[82 Land is essential for the provision of food, water and energy for many living systems, and it is critical to human activity. In rapidly growing urban areas, access to land is rendered increasingly difficult by the potentially competing demands of housing, industry, commerce, infrastructure, transport, agriculture and the need for open spaces and green areas, and the protection of fragile ecosystems. The rising costs of urban land and other factors prevent persons living in poverty and members of other *vulnerable marginalized* and disadvantaged groups from gaining access to suitable land, the location of which does not pose economic, environmental or health risks to the residents because of such reasons as proximity to polluting industrial facilities in appropriate geographical conditions or susceptibility to natural disasters. Bringing the development of urban areas into harmony with the natural environment, **especially within the carrying capacity of the ecosystem** and the overall system of settlements is one of the basic tasks to be undertaken in achieving a **socially equitable and environmentally sound sustainable** urbanized world. The *tools means to for* achieving a physically more balanced development include not only specific urban and regional policies and legal, economic, financial, cultural and other measures, but also innovative methods of urban planning and design and of urban development, **and revitalization and management.** National, sub-national and local policies and problems need to be integrated. [The precautionary principle/*approach* and the use of environmental and social impact assessment are essential].

bis. Land-use is closely related to water resource management because of the critical need to protect aquifers and other fresh-water resources from harmful effects of human settlements. Special attention should be paid to **ensuring that trade in hazardous, including atomic, and toxic wastes and substances should not be carried out, and to guiding potentially hazardous activities away from the fragile areas. Oceans and the atmosphere should be protected from land-based sources of pollution, where appropriate.]** Through **mandatory international normative standards (INS, 1997), states shall invoke and ensure compliance with the precautionary principle. States shall ensure, as agreed in the Platform of Action, UN Conference on Women, that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).**

DOCUMENT OF PRECEDENTS

RE: PROVIDING ACCESS TO WATER

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

RE: INVOKING THE PRECAUTIONARY PRINCIPLE

The precautionary principle has been enunciated in international documents since at least the 1972 United Nations Conference on Humans and the Environment (Stockholm Convention), where it appeared in a rudimentary form; it was then reinforced in the 1982 UN Resolution 37/7, the World Charter of Nature, and then re-enunciated throughout the UNCED documents.

The precautionary principle has been enunciated " as follows:

where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation

(version of precautionary principle in BC Working Group on Developing Criteria for Standards, 1994)

The precautionary principle shall be applied to all potentially harmful emissions, contaminants, agents of pollutants, or re concentrated substances—created through imbalance in biogeochemical cycles. States

shall ensure that in all their activities and in the activities of corporations including transnational corporations there is adherence to the anticipatory principle. In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). In the international documents different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

DOCUMENTATION OF PRECEDENTS

RE: ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (World Charter of Nature)

RE: ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

Undertake measures to prevent soil erosion and promote erosion-control activities in all sectors. (13.16 Fragile ecosystem, Agenda 21)

RE: ENSURING CRADLE-TO-GRAVE

taking into account the cradle-to-grave approach to the management of hazardous wastes, in order to identify options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction (20.20 e Hazardous wastes, Agenda 21)

RE: ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

RE: ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products. (19.15 e, Toxic Chemicals, Agenda 21)

risk reduction involves broad-based approaches to reducing the risks of toxic chemicals, taking into account the entire life cycle of the chemicals. (19.45, Toxic chemicals, Agenda 21)

RE: ENSURING CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

RE: ENSURING RESPONSIBLE CARE

Industry should be encouraged to (19.51 Toxic chemicals)) "develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

RE; REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

RE; INVOKING THE ANTICIPATORY PRINCIPLE

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a trans-boundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

ARTICLE 83

83 Many cities are using peripheral land for urban-related purposes in a wasteful manner while existing serviced land and infrastructure may not be adequately developed and used. To avoid unbalanced, unhealthy and unsustainable growth of human settlements, it is necessary to promote land-use patterns that minimize transport demands, save energy and protect open and green spaces. Appropriate urban density and mixed land-use guidelines are of prime importance for urban development. National, sub-national and local policies and development plans must be carefully re-examined to ensure optimal land use and geographically better balanced economic development, including the protection of indispensable agricultural land; land that sustains biodiversity, water quality and groundwater recharge; fragile areas, including coastal areas; and other sensitive areas in need of protection. Green spaces and vegetation cover in urban and peri-urban areas are essential for biological and hydrological balance and economic development. Vegetation creates natural habitats and permits a better absorption of rainwater by natural means, which implies savings in water management. Green areas and vegetation also play an important part in reducing air pollution and in creating more suitable climatic conditions, thereby improving the living environment in cities. Healthy and environmentally sound agricultural activities and the provision of common land should be integrated into the planning of urban and peri-urban areas.

ARTICLE 84e

84 (e) **Encourage Ensure genuine community involvement and participation among the public, private and voluntary sectors and other [stakeholders of individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] in the caring for and the using *managing* land resources for socially equitable and environmentally sound *sustainable* urban development; Urban and rural communities will not be environmentally sound until states shall undertake to ensure the phasing out of hazardous, toxic and nuclear activities, and actively promote and funding Best Environmentally Sound Technology (BEST).**

[(e bis.) Promote urban planning, housing and industrial siting initiatives that ban and thus prevent *discourage* the siting of hazardous, toxic or nuclear industrial facilities in residential areas;] in any sensitive ecosystem, or eventually in any location. No toxic, hazardous or atomic wastes shall be produced after 1997. States shall immediately reduce and eventually eliminate the production of toxic, hazardous and atomic wastes, and states shall promote and fund active conversion to BEST (Best Environmentally Sound Traditions) practices.

[(e ter.) Seek to prevent or *minimize* pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that **ban *discourage* the *disproportionate* siting of polluting industrial facilities, and in particular the disproportionate siting of industrial facilities** in areas inhabited by people living in poverty or members of other *vulnerable* marginalized and disadvantaged groups;]

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States *should shall* effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

ARTICLE 84f & i

84 f*(f) Develop and support the implementation of improved land-**care and use management** practices that deal comprehensively with competing urban land requirements for housing, industry, commerce, infrastructure, transport, green spaces and forested areas, taking into account the need of spaces for everyday activities such as playgrounds, **wilderness, forests**, parks, sports and recreation areas and areas suitable for gardening and urban agriculture;

(i) Institutionalize a participatory approach to **socially equitable and environmentally sound** *sustainable* human settlements through the development and support of **means and methods strategies and mechanisms** that encourage open and inclusive dialogue among all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, with special attention to the needs and

priorities of women, minorities, children, youth, people with disabilities, older persons and persons living in poverty and exclusion;

ARTICLE 85

85. To develop and support improved and integrated land- **care and use management**, Governments at the appropriate levels, including local authorities, **should shall**:

(a) Develop integrated land information and mapping systems;

[[**(b) Consider, as appropriate, Establishing local structures, such as commissions and tribunals for the enforcement of *land management* socially equitable and environmentally sound laws and regulations in order to make enforcement and appeals more equitable, efficient and effective;**]

[[**(c) Develop the land market through the establishment of an effective and environmentally sound legal framework in order to mobilize/which encompasses lands with diverse tenure systems;**]

(d) Develop, with the participation of all [***stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.***], comprehensive and environmentally sound land-**care/use strategies** at the local level.

ARTICLE 86

86. Promoting equitable, socially viable, **environmentally sound** and stable human settlements is inextricably linked to reducing and eradicating poverty. We share the concerns of the First United Nations Decade for the Eradication of Poverty which also acknowledges [***the increasing feminization of poverty***]. Poverty has various manifestations, which include homelessness and inadequate housing. The eradication of poverty requires, inter alia, sound macroeconomic policies **linked to BEST practices** aimed at creating **meaningful** employment opportunities, equal and universal access to economic opportunities, (and special efforts to facilitate such access for the disadvantaged); education and training that will promote sustainable livelihoods through freely chosen **productive meaningful** employment and work, and basic social services, including health facilities. **However, Although** there are no universal solutions which can be applied, **there are principles reflected in obligations incurred and expectations created through international instruments that can provide a framework for assisting in the achieving of the vision of Habitat II.** People living in poverty must be empowered through freely chosen participation in all aspects of political, economic and social life. Other **key elements of actions to reduce poverty a poverty reduction strategy** include **policies geared to ensuring**[**reducing inequalities,**

increasing opportunities, providing access to resources and **[(meaningful employment] income;** providing social protection for those who cannot support themselves; recognizing the special needs and skills of women; developing human resources; improving and making more accessible infrastructure, including communication facilities; and **[(taking comprehensive national responsibility for meeting)]** the basic needs of all.

ARTICLE 87

87. To promote **and provide** **[(equitable)]** *the provision of services* in human settlements,
Governments at the appropriate level, including local authorities, **shall should**:

[(a)] Formulate and implement integrated settlement development policies which ensure equal access to and maintenance of basic services, including those related to the provision of food security; education; **meaningful** employment and livelihood; primary **and universal** health-care, including reproductive and sexual health care and services; safe drinking water and sanitation; adequate— **affordable, accessible, healthy and safe, environmentally sound** shelter with tenure- security; and access to open and green spaces; giving special priority to the needs and rights of women and children who often bear the greatest burden of poverty;] **As already committed to in the UNCED documents and in the Platform of Action UN Conference on Women: Equality, Development and Peace.**

DOCUMENTATION ON PRECEDENTS

RE: ENSURING FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.1 Combating Poverty UNCED)

RE: PROVIDING FOOD SECURITY

Accepting and implementing the concept of forward planning of food aid

All donor countries **shall should accept and** implement the concept of forward planning of food aid and *make all efforts to provide* commodities and/or financial assistance that will ensure adequate quantities of grains and other food commodities (Section 12 Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: COOPERATING IN THE PROVISION OF FOOD AID

Co-operating in the provision of food aid for meeting emergency and nutritional needs as well as for stimulating rural employment through development projects (Section 12, Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: PROMOTING HEALTH CARE

Governments should establish measures that will directly or indirectly set up an effective primary health care and maternal health care system accessible to all " (3.7.e Combating Poverty)

the provision of a safe water supply and sanitation and the promotion of a safe food supply and proper nutrition. Particular attention should be directed towards food safety, with priority placed on the elimination of food contamination; comprehensive and sustainable water policies to ensure safe drinking water and sanitation to preclude both microbial and chemical contamination; and promotion of health education...education and appropriate services regarding responsible planning of family size... values... (6.3. Protecting and promoting health UNCED)

RE: PROVIDING ACCESS TO HEALTHY SHELTER

Access to safe and healthy shelter is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of national and international action. The right to adequate housing as a basic human right is enshrined in the Universal Declaration of Human rights and the International Covenant on Economic, Social and Cultural rights. (7.6, Settlement, UNCED)

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. (3.7.o Combating Poverty, UNCED)

" provide the poor with access to fresh water and sanitation (3.7. p Combating Poverty, UNCED)

"provide the poor with access to primary education.(3.7.q Combating Poverty, UNCED)

RE: IMPROVING HEALTH AND ENVIRONMENT

The improvement of human health is one of the most important objectives of development. The deterioration of environmental quality, notably air, water and soil pollution owing to toxic chemicals, hazardous wastes, radiation and other sources, is a matter of

growing concern. ..Malnutrition, poverty, poor human settlements, lack of good-quality potable water and inadequate sanitation facilities add to the problems of communicable and non-communicable diseases. As a consequence, the health and well-being of people are exposed to increasing pressures. (16.12 Biotechnology, UNCED)

RE: SATISFYING BASIC HUMAN NEEDS OF DRINKING WATER

freshwater resources are an essential component of the earth's hydrosphere and an indispensable part of all terrestrial ecosystems. (18.7 Fresh water, UNCED)

Priority must be given to the sustenance of land/water ecosystems, with particular attentions to wetlands and biodiversity, and the satisfaction of basic human needs for drinking-water, health protection and food security. (18.8. Fresh water, UNCED)

"One in three people in the developing world still lacks these two (safe drinking-water and sanitation) more basic requirements for health and dignity. (18.58 Freshwater UNCED)

"Water is a finite resource, essential for the sustenance of life on earth (18.2 Freshwater UNCED)

"water is needed in all aspects of life (18.6 fresh water UNCED)

ARTICLE 87 b

(b) Where appropriate, re-direct public resources to enable community-based *management provision* of services and infrastructure and promote the participation of *the private sector, local business entrepreneurs that engage in service industries and BEST practices*, local residents, including people living in poverty, women, people with disabilities, indigenous people and members of disadvantaged groups, in the identification of public service needs, spatial planning and the design, provision and maintenance of urban infrastructure and open and green spaces.

ARTICLE 88

88. To promote social integration, Governments at the appropriate level, including local authorities, recognizing the importance of volunteer contributions and in close cooperation with non-governmental organizations, community-based organizations, the cooperative sector and public and private foundations, **shall should:**

(a) Prohibit ~~[[all]]~~ discriminatory, exclusionary practices related to shelter, employment and access to social and cultural facilities;

(b) Offer opportunities and physical spaces to encourage positive interaction among culturally diverse groups;

(c) Involve marginalized and/or disadvantaged groups and individuals in the planning, decision-making, monitoring and assessment related to human settlements development;

[(d) Encourage, in cooperation with relevant [stakeholder individuals and organizations of civil society with a wide range of experience and expertise,], the development of school curricula geared to conscious understanding and cooperation among diverse cultural groups, through the promotion of principle-based education—education based on the fundamental principles underlying International documents related to enshrining and guaranteeing respect for human rights, to preserving, protecting and conserving the environment, to enabling social justice, to achieving a state of peace; justice and security, and to participating in socially equitable and environmentally sound development.]

ARTICLE 90

General

90. In order to promote the genuine involvement and participation of women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process.

gender-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, in collaboration with women's groups and other [stakeholders [90 bis. [In order to develop the full potential of the youth and prepare them to take a responsible role in the development of human settlements, Governments at the appropriate levels, including local authorities and in partnership with private sector, non-governmental youth organizations and other non-governmental organizations as well as community-based organizations, should:

[90 ter. In order to promote disability-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, should:

(a) Adopt, *where appropriate*, by-laws, standards and norms and develop planning guidelines that take into consideration the needs and situations of and in consultation with **women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process, and ensure their genuine involvement and participation from the determination of the terms of reference and throughout the planning of human settlements, development of human settlements and decision making processes about human settlements.**

[(a) Integrate youth concerns into all relevant national, sub-national and local policies, strategies, programmes and projects;
[(a bis.) Enable youth by supporting and valuing their ability to play an active and creative role in building sustainable communities;

(b) Promote representative structures, *while* ensuring full and equal participation *women's* [and equal opportunities for] and equal access to **all levels of education and training of for women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized in or from the educational system.**

Data Generation

[(c) Generate and disseminate disaggregated data, while ensuring that such statistics are collected, compiled, analyzed and presented by age, sex and work status; set up monitoring mechanisms in government structures and integrate the results into mainstream policies for sustainable human settlements developments;

Equal access

(d) Eliminate legal and customary barriers, where they exist, to women's equal access to and control of land and finance

[(e) Ensure equal access to housing, land and public services in the urban and rural areas in line with the International Convention on the Elimination of All Forms of Discrimination against Women.]

[(f) Develop policy and guidelines and provide services that would enable persons with disabilities to be housed in community-based settings;

[(g) Promote equal access to all levels of education and skills development for persons with disabilities;

[(h) Provide equal access to basic education, while paying special attention to people living in poverty and to youth living in rural areas, and addressing constraints created by distance, lack of educational facilities and social or economic barriers;

(i) Promote equal access to all levels of education for girls, **youth, young with young** and women;

Equal opportunity

(j.) Foster economic policies that have a positive impact on the **meaningful** employment and income of women workers in both the formal and informal sectors and adopt specific measures to address women's unemployment, in particular their long-term unemployment;

[k) Develop and implement programmes that enable people with disabilities to have an equal opportunity to realize an income sufficient to attain an adequate standard of living;

[l) Promote representative structures, ensuring full and equal opportunities for participation of persons with disabilities;

[m) Take special action to reduce the drop-out rate at all levels of education through increased relevance and quality education, and to facilitate the access of school leavers to sustainable livelihood and meaningful employment;

Genuine involvement and participation in decision making

(n) Develop policy guidelines and programmes that encourage and actively pursue the involvement of women's groups in all aspects of community development related to environmental infrastructure and the provision of basic urban services and encourage women's own cooperatives, as well as their membership in other cooperatives;

(o) Recognize that women, as primary family caregivers, spend a greater proportion of time in the home and community [and therefore, as experts in their own home and community, should participate fully and equally in all aspects of community development, especially environmental infrastructure and basic services];

[p) Consider in the planning process that persons with disabilities are often involved in the informal sector and use their homes for business or market activities.]

[q) Recognize that people with disabilities are experts in their own housing and community requirements and should be decision-makers, designers and implementers of them;

Enhance awareness of issues

[(r) Enhance community awareness of issues facing homeless and refugee women, especially those issues related to physical and sexual abuse, and design appropriate community responses;]

[(s) Enhance community awareness of health care issues facing persons with disabilities, such as physical and sexual abuse and substance abuse, and design appropriate community responses;

Establish programmes

(t) Establish programmes that address the [~~severe/absolute~~] poverty found among rural women, focusing on their need for adequate shelter and **meaningful** employment;

Encourage awareness-raising

[u) Encourage awareness-raising campaigns and other actions developed and implemented by youth that are aimed at promoting the appreciation by the youth of historical, natural and cultural heritage and at increasing their consciousness of the environmental values and environmental implications of their consumption and behavioral choices, especially those related to sustainable human settlements development.]

ARTICLE 91

91. To prevent and reduce violence and crime, especially at the local levels, Governments, **working cooperatively in partnership with all** [~~stakeholders~~ **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who have been excluded through fear and mistrust**], should:

(a) Design, create and maintain livable human settlements that encourage the use of public spaces as centres of community life so that they do not become places for criminal activity;

[(a bis.) **Guarantee Ensure** basic education to all;] [(a ter.) Assist crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and result in crime, including by addressing poverty and inequality as the two basic components of the social development approach;]

(b) Encourage youth and children, in particular street children, to become [~~stakeholders~~ **i**] **involved** in **determining** their own future and their community's

future through education, recreation, and job training and counseling that can attract *private sector investment support from individuals and organizations of civil society support from non-profit organizations*; . **Children and youth shall be respected and trusted.**

(b bis.) Enhance women's safety in communities through the promotion of a gender perspective in crime prevention policies and programmes by increasing in those responsible for implementing these policies the knowledge and understanding of the causes, consequences and mechanisms of violence against women;

(c) Establish programmes designed to improve the skills of local leadership in group facilitation, conflict resolution and intervention;

(d) As appropriate, promote personal security and reduce fear by improving police services, making them more accountable to the communities they serve, and by encouraging and facilitating, whenever appropriate, the formation of lawful community-based crime prevention measures and systems;

(e) Provide accessible, affordable, impartial, prompt and humane local systems of justice by, inter alia, facilitating and strengthening, where appropriate, existing traditional institutions and procedures for the resolution of disputes and conflicts;

(e bis.) Encourage the establishment of programmes and projects based upon voluntary participation, especially of children, youth and older persons, to prevent violence, including violence in the home, and crime;

(e ter.) The concerted and urgent action to dismantle international and national sex trafficking networks.

ARTICLE 93

93. [**Socially equitable and environmentally sound *Sustainable* human settlements depend on the creation of a better environment for human health and well-being, which will improve the living conditions of people and decrease disparities in their quality of life. People are entitled to a healthy and *productive meaningful* life in harmony with nature; furthermore, improved health can also contribute more to economic and social development.**]

ARTICLE 94

The health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease. Children's well-being is a particularly reliable indicator for healthy urban environments. Measures to prevent ill health and disease are as important as the availability of appropriate medical treatment and care. It is, therefore, essential to take a holistic approach to health, whereby both prevention and care are placed within the context of the environmental policy, supported by effective management systems and plans of action incorporating targets that reflect local needs and capacities. [Education for all is a fundamental requirement for enabling women and men, young and old, to gain from improved practices and make use of and demand appropriate infrastructure and health and environmental services.]

ARTICLE 95

* [95. Many pollution-related risks to health are particularly high in urban areas, as well as in low-income areas, because of higher concentrations of pollutants from, inter alia, industry, traffic, fumes from cooking and heating devices, overcrowding and inadequate solid and liquid waste management. Environmental risks in the home and the work place may have a disproportionate impact on women's health because of women's different susceptibility to the toxic effects of various chemicals and given the nature of tasks that women frequently undertake. Environmental risks in the home may also have a disproportionate impact on children, and on future generations.]

(a) 95 bis. Many environmental contaminants, such as radioactive materials and persistent organic pollutants, work their way into the food chain and eventually into human beings, thus compromising the health of present and future generations.

DOCUMENTATION OF PRECEDENT

RE: ENSURING THE PRESERVATION OF SPECIES AND ECOSYSTEMS FOR THE BENEFIT OF PRESENT AND FUTURE GENERATIONS

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: NOT COMPROMISING THE ABILITY OF FUTURE GENERATIONS TO MEET THEIR OWN NEEDS

Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to

meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

(b) [95 ter. Unsustainable and wasteful production and consumption patterns [particularly in industrialized countries] also lead to increasing problems in waste management. It is essential to intensify efforts aimed at minimizing the production and discharge of waste, and at recycling and reuse as much as possible, and disposing of the remainder in an environmentally sound manner. This will require changes in attitudes and consumption patterns, as well as in the design of buildings and neighbourhoods as well as innovative, efficient and sustainable modalities for waste management.]

(c) [95 quart. The design of the built environment is recognized as having an impact on people's well-being and behaviour and, thereby, on people's health. Good design in new housing and in upgrading and rehabilitation is important for the creation of sustainable living conditions. The large-scale development of high-rise housing can affect the micro-climate in an adverse way; it often has an alienating effect on social life; it reduces children's access to safe outdoor play; and it is difficult to maintain and operate such a habitat. The large-scale development of high-rise housing requires proper maintenance, regular technical inspection, and social control and safety measures.]

ARTICLE 96

96. To improve the health and well-being of all people throughout their life span, particularly the people living in poverty, Governments at the appropriate levels, including local authorities, *and in partnership with the genuine involvement and participation of other [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, shall *should*:

(a) Develop and implement national, sub-national and local health plans or strategies and strengthen environmental health services to prevent, mitigate and respond to diseases and ill health from poor conditions in living and working environments and the conditions of people living in poverty;

(b) Adopt measures to prevent and control air, water and soil pollution and to reduce noise levels, *where appropriate*, and develop, and develop and ensure access to appropriate preventive and curative health care systems in order to tackle related health problems; Ensure adequate research to assess how and to what extent women and children are particularly susceptible or exposed to

environmental degradation and hazards, including, as necessary, research and data collection on specific groups of women and children, particularly women with low income, indigenous women and women belonging to minorities;

(c) Improve shelter conditions so as to mitigate health and safety risks, particularly risks to women, older persons, children and people with disabilities, which are associated with activities in the home;

(d) Build capacity at all levels for effective environmental health management, **develop** and implement programmes to ensure availability of access to a full range of affordable, **universal** [good quality/basic] health care services for women [throughout their life span, including reproductive health care]; **establish** *Develop* criteria for maximum permitted safe noise exposure levels and promote noise assessment control as part of environmental health programmes;

(e) Raise awareness of the inter-dependencies between environment and health and develop within communities the knowledge, attitudes and practices needed to improve personal and community health, with special attention to hygiene;

[(e bis.) Promote, where appropriate, planning and good design in human settlements, both in new developments and in upgrading and rehabilitation, while emphasizing aesthetic qualities as well as environmentally safe and sound *and sustainable* technical and functional qualities, enriching and enlightening the overall quality of life of the people;]

(f) Establish processes to increase the exchange of information **about BEST practices**, experience and technical assistance among national, sub-national and local governments, [including among governments at the same level] and *across sectors* for environmental health improvements;

[(f bis.) Ensure that due priority is given and adequate resources made available, at the national, regional and international levels, to combat the threat to individuals and public health posed by the rapid spread of HIV/AIDS globally and by the re-emergence of major diseases, such as tuberculosis, malaria, onchocerciasis (river blindness) and diarrhoeal diseases, in particular, cholera;]

(g) Promote safe and healthy work place conditions for men and women.

ARTICLE 97

97 . To improve environmental conditions and reduce industrial and domestic waste and other forms of health risks in human settlements, Governments at the appropriate levels and in partnership with all [*stakeholders* **individuals and**

organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] shall should:

(a) Develop and implement national and local [*sustainable socially equitable and environmentally sound development plans and*] policies and specific cross-sectoral programmes addressing all relevant chapters of Agenda 21., **and in particular to ensure the fulfillment of expectations that arose from Agenda 21** These should be action-oriented and have clear targets and schedules;

(b) Develop laws and policies that specify appropriate ambient environmental quality levels and set targets for environmental improvements and identify instruments for their achievement appropriate to national and sub-national priorities and conditions;

(c) Establish, equip and build capacity for monitoring and evaluating compliance with environmental regulations and effectiveness of enforcement at all levels;

[(d) Set high mandatory international normative environmental standards and technical regulations so as to drive and facilitate the selection and development of BEST (Best Ecologically Sound Traditions) practices appropriate technologies and their appropriate use;]

*[(d bis.) Identify and address, as appropriate, the disproportionately high and adverse effects of policies and programmes on the human health or the environment of the **people in poverty poor**, minorities and other **vulnerable marginalized** populations;]*

(d) Develop criteria and methodologies for the assessment of environmental impacts and resource requirements at the local level throughout the life cycle of products and processes;

(e) Provide incentives and disincentives to promote the use of clean production and energy- and water-saving processes and technologies **such as BEST practices that, among other things, can increase economic opportunities in the area of environmental technology, environmental clean-up and Environmentally sound friendly activities and products and can improve the attractiveness and competitiveness of human settlements for economic investments of other BEST practices;**

(f) Provide guidelines and training for the application of procedures for the assessment of environmental health impacts;

[(g) Undertake *strategic* environmental impact assessments of *for* development projects that may *significantly* have **significant adverse environmental effects** or that may affect the quality of the environment;]

(h) Support mechanisms **for working cooperatively with consultations and partnerships among [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]** to prepare and implement local environmental plans and local Agenda 21's and specific *cross-sectoral integration of* environmental health programmes;

(i) Raise awareness of environmental issues and develop within communities the knowledge, attitudes and practices needed **for socially equitable and environmentally sound sustainable** human settlements *development*;

(j) In cooperation with the international community, promote the protection of the living environment and strive to restore contaminated land, air and water to levels acceptable for **socially equitable and environmentally sound sustainable** human settlements.

DOCUMENTATION OF PRECEDENT

RE: DEVELOPING PROCEDURES FOR ENVIRONMENTAL IMPACT ASSESSMENT— CRADLE TO GRAVE APPROACH, AND ENVIRONMENTAL AUDITS

Governments,...should develop procedures for environmental impact assessment, taking into account the cradle to grave approach, including environmental audits (Agenda 21, 20.19 e)

ARTICLE 98

98 [(a) Promote the conservation and *sustainable* **socially equitable and environmentally sound** use of urban and peri-urban biodiversity, including forests, local habitats and species biodiversity; the protection of biodiversity should be included within local **socially equitable and environmentally sound sustainable** development planning activities;

(aa) Incorporate the following principles *and strategies* in developing this integrated approach: the precautionary principle, the ecosystem *approach* **primacy principle**, pollution prevention **principle**, **staying-within-the-carrying-capacity principle**, and **avoidance of ecological footprint principle**;

(a) Promote practices and consumption patterns that will conserve and protect freshwater and saltwater resources and top soil, as well as air and soil quality;

(a bis.) Ensure that clean water is available and accessible to all human settlements by the year 2000 through, inter alia, the adoption and improvement of technology, and ensure that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds;

DOCUMENTATION OF PRECEDENTS

RE: CONSERVING BIODIVERSITY

To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)

RE: PREVENTING LONG TERM DECLINE OF BIODIVERSITY

The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)

[(b) Protect existing forests, ensure environmentally sound forestry practices in areas designated for forestry, *resources* and promote afforestation around and within human settlements in order to fulfill basic needs relating to energy, construction, recreation and food security;

ARTICLE 98 e

98 (e) Ensure *adequate* the opportunity for genuine community involvement and participation *public participation* by all [*stakeholders* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision,] at all levels of environmental decision-making, including in determining the “terms of reference” and throughout the decision making process]

DOCUMENTATION OF PRECEDENTS

RE: ENSURING GENUINE PUBLIC PARTICIPATION E.(AGENDA ITEM 10 E)

Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize *productive meaningful* employment. (III 11, Habitat I)

RE: MOBILIZING PARTICIPATION IN DECISION-MAKING

Participation is an integral part of the political processes of decision-making; in a field as complex as human settlements, it is also a necessity because the task is too great for Governments to accomplish without mobilizing the interest of inhabitants, using their ingenuity and skills and harnessing otherwise untapped resources. (III 17, Habitat I)

RE: ENSURING THE BENEFICIARY IS A PARTICIPANT IN COLLECTIVE DECISIONS

Public participation is the dynamic incorporation of the people in the economic, social and political life of a country which would ensure that the beneficiary is an effective participant in collective decisions with regard to the common good. (III 28, Habitat I)

RE: PROVIDING DIRECT INVOLVEMENT IN DECISIONS

A co-operative effort of the people and their Governments is a prerequisite for effective action on human settlements. The magnitude and intractability of the problems are too great for Governments to act alone. Citizen participation should be an integral part of the decision-making processes on the full range of human settlement issues. Citizens must be provided opportunities for direct involvement in the decisions that profoundly affect their lives. Such participation can heighten citizen awareness of the complexity and inter-relatedness of the problems and the urgent need for concerted action. Involvement of citizens can also be an important means of making creative use of their ingenuity and skills, thus making effective use of often untapped resources. (III 39, Habitat I)

RE: INVOLVING RESIDENTS IN THE MAKING OF DECISIONS

Participation can be conceived, from the top downwards, as the involvement of the higher echelons of government in the decision-making of smaller groups; laterally, as the co-operation between

parallel or competing sectoral interests; or, from the base upwards, as the direct involvement of residents in the making of decisions and implementation of programmes which concern them. The first two forms of participation are the basis of strategies, planning procedures, implementation of programmes and, in general, management of human settlements; the last, under the label of popular participation, is becoming an indispensable element of a truly democratic process. (III 40, Habitat I)

RE: PROVIDING OPPORTUNITIES FOR EARLY AND CONTINUING INVOLVEMENT IN THE SELECTION OF ALTERNATIVES

Citizen participation, by definition, cannot be achieved by fiat. But it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. The inaccessibility of information and the absence of appropriate mechanisms for the expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration (III 73 Habitat I)

ARTICLE 98 ter

[98 ter. *Water resources in communities management in human settlements presents an outstanding challenge of sustainable **socially equitable and environmentally sound** development. It combines the challenge of securing for serves all the basic human need of a reliable supply of safe drinking water and **meeting the competing the needs of businesses that engage in socially equitable and environmentally sound development and Best practices with local materials. Industry and Agriculture, which are is crucial to socially equitable and environmentally sound economic** development and food security and food self-sufficiency, without compromising the ability of future generations to meet their water needs. Meeting this challenge requires an integrated approach to water resources management that takes cognizance of the links between water, sanitation and health, between the economy and the environment, between cities and their hinterland, and harmonizes land-use planning and housing policies with water sector policies and ensures a comprehensive and coherent approach to setting and enforcing realistic standards. A strong political commitment, cooperation across disciplines and sectors, and an active partnership of all [stakeholders*

individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] will be essential to integrated water resources management. To this end, Governments, at the appropriate levels, and in partnership with other [stakeholder community-minded citizens and groups with a wide range of experience and expertise” including some members of the community that will be socially and environmentally disadvantaged by the decisions], should:

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOOD SECURITY AND FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

ARTICLE 99

[99. In a globalizing economy, the increasing occurrence of the transferring of substances or activities that cause environmental degradation or that are harmful to human health to other states (in violation of principle 14 of the Rio Declaration) and the increasing occurrence of trans-boundary pollution and the transfer across national borders and regions of technologies hazardous — including toxic and nuclear technologies — to the environment represent a serious threat to the environmental conditions of human settlements and the health of their inhabitants. Governments should therefore cooperate to develop further bilateral and multilateral legal mechanisms to implement Principle 13 of the Rio Declaration regarding "liability and compensation for

adverse effects of environmental damage caused by activities within their jurisdiction or control to areas beyond their jurisdiction." In this context, States should be guided by Principle 16 of the Rio Declaration which encourages the approach that the polluter should in principle bear the cost of pollution. The international community, international organizations and Governments should also seek appropriate preventive measures in cases of clear risk of major environmental accidents with trans-boundary effects.] in addition citizens can legitimately expect that states will comply with Principle 14 of the Rio Declaration which calls for the prevention of the transfer of substances and activities that are harmful to human health or to the environment to other states, and to principle 15 which calls for the invoking of the precautionary principle which states that where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.

DOCUMENTATION OF PRECEDENT

RE: PROMOTING NEW AND RENEWABLE ENERGY

The basic and ultimate objective of this programme area is to reduce adverse effects on the atmosphere from the energy sector by promoting policies or programmes, as appropriate, to increase the contribution of environmentally safe and sound and cost effective energy systems, particularly new and renewable ones, through less polluting and more efficient energy production, transmission, distribution and use. This objective should reflect the need for equity, adequate energy supplies and increasing energy consumption in developing countries, and the need to take into consideration the situations of countries that are highly dependent on income generated from the production, processing and export, and/or consumption of fossil fuels and associated energy-intensive products and/or the use of fossil fuels for which countries have serious difficulties in switching to alternatives, and of countries highly vulnerable to adverse effects of climate change. (9:11 Atmosphere, UNCED)

RE: RESPECTING THE ATMOSPHERE THROUGH ENERGY ALTERNATIVES

Energy is essential to economic and social development and improved quality of life. Much of the world's energy, however, is currently produced and consumed in ways that could not be sustained if technology were to remain constant and if overall quantities were to increase substantially. The need to control atmospheric emissions of greenhouse and other gases and

substances will increasingly need to be based on efficiency in energy production, transmission, distribution and consumption, and on growing reliance on environmentally sound energy systems, particularly new and renewable sources of energy./1/ All energy sources will need to be used in ways that respect the atmosphere, human health, and the environment as a whole (9.9. Atmosphere, UNCED).

ARTICLE 100

[100. The use of energy is essential in urban centres for transportation, services, *industrial BEST practices production*, and household and office activities. Current dependence on fossil-fuel-based energy sources in most urban centres leads to climate change, air pollution, and consequential environmental and human health problems, and *[may]* represent a serious threat to **socially equitable and environmentally sound development. sustainable development.** Sustainable energy production and use *can be enhanced by encouraging* shall be undertaken through energy conservation, energy efficiency, by such means as pricing policies, fuel switching, alternative energy, mass transit and public awareness, and through the phasing out of the use of non-renewable or unsafe sources of energy. The socially equitable and environmentally sound development of Human settlements and energy policies should be actively coordinated. Regulations driving the phasing out of non-renewable and unsafe sources of energy will be essential to foster the promotion and development of BEST practices in the area of renewable environmentally sound alternative energy sources.

DOCUMENTATION OF PRECEDENTS

RE: INCREASE AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: DEVELOPING SAFE, MORE EFFICIENT AND LESS POLLUTING TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way,

giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

(c) Promote **energy conservation and** energy-efficient systems, for example, by introducing or supporting innovative energy-efficient measures in the generation, distribution and use of energy, such as combined heating and cooling systems that make use of waste heat recovery, and co-generation of heating and electricity **providing co-generation is not used to justify the continued use of non-renewable or unsafe energy.** ;

(d) **Promote through regulations use of renewable sources of energy** and *Encourage and* research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy; **developed states shall not transfer non-renewable, obsolete, or unsafe sources of energy to developing states.**

(e) Encourage countries, in particular developing countries, to cooperate in exchanging knowledge, experience and know-how in the phasing out of lead gasoline, including the use of biomass ethanol as an environmentally sound substitute;

(f) Introduce or amend user charges and/or other measures to promote the efficient use of household energy;

(g) Stimulate, through fiscal incentives or other measures, and adopt energy-efficient and environmentally sound technologies in the rehabilitation of existing industries and services and in the construction of new ones;

(h) *Support programmes for* **Undertake the prevention,** reduction and neutralization of emissions of polluting gases, originating in the generation, transportation and use of energy;

(i) Provide for public education and media campaigns to encourage recycling, reuse and reduced energy consumption, **and to prepare the public for the required changes needed for the phasing out of non-renewable unsafe sources of energy;**

(j) Encourage the use of solar heating, cooling and electric technologies, energy efficient design, ventilation, and improved insulation of buildings, to reduce the consumption of energy in buildings, **by requiring the phasing out of non-renewable unsafe sources of energy;**

(k) Encourage the **cautious** use of safe industrial and agricultural waste products and other types of low-energy and recycled building materials in construction **providing that this “environment industry” is not used to justify the continued production of toxic, hazardous, or atomic wastes, or to discourage the needed change to the production of safe renewable resources from production;**

(l) Encourage and promote the development and dissemination of new and environmentally sound technologies, including the reduction of metal compounds as part of transportation fuels, and good practices in the use of energy.

ARTICLE 101 b

101 (b) **Introduce energy-pricing policies and use regulatory measures to drive the phasing out of non-renewable unsafe energy and to promote use of renewable and safe sources of energy, and the conservation of energy; and to improve efficiency of energy use in human settlements, while ensuring that people living in poverty and their families are not disadvantaged;**

DOCUMENTATION OF PRECEDENTS

RE: DEVELOPING ALTERNATIVE ENVIRONMENTALLY SAFE AND SOUND TECHNOLOGIES

"To develop and apply pollution control and measurement technologies for stationary and mobile sources of air pollution and to develop alternative environmentally [safe and] sound technologies; (see trans-boundary) (9.24 a Atmosphere)

RE: PROMOTING ALTERNATIVE ENERGY

Promote pilot plans and projects consisting of electrical, mechanical and thermal power (gasifiers, biomass, solar driers, wind-pumps and combustion systems) that are appropriate and likely to be adequately maintained. (14.95 a. Agriculture)

ARTICLE 104 f

104 (f) **Promote, regulate, and enforce BEST—Best Ecologically Sound Traditions— practices, and , during conversion, promote, regulate, and enforce quiet, use-efficient and low-polluting technologies, including fuel-efficient engine and emissions controls and fuel with a low level of polluting emissions and impact on the atmosphere and actively fund and promote other alternative forms of energy;**

ARTICLE 109

109. Urban economies are integral to the process of economic transformation and development. They are a prerequisite for the creation of a diversified economic base capable of generating **meaningful** employment opportunities. Many new jobs will need to be created in urban areas. Cities currently generate more than half of national economic activities worldwide. If other factors, such as population growth of and migration to cities, are addressed effectively through, inter alia, **requiring cities not to exceed the carrying capacity of the ecosystem that sustains them**, urban planning and control of the negative impacts of urbanization, cities could develop the capacity to maintain their productivity, to improve the living conditions of their residents and to manage natural resources in an ecologically sustainable way through **the establishment and enforcement of mandatory standards drawn from international principles in United Nations instruments industry, together with trade and services, will** provides the main impetus to this process. **by driving businesses to engage in socially equitable and environmentally sound practices.**

ARTICLE 110

110. Cities have traditionally served as economic centres and have become the primary providers of services. As engines of economic growth and development they function within a network of supporting economic activities located in their surrounding peri-urban and rural areas. For this reason, specific actions also need to be taken to develop and maintain efficient and affordable transport, information and communications systems and linkages with other urban centres and with rural areas and to seek reasonably balanced patterns of development, both geographically and economically. Rapid changes in production technologies and in trade and consumption patterns will lead to changes in urban spatial structures that, notwithstanding their nature, need to be addressed.

ARTICLE 111

111. Economic development and the provision of services can be enhanced through improved human settlements activities such as urban revitalization, construction, upgrading and maintenance of infrastructural facilities, and building and civil works. These activities are also important growth factors in the generation of employment, income and efficiency in other sectors of the economy. In turn, in combination with appropriate environmental protection policies, they result in the sustainable improvement of the living conditions of city residents as well as of the efficiency and productivity of countries.

Actions

ARTICLE 112

112. To establish an effective financial base for **socially equitable and environmentally sound** urban development **within the carrying capacity of the ecosystem**, Governments at the appropriate levels, including local authorities, in cooperation with trade unions, consumer organizations, **BEST practices**

enterprises *business*, trade, and the financial sector, including *the* cooperatively organized **enterprises** *business sector* and non-governmental organizations, as appropriate, should:

(a) Formulate and implement financial policies which stimulate a broad range of urban **meaningful** employment opportunities;

(b) Encourage the formation of new public-private sector partnerships for institutions that are privately owned and managed but public in their function and purpose, and promote transparency and accountability of their operation.

ARTICLE 113

113. To provide opportunities for *productive meaningful* employment **and investment in BEST practices** *private investment*, Governments at the appropriate levels, including local authorities, in consultation with workers' and employers' organizations, chambers of commerce, industry, trade, consumer organizations, professional associations, and the financial sector, including the cooperative sector, and in the context of comprehensive urban planning, should:

(a) Implement **socially equitable and environmentally sound** *sustainable* urban development policies that take account of and respond effectively to the needs of locally owned enterprises **which engage in BEST practices**, and are not detrimental to the natural and human environment;

(b) Facilitate access to all levels of education and training;

(c) Promote an adequate supply and the environmentally sound allocation of sufficiently serviced land for the needs *of the business community, with due regard to the needs* of the small and medium sized-enterprises **which engage in BEST—Best Environmentally Sound Technology—practices**;

(d) Offer opportunities for urban economic activities by facilitating, **through regulatory schemes**, the access of new and emerging **socially equitable and environmentally sound** businesses, and small and medium-sized enterprises, including the informal sector, to credit and finance, and by streamlining legal and administrative procedures;

(e) Facilitate, where appropriate, the opportunity for urban horticulture; and encourage citizens **to convert lawns and other ecologically unsound use of land to indigenous plant reserves or into food producing areas; local markets and distribution of food to those in need.**

(f) Assist informal-sector enterprises to **embrace BEST practices** *become more productive and through the establishment of MINS 1997 they will have*

the opportunity of being progressively integrated into the formal economy, or of eventually replacing the “formal economy” that has been based on non-renewable use of energy, and on environmentally unsound technology;

(g) Consider designating select areas for redevelopment within urban centres by providing packages of fiscal and financial incentives along with appropriate regulatory arrangements and the development of partnerships.

ARTICLE 114

114. To improve opportunities, **through regulatory schemes**, for the **small BEST practices enterprises businesses** and the micro-enterprise and cooperative sectors, Governments at the appropriate levels, including local authorities, in consultation with non-governmental organizations, community-based organizations, financial and vocational training institutions, should, as appropriate:

(a) **Discourage and phase-out activities that contribute to environmental degradation, to the violation of human rights, to the proliferation of arms or to the production of toxic, hazardous or atomic wastes, and facilitate the extension to the informal sector the protection of human rights in the field of labour and promote respect for the relevant International Labour Organization conventions, including those on the prohibition of forced and child labour, the freedom of association, the right to organize and bargain collectively, and the principle of non-discrimination;**

(b) Promote and strengthen, as appropriate, programmes which integrate credit, finance, vocational training and technological transfer programmes of **BEST practices** in support of small and micro-enterprises and enterprises in the cooperative sector, particularly those developed and utilized by women, **providing that the technology transfer does not undermine endogenous practices;**

(c) Encourage fair treatment of the informal sector, promote the use of environmentally sound practices, and encourage links between financial institutions and non-governmental organizations that support the informal sector where it exists, and encourage financial institutions to **use Mandatory International Normative standards (MINS) to be the basis for conditional funding and to drive industry to BEST practices;**

(d) Integrate, where appropriate, the needs of the growing informal sector within planning, **and design and management systems**, including by promoting its **genuine involvement and participation** in the planning and decision-making process, and by strengthening its linkages with the formal economy;

(e) Promote training for small and micro-enterprises and enterprises in the cooperative sector, and support them in their efforts to improve their products,

services, technology and distribution networks, and to identify new market opportunities.

ARTICLE 115

115. To strengthen urban economies *so they may be competitive in a globalizing economy*, Governments at the appropriate levels, including local authorities, in consultation with all *[[stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]*, should, inter alia:

- (a) Improve education and enhance job training **in meaningful employment** in order to improve the quality of the local work-force;
- (b) Support the re-structuring of local **enterprises industries**, where appropriate, and develop urban infrastructure and services, promote a reliable, efficient and environmentally sound supply of energy and enhance telecommunication networks;
- (c) Review and revise, as appropriate, the regulatory framework in order **to drive BEST practices** and to attract private investment;
- (d) Prevent crime **not through increasing incarceration but through the strengthening of social programs** and enhance public safety in order to make urban areas more attractive for economic, social and cultural activities;
- (e) Encourage sound financial **and BEST** practices at all levels of Government;
- (f) Promote legislative action that may be necessary to implement the above.

ARTICLE 116

116. To *alleviate prevent* the adverse impacts of measures for structural and economic transition, Governments at the appropriate levels, including, where appropriate, local authorities, **shall should**:

- (a) Promote an integrated approach by promoting socially equitable and environmentally sound *addressing the social, economic and environmental consequences of reforms on the needs human settlements development needs*; **ensuring that genuine community involvement and participation shall be involved in determining the needs of the community in particular those of the people in poverty and marginalized groups.**

(b) Promote the *integrated functioning of inclusive housing markets* so as to avoid segregation of the social housing sector;

(c) Implement appropriate basic social programmes and adequate resource allocation, in particular those measures affecting people living in poverty, people with disabilities, other *vulnerable marginalized* segments of society, micro-enterprises and other **socially equitable and environmentally sound small enterprises businesses**;

(d) **Provide for genuine community involvement and participation in finding alternatives to the current ill-conceived structural adjustment programmes** *Review the impact of structural adjustment on social development by paying particular attention to gender-sensitive assessments*;

(e) *Design policies to promote* **Ensure a** more equitable and enhanced access to income and resources;

(f) Support, as appropriate, public and private enterprises in their efforts to adapt to the changing requirements of **BEST practices and of cooperative decision making processes which reflect genuine community involvement and participation** *technological and human resources development*.

9. Balanced development of settlements in rural regions

ARTICLE 117

117. Urban and rural areas are interdependent economically, socially and environmentally. At the turn of the century, a substantial proportion of the world's population will continue to live in rural settlements, particularly in developing countries. In order to achieve a *more socially equitable and environmentally sound sustainable* future for the earth, these rural settlements need to be valued and supported. **Although in many cases**, insufficient infrastructure and services, lack of environmentally sound technology, and pollution resulting from the adverse impacts of unsustainable industrialization and urbanization contribute significantly to the degradation of the rural environment, in other cases it is the environmentally sound endogenous practices with local materials that offer the solution to the means of living within the carrying capacity of the ecosystem. Additionally, the lack of **appreciation of** employment opportunities in rural areas increases rural-to-urban migration **often to less meaningful employment** and results in a loss of human capacity in rural communities. Policies and programmes for the *sustainable socially equitable and environmentally sound* development of rural areas that integrate rural regions into the national economy require strong local and national institutions for the planning *and management* of human settlements that place an emphasis on rural-urban linkages, **that appreciates the innovative and**

environmentally sound traditional practices of the rural areas, and that treat villages and cities as two ends of a human settlements continuum.

ARTICLE 118

118. Rural populations, including indigenous people, play an important role in **demonstrating to urban populations practices of living within the carrying capacity of the ecosystem, in providing evidence of BEST practices**, in ensuring food security and in sustaining the social and ecological balance over large tracts of land in many nations and thus contribute significantly to the task of protecting biodiversity and fragile ecosystems and to the sustainable use of biological resources.

Actions

ARTICLE 119

119. To promote *sustainable socially equitable and environmentally sound* development of rural settlements and to reduce rural-to-urban migration, Governments at the appropriate levels, including local authorities, **shall should**:

(a) Promote the active **genuine involvement and participation** of all *[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. s]]*, including those in isolated and remote communities, in ensuring the integrated consideration of the environmental, social and economic objectives of rural development efforts;

(b) Take appropriate measures to improve living and working conditions in regional urban centres, small towns and rural service centres;

(c) Foster a sustainable and diversified agricultural system in order to have vibrant rural communities;

(d) *Provide infrastructure, services and incentives for investment in rural areas*;

(e) Promote education and training in rural areas to facilitate **meaningful** employment and the use of BEST (**Best Environmentally Sound Traditions**) practices *appropriate technology*.

ARTICLE 120

120. To promote **BEST (Best Environmentally Sound Traditions) practices** *the utilization of new and improved endogenous technologies* and appropriate

traditional practices in rural settlements development, Governments at the appropriate levels, including local authorities, in cooperation with the private sector, should:

(a) Improve access to information on agricultural production, marketing and pricing in rural and remote areas by using, inter alia, advanced and accessible communication technologies;

(b) In cooperation with farmers' organizations, women's groups and other *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, promote research and the dissemination of research findings in traditional, new and improved technologies for, inter alia, agriculture, aquaculture, forestry and agroforestry.

ARTICLE 121

121. In establishing policies **for socially equitable and environmentally sound development sustainable regional development and management**, Governments at the appropriate levels, including local authorities, should:

(a) Promote education and training programmes and establish procedures for the full participation of rural and indigenous people in the setting of priorities for balanced and ecologically viable regional development;

(b) Make full use of geographic information systems and environmental assessment methods for the preparation of environmentally sound regional development policies;

(c) Implement regional and rural development plans and programmes based on needs and economic viability, *[consistent with the goal of socially equitable and environmentally sound sustainable development]*;

(d) Establish an efficient and *transparent open* system for the allocation of resources to rural areas based on people's needs, *[consistent with the goal of sustainable socially equitable and environmentally sound development]*.

DOCUMENTATION OF PRECEDENTS

(From Russow, J. (1995) Charter of Obligations,

RE: PROMOTION OF TRADITIONAL METHODS OF AGRICULTURE

the promotion of ...systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife **care management**, which use, maintain or increase biodiversity (15.5 d Biodiversity, Agenda 21 UNCED 1992)

RE: UNDERTAKING PROJECTS WITH EMPHASIS ON TRADITIONAL ENVIRONMENT PRACTICES

Consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental *management* practices or systems that have a good impact on the environment (13.21, Fragile Ecosystem Agenda 21, UNCED, 1992)

RE: COLLECTING AND RECORDING INFORMATION ON INDIGENOUS CONSERVATION

Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c., Agriculture., Agenda 21 UNCED 1992)

RE: FOSTERING TRADITIONAL METHODS AND KNOWLEDGE

Governments....*should shall*... Recognize and foster the traditional methods and the knowledge of indigenous *people peoples* and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (Unbracketed section in New York Prep Com, changed in final version. 15.4, g Biodiversity, Agenda 21, UNCED, 1992)

RE: PROMOTING COLLABORATIVE RESEARCH WITH INDIGENOUS PEOPLE

Promotion of collaborative research programmes especially in developing countries, to support activities outlined in this programme area, with particular reference to cooperation with local and indigenous people (**s**) and their communities in the conservation of biological diversity and sustainable use of biological resources, as well as the fostering of traditional methods and knowledge of such groups in connection with these activities (16.7 b, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING BENEFICIAL TRADITIONAL HEALTH CARE

Acknowledge and encourage beneficial traditional health care, especially that practised by indigenous women, with a view to preserving and incorporating the value of traditional health care in the provision of health services, and support research directed to achieve this aim (Art.111 Advance Unedited Draft Declaration and Platform for Action, May, 15, 1995)

ARTICLE 122

122. To strengthen [*sustainable* **socially equitable and environmentally sound development and**] **meaningful** employment opportunities in impoverished rural areas, Governments at the appropriate levels, including local authorities, should:

(a) Stimulate rural development by enhancing **meaningful** employment opportunities, providing educational and health facilities and services, improving housing, strengthening technical infrastructure for **BEST (Best Environmentally Sound Traditions) practices**, and encouraging rural enterprises and sustainable agriculture;

(b) Establish priorities for regional infrastructure investments based on *opportunities for economic return*, social equity and environmental quality and on the promoting **BEST (Best Environmentally Sound Traditions) practices** ;

(c) *Encourage the private sector to develop and strengthen contract-based wholesale markets and marketing intermediaries for rural products so as to improve and/or establish a cash-flow and futures contract economy in rural areas;*

(d) Promote equitable and efficient access to markets as well as, where appropriate, pricing and payment systems for rural products, especially of food items consumed in urban areas, **providing that rural areas will not be used for exploitative cash crops for foreign states as has often been done as a result of forced adherence to structural adjustment programmes;**

(d bis.) Promote products from rural areas in urban markets and rural service centers by improving the access to market information and distribution centres and networks;

(e) Reduce significantly or eliminate environmentally harmful **technologies**, subsidies and other programmes, such as those which stimulate the excessive use of pesticides and chemical fertilizers, and price control or subsidy systems that perpetuate unsustainable practices and production systems in rural and agricultural economies.

ARTICLE 123

123. An integrated approach is required to promote balanced and mutually supportive urban-rural development. To achieve this objective, Governments at the appropriate levels, including local authorities, with the support of the relevant international and regional institutions, should:

(a) Provide an appropriate legal, fiscal and organizational framework that is suitable to strengthen the networks of small- and medium-sized settlements in rural areas;

(a bis.) Facilitate the development of efficient communication and distribution infrastructure for the exchange of information, labour, goods, services and capital between urban and rural areas;

(b) Promote broad cooperation among local communities to find integrated solutions for land-use, transport and environmental problems in an urban-rural context;

(c) *Pursue* **Ensure genuine community involvement and participation participatory approach to balanced and mutually supportive urban-rural development, based on a continuous dialogue among the** *[[stakeholders* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]** involved in urban-rural development.

10. Disaster prevention, mitigation, preparedness and post-disaster rehabilitation capabilities

ARTICLE 124

124. The impact on people and human settlements of natural and human-made disasters is on the increase. Disasters are frequently caused by vulnerabilities created by human actions, **such as the consumption and production of ozone-depleting substances, of green-house gas emissions, of toxic, hazardous and atomic wastes**; such as uncontrolled or inadequately planned human settlements, lack of basic infrastructure and the occupation of disaster-prone areas, **and such as the continued production of arms and weapons of mass destruction, and the continued visits of nuclear powered vessels in urban ports**. Armed conflicts also have consequences that affect human settlements and the country as a whole and call for specific rehabilitation and reconstruction processes that may necessitate international involvement, at the request of the Government of the concerned country. The impact of such disasters and emergencies is especially severe in countries where prevention, preparedness, mitigation and response capacities are ineffective in dealing with such situations.

ARTICLE 125

125. **The most efficient and effective disaster response is to ensure first and foremost through a concerted effort that prevention of potential known adverse consequences (preventable disasters) will occur. In cases where there is no possibility to prevent the potential disaster,** The most efficient and effective disaster preparedness systems and capabilities for post-disaster response are usually provided volunteer contributions and local authority actions at the neighbourhood level. These can operate independently and irrespective of reduced, damaged or destroyed infrastructure or capacity elsewhere. Specific actions are also required at the appropriate levels of Government, including local authorities, **in cooperation and partnership with the private sector and** in close coordination with all community groups, to put into place disaster preparedness and response capacities that are coordinated in their planning but flexible in their implementation. The reduction of vulnerability **in the area of anthropogenic disasters**, as well as the capacity to respond to disasters is directly related **to the degree of willingness on the part of government to drive industry through regulations to ban and prevent potentially disastrous technologies, and on the part of financial institutions to refuse to fund disaster-possible technologies** and to some extent the degree of decentralized access to information, communication, and decision-making and the control of resources. National and international cooperation networks can facilitate rapid access to specialist expertise, which can help to build capacities for disaster **prevention and** reduction and, to provide early warning of impending disasters and to mitigate their effects. Women and children are the most affected in situations of disaster, and their needs should be considered in all stages of disaster **prevention and in restoration after disasters management.** Women's active involvement in disaster **prevention and in restoration after disasters planning and management** should be encouraged.

Actions:

ARTICLE 126

126. In improving natural and human-made disaster prevention, preparedness, mitigation and response, Governments at the appropriate levels, including local authorities, and in close consultation and cooperation with such entities as insurance companies, non-governmental organizations, community-based organizations, organized communities, the academic, health and scientific communities, **shall should:**

(a) **Legislated regulations that would ban and prevent technologies that could lead to disasters, and develop, adopt and enforce appropriate norms and by-laws for land-use, building and planning standards, that are based on professionally established assessments of hazard and of vulnerability assessments;**

(a bis.) **Ensure that serious public concern about an activity or technology that could lead to preventable disaster be taken into consideration and the activity or technology shall be prevented or banned, and ensure that the participation in preparing and planning for non-preventable disaster *planning and management* of all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society such as.]*, including women, children, the elderly, and people with disabilities, in recognition of their particular vulnerability to human-made and natural disasters;**

(b) **Ensure regulations that will prevent preventable anthropogenic disasters and encourage continued *mobilization of* domestic and international resources for disaster reduction activities for non-preventable disasters;**

(c) Promote and disseminate information on disaster-resistant construction methods and technologies for buildings and public works in general;

(d) Devise programmes to facilitate, where possible, voluntary relocation and access by all people to less disaster-prone areas;

(e) Develop training programmes on disaster-resistant construction methods for designers, contractors and builders. Some programmes should be directed particularly to small enterprises, which build the great majority of housing and other small buildings in the developing countries;

(f) Take measures to upgrade, where necessary, the resistance of important infrastructure, lifelines and critical facilities, in particular where damage can cause secondary disasters and/or constrain emergency relief operations.

[[126 bis.) Given that since the development of nuclear technology the most significant preventable anthropogenic disaster has been the preventing of nuclear-related disasters, and given that the outcome of nuclear disasters, including from nuclear arms and nuclear civil reactors, has had irreversible consequences that cannot be considered to have been remediated other than by forced reallocation ; and continues to have unexpected consequences; the global community, if it is to embark upon the prevention of preventable disaster, shall prevent the continued production of nuclear arms, the mining of uranium for the producing of nuclear arms, the testing of nuclear arms, the circulating and harbouring of nuclear-armed or nuclear-powered military vessels, and the using of civil nuclear reactors. It should be noted that at the 1972 UN Conference on Human Environment (UNCHE) held in Stockholm the states globally adopted the commitment in Article 26 to “eliminate the production of weapons of mass destruction” and twenty years

later a Nobel Laureate Declaration called for the phasing out of civil nuclear reactors. As a consequence of the development and testing of nuclear weapons, disasters with irreversible environmental consequences have occurred and communities have been displaced, there has to be an acknowledgment that there is no acceptable remediation to these nuclear disasters. The least that can be done for those who have been affected by nuclear disasters is to ensure the safe resettlement of displaced populations especially those from *for* small island developing States and coastal regions. There also has to be an acknowledgement that there is no real restoration of sites that have been exposed to radiation from nuclear disasters, otherwise the perpetuation of the belief in the possibility of restoration could justify the continued nuclear associated technologies. *and the restoration of economic activity to the affected areas, especially for small island developing States and coastal regions.* Noting the special responsibility towards those people of the former United Nations Trust Territories who have been adversely affected as a result of the nuclear-weapons tests conducted during the period of the Trusteeship, all Governments and international organizations that have expertise in the field of cleanup and disposal of radioactive contaminants should consider giving appropriate assistance as may be required for remedial purposes in areas affected by radioactive contamination from nuclear weapons programmes.]

ARTICLE 127

(a) Pursue the objectives of prevention of major technological accidents and the limitation of their consequences, inter alia, through land use policies, **through the banning of technologies and preventing activities that could lead to disasters**, and promotion of safe technology **promotion of BEST (Best Environmentally Sound Traditions) practices**. Prevention of disaster requires the establishment of **Mandatory, International Normative Standards (MINS)** that will drive industry to engage in **BEST practices**. Voluntary standards such as ISO 14,000 environmental management standards which evaluate nothing more than the corporations' compliance with self-selected environmental policy, without reference to external normative standards of performance, will be less effective than MINS for promoting **BEST practices** and thus for preventing anthropogenic disasters. In the interim during the phase-out period the potential environmental and social costs shall not longer be externalized from the operation of the industry/military activities.

(b) **Ensure that dangerous activities are phased out and replaced by safe and environmentally sound practices**, and in the interim take the necessary measures in order to control the siting of new developments surrounding dangerous industrial activities that may be liable to increase the risk of the effects of a major accident by appropriate consultation procedures to facilitate the implementation of the policy established under sub-paragraph (a) above;

(c) Introduce a clear definition of roles and responsibilities and of communication channels among the various key functions of disaster preparedness and prevention including assessment, monitoring, prediction, prevention, relief, resettlement, and emergency response;

(d) Promote and encourage broad-based participation in disaster **prevention and** preparedness activities by giving to the population living in the vicinity of a dangerous activity adequate and regular information on the potential hazards

(e) **Strengthen, and/or develop global, regional and local resolve and political will to prevent preventable disasters by ensuring the phasing out of technologies that could lead to disasters, and to provide** early-warning systems to alert populations in case of a major **non-preventable occurrences technological accident**, and impending disasters.

ARTICLE 128

128. In preparing for and implementing post-disaster relief, rehabilitation, reconstruction and resettlement, Governments at the appropriate levels, including local authorities, in partnership with all *[stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society]*, shall *should*:

(a) Establish or strengthen disaster preparedness and response systems, **in the case of non-preventable disasters**, that clearly define roles and responsibilities of, and communication channels between, the various functions and actors in disaster preparedness, and in post-event disaster management, including emergency management, relief and rehabilitation;

(b) Devise exercises to test emergency response and relief plans and promote research on the technical, social and economic aspects of post-disaster reconstruction and adopt effective strategies and guidelines for post-disaster reconstruction;

(c) Establish reliable communications, and response and decision-making capabilities, including at the national, local and community levels;

(d) Establish contingency plans, *management and* assistance systems and arrangements for rehabilitation, reconstruction and resettlement;

(e) Strengthen scientific and engineering capacities for damage assessment and monitoring and for special rehabilitation and reconstruction techniques;

(g) Identify and support approaches to cope with the urgent shelter requirements of returnees and internally displaced persons;

(h) Identify approaches to minimize interruption to attendance in schools;

(i) Support work for immediate removal of anti-personnel land mines following the cessation of armed conflict;

(j) Ensure that the particular needs of women, children, persons with disabilities and *vulnerable marginalized* groups are considered in all communications, rescue, relocation, rehabilitation, and reconstruction;

(k) Promote a cultural dimension in post-disaster rehabilitation processes.] -

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

D. Capacity-building and institutional development

1. Introduction

ARTICLE 129 j

(j) Reinforce measures to eradicate corruption **and institutional collusion between corporations including transnationals and state governments** and ensure greater **openness** *transparency*, efficiency and **genuine** community **involvement and participation in the preservation of the environment and in the use** *management* of local resources, **within the framework of Mandatory International Normative Standards (MINS);**

(k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation, particularly to share good **BEST (Best Environmentally Sound Traditions) practices** and innovative approaches to **socially equitable and environmentally sound** *sustainable* human settlements *management*;

(l) Develop, in cooperation with UNCHS (Habitat), associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise, **especially BEST practices.**

ARTICLE 130 (2)

2. Decentralization shall be carried out within a framework of globally agreed to principles drawn from the body of United Nations instruments related to the enshrining and guaranteeing of human rights, the preserving, and protecting the environment and the fostering of peace and cooperation. Globally established mandatory standards based on these principles shall be established

Decentralization and strengthening of local authorities and their associations/networks

131. To ensure effective decentralization and strengthening of local authorities and their associations/networks **within a framework of international principles based on the enshrining and guaranteeing of respect for human rights, the preserving, conserving and protecting the environment, the ensuring of social equity and justice, and the enabling of peace and prevention of war,** Governments at all appropriate levels, including local authorities, **shall should:**

(a) Adopt and adapt, *as appropriate*, policies and legal frameworks from other Member States that are effectively implementing decentralization **while adhering to international principles, and contribute innovative local practices to other states that could benefit from this insight;**

(b) Review and revise, as appropriate, legislation **to ensure compliance with international obligations**, increase local autonomy **participation** in decision-making, implementation, and resource mobilization and use, especially with respect to human **rights, allocation of funding for socially equitable and environmentally sound development** *technical and financial resources and local enterprise development*, within the overall framework of **international**, national, and local principles, obligations and undertakings *social, economic and environmental strategy* **and encourage genuine community involvement and participation in decision-making regarding their safe, healthy and environmentally sound communities** *city neighbourhood or dwellings*;

(c) Seek **additional funding from reducing the military budget, and from requiring corporations including transnational corporations to pay deferred taxes, and thus support** local authorities reviewing revenue generating mechanisms;

(d) Facilitate the inter-transfer of **BEST (Best Environmentally Sound Traditions) Practices** *exchange of technology, experience and management expertise* between local authorities in the delivery of services, expenditure control, resource mobilization, partnership-building and local enterprise development with **businesses that comply international obligations and demonstrate BEST practices, that have not violated human rights, caused environmental degradation or contributed to violence and conflict.**, *inter alia*, through technical twinning and **inter-transfer** *exchange* of experience programmes, **recognizing that the solutions to socially equitable and environmentally sound development could be found throughout the world;**

(e) Enhance the performance of local authorities **by requiring BEST practices**, and by undertaking comparative analysis of, and disseminating of innovative **BEST** practices in, the delivery, operation and maintenance of public goods and services, **and in fostering and developing** *and in exploiting the fiscal other* potential of their cities;

(f) *Help institutionalize* **Ensure and implement** broad-based participation in decision-making and management processes at the local level **with genuine community involvement and participation in determining the terms of reference and in having input throughout the process;**

(g) **Ensure and strengthen the capacity of local authorities to seek, respect and rely on genuine community involvement and participation** *engage the local private and community sectors in goal-setting and establishing local priorities and environmentally sound standards for infrastructure development and services delivery, and local socially equitable and environmentally sound development economic development;*

(h) Promote **genuine community involvement and participation in a policy dialogue between among all levels of Government, within a framework of governance principles, the private and community sectors** to improve planning and coordination **in implementing socially equitable and environmentally sound development;**

(i) Collect, analyse and disseminate, through **public channels**, as appropriate, comparative data on the performance of local authorities in providing for the needs of their citizens; **and facilitate the opportunity for citizens to present evidence of non-compliance with obligations through national and international mechanisms**

(j) Reinforce measures to increase the participation of **indigenous peoples, migrant workers, women, children and youth and other disenfranchised groups**. Eradicate corruption and ensure greater transparency **through efficient genuine community involvement and participation** in the **socially equitable and environmentally sound development** of local resources;

(k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation **within a framework of international principles** particularly to share good **BEST** practices and innovative approaches to **socially equitable and environmentally sound development sustainable human settlements management;** and

(l) Develop, in cooperation with UNCHS (Habitat), **and other UN agencies**, associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise. from diverse cultures, ethnic and historical backgrounds.

3. Participation, civic engagement and Government responsibility

ARTICLE 132

132. **Socially equitable and environmentally sound development** *Sustainable human settlements development* requires the active engagement **of individuals and organizations** of civil society —**those members of society that advocate the enshrining and guaranteeing of the respect for human rights, the**

preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and the enabling of socially equitable and environmentally sound development. *organizations, as well as the broad-based participation of all people.* It equally requires responsive, transparent and accountable governmental structures at all levels. Civic engagement and responsible government both necessitate the strengthening of **genuine community involvement and participation** *participatory mechanisms*, including access to justice and community-based action planning, which will ensure that all voices are heard, including particularly women, youth, children and elderly and all other vulnerable marginalized groups (UNICEF) in identifying problems and priorities, setting goals, exercising legal rights, determining service standards, mobilizing resources and implementing policies, programmes and projects.

ARTICLE 133

133. To encourage and support civic engagement and the fulfillment of government **obligations, expectations, duties, commitments, undertakings and** responsibilities, national governments, local authorities and/or civil society organizations, as appropriate, should put into effect institutional and legal frameworks which facilitate and enable broad-based **genuine involvement and participation of all citizens people** in decision-making, **including in the determining of the terms of reference and in having input throughout the decision making process, implementation** and monitoring of human settlements *strategies*, policies and programmes, **and in presenting evidence through legal channels of non-compliance with obligations and expectations;** these institutional and legal frameworks would be specifically aimed at; *inter alia*:

- (a) **Ensuring protecting** the basic human right to hold and express opinions and to disseminate ideas and information;
- (b) Permitting, and facilitating the formation of independent non-governmental community local, national and international organizations **representing a civil society which advocates the enshrining and guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and thus the enabling of socially equitable and environmentally sound development.**
- (c) Providing full, timely and comprehensible information, without undue financial burden to the applicant;

(d) **undertaking education and training programs that promote the ensuring of social justice, the preservation, conservation and protection of the environment, the enshrining and guaranteeing respect for human rights, and the elimination of conflict and war, and that are based on significant principles drawn from United Nations conventions, treaties, covenants, declarations, conference action plans and General Assembly Resolutions.**

DOCUMENTATION OF PRECEDENT;

RE: PROVIDING SOCIAL SERVICES IN HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

(a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;

(b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

(e) establishing regular **opportunities for genuine community involvement and participation** *and broad-based consultative mechanisms as individuals and organizations of civil society for involving civil society—both women and men* in the decision-making process, including in the determination of terms of reference and in having input throughout the process for all major policies, plans and programmes that will affect their lives; (*e bis.*) In addition, removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;

(f) establishing agenda-setting **for genuine community involvement and participation** *participatory mechanisms enabling citizens individuals, to ensure that communities and individuals and organizations of civil society organizations* to play a pro-active, constructive and substantive role in identifying and formulating new policies, plans and projects, **and in determining the terms of reference and in having input throughout the policy formation and the plans and projects development;**

(g) fostering an understanding of contractual relationships **between NGOs and businesses that observe the enshrining and guaranteeing of respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and the preventing of conflict and war, and the ensuring of socially equitable and environmentally sound development and BEST practices, and non-governmental organizations (NGOs) sectors to acquire the skills for participating in and developing projects that will benefit all people negotiating effective partnerships for project implementation, development and management that will maximize benefits to all people;**

(h) promoting equality, **social justice**, and *equity fairness*, *incorporate by incorporating* gender and age considerations and *involve involving* marginalized and low-income groups **including people with disabilities, migrant workers, indigenous peoples** through institutional measures to ensure their interests are represented in policy and decision-making processes, and through such techniques as advocacy training and seminars including ~~the development of those that develop~~ *mediating and consensus-building skills* ~~to~~ **and** facilitate effective networking and alliance formation;

ARTICLE 133 e

(i) **Ensuring Improving** access to judicial and administrative channels for affected **persons and (UNICEF) disadvantaged and marginalized** groups to challenge, or seek redress **from decisions that deny social justice, that destroy the environment, that violate human rights, that are destructive to human health and well-being, or that contribute to war and conflict** *from socially and environmentally harmful decisions and actions*; including legal mechanisms to ensure that **all (UNICEF) State bodies both national and local (UNICEF)** remain legally accountable for their actions, in accordance with their social *and* environmental and **human rights** obligations as defined in both national legislation and **in international conventions, treaties, covenants, declarations, conference action plans and general assembly resolutions. Affected individuals shall, after exhausting all domestic remedies, have access to an International Court of Compliance to bring evidence of state non-compliance. Removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;**

(i) bis **Ensuring** access, when all domestic channels have been exhausted, or when there is no legitimate domestic remedies in place, to an International Court of Compliance where affected persons and groups can seek redress for decisions that deny social justice, that destroy the environment, that violate human rights or that contribute to war and conflict. **Broadening the procedural right of individuals and civil society to take legal actions on behalf of affected communities or groups which do not have the resources or skills to take such action themselves, and promoting the**

representation of inter-generational interests, including children and future generations in decision-making processes.

(j) Facilitating access to legal services by people living in poverty (Canada) low-income and marginalized groups through provision of facilities such as legal aid and free legal advice centres. In addition access to reliable scientific and medical expertise without undue financial burden to the applicant should be provided.

(k) Strengthening **the capacity of international United Nations bodies to establish mandatory international normative standards-and-regulations (MINS) based on fundamental principles enshrined in international customary law; and providing opportunities for local authorities and individuals and groups of civil society organizations to review social, economic and environmental policies affecting their communities and to set local priorities and contribute to the setting of local standards, based on the mandatory international normative standards, for services in such areas basic education, public safety drug-abuse awareness and environmental management: environmental protection and pollution prevention, social justice and basic needs and rights —right to housing, food, safe drinking water, social security, education and universal health care and safety as basic education, child care(EU), public enshrine the right to primary health care—free emergency health care including treatment completion and foster best practices for health promotion and disease prevention recognizing the value of traditional and natural remedies and to universal health care, water for domestic, agricultural and industrial use, public infrastructure,(FAO) public safety, drug- abuse awareness and environmental protection and pollution prevention management; (133)**

ARTICLE 134

134. *Human settlements managers need to draw on the skills and resources of a diversity of people and institutions at many levels coupled with genuine community involvement and participation are essential for socially equitable and environmentally sound development of human settlements.* Scarcity of suitably qualified personnel *and* weakness of institutional systems *and* technical capacity, **as well as unwillingness to draw upon the individuals and groups from civil society that are experienced and aware of the physical and social service community facilities, that are active in the preservation, conservation and protection of the environment and that are advocates of social justice and human rights** are among the main obstacles to the improvement of human settlements in many countries. **In addition, the use of BEST (Best Environmentally Sound Traditions) practices based on principles of socially equitable and environmentally sound development in *new skills, know-how and technology in all aspects of developing community based planning of***

human settlements planning and management will be necessary. In countries where change is rapid there is a need for governments and the international community to ensure the effective development and transfer of leadership skills, *management* expertise and experience **in guaranteeing the respect for human rights, in preserving, conserving and protecting the environment, in promoting peace and social justice, and in advocating BEST practices, know-how and technology.**

Actions

ARTICLE 135

135. To improve **the planning and development of socially equitable and environmentally sound human settlements management,** governments at all appropriate levels, including local authorities and their associations, **shall should:**

(a) Support training programmes for administrators and civic officials at all levels, as appropriate, **and enhance leadership qualities of individuals and organizations of civil society and promote the inclusion of women and young people, and marginalized members of society in staff structures and decision-making;**

(b) Establish *private-public, community, urban-rural sector, BEST practices enterprises business* and economic forums to facilitate the transfer of expertise *management know-how* and experience;

(c) Develop and implement and comprehensive training, education **in socially equitable and environmentally sound and human resources** development policies and programmes involving a wide range of **individuals and groups of civil society including the participation of academics,** local authority associations, *academic, research, training and educational institutions* and the **BEST practices enterprises private sector** focusing on:

(i) The **furthering of genuine community involvement and participation development of a multi-sectoral approach** to human settlements development, **which includes the participation of women, migrant workers, minority groups, indigenous peoples and other usually marginalized individuals and groups;**

(ii) The **cooperative decision making process where there is a continual drawing upon the experience and expertise of members of the community** *The training of trainers to develop a core capacity for institution-strengthening and capacity-building;* **including women, youth, elderly and members of disadvantaged or marginalized groups.**

(iii) The development of local capacity to define needs and undertake or commission applied research, particularly in social and environmental impact assessments, local **socially equitable and environmentally sound development growth and creation of meaningful employment job creation**, and to *incorporate* apply the findings from the research *in management systems* in socially equitable environmentally sound human settlements;

(d) Develop information systems for the exchange, transfer and sharing of experience, expertise, know-how and **BEST practices in socially equitable environmentally sound human settlements technology in human settlements management**;

(e) *Encourage, as appropriate, the involvement of private-sector entities in improving public-sector management and administration and the formation of entities that are public in their function, private in their management and publicly-privately funded; and*

(e) develop information systems for **networking and accessing resources in a timely manner, and for** the exchange, transfer and sharing of experience, expertise, know-how and **BEST practices technology related to** *in human settlements management*;

(f) **help develop principle-based decision making processes to enable mediation programmes in conflict resolution between competing agents in the access to, distribution and use of resources and spaces in settlements.**

4. Metropolitan planning

ARTICLE 136

136. Although **there are the managers of human settlements face** many common challenges **in urban and rural human settlements**, *those responsible for the management and development of metropolitan areas and mega-cities face unique problems caused by the size and complexity of their tasks and responsibilities. Among the characteristics of metropolitan areas that require special skills to handle are* their ethnically **religiously** and culturally diverse populations; their large concentrations of urban poverty **within economically deprived zones (NGO Composite)**; their extensive infrastructure...networks and transportation and communications systems; their role in national, regional and international production and consumption cycles, economic development, trade and finance; and their potential for severe environmental degradation. Large metropolitan areas and mega-cities also represent the largest potential risks of human, material and production-capacity loss in case of natural and human-made disasters and **the greatest negative impacts of the global economy and of structural**

adjustment programmes on local economies. In some countries, the lack of a metropolitan-wide authority creates difficulty in urban management.

Actions

ARTICLE 137

137. To address the special needs of metropolitan areas, Governments at all the appropriate levels, including local authorities, **shall should**:

- (a) **Ensure and promote metropolitan-wide planning in socially equitable and environmentally sound development and management strategies; which include individuals and organizations of civil society with those members of society that are using marginalized in the planning process.**
- (b) Monitor and analyse the effectiveness and efficiency of metropolitan structures and administrative systems, and incorporate the results into public policies for dealing with macroeconomic, social and environmental issues;
- (c) Create a legislative framework and adopt organizational structures that ensure coordinated and efficient delivery of services *delivery*, **provision** of resource *mobilization* and *sustainable* **socially equitable and environmentally sound** development throughout metropolitan areas;
- (d) Strengthen the capacity and mandates of metropolitan authorities to deal effectively with issues of regional and national importance, such as the **use of land, energy and water resources management, the preservation, protection and conservation of the environment management, and** the access to adequate social infrastructures, transportation and communications, trade and finance, and social integration;
- (e) Develop, **a coalition of individuals and groups of civil society with varying areas of experience and expertise to collaborate with a** professional staff trained in the technical aspects of planning and development of primary infrastructure and emergency prevention and planning;
- (f) Facilitate and promote policy dialogue and the exchange of experience, expertise, know-how and **BEST practices technology among** metropolitan authorities **with individuals and groups of civil society including women and numerous marginalized groups** in such areas as transportation and communications, waste **prevention, reduction, resource-reversion waste, and mitigation, management**, energy conservation, social welfare and environmental **preservation, protection and conservation management.**

5. Domestic financial resources and economic instruments

ARTICLE 139

139. Financing the future of urban development and sustaining the economic viability of cities represents a particular challenge which will require innovative systems of finance at national and local levels. Effective *cooperation partnerships* between the public and **BEST practices enterprises** are needed which combine local taxes on production and consumption with fiscal incentives for investment by *industry, commerce, trade and the private service sector*. **BEST practices enterprises with local materials and that provide socially equitable and environmentally sound meaningful employment** New forms of municipal finance are needed to meet the future needs of urban economic development and the costs of supporting infrastructure and services. **In addition funding shall be sought from the reduction of the military budget and from requiring the payment of deferred taxes from industry. It is thus necessary to reduce military expenditures and production in order to finance programs for habitat (NGO Composite).**

BACKGROUND

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget and a resolution to reallocate resources saved from the proposed reduction to economic and social needs In 1994 States, in adopting the statement from the International Conference on Population and Development, concurred that the attainment of “quantitative and qualitative goals of the present Programme of Action clearly require additional resources, some of which could become available from a reordering of priorities at the individual, national and international levels. However, none of the actions required—nor all of them combined— is expensive in the context of either current global development or military expenditures.(Article 1.19) In 1995, Similarly, states in adopting the statement from the Social Development Summit endorsed the calling for “the reallocation of military spending to ensure a greater pocket of resources to expand public services. Again, in 1995, member states of the United Nations reconfirmed these commitments by adopting the Platform of Action at the UN conference on Women, Equality, Development and Peace. In the Platform of Action States have made a commitment to maintain “ peace and

security at the global, regional and local levels, together with the prevention of policies of aggression ... and the resolution of armed conflict” (Art. 14) and to reduce “...military expenditures “ (Art. 15)., states have also made a commitment to the “prevention and resolution of conflicts”(art 15) and to “increase and hasten, ... the conversion of military resources and related industries to development and peaceful purposes (145a)

In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). Yet, through sympathetic administrations states have for years failed to ensure corporate compliance with national laws, codes and regulations, and international agreements. States have continued to provide subsidies and tax deferrals to corporations, a large proportion of whom have engaged in socially inequitable and environmentally unsound development.

Actions

ARTICLE 140

140. To strengthen the national and local economic and financial base with a view to addressing the needs of **socially equitable and environmentally sound sustainable** human settlements *development*, Governments at all appropriate levels, including local authorities, **shall should**:

(a) Strengthen, as appropriate, the capacity of local authorities to attract **BEST practices** investments;

(b) Adopt macroeconomic policies and frameworks which encourage increased domestic savings and facilitate their use in housing, basic infrastructure and **other socially equitable and environmentally sound settlements** development;

(c) Develop efficient, equitable and buoyant sources of national and local revenues, including taxation, user charges, tariffs and betterment fees **levies** to promote national and local capacity for capital investment in housing, infrastructure and basic services; and devise, as appropriate, new financial instruments **which are conditional on mandatory international normative standards (MINS) including the penalizing penalize of environmental damage arising from both**

production and consumption of environmentally unsound activities (NGO Composite);

(d) Enhance national and local tax collection capabilities and expenditure control **to reduce cost attainment ? and increase tax effort for revenue maximization** (NGO Composite)

(e) *Strive for full cost recovery of urban services through user charges, while at the same time* Addressing the needs of the **people living in poverty poor, inter alia**, through pricing policies and, where appropriate, by *transparent* subsidies;

(f) Support local efforts to encourage voluntary private and community sector partnerships and participation in building, operating and maintaining basic infrastructure and services **which employ gender and marginalized group sensitive policies, and address the needs of marginalized groups and empower women with financial resources for home acquisition** (NGO Composite);

(g) *Rationalize and* Facilitate local authorities' access to national, regional and international capital markets and specialized lending institutions, including, *inter alia*, instituting municipal credit rating and credit systems, **which ensure that women and members of marginalized groups have genuine involvement and participation are integral in program in the development of socially equitable and environmentally sound human settlements** bearing in mind the borrower's capacity to repay the debt;

(h) Facilitate the role of local authorities in **working cooperatively forming partnerships with the private**, community and cooperative sectors and institutions for local development by **BEST practices enterprises development**;

(i) Institutionalize budget mechanisms, where appropriate, and accounting to enable local authorities to engage in medium- and long-term investment programmes;

(j) Establish *transparent* open systems and procedures to ensure financial accountability;

(k) Institutionalize, where appropriate, *transparent, open*, inter-governmental transfer **methods mechanisms** that are timely, predictable and performance- and need-based; and

(l) Attract **BEST practices enterprises private and community** investment to urban development.

(m) use a reduction of national military budgets to fund local programmes for human settlement as agreed through General Assembly Resolutions.

6. Information and communications

ARTICLE 141

141. Recent developments in information technology, in conjunction with the liberalization of trade and the free flow of capital on a global scale, **are bringing will bring** about radical changes in the roles and functions of cities, and their decision-making and resource allocation processes. Those Governments that make the necessary investments in information technology and infrastructure and enable and empower their citizens to make effective use of such technology can expect to foster tremendous **additional** productivity gains in industry, trade and commerce. **However in many countries these productivity gains have benefited only a fortunate few, while contributing to increasing income inequality and unemployment. Furthermore, these technologies are only available to those who can afford them and place the substantial majority of people who do not have access at an increasing disadvantage in a competitive global economy. In addition, there has been an unprecedented dependency on computer technology as the panacea for organizing infrastructures, and as noted recently the global conversion to accommodate the date transfer into the year 2000 will cost the global community at least \$400 billion US It is recognized that this improved information technology should be appropriately and optimally has the potential to be** utilized to preserve and share **cultural and** moral values and enhance and improve education, training **development of meaningful employment programmes for women and marginalized groups, has the potential to contribute to** public awareness of the social, economic and environmental issues affecting the quality of life, and **has the potential to** facilitate access by all *key actors and* communities to the exchange of habitat practices, including those which uphold the rights of children, women **disabled, frail elderly, displaced,** and other *vulnerable marginalized groups to genuine community involvement and participation in developing socially equitable and environmentally sound human settlements. context of growing urbanization.*

Actions

ARTICLE 142

142. To improve the capacity to *use exploit* these innovations **to enhance the public good**, governments **at all appropriate levels including** ~~and~~ local authorities **shall should:**

(a) **Develop, upgrade, and maintain** information infrastructure and technology **with a healthy skepticism about the role of this technology** and encourage their use by all levels of Government, public institutions and *civil society organizations individuals and groups of civil society*; **Caution should be exercised in becoming too dependent on this technology.**

(b) **develop and implement a training program for women, men of all ages and for members of marginalized groups** in the use, ways and means of information technology; (Composite NGO)

(c) Develop methods of sharing experiences through electronic means, such as the Internet, networks and libraries of local initiatives and the dissemination of **information on best BEST (Best Environmentally Sound Technique)** practices;

(d) **Implement programs that** encourage participation of children, youth, **women, the elderly, people in poverty, and other members of marginalized groups** in the use of public libraries and communication networks (NGO Composite);

(e) Facilitate the learning process through the dissemination of both successful and unsuccessful experiences in human settlements taken from governments, public **institutions, BEST practices enterprises, corporations, including transnationals, private and community organizations sectors**;

(f) **Establish Encourage** policies that make information technology and services available and more accessible to the general public; and

(g) Ensure *Guarantee* the free flow of, and access to, information in all areas of public policy, decision-making, resource allocation, **and social developments which impact women, children and marginalized groups (NGO Composite).**

(h) **Assure market competition and broad public access in the provision of information technology and media services by strictly limiting concentrations of private ownership and control and by maintaining public information technology and media facilities for those who otherwise lack access (NGO Composite).**

(i) **implement policy measures to assure that the benefits of productivity gains are broadly shared and contribute to livelihood creation rather to increased unemployment.**

142 bis. That dissemination of experiences that contribute to facilitate the access to adequate housing for all and the development of sustainable human settlements is helpful in the formulation of public policies on human settlements development. National governments, in partnership with social actors, should:

(a) Promote the selection of urban management practices which stand out by their positive impact in improving habitat, by their use of participatory modes of organization and operation, by their sustainable and lasting character, and by their tendency to become universal;

(b) Set up structures for the selection of the best practices with participation by non-governmental organizations active in the urban development field;

(c) Promote dissemination of the selected practices locally, nationally, regionally and internationally, in an integrated manner.

Part IV.

GLOBAL PLAN OF ACTION: *STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION*

E. International cooperation and coordination (143 -157 IN BRACKETS)

1. Introduction

ARTICLE 143

[143. The goals of ensuring adequate shelter for all and making human settlements and communities **environmentally sound, productive**, healthy, safe, more equitable and sustainable contribute to achieving world peace, development, stability and justice. International cooperation takes on added significance and importance in the light of recent trends in the globalization and the interdependence of the world economy. There is an urgent need to redefine and resuscitate the existing processes and structure of cooperation and to evolve new and innovative forms of cooperation with a view to enabling humankind to face the challenges posed by the development of rural and urban areas. **There is urgency to redefine development and move towards a new “international economic order” based on socially equitable and environmentally sound development. This new order may require the political will to reduce the global military budget by 50% (from the current 800 billion to 400 billion which it was in 1981 when there was a UN General Assembly resolution to freeze and reduce the military budget) at with the undertaking to transfer the peace dividend to socially equitable and environmentally sound development. The states of the world must firmly adhere to the principle endorsed in the United Nations Conference on Human Environment where states agreed to eliminate weapons of mass destruction, which by definition would include nuclear weapons as well and chemical and biological. In addition the global community must undertake to condemn the continued mining of uranium for weapons production, the use of civil nuclear reactors whose waste is a scourge for future generations, the use of plutonium from former nuclear weapons sites as a fuel for nuclear reactors. Thus** there is a need for the political will of all States as well as specific action by the international community to establish and inspire new forms of cooperation, partnership, coordination and investment, including the local private sector, in order to contribute effectively to the provision and improvement of shelter conditions in human settlements, especially in developing countries, taking into account the diversity of the needs of human settlements among countries.

144. **Although** the formulation and implementation of strategies for human settlements development are the responsibility of each country at the national and local levels, and should take into account the economic, social and environmental diversity of conditions in each country, **fundamental principles derived from the obligations incurred in the United Nation Conventions, Treaties, Covenants**

and from the expectations created in the United Nations Declarations, Conference action plans and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development. The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of mandatory international normative standards-and-technical regulations (MINS) that will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development.** Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real cooperation based on the highest tenable principles. This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive corporations including transnationals *private sector* to participate in socially equitable and environmentally sound development. *participation in the shaping of international cooperation.*** The international community, including multilateral financial institutions, **has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments.** In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, states undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.”. In addition the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which continue to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound technology that *environmental to ensure that additional resources to reinforce national efforts to foster an enabling environment to* **and** achieve the objectives of adequate shelter

for all and the **socially equitable and environmentally sound sustainable development** of human settlements.

ARTICLE 144 bis

144 bis. [International cooperation assumes added significance and importance in the wake of recent trends in the globalization of the world economy on the one hand and the continued deterioration of the plight of developing countries on the other hand. The problems resulting from poverty, urbanization, lack of adequate shelter including social housing, rapid population growth, rural-urban migration, economic stagnation and social instability are especially acute.]

ARTICLE 145

145. [In recent years disparities in economic growth, environmental degradation, and labour-market asymmetries have increased international migration, and have impacted on spatial distribution of cities' population entailing the imbalances of human resources among countries of origin and countries of destination.] Innovative approaches and frameworks for international cooperation in human settlements development and management must be sought and developed to include the active participation of all levels of Government, the **segment of private sector which is driven by high global mandatory regulations and standards** and cooperative sectors, non-governmental organizations and community-based organizations, in decision-making, policy formulation and resource allocation, implementation and evaluation. These approaches and frameworks should also include new and improved forms of cooperation and coordination between and among multilateral financial institutions, international organizations and various organs and bodies of the United Nations system, including south-south, north-south and south-north exchanges of best practices, the continuous development of policy, **and planning and management** tools and instruments such as the application of shelter and urban indicators, human resources development and institutional capacity-building. **In this new global partnership at all levels decisions will be guided by principles reflected in International instruments endorsed by the states within the global system.**

ARTICLE 145 bis

145 bis. These innovative approaches should also include new forms of cooperation and partnerships between multilateral and bilateral assistance agencies on the one side, and **individuals and groups of civil society** and local authorities, on the other, based on the **adherence to principles related to the enshrining and guaranteeing of the respect for human rights, the preservation, protection and conservation of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,**

Principles of local implementation of mandatory standards and regulations should guide "decentralized cooperation". This implies recognition of the capacity of local authorities to develop international relations and cooperation, with the existing legal frameworks of each country, their right to devote their own resources for that purpose and to be associated in the process of defining international human settlements policies. Governments as well as bilateral and multilateral aid-agencies should commit themselves to encourage decentralized cooperation between local authorities as well as the strengthening of networks of associations of local authorities.

EVIDENCE OF PRECEDENT

RE: REDUCING OF DISPARITIES

4. It is of paramount importance that national and international efforts give priority to improving the rural habitat. In this context, efforts should be made towards the reduction of disparities between rural and urban areas, as needed between regions and within urban areas themselves, for a harmonious development of human settlements. (III 4 Habitat I)

2. Enabling international context

ARTICLE 146

146. *The process of Urbanization has resulted from a development model that has been based primarily on economic progress. Socially equitable and environmentally sound human settlements will result from a cooperative and collective undertaking to ensure social justice, to enshrine and guarantee the respect for human rights, to preserve, conserve and protect the environment, and to prevent of conflict and war. is linked to economic development, social development and environmental protection, The promoting of BEST (Best Environmentally Sound Traditions) practices, the preserving and protecting of the environment, the ensuring of social justice are interdependent and mutually reinforcing components of sustainable socially equitable and environmentally sound development. The provision of adequate shelter for all and sustainable socially equitable and environmentally sound human settlements development are increasingly influenced by the global economy. In this context, it is imperative to enable requires all countries, especially developing countries, to improve living and working conditions in human settlements to draw upon endogenous BEST practices with international funding to assist in developing traditional practices. The international funding should be provided to stimulate BEST practices. This calls for an enabling international environment and integrated approaches at national and international levels which take account of the efforts of countries to implement programmes of economic*

reform or economic transition. Furthermore, **BEST practices technological developments** are leading to major changes in the structure of **meaningful** employment. *[It should be recognized that in social and economic terms the housing sector is a productive sector and should be treated on an equal basis with other productive sectors. Achievement of the goal of sustainable human settlements development at the global level would depend on fair and durable solutions of, inter alia, the issues of finance, debt, trade and transfer of technology.]*

ARTICLE 147

147. The international community should support governments in their efforts **to promote socially equitable and environmentally sound** *to cope with the impact of these changes on human settlements* within a framework of **cooperation and collectiveness** *enabling strategies*. The international community **should shall** promote:

(a) *The establishment of **Openness, equity, co-cooperativeness and mutually benefit** open, equitable, cooperative and mutually beneficial international economic environment;*

(b) *The co-ordination of macroeconomic policies at all levels to achieve an international financial system that is conducive to stable and **sustained economic growth** and **socially equitable and environmentally sound** development;*

(c) *An international financial system that is more conducive to stable and **socially equitable and environmentally sound** **sustainable** human settlement **development** through, inter alia, a higher degree of stability in international financial markets, a reduction of the risk of financial crisis, and lower real interest rates;*

(d) *An environment in all countries, [including developing economies, economies in transition and developed economies,] that attracts foreign and domestic direct investment, and encourages savings;*

(e) **BEST (Best Environmentally Sound Traditions) practices** *development, productive investment and expanded access to open and dynamic markets in the context of an open, equitable, secure, non-discriminatory, predictable, transparent and multilateral rule-based international trading system, [and to technologies for all people, especially those living in poverty and the disadvantaged and marginalized , as well as for the least developed countries];*

(f) *Capacity building though **BEST practices** in developing countries in all regions, particularly African countries and the least developed countries: and in countries with economies in transition;*

(g) The strengthening and improvement of *technical and* financial assistance to developing countries in all regions to promote **sustainable socially equitable and environmentally sound** development and overcome hindrances to their full and effective **genuine involvement and** participation in the world economy.

ARTICLE 148

148. With specific reference to *sustainable socially equitable and environmentally sound* human settlements *development* and the provision of shelter, the international community **shall should**:

(a) Ensure that the benefits of **the global economy economic growth** improve people's quality of life in all nations, regardless of where people live;

(b) *Mobilize Provide* national and international financial resources for shelter provision and **socially equitable and environmentally sound sustainable** human settlements *development*;

(c) Facilitate increased access by all levels of government, by **BEST practices enterprises, and by individuals and groups of civil society including those usually marginalized by society and the private sector in developing countries and countries with economies in transition** to international financial resources to enable them to attract investment in shelter and infrastructure for **sustainable socially equitable and environmentally sound** human settlements *development*;

(d) In a manner consistent with national legislation, seek to increase the ability of local authorities, non-governmental organizations and **BEST practices enterprises the private sector** to link *directly with global capital markets, in accordance with prudential safeguards in those markets*, to finance their shelter and infrastructure programmes *and to establish international and local mechanisms and instruments to facilitate risk sharing and credit enhancement for investing agencies - local, regional and national*;

(e) Promote strategies to ensure substantial, well-directed *public and private* investments in **BEST practices** in shelter, infrastructure and health, education and other basic services, including through the provision of *appropriate technical and* financial assistance;

[(f) Encourage international cooperation, in order to address the negative impact of international migration through *technical* assistance, **BEST practices management know-how, exchange of information as well as**

by ensuring equitable wages and working conditions for both migrant and native workers.]

[(g) Continue to provide support to refugees in order to meet their needs, and to assist in assuring them a just, durable solution in accordance with relevant United Nations resolutions and international law, noting that sustainable human settlements can only be established for them on their land of origin.]

3. Financial resources and economic instruments

ARTICLE 149

149. The **need and the** demand for shelter *and infrastructural services in human settlements* is continuously increasing. *Communities and countries, especially developing countries, have difficulties in mobilizing adequate financial resources to meet rapidly rising costs of shelter, services, and physical infrastructure.* [New and additional financial resources, from various sources, are necessary to achieve the goals of adequate shelter for all and **socially equitable and environmentally sound sustainable human settlements development** in an urbanizing world. The existing resources available to developing countries - public, private, multilateral and bilateral - need to be enhanced through appropriate and flexible mechanisms and economic instruments to support sustainable human settlements development.]

ARTICLE 150

150. Implementation of the Habitat Agenda, particularly in developing countries of all regions, especially those in Africa and the least developed countries, will need additional financial resources *to be mobilized* at national and international levels and more effective development cooperation and assistance. This will require, inter alia:

ARTICLE 150 (a—z)

General

[150. (a) Translating the commitments of Habitat II into financial implications for the provision of adequate shelter and **socially equitable and environmentally sound human settlements development** in developing countries in all regions, particularly those in Africa and the least developed countries;

(b) Promoting assistance for shelter and human settlement activities in favour of **vulnerable marginalized** groups, such as refugees and internally displaced persons, documented migrants and the homeless through specific targeted grants and other assistance programmes;

15 The highest priority should be placed on the rehabilitation of expelled and homeless people who have been displaced by natural or man-made catastrophes, and especially by the act of foreign aggression. In the latter case, all countries have the duty to fully cooperate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

Official financial resources

(c) Raising the priority of adequate shelter for all and **socially equitable and environmentally sound *sustainable* human settlements development** among multilateral and bilateral donors *and mobilizing their support* for national, sub-regional and regional plans of action of developing countries, especially for interested beneficiary countries;

(d) Striving to fulfil the 0.7 percent of GDP target and the 0.15 percent of GNP target for assistance to the least developed countries as soon as possible, and to increase, where appropriate, the share of funding for **socially equitable and environmentally sound *sustainable* human development** programs;

(e) Achieving the agreed targets of 0.7 percent of GNP for overall official development assistance (ODA), and 0.15 percent of GNP for assistance to the least developed countries, as soon as possible, and no later than the year 2000, and increasing the share of funding for adequate shelter and **socially equitable and environmentally sound development programmes** in human settlement, commensurate with the scope and scale of activities required to achieve the objectives and goals of the Habitat Agenda;

(f) Replacing *Striving to ensure that* structural adjustment programmes with programmes that would respond to the needs of those who have been indebted as a result of over-consumptive models of development inconsistent with **socially equitable and environmentally sound development. *sustainable human settlements development***;

(g) Inviting the international financial institutions to examine innovative approaches with **genuine community involvement and participation** to assisting low-income countries with a high proportion of multilateral debt, with a view to alleviating their debt burden;

Partnerships Cooperative participation

(h) Encouraging multilateral development institutions and donors to support nations in their effort to pursue enabling strategies through which national and local governments, communities and **BEST practices enterprises** *the private and cooperatives sectors can form can work collectively and cooperatively together* *partnerships to participating in providing shelter and sustainable socially equitable and environmentally sound human settlements activities;*

(i) Inviting multilateral and bilateral donors to support countries, particularly developing countries, in their efforts to pursue enabling strategies through which governments, local authorities, communities, and the private and cooperative sectors can form partnerships to participate in the provision of adequate shelter, including social housing and sustainable human settlements development activities;

(j) Exploring ways and means to strengthen support and expand south-south cooperation based on the concept of triangular cooperation, partnership between developing and developed countries, as well as enhanced cooperation among developing countries;

(k) Consolidating solidarity of the international community and its organizations to provide adequate shelter for all and sustainable human settlements development for people living under foreign occupation;

Improving the effectiveness of financial resources

(l) Striving to enhance the effectiveness of existing ODA and other external financial flows through improving coordination between **policies and among of donors and mandatory international normative standards derived from obligations, and expectations from international United Nations instruments and agreements** *operational activities, and through better coherence between those flows and internal sustainable human settlements strategies;* those practices related to socially equitable and environmentally sound development.

(m) Supporting programmes that increase the effectiveness and **openness** *transparent utilization* of public and private resources, reduce wasteful and untargeted expenditure and increase access to housing and services for people living in poverty;

(n) Recognizing the negative effect of excessive military expenditures, trade in arms, especially of those arms that are particularly injurious or have

indiscriminate effects such as land mines whose use should be banned, and excessive investment for arms production and acquisition; The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget (UN General Assembly 36/81). Also, in 1981 the UN General Assembly undertook to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81.

DOCUMENTATION OF PRECEDENT:

RE; PREVENTING WASTE AND MISUSE OF RESOURCES FOR WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

(o) Giving preference, wherever possible, to the *use utilization* of competent national experts or, where necessary, of competent experts from within the sub-region or region or from other developing countries, in projects and programmes design, preparation and implementation, and to the building of local expertise where it does not exist; **and at all times there shall be genuine community involvement and participation;**

(p) Maximizing projects and programmes efficiency by keeping overhead costs to a minimum;

(q) Integrating practical measures for **preventing and reducing disaster-vulnerability** in development programmes and projects, in particular construction of buildings and communication systems, financed by the international community, and ensuring that such measures become an integral part of feasibility studies and project identification;

Private Non-exploiting enterprises financial resources

(r) Developing economic policies to promote *and mobilize* domestic savings and attract external resources **for socially equitable and environmentally sound *productive* investments within a context of BEST**

practices driven by MINS 1997, and seeking innovative sources of funding, both public and non-exploiting enterprises *private*, for adequate shelter and socially equitable and environmentally sound *sustainable* human settlements development *programmes*, while ensuring their effective utilization;

(s) Strengthening financial *and technical* assistance for **BEST practices** and community-based development and self-help programs, and strengthen cooperation among governments at all levels, community organizations, cooperatives, formal and informal banking institutions, *private BEST practices* enterprises and international institutions, with the aim of *mobilizing* providing local savings, promoting the creation of local financial networks, and increasing the availability of credit and market information to low-income individuals, people in poverty, women, and *vulnerable* marginalized and disadvantaged groups for shelter and **socially equitable and environmentally sound** human settlements *development*;

(t) Facilitating access to global finances for governments and local authorities which are initiating or are involved in **working cooperatively** with **BEST practices** enterprises, and with individuals and groups of civil society including individuals and groups that are usually marginalized from the decision making process and *public-private partnership programmes*;

(u) Establishing and supporting linkages of informal credit mechanisms to the global pool of resources and increasing access by a majority of the population to housing finance through participatory processes involving communities, non-governmental organizations, credit unions, global financial institutions and other relevant actors;

Existing economic instruments

(v) Attracting international flows of public finances for **providing** shelter *provision* and **socially equitable and environmentally sound** human settlements *development* through appropriate economic instruments;

(w) *Considering means to facilitate foreign private sector investment in sustainable human settlements projects, particularly in the areas of infrastructure and transportation, for example by way of BOT schemes*;

(x) Assisting countries, particularly developing countries, in implementing effective and equitable pricing mechanisms for adequate shelter and **socially equitable and environmentally sound** settlements human settlements, infrastructure and services to induce greater flows of *private*,

domestic and global funds, while ensuring **openness** *transparent* and *targeted* subsidies for people living in poverty;

(y) Examining appropriate debt-equity swapping measures in favour of shelter and infrastructure development in human settlements;

Innovative economic instruments

(z) Developing innovative sources of funding, *both public and private*, for **socially equitable and environmentally sound human settlements development**, and creating a *supportive environment support* for the *mobilization of resources* by **individuals and groups of civil society**, including beneficiary and individual voluntary contributions;

Special financing needs/issues

(aa) Providing assistance for shelter and **socially equitable and environmentally sound human settlement development activities in favour of** for people living in poverty, particularly women, and **vulnerable marginalized groups**, such as refugees, internally displaced persons, people with disabilities, street children, migrants and the homeless through specific targeted grants;

(bb) Promoting assistance for shelter and human settlement activities in favour of **vulnerable marginalized groups**, such as refugees and internally displaced persons, documented migrants and the homeless through specific targeted grants and other assistance programmes;

(cc) Recognizing the need for shelter and **socially equitable and environmentally sound human settlements development** in order to address the special conditions of some countries experiencing natural and human-made disasters and the urgent need to reconstruct their economies and **communities human settlements**;

(dd) Implementing the commitments of the international community to the special needs and vulnerabilities of human settlements in the small island developing States, in particular by providing effective means, including adequate, predictable, new and additional resources for **programmes for socially equitable and environmentally sound human settlements programmes**, in accordance with the Declaration of Barbados and on the basis of relevant provisions of the Programme of Action for the Sustainable Development of Small Island Developing States;

(ee) Providing international support and assistance to the land-locked developing countries and their neighbour transit [?] developing countries in their efforts to implement the outcome of Habitat II, taking into account the challenges and problems characteristic to those countries;

(ff) Agreeing on a mutual commitment between interested developed and developing country partners to allocate, on average, 20 per cent of ODA and 20 per cent of the national budget, respectively, to basic social programmes;

(gg) Providing soft loans and grants to enable all nations to specifically address the needs of *vulnerable marginalized groups*.]

4. Technology Transfer and Information Exchange

ARTICLE 151

151. [The use and transfer of environmentally sound *technologies practices* which have a profound impact on consumption and production patterns is one of the prerequisites for **socially equitable and environmentally sound sustainable** human settlements *development*. Advanced **BEST (Best Environmentally Sound Traditions) practices and appropriate technologies** and the knowledge-based systems which support their application offer new opportunities for more efficient use of human, financial and material resources, *more sustainable industrial practices* and new sources of **meaningful** employment. International agencies including UNCHS (Habitat) have an essential role in disseminating and facilitating access to information on **BEST practices available technologies** and options for their transfer. It is understood that the transfer of *technology* **BEST practices** includes assurances of adequate protection of intellectual property and mutually agreed allocation of *commercial* benefits, **particularly those benefits that shall accrue to developing countries for traditional practices including those related to biodiversity, and biotechnology**].

ARTICLE 152

152. The international community, in promoting and facilitating the transfer of technology and expertise in support of the implementation of national plans of action, should:

(a) Establish and reinforce, as appropriate, global networks among all [stakeholders] individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society to facilitate information exchange on environmentally sound technologies particularly those related to shelter and human settlements;

(b) Ensure that the process of technology transfer is fair and avoids dumping of environmentally unsound technologies on the recipients, and also avoids the replacing of significant endogenous BEST practices. In addition, the promotion of clean-up technology which has been used to justify the continuation of the production of hazardous, toxic or atomic wastes undermines the development of BEST practices, and should be discouraged so that the emphasis will be on prevention practice—doing it right the first time.

(c) [Facilitate] [Develop and intensify] technical cooperation with and among all regions including south - south cooperation in order to exchange experiences particularly on best practices, foster the development of technology and technical skills and to increase the efficiency of shelter and human settlements policies and management, with backing of coordinated and complimentary support from multilateral and bilateral arrangements;

(c bis.) Ensure use of appropriate technology and production of local building materials;

(d) Place special emphasis on the funding, and promotion and dissemination of applied research and innovation in all areas which could contribute to enhancing the capabilities of developing countries particularly those in Africa and least developed countries, to provide shelter, urban services, infrastructure and amenities to their communities;

(d bis.) Support the development of international, sub-regional and regional networks of research, production, dissemination and commercialization institutions for locally produced building materials;

(e) [Enhance the identification and dissemination of new and promising technologies related to human settlements which generate meaningful employment and lower cost of infrastructure, make basic services more affordable, and minimize detrimental environmental impacts, and identify specific roles for existing United Nations organizations, [especially UNCHS (Habitat)] which would promote these goals].

5. Technical Cooperation

ARTICLE 153

153. [To face the challenges of the rapidly urbanizing world, there is need to ensure that international and regional networks facilitate more effectively the exchange and transfer of knowledge and experience on institutional, legal and regulatory framework, and to disseminate best practices on sustainable human settlements in rural and urban areas. UNCHS (Habitat) should [play central role] and act as catalyst in mobilizing technical cooperation. Opportunities for improved dissemination and exchange of ideas on technical cooperation at national and regional levels could be explored.]

ARTICLE 154

154. More specifically, the international community should:

(a) Establish, [within existing resources] cost-effective global human settlement information networks in the form of permanent and "electronic conferences" which will contain updated information and the Global Plan of Action, best practices, as well as *progress* **Obligations discharged/Expectations fulfilled** reports on the implementation of national plans of action;

(b) Through global human settlements information networks, assist Governments at all levels, all major groups of actors and international development agencies, in assessing information and policies, strategies, programmes and projects on sustainable human settlements development and shelter provision;

(c) [Under the leadership of the Commission on Human Settlements, and supported by the United Nations regional economic commissions and UNCHS (Habitat), develop awareness-building and information activities to ensure that human settlements development issues in general, and concerted policy and programme responses to urbanization in particular, are brought into the mainstream of the development objectives of the international community and national Governments];

(d) Develop and strengthen, with a view to supporting and facilitating national and local efforts in human settlements management, capacity-building programmes and promote exchange of experiences and policy responses to urbanization and integration of regional development within the framework of national development strategies;

(e) Through the secretariat of the United Nations Commission on Human Settlements, UNCHS (Habitat), supported by information gathered by United Nations regional economic commissions, develop capacity building strategies in order to enhance the capabilities of national and local authorities to identify and analyze critical human settlements issues; to formulate and effectively implement policies and programmes which respond to them; and to efficiently manage the process of settlements development at the local levels;

(e bis.) Through appropriate institutions, continue to promote capacity-building in developing countries with effective utilization of national experts;

(f) Continue to support technical cooperation programmes aimed at mitigating the effects of natural and human-made disasters, as well as reconstruction activities in affected countries;

(g) Enable UNCHS (Habitat), [within existing resources], to provide technical, legal and institutional assistance to Governments at all appropriate levels upon request, in particular, in closer cooperation with UNDP's capacity building efforts.

ARTICLE 155

6. Institutional cooperation

155. The task of pursuing the goals of adequate shelter for all and sustainable human settlements development, in the face of increasing global economic interaction, necessitates international cooperation of public and private institutions operating in the areas of human settlement development, whereby resources, information and capacities are pooled for a more effective response to human settlements problems.

ARTICLE 156

156. [The Habitat Agenda adds new elements to the agenda for national actions and international cooperation, reaffirming, **building on the obligations incurred in Conventions, Treaties and Covenants, and on expectations created through Declarations, Conference Action plans, and General Assembly Resolutions, as well as on the results of the recent major United Nations conferences.** Governments confirm the need for a coordinated follow-up of the major world conferences, including Habitat II. The very nature of urban challenges requires an integrated approach to **sustainable socially equitable and environmentally sound development** and thus increased cooperation and coherence. Existing intergovernmental bodies within the United Nations system should be used to promote communication and coordination between governments, international bodies - including those of the United Nations system and the Bretton Woods system, as well as other relevant [stake-holders] - and to strengthen a common perception of human settlements priorities].

156 bis. [Implementation of The Habitat Agenda should take place within a coordinated framework which ensures that all the United Nations' **obligations incurred in Conventions, Treaties and Covenants, and all the**

United Nations' expectations created through Declarations, Conference Action plans, and General Assembly Resolutions, Conferences are comprehensively followed-up and the agreed programmes of action fully implemented, monitored and reviewed, together with the results of other obligations and expectations from previous international instruments, as well as of other recent United Nations Conferences where they are related to human settlements, particularly the World Summit for Children, the United Nations Conference on Environment and Development, the World Conference on Human Rights, the World Conference on Natural Disaster Reduction, the Global Conference on the Sustainable Development of Small Island Developing States, the World Summit for Social Development, the International Conference on Population and Development, and the Fourth World Conference on Women. This will require better coordination and cooperation between multilateral and bilateral partners and joint programming, leading to increased and more effective cooperation between UNCHS and other entities within and outside the United Nations system].

ARTICLE 157

157. The United Nations family of agencies, including the Bretton Woods institutions, the regional and sub-regional development banks and funds and bilateral support agencies [where appropriate] **shall should:**

(a) **Undertake to require Mandatory International Standards-and-technical-regulation (MINS) drawn from international principles reflected in obligations incurred by states in Conventions, Treaties, and Covenants, and in expectations created in Declarations, General Assembly Resolution, and Conference action plans as a condition for funding; and establish and strengthen, where appropriate, cooperative mechanisms means to integrate into their policies, programmes and operations, socially equitable and environmentally sound sustainable human settlements development including commitments and actions, particularly those from The Habitat Agenda and taking into account the expectations created through outcome of the relevant sections of other recent United Nations Conferences, Declarations and General Assembly Resolutions;**

(b) Establish and strengthen **counterparts and cooperation partnerships** with international associations of local authorities, non-governmental and community-based organizations and with all other *[stakeholders individuals and organizations of civil society drawing upon a wide range of experience and expertise, including that from marginalized members of society to achieve the goals of the Conference;*

- (c) Develop activities aimed at strengthening the capacity of local authorities;
- (d) Intensify their cooperation with non-governmental organizations, voluntary groups and community associations, and with **BEST practices enterprises private** and cooperative **groups sectors** in **socially equitable and environmentally sound sustainable** human settlements *development*;
- (e) Support **cooperative programmes with genuine community involvement and participation** *public-private partnerships* in **providing** shelter *delivery*, services *provision* and other **socially equitable and environmentally sound development activities for sustainable** human settlements;
- (f) Encourage **genuine community involvement and participation** *the involvement of all actors* at local level in reaching agreements and local measures, programmes and actions necessary to implement The Habitat Agenda, Global Plan of Action and national plans of action including through Local Agenda 21 processes as mandated by the United Nations Conference on Environment and Development.]

unsustainable patterns of production and consumption raise these problems in especially acute forms. (Art. 6)

Part IV.**GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION****F. Implementation and follow-up of the Global Plan of Action****(Paragraphs 158 - 185 bracketed)***(The following paragraph is to be incorporated into section F in square brackets)*

[Set up an advisory centre to identify appropriate financial institutions such as ADB and World Bank to avail themselves to assist member states to secure financial assistance/funding for the implementation of shelter and human settlements programmes.]

Note on Part IV, Chapter F: 158 - 184. The entire paper was bracketed.

1. Introduction

ARTICLE 158

[158. **Before governments undertake new commitments they shall be made aware of relevant existing obligations incurred through Conventions, Treaties, and Covenants and of relevant expectations created through Declarations, Conference Action Plans and General Assembly Resolutions. The initial commitment shall be for states to fulfill years of previous obligations by signing what they have not yet signed, ratifying what they have not yet ratified, enacting legislation to ensure compliance, and establishing an enforcement infrastructure to ensure discharging of these obligations. 1987-1997 is the Decade for International Law and during this decade it would be appropriate for states to finally undertake to discharge their accrued obligations. The long-term impact of the commitments made by Governments and the international community at Habitat II will depend on the implementation of actions agreed upon at all levels including local, national and international levels. Also, national plans of action and/or other relevant national programmes and actions on sustainable human settlements development and shelter provision will need to be developed or strengthened, where appropriate, and their implementation will need to be monitored and evaluated by Governments and their partners at the national level in *sustainable development* socially equitable and environmentally sound development. Similarly *progress in* implementing— the discharging of obligations and the fulfilling of expectation— the Global Plan of Action needs to be assessed, with a view to encouraging and enabling all *stakeholders* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by non-fulfillment of expectations from the Global Plan of Action.]**

2. Implementation at the national level

ARTICLE 158 bis

158 bis. Governments have the primary responsibility of implementing the Global Plan of Action. Governments as central partners will create and strengthen effective partnerships with families, communities, local authorities, the private sector, non-governmental organizations, women, youth, elderly, *vulnerable marginalized* groups and indigenous people(s) in each country. National mechanisms should be installed or improved, as appropriate, to coordinate actions at all relevant government levels which have impact on human settlements and to assess this impact prior to governmental actions. Local authorities should be supported in their approach to implement this Global Plan of Action inasmuch as local action is required. All appropriate participatory mechanisms, including Local Agenda

21, should be developed and employed. It should be recognized that many of the provisions necessary for achieving socially equitable and environmentally sound development and for ensuring ecologically sustainable communities were already evident in Agenda 21, and that what is necessary is the political will of states to enact the necessary legislation and mandatory international normative standards-and0regulations to ensure compliance. In the Platform of Action in Beijing in Art.167 states undertook to ensure that corporations including transnationals comply with existing national and international law.

3. Implementation at the international level

ARTICLE 159

159. The effective implementation of the outcome of the United Nations Conference on Human Settlements (Habitat II) should take into account the integration **social equity and justice of sustainable human settlements development** with broader environmental, social and economic considerations into the concept of **socially equitable and environmentally sound development**. The main actors at the global level for the implementation and follow-up of the Habitat Agenda will continue to be Member States of the United Nations, the United Nations General Assembly, the Economic and Social Council, the Secretary-General of the United Nations, the United Nations Commission on Human Settlements and its Secretariat, the United Nations Centre for Human Settlements (Habitat), and all other specialized agencies of programmes in the United Nations system engaged in activities pertaining to the provision of adequate shelter for all and sustainable human settlements development in an urbanizing world.

4. Tracking implementation—the discharging of obligations and the fulfilling of expectations *progress*—on the Global Plan of Action

ARTICLE 160

160. The implementation of the Habitat agenda will require the discharging of obligations incurred in Conventions, Treaties, and Covenants and the fulfilling of expectations created in Declarations, Conference action plans and General Assembly Resolutions. Member States of the United Nations shall *exert concerted efforts to achieve the implementation* **implement** of the Habitat Agenda through bilateral, sub-regional, regional and international mechanisms for cooperation as well as through the United Nations system and the Bretton Woods institutions. **The lending policy of the Bretton Woods institutions shall be determined by a set of principles extracted from a body of international instruments.**

ARTICLE 161

161. The General Assembly, as the highest intergovernmental body— reflecting the democratic will of member states— is the principal policy-making and appraisal organ of international conference agreements. The Habitat II Conference is the final conference in a series of five dealing with environment, human rights, population, women (equality, development and peace). The series of conferences reflect, in many cases, a refinement of thought about global issues, and a synthesis of the essential principles emerging from the expectation created in all the conference action plans, as well as from the obligations incurred in Convention, Treaties, and Covenants shall be undertaken in 1997 in recognition of the culmination of the decade devoted to the promoting and furthering of international law. In addition in honour of this decade concerted effort should be made to call upon states to sign what they have not yet signed, to ratify what they have not yet ratified, to enact the necessary legislation to ensure compliance, and to enforce the legislation to ensure the discharging of obligations and the fulfillment of expectations. Concerted effort should also be made to establish an International Court of Compliance where citizens could take evidence of state non-compliance with obligations and expectations. At the Special Session of the General Assembly convened for 1997 for the purpose of an overall review and appraisal of Agenda 21, due attention should be given to the issue of human settlements in the context of *sustainable socially equitable and environmentally sound* development. The General Assembly is the principal policy-making and appraisal organ on matters relating to the follow-up of Habitat II. At the Special Session of the General Assembly convened for 1997 for the purpose of an overall review and appraisal of Agenda 21, due attention should be given to the issue of human settlements in the context of *sustainable socially equitable and environmentally sound* development. Also, the Assembly should include the follow-up to the Conference in its agenda as an item entitled "Implementation of the Outcome of the Second United Nations Conference on Human Settlements (Habitat II)". In its fifty-first session, it should review the outcome of the conference as well as the steps required to implement the Habitat Agenda;

ARTICLE 162

162. The General Assembly should hold a special session in the year 2006 for an overall mid-term review and appraisal of the implementation of the outcome of Habitat II and should consider further actions and initiatives.

ARTICLE 163

163. **The Economic and Social Council, in accordance with its role under the Charter of the United Nations and with relevant General Assembly Resolutions and ECOSOC decisions should in 1997 in respect for the culmination of the decade devoted to the respect and furtherance of international law, should assist in the promotion of the need for states to discharge obligations arising from Conventions, Treaties, and Covenants, and to fulfill expectations arising from General Assembly Resolutions, Declarations, and Conference action plans . The Economic and Social Council, in accordance with its role under the Charter of the United Nations and with relevant General Assembly Resolutions and ECOSOC Decisions, would oversee system-wide coordination in the implementation of the Global Plan of Action and make recommendations in this regard. The Council should be invited to review at its substantive session in 1997 the implementation of the Global Plan of Action. As coordinating body, the Council should be invited to review in 1997 the role and functioning of the Commission on Human Settlements, taking into account the need for synergy and effective coordination with other related commissions and conference follow-up, and with a view to ensure a clear division of labour and coordination of multi-year programmes of work. In addition, it should consider dedicating one high-level segment before the year_2001 to human settlements and implementation of the Global Plan of Action with the active involvement and participation, inter alia, of the specialized agencies, including the World Bank and IMF.**

ARTICLE 164

164. **The Economic and Social Council (ECOSOC), may convene meetings of high-level representatives to promote international dialogue on the critical issues pertaining to adequate shelter for all and sustainable human settlements development as well as on policies for addressing them through international cooperation.**

ARTICLE 165

165. **The ECOSOC, in the context of its role under the Charter of the United Nations vis-à-vis the General Assembly and in accordance with the relevant General Assembly resolutions, would facilitate system-wide coordination in the implementation of the outcome of Habitat II and make recommendations in this regard. It should look at ways to strengthen, consistent with the mandates of the Charter of the United Nations, the role and authority, structures, resources and processes of ECOSOC, for bringing economic and social development agencies into a closer working relationship with it so that it can review *progress made towards implementing the implementation—the discharging of obligations and the fulfilling of expectations—the outcome of Habitat II.***

ARTICLE 166

166. The General Assembly and ECOSOC should support the establishing of Mandatory International Standards-and-technical-regulation (MINS) drawn from international principles reflected in obligations incurred by states in Conventions, Treaties, and Covenants, and in expectations created in Declarations, General Assembly Resolution, and Conference action plans . The MINS 1997 commemorates the culmination of the Decade for the respect and furtherance of international law. MINS 1997 should assist the development banks to drive socially equitable and environmentally sound development for the fulfilling of the expectations in Habitat II Agenda. The General Assembly and ECHOIC should promote sub-regional and regional cooperation in the implementation of the Habitat Agenda. In this regard, the regional commissions, in cooperation with the regional intergovernmental organizations and banks, should convene meetings at the highest political levels to review the implementation—the discharging of obligations and the fulfilling of expectations—the outcome of Habitat II. , exchange views on their respective experiences, particularly in the best practices, and adopt appropriate measures. The regional commissions should report to the Council on the outcome of such meetings.

167. As a functional commission assisting the Economic and Social Council, the Commission on Human Settlements should have an important role in monitoring, within the United Nations system, the implementation of the Global Plan of Action.

ARTICLE 168

168. The mandate of the Commission will be strengthened and expanded to incorporate and implement the Habitat Agenda. Similarly UNCHS (Habitat) will be strengthened and revitalized in accordance with the relevant resolutions of the General Assembly with a view to enabling it to effectively implement the expanded mandate contained in the Habitat Agenda under the overall policy direction of the United Nations Commission on Human Settlements. UNCHS should be evolved into a highly competent technical secretariat capable of implementing the Habitat Agenda. For the purpose, UNCHS (Habitat) will be restructured and strengthened to deal effectively with the Habitat Agenda.

ARTICLE 175

175. The Secretary General is invited to ensure effective coordination of the implementation of the Global Plan of Action, and adequate consideration of human settlements needs in all activities of the United Nations. The Administrative Committee on Coordination (ACC) should review its

procedures at the inter-agency level to ensure system-wide coordination and full participation of its entities in the implementation of the Global Plan of Action. These entities should examine their programmes to determine how they can best contribute to the coordinated implementation of the Global Plan of Action. ACC should be invited to establish a task force on The Habitat Agenda. UNCHS (Habitat) should be added to the membership of ACC and to the task force on The Habitat Agenda.

ARTICLE 176

176. The Secretary General is invited to continue to ensure effective functioning of the United Nations Centre for Human Settlements (Habitat). In conjunction with the review of the mandate of the Commission on Human Settlements, the functions of the Centre should be assessed by the Economic and Social Council.

ARTICLE 177

177. The important role of the Committee on Economic, Social and Cultural Rights in monitoring those aspects of the Statement of principles *Principals* and Commitment on Global Plan of Action that relate to compliance, by States Parties, with the International Covenant on Economic, Social and Cultural Rights should be emphasized. It is recognized that discharging of obligations under the ICESCR and fulfilling expectations enunciated in the Habitat Agenda require the concomitant discharging of previous obligations and fulfilling of previous expectations. These obligations have been incurred under Conventions, Treaties and Covenants and these expectations have been created through General Assembly Resolution, Declarations and other Conference action plans related to the guaranteeing of human rights, the preserving, protecting and conserving the environment, the fostering of peace, and the enabling of socially equitable and environmentally sound development. It is only when these obligations have been discharged and the expectations fulfilled that the global community will achieve the socially equitable and environmentally sound global settlements.

ARTICLE 178

178. To strengthen their support for actions at the national level and to enhance their contributions to an integrated and coordinated follow-up by the United Nations,

specialized agencies and other organizations of the United Nations system should identify the specific actions they will undertake to meet the priorities identified in the Global Plan of Action.

ARTICLE 179

179. In order to improve the efficiency and effectiveness of United Nations organizations in providing support to the efforts for the provision of adequate shelter for all and sustainable human settlements development at the national level, and to enhance their capacity to achieve the objectives of Habitat II, there is a need to renew, reform and revitalize the various parts of the United Nations system, in particular its operational activities. All specialized agencies and related organizations of the United Nations system are invited to strengthen and adjust their activities, programmes and medium-term strategies, as appropriate, to take into account the follow-up to Habitat II. Relevant governing bodies should review their policies, programmes, budgets and activities in this regard.

(a) The United Nations Development Programme (UNDP) should enhance its efforts to support the implementation of The Habitat Agenda through its network of field offices;

(b) The International Labour Office (ILO) should coordinate and support concrete actions at the policy and programme levels for the implementation of the Habitat Agenda with regard to the expansion and protection of **socially equitable and environmentally sound meaningful employment and work;**

(c) The United Nations Children's Fund (UNICEF) should consider integrating its Urban Basic Service Programmes, the Mayors Defenders of Children Initiative, and the Decentralization of the UNICEF National Plans of Action with the Habitat Agenda through broad partnerships for sustainable community development and community management;

(d) The United Nations Conference on Trade and Development (UNCTAD) should contribute to analyzing and monitoring major trends of urbanization and impact of urban and rural policies in connection with changes in the global economic environment;

(e) The United Nations Environment Programme (UNEP) should develop and promote policies to enhance the environment and integrate environmental considerations in human settlements development and adequate shelter for all and catalyze action to achieve these goals at the international, regional, sub-regional and national levels;

(f) The United Nations Fund for Population Activities (UNFPA) in coordination and cooperation with other United Nations entities, should pursue activities related to basic social services for all;

(g) *The United Nations Industrial Development Organization (UNIDO) in implementing the Habitat Agenda should address areas which require the competitiveness of export-oriented enterprises and competitive local and national enterprise growth;*

(h) The World Health Organization (WHO) should in the implementation of The Habitat Agenda be guided by the global importance of health issues, the linkage of those issues to sustainable human settlements and adequate shelter, and the close relationship between public health and basic urban and rural services and the need to place human beings at the centre of development.

ARTICLE 180

180. International financial institution should be proactive and be involved with driving BEST endogenous practices through requiring that funding being conditional on compliance with (MINS 1997) — mandatory, international normative standards and technical regulation drawn from international instruments, and in this way ensure funding *contribute to the mobilization of resources for the implementation of The Habitat Agenda*. To this end, the relevant institutions are urged to take the following measures:

(a) The World Bank, the International Monetary Fund, the regional and sub-regional development banks and funds, and all other international finance organizations *should* shall undertake to require mandatory international normative standards (MINS) drawn from principles in international instruments as a condition to funding projects; In addition they should further integrate adequate shelter for all and sustainable human settlement development goals in their policies, programmes and operations, including by giving higher priority to these goals, where applicable, in their lending programmes;

(b) The Bretton Woods institutions and other organizations and bodies of the United Nations system should work together with concerned countries particularly developing countries to improve policy dialogues and develop new initiatives to ensure socially equitable and environmentally sound development *that structural adjustment programmes promote sustained economic growth*, with particular attention to the necessity to provide adequate—affordable, accessible, safe and environmentally sound, with tenure security shelter for all and socially equitable and environmentally sound sustainable human settlement development to people living in poverty and vulnerable marginalized groups;

(c) The United Nations system, shall actively institute mandatory international normative standards (MINS) in 1997—the last year of the decade dedicated to the promotion and the furthering of international law, and ensure that the Bretton Woods institutions be guided by these international standards in accessing to the legitimacy of project to be funded. *Including* The Bretton Woods institutions and specialized agencies, should expand and improve their cooperation in the field of adequate shelter for all and socially equitable and environmentally sound *sustainable* human settlements *development* to ensure that the efforts are complementary and, where possible, should combine resources in joint initiatives for adequate shelter for all and socially equitable and environmentally sound *sustainable* human settlements development build around the objectives of Habitat II;

(d) The World Trade Organization (WTO) should consider how it might through promoting and requiring adherence to the principles established in international instruments drive *contribute to* the implementation of The Habitat Agenda, including activities in cooperation with the United Nations system, and specifically the promotion of BEST (Best Environmentally Sound Traditions) practices.

ARTICLE 181

5. Indicators, best practices and performance evaluation

181. It is essential to evaluate the impact of policies, means *strategies* and actions on the provision of adequate shelter and the achievement of socially equitable and environmentally sound development *sustainable* human settlements development. The results of these evaluations will be considered by the relevant United Nations functional commissions, including the United Nations Commission on Human Settlements. UNCHS (Habitat), together with other relevant organizations, will establish an appropriate process for analyzing and monitoring major trends of urbanization and the impact of urban policies. In particular, information on the impact of urbanization on *vulnerable* marginalized and disadvantaged groups, including children, should be collected.

ARTICLE 182

182. All those responsible for ensuring the implementation *partners of* The Habitat Agenda, including local authorities, the BEST practices enterprises, *private sector* and communities, will regularly monitor and evaluate their own performances in the implementation of The Habitat Agenda through comparable socially equitable and environmentally sound development human settlements and performance standards, *shelter indicators* and documented *best* BEST practices, the guidelines for which will be provided by UNCHS (Habitat). The data collection and analysis

capabilities of all by those responsible for ensuring the implementation of Habitat II *these partners* will be strengthened and assisted at national, sub-regional and global levels, and there will be an opportunity for individuals and groups of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision to take evidence of state non-compliance to an International Court of Compliance.¶

ARTICLE 183

183. As part of their commitment to strengthening their existing shelter- and settlements-related data collection and analysis capabilities, Governments at the appropriate levels, including local authorities, should continue to identify and disseminate best practices, **develop performance standards related to and apply shelter and socially equitable and environmentally sound human settlements development indicators. This Performance standards** and mandatory international normative standards (MINS) *other relevant information, as appropriate*, will be used for assessing the national implementation of the global plan of action. Such information could be considered within the framework of an appropriate consolidated reporting system of the United Nations, taking into account the different reporting procedures in the economic, social and environmental fields **under MINS 1997.**

ARTICLE 184

184. UNCHS (Habitat) will be designated as the Global Habitat Observatory to promote, monitor and evaluate the trends and *progress in the implementation—the discharging of obligations and the fulfilling of expectations*—of The Habitat Agenda through locally, nationally and regionally supported indicators and best practices programmes. It should continue to produce and publish the Global State of Human Settlements Report and other periodical monitoring and evaluation publications to track the progress on the implementation of The Habitat Agenda.

ARTICLE 185

185. UNCHS as focal point should:

(a) Set up an advisory secretariat/centre to assist Member States in developing their national housing and urban indicators for at least one major city;

(b) Set up a research centre to assist member states in undertaking studies and research on **BEST (Best Environmentally Sound Traditions) practices, and in particular *sustainable approaches and BEST endogenous practices methods concerning using local building materials and traditional construction practices technology*** and disseminate such information to all Member States.]

() **THAT IN 1996** I was contacted by Dr. Jack Littlepage He asked me then if I would assist him in preparing the next stage of his CIDA grant. On completing my doctorate, I helped him place his grant in the context of international agreements related to environment and gender issues; It was my understanding that in exchange for my work I would be hired to teach a course in Brazil. BACKGROUND;

I was still associated with the Environmental Studies Program at the University. A biology professor, Jack Littlepage, attended the presentation on Brazil, with the two Brazilians that were brought to Canada through the ERA/Eco tropic Project that I organized at the University. He contacted me to help him in developing a project to be funded by CIDA. I helped in the understanding that I would be part of the project and would be able to organize and teach a course on the environment in Brazil. I spent a considerable amount of time going through international documents to find relevant statements to support the project; he contacted me after to ask if I would also provide specific information about the relevance of the project to women's issues. I submitted a document based on my 350-page compilation for the conference in Beijing.

CHECK Plutonium being transferred in the form of MOX. I received a message on the internet about a survey that was being carried out by Rauf Tarik, previously from Canada, but not working in Monterey. I contacted him and asked for information on the survey. the point of his survey was to determine whether or not Canadians would support the transfer of plutonium in the form of MOX from Russian dismantled nuclear weapons The option was referred to as Transferring swords into plough-shares.

50 hours @

COMMENT

I found out through the net that a survey was being done in Canada to determine public opinion about the proposal “from swords to ploughshares” of bringing plutonium from dismantled nuclear weapons in the form of MOX to be used in CANDU reactors. I phoned Rolf Turik who was conducting the project and asked him to send me an e-mail about the project. Thinking that I was a supporter, he sent me inadvertently all their strategic documents for promoting the project.

Supposedly he had sent out 35 questionnaires to groups and individuals and are received only 19 responses. I received a list of the groups originally contacted. First of all when there is an important survey such as this one based on which governments could make decisions, it is negligent for those approached not to ensure that the questionnaire is filled out. Of the 19 who responded 5 said that they were not qualified to respond.

One of the ways that he was pushing the project was by saying that less uranium would have to be mined for the CANDU. Another way was to persuade people that Canada would be playing a peace role by taking this dangerous plutonium away

from the Russians. Unfortunately, at least one either environmental or development group fell for the PR. He did not reveal to me how they voted but did give me a list of the 19 or 14 that responded.

His final results was 7 for and 7 against. When I looked through his list I found Greenpeace which had one vote, and a graduate student from UBC, a retired DND officer, retired AECL director and Polanyi. In other words he was giving one vote to a group representing thousands of voices the same weight as a single individuals. When I found this out, I sent the information out on list serves suggesting that if a single individual could count as one vote then all these other single individuals should have the right to one vote.

Obviously, he did not include the supplemental votes because when he was over in Russian with Chretien in April. he was heard to report that Canadians were evenly divided on the issue.

NATURAL RESOURCES DEFENSE COUNCIL

CENTER FOR RUSSIAN ENVIRONMENTAL POLICY

DRAFT RECOMMENDATIONS of the TASK FORCE WORKING GROUP arsenals. Ratification of START II by the Russian Duma has stalled, and the U.S. continue to modernize nuclear weapon delivery systems. Both nations [appear] intent on maintaining <bloated> [UNNECESSARILY LARGE] nuclear weapons research and development establishments under the multilateral Comprehensive Test Ban Treaty nearing completion in Geneva.

Moreover, the mounting global inventory of nuclear weapon-usable material both military and civilian, represents a continuing threat to all humankind. Capping down these inventories should be top priority for the G-7 and Russia. In conjunction with START and various unilateral U.S. and Russian initiatives, some 16,000 warheads soon will be dismantled. Neither Russia nor the U.S., however, has made serious proposals for the permanent disposal of fissile materials from these weapons, a large fraction of which will be stored weapon-component form.

Meanwhile, Russia's military and civil reprocessing programs continue to separate weapons-usable plutonium from spent nuclear fuel, and three Russian production reactors continue to produce weapon-grade plutonium [AT LEAST UNTIL THE YEAR 2000] pending provision of replacement power, with nothing stronger than paper declarations to insure against future use of this material in weapons.

Although Presidents Clinton and Yeltsin promised in September 1994 to provide information on U.S. and Russian stockpiles of nuclear weapons and weapon-usable material, this effort has been stalled by the failure to agree on the terms of the legal instrument to permit Russian and the United States to exchange classified data. Likewise, in the past year there has been virtually no progress on verification of warhead dismantlement or on related transportation measures. The U.S. purchase of HEU from Russian weapons (blended to low-enriched uranium as fuel for U.S. power reactors) has been slowed by persistent disagreements over price verification measures.

The worldwide public and official reaction against the resumption of French nuclear weapons testing in the South Pacific illustrates the widespread desire to move forward with the task of nuclear disarmament. The general public, the world over, harbors an instinctive revulsion against nuclear weapons and a continuing concern about the spread of nuclear weapons to unstable regions and governments. The leadership of the G-7 and Russia should build on the political foundation of this global sentiment to launch a series of bold new disarmament and *fissile material security initiatives*.

SUMMIT DECLARATION

The Task Force calls upon the G-7 and Russia to implement the following ten-point Summit program to accelerate nuclear weapon reductions and **halt further production and proliferation of weapon-usable fissile materials and technology**. We urge the G-7 leadership, particularly Presidents Clinton and Yeltsin, and their respective governments as appropriate to:

(1) Jointly and unambiguously declare their intention to fulfill their obligations under the Nuclear Non-Proliferation Treaty by beginning negotiations promptly on a START III agreement **that would make further deep, irreversible reductions in strategic nuclear delivery vehicles and nuclear warhead stockpiles, and to initiate inter-government discussions among all the weapon states on the modalities of eliminating nuclear weapons, [and to establish an annual system of informing the United Nations of progress achieved in the elimination of nuclear weapons];**

(2) [R]atify START II (Russia) and accelerate implementation of the required reductions in operational forces jointly with the U.S. well before the 2003 deadline specified in the treaty;

(3) [D]eclare a policy of **"No First Use" of nuclear weapons without caveats and conditions (U.S., Russia, U.K., and France), and jointly commit to taking all caveats and conditions (U.S., Russia, U.K., and France), and jointly commit to taking all nuclear weapons off "day-to-day" alert status to ensure that no nuclear weapons are poised for immediate launch;**

(4) [J]ointly declare **their intention to cease permanently all field preparations and test site operations connected with underground nuclear tests, and not to exploit advanced nuclear experimental and computer simulation capabilities for the purpose of continuing the development of nuclear weapons under a Comprehensive Test Ban (U.S., Russia, U.K., <and> France [and China]);**

(5) [M]ake prompt public declarations of the overall size and breakdown the nuclear weapon arsenals and fissile material inventories, and commit to updating the nuclear weapon arsenals and fissile material inventories, and commit to updating these declarations periodically;

(6) [I]nitiate a program for developing and demonstrating the operation a monitoring and <safeguards> [verification] regime for nuclear weapon states covering intact nuclear weapons, nuclear weapon components in storage, and weapon-usable material (such a program should begin with the U.S. and Russia, but could be extended whenever appropriate to include other nuclear weapon states);

(7) Halt the chemical separation (reprocessing) of plutonium from both military and civil spent nuclear fuel (Russia, France, U.K., Germany, Japan, U.S.);

(8) [E]nd the use of HEU as a fuel for civil reactors (G-7 plus Russia);

(9) [A]ccelerate the replacement of Russia's plutonium production reactors at Seversk and Zheleznogorsk, and the conversion of the plutonium cities at Ozersk, Seversk, Zheleznogorsk to the production of goods and services [exclusively] for peaceful purposes; and

(10) [E]stablish a G-7/Russian feasibility study to evaluate the relative safety, proliferation resistance, and cost of disposition options for excess stocks of separated weapon-usable fissile materials, such as the mixture of weapons plutonium with uranium to make "mixed-oxide" (MOX) fuel for commercial reactors, or with reprocessing wastes and glass "mixed-oxide" (MOX) fuel for commercial reactors, or with reprocessing wastes and glass (called "vitrification") for direct disposal in a permanent underground repository; and develop vitrification programs to stabilize residues already produced in spent fuel reprocessing.

DISCUSSION

Nuclear Arms Control and Disarmament Initiatives (Points 1-4)

The U.S. and Russia should move forward immediately with bold new initiatives toward the twin goals of ultimately eliminating all nuclear weapons and foreclosing the prospect of further nuclear weapons proliferation. The failure of Russia and the United States to progress beyond what had been agreed as of January 1993, when the START II Treaty was signed, is obstructing completion of other important treaties on the international arms control agenda, such as the multilateral Comprehensive Test Ban and Fissile Material Cutoff. Many countries view these arms control agreements not as ends in themselves, but as part and parcel of the broader nuclear weapon-state obligation under the Non-[P]roliferation

Treaty to proceed down the path toward nuclear disarmament, [as reiterated in the decision on "Principles and Objectives for Nuclear Non-Proliferation and Disarmament," the decision on "Principles and Objectives for Nuclear Non-Proliferation and Disarmament," agreed to as part of the package on the indefinite extension of the NPT at the 1995 NPT Review and Extension Conference]. [It would be useful if the nuclear-weapon states were to establish a formal system of submitting annual reports to the United Nations detailing the types and numbers of nuclear warheads and associated delivery systems dismantled and eliminated over the past year, whether unilaterally or under arms reduction treaties. Such a measure would enhance transparency without compromising the national security of the nuclear-weapon states and serve to strengthen nuclear disarmament and nonproliferation goals.]

The currently operative U.S.-Russian joint statement on the subject of further nuclear arms reductions is a <shamelessly> convoluted formulation <from> [of] the September 28, 1994 summit [statement], in which the two governments announced their intention to "intensify their dialogue to compare conceptual approaches and to develop concrete steps to adapt the nuclear forces and practices on both sides to the changed international security situation and to the current spirit of U.S.-Russian partnership, including the possibility, after ratification of START II, of further reductions of, and limitations on, nuclear forces." [Since then the two governments have not reductions of, and limitations on, nuclear forces." [Since then, the two governments have not registered any substantive progress on further nuclear arms reduction measures. Rather, both have taken a step back by reinforcing the continuing centrality of nuclear weapons in their respective defense postures--the Nuclear Posture Review of the U.S., and the revised military doctrine of Russia.]

While more than six years have passed since the collapse of the Berlin Wall, [and though both] Russia and the United States [claim to have de-targeted their strategic missiles, both countries] still maintain thousands of nuclear warheads on alert, ready to <strike each other or some other nation>[to be launched] on short notice. While the Comprehensive Test Ban Treaty has been part of the international negotiating agenda for forty years, the nuclear weapon states are still

having difficulty reaching a definitive agreement on the need for eliminating all nuclear explosions, no matter how small their yield or how "peaceful" their avowed purpose. The United States and France have announced <grandiose> [new] plans for experimental programs in nuclear weapon physics <aimed at> [that will have the effect of] blunting the impact of a CTB on their nuclear weapon design capabilities. While <sitting atop> [possessing] the world's largest stockpile of weapon-grade plutonium, the Russian Ministry of Atomic Energy (Minatom) continues to produce more of this material. Meanwhile, the United States continues to spend hundreds of millions of dollars annually to maintain and upgrade its military plutonium separation facilities at the Savannah River and Idaho National Laboratory reprocessing sites-- ostensibly for the very purposes of "waste management" that it encourages other countries to forswear -- even as threshold nuclear weapon states, such as India and Pakistan, are enjoined to agree to an immediate fissile material production cutoff for weapons purposes. The cumulative effect of such foot-dragging, [and] "hedging," <and outright hypocrisy> by the nuclear weapon powers is to deprive them of moral and political leverage on hypocrisy> by the nuclear weapon powers is to deprive them of moral and political leverage on the vital question of preventing further nuclear weapons proliferation.

Russia should immediately ratify START II with <whatever> [the minimum] collateral conditions <are> required to ensure Duma approval, and negotiations should begin promptly on a follow-on treaty, START III, that would reduce the total Russian and U.S. stockpiles of intact nuclear weapons to 1,000 or less on each side, preferably to a level at which there would be a true reduction in the risk of deliberate nuclear attack. From a technical perspective, such a reduction could easily be achieved within the next seven years -- that is, on the same time-scale now envisioned for full implementation of START II. Entry into force of a Russian-U.S. agreement on reductions to this level <would> [could] set the stage for negotiations on multilateral reductions including the other three permanent members of the UN Security Council, none of whose stockpiles exceed 500 weapons. The Summit nations should not await completion of START III to commence multilateral negotiations, but should announce their intentions to initiate discussions as soon as possible among all weapon states on the modalities of

[reducing and] eliminating nuclear weapons. states on the modalities of [reducing and] eliminating nuclear weapons.

An important political step in the process toward global military de-nuclearization is a joint declaration or multilateral convention among nuclear weapon powers extending unqualified assurance of "No First Use" of nuclear weapons to all states, including other nuclear weapon states. While primarily a political step, over time such a declaration or convention would tend to encourage, and be reflected in, a movement away from force employment doctrines and postures that now emphasize maintaining capabilities for early use of nuclear weapons in a conflict, either to thwart a conventional attack or preempt an adversary's nuclear attack. Similarly, a joint commitment to a conventional attack or preempt an adversary's nuclear attack. Similarly, a joint commitment to take all nuclear weapons off "day-to-day" alert would reduce international tensions by ensuring that a sudden, deliberate nuclear attack could not be mounted by any weapon state, and by reducing the risk of accidental or unauthorized launch. Such a de-emphasis and de-legitimization of the role of nuclear weapons in national or alliance defense should serve to strengthen the nuclear nonproliferation regime -- particularly if complemented by robust collective security arrangements that can moderate the national insecurities and ambitions which prompt countries to acquire nuclear weapons.

Verification and Fissile Materials Security (Points 5 and 6) Plutonium of any isotopic composition (except for very high purity Pu-238) and HEU (defined as uranium with >20% U-235) can be used to make nuclear weapons. Weapon-usable plutonium includes plutonium from dismantled warheads (weapon-grade) and plutonium separated from the spent fuel of commercial nuclear reactors (reactor-grade). The Nagasaki weapon was fabricated with 6.2 kg, and similar designs were subsequently fabricated with 15 to 20 kg of HEU (~ 93% U-235). The plutonium cores of some modern boosted fission primaries contain U-235). The plutonium cores of some modern boosted fission primaries contain substantially less plutonium, on the order of 2 to 3 kg. If reactor-grade plutonium is used, then the penalty in performance may be considerable or insignificant depending on the weapon design, but the resulting explosion is not likely to be less than about 1000

tons of chemical high explosive. According to the U.S. Department of Energy, the Clinton Administration has determined that 38.2 tonnes of plutonium and 174.3 tonnes of HEU from U.S. military stocks are now "excess" to U.S. military needs and can be permanently transferred to the civil sector. Russia U.S. military needs and can be permanently transferred to the civil sector. Russia has agreed in principle to sell to the United States up to 500 tonnes of HEU from weapons "blended-down" to low-enriched uranium suitable for use in civil reactor fuel, but has yet to declare that any of its huge stockpile of weapon-grade plutonium (the world's largest at about 150-170 tonnes) is "excess" to its future military needs. Moreover, Russia continues to chemically separate 2 to 3 tonnes of weapons-usable plutonium from military and civilian spent reactor fuel in its reprocessing program.

The G-7 countries and Russia should make prompt public declarations of the size and breakdown of their nuclear weapon arsenals and other fissile material inventories, and commit to updating these declarations periodically. The Summit nations should also announce their support of a joint U.S./Russian or multilateral laboratory project to research, develop, and demonstrate, on a bilateral basis, a monitoring and safeguards regime that covers all nuclear weapons and weapon-usable materials in the weapons states. This would mean an expansion of the U.S./Russian Lab-to-Lab effort to include development and in-plant demonstrations of a safeguards system to improve the physical containment, surveillance, control and accounting of all fissile material in weapon physical containment, surveillance, control and accounting of all fissile material in weapon states. A safeguards regime for the weapons states will become essential as we move into deeper reductions in the global nuclear arsenals. In order to convince other weapons states to reduce their own arsenals significantly, the U.S. and Russia will need to demonstrate that weapons retired under current arms agreements have been dismantled and that all weapon-usable materials are accounted for to the fullest extent practicable.

Reprocessing of Spent Nuclear Fuel (Point 7)

Several countries in Eastern Europe and the former Soviet Union are nearing or have exceeded their spent fuel storage capacity. In order to deal with this critical waste problem, many of these countries are seeking or have already signed reprocessing contracts with Russia. In light of the current and projected worldwide glut of separated plutonium, the proliferation, environmental, health and safety risks associated with separation of plutonium, and the excessive costs of reprocessing in comparison with other forms of spent fuel management, the Summit leaders should call for an indefinite deferral of spent fuel reprocessing worldwide until the existing inventories of separated plutonium have been eliminated and such time as the risks and costs of civil plutonium use have been dramatically reduced.

The U.S. and other G-7 nations should also commit to working with countries operating VVER-440 and VVER-1000 reactors on (i) performing safety analyses of and financing upgrades to existing spent fuel storage facilities, and (ii) developing the capability in these countries for dry cask storage as needed until a long-term disposal or storage concept is developed.

Ending Civil Use of HEU (Point 8)

The Summit nations should call for termination of the use of HEU in naval vessels and in civil applications. While U.S. Government policy is to discourage the use of HEU fuel for nonproliferation reasons, it is currently cooperating in feasibility work on the use of HEU fuel in the core-conversion of the Russian plutonium reactors. In addition, Germany has plans to build a new research reactor (FRM-II) near Munich that is designed to use HEU, and EURATOM reportedly intends to import this HEU from Russia in a deal that would directly undermine U.S. nonproliferation law and policy.

Conversion of the Russian Plutonium Cities (Point 9)

The Summit countries should issue a statement reaffirming the commitment to the conversion/replacement of the Russian plutonium production reactors at Seversk and Zheleznogorsk as soon as possible and no later than the year 2000. The G-7 nations and Russia should commit to the prompt evaluation of all viable replacement power alternatives for these cities, including energy efficiency potential, in order to develop the best assistance package to achieve shutdown of these reactors. (See Recommendations of the Working Group on Sustainable Energy Development). This commitment should include a goal of prompt completion of the joint U.S.-Russian Fossil-Fuel Replacement Options Study.

Because of their potential for proliferation of weapon-usable fissile materials, sensitive technologies and expertise, the plutonium cities must become a focus of international nonproliferation efforts. Economic stabilization and defense conversion are important elements of such an effort. The U.S. should make full use of the conversion potential of the ongoing cooperative activities in the areas of (i) construction of a fissile material storage facility in Ozersk, (ii) HEU blend-down in Seversk, blend-down in Seversk, and (iii) fissile material security and accounting efforts. To achieve the conversion of these military cities to production of goods and services for peaceful purposes, the G-7 nations and Russia should commit to (i) completion of a joint assessment of possibilities for non-military activities for the plutonium cities, (ii) training of managers and establishing commercially viable enterprises, and (iii) creating incentives for Western investors and businesses to cooperate with the plutonium cities. The U.S. and Russia should commit to facilitation of International Scientific Technical Center (ISTC) and Industrial Partnering Program projects in these cities. Technical Center (ISTC) and Industrial Partnering Program projects in these cities.

Options for Long-Term Weapon-Usable Materials Disposition (Point 10)

The G-7 countries and Russia should announce a decision to undertake joint studies to fully evaluate the environmental, health, safety, and nonproliferation implications of politically and economically plausible options for long-term management and disposition of weapon-usable material. Such options include the

mixture of weapons plutonium with uranium to make "mixed-oxide" (MOX) fuel for commercial reactors, or with reprocessing wastes and glass ("vitrification") for direct disposal in permanent underground repositories. Additionally, the Summit nations should ("vitrification") for direct disposal in permanent underground repositories. Additionally, the Summit nations should commit to developing vitrification programs to clean-up non-weapon-usable residues already produced in countries reprocessing spent nuclear fuel.

DRAFT RECOMMENDATIONS
of the
TASK FORCE WORKING GROUP
on
SUSTAINABLE ENERGY DEVELOPMENT

This proposal addresses the development of sustainable energy projects to supplant electricity generated from unsafe nuclear reactors. The Task Force recommends that the G-7 provide capital for energy efficiency, renewable energy and natural gas projects, and conventional power supply transmission and distribution improvements, using a combination of integrated energy planning and market-based strategies to aggressively implement these projects.

INTRODUCTION

This proposal outlines policies to promote sustainable energy in the six countries of Eastern Europe and the former Soviet Union in which Soviet-designed reactors of the types RBMK-1000/1500 and RBMK-1000/1500 and VVER-440/230 are still operating. These countries are Russia, Ukraine, Lithuania, Bulgaria, Armenia, and the Slovak Republic. In addition to these unsafe plants, three plutonium production reactors continue to operate in Russia, supplying electricity and heat from co-generation for the cities of Seversk and Zheleznogorsk.

RBMK and VVER-440/230 plants have inherent design flaws and a demonstrated history of operational difficulties. In addition, economic upheaval in many host countries has left nuclear plant operators owed millions of dollars in unpaid bills, creating conditions which make safe operation operators owed millions of dollars in unpaid bills, creating conditions which make safe operation of these plants difficult.

Nonetheless, power generated from unsafe facilities is, at present, an important part of the electricity generation mix in these countries. These reactors represent nearly 20,000 Megawatts (MW) of generating capacity, generating 10% of the total electricity consumed in the six host countries, and are important sources of revenue and power for certain countries such as Lithuania and Ukraine. (In 1994, over 85% of Lithuania's electricity, but only 5% of Ukraine's electricity, came from dangerous nuclear plants.) dangerous nuclear plants.)

Public safety and environmental quality will be substantially enhanced if the RBMK, VVER-440/230, and plutonium production reactors are retired as quickly as possible. However, any debate on the closure of these facilities is moot without the development and realization of viable alternatives to meet the host countries' energy needs. In some cases, improvements in energy efficiency alone could make up for the output of these plants, although local and regional issues of transmission grid stability and heat supply also must be considered. If there is to be prompt phase-out of unsafe plants, replacement generating capacity will also need to be supplied in most phase-out of unsafe plants, replacement generating capacity will also need to be supplied in most cases.

Thus far, international assistance efforts to increase nuclear safety have in great part been focused on technical safety upgrades to unsafe plants. At their 1992 Summit in Munich, the G-7 created the \$160 million Nuclear Safety Account (NSA) for the development and implementation of safety measures for unsafe nuclear plants. Since 1992, however, the actual expenditure of these funds has been slow. Moreover, it is the opinion of most Western nuclear experts that technical fixes cannot increase the safety of most RBMK and VVER-440/230 reactors to acceptable cannot increase the safety of most RBMK and VVER-440/230 reactors

to acceptable levels. The only safe RBMK or VVER-440/230 reactor is one that is not operating.

There has been even less financial commitment from the West to supply replacement power for these unsafe power plants. The urgent next step is to develop, fund, and implement packages of energy efficiency, renewable energy and conventional power system improvements targeted specifically to regions served by the nuclear facilities in question. Such projects will be the most effective and economic means by which to replace electricity from unsafe nuclear plants.

SUMMIT DECLARATION

The Task Force calls upon the G-7 and Russia to implement the following five-point program to accelerate the development of economic and environmentally-sustainable energy alternatives to RBMK and VVER-440/230 reactors. We urge the G-7 and Russian leadership, and their respective governments to:

(1) [I]dentify, on an urgent basis, power replacement alternatives for each of the six target countries that will best ensure reliable replacement of unsafe nuclear plants; giving priority to conventional efficiency measures, renewable energy and natural gas power generation, and conventional power supply improvements;

(2) [C]apitalize a revolving fund for these sustainable energy projects; (3) [P]rovide support for the development and implementation of appropriate sustainable energy policies and electric power sector regulation in the six target countries;

(4) [U]ndertake an intensive multi-pronged market inter-mediation and development program designed to overcome serious transactional and market barriers to sustainable energy alternatives; and

(5) [E]stablish an integrated electricity brokerage market between the European Community, (5) [E]stablish an integrated electricity brokerage market between the European Community, Eastern Europe, and states of the Former Soviet Union designed with appropriate consumer and environmental safeguards.

DISCUSSION

Since the energy crises of the 1970's, a wealth of new technologies and practices have been developed for more efficient energy consumption and for production of energy from renewables and other environmentally safer sources. The cost of natural gas turbine technology has decreased substantially as its reliability and efficiency has increased. Expanded use of natural gas substantially as its reliability and efficiency has increased. Expanded use of natural gas (particularly in industrial co-generation) is a logical complement to energy efficiency and renewables towards providing replacement power for unsafe plants.

Compared to the projections of the early 70's, current global energy consumption is over 30% lower than forecast. This reduction is due, in large measure, to improved energy efficiency, which has become the largest "new" source of energy on the planet during the last 20 years. The potential for energy efficiency gains in the six target countries is enormous. Most estimates show that energy intensities in these countries could be reduced by 30-50% or more with equipment and management practices being used in Western Europe today. Examples of measures that can be taken include: efficient lighting, efficient appliances and motors, industrial process changes, variable-speed motor drives, automatic controls, better energy accounting and management, and load management to reduce consumption peaks. Energy efficiency improvements are possible through investments to upgrade existing infrastructure and equipment, and through replacement of inefficient equipment, buildings, and industrial processes. Large energy efficiency gains in heating systems (to replace lost heating energy from the Seversk and Zheleznogorsk production reactors, for lost heating energy from the Seversk and Zheleznogorsk production reactors, for example) are possible with better building and pipe insulation, introduction of controls and meters, and improved maintenance.

In many parts of the world, renewable energy technologies, particularly electricity generated from wind and biomass, have become significant contributors to the electricity system. Costs for solar thermal and photo-voltaic electricity technologies

are rapidly becoming competitive for large grid-based applications, and hold distinct cost advantages in off-grid applications and in certain transmission and distribution upgrade circumstances. Indeed, if subsidies to environmentally unfriendly energy sources and market distortions resulting from ignored environmental externalities were eliminated, renewable power generation would be far more prevalent than is currently the case. Favorable wind and biomass resources have been identified in several areas (Lithuania, Kola Peninsula of Russia, Ukraine) where dangerous plants are located. Serious evaluations of these potentials should be undertaken to quantify the contribution these resources can make to a replacement power package.

Despite the performance and promise of sustainable alternatives, their penetration in the six target countries has been slow due to numerous market, financial, structural, and technical barriers.

Identify Replacement Power Alternatives (Point 1)

We urge the G-7 and Russia to commit to identifying, on an urgent basis, packages of alternative energy sources to reliably provide replacement for power generated from unsafe nuclear facilities in the six target countries. These packages would combine efficiency measures and renewable energy with natural gas generation projects, and other conventional power system upgrades.

The most effective approach to developing packages for the six target countries would be one similar to that underway to find replacement power for Chernobyl in the Ukraine. The G-7 sponsored approach to the Ukrainian situation involves looking at ways to reform the entire power sector and recommending legal, regulatory and administrative measures to promote greater economic and energy efficiency in the sector. The Task Force recommends modifying the Ukrainian program to include a higher priority for targeted energy efficiency programs and more incentives to promote renewable energy.

A typical approach would be to identify a target region or country and analyze its energy needs, taking into consideration the requirements of the entire power system. The its energy needs, taking into consideration the requirements of the entire power system. The opportunities to capture energy resources, whether through energy efficiency, renewable energy, transmission and distribution system upgrades, industrial co-generation, natural gas power supply or other improvements to the existing supply system should be thoroughly investigated and evaluated for cost-effectiveness. The lowest- cost measures should be given top priority for financing through the G-7-sponsored fund described below. Emphasis should be placed on using indigenous contractors and materials to create local production infrastructure and expertise to handle future needs.

Capitalize Revolving Sustainable Energy Fund (Point 2)

We call on the Summit nations to establish the Revolving Sustainable Energy Fund (RSEF), capitalized by G-7 members and countries containing dangerous reactors at a level of not less than U.S. \$10 billion, which would give top priority to energy efficiency measures, renewable energy and natural gas projects, and would provide bridging funds for conventional power sector development and improvement projects. This fund would complement the institution-building, integrated planning and market inter-mediation and development activities described below by providing an planning and market inter-mediation and development activities described below by providing an initial pool of readily available capital for appropriate projects. RSEF funds would be disbursed by the EBRD or World Bank to qualified national on-lending intermediaries with appropriately structured guarantee and collateral mechanisms. Repayments to the fund (at concessional rates) could be used for subsequent projects and eventually become self- sustaining. As the RSEF becomes self sustaining, the original donors could recover their initial investment.

The RSEF would act as a fund consolidator and perform due diligence on nationally-based on-lenders. These local on- lending bodies would disburse funds to support sustainable energy project sponsored by a variety of institutions,

including electric utilities, sustainable energy project sponsored by a variety of institutions, including electric utilities, distribution companies or private energy service companies (ESCOs). The responsibility for ensuring the viability of funded projects would rest with the approved national entity. This system will allow for a wider and more timely distribution of funds as well as enhance the development of local capability to identify, manage and implement sustainable energy projects. Promising project implementors could be targeted for intensive intermediation assistance, as discussed below, in preparation for final project investment.

investment.

Another possible source of funding for this account is a minor sliding-scale levy on electricity produced from nuclear reactors world-wide. The sliding scale could be based on a "score" derived from a power plant's safety evaluation, production cost, reliability, and other factors. Higher-scoring plants would have a reduced levy as a reward for safe and economical operation. The larger levy would act as an incentive for problem plants to improve their performance. Safety performance and economy could be certified by the IAEA or an international nuclear regulatory body according to standard criteria. It is unlikely that this levy would exceed 2-3% of the revenues from standard criteria. It is unlikely that this levy would exceed 2-3% of the revenues from nuclear-generated electricity worldwide.

Support Development of Sustainable Energy Policies and Regulation (Point 3)

The sustainable energy packages described above for financing through the RSEF must be developed within an appropriate policy and regulatory context.

Unfortunately, insufficient attention has been given to developing an adequate institutional basis for crafting sustainable energy policies. Current institutional barriers to developing a sustainable energy framework include incomplete or underdeveloped legal and regulatory regimes, monopoly production in many industries, energy underdeveloped legal and regulatory regimes, monopoly production in many industries, energy quotas, and lack of ownership and incentives. Relationships need to be clearly established between government

policy makers, regulators, energy producers and consumers. The responsibilities of each of these actors also needs to be legally established.

The Task Force urges the G-7 to enhance current bilateral and multilateral efforts to develop policy-making and regulatory bodies. Areas of special emphasis include:

- (a) development of contract law and the legal, regulatory and administrative institutions that underlie efficient energy markets;
- (b) requirements for integrated energy assessments that allow comparison of investments in demand-side and supply-side measures; establishment of regulations governing private entrance into power markets and transactions within those markets;
- (c) development of energy performance codes and standards for buildings and certain kinds of energy-using equipment.

Undertake Market Intermediation and Market Development Programs (Point 4)

Many transaction barriers exist that can prevent or limit the implementation of integrated, market-oriented sustainable energy strategies. Market intermediation and development can market-oriented sustainable energy strategies. Market intermediation and development can overcome these barriers and must be a high priority in the implementation of these approaches. This aspect of the Task Force proposal directly addresses ways to overcome transaction barriers.

Financial barriers include high inflation rates, the absence of developed capital markets, and currency conversion problems. Information barriers include a lack of information about technical opportunities and performance, baseline consumption and thus potential energy savings, costs of equipment and installation, and potential business partners and sources of finance. Experiential barriers include a lack of trained personnel who are familiar with sustainable finance. Experiential barriers include a lack of trained personnel who are familiar with sustainable technologies, analytical methodologies, and installation and maintenance.

Technological barriers include the technical character and large sunk investment in some existing infrastructures that can make equipment replacement difficult.

These barriers have in general been seriously underestimated by the architects of new market-based institutional structures proposed for the electricity sector of formerly centrally-planned economies. Consequently, sufficient resources have not been allocated to overcome these barriers. Therefore, we call on the G-7 nations and Russia to urgently implement the following key market intermediation and development efforts in the six target countries:

- (a) institutional development of market intermediaries such as energy service companies, utility companies, electricity market brokers, and information clearinghouses;
- (b) training of key managers and officials in project identification, evaluation, preparation, and finance; development and dissemination of information about consumption patterns and options for meeting those consumption needs efficiently; for meeting those consumption needs efficiently;
- (d) support for joint venture production through assistance in partner identification and evaluation, capitalization, and marketing, including support for the private banking sector to undertake energy efficiency and renewable energy lending.

Institute a Continental Electricity Market and Brokerage (Point 5)

We urge the Summit nations to take steps to establish an integrated continental electricity market and brokerage. The benefits of larger-scale integration of electricity systems have been well demonstrated. Current efforts to establish market-based electricity sectors in countries housing RBMK and VVER- 440/230 reactors could be expanded beyond individual countries to the integration of the West and East European and former Soviet electricity to the integration of the West and East European and former Soviet electricity markets. Although such linkages would likely stop short of full integration and synchronous operation, the spread of time zones could significantly reduce total peak demand, similar to the 10,000 MW reductions achieved by the Russian integrated energy system, and surpluses could be more reliably delivered. Moreover, the establishment of a G-7-

sponsored broker could serve to overcome the political concerns of some nations about reliance on other countries in the region for their energy supplies.

Proper market development and coordination would provide a much broader base for competition and help reduce disparities in access to energy services for countries with lesser developed systems.

Shutting down unsafe reactors would require that existing capacity in Western & Eastern Europe and the former Soviet Union (principally non-nuclear thermal), increase its capacity factor by 5% or less. The expense of providing adequate transmission system interconnection for a continental brokerage could be partially defrayed by the Revolving Sustainable Energy Fund discussed above.

DRAFT RECOMMENDATIONS

of the

TASK FORCE WORKING GROUP on NUCLEAR SAFETY

This paper will address the urgent need to reduce risks associated with the operation of unsafe nuclear power plants worldwide, and will propose structural solutions designed to correct fundamental flaws in current international safety assistance efforts and to achieve safe and permanent shutdown of the most dangerous reactors.

INTRODUCTION

Ten years after the devastating accident at Chernobyl Power Plant, the worst nuclear accident in history, 67 Soviet-designed reactors still operate in Eastern Europe and the former Soviet Union. Western nuclear experts generally agree that at least one-third of these units -- reactors of the models RBMK (Chernobyl-type)

and VVER-440/230 -- present serious safety risks. There are 15 RBMK reactors still operating in Russia, Ukraine, and Lithuania, and eleven VVER-440/230 units operating in Bulgaria, the Slovak Republic, Russia, and Armenia. Even if one of these most dangerous reactors were shut down each year, twenty-six years would pass before they could all be retired -- reactors were shut down each year, twenty-six years would pass before they could all be retired -- a period longer than many of their remaining lifetimes. Meanwhile, there are also serious safety concerns about the newer-model VVER-440/213's and VVER-1000 operating throughout the region. Moreover, economic upheaval in many host countries has created conditions which make safe operation of these plants difficult or impossible.

The G-7 pledged in 1992 to work toward the shutdown of the most dangerous of these reactors by the year 2000. Despite this commitment, however, insufficient capital has been invested in efficiency and replacement power sources to achieve shutdown of these reactors. Most notably, hopes to close reactors at Kozloduy in Bulgaria, Ignalina in Lithuania, and Most notably, hopes to close reactors at Kozloduy in Bulgaria, Ignalina in Lithuania, and Chernobyl in Ukraine have thus far gone unfulfilled. Moreover, in 1995 one of the riskiest reactors in the region -- Armenia's Metsamor 2, which had been shut-down following the disastrous 1988 earthquake in Armenia -- was restarted. This failure has been due, in great part, to the lack of sufficient capital to supplant the electricity produced by these reactors with efficiency and alternative power sources.

Although most G-7 nuclear safety assistance efforts have been focused on the region of Eastern Europe and the former Soviet Union, the problem of nuclear reactor safety is, of course, not limited to that region. In the United States, for example, serious concerns are limited to that region. In the United States, for example, serious concerns are growing about the effect that the present trend towards deregulation of the electric utility industry is likely to have on nuclear safety. Most recently, the Monju reactor accident in Japan has raised awareness in that country and worldwide about the risk of nuclear accidents.

The International Convention on Nuclear Safety, the result of three years of international negotiations, is a weak agreement that will not remove the roadblocks to safety. The Convention does not require phase-out of nuclear plants with the highest accident risks, it does not establish substantive technical or procedural standards by which nuclear installations should be evaluated, substantive technical or procedural standards by which nuclear installations should be evaluated, and it does not provide a framework for independent third-party oversight of nuclear facilities. It therefore represents a political victory for the U.S., France, Japan, and other states fearful of prescriptive obligations and international regulation. International safety assistance efforts -- the G-7 Nuclear Safety Account, for example -- have focused primarily on technical assistance for upgrades to existing plants. This approach, when taken alone, does not address the root problems of reactors that cannot be upgraded to acceptable levels of safety, or of the inefficient energy economies and lack of indigenous power supplies with which to replace old, unsafe plants. Without sufficient financial commitment with which to replace old, unsafe plants. Without sufficient financial commitment to decommission unsafe reactors and provide replacement power, the present institutional nuclear safety assistance mechanisms will only continue to be largely ineffective in reducing the risk of accidents. The World Bank, International [Atomic] Energy Agency [IAEA], and the European Bank for Reconstruction and Development (EBRD), charged by the G-7 to study means of using alternative energy sources to replace the most unsafe plants, concluded in June 1993 that it would be technically feasible to meet electricity demand in Eastern Europe and the former Soviet Union while closing the higher-risk plants (RBMK's and VVER-440/230's) by the mid-1990's. While the price-tag to higher-risk plants (RBMK's and VVER-440/230's) by the mid-1990's. While the price-tag to replace these plants will be substantial in the short-run, prevention of future accidents will be well worth the investment.

SUMMIT DECLARATION

To meet the challenge of reducing the risk of nuclear accidents, the Task Force calls upon the G-7 countries and Russia take the lead by implementing the following two-point Summit program. This program, in conjunction with our Recommendations on Sustainable Energy Development, will best Development, will best facilitate the prompt shutdown of the most [potentially] unsafe reactors. We urge the leaders at the Summit to announce intentions to: (1) <prioritize> [identify] the top fifty <most dangerous> nuclear reactors for [priority] shutdown, and in doing so prioritize countries for the receipt of international assistance for improvements in end-use efficiency and for replacement power, and; (2) commit to providing sufficient capital and technical assistance for the permanent and safe decommissioning of the <most dangerous> reactors [for priority shutdown], including all RBMK and VVER-440/230 model Soviet-designed reactors within ten years (see also all RBMK and VVER-440/230 model Soviet-designed reactors within ten years (see also Summit Point 2 in the Task Force Recommendations on Sustainable Energy Development).

DISCUSSION

Prioritization of Reactors for Shutdown (Point 1)

The G-7 and Russia should announce their intention to prioritize, by no later than the end of 1996, the most [potentially] dangerous reactors for safe and permanent shutdown. This priority list would This priority list would be used to determine how international assistance for replacement power will be distributed most effectively.

The G-24 Nuclear Safety Working Group, established after the 1992 G-7 Summit, should be charged with evaluating the safety of individual reactors and ranking them for shutdown. Thus far the Nuclear Safety Working Group has served to coordinate individual countries reactor upgrading assistance efforts, and is familiar with the risks associated with particular reactors. Its function should now be expanded to include coordination of efforts to replace these unsafe units.

This <"Most Dangerous Reactors" list> [List of Reactors for Priority Shutdown]
This <"Most Dangerous Reactors" list> [List of Reactors for Priority Shutdown] should include at least the top fifty most [potentially] dangerous reactors worldwide. This list should include those Soviet-designed reactors commonly placed in the higher-risk category by safety experts -- reactors of the types RBMK and VVER-440/230. RBMK's, of the ill-fated Chernobyl design, use a graphite moderator which can burn, lack a Western- style sealable secondary containment system and adequate fire protection mechanisms, and suffer from less stable nuclear chain reactions when cooling water is lost. The VVER-440/230 also has inadequate containment and lacks an emergency core-cooling mechanism and adequate instrumentation and control systems. Later Soviet models -- the VVER-440/213 and the VVER-1000 -- also have serious design deficiencies such as inadequate instrumentation and control systems and fire-protection mechanisms.

Capital for Replacement and Decommissioning (Point 2)

The G-7 and Russia should announce their commitment to providing sufficient capital for the shutdown and decommissioning of the most dangerous reactors, including Soviet-designed reactors of the types RBMK and VVER-440/230, within ten years. Upon completion of this "Most Dangerous Reactors" list, bilateral and multilateral negotiations should commence immediately. Bilateral and multilateral negotiations should commence immediately between the G-7, Russia, and countries operating the most unsafe reactors in order to develop assistance packages for prompt replacement of these units. Progress in these negotiations should be reviewed at least biannually by the Nuclear Safety Working Group. A timeline for closure of at least two to three reactors per year (on average) for ten years should be strictly adhered to.

Such a multilateral effort is already underway between the G-7 and Ukraine for closure of Chernobyl Units 1 and 3. Although progress has been slow, in December 1995 a G-7/Ukraine Memorandum of Understanding was signed for

closure of Chernobyl by 2000, with the Memorandum of Understanding was signed for closure of Chernobyl by 2000, with the condition that \$2.3 billion in Western funds be provided for replacement power and decommissioning. If this agreement is implemented in such a way as to guarantee that maximal use is made of Ukraine's massive potential for energy efficiency, and that any replacement power sources will be as safe and sustainable as possible, this assistance package and cooperative effort could serve as a prototype for other multilateral negotiation efforts.

These bi- and multilateral efforts will require heavy capital investments. The Task Force has proposed a Revolving Sustainable Energy Fund (RSEF), to be capitalized at a initial level of no proposed a Revolving Sustainable Energy Fund (RSEF), to be capitalized at a initial level of no less than U.S. \$10 billion, for development and funding of sustainable energy projects to supplant electricity from unsafe reactors. (See Task Force Recommendations on Sustainable Energy Development.) Repayments to this fund (at concessional rates) could be used for subsequent projects and could eventually become self sustaining.

? DRAFT RECOMMENDATIONS of the TASK FORCE WORKING GROUP on NUCLEAR DEMOCRACY

This paper addresses the need for the disclosure of nuclear information and for public This paper addresses the need for the disclosure of nuclear information and for public participation in the nuclear decision- making process. The Summit leaders should recognize the public's right to environmental, health, and safety information, and should develop standards on openness accordingly.

INTRODUCTION

Since the dawn of the atomic age, information regarding nuclear issues has typically been subject to a great degree of secrecy. Since the end of the Cold War, the U.S., Russia, and other countries have made significant strides towards opening the doors to their government secrets.

Recent events, however, have reminded us that all countries -- especially the weapons states -- have far to go towards achieving true freedom of information for their citizens. The recent arrest for espionage of retired Russian naval officer Alexander Nikitin, working with the Bellona Foundation on radioactive contamination on the Kola Peninsula, is a striking example of how secrecy can overstep its bounds. Secrecy surrounding the recent Monju reactor accident in Japan clearly had a negative effect on the Japanese public trust.

To most citizens living democratic societies, it is axiomatic that government openness is a necessary cornerstone of a successfully functioning society. The free flow of government information is absolutely essential for citizens to make informed policy decisions, to choose government leaders, and to hold them accountable.

While all governments must keep some secrets in the interest of national security, there are instances when the public is denied information for reasons other than compelling public interests. In the United States, for example, the recently uncovered story of radiation experiments performed on humans during the Cold War has shown that national security was sometimes invoked in the past to justify classification of information for public relations -- not national security -- considerations.

Freedom of environmental, health, and safety information is an instance where the public's right to this information usually outweighs any national security considerations. When a government places its citizens at risk, those citizens should expect to be informed, both in advance of the exposure to risk and afterwards about the consequences of that exposure. This important public interest should always be weighed against the temptation of government entities to automatically classify all nuclear-related information.

Unnecessary secrecy does not always end once clear and fair classification guidelines are in place. In the absence of a legal requirement for public access to government information -- such as the Freedom of Information Act (FOIA) enacted in the U.S. in 1966 -- even unclassified information can, for all practical purposes, be out of the public's reach. Moreover, even in countries with such legal requirements, administrative secrecy often prevents the public from gaining access to unclassified information.

In addition to freedom of environmental, health, and safety information, public participation in decision-making on nuclear issues is absolutely essential to the democratic process. Citizens in a democratic society must have the right to take part in the decisions that will most affect their lives. Unfortunately, the citizens who will be most affected by the siting or construction of a nuclear plant or a waste storage facility are often intentionally isolated from the decision-making process.

SUMMIT DECLARATION

The Task Force urges the G-7 and Russia to adopt the following five-point Summit program to The Task Force urges the G-7 and Russia to adopt the following five-point Summit program to best ensure the free flow of nuclear information and ample public participation in the decision-making process on nuclear issues, [and to encourage all other countries with operational research and power reactors to join in this transparency measure]. We call upon the G-7 and Russian leaders, and their respective governments as appropriate to:

(1) jointly declare their intention to promptly declassify all environmental, health, and safety information with few or no exceptions, and establish systematic declassification reviews for existing documents containing environmental, health, and safety declassification reviews for existing documents containing environmental, health, and safety information;

(2) promptly publish in the open press the rules establishing categories of classified information, and ensure that these classification guidelines explicitly prohibit classification of environmental, health, and safety information with few or no exceptions;

(3) establish public information law requiring that government entities supply the public with environmental, health, and safety information upon request, with few exceptions;

(4) establish a framework for ample citizen participation in and contribution to environmental impact reviews and decision-making on siting, licensing, and contribution to environmental impact reviews and decision-making on siting, licensing, and construction of nuclear installations, radiation sources, and storage sites; (5) institute a regulatory framework for civilian inspection of all nuclear facilities, including military installations.

DISCUSSION

Declassification and Accessibility of Environmental, Health and Safety Information (Point 1)

The G-7 and Russia should announce their intention to promptly declassify all environmental, The G-7 and Russia should announce their intention to promptly declassify all environmental, health and safety (EH&S) information with few or no exceptions, [and to work toward achieving an international convention on nuclear transparency]. Declassification of EH&S information is an instance where the public interest most clearly outweighs any national security interest in keeping the information classified. Information about the storage and handling of radioactive waste and spent nuclear fuel from power plants, or about radiation releases from power plants, is clearly unconnected with military secrets and should never be withheld from the public.

Recent guidelines established by U.S. Secretary of Energy Hazel O'Leary on the classification of new documents containing environmental, health, and safety information provide classification of new documents containing environmental, health, and safety information provide a good starting model for ensuring that this type of information is accessible to the public. In a June 1993 departmental memorandum, Secretary O'Leary called for the following guidelines to be observed in the creation of "any document or database containing information related to the

environment, health, and safety of departmental employees and contractors, or the public":

- "1. Classification or other dissemination restrictions will be used only when the document clearly contains information that we are required by law or regulation to protect.
2. If the essential information in the document can be conveyed without including specific, classified or otherwise restricted information, do not include classified information.
3. In cases where classified information is essential to communicating or supporting the thesis of the document, whenever possible keep the primary document unclassified and include the necessary classified information in an attachment, appendix, or supporting documentation.
4. In cases where classified information must be an integral part of the document, consider also creating an unclassified version if significant environmental, safety, or health information can be coherently communicated." The memorandum goes on to urge not only that the information be made available using the above guidelines but that it be made accessible to the general public by the use of diagrams, maps, photographs, and other tools to aid in comprehension.

The Summit nations, particularly the U.S. and Russia, should commit to amending their respective atomic energy laws to include requirements for the availability of EH&S information such as those outlined above. Moreover, the Summit nations that have not already done so should promptly establish systems for declassification review of existing documents containing EH&S information. EH&S information.

Publication of Categories of Classified Information (Point 2)

The Task Force calls on the Summit nations that have not already done so to require their government agencies to immediately publish their classification guidelines in the open literature, and to keep debate on new information control policies open to the public. The guidelines for dissemination of EH&S information

proposed above can only be useful if the public can be assured that EH&S information is not improperly classified.

The State Secret Law of the Russian Federation (1993), much like the current U.S. Executive Order 12958 that defines "national security information," defines three levels of classification and types of information that might be classified. This law explicitly prohibits classification of information pertaining to public health and the environment, and requires that a list of approved topics of classification be published in the open press.

In November 1995, President Yeltsin signed edict Number 1203, "Approving the List of Information Classified as Secrets." This "list" was subsequently published. Unfortunately, this edict apparently allows unlimited classification of "information on the design, installation, apparently allows unlimited classification of "information on the design, installation, operation, or security support of facilities of the nuclear complex" (paragraph 10), as well as classification of "information on the choice or assignment of parcels of land, underground areas, or bodies of water for the construction of [operations] facilities..." (paragraph 15).

The Task Force believes that this edict or its implementing directives should be amended to specifically acknowledge the legitimate public interest in EH&S information, in accordance with the principles cited above. Without such an [acknowledgment], the edict is in direct conflict with the law on State Secrets. In Russia and in all the G-7 nations, this important public interest in EH&S law on State Secrets. In Russia and in all the G-7 nations, this important public interest in EH&S information must always be weighed against the temptation to automatically classify all nuclear-related information.

Moreover, discussion about new information control policies should be open to the public, with ample opportunity for public input. These decisions should not be limited to government officials within the agencies establishing the guidelines.

Laws Governing Freedom of Information (Point 3)

The Task Force urges the Summit nations to immediately establish an affirmative legal requirement that the government must provide the public with access to unclassified information. Without such a legal requirement, citizens have no guarantee that they will have access even to unrestricted information.

Freedom of information law should limit exemptions only to matters of national security and other compelling public interests such as preserving personal privacy or the integrity of ongoing law enforcement investigations. Every attempt should be made to provide citizens with unclassified EH&S information, even when it is contained in a classified document (by document abstraction, segregation of classified information, etc.). Russia and G-7 nations that do not recognize a segregation of classified information, etc.). Russia and G-7 nations that do not recognize a legally-enforceable public right to government information should immediately establish such a law.

Public Participation in the Environmental Review Process (Point 4)

We urge the G-7 nations and Russia to commit to the principle of full public participation in the environmental review and decision-making process, and to immediately implement mechanisms to ensure this participation. Summit nations have already written into law requirements for public participation in environmental impact studies (EIS) for the siting of nuclear installations, radiation sources, and waste storage sites. However, structural mechanisms to ensure radiation sources, and waste storage sites. However, structural mechanisms to ensure compliance with the law -- and to ensure that state decisions will be made with a view to the concerns of public organizations and citizens -- are not yet in place in all Summit countries. Such structural mechanisms could include: public hearings on facility construction or licensing procedures; mechanisms for citizens to become formal parties in the facility licensing process; judicial review of final decisions; and citizen enforcement suits against facilities in violation of safety regulations.

The new Russian Atomic Energy Law (1995) lays a solid framework for such public participation. It requires that government agencies "conduct discussions of questions participation. It requires that government agencies "conduct discussions of questions connected with the location, design, and structure of facilities using nuclear energy, with the participation of organizations, including public organizations (or associations), and citizens, if these nuclear installations, radiation sources, or storage sites are to be located within their territory." In reality, however, citizens still have little opportunity to provide input into the decision-making process in Russia, as few mechanisms for public participation are yet in place. And although many such mechanisms are in place in the U.S., citizens are often provided with insufficient information to give informed input to the environmental review process, and the rights of disadvantaged or give informed input to the environmental review process, and the rights of disadvantaged or under-represented citizens are often overlooked in the siting, licensing, and construction of facilities located in their territory.

In addition to a formal structure for public participation in environmental review, the Summit nations should commit to the principle that independent organizations must be allowed free access (consistent with legitimate security concerns) to gather information about radioactive contamination and the safety of nuclear installations. Otherwise, there will be no guarantee that public discussion that public discussion about the risks of accidents or contamination will be honest and unbiased.

Civilian Inspection of All Nuclear Facilities (Point 5)

The G-7 countries and Russia should announce their intention to immediately establish regulatory frameworks within which independent civilian regulatory bodies have power of inspection over all nuclear installations and waste storage facilities, including military sites. Unbiased review of the safety of military installations cannot be ensured under the jurisdiction of a military body. An inherent conflict of interest arises when the body charged with promotional responsibilities is also responsibilities is also charged with regulatory duties.

Russian Executive Order 350 (July 1995) removed power to inspect military nuclear facilities from the hands of the civilian regulatory body, Gosatomnadzor (GAN), and placed it under the control of the Russian Defense Ministry. This regulatory power should be reinstated to GAN. The U.S. and Russia must set a clear precedent for the rest of the weapons states, which should all allow for civilian inspection of military facilities. The Summit nations should also declare their support for international independent regulatory oversight of civilian nuclear facilities (see Recommendations of the Working Group on Nuclear Safety).

() **THAT in 1996** I made an 'Ideagraph'- a large diagram displaying the complexity and interdependence of issues—on the linking of the civil nuclear energy cycle and the development of nuclear arms

EXHIBIT DIAGRAM IDEAGRAPH

() **THAT in 1996 I continued to follow the OUTCOME OF THE CANDU OPTION**

Comment

How little we have learned from the lessons of Chernoybl. From April 19 to 20, the G7 leaders met in Moscow to consider, among other issues, a number of proposals related to the disposal of weapons-grade plutonium from dismantled Russian nuclear armaments. There was a proposal on the table described as , the "CANDU option", an option strongly advocated by the Canadian Government, and other Canadian nuclear proponents. The CANDU option involves the transfer of weapons-grade plutonium from dismantled nuclear armaments in Russia in the form of MOX (mixed oxide fuel) to be used in CANDU reactors in Canada. The promoters of this option have developed what they refer to as a "communications strategy" which entails a public promotional campaign claiming that the CANDU option will transfer "Megatons into megawatts" or "Swords into Plowshares" to "enhance public acceptability and support" (R. Tariq).

Dr Fred Knelman, in responding to the CANDU option, has countered that : " Plutonium should not be used as a fuel for current or future nuclear power reactors. Aside from the fact that such use would tend to perpetuate and support

an expansion of civil nuclear power, it would also not solve the problem because some further plutonium would be produced in the process, There would be increased traffic in plutonium either as the mixed oxide fuel (MOX) or en route to and from the mixing plant. A diversion of MOX would permit the separation of weapons grade plutonium”.

Although we do not have CANDU reactors on Vancouver Island, the nuclear issue is of vital importance to residents of Vancouver Island . Victoria has had over the years approximately 160 day visits a year of nuclear powered and nuclear arms-capable vessels in the urban ports of Esquimalt and Victoria. Nuclear powered vessels are floating nuclear plants, and await potential disaster. The Canadian government had been requested to fulfill its responsibility to the protection of the population and carry out a public non-Department of Defence (DND) environmental assessment review of the these visits. Bob Moore Stewart, lawyer for the Vancouver Island Peace Society, revealed that “in 1991, the Federal Cabinet bypassed the process and issued an order in council to permit the continued visits without a public environmental assessment review, relying on an in-house DND assessment that suggests against all common sense that there is no appreciable risk to harbouring these nuclear vessels in our urban harbours”.

Norm Abbey from the Nanoose Conversion Campaign, and Vancouver Island Peace Society, has raised the question:“What if we were to look at Chernobyl ten years BEFORE the disaster. Would it not look remarkably similar to “Whiskey Golf” at Nanoose Bay?

() THAT IN 2022, I tried to find out about the CANDU option, did it ever happen?
So I wrote to Gordon Edwards I

<https://www.cbc.ca/news/canada/greenpeace-firefighters-oppose-plutonium-shipment-1.187435> I contacted **Gordon Edwards** and asked him *DID*

CANADA EVER USE PLUTONIUM FROM DISMANTLED SOVIET NUCEAR

SITES IN CANDU REACTORS AS RAUF TARIQ PROPOSED AND CHRETIAN AGREED TO?

RESPONSE

He responded: "No.

But USA tried to, built a beautiful plutonium fuel fabrication plant at Savannah River site, spent hundreds of millions on it, and then canceled it without ever finishing it.

Canada imported a small amount of plutonium from Russian that went to Chalk River for testing but went no further.
Also also imported a very small amount from the USA, equivalent to about three AAA batteries, also to Chalk River.

Gordon Edwards

() THAT in 1996, I wrote: **THE LESSONS OF CHERNOBYL: NOT LEARNED BUT IGNORED**

CIVIL NUCLEAR REACTORS ARE NEITHER THE SOLUTION NOR AN OPTION

1996 April 26 10th Anniversary of Chernoybl
piece published in the Times Colonist

THE LESSONS OF CHERNOBYL: NOT LEARNED BUT IGNORED

April 26 will be the 10th Anniversary of the Chernobyl disaster. Tens of 1000s have died as a result of the disaster. over 6,000 of Chernobyl's cleanup veterans: the liquidators have reportedly died. Thousands of children and adults in Ukraine and Belarus experienced symptoms of acute radiation sickness. Over 4.5 million hectares of productive agricultural land was contaminated. Over 130,000 residents were permanently evacuated in a 30 Km radius around Chernobyl, while more than 1.2. million still live on lands contaminated by 'low-level' radiation. In addition, centuries of future unanticipated consequences from the Chernobyl disaster could lie ahead.

Many thought that the Chernobyl accident would sound the death knell for the civil nuclear industry, and would lead to a global endorsement of the precautionary principle of science and ethics which embraces the notion that we do not have to wait until there is scientific certainty that human and environmental disasters would occur for the global community to act to prevent the potential disasters—such as those that could occur with the further development and use of civil nuclear reactors. Dr. David Marples of the University of Alberta, a specialist in the social impacts of the disaster in Chernobyl noted on April 18, at a public symposium at the University of Victoria, that “the Chernobyl disaster should have forced us to look at alternatives to civil nuclear reactors.” Dr. Fred Knelman—who initiated a Nobel Laureate Declaration in which there was the call to phase out nuclear energy, concurred, “surely the Chernobyl lesson should have been to phase out nuclear power and develop alternative energy sources”.

Yet since that time the nuclear energy proponents along with sympathetic administrations and regulatory agencies such as the International Atomic Energy Agency (IAEA), are actively promoting the use of nuclear energy as the solution to the problem of climate change and growing world energy consumption even though the future ecological consequences have not been effectively addressed or admitted. Canada has, through its Prime Minister and nuclear promoters, become an active apologist and vendor of CANDU reactors. Dr. David Marples, at the April 18 Symposium, decried the folly of Canada’s having sold and continuing to sell civil nuclear reactors to Eastern Europe“. Dr. Marples expressed alarm about the CANDU reactor sales in Romania, and described the sale as a “shameful exercise”, and added that “nuclear power has never justified, the expenditures spent on it” Dr. Walter Saimani who also participated at the April 18 symposium expanded on Dr. Marples remark and added that the purported “benefits of civil nuclear reactors do not outweigh the risks”.

POST- 50

() THAT **52/1 Proclamation of the International Year of Global Compliance**

The General Assembly

Whereas 1999 is the culmination of the decade devoted to the furtherance of International law

Whereas the General Assembly has decided unanimously to proclaim solemnly, on the Fifty-second Anniversary of the United Nations, 1999 to be the International Year of Global Compliance

Whereas since the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations; and have created expectations through General Assembly Resolutions, declarations and Conference action statements.,

Whereas, if these years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Whereas fulfillment of the purpose of the United Nations would require the discharging of these year of obligations related to guaranteeing respect for human rights, preserving and protecting the environment, promoting peace, and ensuring socially equitable and environmentally sound development;

Whereas, the freeing up of money through the peace dividend would assist in the discharging of these obligations, and the fulfilling of these expectations

Whereas the Fifty-second Anniversary of the United Nations provides a unique opportunity to reaffirm the support for and commitment to the purposes and principles of the Charter of the United nations, and to undertake to discharge previous obligations incurred through the Charter, Covenants, Conventions, and to fulfill previous expectations created through Declarations, General Assembly Resolutions, and Conference Action statements.

Now, therefore,

The General Assembly, and its member states

Solemnly proclaim 1999 the International Year of Global Compliance

and solemnly pledge to do the following:

- to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained;
- to discharge obligations undertaken through the Charter, Conventions, Treaties, and Covenants, and to fulfill expectations created through Declarations, General Assembly Resolutions and conference Action statements;
- to sign and ratify what they have not yet signed and ratified, to enact the necessary legislation and enforcement measures to ensure the discharging of these obligations
- to fulfill additional expectations created through globally adopted UN Conference action plans, and programs of action.

7.2.4. MANDATE TO CHANGE CONSUMPTIVE PATTERNS OF DEVELOPMENT AND TO ADDRESS INEQUALITY

" Programs should: Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups -- in particular, women, children and youth within those groups - refugees and people under occupation. The groups will include poor smallholders, pastoralists, artisans, fishing communities, landless people, indigenous communities,

" Establishing, expanding and managing, as appropriate to each national context, protected area systems, which includes systems of conservation units for their environmental, social and spiritual functions and values, including conservation of forests in representative ecological systems and landscapes, primary old-growth forests, conservation and management of wildlife, nomination of world Heritage Sites under the World Heritage Conventions, as appropriate, conservation of genetic resources, involving in situ and ex situ measures and undertaking supportive measures to ensure sustainable utilization of biological resources and conservation of biological diversity and the traditional forest habitats of indigenous people, forest dwellers and local communities; (11.15 b., Deforestation)

" to promote income-generating activities, such as sustainable tourism,... in particular to protect the livelihood of local communities and indigenous people(13.15. b, fragile ecosystems)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Long-term research into the importance of biodiversity for the functioning of ecosystems and the role of ecosystems in producing good, environmental services and other values supporting sustainable development with particular reference to the biology and reproductive capacities of key terrestrial and aquatic species, including native, cultivated and cultured species; ? observation and inventory techniques; ecological conditions necessary for biodiversity conservation and continued evolution; and social behaviour and nutrition habits dependent on natural ecosystems, where women play key roles. The work should be undertaken with the widest possible participation, especially of indigenous people and their communities, including women. (15.5 f, Biological diversity)

In chapter 36 of Agenda 21, a very important distinction is made between promoting "education," promoting "public awareness," and promoting "training." It appears to be clear in Agenda 21 that non-governmental organizations, community-based groups, women's groups and aboriginal groups are called upon to assist educational authorities in reorienting education. The role of industry is ascertained to be limited to specific areas of business and industrial and training programs.

" Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. The authorities and industry should encourage business, industrial and agricultural schools to include such topics in their curricula. The corporate sector could include sustainable development in their education and training programmes. Agenda 21, Chapter 36.5 l

In the section of Agenda 21 that addresses the " promoting of public awareness " industry is included not as the dispenser of "education" but as the recipient of needed education.

" Countries and regional organizations should be encouraged, as appropriate, to provide public environmental and development information services for raising the awareness of all groups, the private sector and particularly decision makers. (Agenda 21, section 36.10 c)

In the section of Agenda 21, that addresses the "promoting of training, an important role for industry is envisioned.

To strengthen national capacities,... in training, to enable governments, employers and workers to meet their environmental and development objectives and to facilitate the transfer and assimilation of new environmentally sound, socially acceptable and appropriate technology and know-how (Agenda 21, 36.13 c)

13. RIGHTS OF INDIGENOUS PEOPLES

UNCED Documents Sections from Agenda 21

Indigenous people and their communities have an historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities. (Agenda 21, 16.1)

In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: (Agenda 21, 16.3)

(a) Establishment of a process to empower indigenous people and their communities through measures that include:

(i) Adoption or strengthening of appropriate policies and/or legal instruments at the national level;

(ii) Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;

(iii) Recognition of their values, traditional knowledge and resource management practices with a view to promoting environmentally sound and sustainable development;

UNCED Documents: Rio Declaration

Indigenous people and their communities, and other local communities, have a vital role in environmental management and development because of their knowledge and traditional practices. States should recognize and duly support their identity, culture and interests and enable their effective participation in the achievement of sustainable development. (Rio Declaration, Principle 22)

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health. (Rio Declaration, Principle 14)

In order to protect the environment, the precautionary approach shall be widely applied by States according to their capabilities. Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation. (Rio Declaration, Principle 15)

National authorities should endeavour to promote the internalization of environmental costs and the use of economic instruments, taking into account the approach that the polluter should, in principle, bear the cost of pollution, with due regard to the public interest and without distorting international trade and investment.(Rio Declaration, Principle 16)

14.RESPECT FOR CULTURAL INTEGRITY AND INDIGENOUS PRACTICES

13.1. RESPECT FOR CULTURAL INTEGRITY AND RIGHTS OF INDIGENOUS PEOPLE

" respecting the cultural integrity and the rights of indigenous people [PEOPLES, EDITORIAL ADDITION] and their communities (3.7. b)

14.2. RESPECTS FOR TRADITIONAL AND INDIGENOUS PRACTICES

"Promote development in accordance with indigenous practices and adopt technologies appropriate to local conditions (7.42 c)

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 Biodiversity)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c, Agriculture)

" Governments ...should ... Recognize and foster the traditional methods and the knowledge of indigenous people and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (15.4, g Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ...(15.6 g. Biodiversity)

Governments... consistent with the requirements of international law should, as appropriate collect, assess and make available relevant and reliable information in a timely manner and in a form suitable for decision-making at all levels, with the full support and participation of local and indigenous people and their communities. (15.6 f Biodiversity)

"promotion of collaborative research programmes... fostering of traditional methods and knowledge of such groups (local and indigenous) in connection with these activities. (16.7 b Biotechnology)

States shall cooperate with a view to the conservation of marine mammals and, in the case of cetaceans, shall in particular work through the appropriate international organizations for their conservation, management and study (17.50 Marine)

“Environmentally preferable goods.

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies to ensure that the private sector, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws, and adopt policies and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on an equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

fundamental principles derived from the obligations incurred in the United Nation Conventions, Treaties, Covenants and from the expectations created in the United Nations Declarations, Conference action plans and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development. The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of mandatory international normative standards-and-technical regulations (MINS) that will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development.** Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real cooperation based on the highest tenable principles. This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive corporations including transnationals private sector to participate in socially equitable and environmentally sound development.** *participation in the shaping of international cooperation.* The international community, including multilateral financial institutions, **has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments.** In section

167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, states undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.”. In addition the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which continue to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound technology that *environmental to ensure that additional resources to reinforce national efforts to foster an enabling environment to and achieve the objectives of adequate shelter for all and the socially equitable and environmentally sound sustainable development* of human settlements.

of their international obligations concerning the protection of human health and protection and preservation of the environment, and are liable in accordance with international law (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992);

shall establish the basis for socially equitable and environmentally sound development.

fundamental principles derived from

... Art. 148 and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on a equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires ensuring compliance of private sector**

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure,

health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(23)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of a practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(24)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and states have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature

(27)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural states where refugees, landed immigrants and citizens from former states have left their country of origin because of the violation of human rights.

DRAFTED FOR 1997 52 ANNIVERSARY

52/1 Proclamation of the International Year of Global Compliance

The General Assembly

Whereas 1999 is the culmination of the decade devoted to the furtherance of International law

Whereas the General Assembly has decided unanimously to proclaim solemnly, on the Fifty-second Anniversary of the United Nations, 1999 to be the International Year of Global Compliance

Whereas since the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations; and have created expectations through General Assembly Resolutions, declarations and Conference action statements.,

Whereas, if these years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Whereas fulfillment of the purpose of the United Nations would require the discharging of these year of obligations related to guaranteeing respect for human rights, preserving and protecting the environment, promoting peace, and ensuring socially equitable and environmentally sound development;

Whereas, the freeing up of money through the peace dividend would assist in the discharging of these obligations, and the fulfilling of these expectations

Whereas the Fifty-second Anniversary of the United Nations provides a unique opportunity to reaffirm the support for and commitment to the purposes and principles of the Charter of the United nations, and to undertake to discharge previous obligations incurred through the Charter, Covenants, Conventions, and to fulfill previous expectations created through Declarations, General Assembly Resolutions, and Conference Action statements.

Now therefore,

The General Assembly, and its member states

Solemnly proclaim 1999 the International Year of Global Compliance

and solemnly pledge to do the following:

- to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained;

- to discharge obligations undertaken through the Charter, Conventions, Treaties, and Covenants, and to fulfill expectations created through Declarations, General Assembly Resolutions and conference Action statements;
- to sign and ratify what they have not yet signed and ratified, to enact the necessary legislation and enforcement measures to ensure the discharging of these obligations
- to fulfill additional expectations created through globally adopted UN Conference action plans, and programs of action.

MOVE MOVE MOVE 1997

52nd plenary meeting 24, October, 1996

()THAT in 1996, in October, I circulated the following petition:

EXHIBIT

PETITION FOR THE ESTABLISHMENT OF AN INTERNATIONAL COURT OF COMPLIANCE

RECOGNIZING that, for fifty years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge these obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

• ADDITIONAL INTERNATIONAL PRINCIPLES

ACKNOWLEDGMENT OF URGENCY OF CONSERVING NATURE

Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources (World Charter of nature)

ENSURING THE INHERENT WORTH OF NATURE

ensuring that every form of life is unique, warranting respect regardless of its worth to man [human], and to accord other organisms such recognition's (World Charter of Nature)

ACCEPTANCE OF NEED FOR MORAL CODE OF ACTION IN RESPECT OF NATURE

ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans], and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (UN Resolution 37/7) World Charter of Nature)

RECOGNITION OF INTERCONNECTEDNESS WITH NATURE

Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (World Charter of Nature).

COMMITMENT TO NON-TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration, UNCED)

AFFIRMATION OF POSITIVE-DUTY-TO PROTECT-INDIGENOUS-LANDS PRINCIPLE.

recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate (16.3. ii, Agenda 21)

ADDITIONAL PRINCIPLES THAT SHOULD BE INCORPORATED INTO INTERNATIONAL STANDARDS

ENUNCIATION OF THE PRIMACY OF THE ECOSYSTEM PRINCIPLE

Ensuring that in all decisions made about the environment that the ecosystem be given primacy

RECOGNITION OF LIMITS TO GROWTH PRINCIPLE

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are implications of their imminent approach

PRINCIPLE OF COOPERATION WITH AND NON-DOMINATION OVER NATURE

Humanity's role is to understand and work with the rest of nature, not control, manage, dominate or conquer it

NON-QUANTIFIABILITY OF ECOLOGICAL VALUES

Ecological values are of a class not readily quantified particularly in economic units but must be taken as a given, in that all life is dependent on sustaining the biosphere, the exclusive life-support system (Knelman)

No pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, the prevention of pollution and environmental destruction should be reaffirmed by using "prevention technologies"

ENUNCIATION OF THE "CAUTIONARY" PRINCIPLE (REVERSE - ONUS)

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

[NOTE THAT THE HONORABLE SHEILA COPPS, THE MINISTER OF ENVIRONMENT OF CANADA HAS CALLED FOR THE IMPLEMENTATION OF THE REVERSE ONUS.]

NON-INTRODUCTION OF HAZARDOUS PRODUCTS IN THE ENVIRONMENT PRINCIPLE

the onus of proving the non-hazardous nature of the product will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm has been done by non-vested interest (i.e. financial interest) parties]

INCLUSION LEGISLATIVE PRINCIPLE

ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act

NON-PROSECUTION FOR ADVOCATING PURPOSES OF THIS FRAMEWORK OF MANDATORY STANDARDS AND TECHNICAL REGULATIONS PRINCIPLE

ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the framework

COMPENSATION NOT JUSTIFICATION FOR NON-FULFILLING OF DUTY PRINCIPLE

ensuring that compensation can never be used as reason for not exercising the duty to protect, conserve and sustain the environment

COUPLING-AVOIDANCE PRINCIPLE

ON-ACCEPTANCE-OF- “ENVIRONMENT-INDUSTRY”-BEING-COUPLED-WITH-THE-TOXIC- WASTE-PRODUCTION-INDUSTRY-PRINCIPLE

The coupling of a “clean-up environment” industry with a toxic waste producer shall not be used to justify the continuation of the production of toxic waste

SOLUTION-WORSE-THAN-PROBLEM-AVOIDANCE PRINCIPLE

The advocating of a “solution” that is potentially worse than the problem to be addressed shall be avoided. For example, the civil nuclear power industry is promoting nuclear energy as the solution to climate change

1. 3. COMPLYING WITH PREVENTION PRINCIPLES IN NAFTA

NON-RELAXATION OF STANDARDS TO ATTRACT INVESTMENT

The Parties recognize that it is inappropriate to encourage investment by relaxing domestic health, safety or environmental measures. Accordingly, a Party should not waive or otherwise derogate from, or offer to waive of otherwise derogate from such measures as an encouragement for the establishment, acquisition, expansion or retention in its territory of an investment of an investor. If a Party considers that another Party has offered such an encouragement, it may require consultations with the other Party and the two Parties shall consult with a view to avoiding any such encouragement. (NAFTA Article 1114 ss 2)

1.4. COMPLYING WITH SIGNIFICANT FEDERAL PRINCIPLES

CAUTIONARY OR “REVERSE ONUS” PRINCIPLE

The proponent of an intervention into the ecosystem shall demonstrate the safety of the intervention rather than the opponent of an intervention, being

required to demonstrate, harm (Proposed by The Federal Minister of Environment

1.1. [This principle holds that] a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose (Art.1.Convention on the Law of Treaties, 1968)

1.2. [This principle also holds that] the rules of customary international law will continue to govern questions not regulated by the provisions of the present Convention have agreed as follows (Article 29 territorial scope of treaties, Convention on the Law of Treaties)

(2)

OBLIGATION PRINCIPLES

2.2. [This principle holds that there is an] Obligation not to defeat the object and purpose of a treaty prior to its entry into force

A state is obliged to refrain from acts which would defeat the object and purpose of a treaty when:

(i) it has signed the treaty or has exchanged instruments constituting the treaty subject to ratification, acceptance or approval, until it shall have made its intention clear not to become a party to the treaty a); or

(ii) it has expressed its consent to be bound by the treaty, pending the entry into force of the treaty and provided that such entry into force is not unduly delayed b)

(Art. 18, Convention on the Law of Treaties, 1968)

2.3. [This principle affirms the Doctrine of Legitimate Expectations which holds that]

(i) "To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, B.C. Ombudsman Annual Report, 1991)

and that

(ii) If a government holds itself out to do something even if not legally required to do so, it will be expected to act carefully and appropriately without negligence, and the citizens have the legitimate expectation that the government will discharge its obligations (Ombudsman Office, Personal Communication).

2.4. This principle also entails commitment to the Public Trust Doctrine

This doctrine provides that submerged and submersible lands are preserved for public use in navigation, fishing and recreation and state, as trustee for the people, bears responsibility of preserving and protecting the right of the public to the use of the waters for those purposes.

(3)

EQUITY PRINCIPLES

[This principle holds that] equity imputes an intention to fulfill an obligation and that equity looks to the intent rather than to the form (Maxims of Equity)

- 3.1. **Equity will not suffer a wrong without a remedy**
- 3.2. **Equity follows the law**
- 3.3. **Where there is equal equity, the law shall prevail**
- 3.4. **Where the equities are equal, the first in time shall prevail**
- 3.5. **He/she who seeks equity must do equity**
- 3.6. **He/she who comes into equity must come with clean hands**
- 3.7. **Delay defeats equity**
- 3.8. **Equality is equity**
- 3.9. **Equity looks to the intent rather than to the form**
- 3.10. **Equity looks on that as done which ought to be done**
- 3.11. **Equity imputes an intention to fulfill an obligation**
- 3.12. **Equity acts in person**

(Roscoe Pound in Cambridge Legal Essays (1926), pp259 et seq., cited from P.V. Baker and P. St Langar (1990). *Snell's Equity* London Sweet and Maxwell

(4)

POSSIBILITY OR REVERSIBLE PRINCIPLE

4.1. [This principle holds that]Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligations under the treaty or of any other international obligation owed to any other party to the treaty (Art. 61. 2 Convention on the Law of Treaties, 1968).

SYSTEMIC CONSTRAINT:

OFTEN IT IS THOSE WHO ATTEMPT TO PREVENT IRREVERSIBILITY RATHER THAN THOSE WHO BECAUSE IRREVERSIBILITY ARE THAT ARE PROSECUTED. INJUNCTIONS WHICH ARE SUPPOSED TO PREVENT IRREPARABLE HARM ARE USED AGAINST THOSE WHO ATTEMPT TO PREVENT IRREPARABLE HARM

(5)

HIGHEST TENABILITY PRINCIPLE

INTERNATIONAL OBLIGATIONS AS A MINIMUM PRINCIPLE

5.1. This principle affirms that the need to avoid the lowest common denominator as the solution

Nothing in this Convention shall affect any provisions that are more conducive to the achievement of equality between men and women which may be contained in the legislation of a State Party or

in any other international convention, treaty or agreement in force for that State. (Paraphrase of Article 23, Convention on the Elimination of all forms of Discrimination Against Women, 1979)

(6)

INTERDEPENDENCE PRINCIPLE

6.1. The interdependence principle affirms the interdependence of respect for human rights, of fulfillment of social justice and equity, of achieving environmental protection, preservation and conservation, and of attainment of peace. These issues will be perceived to be interdependent facets of a potentially viable solution. It is no longer possible to consider in isolation: threats and impacts of war; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes, including nuclear waste, the disregard for inter-generational and gender equality/equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of

development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap

6.2. This Interdependence principle reflects[ing] the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation. (Preamble, 1.5., International Conference on Population and Development, 1994)

6.3. [This principle holds that] Research *should shall* be undertaken on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994)

6.4. This principle holds that *mankind humankind* is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (Preamble (a)UN Resolution, 37/7, World Charter of Nature, 1982)

Reducing environmental health hazards

* 89 a ter Improve policies that **prevent**, reduce environmental health hazards and provide the informal sector and all workers with accessible information on how to enhance occupational safety and reduce health risks;

(7)

PRINCIPLE OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

7.1. This principle affirms the need for “socially equitable and environmentally-sound development” (Preamble, 1.2., International Conference on Population and Development, 1994)

7.2. This principle affirms that to achieve *sustainable development* [socially equitable and environmentally-sound] and a higher quality of life for all people, Governments *should reduce and shall* eliminate unsustainable patterns of production and consumption and promote [appropriate ~] demographic policies (3.9., International Conference on Population and Development, 1994)

(8)

PRINCIPLE OF SELF-SUFFICIENCY

8.1. This principle entails the supporting of bioregions in the development of self-sufficiency through the development of indigenous technology using ecologically sound means and only exporting when there is a surplus. Adoption of this principle would discourage export-dominant economies and the furthering of many of the aspects of the “green revolution” — which fostered the dependence on external technology.

8.2. This principle is aimed at the promotion of food security and, *where appropriate*, food self-sufficiency within the context of sustainable agriculture (3.7.I., Combating Poverty, Agenda 21, UNCED, 1992)

(9)

PRINCIPLE OF EXTRA-TERRITORIALITY

9.1. This principle entails the ensuring that states, individuals, institutions and the market shall not abuse the concept of extra-territoriality —the application of standards from exporter state- to justify the transfer of banned, restricted, obsolete or rejected technology to other states whose standards are not as high

SYSTEMIC CONSTRAINT: THE SAME STATE OR INDUSTRY THAT CONTINUES TO IMPOSE THE TRADITIONAL MODEL OF CONSUMPTION USES THE RELUCTANCE TO IMPOSE EXTERNAL REGULATIONS AS A MEANS TO JUSTIFY RELAXING REGULATIONS

(10)

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(11)

EQUALITY PRINCIPLE

11.1. [This principle entails] reaffirming of the... faith in fundamental human rights, in the dignity and worth of human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in large freedom (Preamble, Universal Declaration of Human Rights, 1948)

(12)

PRINCIPLE OF NON-PRESUMPTION

12.1. This principle entails the affirming that no presumption shall be made about capabilities or abilities on the basis of race, tribe, religion, disabilities, country of origin, sex, sexual orientation, language, family structure, or other status

(13)

LIMITS-TO GROWTH PRINCIPLE

LIVING WITHIN THE CARRYING CAPACITY OF THE ECOSYSTEM

13.1. There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

* [Find: Quote from Club of Rome]

(14)

INHERENT WORTH PRINCIPLE

14.1. Every form of life is unique, warranting respect regardless of its worth to man [Humanity], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

14.2. Nature shall be respected and its essential processes shall not be impaired (Principle 1, UN Resolution, 37/7, World Charter of Nature, 1982) World Charter of Nature, 1982)

(15)

PRECAUTIONARY PRINCIPLE

15.1. This principle holds that...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

15.2. PREVENTION PRINCIPLE And ANTICIPATORY PRINCIPLE (See, *Global compliance Research project's submission on the environment, 22.3*)

15.4. Reverse onus principle

(i) The onus of proof shall shift from the opponent of an intervention having to demonstrate harm, to the proponent of an intervention into the Ecosystem, having to demonstrate safety. Every proponent of an intervention into the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes, and be prepared to submit data for a full-scale life cycle analysis, and environmental cost analysis of the product and activities.

(16)

PRINCIPLE OF NON-DISPLACEMENT

16.1. This principle acknowledges that solutions do not lie in transferring the problem to another area, or another time

(17)

PRINCIPLE OF SOLUTION BEING BETTER THAN THE PROBLEM PRINCIPLE

17.1. Ensuring that the solution offered is not worse or potentially worse than the original problem that it was intended to solve

(18)

TRANSBOUNDARY PRINCIPLE

This principle holds that States shall take all measures necessary to ensure that activities under their jurisdiction or control are so conducted as not to cause damage by pollution to other States and their environment, and that pollution

arising from incidents or activities under their jurisdiction or control does not spread beyond the areas where they exercise sovereign rights in accordance with this Convention. (Art. 194. 2., Law of the Seas, 1982)

(19)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(20)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and states have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature

(21)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural states where refugees, landed immigrants and citizens from former states have left their country of origin because of the violation of human rights.

(22)

ARMS LENGTH RESEARCH PRINCIPLE

This principle holds that most of the current research that has been used to support the continuation of the current model of development has arisen from non-arms length research by vested interests, and that if the urgency of the global situation is to be addressed arms-length non-vested interest research has to be relied on.

(23)

REGULATOR MUST NOT PROMOTE BE PRINCIPLE

This principle holds that regulators must not promote the continuance of the object or activity over which they regulate

(24)

PRINCIPLE OF PROPORTIONAL RESPONSE

This principle holds that the response in conflict must be proportional in kind, extent, nature to that of the original attack [Check wording in the Geneva Convention]

(25)

PRINCIPLE OF DISCRIMINATION

This principle requires the discrimination between military and not military competence and non competence [Check wording in the Geneva Convention]

PRINCIPLES OF ENVIRONMENTAL COMPLIANCE

This was prepared for submission to the B.C. Government's Working Committee on Criteria for Discharge Emissions by the ERA Ecological Rights Association. It is proposed as a set of principles appropriate for bioregionalism

PRINCIPLE 1. ENDORSING THE INTERDEPENDENCE PRINCIPLE

The interdependence principle affirms the interdependence of respect for human rights, fulfillment of social justice and equity, achievement of environmental protection and preservation, and the attainment of peace. These components are interdependent facets of a potentially viable solutions. It no longer seems possible to consider "problems" in isolation (such as threats and impacts of war; the exponential growth of population; continued urbanization; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes (including nuclear waste); the disregard for inter-generational and gender equality/equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap, etc.)

PRINCIPLE 2 ENDORSING THE PRIMACY OF THE ECOSYSTEM

In all decisions made affecting the environment, the integrity of the ecosystem must be given primacy in conjunction with socially equitable and environmentally-

sound development. NOTE: The “Ecosystem” includes both the biological and physical and chemical components (the biotic and abiotic)

PRINCIPLE 3; ENSURING CONSISTENT PROTECTION OF AMBIENT AIR AND WATER AND SOIL QUALITY

Ensuring consistent protection means ensuring both the variation in air, water, and soil conditions across a bioregion and the variation in effects of different substances emitted. All discharges, no matter where they are located in a region, will be equally affected by the criteria. Ensuring consistent protection also means that governments will not transfer its pollution problems onto other jurisdictions or bioregions, nor should governments relax standards in order to attract industry. Criteria must ensure acceptable ambient environmental conditions all across states and bioregions.

PRINCIPLE 4: [ENABLING] SOCIALLY EQUITABLE AND ENVIRONMENTALLY-SOUND DEVELOPMENT

“socially equitable and environmentally-sound development” is a basis of bioregional planning. (Preamble, 1.2., International Conference on Population and Development, 1994)

PRINCIPLE 5: ENSURING THAT POLLUTING SUBSTANCES ARE NOT TRANSFERRED FROM ONE MEDIA TO ANOTHER

Pollution prevention is complete prevention instead of displacement of problem and not the transferring pollution from one medium to another (for example from water to air).

PRINCIPLE 6: AFFIRMING THE LIMITS OF GROWTH

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

PRINCIPLE 7: ENDORSING THE ANTICIPATORY PRINCIPLE

The anticipatory principle is a pro-active measure to ensure that substances, processes and activities which are harmful to the environment are prevented from entering the environment, and to ensure that costly subsequent means of restoration are avoided, and that irreversible environmental degradation are avoided. Adverse effects include, but are not limited to: toxicity, bioaccumulation, bio-concentration, persistence, depletion of the stratospheric ozone layer,

reduction of carbon sinks, increased greenhouse gases, increased human-induced climate change, reduction or loss of biodiversity, as well as heat, light and electromagnetic radiation, atomic radiation, and hormone mimicry

PRINCIPLE 8: AFFIRMING THE "CAUTIONARY" PRINCIPLE

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

PRINCIPLE 9: REQUIRING OF A SHIFT IN THE ONUS OF PROOF

the proponents of an intervention shall demonstrate the safety of the intervention rather than the opponent having to demonstrate the harm of the intervention. "Reverse-onus principle" recommended by the Canadian Minister of Environment, Sheila Copps (1994) Proof of the non-hazardous or toxic nature of the product introduced into the environment will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm by non-vested interest parties]

PRINCIPLE 10: ADOPTING OF "PREVENTION" TECHNOLOGIES

Prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error — will contribute to socially equitable and environmentally-sound development

PRINCIPLE 11: ENFORCING THE POLLUTION PREVENTION PRINCIPLE

Mandatory standards and technical regulations will be developed to prevent adverse effects of substances or activities on the ecosystem including the adverse effects on the health of human and non-human species within and throughout bioregions.

PRINCIPLE 12: REQUIRING THE USE OF BEST ECOLOGICALLY SOUND TECHNIQUES (BEST)

It is important to support and promote the development of and the use of BEST (Best Ecologically Sound Techniques). In the event that there is no BEST technology which can prevent the release of persistent or bio-accumulative toxics then the extractive or productive activities which produce the product or substance process should be changed; the activities and product phased out/outlawed, or the demand for the product reduced through public education. In this case, the industry involved shall be assisted in the conversion to alternative processes or products.

PRINCIPLE 13 CREATING INDIGENOUS PLANT RESERVES AND HOME AND COMMUNITY MARKET GARDENS

Maintaining lawns requires a drain on local water supplies. Governments should pass regulations which encourage the replacement of grass lawns with indigenous plant reserves consistent with the fauna of the bioregion and home/community market gardens

PRINCIPLE 14: GENERATING BY-PRODUCTS AS A RESOURCE NOT AS WASTE

The generation of waste shall be prevented, and the emphasis shall be on the generation of by-products that can become an ecologically safe and sound resource. If waste is already in existence, waste shall be disposed of at its source in an ecologically safe and sound manner ensuring that nothing is being stored that could, if an accident occurred, cause harm to the environment. If no assurance can be given that waste will not cause potentially significant adverse effects, then the activity that is generating the wastes shall cease, or permission to undertake the project will not be granted.

PRINCIPLE: 15 GLOBAL COMPLIANCE

The most stringent environmental provisions shall be adopted complying with all international, national, bilateral and bioregional agreements, protocols and conventions as a minimum. If there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail.

PRINCIPLE 16: ENSURING INCLUSIVENESS OF ACTIVITIES AND SUBSTANCES

Every activity or substance that could prevent the protection and conservation of the environment will be included in environmental legislation, regardless of whether the activity or substance is, or is presumed to be covered under another Act

PRINCIPLE 17: UNDERTAKING TO NOT RELAX STANDARDS RELATED TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Governments shall undertake to not relax environmental standards and technical regulations, or human rights protection, or social justice and equality/equity provisions to attract short-term economic benefit.

PRINCIPLE 18: ENSURING THAT RELAXATION OF STANDARDS AND REGULATIONS SHALL NOT BE USED TO ATTRACT POLLUTING INDUSTRY

No proposal to relax standards or technical regulations shall be used to attract industry into a specific bioregion [see principle enunciated in NAFTA. (re: relaxation of standards to attract industry)]

PRINCIPLE 19: ESTABLISHING AND ENFORCING REDUCTION AND ELIMINATION TARGETS

"Ambient criteria", or "environmental quality criteria" refers to levels of contaminants in the environment that must be zero use, production, and release in all cases where a toxic substance is persistent or bio-accumulative (e.g. chlorine). It also applies when a substance will generate persistent or bio-accumulative toxic by-products or breakdown products during its productions, use or disposal (Zero Toxics Alliance Statement of Principles)

PRINCIPLE 20: ENSURING ENVIRONMENTAL AUDITS AND TAKING INTO ACCOUNT ALL ECOLOGICAL CONSEQUENCES PRINCIPLE

The environmental audit and ecological consequences principle are the following: to assess both the environmental costs of not converting to ecologically sound practices and the environmental costs of permitting ecologically unsound practices (including the costs to future generations of irreversible environmental degradation) and the environmental costs of potential mitigation, and restoration.

PRINCIPLE 23: ASSESSING THE FULL COSTS OF VIOLATING THE RIGHTS TO THE DISENFRANCHISED THROUGH ECOLOGICALLY UNSOUND PRACTICES

In addition, assessment of the full costs of violating the rights of the disenfranchised shall be carried out. The groups bearing the greatest impact from ecologically unsound practices are usually the disenfranchised in society—the poor and the members of minority groups

PRINCIPLE 25: REQUIRING A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT

An actual assessment of the short and long term potentially adverse environmental effects of existing and proposed projects and activities shall be carried out. So-called "Environmental Assessments" which review "environmental, economic, social, cultural, heritage, health effects of the reviewable projects" are not legitimate environmental impact assessments (Principle 25, "Environmental Compliance" Global Compliance Research Project)

PRINCIPLE 26: ENSURING AND ENFORCING THE POLLUTER PAY PRINCIPLE

The Polluter Pay Principle ensures that those who may release polluting substances into the environment pay the full-cost of environmentally safe handling, treatment, disposal, and remediation; in addition, permits shall be suspended and canceled, if the polluter has caused serious irreversible ecological damage

PRINCIPLE 27: ENFORCING ENVIRONMENTAL COMPENSATION PRINCIPLE

Given that throughout history sympathetic government regimes have failed to enforce their own statutory legislation, and given that there has been resultant environmental degradation, current governments shall seek environmental compensation from companies that can be shown to have consistently contributed to environmental degradation. The funds from environmental compensation shall be put into developing BEST (Best Ecologically Sound techniques)

PRINCIPLE 28: ENSURING THAT COMPENSATION IS NOT USED AS JUSTIFICATION FOR NON-FULFILLING OF DUTY

Compensation shall never be used as reason for not exercising the duty to preserve, protect, conserve the environment

PRINCIPLE 29: REJECTING THE NOTION THAT THE RESTORABILITY OF NATURE JUSTIFIES THE ABUSE OF NATURE

There exists a notion that environmental degradation is reversible; it can be restored, and rehabilitated. This notion shall never be used as a justification for the causing of environmental degradation

PRINCIPLE 30: EXTENDING CONCEPT OF DISASTER REDUCTION TO COVER NATURAL AND OTHER DISASTER SITUATIONS INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL DISASTERS (NA-TECHS)

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries. (B i Convention on Natural Disaster, 1994)

PRINCIPLE 18: ENSURING THAT STANDARDS AND TECHNICAL REGULATION WILL NOT BE RELAXED TO ATTRACT INVESTMENT

The argument that in a pristine environment that has not yet been polluted by industrial activity shall be able to have emission standards relaxed is inherently invalid and should be discounted. In other words, a licence to pollute could be given to industry in a pristine area because the area is not yet officially been designated as being polluted

PRINCIPLE 18: ENSURING THAT REDEFINITION OF PRACTICES WILL NOT ENABLE INDUSTRY TO BYPASS REGULATIONS

Polluting industries that have been regulated under statutory law, shall not through redefinition of practice be excluded from the previous regulations [where a plant with "industrial" air emissions is redefined as a recycling plant and thus the regulations related to "industrial....] is deemed inapplicable

Joan Russow PhD

Sessional Lecturer in Global Issues

Coordinator, Global Compliance research Project

- Increased loss and degradation of mountain ecosystems

Mountain ecosystems are, however, rapidly changing. They are susceptible to accelerated soil erosion, landslides and rapid loss of habitat and genetic diversity. On the human side, there is widespread poverty among mountain inhabitants and loss of indigenous knowledge. As a result, most global mountain areas are experiencing environmental degradation. (13.1. Fragile ecosystems)

7.2.4. MANDATE TO CHANGE CONSUMPTIVE PATTERNS OF DEVELOPMENT AND TO ADDRESS INEQUALITY

" Programs should: Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups -- in particular, women, children and youth within those groups - refugees and people under occupation. The groups will include poor smallholders, pastoralists, artisans, fishing communities, landless people, indigenous communities,

" Establishing, expanding and managing, as appropriate to each national context, protected area systems, which includes systems of conservation units for their environmental, social and spiritual functions and values, including conservation of forests in representative ecological systems and landscapes, primary old-growth forests, conservation and management of

wildlife, nomination of world Heritage Sites under the World Heritage Conventions, as appropriate, conservation of genetic resources, involving in situ and ex situ measures and undertaking supportive measures to ensure sustainable utilization of biological resources and conservation of biological diversity and the traditional forest habitats of indigenous people, forest dwellers and local communities; (11.15 b., Deforestation)

" to promote income-generating activities, such as sustainable tourism,... in particular to protect the livelihood of local communities and indigenous people(13.15. b, fragile ecosystems)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Long-term research into the importance of biodiversity for the functioning of ecosystems and the role of ecosystems in producing good, environmental services and other values supporting sustainable development with particular reference to the biology and reproductive capacities of key terrestrial and aquatic species, including native, cultivated and cultured species; ? observation and inventory techniques; ecological conditions necessary for biodiversity conservation and continued evolution; and social behaviour and nutrition habits dependent on natural ecosystems, where women play key roles. The work should be undertaken with the widest possible participation, especially of indigenous people and their communities, including women. (15.5 f, Biological diversity)

In chapter 36 of Agenda 21, a very important distinction is made between promoting "education," promoting "public awareness," and promoting "training." It appears to be clear in Agenda 21 that non-governmental organizations, community-based groups, women's groups and aboriginal groups are called upon to assist educational authorities in reorienting education. The role of industry is ascertained to be limited to specific areas of business and industrial and training programs.

" Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. The authorities and

industry should encourage business, industrial and agricultural schools to include such topics in their curricula. The corporate sector could include sustainable development in their education and training programmes. Agenda 21, Chapter 36.5 I

In the section of Agenda 21 that addresses the "promoting of public awareness" industry is included not as the dispenser of "education" but as the recipient of needed education.

" Countries and regional organizations should be encouraged, as appropriate, to provide public environmental and development information services for raising the awareness of all groups, the private sector and particularly decision makers. (Agenda 21, section 36.10 c)

In the section of Agenda 21, that addresses the "promoting of training, an important role for industry is envisioned.

To strengthen national capacities,... in training, to enable governments, employers and workers to meet their environmental and development objectives and to facilitate the transfer and assimilation of new environmentally sound, socially acceptable and appropriate technology and know-how (Agenda 21, 36.13 c)

13. RIGHTS OF INDIGENOUS PEOPLES

UNCED Documents Sections from Agenda 21

Indigenous people and their communities have an historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and

historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities. (Agenda 21, 16.1)

In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: (Agenda 21, 16.3)

(a) Establishment of a process to empower indigenous people and their communities through measures that include:

(i) Adoption or strengthening of appropriate policies and/or legal instruments at the national level;

(ii) Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;

(iii) Recognition of their values, traditional knowledge and resource management practices with a view to promoting environmentally sound and sustainable development;

UNCED Documents: Rio Declaration

Indigenous people and their communities, and other local communities, have a vital role in environmental management and development because of their knowledge and traditional practices. States should recognize and duly support their identity, culture and interests and enable their effective participation in the achievement of sustainable development. (Rio Declaration, Principle 22)

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health. (Rio Declaration, Principle 14)

In order to protect the environment, the precautionary approach shall be widely applied by States according to their capabilities. Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation. (Rio Declaration, Principle 15)

National authorities should endeavour to promote the internalization of environmental costs and the use of economic instruments, taking into account the approach that the polluter should, in principle, bear the cost of pollution, with due regard to the public interest and without distorting international trade and investment.(Rio Declaration, Principle 16)

14.RESPECT FOR CULTURAL INTEGRITY AND INDIGENOUS PRACTICES

13.1. RESPECT FOR CULTURAL INTEGRITY AND RIGHTS OF INDIGENOUS PEOPLE

" respecting the cultural integrity and the rights of indigenous people [PEOPLES, EDITORIAL ADDITION] and their communities (3.7. b)

14.2. RESPECTS FOR TRADITIONAL AND INDIGENOUS PRACTICES

"Promote development in accordance with indigenous practices and adopt technologies appropriate to local conditions (7.42 c)

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 Biodiversity)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c, Agriculture)

" Governments ...should ... Recognize and foster the traditional methods and the knowledge of indigenous people and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (15.4, g Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ...(15.6 g. Biodiversity)

Governments... consistent with the requirements of international law should, as appropriate collect, assess and make available relevant and reliable information in a timely manner and in a form suitable for decision-making at all levels, with the full support and participation of local and indigenous people and their communities. (15.6 f Biodiversity)

"promotion of collaborative research programmes... fostering of traditional methods and knowledge of such groups (local and indigenous) in connection with these activities. (16.7 b Biotechnology)

States shall cooperate with a view to the conservation of marine mammals and, in the case of cetaceans, shall in particular work through the appropriate international organizations for their conservation, management and study (17.50 Marine)

“Environmentally preferable goods.

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies to ensure that the private sector, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws, and adopt policies and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on an equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

fundamental principles derived from the obligations incurred in the United Nation Conventions, Treaties, Covenants and from the expectations created in the United Nations Declarations, Conference action plans and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development. The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of mandatory international normative standards-and-technical regulations (MINS) that will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development.** Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting **BEST (Best Environmentally Sound Traditions) practices from the outset.** Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real

cooperation based on the highest tenable principles. This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive corporations including transnationals** *private sector to participate in socially equitable and environmentally sound development.* *participation in the shaping of international cooperation.* The international community, including multilateral financial institutions, **has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments.** In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, states undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.”. In addition the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which continue to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound technology that *environmental to ensure that additional resources to reinforce national efforts to foster an enabling environment to and achieve the objectives of adequate shelter for all and the socially equitable and environmentally sound, sustainable development of human settlements.*

of their international obligations concerning the protection of human health and protection and preservation of the environment, and are liable in accordance with international law (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992);

shall establish the basis for socially equitable and environmentally sound development.

fundamental principles derived from

... Art. 148 and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on an equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires ensuring compliance of private sector**

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(23)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of a practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(24)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and states have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature

(27)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural states where refugees, landed immigrants and citizens from former states have left their country of origin because of the violation of human rights.

32

Reducing environmental health hazards

(Article * 89 a ter Improve policies that **prevent**, reduce environmental health hazards and provide the informal sector and all workers with accessible information on how to enhance occupational safety and reduce health risks;

(12)

PRINCIPLE OF NON-PRESUMPTION

12.1. This principle entails the affirming that no presumption shall be made about capabilities or abilities on the basis of race, tribe, religion, disabilities, country of origin, sex, sexual orientation, language, family structure, or other status

() THAT in 1996 march 29-30, I attended International Environmental Law: Evolution and enforcement. Conference

Evening Presentation; by Judge Ulf Panzer Judges Blockade, Hamburg

Delia Burford: Wishes by and For the Children

Peter McAllister: Slideshow

Joan Russow Global Compliance Project need to establish an International Court of Compliance where citizens could take evidence of state and government noncompliance with international law.

() in 1996, I was particularly interested in Judge Ulf Presentation on the defense of necessity

Comment: Ulf Panzer, used the Nuremberg principle to justify his protesting Nuclear site

EXHIBIT

NECESSITY DEFENCE fact. But that is for a jury to say, not the court.' 8
Reasonableness is an essential concept in the necessity principle. Did the defendant reasonably believe a greater harm was about to occur? Were there no reasonable alternatives? Was the action reasonably thought necessary to prevent the harm? The greater the harm, the more reasonable it is to do something about it, even if the likelihood of success is small. As the Berrigan court said: The fallacy in the trial court's and the dissent's reasoning is to equate "reasonableness" with "success:" If by breaking the law you did not succeed in gaining your objective, you may not plead justification. But reasonableness is a function of the actor's situation. If the peril to the town was slight, it may indeed have been unreasonable of me to make a firebreak by destroying my neighbor's house but if the peril was great, my action may be seen in a very different light, and my plea of justification may prevail, even in the face of proof that the fire swept across the space I had cleared, and burned down the town.

() THAT, in 1996 , I gave a presentation at International Environmental Law: Evolution and enforcement. Conference

Global Compliance Project need to establish an International Court of Compliance where citizens could take evidence of state and government non-compliance with international law.

EXHIBIT

PETITION CALLING FOR AN INTERNATIONAL COURT OF COMPLIANCE
submission by the Global Compliance Caucus

Recognizing that for fifty-one years since the inception of the United Nations, member states have incurred obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, and General Assembly resolutions,

NOTING that obligations and expectations are reflected in international instruments undertaking to guarantee the respect of human rights, to preserve, protect and conserve the environment, to prevent conflict and war, and to achieve socially equitable and environmentally sound development

REMINDED of the General Assembly resolution establishing a decade of international law from 1990-1999

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. ii Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all forms of Racial Discrimination (1965) International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979);; Convention on the Control of trans-boundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will fulfil this expectation, and convinced of the applicability of this Doctrine to declarations, conference action plans and General Assembly Resolutions.

AWARE that the relevance of the United Nations will be furthered through the demonstration of the political will to ensure the discharging of obligations and the fulfilling of expectations

() THAT IN 1996 I PRESENTED A SUMMARY OF THE PRESENTATION AT THE UN

EXHIBIT

PETITION FOR THE ESTABLISHMENT OF AN INTERNATIONAL COURT OF COMPLIANCE

RECOGNIZING that for fifty years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge these obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

- ADDITIONAL INTERNATIONAL PRINCIPLES

ACKNOWLEDGMENT OF URGENCY OF CONSERVING NATURE

Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources (World Charter of Nature)

ENSURING THE INHERENT WORTH OF NATURE

ensuring that every form of life is unique, warranting respect regardless of its worth to man [human], and to accord other organisms such recognition's (World Charter of Nature)

ACCEPTANCE OF NEED FOR MORAL CODE OF ACTION IN RESPECT OF NATURE

ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans], and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (UN Resolution 37/7) World Charter of Nature)

RECOGNITION OF INTERCONNECTEDNESS WITH NATURE

Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (World Charter of Nature).

COMMITMENT TO NON-TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration, UNCED)

AFFIRMATION OF POSITIVE-DUTY-TO PROTECT-INDIGENOUS-LANDS PRINCIPLE.

recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate (16.3. ii, Agenda 21)

ADDITIONAL PRINCIPLES THAT SHOULD BE INCORPORATED INTO INTERNATIONAL STANDARDS

ENUNCIATION OF THE PRIMACY OF THE ECOSYSTEM PRINCIPLE

Ensuring that in all decisions made about the environment that the ecosystem be given primacy

RECOGNITION OF LIMITS TO GROWTH PRINCIPLE

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are implications of their imminent approach

PRINCIPLE OF COOPERATION WITH AND NON-DOMINATION OVER NATURE

Humanity's role is to understand and work with the rest of nature, not control, manage, dominate or conquer it

NON-QUANTIFIABILITY OF ECOLOGICAL VALUES

Ecological values are of a class not readily quantified particularly in economic units but must be taken as a given, in that all life is dependent on sustaining the biosphere, the exclusive life-support system (Knelman)

No pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, the prevention of pollution and environmental destruction should be reaffirmed by using "prevention technologies"

ENUNCIATION OF THE "CAUTIONARY" PRINCIPLE (REVERSE - ONUS)

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

[NOTE THAT THE HONORABLE SHEILA COPPS, THE MINISTER OF ENVIRONMENT OF CANADA HAS CALLED FOR THE IMPLEMENTATION OF THE REVERSE ONUS.]

NON-INTRODUCTION OF HAZARDOUS PRODUCTS IN THE ENVIRONMENT PRINCIPLE

the onus of proving the non-hazardous nature of the product will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm has been done by non-vested interest (i.e. financial interest) parties]

INCLUSION LEGISLATIVE PRINCIPLE

ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act

NON-PROSECUTION FOR ADVOCATING PURPOSES OF THIS FRAMEWORK OF MANDATORY STANDARDS AND TECHNICAL REGULATIONS PRINCIPLE

ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the framework

COMPENSATION NOT JUSTIFICATION FOR NON-FULFILLING OF DUTY PRINCIPLE

ensuring that compensation can never be used as reason for not exercising the duty to protect, conserve and sustain the environment

COUPLING-AVOIDANCE PRINCIPLE

ON-ACCEPTANCE-OF- "ENVIRONMENT-INDUSTRY"-BEING-COUPLED-WITH-THE-TOXIC- WASTE-PRODUCTION-INDUSTRY-PRINCIPLE

The coupling of a "clean-up environment" industry with a toxic waste producer shall not be used to justify the continuation of the production of toxic waste

SOLUTION-WORSE-THAN-PROBLEM-AVOIDANCE PRINCIPLE

The advocating of a "solution" that is potentially worse than the problem to be addressed shall be avoided. For example, the civil nuclear power industry is promoting nuclear energy as the solution to climate change

1. 3. COMPLYING WITH PREVENTION PRINCIPLES IN NAFTA

NON-RELAXATION OF STANDARDS TO ATTRACT INVESTMENT

The Parties recognize that it is inappropriate to encourage investment by relaxing domestic health, safety or environmental measures. Accordingly, a Party should not waive or otherwise derogate from, or offer to waive or otherwise derogate from such measures as an encouragement for the establishment, acquisition, expansion or retention in its territory of an investment of an investor. If a Party considers that another Party has offered such an encouragement, it may require consultations with the other Party and the two Parties shall consult with a view to avoiding any such encouragement. (NAFTA Article 1114 ss 2)

1.4. COMPLYING WITH SIGNIFICANT FEDERAL PRINCIPLES

CAUTIONARY OR "REVERSE ONUS" PRINCIPLE

The proponent of an intervention into the ecosystem shall demonstrate the safety of the intervention rather than the opponent of an intervention, being required to demonstrate, harm (Proposed by The Federal Minister of Environment

1.1. [This principle holds that] a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose (Art.1.Convention on the Law of Treaties, 1968)

1.2. [This principle also holds that] the rules of customary international law will continue to govern questions not regulated by the provisions of the present Convention have agreed as follows (Article 29 territorial scope of treaties, Convention on the Law of Treaties)

(2)

OBLIGATION PRINCIPLES

2.2. [This principle holds that there is an] Obligation not to defeat the object and purpose of a treaty prior to its entry into force

A state is obliged to refrain from acts which would defeat the object and purpose of a treaty when:

- (i) it has signed the treaty or has exchanged instruments constituting the treaty subject to ratification, acceptance or approval, until it shall have made its intention clear not to become a party to the treaty a); or
- (ii) it has expressed its consent to be bound by the treaty, pending the entry into force of the treaty and provided that such entry into force is not unduly delayed

b)
(Art. 18, Convention on the Law of Treaties, 1968)

2.3. [This principle affirms the Doctrine of Legitimate Expectations which holds that]

(i) "To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, B.C. Ombudsman Annual Report, 1991)

and that

(ii) If a government holds itself out to do something even if not legally required to do so, it will be expected to act carefully and appropriately without negligence, and the citizens have the legitimate expectation that the government will discharge its obligations (Ombudsman Office, Personal Communication).

2.4. This principle also entails commitment to the Public Trust Doctrine

This doctrine provides that submerged and submersible lands are preserved for public use in navigations, fishing and recreation and state, as trustee for the people, bears responsibility of preserving and protecting the right of the public to the use of the waters for those purposes.

(3)

EQUITY PRINCIPLES

[This principle holds that] equity imputes an intention to fulfill an obligation and that equity looks to the intent rather than to the form (Maxims of Equity)

- 3.1. Equity will not suffer a wrong without a remedy**
- 3.2. Equity follows the law**
- 3.3. Where there is equal equity, the law shall prevail**
- 3.4. Where the equities are equal, the first in time shall prevail**
- 3.5. He/she who seeks equity must do equity**
- 3.6. He/she who comes into equity must come with clean hands**

- 3.7. Delay defeats equity
- 3.8. Equality is equity
- 3.9. Equity looks to the intent rather than to the form
- 3.10 Equity looks on that as done which ought to be done
- 3.11. Equity imputes an intention to fulfill an obligation
- 3.12. Equity acts in personam

(Roscoe Pound in Cambridge Legal Essays (1926), pp259 et seq., cited from P.V. Baker and P. St Langar (1990). *Snell's Equity* London Sweet and Maxwell

(4)

POSSIBILITY OR REVERSIBLE PRINCIPLE

4.1. **[This principle holds that]** Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligations under the treaty or of any other international obligation owed to any other party to the treaty (Art. 61. 2 Convention on the Law of Treaties, 1968).

SYSTEMIC CONSTRAINT:

OFTEN IT IS THOSE WHO ATTEMPT TO PREVENT IRREVERSIBILITY RATHER THAN THOSE WHO BECAUSE IRREVERSIBILITY ARE THAT ARE PROSECUTED. INJUNCTIONS WHICH ARE SUPPOSED TO PREVENT IRREPARABLE HARM ARE USED AGAINST THOSE WHO ATTEMPT TO PREVENT IRREPARABLE HARM

(5)

HIGHEST TENABILITY PRINCIPLE

INTERNATIONAL OBLIGATIONS AS A MINIMUM PRINCIPLE

5.1. **This principle affirms that the need to avoid the lowest common denominator as the solution**

Nothing in this Convention shall affect any provisions that are more conducive to the achievement of equality between men and women which may be contained in the legislation of a State Party or

in any other international convention, treaty or agreement in force for that State. (Paraphrase of Article 23, Convention on the Elimination of all forms of Discrimination Against Women, 1979)

(6)

INTERDEPENDENCE PRINCIPLE

6.1. The interdependence principle affirms the interdependence of respect for human rights, of fulfillment of social justice and equity, of achieving environmental protection, preservation and conservation, and of attainment of peace. These issues will be perceived to be interdependent facets of a potentially viable solution. It is no longer possible to consider in isolation: threats and impacts of war; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes, including nuclear waste, the disregard for inter-generational and gender equality/equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap

6.2. This Interdependence principle reflects[ing] the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation. (Preamble, 1.5., International Conference on Population and Development, 1994)

6.3. [This principle holds that] Research *should shall* be undertaken on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994)

6.4. This principle holds that *mankind humankind* is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (Preamble (a)UN Resolution, 37/7, World Charter of Nature, 1982)

Reducing environmental health hazards

* 89 a ter Improve policies that **prevent**, reduce environmental health hazards and provide the informal sector and all workers with accessible information on how to enhance occupational safety and reduce health risks;

(7)

PRINCIPLE OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

7.1. This principle affirms the need for “socially equitable and environmentally-sound development” (Preamble, 1.2., International Conference on Population and Development, 1994)

7.2. This principle affirms that to achieve *sustainable development* [socially equitable and environmentally-sound] and a higher quality of life for all people, Governments *should reduce and shall* eliminate unsustainable patterns of production and consumption and promote [appropriate ~] demographic policies (3.9., International Conference on Population and Development, 1994)

(8)

PRINCIPLE OF SELF-SUFFICIENCY

8.1. This principle entails the supporting of bioregions in the development of self-sufficiency through the development of indigenous technology using ecologically sound means and only exporting when there is a surplus. Adoption of this principle would discourage export-dominant economies and the furthering of many of the aspects of the “green revolution” — which fostered the dependence on external technology.

8.2. This principle is aimed at the promotion of food security and, *where appropriate*, food self-sufficiency within the context of sustainable agriculture (3.7.I., Combating Poverty, Agenda 21, UNCED, 1992)

(9)

PRINCIPLE OF EXTRA-TERRITORIALITY

9.1. This principle entails the ensuring that states, individuals, institutions and the market shall not abuse the concept of extra-territoriality —the application of standards from exporter state- to justify the transfer of banned, restricted, obsolete or rejected technology to other states whose standards are not as high

SYSTEMIC CONSTRAINT: THE SAME STATE OR INDUSTRY THAT CONTINUES TO IMPOSE THE TRADITIONAL MODEL OF CONSUMPTION USES THE RELUCTANCE TO IMPOSE EXTERNAL REGULATIONS AS A MEANS TO JUSTIFY RELAXING REGULATIONS

(10)

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(11)

EQUALITY PRINCIPLE

11.1. [This principle entails] reaffirming of the... faith in fundamental human rights, in the dignity and worth of human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in large freedom (Preamble, Universal Declaration of Human Rights, 1948)

(12)

PRINCIPLE OF NON-PRESUMPTION

12.1. This principle entails the affirming that no presumption shall be made about capabilities or abilities on the basis of race, tribe, religion, disabilities, country of origin, sex, sexual orientation, language, family structure, or other status

(13)

LIMITS-TO GROWTH PRINCIPLE

LIVING WITHIN THE CARRYING CAPACITY OF THE ECOSYSTEM

13.1. There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

* [Find: Quote from Club of Rome]

(14)

INHERENT WORTH PRINCIPLE

14.1. Every form of life is unique, warranting respect regardless of its worth to man [Humanity], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

14.2. Nature shall be respected and its essential processes shall not be impaired (Principle 1, UN Resolution, 37/7, World Charter of Nature, 1982) World Charter of Nature, 1982)

(15)

PRECAUTIONARY PRINCIPLE

15.1. This principle holds that...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

15.2. PREVENTION PRINCIPLE And ANTICIPATORY PRINCIPLE (See, *Global compliance Research project's submission on the environment, 22.3*)

15.4. Reverse onus principle

(i) The onus of proof shall shift from the opponent of an intervention having to demonstrate harm, to the proponent of an intervention into the Ecosystem, having to demonstrate safety. Every proponent of an intervention into the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound

wastes, and be prepared to submit data for a full-scale life cycle analysis, and environmental cost analysis of the product and activities.

(16)

PRINCIPLE OF NON-DISPLACEMENT

16.1. This principle acknowledges that solutions do not lie in transferring the problem to another area, or another time

(17)

PRINCIPLE OF SOLUTION BEING BETTER THAN THE PROBLEM PRINCIPLE

17.1. Ensuring that the solution offered is not worse or potentially worse than the original problem that it was intended to solve

(18)

TRANSBOUNDARY PRINCIPLE

This principle holds that States shall take all measures necessary to ensure that activities under their jurisdiction or control are so conducted as not to cause damage by pollution to other States and their environment, and that pollution arising from incidents or activities under their jurisdiction or control does not spread beyond the areas where they exercise sovereign rights in accordance with this Convention. (Art. 194. 2., Law of the Seas, 1982)

(19)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(20)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and states have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature

(21)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural states where refugees, landed immigrants and citizens from former states have left their country of origin because of the violation of human rights.

(22)

ARMS LENGTH RESEARCH PRINCIPLE

This principle holds that most of the current research that has been used to support the continuation of the current model of development has arisen from non-arms length research by vested interests, and that if the urgency of the global situation is to be addressed arms-length non-vested interest research has to be relied on.

(23)

REGULATOR MUST NOT PROMOTER BE PRINCIPLE

This principle holds that regulators must not promote the continuance of the object or activity over which they regulate

(24)

PRINCIPLE OF PROPORTIONAL RESPONSE

This principle holds that the response in conflict must be proportional in kind, extent, nature to that of the original attack

(25)

PRINCIPLE OF DISCRIMINATION

This principle requires the discrimination between military and non-military competence and non competence

PRINCIPLES OF ENVIRONMENTAL COMPLIANCE

This was prepared for submission to the B.C. Government's Working Committee on Criteria for Discharge Emissions by the ERA Ecological Rights Association. It is proposed as a set of principles appropriate for bioregionalism

PRINCIPLE 1. ENDORSING THE INTERDEPENDENCE PRINCIPLE

The interdependence principle affirms the interdependence of respect for human rights, fulfillment of social justice and equity, achievement of environmental protection and preservation, and the attainment of peace. These components are interdependent facets of a potentially viable solutions. It no longer seems possible to consider "problems" in isolation (such as threats and impacts of war; the exponential growth of population; continued urbanization; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes (including nuclear waste); the disregard for inter-generational and gender equality/equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap, etc.)

PRINCIPLE 2 ENDORSING THE PRIMACY OF THE ECOSYSTEM

In all decisions made affecting the environment, the integrity of the ecosystem must be given primacy in conjunction with socially equitable and environmentally-sound development. NOTE: The "Ecosystem" includes both the biological and physical and chemical components (the biotic and abiotic)

PRINCIPLE 3; ENSURING CONSISTENT PROTECTION OF AMBIENT AIR AND WATER AND SOIL QUALITY

Ensuring consistent protection means ensuring both the variation in air, water, and soil conditions across a bioregion and the variation in effects of different substances emitted. All discharges, no matter where they are located in a region, will be equally affected by the criteria. Ensuring consistent protection also means that governments will not transfer its pollution problems onto other jurisdictions or bioregions, nor should governments relax standards in order to attract industry. Criteria must ensure acceptable ambient environmental conditions all across states and bioregions.

PRINCIPLE 4: [ENABLING] SOCIALLY EQUITABLE AND ENVIRONMENTALLY-SOUND DEVELOPMENT

“socially equitable and environmentally-sound development” is a basis of bioregional planning. (Preamble, 1.2., International Conference on Population and Development, 1994)

PRINCIPLE 5: ENSURING THAT POLLUTING SUBSTANCES ARE NOT TRANSFERRED FROM ONE MEDIA TO ANOTHER

Pollution prevention is complete prevention instead of displacement of problem and not the transferring pollution from one medium to another (for example from water to air).

PRINCIPLE 6: AFFIRMING THE LIMITS OF GROWTH

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

PRINCIPLE 7: ENDORSING THE ANTICIPATORY PRINCIPLE

The anticipatory principle is a pro-active measure to ensure that substances, processes and activities which are harmful to the environment are prevented from entering the environment, and to ensure that costly subsequent means of restoration are avoided, and that irreversible environmental degradation are avoided. Adverse effects include, but are not limited to: toxicity, bioaccumulation, bio-concentration, persistence, depletion of the stratospheric ozone layer, reduction of carbon sinks, increased greenhouse gases, increased human-induced climate change, reduction or loss of biodiversity, as well as heat, light and electromagnetic radiation, atomic radiation, and hormone mimicry

PRINCIPLE 8: AFFIRMING THE "CAUTIONARY" PRINCIPLE

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

PRINCIPLE 9: REQUIRING OF A SHIFT IN THE ONUS OF PROOF

the proponents of an intervention shall demonstrate the safety of the intervention rather than the opponent having to demonstrate the harm of the intervention. "Reverse-onus principle" recommended by the Canadian Minister of Environment, Sheila Copps (1994) Proof of the non-hazardous or toxic nature of the product introduced into the environment will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm by non-vested interest parties]

PRINCIPLE 10: ADOPTING OF "PREVENTION" TECHNOLOGIES

Prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error — will contribute to socially equitable and environmentally-sound development

PRINCIPLE 11: ENFORCING THE POLLUTION PREVENTION PRINCIPLE

Mandatory standards and technical regulations will be developed to prevent adverse effects of substances or activities on the ecosystem including the adverse effects on the health of human and non-human species within and throughout bioregions.

PRINCIPLE 12: REQUIRING THE USE OF BEST ECOLOGICALLY SOUND TECHNIQUES (BEST)

It is important to support and promote the development of and the use of BEST (Best Ecologically Sound Techniques). In the event that there is no BEST technology which can prevent the release of persistent or bioaccumulative toxics then the extractive or productive activities which produce the product or substance process should be changed; the activities and product phased out/outlawed, or the demand for the product reduced through public education. In this case, the industry involved shall be assisted in the conversion to alternative processes or products.

PRINCIPLE 13 CREATING INDIGENOUS PLANT RESERVES AND HOME AND COMMUNITY MARKET GARDENS

Maintaining lawns requires a drain on local water supplies. Governments should pass regulations which encourage the replacement of grass lawns with indigenous plant reserves consistent with the fauna of the bioregion and home/community market gardens

PRINCIPLE 14: GENERATING BY-PRODUCTS AS A RESOURCE NOT AS WASTE

The generation of waste shall be prevented, and the emphasis shall be on the generation of by-products that can become an ecologically safe and sound resource. If waste is already in existence, waste shall be disposed of at its source in an ecologically safe and sound manner ensuring that nothing is being stored that could, if an accident occurred, cause harm to the environment. If no assurance can be given that waste will not cause potentially significant adverse effects, then the activity that is generating the wastes shall cease, or permission to undertake the project will not be granted.

PRINCIPLE: 15 GLOBAL COMPLIANCE

The most stringent environmental provisions shall be adopted complying with all international, national, bilateral and bioregional agreements, protocols and conventions as a minimum. If there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail.

PRINCIPLE 16: ENSURING INCLUSIVENESS OF ACTIVITIES AND SUBSTANCES

Every activity or substance that could prevent the protection and conservation of the environment will be included in environmental legislation, regardless of whether the activity or substance is, or is presumed to be covered under another Act

PRINCIPLE 17: UNDERTAKING TO NOT RELAX STANDARDS RELATED TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Governments shall undertake to not relax environmental standards and technical regulations, or human rights protection, or social justice and equality/equity provisions to attract short-term economic benefit.

PRINCIPLE 18: ENSURING THAT RELAXATION OF STANDARDS AND REGULATIONS SHALL NOT BE USED TO ATTRACT POLLUTING INDUSTRY

No proposal to relax standards or technical regulations shall be used to attract industry into a specific bioregion [see principle enunciated in NAFTA. (re: relaxation of standards to attract industry)]

PRINCIPLE 19: ESTABLISHING AND ENFORCING REDUCTION AND ELIMINATION TARGETS

"Ambient criteria", or "environmental quality criteria" refers to levels of contaminants in the environment that must be zero use, production, and release in all cases where a toxic substance is persistent or bio-accumulative (e.g. chlorine). It also applies when a substance will generate persistent or bio-accumulative toxic by-products or breakdown products during its productions, use or disposal (Zero Toxics Alliance Statement of Principles)

PRINCIPLE 20: ENSURING ENVIRONMENTAL AUDITS AND TAKING INTO ACCOUNT ALL ECOLOGICAL CONSEQUENCES PRINCIPLE

The environmental audit and ecological consequences principle are the following: to assess both the environmental costs of not converting to ecologically sound

practices and the environmental costs of permitting ecologically unsound practices (including the costs to future generations of irreversible environmental degradation) and the environmental costs of potential mitigation, and restoration.

PRINCIPLE 23: ASSESSING THE FULL COSTS OF VIOLATING THE RIGHTS TO THE DISENFRANCHISED THROUGH ECOLOGICALLY UNSOUND PRACTICES

In addition, assessment of the full costs of violating the rights of the disenfranchised shall be carried out. The groups bearing the greatest impact from ecologically unsound practices are usually the disenfranchised in society—the poor and the members of minority groups

PRINCIPLE 25: REQUIRING A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT

An actual assessment of the short and long term potentially adverse environmental effects of existing and proposed projects and activities shall be carried out. So-called “Environmental Assessments” which review “environmental, economic, social, cultural, heritage, health effects of the reviewable projects” are not legitimate environmental impact assessments (Principle 25, “Environmental Compliance” Global Compliance Research Project)

PRINCIPLE 26: ENSURING AND ENFORCING THE POLLUTER PAY PRINCIPLE

The Polluter Pay Principle ensures that those who may release polluting substances into the environment pay the full-cost of environmentally safe handling, treatment, disposal, and remediation; in addition, permits shall be suspended and canceled, if the polluter has caused serious irreversible ecological damage

PRINCIPLE 27: ENFORCING ENVIRONMENTAL COMPENSATION PRINCIPLE

Given that throughout history sympathetic government regimes have failed to enforce their own statutory legislation, and given that there has been resultant environmental degradation, current governments shall seek environmental compensation from companies that can be shown to have consistently contributed to environmental degradation. The funds from environmental compensation shall be put into developing BEST (Best Ecologically Sound techniques)

PRINCIPLE 28: ENSURING THAT COMPENSATION IS NOT USED AS JUSTIFICATION FOR NON-FULFILLING OF DUTY

Compensation shall never be used as reason for not exercising the duty to preserve, protect, conserve the environment

PRINCIPLE 29: REJECTING THE NOTION THAT THE RESTORABILITY OF NATURE JUSTIFIES THE ABUSE OF NATURE

There exists a notion that environmental degradation is reversible; it can be restored, and rehabilitated. This notion shall never be used as a justification for the causing of environmental degradation

PRINCIPLE 30: EXTENDING CONCEPT OF DISASTER REDUCTION TO COVER NATURAL AND OTHER DISASTER SITUATIONS INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL DISASTERS (NA-TECHS)

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries. (B i Convention on Natural Disaster, 1994)

PRINCIPLE 18: ENSURING THAT STANDARDS AND TECHNICAL REGULATION WILL NOT BE RELAXED TO ATTRACT INVESTMENT

The argument that in a pristine environment that has not yet been polluted by industrial activity shall be able to have emission standards relaxed is inherently invalid and should be discounted. In other words, a licence to pollute could be given to industry in a pristine area because the area is not yet officially been designated as being polluted

PRINCIPLE 18: ENSURING THAT REDEFINITION OF PRACTICES WILL NOT ENABLE INDUSTRY TO BYPASS REGULATIONS

Polluting industries that have been regulated under statutory law, shall not through redefinition of practice be excluded from the previous regulations [where a plant with "industrial" air emissions is redefined as a recycling plant and thus the regulations related to "industrial....] is deemed inapplicable

- Increased loss and degradation of mountain ecosystems

Mountain ecosystems are, however, rapidly changing. They are susceptible to accelerated soil erosion, landslides and rapid loss of habitat and genetic diversity. On the human side, there is widespread poverty among mountain inhabitants and loss of indigenous knowledge. As a result, most global mountain areas are experiencing environmental degradation. (13.1. Fragile ecosystems)

NEW CODE FOR COMPROMISE: "NOW I AM REASONABLE"

() THAT in 1996, I went to a meeting with JAG Maini

SPECIAL MEETING OVER IN VANCOUVER WITH JAG MAINI. PATRICK MOORE
 . SUTTON FROM NEW ZEALAND

COMMENT

I introduced myself as coming from the University of Victoria. I had been asked by Rod Dobell to attend. When Patrick Moore introduced himself, he inserted in the introduction that he was NOW"reasonable", another member obviously a colleague of Moore also described himself as a former environmentalist but now he was reasonable. being reasonable was obviously a code word for willingness to compromise. Jag Maini started out saying: This is like old times when we all met before Rio. I do not remember meeting with Maini. [I do however, remember his speaking to the Royal Society meeting on Brazil in 1991 where he was catering to a different audience. Here we were with the movers and shakers of the BC forest industry. I raised numerous issues related to the non compliance with commitments made at Rio and about the flaws in the forest principles document.

Inbox

() **THAT in April 1996** I had been contacted by Dr. Jack Littlepage, during the summer of 1995 when the Brazilians gave a presentation at the university. He asked me then if I would assist him in preparing the next stage of his CIDA grant. On completing my doctorate, I helped him place his grant in the context of international agreements related to environment and gender issues; It was my understanding that in exchange for my work I would be hired to teach a course in Brazil.

Instruction for Interdisciplinarity (Complexity and Uncertainty)¹

In recent years there has been increased interest in the problem of understanding, expressing and communicating complexity and uncertainty. Often interdisciplinarity has been proposed as a solution to this problem; yet the concept of interdisciplinarity has often been narrowly interpreted as being simply the linking of disciplines.

¹ This proposal is based on the instruction construct "Principle-based education" which was introduced in 1985 in Russow, J. "A Method of teaching issues;" and expanded in Russow, J and D White. Global/local Issues through principle-based education

Academics often call for the need to integrate disciplines, to grasp the interdependence of aspects, to explore the complexity of a topic, to make connections, etc. However, rather than facilitating the expression and communication of the resultant complexity and interdisciplinarity, academics often discourage interdisciplinarity and complexity by requiring interdisciplinarity to adhere to traditional models of thinking, of composition, expression, evaluation, and academic rigour, and in particular, instruction.

Interdisciplinarity could be conceived as accommodating significant connections among disciplines around an entity — all units that you write about: existing things, phenomena, objects, concepts, themes etc. Connections that may arise, out of necessity, from thinking, composing, expressing and interacting within an entity-field— the shifting universe of discourse. Interdisciplinarity encompasses a different mode of thinking, of composing of expressing, of interacting, as well as of displaying academic rigour.

Disciplines are often juxtaposed out of convenience— the application of existing disciplinary models to the entity-field examined rather than by necessity— the entity-field demanding the contribution of disciplinary thought. There still appears to be a well-entrenched belief that going beyond disciplinary boundaries and traditional models with no grounding in one discipline is a non-academic dilettante pursuit devoid of academic rigour. There does not yet appear to be general recognition that there is a form of interdisciplinarity that is beyond all disciplinary boundaries, and traditional models, and that there could be a different concept of academic rigour displayed through the deepening of understanding and knowledge of an interdependence of aspects within an entity field — the locus of all possibilities, shifting universes of discourse about an entity.

There does not yet appear to be general recognition that the full acceptance of interdisciplinarity, is dependent upon the acceptance of a principle that will guide alternative modes of thinking, of composing of expressing, of interacting, of displaying academic rigour, and of instructing. This acceptance could mean

moving beyond the current practice of requiring adherence to traditional preconceived academic models.

Interdisciplinarity may require a different mode of thinking, expressing, interacting as well as a different mode of instructing, and mode of conceiving of academic rigour. For full acceptance of interdisciplinarity to occur there must be a concomitant acceptance of additional or supplemental concepts of thinking, of composing of expressing, of interacting, of academic rigour and of instruction.

The proposal for “innovative instruction” is related to this alternative vision of “interdisciplinarity.” The purpose of the instruction project is to broaden concept of interdisciplinarity through what has been described as Endigmatic thinking, expressing, interacting and instructing.

This mode of instruction is based on a presumption that the exploration of the complexity and uncertainty of thought vacillates between momentary static patterns and principles, and dynamic processes.

Processes in Endigmatic mode of instruction

Students are encouraged to examine, to explore and to appreciate the full complexity, interdependence and uncertainty of an entity-field through engaging in the following analytical and reflective processes:

- Extraction of principles and processes from a wide range of disciplines
- Clustering of principles, patterns and processes into patterns
- Preparing an ideograph— a complex diagram displaying the principles and processes (Ideograph of interdisciplinary principles, patterns and processes)
- Discerning of interdependence of the clusters of principles, patterns and processes
- Discerning significant distinctions among disciplinary approaches to apparently similar principles, processes and patterns
- Location of new principles, patterns and processes within nearest cluster in the Ideagraph

- Assimilating or distinguishing aspect from cluster
- Connect principle with other processes within the diagram for wider analogy
- Exploring principles, patterns and processes
- Drafting of new principles, patterns or processes from the interdisciplinary complex if no principle, pattern or process exists
- Clarifying concepts and terms through ordinary language analysis
- Determining criteria for examining the of applicability of principle
- Establishing criteria for selecting entities to be examined
- Determining of issues emerging within principle, patterns and processes
- Selection of examples to illustrate principles, patterns or processes

Phase 1 of the project would involve further consultation with academics in different disciplines about principles, patterns and processes that could be included in the series of ideagraphs that would be expanded.

Phase 2 would be the determining of significant connections and points of distinctions and subtle variations among the different principles, patterns and processes.

Phase 3 would be the determining of disciplinary idiosyncrasies.

Phase 4 would be carrying out workshops on the mode of instruction arising from an expansion of this complex of principles, patterns and processes.

() **THAT in 1996**, I applied for a follow-up grant proposal, **Synthesis of Obligations Incurred and Expectations Created.: Knowledge of International Agreements as an Instrument of Change**, from CIDA

EXHIBIT
FOLLOW-UP PROPOSAL TO CIDA

1996 Synthesis of **Obligations Incurred and Expectations Created.:**
Knowledge of International Agreements as an Instrument of Change

BACKGROUND:

For over fifty years, member states of the United Nations have incurred obligations and created expectations.

If these fifty years of obligations had been discharged, and if these fifty years of expectations fulfilled, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled. In international agreements member states of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations through enacting the necessary legislation and through the enforcing this legislation.

Relevant sections in the Law reform Commission

More recent version of the Law Reform Commission was not in Law Library.
Relevant sections in the 1988 Law Reform Commission Book:

19 (1) Disastrous Damage to the Environment. Everyone commits a crime who recklessly causes disastrous damage to the environment
comment: although most environmental offences are covered by the Canadian Environmental Protection Act, S.C 1988, chapter 22, the Commission felt that protecting the environment was an important value which should, in addition be protected by criminal law. Therefore, the above-mentioned provision underlines the value of respect for the environment itself and stigmatizes behaviour causing disastrous damage with long- term loss of natural resources.

Principles of Liability

2 (1) principle of legality. No one is liable except for conduct defined at the time of its occurrence as a crime by this Code or by some other Act of the Parliament of Canada

2 (4) General Requirements as to level of culpability. Unless otherwise provided:

(1) where the definition of a crime requires purpose, no one is liable unless he acts

A. purposely as to the conduct specified by that definition

B purposely as to the consequences, if any, so specified and

(c) knowingly or recklessly as to the circumstances, if any, so specified.

ii) where the definition of a crime requires recklessness, no one is liable unless as concerns its elements he acts

a. purposely as to the conduct specified by that definition

b. recklessly as to the consequences, if any so specified and

c. recklessly as to the circumstances, whether specified or not.

Definitions

Purposely

1. a person acts purposely as to conduct if he means to engage in such conduct, and in the case of an omission, if he also knows the circumstances giving rise to the duty to act or is reckless as to their existence.

ii a person acts purposely as to a consequence if he acts in order to effect: A that consequence; or

B. another consequence which he knows involves that consequences

"recklessly." A person is reckless as to consequences or circumstances if, in acting as he does, he is conscious that such consequences will probably result or that such circumstances probably obtain.

Alternative; (p. 40) Recklessly." a person is reckless as to consequences or circumstances if, in acting as he does, he consciously takes a risk, which in the circumstances known to him is highly unreasonable to take, that such consequences may result or that such circumstances may obtain

2 (6)

Causation. Everyone causes a result when his conduct substantially contribute to its occurrence and no other unforeseen and unforeseeable cause supersedes it.

Defences: absence of conduct or state of mind necessary for culpability

3 (2) Lack of knowledge

(b) exception: recklessness and negligence. This clause shall not apply as a defence to crimes that can be committed by recklessness or negligence where the lack of knowledge is due to the defendant's recklessness or negligence as case may be.

" The problem is that harm arising from a violation may be harm not to any individual but to the public as a whole, or even harm to the environment in which it is difficult to "prove" any human interest. The diffuseness of such harm makes it difficult to establish the gravity of the offence, a key consideration in sentencing. "
(Swaigen, p. 2)

The government has erred because it has not taken into consideration "intangible values" (p. 3) "mental distress, spiritual or aesthetic interests" (p.3) -- psychological (quality of life) that could result in the violation of the right of future generations to their environmental heritage

Children have the right to experience nature as it was -- untouched "the timelessness of existing independent of human control ... being in touch with infinity.... entering into a state of transition between what is and what could have been."

() THAT i 1996 , David White and I and I were contacted by the federal Green Party and asked if we would work on the draft platform in international affairs and environment (Joan) and environment (David) for the platform for the federal election in 1997.

EXHIBIT DRAFT INTERNATIONAL AFFAIRS SUBMISSION BY Joan Russow

The international affairs platform has been divided into different Chapters that correspond somewhat to the divisions of the United Nations Plan of Action. It has been divided in this way to assist Green Party candidates in the upcoming election to use this document as a lobbying document, and to be able to link the issues in with those being discussed at the Earth Summit II in 1997; The follow-up which will be getting a lot of press.

**EXHIBIT
INTERNATIONAL AFFAIRS**

[[To ensure that the protection from discrimination. the platform should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "Other status" which indicated the intention to include other grounds as they arose. Through various

human rights instruments, states have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status. In other documents "sexual orientation" has also been included, but remained bracketed. In keeping with the intention of 'other status' in the Universal Declaration of Human Rights, the Canadian government should include this ground. in all Canadian human rights documents, and lobby for its inclusion in all international human rights documents

From 1992 Agenda 21:

Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Preamble Agenda 21, UNCED, 1992).

Here is a revision

THE INTERNATIONAL AFFAIRS PLATFORM STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.FOR THE GREEN PARTY OF CANADA PLATFORM

The Green party government in Canada supports a strong United Nations, and mandatory international standards and regulations drawn from International principles; it would also advocate that these standards and regulations be harmonized continually upwards to correspond to the highest state principles, standards and regulations. .

For fifty two years through international agreements, the member states of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security, and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

The Green party of Canada supports the following proposal:

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly

resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

A Green party government in Canada would support the following actions for Earth Summit II in June, 1997 — the fifth anniversary of the United Nations conference on Environment and Development (UNCED)

1. At the Earth Summit II, the member states of the United Nations undertake to sign and ratify international agreements that they have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition they undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

2. At the Earth Summit II, the member states of the United Nations undertake to act upon the commitment in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

To act upon this commitment, a Green party government in Canada would propose the following measures:

(i) the establishment mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member states harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

(ii) the revoking of licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

(iii) the institution of an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

3. At the Earth Summit II, member states of the United Nations undertake to act upon the Malaysian General Assembly resolution which affirmed that “the continuing existence of nuclear weapons poses a threat to all humanity and that their use would have catastrophic consequences for all life on earth (Dec,10 1996 response to the International Court of Justice decision on the use or threat to use nuclear weapons being against international humanitarian law).

To act upon the resolution member states of the United Nations will embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

In order to achieve a permanent elimination of nuclear weapons, and because of the fatal link between civil and military nuclear power, member states of the United Nations must also endorse an international uranium suffocation program, a moratorium on further nuclear plants, and a time-bound phase-out of existing nuclear plants

In addition, the member states of the United Nations undertake to ensure that all circulation and berthing of nuclear powered and nuclear armed vessels discontinue.

4. At the Earth Summit II, the member states would undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

5. At the Earth Summit II, the member states of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed states to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

In order to prevent further environmental degradation and human rights violation, we the member states of the United Nations will fully act upon our commitment under principle 14 of the Rio Declaration which calls for the prevention of the transfer to other states of substances or activities that cause environmental degradation or that are harmful to human health. We also acknowledge that this

principle includes toxic, hazardous, and atomic substances and wastes and associated activities, and that prior informed consent by the receiving country does not absolve us from the commitment to transfer these substances. In addition we will extend this principle to include transfer within states to lands of indigenous peoples, or to communities of marginalized citizens.

6. At the Earth Summit II, the member states of the United Nations will undertake to act upon a commitment in recent UN Conferences to move away from the over-consumptive model of development and reject the notion that economic growth will solve the urgency of the global situation. To achieve the moving away from the current over-consumptive model of development the A Green party government would propose the following measures be taken in the following areas
[[reference to the rest of the program]]

-
-

7. At the Earth Summit II, the member states of the United Nations will undertake to invoke the precautionary principle (Rio Declaration, Convention on Biological Diversity, and Framework convention on Climate Change Convention) and not wait until there is scientific certainty that environmental degradation, loss or reduction of biodiversity, or climate change will occur for current practices causing environmental degradation, loss or reduction of biodiversity, or climate change to be banned, discontinued, or phased out..

In addition member states of the United Nations will adhere to the prevention of disasters principle as enunciated in the Habitat II Agenda, and ban, discontinue and phase out the use of substances and activities that could potentially cause disasters. For all future activities and substances, states will undertake to endorse the reverse onus principle which requires the proponent of an intervention into the ecosystem to have to demonstrate the safety of the intervention rather than the opponent having to demonstrate harm.

ACTION FOR COMPLIANCE

Citizens must be aware that the United Nations through years of international meetings has already drafted the blueprint for the actions that are necessary to address the urgency of the global situation. International public policy already exists in the complex of United Nations documents, and that member states of the United Nations have failed either to comply with this international public policy, or to determine what would constitute compliance. What is needed now, immediately, is compliance with the existing body of obligations, expectations. and commitments

A Green party government in Canada will ensure that citizens of Canada will be aware of international instruments, and encourage the use of international instruments in Canada including ensuring that citizens receive standing in the courts of Canada to bring to the attention of the courts Canada's non-compliance with international law. In addition a Green party government in Canada will lobby internationally to ensure state and corporate compliance with international obligations, expectations and commitments.

The Green party of Canada would work continually towards the

For fifty two years through international agreements, the member states of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

For fifty two years through international agreements, the member states of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;

- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon,

respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

“A MODEST PROPOSAL”

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

Suggested actions for Earth Summit II in June, 1997

1. (a) On June 23, 1997 at the fifth anniversary of the United Nations conference on Environment and Development, we the member states of the United Nations undertake to sign and ratify international agreements that we have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition we undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

- Establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member states harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

1(b) In addition, we reaffirm the undertaking in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

- revoke licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

1 (c) Further, we undertake to establish an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

2. (a) On June 24, 1997. we the member states of the United Nations undertake to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

We undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations.

Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

3. On June 25 1997. we the member states of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed states to redress, compensate and restore. . Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

Through international agreements nation states have undertaken (i) to guarantee human rights including the right to be free from discrimination, the right to shelter, the right to food, the right to social security (international human rights instruments); (ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the protection of Cultural and Natural Heritage, 1972) ; (iii) to eliminate weapons of mass destruction (UNCHE, 1972); (iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in

accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975); (v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981); (vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981) and to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981); (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982); (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982); (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984); (x) to demand that policies of states be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984); (xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983);(xii) to prevent the transfer to other states of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992); (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992); (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration); (xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity); (xvi) to preserve carbon sinks (Art. 4 1 d Framework Convention on Climate Change, 1992); and from the Habitat II Agenda: (xvii) to reduce the ecological footprint (Art. 27 b); (ix) to protect fragile ecosystems and environmentally vulnerable areas (27e); to prevent anthropogenic disasters (27 i); (xx) to prevent environmental damage through knowledge of eco-cycles (Art. 135). and so forth.

A key concept that has significant policy implications is that of international customary law. Simply put, where a principle of international law has been a long standing part of that law, it may be held to be a part of international customary law and deemed applicable as part of national law. For example, the principle of intergenerational equity i.e. the rights of future generations to a safe environment may be argued as falling within international customary law since it is found in a number of international documents beginning with the UN Conference on Humans

and the Environment (UNCHE), 1972, including in the Convention on the Protection of Cultural and Natural Heritage (1972) through the World Charter of Nature (1982) to the various documents coming out of the United Nations Conference on the Environment (UNCED) 1992 (Agenda 21, The Convention on Biological Diversity and the Framework Convention on Climate Change).

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

On June 2, the Secretary General of the Habitat Conference, Dr. Wally N'Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment- ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction , and continuing human misery - many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet when called upon to seriously address the urgency by rejecting old recipes, many states lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of states to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions, Conference Action Plans and Declarations.

The failure of states to sign instruments, to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation.

The failure of states to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens, to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice; and the reluctance of states to revoke the charters of corporations for failing to adhere to these standards.

The failure on the part of states to accept the authority of international bodies reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past.

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past.

CHAPTER 2 EQUITABLE AND ENVIRONMENTALLY SOUND FINANCIAL PROVISIONS

ENVIRONMENT, TRADE HUMAN RIGHTS AND REGULATIONS

“to prevent the transfer to other states of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992)

- ENSURING THAT WORLD TRADE AGREEMENT AND NAFTA ARE UNDER THE CONTROL OF INTERNATIONAL LAW, AND THAT INTERNATIONAL LAW INCLUDING TREATIES, CONVENTIONS, COVENANTS, GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTIONS PLANS AND DECLARATION TAKE PRECEDENCE OVER TRADE AGREEMENTS
- LOBBYING STRONGLY FOR ALL STATES TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE
- CO-ORDINATING SANCTIONS AGAINST THOSE COUNTRIES WHO ARE NOT COMPLYING WITH UNITED NATIONS OBLIGATIONS INCURRED FROM CONVENTIONS, TREATIES, AND COVENANTS, AND EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTION PLANS, AND DECLARATIONS
- ESTABLISHING REGULATIONS TO ALLOW STATES TO PLACE TARIFFS UPON, OR REFUSE ENTRY OF, PRODUCTS MADE WITH CHILD AND SLAVE LABOUR, OR THAT ARE ENVIRONMENTALLY UNSOUND, CULTURALLY INAPPROPRIATE OR HARMFUL TO HEALTH ;

- INSISTING THAT NO HAZARDOUS OR TOXIC WASTE BE DUMPED IN THIRD WORLD COUNTRIES AND/OR RURAL COMMUNITIES, OR ON INDIGENOUS LANDS; (INCLUDING THE SALE OF CANDU REACTORS AND ALL NUCLEAR TECHNOLOGY).

- ENSURING FAIR TRADE NOT FREE TRADE

EQUITABLE AND ENVIRONMENTALLY
SOUND FINANCE

“united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of a New International Economic Order, 1974).

- INSTITUTING AN ECONOMIC SYSTEM BASED ON EQUITY

- DEVELOPING A COMPREHENSIVE SET OF CRITERIA FOR ETHICAL INVESTMENTS

- CANCELING DEBT/DEBT FORGIVENESS AND REPARATION

- ENSURING THAT .7% OF GNP IS TRANSFERRED TO DEVELOPING COUNTRIES; AND INCREASING IT TO AT LEAST 1%

- FORGIVING DEBT TO DEVELOPING COUNTRIES AND RESTRICTING CORPORATE PROFIT AND WEALTH TRANSFER FROM POOR TO RICH COUNTRIES;

- FAIRLY COMPENSATING DEVELOPING COUNTRIES FOR THE SALE OF THEIR COMMODITIES AND FOR PREVIOUS ACTIVITIES THAT HAVE CONTRIBUTED TO ENVIRONMENTAL DEGRADATION OR THAT HAVE BEEN HARMFUL TO HUMAN HEALTH

- DEVELOPING A COMPREHENSIVE SET OF CRITERIA FOR ETHICAL INVESTMENTS

- CONVERTING VESTED ECONOMIC INTEREST GATT TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES DRAWN FROM INTERNATIONAL INSTRUMENTS

- INSTITUTING AN ECONOMIC SYSTEM BASED ON EQUITY AND INTERDEPENDENCY, COMMON INTEREST AND COOPERATION WHICH RECTIFIES EXISTING INJUSTICES

- REQUIRING ADHERENCE TO THE TRANSBOUNDARY PRINCIPLE BY PREVENTING THE ENGAGING IN ENVIRONMENTALLY UNSOUND ACTIVITIES, AND THE PRODUCING OF ENVIRONMENTALLY UNSOUND SUBSTANCES

- REQUIRING OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE

- ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE, AND DEVELOPMENT ASSISTANCE

- DISCONTINUING SUBSIDIES FOR SOCIALLY INEQUITABLE AND ENVIRONMENTALLY HARMFUL ACTIVITIES

- CONDEMNING THE CONTINUED “FOREIGN-AID” (TRADE) POLICY DIRECTION OF STATE AND BUSINESS SELF-INTEREST COMPETITION, AND PROMOTING INTERNATIONAL COOPERATION AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- SUPPORTING LOCAL MARKETS, LAND REFORM, AND SELF-RELIANCE RATHER THAN CASH CROPS FOR EXPORT;

- IMPLEMENTING OR MAINTAINING TRADE SANCTIONS ON COUNTRIES WITH HUMAN RIGHTS VIOLATIONS

- DISCONTINUING ALL FOREIGN AID ASSISTANCE TO ALL EXISTING NUCLEAR, FOSSIL FUEL AND LARGE HYDRO-ELECTRIC RELATED PROJECTS, EXCEPT TO ASSIST WITH DE-COMMISSIONING OR ENVIRONMENTAL RESTORATION;

- AWARDING ENERGY-RELATED FOREIGN AID TO COMMUNITY PROJECTS WHICH PROMOTE USE OF RENEWABLE ENERGY AND EFFICIENT USE OF RESOURCES.

- LIMITING FOREIGN AID TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PROJECTS

- PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN
- CREATING JOBS IN COMMUNITIES BY REINVESTING PROFITS THROUGH REVOLVING COMMUNITY LOANS AND THROUGH USE OF LOCAL RESOURCES;
- ESTABLISH A COMMUNITY INVENTORY OF PRODUCTS NEEDED THAT WOULD ENSURE EVERY CITIZEN A REASONABLE STANDARD OF LIVING AND QUALITY OF LIFE.
- ENCOURAGING CITIZEN OWNERSHIP AND CONTROL OF RESOURCES WITHIN A FRAMEWORK OF OVERARCHING EQUITABLE AND ECOLOGICALLY SOUND PRINCIPLES
- INCREASING THE AMOUNT OF PUBLIC DEBT FINANCED BY THE BANK OF CANADA AT LOW OR NO INTEREST;
- REDUCING YEARLY DEFICITS BY GETTING RID OF SUBSIDIES TO ECOLOGICALLY UNSUSTAINABLE INDUSTRIES (EG. NUCLEAR POWER, PETROCHEMICAL AND HIGH-TECH ARMS MANUFACTURERS);
- ENDING CORPORATE SUBSIDIES AND TAX DEFERRALS, EXCEPT FOR GREEN INDUSTRIES
- CREATING JOINT CO-OPERATIVE MANAGEMENT THAT WOULD ENSURE ELIMINATION OF OVERLAP BETWEEN PROVINCIAL AND FEDERAL GOVERNMENT DEPARTMENTS IN FORESTRY, AGRICULTURE, EDUCATION, SOCIAL PROGRAMS, HEALTH AND TRANSPORTATION, ETC., WITHOUT LOWERING STANDARDS OF LIVING AND/OR QUALITY OF LIFE.
- PROMOTING A FINANCIAL TRANSACTION TAX (FTT) TREATY AND LEGISLATION WHICH COVERS ALL INTERNATIONAL INVESTMENT AND CURRENCY TRADING. SUCH A TAX COULD FUND THE VARIOUS UNITED NATIONS AND NON-GOVERNMENTAL AID AGENCIES.
- PROMOTING AN INTERNATIONAL TREATY THAT WOULD ENSURE CITIZENS AND GOVERNMENTS THE RIGHT TO KEEP NATURAL AND MONETARY CAPITAL WITHIN THEIR COUNTRIES' BORDERS;

>

- PROVIDING LOW- OR NO-INTEREST LOAN PROGRAM LEGISLATION. PROGRAM FUNDS WOULD BE DEPOSITED WITH THE NATIONAL BANKS BY CHARTERED BANKS, OTHER FINANCIAL INSTITUTIONS AND CORPORATIONS WITH ASSETS EXCEEDING \$100 MILLION. 5% OF THEIR CAPITAL ASSETS WOULD BE DEPOSITED TO ACT AS LIABILITY INSURANCE, SUBJECT TO LEGAL CONFISCATION AND LOSS OF CORPORATE CHARTER, IN THE EVENT THAT ANY OF THESE CORPORATIONS CAUSE ECOSYSTEM DAMAGE AND/OR PREVENTABLE SOCIAL DISLOCATION TO CITIZENS AND OTHER SPECIES.

CHAPTER 3

SOCIAL JUSTICE, EQUITY AND SECURITY ASSURANCES- BASIC NEEDS, FOOD SECURITY, AGRICULTURE, HEALTH, SHELTER PROVISIONS

SOCIAL JUSTICE, AND EQUITY AND SECURITY

“The States... recognize the right of everyone to an adequate standard of living. for himself [herself] and his [her] family, including adequate food, clothing and housing and to the continuous improvement of living conditions. the states parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)”

- ENSURING THE RIGHT TO SAFE AND HEALTHY FOOD, SHELTER, HEALTH CARE, AND THE PROVISION FOR A GUARANTEED ANNUAL INCOME, FAIR PENSION AND SOCIAL SECURITY
- REDUCING POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT
- ENSURING THE RIGHT TO SAFE DRINKING WATER, AND SANITATION TO PRECLUDE BOTH MICROBIAL AND CHEMICAL CONTAMINATION;
- GUARANTEEING THE RIGHT TO UNIVERSAL HEALTH CARE PROVIDED THROUGH PUBLIC FUNDS WITH FAIR AND EQUAL ACCESS
- ENSURING THE RIGHT TO SHELTER THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY-SOUND AND WITH TENURE SECURITY
- PROVIDING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT WITH A SHORTER WORK WEEK WITH FULL BENEFITS FOR

PART TIME WORKERS, AND WITH EQUAL PAY FOR WORK OF EQUAL VALUE

- GUARANTEEING ECOLOGICAL RIGHTS TO A SAFE ENVIRONMENT (CLEAN AND UNPOLLUTED AIR, WATER, AND LAND); AND TO AN ECOLOGICAL HERITAGE FOR FUTURE GENERATIONS

FOOD SECURITY

Every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Sect.1. Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- GUARANTEEING THE RIGHT TO FOOD (THE RIGHT TO NON GENETICALLY ENGINEERED OR RADIATED FOOD, NUTRITIOUS ORGANICALLY GROWN FOOD)
- GUARANTEEING CONSERVATION OF FERTILE AREAS FOR GROWING FOOD
- REFOCUSING PRIORITIES TO SUPPORT DEVELOPMENT OF SELF-RELIANT FAMILY AND COMMUNITY FARMS THAT USE ECOLOGICALLY SENSITIVE METHODS OF FARMING.
- PROMOTING ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES
- REVISING THE CODEX ALIMENTARIOUS AND NATIONAL FOOD GUIDES SUCH AS THE CANADA FOOD GUIDE TO PRESENT LEGUMES, VEGETABLES, FRUITS AND GRAINS (WHICH CAN MEET ALL NUTRITIONAL NEEDS, WHILE REDUCING RELATED HEALTH PROBLEMS) AS A COMPLETE ALTERNATIVE TO A MEAT-BASED DIET.
- BANNING GENETICALLY ENGINEERED FOOD, AND IRRADIATED FOOD

HEALTH , RIGHTS AND ETHICS

- DEVELOPING EQUITABLE AND ETHICAL CRITERIA FOR DETERMINING MEDICAL CHOICES
- ESTABLISHING GUIDELINES FOR REPRODUCTIVE TECHNOLOGIES LIKE SURROGATE MOTHERHOOD
- ENSURING THE RIGHT OF ACCESS TO REPRODUCTIVE CHOICE: RESPECTING THE WOMAN'S RIGHT TO CHOSE, AND ACKNOWLEDGING THAT THE GOVERNMENT HAS NO ROLE IN THIS DECISION.
- CONDEMNING THE PRACTICE OF SEX SELECTION
- PROMOTING THE AVAILABILITY OF GENERIC OVER PATENTED DRUGS
- DECRIMINALIZING DOCTOR ASSISTED SUICIDE, AND EUTHANASIA
- BANNING GENETICALLY MODIFIED ORGANISM AND THE PATENTING OF HUMAN GENES
- LIMITING AND CONTROLLING BIOTECHNOLOGY
- ENSURING THE ETHICAL TREATMENT OF ANIMALS, PHASING OUT THE USE OF ANIMALS IN RESEARCH
- DISCONTINUING THE PRACTICE OF PRESCRIBING ANTIBIOTICS FOR VIRAL INFECTIONS, AND FOR NON-LIFE THREATENING BACTERIAL INFECTIONS
- LEGISLATING MIDWIFERY LOCALLY, NATIONALLY AND INTERNATIONALLY
- ENSURING EXTENDED MATERNITY AND PATERNITY LEAVE.
- ENDORSING AND SUPPORTING BREAST FEEDING AS THE BEST WAY TO FEED AN INFANT.
- CONDEMNING THE ADVERTISING AND PROMOTION OF ARTIFICIAL INFANT FORMULA TO THE PUBLIC.
- ENSURING HIGHER SAFETY STANDARDS IN THE PRODUCTION OF MEDICAL PRODUCTS

- DISCONTINUING THE PRACTICE OF PRESCRIBING ANTIBIOTICS FOR VIRAL INFECTIONS, AND FOR NON-LIFE THREATENING BACTERIAL INFECTIONS

CHAPTER 4 OVERCONSUMPTION REDUCTION AND EQUITABLE DISTRIBUTION OF RESOURCES

ENVIRONMENTALLY SOUND PRACTICES THROUGH REGULATIONS AND REDUCTION OF OVERCONSUMPTION

“the major cause of the continued deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

- PHASING OUT THE CURRENT UNSUSTAINABLE PATTERN OF CONSUMPTION THROUGH REGULATIONS AND EDUCATION
- REQUIRING ENVIRONMENTAL SOUND PRACTICES DRIVEN BY FORCED COMPLIANCE WITH REGULATIONS (PRINCIPLE DRIVING INDUSTRY RATHER THAN INDUSTRY COMPROMISING PRINCIPLE)
- ENSURING BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES
- ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS (MANDATORY INTERNATIONAL NORMATIVE STANDARDS -MINS)
- STRENGTHENING AND PROMOTING TRADITIONAL ENVIRONMENTALLY SOUND PRACTICES
- REQUIRING MANUFACTURERS TO ASSUME THE FULL RECYCLING, COMPOSTING AND OTHER DISPOSAL COSTS OF THEIR PRODUCTS IN AN ECOLOGICALLY SOUND MANNER.
- ENACTING THE FULL LIFE-CYCLE ANALYSIS OF ANY PRODUCT OR ACTIVITY THAT HAS POTENTIALLY HARMFUL ENVIRONMENTAL EFFECTS: THIS LIFE CYCLE ANALYSIS SHALL INCLUDE THE FULL LIFE CYCLE OF THE PRODUCT BY AN INDEPENDENT BODY

- INTRODUCING LEGISLATION TO PROMOTE THE REUSE OR REPLACEMENT OF MINERALS IN INDUSTRIAL PRODUCTION WITH RENEWABLE ALTERNATIVES.

CHAPTER 5

CHAPTER 6

HEALTH, RIGHTS AND ETHICS ASSURANCES ENVIRONMENT-INDUCED DISEASE PREVENTION, AND BIOTECHNOLOGY ASSESSMENT

HEALTH AND ENVIRONMENT

“the health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease”. (93 Habitat II)

- IMPROVING PEOPLE'S QUALITY OF LIFE THROUGH PREVENTION OF DISEASE AND ILLNESS
 - INCREASING FUNDING AND PROMOTING RESEARCH INTO ENVIRONMENTALLY-INDUCED DISEASES
 - PROMOTING RESEARCH WHICH ADDRESSES THE LINKS SUPPRESSION OF OUR IMMUNE SYSTEM TO OZONE DEPLETION, PETROCHEMICAL POLLUTION AND BIOACCUMULATION OF PERSISTENT TOXINS INDICATES THAT PUBLIC HEALTH IS BEING ENDANGERED BY A DETERIORATING ENVIRONMENT.
 - ENSURING THAT HEALTH RESEARCH AND SERVICES RESPOND TO THE NEEDS OF WOMEN, FIRST NATIONS AND MINORITIES;
 - SIGNIFICANTLY INCREASING RESEARCH FUNDING INTO ALTERNATIVE HEALTH CARE METHODS WHICH COMPLEMENT OR REPLACE MORE EXPENSIVE CONVENTIONAL DRUGS AND SURGERY;
 - SUPPORTING INITIATIVES TO EDUCATE THE PUBLIC AROUND LIFESTYLE CHANGES AND CHOICES THAT WOULD CONTRIBUTE TO BOTH PERSONAL HEALTH AND PROTECTION OF THE ENVIRONMENT

- ENSURING THAT HEALTH ADMINISTRATIONS ACCEPT AND PROMOTE THE USE OF NATURALLY OCCURRING MEDICINES AND HERBS WHILE PROVIDING A STRINGENT REVIEW PROCESS FOR NEW AND EXISTING HUMAN-MADE CHEMICALS, TECHNOLOGIES, AND ELECTROMAGNETIC DISRUPTION.

- ELIMINATING, PREVENTING AND REDUCING OF HEALTH AND ENVIRONMENT HAZARDS

- DISCONTINUING PHARMACEUTICAL COMPANY FUNDING TO AND DIRECTION OF HEALTH RESEARCH IN UNIVERSITIES

CHAPTER 7

ENVIRONMENTALLY SOUND TRANSPORTATION SUPPORT AND PROMOTION

-RIGHT TO SHELTER, AND ENVIRONMENTALLY SOUND TECHNOLOGY INCLUDING ENERGY, TRANSPORTATION AND PRACTICES ASSURANCES

ENVIRONMENT, TRANSPORTATION AND ENERGY

to encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (Article 104 c, Habitat II Agenda)

- DETERMINING AND REVEALING THE FULL SUBSIDY FOR THE INFRASTRUCTURE FOR THE AUTOMOBILE AND ELIMINATING ALL FUTURE SUBSIDIES

- REESTABLISHING A VIABLE RAIL AND LIGHT RAPID TRANSIT SYSTEMS

- PROMOTING THE USE OF RAIL FOR FREIGHT AND PASSENGER TRANSPORT, AND EXTEND THE RAIL NETWORK TO SERVE ALL URBAN AND RURAL LOCATIONS CONVENIENTLY;

- ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY

- DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION

- PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -

- PROMOTING AND ENSURING ENVIRONMENTALLY-SOUND TRANSPORTATION

CHAPTER 8
PRINCIPLE-BASED RATHER THAN VESTED-INTERESTED DECISION MAKING
PRINCIPLE-BASED DECISION MAKING AND
PUBLIC ACCESS TO INFORMATION

Providing full, timely and comprehensible information, without undue financial burden to the applicant; 133(c) UNCED

- IMPLEMENTING PRINCIPLE BASED DECISION MAKING MOVING FROM VESTED INTEREST DECISION MAKING TO PRINCIPLE-BASED DECISION MAKING
- ENSURING GENUINE COMMUNITY PARTICIPATION AND INVOLVEMENT WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES DRAWN FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS

CHAPTER 9
ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

GREENHOUSE GAS EMISSION AND OZONE-DEPLETING SUBSTANCES REDUCTION AND ELIMINATION

ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy (101 d, Habitat II)
Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 ii (Habitat I, 1976)

- REQUIRING AND DEVELOPING ENVIRONMENTALLY SOUND ENERGY
- PROVIDING FOR ENVIRONMENTALLY-SOUND ENERGY SOURCES BY 1999, AND CONCURRENTLY PHASING OUT ENVIRONMENTALLY-UN SOUND ENERGY

- REQUIRING THE CONSERVATION OF ENERGY
- REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE
- *• MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASED INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY
- TRANSFERRING FUNDING FOR FOSSIL FUEL AND NUCLEAR INTO ENVIRONMENTALLY SOUND ENERGY
- REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY
- CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES
- INSTITUTING A MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.
- - PROMOTING RESEARCH FOR THE STORAGE AND HANDLING OF EXISTING NUCLEAR WASTE WHILE PHASING OUT CIVIL NUCLEAR ENERGY, AND THE GENERATION OF NUCLEAR WASTES
- PHASING OUT THE USE OF CIVIL NUCLEAR ENERGY AND THE TRANSFER OF FUNDS INTO THE DEVELOPMENT OF ENVIRONMENTALLY SOUND RENEWABLE ENERGY
- CONDEMNING AND BAN THE PROPOSAL TO USE WEAPONS-GRADE PLUTONIUM FROM DISMANTLED RUSSIAN AND US WEAPONS (IN THE FORM OF MOX) IN CANDU REACTORS.
- ELIMINATING OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY
- SUBJECTING ALL WEAPONS-USABLE RADIOACTIVE MATERIALS AND NUCLEAR FACILITIES IN ALL STATES TO INTERNATIONAL ACCOUNTING, MONITORING AND SAFEGUARDS AND ESTABLISHING A PUBLIC INTERNATIONAL REGISTRY OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)

- PROHIBITING NUCLEAR WEAPONS RESEARCH, DESIGN, DEVELOPMENT AND TESTING THROUGH LABORATORY EXPERIMENTS INCLUDING BUT NOT LIMITED TO NON-NUCLEAR HYDRODYNAMIC EXPLOSIONS AND COMPUTER SIMULATIONS, SUBJECT ALL NUCLEAR WEAPONS LABORATORIES TO INTERNATIONAL MONITORING AND CLOSING ALL NUCLEAR TEST SITES (ABOLITION 2000)

GREENHOUSE GAS EMISSIONS AND OZONE-DEPLETING SUBSTANCES REDUCTION AND ELIMINATION

Stabilizing the atmospheric concentrations of CO₂ is an imperative goal. It is currently estimated to require reductions of more than 50% from present emission levels. Energy research and development budgets must be massively directed to energy options which would eliminate or greatly reduce CO₂ emissions and to studies undertaken to further refine the target reductions (CHANGING ATMOSPHERE CONFERENCE, 1988).

- ADDRESSING CLIMATE CHANGE THROUGH REDUCING AND PHASING OUT OF GREENHOUSE GASES, PROVIDING ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION, AND MOVING AWAY FROM CAR-DEPENDENCY.

- ADDRESSING CLIMATE CHANGE: PROTECTING CARBON SINKS AND REDUCING EMISSIONS WAY BEYOND WHAT WAS REQUIRED IN THE FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992. (TO AT LEAST FULFILL THE RECOMMENDATION MADE IN 1988 “CHANGING ATMOSPHERE”)

- CONDEMNING THE MYTH THAT NUCLEAR ENERGY IS THE SOLUTION TO CLIMATE CHANGE

- ACKNOWLEDGING THE CONCERN BY INSURANCE COMPANIES OF THE IMPLICATIONS OF CLIMATE CHANGE

- ELIMINATING OF THE PRODUCTION AND CONSUMPTION OF OZONE-DEPLETING SUBSTANCES

- BANNING THE PRODUCTION, SALE, CONSUMPTION AND DISTRIBUTION OF OZONE DEPLETING CHEMICALS, SUCH AS METHYL BROMIDE, HALONS, CHLOROFLUOROCARBONS, HYDROCHLORFLUOROCARBONS, CARBON TETRACHLORIDE AND OTHER COMPOUNDS CAPABLE OF BEARING CHLORINE TO THE STRATOSPHERE.

- ENSURING THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION

CHAPTER 11, 13, 15 BIODIVERSITY, MOUNTAINS AND FOREST CONSERVATION

CONSERVATION, BIODIVERSITY AND FORESTS

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

- GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY IN LAND, AIR AND WATER SYSTEMS
- PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS SUCH AS THE BIODIVERSITY CONVENTIONS, THE FRAMEWORK CONVENTION ON CLIMATE CHANGE, CONVENTION ON COMBATING DESERTIFICATION, THE VIENNA CONVENTION ADDRESSING OZONE DEPLETION; ENVIRONMENTAL IMPACT ASSESSMENT OF TRANSBOUNDARY POLLUTION ETC.
- IDENTIFYING BIODIVERSITY, AND CARRYING OUT AN ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY
- ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

ENSURING THAT THE BIODIVERSITY CONVENTION TRANSCEND JURISDICTIONAL AND PROPRIETORIAL BARRIERS

- IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS
- BANNING CLEARCUTTING AND OTHER ENVIRONMENTALLY UNSOUND PRACTICES THROUGH ENACTING LEGISLATION TO CONFORM WITH THE

CONVENTION ON BIOLOGICAL DIVERSITY, AND WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE

- BANNING THE EXPORT OF RAW LOGS
- REGULATING MINING PRACTICES, AND PREVENTING THE TRANSFER OF SUBSTANCES OR ACTIVITIES THAT COULD CONTRIBUTE TO ENVIRONMENTAL DEGRADATION
- DISCONTINUING THE DUMPING OF ENVIRONMENTALLY UNSOUND EMISSIONS INTO LAND, AIR AND WATER SYSTEMS

GREEN SPACES, PARKS, PRESERVATION AND CONSERVATION

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

- PRESERVING AND PROTECTING OF GREEN SPACES
- PROMOTING THE CONSERVATION AND SUSTAINABLE USE OF URBAN AND PERI-URBAN BIODIVERSITY, INCLUDING FORESTS, LOCAL HABITATS AND SPECIES BIODIVERSITY; THE PROTECTION OF BIODIVERSITY
- PROTECTING ENDANGERED SPECIES AND HABITATS THROUGH LEGISLATION THAT WOULD PROTECT HABITATS AND CONSERVATION CORRIDORS
- DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES
- >• PREVENTING INDUSTRIAL ACTIVITIES SUCH AS FORESTRY AND MINING IN PARKS

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

Every form of life is unique, warranting respect regardless of its worth to man [human] , and to accord other organisms such recognition's, man [must be guided by a moral code of action. (a, UN General Assembly Resolution 1982)

- RESPECTING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

- REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE
- RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM (ENSURING THAT THIS IS NOT USED TO JUSTIFY INTRUSION INTO PRISTINE AREAS)
- ENSURING THE ADHERENCE TO THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES
- ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES
- ENFORCING OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION INTO THE ECOSYSTEM HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)
- INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE
- ENSURING THAT ALL CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW (AS AGREED IN HABITAT II)

CHAPTER 12

DESERTIFICATION AND DROUGHT PREVENTION

- CALLING UPON MEMBER STATES FROM THE UNITED NATIONS TO SIGN AND RATIFY THE CONVENTION ON DESERTIFICATION, AND ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT

CHAPTER 17 AND 18

MARINE, AND FRESH WATER PROTECTION AND CONSERVATION

MARINE, AND FRESH WATER PROTECTION AND CONSERVATION

To assure the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- PROTECTING WILD FISH STOCKS
- MAINTAINING A MORATORIUM ON ADDITIONAL SALMON FISH FARMING because of Risks of disease transfer from netcage fish to wild stocks; Risks of introduction of exotic diseases from the continued importation of offsite species;
 - Pollution from fish sewage, contamination of shellfish, and loss of habitat
 - Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices
 - Loss of access to traditional fisheries for indigenous peoples with increased risks to their health from exposure to drug residues from food collected near netcage operations
 - Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water
 - Decline of wild stocks Losses of wild fish, such as herring and juvenile salmon, consumed by netcage fish
 - Endangered human health from the increased use of antibiotics and other drugs, which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics
- REGULATING EXISTING MARICULTURE AND AQUACULTURE
- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS THAT DONE WITH TRAWLERS AND SEINERS
- RATIFYING THE LAW OF THE SEAS, AND OTHER RELATED CONVENTIONS, AND ENACTING THE NECESSARY LEGISLATION FOR COMPLIANCE AND ENFORCEMENT
- ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT
- ESTABLISHING MARINE PROTECTED AREAS FREE FROM FOSSIL FUEL AND HUMAN WASTE POLLUTION
- ENSURING INTERCONNECTING CONSERVATION CORRIDORS AMONG MARINE PROTECTED AREAS
- REQUIRING MANDATORY WATER CONSERVATION
- PREVENTING TRANSBOUNDARY POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)
- PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS TRAWLERS AND SEINERS.

CHAPTER 19, 20, 21, 22

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION

-SOLID WASTE REDUCTION AND ELIMINATION

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION
EXTRACTION REDUCTION AND CONTROL

“ Zero use, production , and release of persistent and /or bioaccumulative toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (ZERO TOXIC ALLIANCE, 1994) “

- ENSURING ZERO EMISSIONS OF CHEMICALS THAT ARE TOXIC OR BIOACCUMULATE, INCLUDING ENDOCRINE-DISRUPTING CHEMICALS WHICH HAVE BEEN LINKED TO REPRODUCTIVE DISORDERS
- MONITORING AND MAKING PUBLIC THE EXTENT OF THE HARMFUL CHEMICAL PRODUCTION, AND OF THE HARMFUL WASTES FROM CHEMICAL PRODUCTION
- BANNING OF PERSISTENT ORGANIC POLLUTANTS
- ENDING THE PRODUCTION OF ENDOCRINE-DISRUPTING CHEMICALS
- ELIMINATING OF TOXIC, HAZARDOUS AND NUCLEAR WASTES
- INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE
- CONDEMNING THE ENORMOUS ENVIRONMENTAL AND SOCIAL IMPACT CAUSED BY MINERAL AND PETROLEUM DEVELOPMENT
- SUPPORTING THE RIGHTS OF COMMUNITIES TO OPPOSE MINING OPERATIONS AND DEFINE THE USE OF THEIR RESOURCES ARE RESPECTED, AS IS RECOMMENDED IN ART. 15 OF AGREEMENT 169 OF THE INTERNATIONAL LABOUR ORGANIZATION FOR INDIGENOUS COMMUNITIES.

- RESPECTING THE WATER USE RIGHTS OF COMMUNITIES ABOVE OTHER ACTIVITIES THAT LIE OUTSIDE THE PRIORITIES THAT THEY HAVE THEMSELVES DEFINED.
- STOPPING THE EXPANSION OF MINING AND PETROLEUM FRONTIERS
- INITIATING ACTIONS TOWARDS REDUCING THE CONSUMPTION OF MINERALS AT A WORLD LEVEL.
- PREVENTING THE IMPORTING, EXPORTING, AND TRANSPORTING OF TOXIC MINING WASTES UNDER ALL CONDITIONS.
- SUPPORTING THE RESTORATION OF DAMAGE CAUSED BY MINING ACTIVITY BE ASSURED WITHOUT FINANCIAL LIMIT.

HUMAN-INDUCED DISASTER PREVENTION

“The need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence and to reduce the impacts of natural disasters and other emergencies on human settlements (Habitat II)”

- PREVENTING DISASTERS INCLUDING NA-TECHS NATURAL AND TECHNOLOGICAL DISASTERS, INCLUDING ACTIVITIES THAT PRODUCE TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTES
- PREVENTING THE TRANSFERENCE TO OTHER STATES OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION, INCLUDING TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- CONDEMNING THE CONTINUED CIRCULATION AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS, THE TESTING OF NUCLEAR WEAPONS, AND PERMITTING OF LOW-LEVEL TEST FLIGHTS
- INCLUDING INDUCING CLIMATE CHANGE AND OZONE-REDUCTION UNDER THE CATEGORY OF DISASTERS
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- REQUIRING THE REGULAR REPORTING TO THE UN REGISTER OF CONVENTIONAL WEAPONS (ADAPTED FROM PEACE CAUCUS CSD)

- RESTRAINING AND PREVENTING WEAPONS PROLIFERATION

- REQUIRING THE DAILY PUBLICATION OF THE NAMES OF THE COMPANIES AND COUNTRIES THAT PRODUCE WEAPONS, AMOUNT AND TYPE OF WEAPONS SOLD, AND THE NAMES OF THE PURCHASER AND THE NAME AND THE NATIONALITY OF THE PURCHASER AND THE PURPOSE FOR WHICH THE ARMS ARE TO BE USED

- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

BANNING IMMEDIATELY THE PRODUCTION, USE, SALE AND TRANSFER OF ANITPERSONNEL LAND MINES (PEACE CAUCUS)

MILITARY CONVERSION AND TRANSFER FUNDS TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (General Assembly, 1981)

- REDUCING AND TRANSFERRING THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- REDUCING AND TRANSFERRING OF THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- PROTECTING THE RIGHT TO DEDUCT AND PROVIDING FOR A PROPORTION OF THE TAXES COMPARABLE TO THE PERCENTAGE REPRESENTED BY THE MILITARY BUDGET TO BE PUT INTO A PEACE FUND
- PROTECTING AND SUPPORTING CONSCIENTIOUS OBJECTORS
- SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE
- PROMOTING CIVILIAN RULE
- PREVENTING THE CAUSES OF CONFLICT THROUGH GUARANTEEING HUMAN RIGHTS, INCLUDING ENSURING SOCIAL JUSTICE AND THE SATISFYING OF BASIC NEEDS
- ELIMINATING URANIUM MINING AND THUS PREVENTING THE CONTRIBUTION TO NUCLEAR WEAPONS
- ALLOCATING FUNDS AND TECHNOLOGY FOR REMOVAL OF THE MORE THAN 100 MILLION ANTIPERSONNEL LAND MINES ALREADY PLANTED IN 64 COUNTRIES (PEACE CAUCUS)

MILITARY, WEAPONS OF MASS DESTRUCTION AND CONVENTIONAL ARMS ELIMINATION AND REDUCTION

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

- IMPLEMENTING THE DECLARATION OF PEOPLE'S RIGHT TO PEACE
- MOVING FROM A CULTURE OF VIOLENCE TO A CULTURE OF PEACE (UNESCO)
- PROMOTING AN INTERNATIONAL VOLUNTARY MILITARY FORCE UNDER CHAPTER 7 OF THE UNITED NATIONS CHARTER TO BE USED WHEN ABSOLUTELY NECESSARY AND PROMOTING NON-VIOLENT RESOLUTION TO CONFLICT (PEACE CAUCUS)
- ENSURING EARLY INVOLVEMENT IN POTENTIALLY VIOLENT AREAS TO ALLEVIATE THE NEED FOR MILITARY SOLUTIONS AND THE RESULTING

ENVIRONMENTAL DEGRADATION (ADAPTED FROM THE PEACE CAUCUS CSD)

- RESTRUCTURING ECONOMIES AWAY FROM DEPENDENCE ON THE MILITARY (PEACE CAUCUS CSD)
- CONVERTING MILITARY MANUFACTURING CAPACITY TO ENGAGING IN PRACTICES, AND GENERATING SUBSTANCES AND PRODUCTS THAT ARE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND
- SHIFTING RESEARCH AND DEVELOPMENT FROM DEFENCE-BASED INDUSTRIES TO EQUITABLE DEVELOPMENT AND SOCIALLY RESPONSIBLE PRODUCTION TO RECTIFY ENVIRONMENTAL DEGRADATION (PEACE CAUCUS CSD)
- DEALING WITH AND DISPOSING OF ALL TOXIC MILITARY WASTE IN THE BEST ENVIRONMENTALLY SOUND WAY RECOGNIZING THAT THERE IS NO ENVIRONMENTALLY SOUND MEANS OF DISPOSING OF MOST OF THE WASTE AND THE BEST PRACTICE IS TO PREVENT THE PRODUCTION OF MILITARY WASTES.
- ACKNOWLEDGING AND ACTING UPON THE EVIDENCE OF THE SERIOUS AND IRREVERSIBLE CONSEQUENCES OF NUCLEAR TECHNOLOGY ON HUMAN HEALTH AND ON THE ECOSYSTEM
- ACTING IMMEDIATELY ON THE JUDGMENT OF THE WORLD COURT THAT NUCLEAR WEAPONS ARE AGAINST INTERNATIONAL HUMANITARIAN LAW
- ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL
- PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS
- REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR
- MAKING AN IMMEDIATE PLEDGE NOT TO USE OR THREATEN TO USE NUCLEAR WEAPONS (ABOLITION 2000)
- DECLARING THE GLOBAL COMMONS A NUCLEAR FREE ZONE ON JUNE 21, 1997 {CREATING ADDITIONAL NUCLEAR WEAPONS FREE ZONES, SUCH AS THOSE ESTABLISHED BY THE TREATIES OF TLATELOLCO AND RAROTONGA (ABOLITION 2000)}

- ELIMINATING IMMEDIATELY ALL FURTHER PRODUCING OF NUCLEAR WEAPONS AND INITIATING IMMEDIATELY (1997) A TIME-BOUND CONVENTION FOR THE COMPLETE ELIMINATION AND DESTRUCTION OF NUCLEAR WEAPONS BY THE YEAR 2000
- [AT A MINIMUM] INITIATING AND CONCLUDING BY THE YEAR [1999] 2000 NEGOTIATIONS ON A NUCLEAR WEAPONS ABOLITION CONVENTION THAT REQUIRES THE PHASED ELIMINATION OF ALL NUCLEAR WEAPONS WITHIN A TIME BOUND FRAMEWORK WITH PROVISIONS FOR EFFECTIVE VERIFICATION AND ENFORCEMENT (ABOLITION 2000)
- ELIMINATING OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, INCLUDING NUCLEAR WEAPONS BY THE YEAR 1999
- IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS
- BANNING THE TESTING OF NUCLEAR WEAPONS
- RECOGNIZING THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY
- PROHIBITING THE MILITARY AND COMMERCIAL PRODUCTION AND REPROCESSING OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)
- PROHIBITING THE USE OF WEAPONS-GRADE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN CIVIL NUCLEAR REACTORS
- BANNING THE PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)
- PREVENTING THE TESTING OF ALL WEAPONS INCLUDING THOSE IN CANADA (NANOOSE BAY AND LOW-FLYING FLIGHTS IN INNU TERRITORY)
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- HALTING LOW-LEVEL FLIGHT TRAINING IN LABRADOR AND END NUCLEAR SUBMARINE TESTING AT NANOOSE BAY, AND THE CIRCULATING AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS ;
- WITHDRAWING FROM MILITARY ORGANIZATIONS SUCH AS NATO, AND ALL OTHER BI- AND MULTILATERAL DEFENCE ARRANGEMENTS WITH INDIVIDUAL COUNTRIES AND REGIONS.
- PROHIBITING THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES
- ENSURING THAT THE ENVIRONMENT IS NOT ALTERED FOR MILITARY PURPOSES
- CONVERTING MILITARY MANUFACTURING CAPACITY TO MAKING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRODUCTS
- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

CHAPTER 34
 TRANSFER OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND
 TECHNOLOGY
 MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE
 INDUSTRY TO BEST PRACTICES

|
 CHAPTER 35
 SCIENCE FOR PEACE AND THE BENEFITS OF HUMANITY

CHAPTER 36
 COMMUNICATION AND EDUCATION PROMOTION AND FACILITATION
 ENVIRONMENTAL EDUCATION WITHOUT INDUSTRY INTRUSION
 MEDIA AND SOCIAL CONSCIENCE
 ARTS AND CULTURE SUPPORT AND PROMOTION 8
 COMMUNICATION AND EDUCATION
 Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in

environment and development, basing activities around elementary/secondary schools and local problems. (Agenda 21, Chapter 36.5 | UNCED)

EDUCATION AND COMMUNICATION

- ENSURING THE RIGHT TO AN EDUCATION WHICH IS EQUITABLE, COLLABORATIVE, AND MEANINGFUL
- STIMULATING AWARENESS OF HUMAN RIGHTS, ENVIRONMENT, AND PEACE ISSUES THROUGH EDUCATION
- REQUIRING CORPORATIONS TO PAY INCREASED TAXES, AND REDIRECTING OF CORPORATE FUNDING FOR EDUCATIONAL MATERIALS INTO GENERAL REVENUE THROUGH TAXES
- GUARANTEEING THE RIGHT TO FREE EDUCATION AT ALL LEVELS, AND INCREASING RESEARCH GRANTS AT THE UNIVERSITY LEVELS
- LINKING STUDENT LOAN PAYMENT TO SALARY, AND ALLOWING FOR COMMUNITY SERVICE AS REPAYMENT
- PROMOTING AND SUPPORTING INCREASED FUNDING FOR LITERACY
- ENSURING THAT SPECIAL NEEDS CHILDREN HAVE A RANGE OF OPTIONS WITHIN THE EDUCATIONAL SYSTEM
- PROVIDING FREE UNIVERSITY EDUCATION THROUGH INCOME SUPPLEMENT PLAN TO ASSIST STUDENTS
- ELIMINATING ALL CORPORATE DETERMINING OF PHILOSOPHICAL UNDERPINNINGS OF EDUCATION
- ELIMINATING OF ALL CORPORATE INVOLVEMENT IN THE DIRECTION OF UNIVERSITY
 - AVOIDING COMPROMISE THROUGH PROHIBITING INDUSTRY-FUNDED UNIVERSITY RESEARCH
- REQUIRING ARMS LENGTH RESEARCH FROM INDUSTRY TO AVOID CONFLICT OF INTEREST

- REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”
- DENYING DEGREE-GRANTING STATUS TO NON-SECULAR SCHOOLS, COLLEGES AND UNIVERSITIES
- DISCONTINUING ALL PUBLIC FUNDING FOR ALL-NON-SECULAR PRIVATE SCHOOLS (NOT PROVIDED FOR UNDER THE CONSTITUTION)

ARTS AND CULTURE

- ENSURING AND INCREASING SUPPORT AND FUNDING FOR THE ARTS AND CULTURE THROUGH GENERAL REVENUE
- CLOSING CORPORATE TAX LOOPHOLES, TAX DEFERRALS, AND INCREASE CORPORATE TAXES TO AT LEAST OECD STANDARDS, AND TRANSFERRING FUNDS INTO GENERAL REVENUE
- ENCOURAGING ARTS ORGANIZATIONS TO NOT SEEK FUNDING FROM CORPORATIONS BUT FROM A DEDICATED FUNDING SOURCE IN GENERAL REVENUES
- PROVIDING ADDITIONAL FINANCIAL SUPPORT TO PUBLIC RADIO, SUCH AS CBC, AND TELEVISION

MEDIA AND COMMUNICATION

- STRENGTHENING THE MEDIA AS AN INSTRUMENT OF PUBLIC TRUST AS HAS BEEN AGREED TO THROUGH VARIOUS MEDIA CODES

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member states of the United Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and the fulfilling of expectations.

I wrote I think that we need an inclusive “green book” of as many pages as is necessary to convey the actions that need to be taken to achieve a socially equitable and environmentally sound society
 i had been invited to have input into the international affairs section of the platform

MAY MAY 1996

() THAT in 1996, when I was asked to have input into a draft for the Green Party Platform- I was shocked when I received a ready-made Green Party platform in which there was the following affirmation:

“we are in strong agreement with Carolyn Linden who urges us to ground ourselves in reality if we want to increase the number of votes we receive.”

() THAT in 1996,
 I responded to the ready-made platform

COMMENT

Please take my name of the platform

Also, I have however specific concerns about the FINAL draft platform
 I would like to express some initial concerns about the current final platform: the first concern is about the vision statement. if we are to have a real vision, we must completely move away from the compromising position suggested in the following comment:

“we are in strong agreement with Carolyn Linden who urges us to ground ourselves in reality if we want to increase the number of votes we receive.”

I added:” I am sure you are all aware of the corporate assessment of activists as being radicals, opportunists, idealists and realists. the recommended corporate strategy has been to marginalize the radicals, ...and turn the idealists into realists.”

[THIS SHOULD HAVE BEEN A WARNING TO ME TO NOT RUN AS LEADER]

() IN 1996 MAY THAT FRED KNELMAN AND I APPLIED FOR A TEACHING POSITION AT ROYAL RHODES

May 1996
EXHIBIT

Dr. Stephen Grundy
Coordinator
Environmental Programs
Royal Roads University

Dear Dr. Grundy,

This is to follow-up on our phone conversation. As I mentioned to you, I am leaving tomorrow for a conference in Vancouver, so I have quickly put together a recent resume. I have discussed our phone conversation with Dr Knelman and he is very interested in your program. He will be sending you a resume separately. We would be interested in co-teaching a course and also in having input into the graduate program.

Yours sincerely

Joan Russow

EDUCATION

I received a doctorate in interdisciplinary studies culminating years of studying a range of disciplines from common law, architecture, and indigenous art to mathematics, philosophy and Bacteriology. My doctoral dissertation was in Interdisciplinary studies analyzing complexity and the alternative modes of thought, expression and interaction. My Masters degree was in Curriculum Development where I developed a method of teaching human rights within a context of environmental, ethical and peace framework.

COURSE INSTRUCTION

For the past 4 years, Dr. Fred Knelman and I have taught a course in Global Issues in the environmental studies program at the University of Victoria. This course integrated scientific knowledge and environmental law within an interdisciplinary intellectual framework. The central theme of this course is the anatomy of global change and its multiple relationships to the environment. The major focus of this course is an analysis of global sustainability within the context of two contending paradigms, one which assigns primacy to economic development and treats ecological conservation as derivative and the other which reverses the relationship. The former paradigm is often coupled with the notion of technological omnipotence. The tension that is created thereby is complicated by the critical social gulf between the rich and poor worlds as well as violent conflicts of all kinds. Numerous international instruments have attempted to examine this tension. The course will treat the above issues in depth, in particular analyzing the nature of economic development, philosophically, socio-politically and operationally and the consequences for ecological conservation. Alternative development programs that create a true resolution of the economics/ecology conflict will be proposed. A key factor in the above treatment is the current trend of globalization and the nature of global change. With the above introduction and background features, the major thrust of the course will then examine a number of critical issues that impact and interact with the natural environment. Among these issues are population, food and agriculture, energy and resources, trade and equity/equality. At all times an attempt will be made to analyze the multiple complex relationships among the above issues. Finally, the course attempts to describe a viable system of global sustainability and to assess the possibility of its being achieved within an analysis of the constraints and obstacles to be overcome. An essential part of the course has been to make students aware of both current

issues that are being discussed internationally and of key international documents that are being negotiated.

COURSE DEVELOPMENT

I developed a course on teaching global issues through principle-based education, examining issues within the context of interdependence of peace, environment, equity, ethics, and human rights, drawing upon globally adopted principles.

For almost 50 years, the United Nations and member states of the United Nations, through international instruments—conventions, treaties, declarations, conference action plans, and General Assembly resolutions—have undertaken obligations to address the urgency of the global situation. This urgency is reflected in the continued degradation of the environment, the production of arms and the escalation of conflict and war, the violation of human rights, and the inequitable distribution of resources. This complex of globally adopted principles has become the foundation for a program called "Principle-based" education.

Principle-based education works within a framework based on globally adopted principles related to preventing the degradation of the environment, the escalation of conflict and war, the violation of human rights, and the perpetuation of inequality/inequity and social injustice. This framework has been developed not from a particular value system of the teacher, educator, or institution, but is based on globally adopted principles over the period of the existence of the United Nations.

In principle-based education, complex and controversial issues reflecting the urgency of the global/local situation are discussed in the classroom or in the community within a conceptual principled framework. Principle-based education, is a means of fostering critical thinking and of examining difficult, complex and controversial issues within a principle-based framework.

PROJECTS

1996 Reviewing and proposing changes in the bracketed sections of the "Habitat II Agenda" for the United Nations Habitat II Conference to be held in June in Istanbul; contributing to the Canada-wide consultation process and making submissions to the external affairs representative negotiating on environmental issues.

1994 Initiated (and have continued as Coordinator) of a CIDA funded project (1995) called the Global Compliance Research Project. The purpose of the project has been to carry out a content analysis of international instruments related to peace, human rights, environment, ethics and social equity/equality issues, and compiled a "Charter of Obligations". This project involves representatives from over 60 different countries.

1995. Initiated a project for the International Affairs Caucus (BCEN) on the Integration and Interdependence of issues. I received EDSP (Environment Development Support Program) funding for an exploratory phase which was

successfully completed. A further proposal for \$75,000 is being drafted to set up an Institute of Global Interdependence, linked with three projects in Brazil. The ERA as the lead group, and is linked with Ecotropic, a group of academic activists, and the Intertribal Council, the principal organizing organization for the indigenous peoples meeting at Karaoke at UNCED.

1992-94 Assisted Dr. Rod Dobell, in carrying out researching for the Social Learning Project—an International project, housed in the Kennedy School of Public Policy at Harvard. The project examined social learning related to "climate change," "Ozone depletion," and "Acid rain" in seven different countries.

PRESENTATIONS AT WORKSHOPS CONFERENCES

June 1996. Proposed presentation at the NGO forum on Habitat at Istanbul.

March 1996. Presentation on the panel of the open plenary of the International Environmental Law Conference.

January 1996. Presentation on the Global Compliance Research Project. Praxis/Nexis Conference

October 2 1995 Panel presentation on the enforcement of International Environmental law, Faculty of Law, University of Victoria

October 25 1995. Presentation at the United Nations celebration of the 50th Anniversary of the United Nations organized by the United Nations Association of Victoria.

October, 1995. Conducted a workshop on a Content analysis of Agenda 21 of UNCED for an International Forum of Students from Simon Fraser and University of B.C.

September.1995. Presentation at the NGO Forum in Beijing. "Translating the Conventions to the Grassroots" and "Global Compliance Research the Charter of Obligations"

June, 1995. Presentation to the plenary of the International Conference "We the Peoples Conference" on the Global Compliance Resolution. San Francisco

March 1995: Presentation to the plenary of the United Nations Congress of Public International Law in New York at the General Assembly

March 1995: Presentation to the United Nations Commission on the Status of Women on the Global Compliance Research Project

November 1994. Presentation. "International Instruments as Instruments of Change" to the International Law Caucus, and Environmental Law Caucus of the Bar Association.

April, 1994. Presentation. "Beyond the precautionary principle" at an international conference on Ozone Depletion and Ultraviolet radiation

March, 1994. Presentation. "Climate Change: international principles as instruments of change at the Public Policy and Environmental Law, Eugene, Oregon

January 1994. Presentation a paper on "Principle-based" education to the Commission on Education and Communication at the IUCN (World Conservation Union, January, 1994)

March 1993. Participant on an international panel on NAFTA. Public Policy and Environmental Law Conference

PARTICIPATION IN POLICY FORMATION AND GOVERNMENT LEGISLATION REVIEW PROCESS

International

Assisted in drafting an Alternative Declaration at the UN conference on Women: Equality, Development and Peace

Submitted revisions to the "Covenant" prepared by the Commission on Environmental Law, IUCN

Assisted in drafting an Alternative Declaration at the UN conference on Women: Equality, Development and Peace

Assisted in the Drafting of the Alternative Earth Charter, at UNCED

Canada

Selected by the CEN to participate in a briefing in Toronto on ISO standards (May11, 12)

Submitted a set of criteria for an Environmental Assessment Review of CIDA projects

Submitted “principles of sustainability” to Round-table on Pulp and Paper. o

British Columbia

Participated in the Western Caucus of CSA examining ISO standards

Reviewed provincial documents such as CORE Charter, B.C., drafted a proposal for a revision to the Land Use Charter, Environmental Bill of Rights, the B.C. Prevention Act, the Forest Practices Code; B.C. Standards for Pollution Prevention, Bill of environmental rights

January 1995, Participated in the BCEN review of the Environmental Assessment Review

December 1994. Participated in BCEN Forest Caucus analysis of the Forest Practice Code

March 1994 to March 1995, selected by the BCEN to participate in the Working Group on developing Standards for Discharge Emissions

PUBLICATIONS

Russow, J. (1996). The Habitat Agenda within the context of previous obligations. (in progress) prepared for the UN Habitat II Conference, 1996

Russow J. (1995) Charter of Obligations. in preparation a 350-page content analysis, entitled, Charter of Obligations. Officially distributed to delegates at the UN Conference on Women: Equality, Development and Peace, in September, 1995.

Russow J (1995) Principle-based Education: an instrument of socio-political global change. Global Compliance Research Project

Russow J (1994) Beyond the precautionary principle. Publication of the Proceedings on Conference on Ozone Depletion and Ultraviolet Radiation. Skies Above Foundation.

Russow J. (1994) Prepared a 150-page leave to Appeal book, examining the applicability of international environmental law in the courts of B.C.

Russow J. (1994) “Canadian Obligations under the Climate Change Convention. BCEN Report

Dobell, R and J. Russow. papers submitted to the Social Learning projects on an examination of the history of learning related to climate change in Canada, on the role of the Science Council in the development of policy related to Climate Change, and on climate change and forests

ORGANIZATIONAL AFFILIATION:

1994-1996. Reappointed to the IUCN (World Conservation Union) Commission on Education and Communication.

1995. Chair, International Affairs Caucus BCEN
Co-founder of the ERA Ecological Rights Association, and the Global Compliance Research Project. Director of the Vancouver Island Peace Society, Director of the Council of Canadians, member of the United Nations Association and the Voice of Women.

- Submitted a proposal for “Option 6” — a proposed programme for addressing obligations under the Framework Convention on Climate Change
- Participating in the Committee for promoting changes in legislation related to “Slapp suits”. This Committee has drafted an act and is negotiating with government to have it presented to the legislature in the next session.
- Published an article criticizing the Core Process as an "arena of competing interests" where there was the "glorification of conflict of interest". In particular, there was a criticism of CORE (Commission on Resources and Environment) for failing to have as a basis to discussion, non-negotiable international obligations, and to seek expert advice beyond the table
- Worked with the Sierra Club international on drafting a resolution at the 1994 Annual General Meeting IUCN (the World Conservation Union) —an organization that has both non-governmental and governmental representation, and academic and professional representation from 125 countries. The resolution was the "North American Temperate Rainforest" Resolution which passed with only one state abstaining, Canada. The IUCN undertakes to circulate any resolution passed at the Annual General Meeting to all states in the United Nations, and it is the responsibility of the proposer of a resolution to monitor the fulfillment of IUCN resolutions, and to submit documentation about the fulfillment of the resolutions for distribution at the next IUCN Annual General Meeting. There has consequently been international condemnation of British Columbia for its forest practices that contribute to loss of biodiversity and for its failure to preserve significant network of ancient temperate rainforests through a resolution from IUCN, an international organization with representation from 125 countries, including representation from governments and non-governmental organizations. It should be noted that the IUCN is the organization that has been given the responsibility by the United Nations of determining whether proposed sites should be nominated as World Heritage Sites.
- Proposed and worked on a draft of a resolution calling for the waiting until there were North American principles of enforceable law related to Human Rights, Environment, and equity issues. This resolution was supported unanimously by the 200 participants at the NAFTA session Public Interest and Environmental Law Conference

Personal Background

For years I have been concerned about the complexity and interdependence of issues. Preventing the destruction of the environment, the escalation of war, the violation of human rights the disregard for social justice and the perpetuation of inequity. At the same time that I have been addressing common security issues, I

have been examining, through my academic work, the fragmentation of thought and the imposition of models on the complexity of thought.

() in 1996 David White wrote the following comment about the platform process

I thought I'd summarize what was sent to me, and which I have opened. I have

1. Long version - Part 2 1/2
2. Long version - Part 2 2/2
3. Long version - Part 3
4. Re: Long version of platform - ASCII 1/2
5. Re: Long version of Platform - ASCII 2/2

Was there more? (not that I necessarily WANT more; it seems quite enough already!)

() I also received the two parts of the Shadow Cabinet Platform Drafts. I was surprised to see that only a small portion of the Environment Policy which I submitted was included. I'm sure it was an oversight, so I am sending it to the others on the list and asking that it be included. I've posted it below. Did you ever see it?

David White

DRAFT ENVIRONMENT PLATFORM - GREEN PARTY OF CANADA 1997 by David White

The federal government has responsibilities over many aspects of Canadian life and has enormous responsibilities pertaining to the environment. As can be anticipated, a Green Government will act quickly to reverse the unprecedented slide towards ecological chaos which current federal policies are contributing to AIR

a) climate change

A Green government will comply with Canada's international commitment to stabilize greenhouse emissions to 1990's level by the end of this decade. To achieve this commitment:

- The Green government will work with provincial governments to build infrastructures which address pollution arising from the use of the automobile. (promotion of the automobile).

- A Green government will honour Canadian commitments to move away from auto-dependency. Given that a carbon tax, implemented within Canada but not in the USA, is impractical, a Green government will impose a similar tax on the sale

of new and used automobiles, automobile advertising, and at the well-head production

- An elected Green government will fund research into alternatives to wood use. The decline of our forest reserves constitutes a significant proportion of the world's carbon sink. A Green government will reduce forest exploitation to sustainable levels, prohibit forest exploitation in old growth, and ban clear-cutting. Importation of wood products which do not conform to Canadian standards will not be allowed.

b) Ozone Depletion

Ozone depletion caused by CFC's and their replacements such as HCFC's constitutes another serious threat to humanity. Methyl bromide and similar constituents of fertilizers pose similar threats. An elected Green government will legislate an immediate ban on production, sale, and distribution of ozone depleting chemicals in Canada, where alternatives to their consumption exist.

WATER

Throughout Canada, many existing municipal water supply systems are aging and need to be replaced. An elected Green Government will undertake the important work on water supply infrastructure. The Green Party also recognizes the many threats which exist to domestic water supplies across the country, and propose to protect sources of domestic water supply through a Domestic Water Supply Act

Sewage

Many Canadian municipalities continue to dump their raw sewage directly into the oceans. The Federal government has a constitutional responsibility to protect these waters, and under a Green Government will use its resources to ensure the sewage is treated and any resource resulting from the treatment is recycled.

Oil Transport

A Green Government will pass legislation which ensures the double hulling of all vessels carrying petroleum products in Canadian waters.

LAND

A Green Government will revitalize the Canadian parks system and reverse the trend towards privatization of the national system. In addition, a Green Government will take the following initiatives:

a) Endangered Habitats Act - The Green Party recognizes that the essence of species protection is protection of species habitat. A Green Government will work to protect a system of connected untouched wilderness corridors of high biodiversity throughout Canada. Old growth original forests throughout Canada

make up less than 5% of the landbase; these forests should become the focus for this network of endangered habitats. Such connected corridors will ensure Canada's parks don't become dwindling pools of genetic conformity.

A Green Government will ensure that similar connected reserves are developed for marine ecosystems. .

b) Mining

Canada's corporate dirty secret is the appalling worldwide human rights and environmental record of many Canadian mining companies. The Green Party recognizes that while mining is necessary to replenish existing mineral stocks, it is also a completely unsustainable activity. A Green government will introduce legislation which promote the reuse or replacement of minerals in industrial production. A Green government will ban the use of cyanide leaching process for mineral extraction.

c) Forests

The federal government has an important role to play in the development of vibrant and diverse forests through the development of standards and the judicious use of export taxes.

A Green Government will use its influence to move the provinces towards alternatives to ecologically degrading forest practices.. Timber cut from clearcuts will be clearly labeled, and will be subject to substantially higher export duties. Timber taken from forests which are sustainably managed will be promoted internationally by a Green Government, and be subject to substantially reduced tariffs.

To keep employment local Greens would discourage the export of logs, pulp and plain sawed boards and encourage the export of finished products only. The Green Party program of taxing resources and reducing income taxes will increase employment in the wood products industry as well as encourage conservation.

Paper products can be recycled up to 10 times and then used for insulation or cattle bedding. To ensure all paper products are recycled, a variety of measures are required including quotas on recycled content for newspapers, taxes on virgin paper, deposits on paper purchases.

Greens advocate the complete reuse and recycling of existing lumber including reuse of building materials. Greens encourage research and development of alternate fibre sources. Hemp and straw provide fibre at much higher rates than trees. Steel frame houses are recyclable, stronger, and more fire resistant.

Greens demand that forestry move toward harvesting systems that take wood fibre while leaving forest ecosystems viable and intact. Modified cutting methods which are tailored to the species~for example, strip-cuts for black and white spruce, and uniform shelter wood cut for white and red pine. Where the soil base or topography is not adequate to withstand logging or support forest re-growth, harvesting must not be permitted.

*FIRE

a) Environment and Energy

The linkage between air quality and energy consumption is well-documented. An elected Green government will place the attainment of higher energy efficiency as a priority. The development of solar, biomass, wind, hydro, hydrogen and geothermal technologies cannot be advanced without a strong and sustained investment in research, development, and demonstration (RD&D). Such a industrial strategy will be undertaken by a Green Party government.

To encourage conservation, reduce pollution, and support RD&D, a Green will levy taxes at the well head (and the mine head for coal). Well head taxation have many advantages over "end of the pipe" and other consumer taxes on emissions.

b) Military

The General Assembly of the United Nations has called upon nation states to reduce the military budget and transfer the funds to socially equitable and environmentally sound development. An elected Green government will support non-military solutions to conflicts. Transferring the military budget to education, health and social equity is a priority of an elected Green government.

The Green Party speaks strongly for consensus and non-violent solutions to conflict. A Green government will renew no agreement with states wishing to use Canadian lands, water or air for military purposes

The World Court recently decided that the use or threat of nuclear weapons is illegal. A Green government will renew no agreement with any government which allows for the visitation of nuclear vessels into Canadian waters or the flight of nuclear-equipped aircraft through Canadian airspace. International training exercises with offensive purposes on Canadian soil will be terminated by a Green Government. This includes low-level flying exercises in Goose Bay, Labrador, cruise missile testing in Cold Lake, Alberta and submarine training in Nanoose Bay, British Columbia.

Canada is the 8th largest military producer in the world producing \$3 billion worth of military goods annually. Of the 55 countries receiving military hardware from

Canada, about 50% engage in gross violations of humans rights and/or are involved in wars with neighbouring states. This manufacturing capacity should be converted to sustainable and useful production.

ENVIRONMENT AND HEALTH

Environmental Bill of Rights

Green Party policy recognizes the direct linkage between a healthy environment and a healthy citizenry. A Green Government will undertake the following initiatives when elected:

a) Chlorine

Chlorine and chlorine-based compounds have been scientifically demonstrated to pose serious threats to health. The American government has called for a chlorine phase-out. A Green government will take similar steps to ensure that chlorine-based industry isn't displaced into Canada

b) Labeling of Foods

A Green government will introduce legislation to ensure that if a pesticide is used in the growing of the food product, the name and chemical composition of the pesticide shall appear on the food product label. Similarly, any genetically altered material or hormone used in any product or in any phase of the production of a consumable will be labeled.

Ecologically-unsound-practices-accumulation-impact principle

" Despite mounting efforts over the past 20 years, the loss of the world' biological diversity, mainly from habitat destruction, over-harvesting, pollution and the inappropriate introduction of foreign plants and animals has continued. (Agenda 21, 15.3)

CHARTER OF ECOLOGICAL PRINCIPLES

This Charter draws from international obligations that have already been agreed to internationally. The Charter draws from both obligations undertaken by states through UN resolutions such as the "World Charter of Nature", globally agreed to documents such as the United Nations Conference on Humans and the Environment (Stockholm, 1972), The Rio Declaration (UNCED, 1992) and Agenda 21 (UNCED, 1992) and the legally binding documents such as the Vienna Convention on Ozone (1986), the Montreal Protocol (1987), The Basel Convention (); Convention on Biological Diversity (UNCED, 1992, in Force, 1993) and the Convention on Climate Change (UNCED, 1992, in force 1993), and the Law of the Sea (in force 1994).

NOTE: Article 18 of the Vienna Convention Treaty stipulates that if a state has signed a treaty there is an "obligation not to defeat the object and purpose of a treaty prior to the entry into force"

The following principles have been agreed to internationally

International obligations must be fulfilled as being not the maximum but the minimum standards to follow

Transference of agreed to principles to state practices

The principles set forth in the present Charter shall be reflected in the law and practice of each State, as well as at the international level (World Charter of Nature)

Inherent worth of nature

ensuring that every form of life is unique, warranting respect regardless of its worth to man

[human], and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (World Charter of nature)

Respect for essential processes

Nature shall be respected and its essential processes shall not be impaired

Urgency of conserving nature

Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and nature (World Charter of nature)

Moral code of action

ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans], and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (World Charter of nature)

Enunciation of the primacy of the ecosystem

Ensuring that in all decisions made about the environment that the ecosystem be given primacy

Invocation of the precautionary principle

where there is a threat of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing measures to avoid or minimize such a threat (from the Biodiversity Convention)

Enunciation of the principle of doubt

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should shall not proceed (World Charter of Nature)

Enunciation of the "Cautionary" Principle

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

Adoption of "prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error.

Non introduction of hazardous products in the environment

the onus of proving the non-hazardous nature of the product will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm by non-vested interest parties]

Environmental Assessment review

Introduce appropriate procedures requiring environmental impact assessment of its proposed projects and activities that are likely to have significant adverse effects on Biological diversity with a view to avoiding or minimizing such effects, and

where appropriate, allow for public participation in such procedures (Article 14, 1A, Convention on Biological Diversity)

Assertion of the avoidance of activities

Activities which are likely to cause irreversible damage to nature shall be avoided (World Charter of Nature)

Recognition of inter-connectedness with nature

Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients

Reaffirmation of intergenerational equity

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (World Charter of Nature)

Commitment to non-transference of harmful substances and activities

States should [Shall] *effectively cooperate to discourage or prevent* the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration)

(b) identifying, preserving and preventing the loss or reduction of Biological Diversity

[wording in part from the Convention on Biological Diversity]

(b 1) mitigating climate change by addressing anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change [wording from the Climate Change Convention]

(c) Achieving the goal of zero pollution in the Province

(e) applying the principles of pollution prevention as the foundation of environmental protection

[from definition of "pollution prevention"]

(a 0) _ the prevention of the use, generation and release of any substance into the environment in such a manner or quantity as to cause pollution [repeated from 41 1)

(a) the elimination of the use of polluting substances

(b 0) the substitution of polluting substance with non-polluting substances

(b) the substitution of polluting substances with less polluting substances

(c) the reduction in the introduction and use of **[non-renewable]** resources and polluting substances

(d) the elimination and reduction in the generation of polluting substances

[e, f, g removed because not deemed appropriate for prevention;
Discussion Environmental Group, February 19]

(f0) Confirming the responsibility of government to set up a non-vested interest board or panel with varying levels of expertise and experience to do "arms-length" research into the true environmental impacts of substances and activities by carrying out "life cycle analysis" (recommendations from various chapters of UNCED Agenda 21) (Suggested Environment meeting, February 19)

(f) Confirming the responsibility of producers for sound environmental stewardship of products through all phases of a product's life;

(g) ensuring the comprehensive and integrated consideration of environmental and socioeconomic effects in public policy-making in British Columbia. [Deemed to be inconsistent with the overriding purpose of the Act] **Ensuring that in all decisions made about the environment that the ecosystem be given primacy (Suggested Environment meeting, February 19)**

(h0) International obligations must be fulfilled as being not the maximum but the minimum standards to follow (proposed, Discussion, February 19)

(h) Recognizing that British Columbia residents have an interest in **and a responsibility of minimizing their impact upon** the regional, national and **global environment** and global environmental well-being **(Suggested Environment meeting, February 19)**

(i) using the knowledge and experience of British Columbia residents in the formulation of decisions affecting the environment,

(j) confirming the responsibility of polluters to pay for the costs of their actions **(also recommended in Agenda 21) but also recognizing that no pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, and reaffirming that the prevention of pollution and environmental destruction should be by using "prevention technologies"**

(k) ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

(l) ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested, February 19)

(m) promoting the research into the development and introduction of renewable, non-polluting (protection technologies)

(n) ensuring that compensation can never be used as reason for not exercising the duty under the act to protect, conserve and sustain the environment (proposed, Discussion, February 19)

(o) agreeing that any compensation given shall be assessed on the basis of past environmental performance and environmental costs and subsidies, and that any awarded money shall be (used by the compensated party to create employment within B.C.) placed in a job creation fund (Suggested, Discussion, February 20)

(p) ensuring the maintenance and enhancement of the quality of the environment (moved from section 2.a, February 20)

2. To achieve the purposes of this Act, all persons who exercise functions and powers under this Act shall have regard to the importance of the purposes of this act ((proposed, February 20)

(a) the maintenance and enhancement of the quality of the environment

(b) the actual or potential effect of an activity or natural process on the whole of the environment, including its actual or potential effect on the health and safety, and the economic, cultural and social well-being of people and communities

(c) the potential costs and benefits of any objective, policy, or proposal to the environment

Scope

(1) For the purposes of this Act, introduction of a substance into the environment means depositing the substance on or in or allowing or causing the substance to flow or seep on or into any land or water or allowing or causing the substance to be emitted into the air and includes indirect means of introduction into the environment

(1*) For the purpose of this Act, the impact of an activity on the environment means the engaging in any activity which could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

2. Except where this Act or the regulations specifically provides to the contrary, this Act applies to the whole environment of British Columbia **{The onus of proof for exclusion from the Act must reside in the proponent for exclusion (proposed, February 20)}**

3. Where there is conflict between this Act, its regulations or an authorization under this Act and any other act or regulations thereunder, this Act its regulations and authorizations issued or subsisting under this Act apply, **except when provisions in other Acts or regulations contribute to the fulfillment of the purposes of the Environmental Protection Act better than those contained in this Act**
(a) where this Act or its regulations provide to the contrary, or
(b) as may be prescribed by the Lieutenant Governor in Council

4. Nothing in the Soil Conservation Act shall be taken to prevent the establishment within a local authority of any facility for the disposal of waste in accordance with this Act **providing that the establishment is deemed to fulfill the purposes of the Environmental Protection Act. (Proposed, February 20)**

5. The Crown is bound by this Act, except where this Act or the regulations specifically provide to the contrary

[Not yet commented on rest of section]

Part 2

Environmental Bill of Rights

Public Trust

30. (1) Every resident of British Columbia has a right to protect the environment and the public trust from any pollution, impairment or destruction

(2) The government, as trustee, has a duty to conserve and protect the environment of British Columbia

3. Citizens of British Columbia has the right to have the environment conserved and protected (Suggested Environment meeting, February 19)

4. Citizens of British Columbia have to right to expect that no person shall use **generate or release**, waste or recyclable maters, or any other substance **(including fugitive gas or leachate)** into the environment in such a manner or quantity as to cause pollution

[moved from 41 (1) (Suggested Environment meeting, February 19)

5. Citizens of British Columbia have the right to expect that the government will live up to its obligations (Doctrine of Legitimate Expectation)

6. Present and future generations of British Columbia have the right to an ecological heritage (Suggested Environment meeting, February 19)

7. ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested Environment meeting, February 19)

Right of action

31. (1) The Attorney General or any resident of British Columbia may commence an action in the Supreme Court against any person who has polluted or otherwise degraded the environment and the public trust or who is likely to do so.

2. A person may commence an action under subsection (1) without having to establish that there is , has been or is likely to be an infringement of an authorization issued under this Act or an approval, permit, licence, standard, regulation, rule or order issued by or under an Act listed in Schedule A.

3. A person who commences an action under subsection (1) shall provide notice of the proceedings to the Attorney General and the Minister.

4. This section does not abrogate those common law rights that would normally be available to a plaintiff to commence an action.

5. the need for intervener funding

Standing

32 A person may commence an action under section 31 without having to show that he or she has

(1) any greater or different right, harm or interest than any other person; or

(2) any pecuniary or proprietary right or interest in the subject matter at issue.

Burden of proof.

33.

(1 a) Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

If the proposal involves anything that could be hazardous, 0 emissions and waste must apply; if the proposal involves lowest achievable discharge rate should apply (February 19, discussion)

(1 b) the plaintiff shall establish a prima facie case showing that **the defendant's proposed activities are likely to pollute or degrade the environment**

(1) the plaintiff shall establish a prima facie case showing that the defendants' activities have polluted or degraded the environment or is likely to do so

(1 c. In a prosecution for a contravention the burden of proving compliance is on the defendant [Section 46, ss 4]

2. Where a prima facie case under subsection (1) is established, the defendant may rebut the prima facie case by showing that there is no feasible and prudent alternative to the defendant's action

[If so, there must be some criteria for determining feasible and prudent alternatives in the light of the purpose of the Act; "providing prevention, conservation and sustainability of the environment" determined by an advisory, non-vested interest board or panel with representation from varied areas of expertise and experience]

3. It is a defence to an action commenced under this Act that the defendant's action is authorized under this act or an Act listed in Schedule A, unless the plaintiff can establish, on balance of probabilities, that the standard is inadequate to protect the environment and that the defendant's action has caused, or is likely to cause, severe or irreparable contamination or degradation of the environment.

The burden of proof must be on the defendant to demonstrate that the defendant's action has not caused or is not likely to cause, severe or irreparable contamination or degradation of the environment (Discussion, February 19)

Limitation Period

34. The limitation period for an action under section 31 of this Act is postponed and time does not commence to run until the plaintiff becomes aware, or ought reasonably to have become aware, of the identity of the defendant and of the material facts surrounding the claim

Appointment of minister's environmental mediator

37 (1) Subject to section 140, the Minister may, *where he or she deems it advisable* **where it is deemed advisable** and where the conflicting parties concur, appoint an environmental mediator acceptable to the parties to mediate between persons involved in an environmental conflict.

(2) when a mediator is appointed under subsection (1), the mediator shall, within 6 weeks after completion of the mediation, report to the results of the mediation to the Minister and the parties

38 (c) award damages to (iv) any person who has a concern for the environment
39 ...licence, standard, regulation, rule or order issued under an Act listed in
Schedule A affects **the environment** and rights of a person, **any** person shall be
furnished with a written statement of the decision setting out.... **(c) any dissenting
opinions (Discussion, February 19)**

[Further comment to come on subsequent sections]

Since the first United Nations Conference on the Environment in Stockholm in 1972, we have come to realize that the traditional patterns of development have contributed to poverty - denying more than a quarter of the world's population adequate living conditions — to the inequitable distribution of resources to Over-consumption, to the violation of human rights, and to the potentially irreversible degradation of the ecosystem.

WE DECLARE THE FOLLOWING PRINCIPLES TO GUIDE HUMANITY TO AN EQUITABLE AND ECOLOGICALLY SOUND FUTURE:

1. The ecosystem of which we are a part shall be protected and preserved, ecologically unsound patterns of development shall be condemned and the inequity of development must be addressed and rectified

2. Development activities that benefit the few while compromising the biological inheritance and quality of life of the many must be condemned as being inherently wrong

4. International ecological standards should be in place so that no short-term individual pursuit of self-interest, or short sighted national or international regulations (GATT) could jeopardize the environment. The purpose of these standards is to address the individual and multinational pursuit of self-interest and consumptive and exploitative use of the environment and not to penalize local communities that wish to function in an interdependent way within the ecosystem. The economic development necessary to eliminate poverty shall not be a mandate to abuse the environment for either short-term gain or economic growth alone. Principle must drive industry not industry driving principle.

5. Environmental processes do not recognize national boundaries; therefore, states shall not have the sovereign right to exploit resources within their territories in isolation from the global ecological needs of the Earth

6. The continued build-up of the military complex must cease, and the use of military force as a means of resolving conflict must be rejected. A radical reduction of the military budgets of the world must occur and the funds released for ecological and humanitarian purposes. Peace is not merely the absence of war but the pursuit of environmental, social justice, economic, spiritual and cultural well-being.

7. 8. the decision-making process should be clearly defined, transparent, accessible and equitable. Criteria in decision making should be revealed,

and the public and affected communities should be involved at the time of the formulation of the terms of reference and through the process.

9. The international community must condemn and disallow the exporting of products deemed to be unsafe in a state where there are advance testing procedures to other states with less advanced testing procedures. Since the first United Nations Conference on the Environment in Stockholm in 1972 we have come to realize that the threats to the biosphere which sustains all life on this planet have increased in rate, magnitude and scale that inaction is negligent. The international community has enough information about the pending state of ecological irreversibility that it must act immediately (proposal for NGO Earth Charter, Rio, June, 1992)

The precautionary principle shall be extended to require those who wish to intervene in the ecological commons to have to justify their intervention and demonstrate the safety of their intervention. The full environmental costs shall be considered in any proposed development project. (NGO Earth Charter, Rio, June, 1992)

ISSUE 2:

PROJECT 1 B.

DEVELOPMENT OF CRITERIA FOR IMPLEMENTING INTERNATIONAL LEGISLATION TO ENSURE THAT "SUBSTANCES AND ACTIVITIES" HARMFUL TO HUMAN HEALTH OR TO THE ENVIRONMENT WILL NOT BE TRANSFERRED FROM THE NORTH TO THE SOUTH OR FROM AN INDUSTRIAL AREA TO AN INDIGENOUS AREA OF A COUNTRY.

- Transfer of potentially harmful substances or activities from North to South
- E.g. examination of such transfers from Canada to India
- E.g. examination of such transfers from India to other countries

Case studies

- E.g. Transfer from Vancouver Island - British Columbian logging practices -impact on Chipko et.
- E.g. Transfer from India to other less developed countries???

_ Transfer of potentially harmful substances or activities from industrial area to disadvantaged or indigenous area on Vancouver Island

Case studies:

- E.g. transfer within India....
- E.g. Pulp mill in Gold river adjacent and on Indian Reserve

_ Sewage Treatment resource or waste)

- E.g. Innovative initiatives in a region in India and on Vancouver Island where they are working on alternative technologies so that what was formerly considered as waste is now used as a resource

Relevant International principles such as the following

Not-transferring-environmentally-harmful-activities or substances principle
States should effectively cooperate to discourage or prevent the relocation and transfer to other states of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration)

Positive-duty-to protect principle

Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate; recommendations (Agenda 21, 16.3 ii)

Positive-duty-or-responsibility principle

the responsibility to conserve their biodiversity and use their biological resources sustainably, and to ensure that activities within their jurisdiction or control do not cause damage to the biological diversity of other states or of areas beyond the limits of national jurisdiction. " (Agenda 21, 15.3)

ISSUE: 3 Often practices which are considered to be in violation of human rights are condoned because they are justified through religious or cultural traditions. Can or should the exploitation of women and the assigning of a lesser role to women be justified by cultural norms?

PROJECT 1. C. DEVELOPMENT OF A CONCEPTUAL FRAMEWORK FOR EXAMINING THIS ISSUE ON VANCOUVER ISLAND AND IN THE CHIPKO REGION

Relevant International principles such as the following

UN Declaration of Human Rights and discussions and contributions from the South during the Human Rights discussion in Vienna in June 1993.

Legend

Underlined: what has already been agreed to internationally

Bold: what still needs to be done

PUBLIC INVOLVEMENT

3 Who is the "Public"

While a definition for the term "public" is not provided in CEAA, guidelines will have to be developed to determine who constitutes the "public" for purposes of projects and activities outside of Canada. In developing these guidelines, consideration will have to be given to a number of broad issues including: the sovereignty of foreign nations, the spirit and intent of CEAA, the widely differing institutional capabilities and socio-political context of recipient countries, international agreements and arrangement to which Canada is party, timeliness and cost. These suggest the need for a definition rigorous enough to reflect the principles that underline CEAA, yet sufficiently flexible to be relevant in a variety of circumstances.

- to address the issue of "who is the 'public'" the government could bring together informed and concerned members of the public, drawing upon a wide range of expertise and experience, as well as upon the local members of the community that are concerned about humanitarian development. In no way should the involvement of the public be based on the promotion of particular vested interests. A distinction could be made between vested interest for individual gain and public concern for the commons. The current round-table process which sets up an arena of competing interests through "multi-stakeholders" rarely brings together the people that have a larger vision of comprehensive solution for the commons.
- To ensure that the "public" is involved in establishing the terms of reference and throughout the project

[all contained in UNCED documents].

In 1983 the science council of Canada made an important distinction between a "reasoned outcome," and a "negotiated outcome," the establishment of standards should not be part of a negotiated outcome.

- There must be a continuous vigil on substance. Perhaps given that we do not understand the long-term synergistic effects or the long-term effect of combinations. Introduction of no new chemicals should become a policy. An assumption is often made that the effects are additive or independent rather than exponential or....
- The problem of limitation of knowledge must be recognized. often scientists are not capable of anticipating impacts because they don't even know what they are looking for and consequently are not able to find it. for example, CFCs were initially

considered to be non-toxic, not bio-accumulation, and were hailed as the solution. No one would have anticipated the problem with the ozone.

() in 1996 **ASK NOT WHETHER BUT HOW**

- 1996 David White and I made a submission, "Salmon Aquaculture and the Precautionary Principle", to the Aquaculture review.

EXHIBIT

ASK NOT WHETHER BUT HOW: QUESTIONABLE ENVIRONMENTAL IMPACT ASSESSMENT OF SALMON AQUACULTURE

Dr. Sheila Wynn reported on the radio today that they were not asked to determine in the Salmon Aquaculture Review "whether but how". A genuine environmental impact assessment of a proposal, an activity or a project has to also determine whether the project under review should proceed.

An important distinction has to be made between a "genuine environmental impact assessment" and "a project review". A "genuine environmental impact assessment is precautionary/harm preventive based on principles. A precautionary assessment attempts to prevent environmental degradation and to determine whether the project should be allowed to proceed; thus the outcome of a precautionary assessment could be a decision to prevent the project from proceeding. On the other hand a "project review" is harm-mitigative based on an arena of competing interests. A project review attempts to "balance" different competing interests and to mitigate environmental impacts; thus, the outcome of a project review, tends to be that the project will be permitted with mitigative measures to address potential environmental impacts.

Under the Convention on Biological Diversity, Canada and BC are required to carry out an environmental impact assessment of projects which are likely to have adverse effects on biodiversity (Article 14, Convention on Biological Diversity);

If the review has only examined how rather than whether Article 14 of the Convention on Biological Diversity has been contravened.

In addition Canada and BC have undertaken to invoke the precautionary principle. This principle affirms that in cases where there is sufficient scientific evidence that potential environmental degradation could occur, lack of scientific certainty shall not be used as a reason for postponing measures that would prevent the degradation.

It would appear that even though there is sufficient scientific evidence to justify not proceeding with additional salmon Aquaculture. Dr. Wynn has reversed the precautionary principle and concluded that there is always scientific uncertainty, therefore we should proceed with the project and balance the risks.

In not carrying out a genuine environmental impact assessment the BC Government has misled the public, contravened international law, and permitted further environmental degradation.

David White Green Party candidate

() in 1996 I was asked by the BCEN ,TO participate as part of ISO Western Caucus and I prepared
A document, "Mandatory International Normative Standards not Voluntary Compliance"

COMMENT:
MAY 26 1996
ATTENTION
Larry Futers

FAX 416 747-2473

Dear Larry

Here are my notes from the meeting, including my alternative proposal for the terms of reference for the Western Caucus; my reservations about the sections we discussed, and a comment on “ sustainable development”

DRAFT NOTES AFTER THE WESTERN CAUCUS MEETING OF MAY 24

**ALTERNATIVE PROPOSAL FOR THE TERMS OF REFERENCE FOR THE WESTERN CAUCUS OF THE CANADIAN ENVIRONMENTAL COUNCIL
submitted by Dr. Joan E. Russow
Global Compliance Research Project**

The Western Caucus recognizes that state governments have incurred obligations through Conventions, Treaties, and Covenants and have created expectations through Declarations, General Assembly Resolutions and through Conference Action Plans, and that compliance with the principles enunciated in these obligations and expectations shall form the basis for international standards. (See attached set of Compliance principles for MINS 1997)

PURPOSES/STRATEGY

The Western Caucus of the Canadian Environmental Council is a Canadian Environmental Council recognized entity mandated to

- **promote compliance by corporations, including transnationals, with all international, national and regional standards, law, and codes so as to enable states to fulfill the following expectation from the Platform of Action:**

“ensure that corporations including transnationals comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment” as agreed in Art 167 of the Platform of Action, United Nations Convention on women: Equality, Development and Peace.

and extend the obligation for compliance to all institutions and individuals.

- **promote and inform the public about the need for Mandatory International Normative Standards (MINS) for 1997— the culmination of the decade dedicated to the promoting and furthering of International Law.**
- **encourage Western Canadians to participate in international, national and regional socially equitable and environmentally-sound development programs (SEED) that are designed to improved the protection of the environmental and human health the use of BEST (Best environmentally sound traditions) practices**
- **Communicate the value of SEED and BEST practices to the general public and other interested parties in Western Canada**
- **monitor the effectiveness of these initiatives in Western Canada and the Territories.**

PRINCIPLES

The Western Caucus of the Canadian Environmental Council will:

- **ensure compliance with international, national, regional and local law, standards, codes, and technical regulations; without perceiving these laws, standards, codes and technical regulations as limiting the moving beyond the current requirements.**
- **promote a shift from concern about the cost of high international performance standards and environmental regulations to the cost to the environment of not establishing high international performance standards and regulations and of not enforcing regulations**
- **identify the unique needs of Western Canadian industry and BEST practices entrepreneurs and ensure such needs are recognized and addressed by CEC**
- **encourage and ensure concerned and affected parties with varying experience and expertise are able to participate fully in both the development and implementation process of SEED and BEST practices in Western Canada, and to ensure that participation does not exclude those enterprises engaging in BEST practices, and those individuals from civil society without sufficient funding to participate and attend.**
- **emphasize participation in international and national processes to avoid duplication of effort**
- **develop local initiatives that focus on mutually agreed goals particularly to ensure that principles will drive industry to establish SEED and BEST practices based not just on conformance to industry-developed environmental policy but on mandatory international normative standards**
- **consider equally the needs of all organizations, irrespective of size**
- **focus on areas where socially equitable and environmentally sound development will be furthered**
- **ensure the development and adoption of environmental mandatory international normative standards —and—regulations (MINS) which will ensure that the internationally agreed to principles will be adhered to and state obligations will be discharged, and to ensure that ISO standards are equal or higher than those that will enable the adhering to international principles, the discharging of state obligations, and the fulfilling of expectations created by states**

- **ensure the implementation of Mandatory International Normative Standards (MINS 1975) in the year 1997—the culmination of the decade devoted to the recognition and further of international law**
- **acknowledge that participation in the Western Caucus does not indicate either endorsement of ISO or of the positions taken by the Western Caucus and ensure that minority opinions be circulated and distributed with the documents**
- **Undertake to include in the caucus substantial representation from BEST practices enterprises—non-polluting enterprises such as those developing alternative environmentally safe and sound energy**

RESERVATIONS MADE AT THE WESTERN CAUCUS IN RELATION TO THE RECOMMENDATIONS OF THE CHAIRS OF THE NATIONAL CAC COMMITTEES TO MAJOR ISSUES FOR CAC CANADIAN POSITIONS [RIO '96]

GENERAL RESERVATIONS ABOUT ISO

CONCERN ABOUT THE ISO PROCESS ITSELF

- that most of the corporations that are involved with the ISO process belong to what could be described as the GOMREPTHAW industries (the **Green**-house gas producing; **O**zone depleting, [**M**ilitary-not yet encountered] **R**esource **E**xtraction, **P**roducers of **T**oxic, **H**azardous and **A**tomic **W**astes). These industries are among those that would benefit most from relaxed regulations and “compliant friendly” agreements. Also many of those industries that belong to the ‘Environment Industry’ thrive on relaxed regulations which allow for the continued production of toxic, hazardous or atomic wastes because they have developed coupling “clean-up” technologies. Another segment of the Environment industry would include those that have generally been excluded from the ISO process. This latter group is engaging in developing or promoting BEST (Best Environmentally Sound Techniques) practices, and their practices will be supported better when stiff regulations drive industry.

- that the participation of the GOMREPTHAW and coupling Environmental industries reflect a conflict of interest at a time when states along with civil society should be determining how best to ensure that corporations comply with international obligations and expectations
- most of the countries involved are industrial countries
- that voting rights appear to depend on ability to participate and contribute resources which would exclude the participation of non-industrialized countries.
- that the United Nations process ensures the participation of all member states; the ISO process is regressive in purporting to be international but reflecting primarily the views of the developed states, and the resource based developing states.
- that the information is not freely accessible

CONCERN ABOUT THE IMPLICATION OF PARTICIPATING IN THE PROCESS

- that the participation of the Global Compliance Project would be construed as supporting the ISO

CONCERN ABOUT THE NATURE OF THE ISO

- that the ISO 14001 certification is voluntary and measures only compliance with the corporations own stated environmental policy which may be environmentally indefensible. For example, Mohawk set as a goal to reduce CO2 emissions; apart from significant reductions in “no-regrets” areas, Mohawk decided to increase its

nuclear energy capability perpetuating that ill-conceived notion that nuclear energy is the solution to climate change.

- that the ISO 14001 certification is not normative and thus not referenced to external normative standards
- that ISO 14001 certification is not performance based but could be interpreted as demonstrating performance with external standards
- that ISO could undermine government resolve to regulate polluting industries
- that ISO could be used to legitimize the excuse of “due diligence”
- that the relaxing of regulations will not drive industry to engage in BEST (Best ecologically sound technique practices)
- that there is discussion about the possibility of labeling of product coming from ISO certified corporations, and that this labeling would misrepresent the certification as being that related to environmental performance.
- that the emphasis in ISO is on the cost of environmental regulations not the cost on the environment of not enforcing regulations

1. (a) Sectoral Application of ISO 14001

Reservation:

sectoral guides shall be developed based on Mandatory International Normative Standards (MINS 1997) (See submitted Compliance principles).

(b) the development of a “bridging” document between ISO 14001 and EMAS?

Reservation:

EMAS appears to be moving more towards a regulatory scheme which should be based on MINS. EMAS also is performance-based rather than conformance to self-declared environmental policy. In ISO, there appears to be no requirement for public accountability. Although EMAS does not go far enough to ensure socially equitable and environmentally sound development, it appears to be a more meaningful estimation of environmental impact. A bridging document should be replaced by an overarching document based on the principles in MINS and drawing upon the strongest regulatory provisions that will ensure the prevention of environmental degradation. The emphasis must shift FROM concern about the cost of high international performance standards and environmental regulations TO the cost (to the environment) of not establishing high international performance standards and regulations and of not enforcing regulations

(c) Proposal of a bridging document to be used for interpreting ISO 14001 to forestry

Reservation:

The proposed Forest document is not linked to legally binding instruments such as the Convention of Biological Diversity, the Framework Convention on Climate Change, the Convention on Combating Desertification, the Vienna Convention on OZONE Depletion etc. There is a danger that the applicability of the above legally binding documents to forestry will be ignored. The forest document is linked to Agenda 21 from UNCED so it does indicate a willingness to live up to expectations emanating from Agenda 21 yet it ignores many of the significant principles contained within the Agenda 21 document (see Compliance principle document).

“Indicators” have become a means for softening obligations incurred and expectations created. For example in the ISO documents related to forests there is an initial disclaimer that the document is voluntary, and then there is a listing of the indicators. One of the indicators is the conserving of biodiversity. By removing the conserving of biodiversity in forests from the legally binding Convention on Biological Diversity, the forest industry and sympathetic administrations have weakened the requirements for conserving biodiversity. In the Conventions on Biological Diversity, states are required “to identify biodiversity” (yet the Federal government itself admits that vertebrates have not been sufficiently identified and invertebrates have barely begun to be identified); “to carry out an environmental assessment review of practices that could contribute to loss or reduction of biodiversity” (yet forest practices have not been included in Environmental Assessment legislation as being a project or an activity to be assessed); and to invoke the precautionary principle that states that in the case of a reduction or loss of biodiversity states do not have to wait for scientific certainty to discontinue activities that contribute to this loss (yet there is sufficient evidence that current forest practices such as clear cut logging and other environmentally unsound activities destroy biodiversity)

A forest protocol linked to the Convention on Biological Diversity (as well as to other relevant conventions) is necessary to address the above issue.

(6) Occupational Health and Safety**Reservation:**

There is an proposal that ISO standards act as a determinant in the interpretation of the section in GATT Article 22 that relates to the legitimacy of raising local standards to conserve resources or to protect health and safety. The onus of proof lies with the state raising the standards to justify the raising of standards. The proposed criterion for determining the justification of the standards has been science (although science may not

necessarily be the panacea it is certainly a better criteria than conformance to self-proclaimed environmental policy)

(8) Sustainable development

Reservation

“Socially equitable and environmentally sound development” : an evolved notion of “sustainable development”.

For over 50 years states have accrued obligations through UN Conventions, Treaties, and Covenants, and have created expectations through Declarations, General Assembly Resolutions, and Conference Action Plans These obligations and expectations have been related to the guaranteeing of human rights, the preserving, protecting and conserving the environment, the developing of meaningful and fair work, the promoting of social equity and justice, the preventing of war and conflict and often, industry, assisted by sympathetic administrations, has prevented states from discharging these obligations or from fulfilling these expectations.

Within the United Nations system culminating in 1995, there has been a movement towards States’ being responsible for corporate compliance, as indicated in the Article 167 from the Platform of Action

“ensure that corporations including transnationals comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment” (United Nations Convention on women: Equality, Development and Peace)

In 1974 through the General Assembly Resolution for the “Establishment of a New International Economic Order” States affirmed a commitment to “equity”:

“united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of a New International Economic Order, 1974).

In the 1976 Habitat I conference, an expectation was created by States that the essence of the 1974 New International Economic Order would be fulfilled. In the upcoming conference in Istanbul, Habitat II States have undertaken to move beyond the expectations created in 1974.

This international trend to compliance with an equitable vision of the economy is an indication that states are becoming more and more willing to move toward ensuring compliance within a new vision of economy— one that is both socially equitable and environmentally sound. This concept of socially equitable and environmentally sound development is an evolved concept from the original notion of sustainable development which has been severely criticized for the emphasis on the perpetuation of an unsustainable model of development. This evolved notion links equity and environment as the basis for development with a moving away from unsustainable patterns of production and consumption. A precedent for this concept, lies in the Action Plan which emerged from the International Conference on Population:

to achieve socially equitable and environmentally-sound development and a higher quality of life for all people, Governments should reduce and eliminate unsustainable patterns of production and consumption ... (3.9., International Conference on Population and Development, 1994)

“Socially equitable and environmentally sound development” is gaining support internationally as the best description of the type of development that guarantees human rights, that preserves, protects and conserves the environment, that creates meaningful employment, and that achieves equity and social justice for present and future generations. Some of these components were absent from the concept of “Sustainable Development”. All of the above components have been endorsed through obligations incurred by states in Conventions, Treaties, and Covenants, and through expectations created by states in Declarations, General Assembly Resolutions and Conference Action Agendas.

Tel/FAX. (604) 598-0071. e-mail Russow@uvaix.uvic**

BACKGROUND; I was still associated with the Environmental Studies Program at the University. A biology professor, Jack Littlepage, attended presentation on Brazil, with the two Brazilians that were brought to Canada through the ERA/Eco tropic Project that I organized at the University. He contacted me to help him in developing a project to be funded by CIDA. I helped in the understanding that I would be part of the project and would be able to organize and teach a course on the environment in Brazil. I spent a considerable amount of time going through international documents to find relevant statements to support the project; he contacted me after to ask if I would also provide specific information about the relevance of the project to women's issues. I submitted a document based on my 350-page compilation for the conference in Beijing.

OF ALTERNATIVES

73 Citizen participation, by definition, cannot be achieved by fiat but it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. The inaccessibility of information and the absence of appropriate mechanisms for the expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration
(73, Habitat I)

PARTICIPATION OF WOMEN

Since a genuine human settlement policy requires the effective participation of the entire population, ... The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

CIVIL SOCIETY ORGANIZATIONS DISTINGUISHED FROM MARKET

This EXPRESSION has been defined by UNICEF as being distinct from state and private sector. In the Habitat document "civil society organizations" should be maintained because it appears to exclude corporation and industry. The expression "individuals and organizations of civil society"

should be reserved for those individuals and organizations that are concerned about the guaranteeing of respect for human rights, the ensuring of social equity, the conserving and protecting of the environment, and the preventing of conflict and war

OBLIGATION OF GOVERNMENTS TO ENSURE CORPORATE COMPLIANCE WITH INTERNATIONAL AGREEMENTS

In 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, States undertook to ensure that “all corporations (including transnational corporations) comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).

For over 50 years, in international agreements, the states of the United Nations have undertaken: to promote and fully guarantee respect for human rights; to ensure the preservation and protection of the environment; to create a global structure that respects the rule of law; to achieve a state of peace; justice and security and to participate in socially equitable and environmentally sound development.

For over fifty years, since the formation of the United Nations, member States of the United Nations have undertaken obligations reflected in Charters, Covenants, Conventions, Declarations, Resolutions and Treaties;

If these fifty years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled;

In previous agreements, it was recognized that States are responsible for the discharging of their international obligations concerning the protection of human health and protection and preservation of the environment, and are liable in accordance with international law (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992); Now, in the Platform of Action a firm obligation has been placed on the states to ensure that corporations comply with international agreements.

As a result of article 167 of the Platform of Action—given that through international agreements states have undertaken to guarantee the respect for human rights, to preserve and protect the environment, to prevent and remove threats to peace, to achieve disarmament, and to enable socially equitable and environmentally sound development—if governments are to ensure compliance then **the charters of all the transnationals that contribute to conflict, to the escalation of war, to the violation of human rights and to the degradation of the environment shall be revoked.** In addition, full compensation shall be sought

from the corporations including transnationals and funds shall be transferred into assisting the member states of the United Nations to promote and fully guarantee respect for human rights, to ensure the preservation and protection of the environment, to create a global structure that respects the rule of law, to achieve a state of peace, justice and security , and to participate in socially equitable/equal and environmentally sound development;

THE DOCTRINE OF LEGITIMATE EXPECTATION AS AN INSTRUMENT OF COMPLIANCE

States have undertaken obligations through legally binding international instruments such as Conventions, Treaties and Covenants. In addition, citizens can legitimately expect that States will abide by the principles enunciated in globally adopted conference statements and will respect the democratic expression of international will evident in General Assembly Resolutions. The Doctrine of Legitimate Expectations could be described as follows:

The obligations undertaken by governments in ratifying these instruments are the standards against which they should be held accountable, both by their own citizenry and by actors in the international arena (International Human Rights Safeguards, Document for the Summit of the Americas, 1994).

The above statement alludes to two key questions that the Charter of Obligations has been devised to address. One is “what constitutes obligations?” and “what constitutes ‘civil society’?” The use of the term “Obligations” in this Charter is based on a key doctrine called the Doctrine of Legitimate Expectation. This doctrine could be enunciated as follows, and contains the following elements:

- **Not breaking and undertaking as one pleases**
- **Compatibility with public duty**
- **Public interest may be better served by honouring their undertaking than by breaking it**

But that principle does not mean that a corporation can give an undertaking and break it as they please. So long as the performance of the undertaking is compatible with their public duty, they must honour it. And I should have thought that this undertaking was so compatible.... The public interest may be better served by honouring their undertaking than by breaking it. (Lord Denning, *Central London Property Trust Ltd. v High Trees House Ltd.* [1947] KB 130, 594

- **Fulfilling the expectation must assist in performing rather than inhibit the performance of its statutory duties**

If I thought that the effect of granting to the applicants the relief sought was to prevent the council validly using those powers which Parliament has conferred on it, I would refuse relief. But that is not the present case. It seems to me the relief claimed will in the end, as counsel for the corporation ultimately conceded assist the council to perform rather than inhibit the performance of its statutory duties” (Lord Roskill *Central London Property Trust Ltd. v High Trees House Ltd.* [1947] KB 130, 596)

- **Expectation must be based upon statements or undertaking on behalf of the public authority which has the duty of making the decision**

The expectation may be based upon statement or undertaking by or on behalf of the public authority which has the duty of making the decision, if the authority has through its officers, acted in a way that would make it unfair or inconsistent with good administration for him to be denied such an inquiry (Lord Fraser, [1983] 2 All. ER 350)

- **Expectation is based on an assurance given by a Minister of the Crown as to the way in which discretionary power would be exercised.**

- **Assurance was given so as to induce this very expectation**

...it is upon an express assurance that the expectation is based: an assurance given by a Minister of the Crown as to the way in which the discretionary power conferred upon him by statute would be exercised. any fair reading... leads to the inference that assurance was given so as to induce this very expectation in the minds of...such as the Plaintiff, so that they might come forward and reveal to the authorities... (Stephen j. [1977])14 A.I.R., 1, p 34), cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good**

The powers of public authorities are...essentially different from those of private persons.... But a public authority may do neither [examples of 'unfettered discretion'] unless it acts reasonably and in good faith and upon lawful and relevant grounds of public interest. Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good ((H.W. R. Wade's Administrative Law, referred to by Mr. Justice Cook in (1983) 1 NZL R 646 cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Expectation arising from Government holding itself out to do something**

- **Legitimate expectation that Government will discharge this obligation**

If a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully

and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligation

- **Expectation that when public authorities establish procedures and publish policies, they are bound to follow them**

Where public authorities establish procedures and publish policies, they are bound to follow them. The concept of legitimate expectations has extended the requirements of natural justice to situations where citizens may legitimately be expected to be treated fairly (Ombudsman office, personal communication)

There does not have to be a specific legal right or interest affected for the concept to apply. "Legitimate expectation" means 'reasonable expectation' and it can be invoked where fairness and good administration justify a right to be heard or some other substantial procedural right (ombudsman office, personal communication)

- **When an expectation is created there must be the ability to fulfill the promise it implies**

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

Under this doctrine, it could be argued that the statements enunciated in international instruments — legally binding documents (conventions, Treaties, Covenants); globally adopted Convention Platforms of Action, and Action plans, and majority-passed General Assembly Resolutions and Declarations — could all reflect "promises" that create an "expectation" that citizens can demand to be fulfilled

() THAT I MADE **COMMENTS ON SIGNIFICANT BRACKETED AND OTHER SECTIONS OF THE HABITAT II AGENDA**

PART 1

PREAMBLE

1. We recognize that **years of accrued state obligations to improve the quality of life through recognizing the right to shelter, the right to social security, the right to equality, the right to peace and the right to a safe environment have not yet been discharged. In 1974, through General Assembly resolutions, we recognized “united determination to work urgently for the establishment of a new international Economic order based on equity, ...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of an New International Economic Order, 1974).**

DOCUMENTATION OF PRECEDENT

RE: ESTABLISHING A NEW INTERNATIONAL ECONOMIC ORDER AS ADVOCATED IN HABITAT 1 (REFERENCE TO A 1974 GENERAL ASSEMBLY RESOLUTION IGNORED IN HABITAT II)

To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 4, Habitat I)

Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas, between regions and within regions themselves. Governments should adopt policies; which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

We affirm the imperative need **and urgency** to improve the quality of human settlements which profoundly affects the daily lives and well-being of *our* people.

There is a sense of great opportunity and hope that a new world can be built in which economic development, social development and environmental protection as interdependent and mutually reinforcing components of *sustainable development* **socially equitable and environmentally sound development** can be realized through solidarity and cooperation within and between countries, and through effective partnerships at all levels. International cooperation and universal solidarity, guided by the ~~[[purposes and]]~~ principles of the Charter of the United Nations, **and by over 50 years of obligations accruing through Conventions, Treaties, Covenants, and by over 50 years of expectations arising through Declarations, Conference action plans and General Assembly Resolutions** *In a spirit of partnership*, are crucial in order to improve the quality of life of the peoples of the world. **The constant vigilance by individuals and organizations of civil society is essential and should be facilitated through the establishment of an International Court of Compliance where citizen can take evidence of state non-compliance.**

DOCUMENTATION OF PRECEDENT:

RE: PROMOTING NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY

Solemnly proclaim our united determination to work urgently for the Establishment of a New International Economic Order based on equity, sovereign equality, interdependence, common interest and co-operation among all States, irrespective of their economic and social systems which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development and peace and justice for present and future generation... (Preamble, Declaration on the Establishment of a new international economic order, 1974)

RE: ADVOCATING LOCAL SERVICES AND HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women

and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

PROPOSED GLOBAL COMPLIANCE RESOLUTION: POST-50TH GLOBAL COMPLIANCE RESOLUTION

We are mindful *that since* the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations and Resolutions, and that if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Cognizant that only when these obligations are discharged will we have the global community that is socially equitable and environmentally sustainable.

RECOGNIZING that for fifty-one years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant on Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do

something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge these obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

ARTICLE 1 bis

Recognizing that it is only through the fulfillment at a global level of years of state obligations and expectations that the goals of Habitat can be achieved

ARTICLE 2

The purpose of the second United Nations Conference on Human Settlements (Habitat II) is to address two themes of equal global importance: **the right to Adequate- shelter for all and Sustainable human settlements development** in an urbanizing world. Human beings **and the carrying capacity of the ecosystem** are at the Centre of concerns for **socially equitable and environmentally sound sustainable** development, including shelter for all **and socially equitable and environmentally sound sustainable** settlements, and they are entitled to a healthy and productive life in harmony with nature. As to the first theme, a large segment of the world's population lacks shelter and sanitation, particularly in developing countries. **Another segment of the world's population in developed countries has been experiencing the problem of urban sprawl, widening gaps between the rich and the poor, excessive environmental destruction as a result of unsustainable models of development.** We recognize that **the right to social security and [the right to adequate housing, as affirmed in the International Covenant of Cultural, Economic and Cultural rights, reaffirmed in the Convention of Elimination of all Form of Discrimination, reaffirmed in Chapter 7 of Agenda 21, and reaffirmed in the International Conference on**

Population and Development, 1994) which includes] access to affordable, accessible, inclusive, free-from illegal forced evictions, security of tenure, and environmentally sound, and safe and healthy shelter and basic services is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of our urgent actions for the more than one billion people without decent living conditions. Our objective is to achieve adequate shelter for all and especially for the deprived urban and rural poor and landless poor through an enabling approach to the development and improvement of shelter that is environmentally sound. Our objective is also to strive to change peoples' attitudes towards the poor and those that are different. The poor should never be blamed for their condition, and there should be trust in not fear of those that are different.

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE WASTEFUL AND ECOLOGICAL DESTRUCTIVENESS OF URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

- (i) securing legislation, legal instruments and regulations;
- (iv) active participation of a well-informed public
- (v) protection of ecosystems and critical land
- (ix) Integration and improvement of squatter and marginal settlements. (Habitat I)

RE: PLACING AN OBLIGATION TO PROVIDE ADEQUATE SHELTER AND SERVICES - AS A BASIC HUMAN RIGHT

Adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better-balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO THE POOR AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

As to the second theme, socially **equitable and environmentally sound** development **of healthy, safe and environmentally sound communities-settlements** combines **social equity and environmentally sound development with** environmental protection and full *economic development, social development and environmental protection*, with full respect for all human rights and fundamental freedoms, including the right to development, and offers a means to achieving a world of greater stability and peace, built on ethical *and spiritual* vision. **To achieve this vision states shall undertake to ensure compliance with a body of established international principles by establishing mandatory international normative standards (INS) related to the ensuring of social justice, the guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, and the preventing of conflict and war.**

DOCUMENTATION OF PRECEDENTS

RE: TRANSNATIONAL CORPORATIONS

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I)

RE: STATE REQUIREMENT TO ENSURE COMPLIANCE

states to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws” (Section 167 Platform of Action UN Conference on Women: Equality, Development and Peace).

[Democracy, and transparent, representative and accountable governance and administration in all sectors of society are indispensable foundations for the realization of **socially equitable and environmentally sound sustainable development**. However, the lack of **socially equitable and environmentally sound development** and the existence of widespread absolute poverty inhibit the full and effective enjoyment of human rights and render fragile democracy and popular participation.]

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOR PARTICIPATION

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

RE: ADVOCATING THE EXPRESSION “SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT”

The expression “socially equitable and environmentally sound development” was used in the International Conference on Population and Development:

None the less, the effective use of resources, knowledge and technologies is conditioned by political and economic obstacles at the national and international levels. Therefore, although ample resources have been available for some time, their use for socially equitable and environmentally sound development has been seriously limited” (Preamble 1.1. International Conference on Population and Development, 1994)

NOTE: [In the Habitat document the expression “environmentally sound” is used as often as Sustainable Development—a term that reflected neither the real equitable nor environmental component so necessary in development.]

ARTICLE 3

3. Recognizing the global nature of these issues, the international community, in convening Habitat II, has decided that a concerted global approach could greatly enhance progress toward achieving these goals. **As recognized in Agenda 21 (UNCED)** [The cross-national and global impacts of unsustainable patterns of production and consumption, particularly in industrialized countries, environmental degradation, demographic changes, widespread and persistent poverty, and social and economic inequality are clearly visible.]. **As also confirmed through early Environmental Conventions such as the Vienna Convention on Ozone Depletion with the Montreal Protocol, the Convention on Biological Diversity and the Framework Convention on Climate Change, the global community has undertaken to discharge its international obligations related to conserving and protecting the environment through banning ozone depleting substances, through preserving biodiversity, and through reducing and eliminating climate change agents.**

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF UNSUSTAINABLE PATTERN OF CONSUMPTION

...the major cause of the continued deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992), and reaffirmed in Art. 37 of the Platform of Action, UN Conference on Women: Equality, Development and Peace)

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

**RE: ACKNOWLEDGING THE IMPACT ON AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT)
(Sections from Habitat I)**

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resource; without public control land is a prey to speculation and urban encroachment. (Habitat I)

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation. (Habitat I)

(c) Such control may be exercised through

(i) zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;

(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises; (Habitat I)

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

The sooner communities, and local governments, *partnerships among the public, and private and community sectors* join efforts to create comprehensive, bold and innovative **plans strategies** for shelter and human settlements, the better the prospects will be for the safety, health and well-being of people and the brighter the outlook for solutions to global environment and social problems. **As previously recognized in Habitat I, communities should take more control over the planning and ownership of public lands and that greater benefit should accrue to the public from the sale of land.**

RE: REDISTRIBUTING BENEFITS TO THE PUBLIC

Recommendation D3

Recapturing plus value.

(a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to

the public at large the benefits of the unearned increase in land values. (Habitat I)

(b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community), unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies. (Habitat I)

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land; (Habitat I)

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices; (Habitat I)

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start; (Habitat I)

RE: CONSERVING OF ENERGY

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)

Human settlements are consuming more and more energy just when Humanity *mankind* has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources. (Habitat I)

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 (Habitat I)

(iv) emphasizing where possible the use of renewable over non-renewable energy sources and the rationalization of technologies

which are currently known to be hazardous to the environment.
(Habitat I)

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification, and district heating and cooling, including the utilization of solar and geothermal energy and heat pumps as appropriate. (Habitat I)

ARTICLE 4

4. Having acknowledged the applicability of years of international instruments since the formation of the United Nations, having been forced to acknowledge that many expectations arising from Habitat I have not yet been fulfilled, and Having considered the experience since the United Nations Conference on Human Settlements (Habitat), held in Vancouver, Canada, in 1976, Habitat II reaffirms the results from relevant **conventions, treaties covenants, declarations, resolutions and recent world conferences and has developed them into an agenda for human settlements: the Habitat Agenda. **The Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, the International Covenant of Cultural, Economic, Cultural Rights, The Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of All Forms of Discrimination Against Women, all the Conventions and Treaties related to the Environment and Peace,** of The United Nations Conference on Environment and Development -- The Earth Summit -- held in Rio de Janeiro in 1992, produced Agenda 21. At this Conference, the international community agreed to a framework for the sustainable development of human settlements. Each of the other conferences, including the Fourth World Conference on Women (Beijing, 1995); the World Summit for Social Development (Copenhagen, 1995); the International Conference on Population and Development (Cairo, 1994); the Global Conference on the Sustainable Development of Small Island Developing States (Barbados, 1994); and the World Conference on Human Rights (Vienna, 1993), as well as the World Summit on Children (New York, 1990) and the World Conference on Education for All (Jomtien, Thailand, 1989) and **Habitat I** also address important **socially equitable and environmentally sound development social, economic and environmental issues, including components of the sustainable development agenda,** for which successful implementation requires action at the local, national and international levels. The Global Strategy for Shelter to the Year 2000, adopted in 1988, which emphasizes the need for improved production and delivery of shelter, revised national housing policies, and an enabling strategy, offers useful guidelines for the realization of adequate shelter for all in the next century.**

ARTICLE 5

During the course of history, urbanization has been associated with economic and social progress, the promotion of literacy and education, the improvement of the general state of health, greater access to social services, and cultural, political and religious participation. **It should be acknowledged that although there has been some increased participation by members of civil society there is a long way to go to achieve the necessary** *Democratization has enhanced such access and meaningful participation and involvement for civil society actors, and for public-private partnerships;* **While** decentralized, participatory planning *and management which* are important features of a successful urban future, **the planning should be grounded in fundamental principles related to the guaranteeing of human rights , the ensuring of social justice, the preserving, protecting and conserving of the environment, and the promoting of peace.** Cities and towns have been engines of growth **often beyond the carrying capacity of the ecosystem that contains them** and incubators of civilization **or destroyers of culture** and have facilitated **or repressed** the evolution of knowledge, culture and tradition, *as well as of industry and commerce.* Urban settlements, properly planned *and managed,* hold the promise for human development and the protection of the world's natural resources through their ability to support large numbers of people while limiting their impact on the natural environment. **Unfortunately, urbanization has also been associated with increased violations of human rights, unmitigated environmental degradation, perpetuated unsustainable patterns of economic consumption, widened gaps between the rich and the poor (the enfranchised and disenfranchised), increased abuse of the marginalized, and increased incidents of conflict, violence and crime.** The growth of cities and towns causes social, **economic and environmental changes that go beyond city boundaries, through urban sprawl and industrial conversion of productive land and of areas worthy of preservation.** Habitat II deals with all settlements - large, medium and small - and reaffirms the need for universal improvements in living and working conditions.

ARTICLE 6

6. To overcome current problems and to ensure future progress in the improvement of economic, social and environmental conditions in human settlements, we must begin with a recognition of the challenges facing cities and towns. According to current projections, by the turn of the century, more than three billion people - one-half of the world's population - will live and work in urban areas. The most serious problems confronting cities and towns and their inhabitants include **severe environmental degradation resulting from either lack of mandatory regulations that drive industry, institutional governments/industry collusion that weakens the resolve to establish or enforce regulations;** inadequate financial resources **to promote socially equitable and environmentally sound development,** lack of employment opportunities **in socially equitable and environmentally sound employment,** spreading homelessness and expansion of squatter settlements, increased poverty

and a widening gap between rich and poor particularly **because of the imposition of environmentally unsound models of development and of the ill-conceived structural adjustment programs**, growing insecurity and rising crime rates **because of misplaced priorities—incarceration rather than social equity including positive human rights of the right to social security, health care, shelter, food etc. (International Covenant on Social Cultural Economic Rights),**

DOCUMENTATION OF PRECEDENTS

RE: GENERATING OF MEANINGFUL EMPLOYMENT

In fact, the very construction of the physical components of human settlements- be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of meaningful employment, instead of being treated as a residual of so-called “productive” activities. (Chapter II A. 5 Habitat)

RE: PREVENTING WASTE AND MISUSE OF RESOURCES IN WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

RE: REDUCING OF AVAILABLE RESOURCES THROUGH EXCESSIVE MILITARY EXPENDITURES

Excessive military expenditures, including global military expenditures and arms trade or trafficking, and investments for arms production and acquisition have reduced the resources available for social development. As a result of the debt burden and other economic difficulties, many developing countries have undertaken structural adjustment policies. **Moreover, there are structural adjustment programmes that have been poorly designed and implemented, with resulting detrimental effects on social development. The number of people living in poverty has increased disproportionately in most developing countries, particularly in the heavily indebted countries, during the last decade. (Art. 15**

Platform of Action, UN Conference on Women: Equality, Development and Peace, 1995)

RE: REASSESSING STRUCTURAL ADJUSTMENT PROGRAMS
Ensuring continued provision of basic services to the poor and needy

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PREVENTING CRIME

Reaffirming that crime prevention and criminal justice should be considered in the context of...social and cultural systems

Reaffirms that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

RE: ACCOMMODATING THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, misconceived structural adjustment programs. In addition, displacement occurs through** natural or *man-made anthropogenic* catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

inadequate and deteriorating building stock, services and infrastructure, lack of health and educational facilities, improper land use, insecure land tenure, rising traffic congestion, increasing pollution, lack of green spaces, inadequate water supply and sanitation, uncoordinated urban development, and an increasing vulnerability to disaster **including for example the existence of and the**

promotion of civil nuclear reactors, the continued visits of nuclear powered military vessels in urban ports and of the development and testing of nuclear weapons.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING PUBLIC CONTROL AND BENEFIT FROM LAND

D. Land (Agenda item 10 (d))

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice; if unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people can only be achieved if land is used in the interests of society as a whole (Habitat I)

2. Instead, the pattern of land use should be determined by the long-term interests of the community, especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment and a crucial link in an often-delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies. (Habitat I)

Recommendation D1

Land resource

a Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest is the single most important means of improving the capacity of human settlements to absorb changes and movements in population, modifying their internal structure and achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered. (Habitat I)

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal regions and other areas subject to the impact of development, recreation and tourism activities. (Habitat I)

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore Governments must maintain full jurisdiction and exercise complete sovereignty over such and exercise complete over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed by foreign nations which enjoy the benefits while preventing its rational use. (Habitat I)

All of these have seriously challenged the capacities of governments, particularly those of developing countries, at all levels to realize economic development, social development and environmental protection, which are interdependent and mutually reinforcing components of **socially equitable and environmentally sound development** *sustainable development*, the framework for our efforts to achieve a higher quality of life for all people. Rapid rates of international and internal migration to, as well as population growth in, cities and towns, and unsustainable patterns of production and consumption raise these problems in especially acute forms. In these cities and towns, large sections of the world's urban population live in inadequate conditions and are confronted with serious problems, including environmental problems, that are exacerbated by inadequate planning *and managerial* capacities, and **by unsustainable patterns of production and consumption** lack of investment *and technology* in **BEST (best environmentally sound techniques) practices (prevention technology that does it right the first time); too often environmentally unsound technologies have been introduced as a result of North/south transfer and then the "coupling" clean-up technologies are introduced. The continued introduction of these ecologically unsound technologies contributes to environmental degradation, undue stress on the disadvantaged, over-dependency on external "solutions" that could be equally bad or even worse than the problem they were intended to solve. These ecologically unsound technologies and technological fixes perpetuate a cycle of attempted rectification of error, and insufficient mobilization of financial resources to ecologically sound technologies and inappropriate allocation of financial resources to ecologically unsound technologies such as non-renewal sources of energy or the production of substances and activities that cause environmental degradation and are harmful to human health (note states were urged to**

prevent the transfer of substances and activities that could cause environmental degradation or be harmful to human health to other states; this would mean that no state should transfer substances such as toxic, hazardous, or atomic wastes or activities that would produce toxic, hazardous or atomic wastes) ,

DOCUMENTATION OF PRECEDENTS RELATED TO TRANSFER OF HARMFUL SUBSTANCES

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

RE: RECOGNIZING THE DAMAGE TO HEALTH AND THE ENVIRONMENT CAUSED BY EXPORT OF BANNED OR PERMANENTLY WITHDRAWN PRODUCTS

Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT SOME PRODUCTS HAVE BEEN SEVERELY RESTRICTED BECAUSE TOXIC EFFECTS ON HEALTH AND THE ENVIRONMENT

Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have been severely restricted in their consumption and/or sale owing to their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should **shall** effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

RE: REFUSING TO ACCEPT PERMISSION TO BE HARMED

No support shall be given for the justification of the transfer of harmful substances to human health and to the environment on the grounds that the recipient state has granted permission for this transfer.

Under no circumstances shall a State agree to accept hazardous, toxic, or atomic wastes from another State. Also, under no circumstances shall a State that has less stringent regulations been called upon to accept activities or substances that are deemed to be ecologically unsafe and unsound in another State that has more stringent regulations. Similarly, this principle shall also apply within a state where industry or a government within a state seeks to deposit toxic, hazardous or atomic wastes in different areas of the State, in particular on indigenous lands or in areas in which the disenfranchised members of the population live.

as well as by a lack of social and economic opportunities.

In the case of international migration, migrants have **[particular]** needs for housing and basic services, education, employment, and social integration without a loss of cultural identity, and they are to be given adequate protection and attention within host countries.

DOCUMENTATION OF PRECEDENTS

RE: CONTINUED INSUFFICIENT PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their

families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should *shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to *[quality]* education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to

improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers
1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, place of birth, **nature of residence** or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)
-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

- No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).
- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)
- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).
- Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983)

ARTICLE 7

7. In the process of globalization and growing interdependence, rural settlements represent a great challenge and opportunity for renewed **socially equitable and environmentally sound** developmental initiatives at all levels and in all fields. Many rural settlements, however, are facing a lack or an *inadequacy of economic opportunities* **adequate infrastructure of ecologically unsound practices**, especially employment, and of infrastructure and services, particularly those related to water, sanitation, health, education, communication, ecologically-**sound public** transportation and **ecologically safe and sound renewable** energy. Appropriate efforts and technologies for rural development can help to reduce, inter alia, imbalances, unsustainable practices, poverty, isolation, environmental pollution and insecure land tenure. Such efforts can contribute to improving the linkage of rural settlements with the mainstream of economic, social and cultural life, to assuring sustainable communities and safe environments, and to reducing pressures on urban growth.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING RADICAL REVERSAL OF TRANSPORTATION TRENDS (

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents. (Habitat I)

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles. (Habitat I)

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel. (Habitat I)

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles (Habitat I)

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic; (Habitat I)

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution (Habitat I)

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system. (Habitat I)

RE: RECOGNIZING IMPACT OF INCREASED AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is

adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE; DEVELOPING MASS TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 8

8. Cities, towns and rural settlements are linked through the movements of goods, **environment, transportation, energy**, resources and people. Urban-rural linkages have a crucial importance for the sustainability of human settlements. As rural population growth has outpaced the generation of employment and economic opportunities, rural-to-urban migration has steadily increased, particularly in developing countries, which has put enormous pressure on urban infrastructure and services already under serious stress. It is urgent to eradicate rural poverty and to improve the quality of living conditions, as well as to create employment and educational opportunities in rural settlements, regional centres and secondary cities. Full advantage must be taken of the complementary contributions and linkages of rural and urban areas by balancing their different economic, social and environmental requirements.

ARTICLE 9

9. More people than ever are living in absolute poverty and without adequate shelter. Inadequate shelter and homelessness are growing plights in many countries **including the most affluent countries of the North**, threatening standards of health, security and even life itself. *[Everyone should shall be entitled to an adequate- high standard of living, including adequate—affordable, accessible, safe and healthy food, clothing and inclusive adequate — affordable, accessible, safe and environmentally sound, with tenure security housing, and to the continuous improvement of living conditions.]* **All the states signatory to the international Covenant of Social Cultural and Economic Rights have “recognize the right of everyone to an adequate standard of living, including food, clothing and housing” (Art. 11.1 International Covenant of Economic, Social and Cultural Rights — ICESCR, 1966). In addition, states have undertaken the international obligation to recognize the “right of everyone to social security (Art. 9), and “the right of everyone to the enjoyment of the highest attainable standard of physical and mental health” (Article 12, ICESCR).**

DOCUMENTATION OF PRECEDENT

RE: PROVIDING FOR THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, misconceived structural adjustment programs. In addition, displacement occurs through** natural or *man-made* **anthropogenic** catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: ACKNOWLEDGING ADEQUATE SHELTER AND SERVICES - BASIC HUMAN RIGHT. OBLIGATION ON GOVERNMENTS TO ENSURE ADEQUATE SHELTER

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better-balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: EQUITABLE DISTRIBUTION OF BENEFITS

(b) Human settlements policies should aim to improve the condition of human settlements particularly by promoting a more equitable distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4, b Habitat I)

(c) this can be done through:

- (i) the location of public sector investments;
- (ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups

- (iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas
- (iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived
- (v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;
- (vi) Measures to improve the quality of life of vulnerable groups which have special needs-such as children, the elderly, the handicapped and the disabled. Such measures include provision of basic social services, adequate shelter and social and physical access to facilities. (Habitat I)

Recommendation C 11

Infrastructure policy

- (a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.
- (b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.
- (c) this implies
 - (i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population
 - (ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures; (Habitat I)

9 bis. The rapidly increasing number of displaced persons including refugees, other displaced persons in need of international protection and internally displaced persons, as a result of natural and human-made disasters in many regions of the world, is aggravating the shelter crisis, highlighting the need for a speedy solution to the problem on a durable basis.

9 ter. Acknowledging that often the lack of respect and trust of youth, and the exclusion of youth from the decision making process have contributed to a reciprocal lack of trust on the part of youth, and thus affirming that t
The rights and needs of children and youth and of future generations have to be taken fully into account [recognizing the rights, duties and

responsibilities of parents and other persons legally responsible for children, consistent with the Convention on the Rights of the Child]. Special attention needs to be paid to participatory processes dealing with the shaping of cities, towns and neighbourhoods; this is in order to secure the living conditions of children and of youth and to make use of their insight, creativity and thoughts on the environment. Special attention must be paid to shelter needs of vulnerable children, such as street children, refugee children and children who are victims of sexual exploitation.

DOCUMENTATION FOR PRECEDENT

RE: RECOGNIZING THE PROFOUND IMPORTANCE OF PARTICIPATION OF YOUTH

- Recognizing the profound importance of the direct participation of youth in shaping the future of *mankind humanity* and the valuable contribution that youth can make in the implementation of the new international economic order based on equity and justice,
- Considering it necessary to disseminate among youth the ideals of peace, respect for human rights and fundamental freedoms, human solidarity and dedication to the objectives of progress and development, social and cultural advancement of peoples, the implementation of the new international economic order, the preservation of world peace and the promotion of international co-operation and understanding (The General Assembly Resolution 36/28 International Youth Year: Participation, Development, Peace, 1981)

ARTICLE 10

10. Although all *many* countries, particularly developing countries, lack legal, institutional, financial, technological and human resources to respond adequately to rapid urbanization, many local authorities are taking on these challenges with open, accountable and effective leadership and are eager to bring people into the *sustainable socially equitable and environmentally sound* development process. Enabling structures that facilitate independent initiative and creativity, and that encourage the wide range of partnerships, including with the **members in the private sector that are advocating strong mandatory regulations to facilitate and drive socially equitable and environmentally sound development**, within and between countries, should be promoted. Furthermore, empowering all people, especially [members of] vulnerable and disadvantaged groups and people living in poverty, to participate equally and effectively in all activities related to human settlements is the basis for civic engagement, facilitated by the national authorities. Indeed, the Habitat Agenda provides a framework to enable people to take responsibility for the promotion and creation of sustainable human settlements.

10 bis. [Human settlements problems are of multidimensional nature that has its main roots in poverty and underdevelopment and, in many countries, is aggravated by the scarcity of resources. It is recognized that human settlements are not isolated from the social and economic development of countries and that they cannot be set apart from the need for a favourable international framework for sustained economic growth and sustainable socially equitable and environmentally sound development.]

ARTICLE 11

11. There are critical differences regarding human settlements in different regions and countries and within countries. These differences, specific situations and varying capacities of each community and country need to be taken into account in the implementation of the Habitat Agenda. [International, regional, sub-regional and national institutional arrangements, including the enhancement of the Commission on Human Settlements and the United Nations Centre for Human Settlements (Habitat) as the global focal points and allocation of resources, are central to the implementation of the Habitat Agenda.]. **In addition, it is essential that UNCHS recognize that the successful implementation of Habitat II depends on the necessity of examining the interdependence of issues and continually work with agencies involved in Environment, Human Rights, and Peace promotion.**

ARTICLE 12

12. The Habitat Agenda is a global call to action at all levels. It offers, within a framework of goals and principles and commitments, a positive vision of **socially equitable and environmentally sound development** of *sustainable* human settlements -- where all have adequate shelter, a healthy and safe environment, basic services, and productive, **environmentally sound** and freely chosen **meaningful** employment. The Habitat Agenda will guide all efforts to **finally** turn this vision, **which has been articulated through multiple international forums for over 50 years** into reality.

PART II. GOALS AND PRINCIPLES

13. We, the States participating in the United Nations Conference on Human Settlements (Habitat II) [are committed to a political, economic, environmental, ethical and spiritual vision of human settlements based on the principles of equality, solidarity, partnership, human dignity, respect and cooperation. We] adopt the goals and principles of adequate shelter for all and sustainable human settlements development in an urbanizing world. [We believe that attaining these goals will promote a world more stable and freer from injustice and conflict and contribute to just, comprehensive and lasting peace and to global equitable economic and social development and environmental protection.] [Civil, ethnic and religious strife, nuclear armament, armed conflicts, alien and colonial domination, foreign occupation, international economic imbalance, coercive economic measures, poverty, organized crime, and terrorism in all its forms are destructive to sustainable human settlement development and should therefore be renounced by all States.] [We believe that attaining these goals will promote a world more stable and freer from injustice and conflict. Civil, ethnic and religious strife, violations of human rights, armed conflicts, terrorism, foreign aggression or occupation are destructive to human settlements and should therefore be renounced by all States. At the national level we will reinforce peace by promoting tolerance, non-violence and respect for diversity, and by settling disputes by peaceful means. At the local level, the prevention of crime and the promotion of sustainable communities are essential to the attainment of safe and secure societies. Crime prevention through social development is one crucial key to these goals. At the international level, we will promote international peace and security and make and support all efforts to settle international disputes by peaceful means in accordance with the Charter of the United Nations.] We reaffirm and are guided by the purposes and principles of the Charter of the United Nations and by over 50 years of obligations incurred and expectations undertaken through international instruments and we reaffirm our commitment to ensure the realization of the human rights set out in international instruments [including the right to adequate housing as provided for] in the Universal Declaration on Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of all Forms of Discrimination against Women and the Convention on the Rights of the Child [*taking into account that the right to adequate housing should shall be realized progressively*]. We reaffirm that all human rights - civil, cultural, economic, political and social - are universal, indivisible and interdependent and interrelated. We subscribe to the following principles and goals to guide us in our actions.

ARTICLE 14

14. Equitable human settlements are those in which all people, without discrimination of any kind as to race, tribe, or culture, **colour**, ethnicity, **national**

ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age, language, religion or conviction, political or other opinion, *national or , social origin*, property, *birth, nature of residency* or other status have equal access to safe and healthy housing, infrastructure, health services, adequate food and water, education and open spaces. In addition, such human settlements provide equal opportunity for a productive and freely chosen livelihood; equal access to economic resources *[Including the right to inheritance]*, /As agreed in the Convention on the Elimination of All Forms of Discrimination 5 d (vi) The right to inherit:

ARTICLE 16

16. [*Sustainable socially equitable and environmentally sound development is essential to human settlements development, while giving full consideration for the needs and necessities of achievement of economic growth in all countries, particularly in developing countries. Special consideration needs to be given to the specific situation of countries with economies in transition.*] Human settlements shall be planned, developed and improved in a manner that takes full account of *sustainable socially equitable and environmentally sound* development principles and all its components, as set out in Agenda 21 and other related outcomes of the United Nations Conference on Environment and Development. Sustainable human settlements development ensures *socially equitable and environmentally sound economic development*, employment opportunities and social progress, in harmony with the environment. It incorporates, among the principles of the Rio Declaration which are equally important and other outcomes of the United Nations Conference on Environment and Development, that of the precautionary approach principle, pollution prevention, respect for the carrying capacity of ecosystems, and preservation of natural heritage and socially equitable and environmentally sound opportunities for future generations. Production, consumption and transport should be developed *managed* in ways that protect and conserve the stock of resources while drawing upon them. Science and technology have a crucial role in shaping sustainable human settlements and sustaining the ecosystems they depend upon. Sustainability of human settlements entails their balanced geographical distribution or other appropriate distribution in keeping with national conditions, promotion of economic and social development, and human health and education, the maintenance of biodiversity *promotion of economic and social development*, human health and education, and cultural diversity, as well as air, water, vegetation and soil qualities at standards sufficient to sustain human life and well-being for all time.

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 6 Habitat I)

Re: Precautionary principle

The expression “the Precautionary Principle” is used throughout the UNCED documents in Agenda 21, Convention on Biological Diversity, The Framework Convention on Climate Change, and the Rio Declaration

RE: ENSURING ENVIRONMENTAL AND CULTURAL PRESERVATION

It is the responsibility of Governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy, linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity** mankind. (III 2, Habitat I)

RE: PRESERVING OR PROTECTING NATURAL HERITAGE

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)
- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and

ecosystems for the benefit of present and future generations
(Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

RE: ENVIRONMENT AS COMMON HERITAGE

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of mankind and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

ARTICLE 17

17. The quality of life of the people depends, among other economic, social, environmental and cultural factors, on the physical conditions and spatial characteristics of our villages, towns and cities. City lay-out and aesthetics, land-use patterns, population and building densities, transportation and ease of access for all to basic goods, services and public amenities have crucial bearing on the livability of settlements. This is particularly important to vulnerable and disadvantaged persons, many of whom face barriers in access to shelter and in participating in shaping the future of their settlements. People's needs for community and their aspirations for more livable neighbourhoods and settlements should guide the process of **planning**, and **designing**, *management and maintenance* of human settlements. Objectives of this endeavour include protecting public health, providing for safety and security conditions, education, and social integration, promoting equality, respect for diversity and cultural

identities, increased accessibility for persons with disabilities, and preservation of historic, spiritual, religious and culturally significant buildings and districts, respecting local landscapes and treating the local environment with respect and care. [The preservation of **natural heritage** and historical monuments and buildings, particularly in the case of those declared by UNESCO as part of the cultural and natural patrimony of humanity, should be assisted through international cooperation.] **including states undertaking to sign and ratify the convention on the Protection of Cultural and Natural Heritage, and to enact the necessary legislation to ensure that significant cultural and natural heritage are protected and presented for international world heritage designation.**² It is also of crucial importance that spatial diversification and mixed uses of types of housing and services be promoted at the local level in order to meet the diversity of needs and expectations.

DOCUMENTATION OF PRECEDENTS

RE: PRESERVING, PROTECTING AND ENHANCING OF THE ENVIRONMENT

Every State has the right to exercise full and permanent sovereignty over its wealth, natural resources and economic activities, adopting the necessary measures for the planning ... of its resources, providing for the protection, preservation and enhancement of the environment. (II 8 Habitat I)

RE: PRESERVING OF NATURAL HERITAGE

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of mankind [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 19

19. All people have basic rights **including the right to safe and healthy housing** and must also accept their responsibility to respect and protect the rights of others - including future generations - and to contribute actively to the common good.

Socially equitable and environmentally sound Sustainable human communities settlements are those that, inter alia, generate a sense of citizenship and identity, cooperation and dialogue for the common good, and a spirit of voluntarism and civic engagement, where all people are encouraged and have equal opportunity **for genuine community involvement and participation including the participation of those who have usually been marginalized from the decision making process** to *participate* in decision-making and development. Governments at all appropriate levels, including local authorities, have a responsibility to ensure access to education and to protect their population's health, safety and general welfare. This requires, as appropriate, establishing policies, laws and regulations for both public and private activities, encouraging responsible private activities in all fields, facilitating community groups' participation, adopting transparent procedures, encouraging public-spirited leadership and public-private—**individuals and businesses that engage in BEST (Best environmentally sound techniques) practices or socially equitable and environmentally sound development— cooperation partnerships**, and helping people to understand and exercise their rights and responsibilities through open and effective participatory processes, universal education and information dissemination.

ARTICLE 20

JARGON [*] AND BUZZ WORD [§], EUPHEMISMS [£] UNNECESSARY COMPLICATION [%], OR VEILED INTENTION ALERT.

*20. Partnerships among countries and among all actors within countries from public, *private*, voluntary, and community-based organizations, the cooperative sector, non-governmental organizations and individuals are essential to the achievement of sustainable human settlements development and the provision of adequate shelter for all and basic services. *Partnerships can integrate and mutually support objectives of broad-based participation through, inter alia, forming alliances, pooling resources, sharing knowledge, contributing skills and capitalizing on comparative advantages of collective actions. The processes can be made more effective by strengthening civil organizations at all levels. Every effort must be made to encourage collaboration and partnership of all sectors of society and among all actors in decision-making processes as appropriate.* *

ARTICLE 21

21. Solidarity with those who are less fortunate, disadvantaged and vulnerable groups, including people living in poverty, as well as tolerance, non-discrimination and cooperation among all people, families and communities are foundations for social cohesion. Solidarity, cooperation and assistance should be enhanced by the international community as well as by States and all other relevant actors to respond to challenges of human settlements development. The international community and governments at all appropriate levels are called upon to promote sound and effective policies and instruments, thereby strengthening cooperation

among governments and non-governmental organizations, as well as to mobilize complementary resources to meet these challenges.

ARTICLE 22

22. [To safeguard the global needs and rights *interest* of present and future generations in human settlements including the right to a safe environment, the right to natural heritage and to socially equitable and environmentally sound development including social justice is one of the fundamental goals of the international community. The implementation of the Global Plan of Action will require a willingness to make the necessary attitudinal changes, particularly in relation to the rights of future generations and of marginalized people in global societies, and a flow of new and additional financial from different sources including reduction of the global military budget and from deferred taxes from corporations including transnational corporations and to transfer resources to developing countries in order to cover the incremental costs of the socially equitable and environmentally sound actions they have to undertake to deal with human communities *settlements* problems and to accelerate socially equitable and environmentally sound development *sustainable development*.] In additions compensation shall be sought from corporations that have violated human rights, caused environmental degradation, and contributed to conflict.

DOCUMENTATION OF PRECEDENT

RE DESIGNATING OF HERITAGE OF OUTSTANDING INTEREST

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humanity**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)
- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and

ecosystems for the benefit of present and future generations
(Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: CONSERVING BIODIVERSITY FOR FUTURE GENERATIONS

- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

**Part III.
COMMITMENTS**

ARTICLE 22

We are mindful *that since the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Treaties, Covenants, Conventions, and have created expectations reflected in Declarations, General Assembly Resolutions, and Conference Agendas, and that if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,*

Cognizant that only when these obligations are discharged and expectations fulfilled will we have the global community that is socially equitable and environmentally sustainable.

RECOGNIZING that for fifty-one years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant on Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on

the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge these obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

States undertake to introduce the following resolution in the General Assembly.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

22. *[The Global Plan of Action is shall be revised to be drawn up in full conformity with the purposes and principles of the Charter of the United Nations, and with the over 51 years of obligations undertaken in Treaties, Conventions, Covenants and expectations created in Declarations, General Assembly Resolutions and Conference Agendas. The implementation of the recommendations contained in this plan of action is the sovereign right of each State consistent with national laws and development priorities, as well as with full respect for the various religious, ethical values, cultural backgrounds and philosophical convictions of its people, and in conformity with universally recognized international human rights.]*⁴

The implementation of the recommendations in this plan of action should reflect sovereign equality as specified in the original charter of the United Nations. Sovereign equality does not mean that states should not comply with obligations or fulfill expectations from previous international instruments.

ARTICLE 23

23. [Embracing the foregoing principles of **compliance and equality** we, as participating States in this Conference, commit ourselves to implement the Habitat Agenda including through sub-national, national, sub-regional and regional plans of action and other policies and programmes drafted and executed in cooperation with all **key actors** at all levels and supported by the international community taking into account **that there shall be respect for nature beyond human purpose and that human beings are crucial in the promotion of** *are at the centre of concerns for sustainable* **socially equitable and environmentally sound** development, including adequate shelter for all and sustainable human settlements development, and they are entitled to a healthy and productive life in harmony with nature.]/5

[23 bis. In implementing these commitments, we shall give special attention to the circumstances and needs of people who are homeless, living in poverty, or are in some other way disadvantaged or vulnerable, especially those who are women, children, older people, indigenous people, displaced people or people with disabilities.]/6

A. ADEQUATE SHELTER FOR ALL

ARTICLE 24

24. [We reaffirm our commitment to the progressive realization of the right to adequate— affordable, accessible, tenure security, safe, healthy and environmentally sound— housing, as set out in numerous international instruments. In this context, we recognize the fundamental obligation of governments to enable people to obtain shelter and to protect and improve dwellings and neighbourhoods, **and to have genuine involvement and participation in the development of the community.**] We commit ourselves to the goal of improving living and working conditions on an equitable and sustainable basis, so that everyone will have adequate shelter which is healthy, safe, secure, accessible and affordable and which includes basic services, facilities and amenities and the enjoyment of freedom from discrimination in housing and legal security of tenure. We shall implement and promote this objective in a manner fully consistent with human rights standards. /7

ARTICLE 25

DOCUMENT FOR PRECEDENT

RE: PRESERVING LAND RIGHTS OF INDIGENOUS PEOPLES

i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

RE: CONDEMNING DISPLACEMENT OF NATIVE POPULATION

(e) In all occupied territories, changes in the demographic composition, or the transfer or uprooting of the native population, and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. the heritage and national identity must be protected. Any policies that violate these principles must be condemned.

RE; CONTINUED INSUFFICIENT PROTECTING OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE; ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should **shall** pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to **[quality]** education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national,

ethnic or social origin, nationality, age, economic position, property, marital status, birth or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983

DOCUMENTATION OF PRECEDENTS

RE: AFFIRMING THE RIGHT TO EDUCATION

- Recalling its resolutions 34/170 of 17 December 1979, 35/191 of 15 December 1980 and 36/152 of 16 December 1981 on the right to education,
- Recalling the International Covenant on Economic, Social and Cultural Rights, adopted by its resolution 2200 A (XXI) of 16 December 1966, which recognizes the right of everyone to education,
- Bearing in mind the importance of the Convention against Discrimination in Education, adopted on 14 December 1960 by the General Conference of the United Nations Educational, Scientific and Cultural Organization (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: REAFFIRMING THE IMPORTANCE OF IMPLEMENTING THE RIGHT TO EDUCATION

Reaffirming the paramount importance of the implementation of the right to education for the full development of the human personality and for the enjoyment of other fundamental human rights and freedoms (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: AFFIRMING THE RIGHT OF EDUCATION FOR ALL REGARDLESS OF STATUS

Recalling that, since its establishment, the United Nations Educational, Scientific and Cultural Organization has constantly striven for effective realization of the right to education and equality of educational opportunities for all, without distinction as to race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, economic status or birth and that, for many years past, activities directed to securing the right to education and the extension and improvement of educational and training systems in Member States, more particularly in the developing countries, have occupied a central place in that organization's programme (GA Resolution, The Right to Education 37/178 17, December 1982)

RE: AFFIRMING UNIVERSAL ACCESS TO EDUCATION

We commit ourselves to promoting and attaining the goals of universal and equitable access to quality education, the highest attainable standard of scholarly, academic, ethical, physical and mental health, and universal access of all to primary health care, making particular efforts to rectify inequalities relating to social conditions, and without distinction as to race, tribe, national origin, gender, age or disability, **sexual orientation, family structure and other status in the achievement of socially equitable and environmentally-sound development** (Commitment 6, ICPD)

To this end, at the national level, we will:

B. Emphasize lifelong learning by seeking to improve the quality of education to ensure that people of all ages are provided with useful knowledge, reasoning ability, skills and ethical and social values required to develop their full capacities in health and dignity. In this regard, women and girls should be considered a priority group. (ICPD)

Recognize and support the right of indigenous people to education in a manner that is responsive to their specific needs, aspirations and cultures, and ensure their full access to health care (g Commitment 6, ICPD)

Develop broad-based education programmes that promote and strengthen respect for all human rights and fundamental freedoms, including the right *to development* to **socially equitable and environmentally-sound development**, promote the values of tolerance, responsibility and respect for the diversity and rights of others, and provide training in peaceful conflict resolution, in recognition of the United Nations Decade for Human Rights Education (1995-2005, Commitment 6, ICPD)

Education is a basic human right and an essential tool for achieving the goals of equality, development, **environmental integrity** and peace (71 Platform of Action).

RE: RESTRUCTURING OF EDUCATIONAL SYSTEM:

The United Nations, through its almost 50 years of operation, has strongly supported the development of international instruments to address the violation of human rights, the escalation of war and conflict, the degradation of the environment, and the denial of equality/equity (including

specifically gender Equality/equity) and social justice. Similarly, states have undertaken obligations through international conventions treaties, resolutions, to address these issues.

In most of the international documents there has been provision for educating the global community in a way that would achieve the “goals of justice.” To legitimately reflect these issues in education, requires a complete restructuring of the educational system is essential. The global community should begin to embrace a new vision of education that fosters a commitment to addressing the above issues, along with a stimulation of thinking, in a non-evaluative collaborative environment.

Equal access to an educational system that is inequitable, competitive and hierarchical will not provide the necessary changes to address the issues facing the global community. Equal access plus a complete restructuring of the educational system is essential.

To achieve the above vision, and to discharge international obligations related to the promotion of socially equitable and environmentally-sound development, peace, and respect for human rights, the international community must move from an inequitable, hierarchical, biased, and competitive, model dependent educational system —a system that reproduces the current socioeconomic, political global structure to a new vision of education that is one of tolerance cooperation and intellectual stimulation.

RE: ENSURING UNIVERSAL ACCESS TO HEALTH CARE

Ensure, on a basis of equality of men and women, universal access to health-care service, including those related to reproductive health care, which include family planning and sexual health. Reproductive health-care programmes should provide the widest range of services without any form of coercion (Principles 8 International Conference on Population and Development, 1994)

RE: RECOGNIZING THE PRIORITY OF SOCIAL SERVICES

Recommendation C 15

Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:

(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;

(Recommendation C 15, Habitat I)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

B. SUSTAINABLE HUMAN SETTLEMENTS/9

ARTICLE 26

[26. We commit ourselves to the goal of sustainable human settlements in an urbanizing world by developing economies that will make efficient use of resources within the carrying capacity of ecosystems and by providing all people with equal opportunities for a healthy, safe and productive life in harmony with nature and **with natural and cultural heritage and spiritual and cultural values, ensuring social progress.**

DOCUMENTATION OF PRECEDENTS

RE: BEING WITH THE CARRYING CAPACITY OF ECOSYSTEMS

Recommended extensively throughout all literature on Ecology and the Environment. The need for socially equitable and environmentally sound development within the carrying capacity of ecosystems is an essential principle of sustainability.

ARTICLE 27

27. We further commit ourselves to the objectives of:

ARTICLE 27 a

(a) Promoting socially integrated human settlements, combating segregation, discriminatory and other exclusionary policies and practices and recognizing and respecting the rights of all, *especially women and the poor*; including those who have been discriminated on the basis of **gender, sex sexual orientation, marital status, age, disabilities,, race, tribe, or culture, colour, ethnicity, national, ethnic or social origin, nationality, place of birth, refugee or immigrant status, aboriginal ancestry, religion or conviction, language, political or other opinion, socioeconomic conditions , nature of residency and other status**

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE INHERENT DIGNITY OF ALL MEMBERS OF THE HUMAN FAMILY AS BEING THE FOUNDATION OF FREEDOM, JUSTICE AND PEACE

Recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the World (Preamble, Universal Declaration of Human Rights, 1948)

RE: ENSURING EQUALITY BEFORE THE LAW

All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law shall prohibit any discrimination and guarantee to all persons equal and effective protection against discrimination on any ground such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status (Art. 26, International Covenant on Civil and Political Rights, 1966)

RE; ENCOURAGING TOLERANCE AND ELIMINATING OF ALL FORMS OF DISCRIMINATION

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, **sexual orientation, family structure**, or other status. (Art. 2, The Universal Declaration of Human Rights, 1948)

RE: BEING CONVINCED THAT ANY DOCTRINE OF SUPERIORITY BASED ON RACIAL DIFFERENTIATION IS SCIENTIFICALLY FALSE...

Convinced that any doctrine of superiority based on racial differentiation is scientifically false, morally condemnable, socially unjust and dangerous, and that there is no justification for racial discrimination, in theory or in practice, anywhere (Preamble, International Convention on the Elimination of All Forms of Racial Discrimination, 1965)

RE: STRENGTHENING LEGAL FRAMEWORKS FOR ACCESS TO LAND AND OWNERSHIP...IN PARTICULAR FOR WOMEN

Consider strengthening/developing legal frameworks for land management, access to land resources and land ownership - in particular, for women - and for the protection of tenants (3.8.h Combating Poverty, Agenda 21, UNCED, 1992)

RE: UNDERTAKING ACTIONS TO PROMOTE FOOD SECURITY

Undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.8. I., Combating Poverty, Agenda 21, UNCED 1992)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO THE POOR AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ELIMINATING THE PRACTICE OF ADDING POVERTY PROGRAMS AS AN AFTERTHOUGHT

How can poor and traditionally excluded people gain an integral role in economic development that addresses squarely the poverty and inequality that is crippling the hemisphere? Poverty programs should not be added to development strategies as an afterthought. Poor people, small farmers and small businesses must be treated as potential generators of wealth and engines of economic growth. Critical issues of food security, land tenure and agricultural policy for the majority of the region's farmers (PROMISES TO KEEP the Unfinished Agenda for Human Rights and Economic Justice in the Americas, 1994)

ARTICLE 27 b

(b) Acknowledging and harnessing the potential of the informal sector, where appropriate, in providing housing and services for the poor;

ARTICLE 27 c

(c) Promoting changes in production and consumption patterns and settlements structures that will protect natural resources - including water, air, bio-diversity, energy and land - providing a healthy living environment for all;

ARTICLE 27 d

(d) Promoting spatial development patterns that reduce transport demand, as well as creating efficient, effective and environmentally sound transport systems that improve accessibility to work, goods, services and amenities;

ARTICLE 27 e

(e) Preserving **natural ecosystems** and productive land in urban and rural areas and protecting fragile ecosystems from the negative impacts of human settlements;

ARTICLE 27 f

(f) **Preserving, protecting and maintaining natural, historic and cultural heritage, including traditional shelter and settlements patterns and pathways, as appropriate, as well as landscapes and urban flora and fauna in open and green spaces;**

DOCUMENTATION OF PRECEDENTS.

RE: PRESERVATION OF HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

•Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

COMMENT

RE: RE-EXAMINING THE IMPACT OF STRUCTURAL ADJUSTMENT PROGRAMS

Increasing negative impact of structural adjustment programs
The international debt crisis, which has forced nations to undergo structural adjustment programs, has undermined nation states to implement or maintain food security policies. Increased trade liberalization, with the World Trade Agreement will further restrict the nation state from implementing food security policies. The negative consequences of structural adjustment programmes have had negative consequences such as increased poverty, unemployment, social disintegration, health care decline, environmental degradation, reduced access to education, and escalation of conflict. (Global Compliance Research Project)

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING REVIEW OF STRUCTURAL ADJUSTMENT

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: CRITICIZING OF STRUCTURAL ADJUSTMENT PROGRAMS

(iii) Concerned about the negative impact on the poor, especially women and children, of the International Monetary Fund and World Bank structural adjustment policies (Women's Action Agenda, 1992)

In many countries, in particular in developing and least-developed countries, [structural adjustment,] [the deterioration of public health systems, a decrease in public health spending and in some cases, increasing privatization of health care systems without appropriate guarantees of universal access] further reduce health care availability. This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles including within the

family and the community are often not acknowledged and as such do not receive the necessary social, psychological and economic support (93 Advanced Draft Platform of Action, UN Conference on Women, 1995)

In many countries, especially in developing countries, in particular the least developed countries, a decrease in public health spending and, in some cases, structural adjustment, contribute to the deterioration of public health systems. In addition, privatization of health-care systems without appropriate guarantees of universal access to affordable health care, further reduces health-care availability. This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles, including their roles within the family and the community, are often not acknowledged; hence they do not receive the necessary social, psychological and economic support (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

22. Macro and microeconomic policies and programmes, including structural adjustment, have not always been designed to take account of their impact on women and girl children, especially those living in poverty. Poverty has increased in both absolute and relative terms, and the number of women living in poverty has increased in most regions. There are many urban women living in poverty; however, the plight of women living in rural and remote areas deserves special attention given the stagnation of development in such areas. In developing countries, even those in which national indicators have shown improvement, the majority of rural women continue to live in conditions of economic underdevelopment and social marginalization (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

.49. More than 1 billion people in the world today, the great majority of whom are women, live in unacceptable conditions of poverty, mostly in the developing countries. Poverty has various causes, including structural ones. Poverty is a complex, multidimensional problem, with origins in both the national and international domains. The

globalization of the world's economy and the deepening interdependence among nations present challenges and opportunities for sustained economic growth and development, as well as risks and uncertainties for the future of the world economy. The uncertain global economic climate has been accompanied by economic restructuring as well as, in a certain number of countries, persistent, unmanageable levels of external debt and structural adjustment programmes. In addition, all types of conflict, displacement of people and environmental degradation have undermined the capacity of Governments to meet the basic needs of their populations. (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

61. By multilateral financial and development institutions, including the World Bank, the International Monetary Fund and regional development institutions, and through bilateral development cooperation:

(a) In accordance with the commitments made at the World Summit for Social Development, seek to mobilize new and additional financial resources that are both adequate and predictable and mobilized in a way that maximizes the availability of such resources and uses all available funding sources and mechanisms with a view to contributing towards the goal of poverty eradication and targeting women living in poverty.;

(b) Strengthen analytical capacity in order to more systematically strengthen gender perspectives and integrate them into the design and implementation of lending programmes, including structural adjustment and economic recovery programmes;

61 (d) Ensure that structural adjustment programmes are designed to minimize their negative effects on vulnerable and disadvantaged groups and communities and to assure their positive effects on such groups and communities by preventing their marginalization in economic and social activities and devising measures to ensure that they gain access to and control over economic resources and economic and social

activities; take actions to reduce inequality and economic disparity; (Art 61 d Platform of Action. UN Conference on Women: Equality, Development and Peace)

(e) Review the impact of structural adjustment programmes on social development by means of gender-sensitive social impact assessments and other relevant methods, in order to develop policies to reduce their negative effects and improve their positive impact, ensuring that women do not bear a disproportionate burden of transition costs; complement adjustment lending with enhanced, targeted social development lending (Art. 61 e Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: PROPOSING DEBT FORGIVENESS

Find effective development-oriented and durable solutions to external debt problems in order to help them to finance programmes and projects targeted at development, including the advancement of women, inter alia, **through the immediate implementation of the terms of debt forgiveness agreed upon in the Paris Club in December 1994, which encompassed debt reduction, including cancellation or other debt relief (Habitat I) measures and develop techniques of debt conversion applied to social development programmes and projects in conformity with Platform priorities;** (61 c Platform of Action. UN Conference on Women: Equality, Development and Peace)

Widespread economic recession, as well as political instability in some regions, has been responsible for setting back development goals in many countries. This has led to the expansion of unspeakable poverty. Of the more than 1 billion people living in abject poverty, women are an overwhelming majority. The rapid process of change and adjustment in all sectors has also led to increased unemployment and underemployment, with particular impact on women. In many cases, structural adjustment programmes have not been designed to minimize their negative effects on vulnerable and disadvantaged groups or on women, nor have they been designed to assure positive effects on those groups by preventing their marginalization in economic and social activities. The Final Act of the Uruguay Round of multilateral trade negotiations 9/ underscored the increasing interdependence of national economies, as well as the importance of trade liberalization and access to open, dynamic markets. There has also been heavy military spending in some regions. Despite increases in official

development assistance (ODA) by some countries, ODA has recently declined overall (Art. 18 Platform of Action. UN Conference on Women: Equality, Development and Peace)

More than 1 billion people in the world today (the great majority of whom are women) live in unacceptable conditions of poverty; mostly in the developing countries. Poverty has various causes including structural ones. Poverty is a complex, multidimensional problem, with origins in both the national and international domains. The globalization of the world's economy and the deepening interdependence among nations present challenges and opportunities socially **equitable and environmentally sound development for sustained economic growth and development**, as well as risks and uncertainties for the future of the world economy. The uncertain global economic climate has been accompanied by economic restructuring as well as, in a certain number of countries, persistent, unmanageable levels of external debt and structural adjustment programmes. In addition, all types of conflict, displacement of people and environmental degradation have undermined the capacity of Governments to meet the basic needs of their populations. The global transformations of the world economy are profoundly changing the parameters of social development in all countries. One significant trend has been the increased poverty of women, the extent of which varies from region to region. The gender disparities in economic power-sharing are also an important contributing factor to the poverty of women. Migration and consequent changes in family structures have placed additional burdens on women, especially those who provide for several dependents (Art 49 Platform of Action. UN Conference on Women: Equality, Development and Peace)

. ARTICLE 27 J

(i) Preventing and Reducing the impact of natural and human-made disasters on human communities settlements, by enshrining the notion of healthy community as “healthy, safe and environmentally sound communities,” by recognizing that some patterns of consumption and development have increased the vulnerability to disasters, by promoting and funding BEST practices, and by embracing a culture of safety.

DOCUMENTATION OF PRECEDENTS

RE: PROMOTING A CULTURE OF SAFETY

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters)

This principle involves the commitment to act to prevent rather than to [correct]

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (Agenda 21, 7.60)

Profoundly concerned that the situation of children in many parts of the world remains critical as a result of inadequate social conditions, natural disasters, armed conflicts, exploitation, illiteracy, hunger and disability, and convinced that urgent and effective national and international action is called for **and needed** (Preamble, Convention on the Rights of the Child, 1989)

RE: PREVENTING DISASTER

The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation will significantly enhance our ability to achieve real progress in **preventing** *mitigating* disasters through the transfer of **Best Ecologically Sound Techniques** *technology* and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention on Natural Disaster, 1994).

RE: RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL DISASTERS

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability ... (A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

RE: RECOGNIZING DISASTER PREVENTION...BETTER THAN DISASTER RESPONSE

Disaster prevention, *mitigation and preparedness are* better than disaster response in achieving the goals and objectives of the Decade. Disaster response alone is not sufficient, as it yields only temporary results at a very high cost. We have followed this limited approach for too long.

This has been further demonstrated by the recent focus on response to complex emergencies which, although compelling, should not divert from pursuing a comprehensive approach. Prevention contributes to lasting improvement in safety and is essential to integrated disaster management (3 a Convention on Natural Disaster, 1994).

RE: DEVELOPING A GLOBAL CULTURE OF PREVENTION

Development of a global culture of prevention as an essential component of an integrated approach to disaster reduction; (9 a The World Conference on Natural Disaster Reduction, 1994)

RE: INCORPORATING DISASTER PREVENTION...IN DEVELOPMENT PLANNING

Incorporate disaster reduction prevention *or mitigation* in socioeconomic development planning based on the assessment of the risk (11a i The World Conference on Natural Disaster Reduction, 1994)

RE: STIMULATING GENUINE COMMUNITY INVOLVEMENT... REDUCING VULNERABILITY OF COMMUNITIES TO NATURAL DISASTERS

Stimulate genuine community involvement and empowerment of women and other socially disadvantaged groups at all stages of disaster management programmes in order to facilitate capacity building, which is an essential precondition for reducing vulnerability of communities to natural disasters (11 q Convention on Natural Disaster, 1994).

RE: EXPRESSING THE POLITICAL COMMITMENT TO...THROUGH LEGISLATION....AT [GLOBAL] NATIONAL, COMMUNITY LEVEL

Express the political commitment to reduce their vulnerability, through declaration, legislation, policy decisions and action at the highest level, which would require the progressive implementation of disaster **prevention assessment and reduction** plans at the **global**

national and community levels (11 a Convention on Natural Disasters, 1994)

RE: EXTENDING THE CONCEPT OF DISASTER REDUCTION TO COVER NATURAL AND OTHER DISASTER SITUATIONS INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL DISASTERS (NA-TECHS)

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries (B i Convention on Natural Disaster, 1994)

RE; RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL DISASTERS

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability, if planned and managed in a way to ameliorate the social and economic conditions of the affected groups and communities. (A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

C. Enablement

ARTICLE 28

28. We commit ourselves to *the strategy of enabling all key actors, in the public, private and the community sectors, to be genuinely involved and participate to play an effective role - at national, state/provincial, metropolitan and local levels - in human settlements and shelter development.*

ARTICLE 29 e

(e) Supporting institutional and legal enabling frameworks for mobilizing financial resources for sustainable shelter and human settlements development; and

ARTICLE 29 f

(f) Promoting equal access to reliable information, utilizing, where appropriate, modern communications technology and networks.]

[Gender Equality

E. International cooperation/12

ARTICLE 32

[32. We commit ourselves - in the interests of international peace, security, justice and stability - to enhancing international cooperation and partnerships which will assist in the implementation of the national and the global plans of action and the attainment of the goals of the Habitat Agenda, by contributing to and participating in multilateral, regional and bilateral cooperation programmes and institutional arrangements and technical and financial assistance programmes; by the exchange of appropriate technology; by the collection, analysis and dissemination of information about shelter and human settlements, and by international networking.]

ARTICLE 33

[33. We further commit ourselves to the objectives of:

(a) Striving for the fulfillment of the accepted target of 0.7 per cent of gross national product for official development assistance, as soon as possible, as well as increasing, within it, the share for funding for human settlements and shelter development;

(b) Using resources and economic instruments in an effective, efficient and equitable manner, at the local, national, regional and international levels; and

(c) Promoting responsive international cooperation between public, private and non-profit, non-governmental and community organizations.]

F. Assessing progress

ARTICLE 34

[34. We commit ourselves to monitor and evaluate, within our own countries, efforts to implement national plans of action, striving to ensure efficiency and effectiveness in meeting the goals of adequate shelter for all and sustainable human settlements development.]

ARTICLE 35

[35. We further commit ourselves to the objective of enhancing the role and strengthening the institutional capacity of UNCHS (Habitat) as an agency of coordination and cooperation assisting the Member States of the United Nations to monitor and evaluate the implementation of the Habitat Agenda, using shelter and urban indicators and best practices as a basis for assessing global conditions and trends in shelter and human settlements development.]

ARTICLE 38 (Composite including EU and G-77 and China)

38. [Globalization of the world economy and deepening interdependence among nations presents challenges and opportunities as well as risks and uncertainties for the future of the world economy. As a result, the level of economic development has increased in some countries, while the situation in a large number of them remains critical and uncertain. At the same time, the gap between developing and developed countries, the poor and rich - countries as well as people - has widened. New communications technology makes information much more widely accessible and accelerates all processes of change. In many societies, new issues of social cohesion and personal security have emerged and the issue of solidarity has become central. Poverty, unemployment, environmental degradation, social disintegration and the increasing movement of people, as well as intolerance and violence have also emerged as critical factors. We must keep these new conditions in view as we draw up human settlement's strategies for the first two decades of the twenty-first century.

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR IMPLEMENTATION

A. Introduction

ARTICLE 39

39. While Habitat II is a Conference of States and there are many things national Governments can do to enable local communities to solve problems, the actors who will determine success or failure in improving the human settlements condition are mostly found at the community level in the public, private and non-profit sectors. It is they, local authorities and other *[stakeholders]*, individuals **and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision** and who are on the front line in achieving the goals of Habitat II. Although the structural causes of the problems have often to be dealt with at the national and sometimes the international level, progress will depend to a large degree on local authorities, civic engagement and the forging of partnerships at all levels of government with the private sector, the cooperative sector, non-governmental and community-based organizations, workers and employers and civil society at large.

ARTICLE 40

40. Habitat II is one in an extraordinary series of World Conferences held under the auspices of the United Nations over the past five years. All addressed important issues of people-centred *sustainable socially equitable and environmentally sound* development, including sustained economic growth and equity, for which successful implementation requires action at all levels, particularly at the local level. Strategies on social, economic, environmental, disaster reduction, population, disability and gender issues will have to be implemented in urban and rural areas and, in particular, where the problems are acute and generate tension.

ARTICLE 41

41. In Habitat II, Governments at all levels, the community and the private sector considered how the achievement of the two principal goals of "Adequate shelter for all" and "Sustainable human settlements development in an urbanizing world" can be furthered at the local level through an enabling process in which individuals, families and their communities play a central role. This is what is special about the Habitat II Global Plan of Action and its strategies for implementation. Implementation of these measures will need to be adapted to the specific situation of each country and community.

ARTICLE 42

42. The strategy of the Global Plan of Action is based on enablement, transparency and participation. Under this strategy, government efforts are based on establishing legislative, institutional and financial frameworks that will enable

the private sector, non-governmental organizations and community groups to fully contribute **to socially equitable and environmentally sound development** *[sustainable development, including sustained growth]* and enable all women and men to work with each other and in their communities with Governments at all levels, to determine collectively their future, decide on priorities for action, identify and allocate resources fairly and build partnerships to achieve common goals. Enablement creates:

(a) A situation in which the full potential and resources of all actors in the shelter production and improvement process are mobilized;

(b) The conditions for women and men to exercise their individual rights and responsibilities equally and to engage their abilities effectively in activities that will improve and sustain their living environments;

Article 42 (c)

42 (c) The conditions for organizations and institutions to interact and network, **building fostering and ensuring genuine community involvement and participation partnerships for socially equitable and environmentally sound development** *[sustained economic growth and sustainable development];*

...

**PART IV:
GLOBAL PLAN OF ACTION: STRATEGIES FOR IMPLEMENTATION**

B. Adequate shelter for all/14

ARTICLE 44

44. [Since the adoption of the Universal Declaration of Human Rights in 1948, the right to adequate housing has been recognized as an important component of the right to an adequate standard of living. All nations without exception have some form of obligation to provide for *in the shelter sector*, as exemplified by their creation of ministries of housing or agencies, by their allocation of funds for the housing sector and by their policies, programmes and projects.]

[The provision of adequate housing for everyone requires action not only by governments, but by all sectors of society, including the private sector, non-governmental organizations, local authorities, as well as by international organizations (community)] Within the overall context of an enabling approach, governments should take appropriate action [in order to promote, protect and, (ensure) the progressive realization of the right to adequate housing.] These include, but are not limited to:

1. Providing adequate legal protection from, and effective remedies against discrimination of any kind in housing as to *race, colour, sex, **sexual orientation** language, religion, political or other opinion, national or social origin, [[property, birth or other status];* race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age, language, religion or conviction**, political or other opinion, *national or social origin, property, birth, nature of residency* or other status
2. Providing legal security of tenure and equal access to land among all, including women and those living in poverty, as well as effective protection [from illegal forced evictions]/15;
3. Adopting policies aimed at making housing habitable, affordable and accessible, including for those who are unable to secure adequate housing through their own means, by inter alia:
 - a) Expanding the supply of affordable housing through appropriate regulatory measures and market incentives;
 - b) Increasing affordability through provision of subsidies and rental and other forms of housing assistance to people living in poverty;

- c) Supporting community-based, cooperative and non-profit rental and owner-occupied housing programmes;
 - d) Promoting supporting services to homeless and other vulnerable groups;
 - e) Mobilizing innovative [domestic] financial and other resources - public and private - for housing and community development;
 - f) Creating and promoting market-based incentives to encourage the private sector to meet the need for affordable rental and owner-occupied housing;
 - g) Promoting sustainable spatial development patterns and transportation systems that improve accessibility to goods, services amenities and work.
4. Effective monitoring and evaluation of housing conditions including the extent of homelessness and inadequate housing and, in consultation with the affected population, to formulate and adopt appropriate housing policies and implement effective strategies and plans to address these problems.

ARTICLE 47

47. International and national cooperation at all levels will be both necessary and beneficial in promoting adequate shelter for all. This is especially needed in areas that are affected by war or by natural, industrial or technological disasters, and in situations in which reconstruction and rehabilitation needs surpass national resources.

ARTICLE 48

48 ter. [To ensure continuing progress toward realizing an adequate standard of living for all national and local governments, as appropriate, should adopt:

(a) Provisions to ensure:

(i) freedom from discrimination based on race, ethnicity, gender, family composition, and disability status in housing and credit markets, and specifically, recognition that the right to an adequate standard of living pertains to every person, including those in female-headed households; and

(ii) legal security of tenure and equal access to land among all, including women and people living in poverty;

(b) Policies aimed at making housing habitable, affordable, and accessible, including:

(i) creation of market-based incentives to encourage the private sector to meet the need for affordable rental housing and home ownership;

48 (ii) promoting spatial development patterns and safe and environmentally sound public transportation systems that improve accessibility to goods, services and amenities;

NOTE WORDING ALREADY AGREED TO IN ARTICLE 44 G

DOCUMENTATION OF PRECEDENTS

RE: PREVENTING AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: PROVIDING SAFE AND LESS POLLUTING BEST PRACTICES — BEST ECOLOGICALLY SOUND TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 48 (iii—vii)

(iii) mobilizing innovative sources of domestic finance - public and private - for housing and community development;

(iv) expanding the supply of affordable housing through appropriate regulatory and market incentives;

(v) promoting sustainable economic development through community partnerships;

(vi) increasing affordability through provision of rental assistance to people living in poverty;

(vii) supporting community-based programmes that provide shelter and supportive services to the homeless;

ARTICLE 48 (vii)

48 (viii) Preserving, protecting and maintaining historical and cultural and Natural heritage, and urging non-party states to sign and ratify the Convention on the Protection of Cultural and Natural Heritage]

DOCUMENTATION OF PRECEDENT.

RE: PROTECTING HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 51 (b-d)

51 (b) [Take full account of the need for socially equitable and environmentally sound *sustained economic growth, of sustainable development principles and of the basic needs for human development and health*] ;/17

(c) Encourage the development of environmentally sound and affordable construction methods and production and distribution of building materials, including strengthening the indigenous building materials industry, based as far as possible on locally available resources;

(d) Promote the free exchange of information on the entire range of the environmental health aspects of construction, including the development and dissemination of databases on the adverse environmental effects of building materials, through the collaborative efforts of the private and public sectors.

ARTICLE 52 (g-h)

52 (g) Encourage the development of environmentally sound and affordable construction methods, and production and distribution of building materials,

including strengthening the local building materials industry, based as far as possible on locally available resources;

(h) Promote, where appropriate, the use of labour-intensive construction and maintenance technologies that generate employment in the construction sector for the underemployed labour force found in most large cities, at the same time promoting the development of skills in the construction sector.

ARTICLE 53

53. In many countries, markets serve as the primary housing delivery mechanism, and hence their effectiveness and efficiency are important to the goal of *sustainable* socially **equitable and environmentally sound** development. It is the responsibility of Governments to create an enabling framework for a well-functioning housing market. The housing sector should be viewed as an integrating market in which trends in one segment affect performance in other segments. Government interventions are required to address the needs of disadvantaged and vulnerable groups, who are insufficiently served by markets.

ARTICLE 55 (d)

55 D [(d) Apply transparent, comprehensive, easily accessible and progressive taxation and incentive mechanisms to stimulate efficient, environmentally sound and equitable use of land, and exploit the full potential of land-based and other forms of **regulations and taxation** in mobilizing financial resources for service provision by local authorities;]

ARTICLE 57 (c)

57 [(c) Encourage the multiplicity and diversity of intervention of *all [stakeholders,]* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision-making process

men and women alike, acting within the market system;] (d) Develop a legal framework of land use aimed at balancing the need for construction with the protection of the environment, minimizing risk and diversifying uses;

ARTICLE 58

58. To eradicate legal and social barriers to the [equal and equitable] access to land, especially the access of women, people with disabilities and other vulnerable groups, Governments, at the appropriate levels, in partnership with the private sector, non-governmental organizations, the cooperative sector, and community-based organizations should:

ARTICLE 58a

(a) Address the cultural, ethnic, religious, social and disability-based causes that result in the creation of barriers that lead to segregation and exclusion, including by encouraging **principle-based education founded upon international principles related to promoting and fully guaranteeing respect for human rights; to preserving, conserving and protecting the environment; to creating a global structure that respects the rule of law, to achieving a state of peace through prevention and peaceful resolution of conflicts; justice and security , and to participating in socially equitable and environmentally sound development. and training for peaceful conflict resolution;**

ARTICLE 59 e

59 (e) *Capitalize on* **Draw upon** the potential contribution of key *[[stakeholders]] in the private formal and informal sectors, and support the engagement of non-governmental organizations, community organizations and the private sector in participatory and collective initiatives and mechanisms appropriate to conflict resolution; individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision-making process*

ARTICLE 63

63. To facilitate **equitable** access to housing for those not served by existing finance mechanisms, Governments *should review and rationalize, where appropriate, systems of subsidies by policies that will ensure their viability, [[equity]] and transparency, thus allowing that* many people without access to credit and land to enter the market.

(e) Ensuring access to basic infrastructure and services

ARTICLE 65

65. To safeguard the health, safety, welfare and improved living environment of all people and to provide adequate and affordable basic infrastructure and services, Governments at the appropriate levels, including local authorities, should promote:

(a) The supply of and access to adequate quantities of safe drinking water;

[[b) Adequate sanitation and [[technically]] [[environmentally sound]] waste systems management, based on perceiving “waste” as a resource, and on drawing upon innovative traditional practices.

ARTICLE 66

66. To ensure the [equitable] provision of basic infrastructure and service delivery systems, Governments at the appropriate levels, including local authorities, should:

(a) Work with all *[stakeholders]* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision related to *in* providing serviced land and *in* to allocating adequate space for basic services, as well as for recreational and open space in the development of new schemes and the upgrading of existing ones;

(g) Promote dialogue among all *[stakeholders]* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision to help provide basic services and infrastructure.

ARTICLE 69

69. To respond effectively to the requirements for **healthy and environmentally safe and sound** *appropriate* planning, design, construction, maintenance, and rehabilitation of shelter, infrastructure and other facilities, Governments at the appropriate levels should:

(a) Encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology;**

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING THE USE OF NATURAL MATERIALS

In cases where natural materials can satisfy the requirements of market, new investment for the expansion of the capacity to produce synthetic materials and substitutes *should shall* not be made (3 a xii, Food, Programme of Action for the establishment of a New International Economic Order, 1974)

RE: SUPPORTING ENDOGENOUS TECHNOLOGY

Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should

be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefore be:

(kk) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating employment and income.

(iv) Conceived to utilize traditional techniques suitable adapted to new materials

(v) emerging from original indigenous research

(vi) Planned so as to take full account of their environmental impact (Habitat

l)

ARTICLE 70

70. To promote and support an adequate supply of locally produced, environmentally sound, affordable, and durable basic building materials, Governments at the appropriate levels, in cooperation with all other *[stakeholders, individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision]* should:

(a) Where appropriate, encourage and support the establishment and expansion of environmentally sound, small-scale local building materials industries and the expansion of their production and commercialization through, inter alia, legal and fiscal incentives, provision of credit, research and development, and information;

(b) As required, provide policies and guidelines to facilitate fair market competition for building materials with enhanced participation of local *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.** and establish a public mechanism to enforce them;

(c) Promote information exchange and flow of appropriate, environmentally sound, affordable and accessible building technologies and facilitate the inter-transfer of **BEST (Best Ecologically Sound Techniques) practices technology recognizing that in many cases traditional practices could be the most ecologically sound.**

(d) With *adequate* attention to safety needs, and **BEST (Best Environmentally Sound Techniques) Practices**, reformulate and adopt building standards and by-laws, and to ensure compliance to safety and Best practices, *where appropriate*, to promote and permit the use of low-cost **endogenous** building materials in housing schemes, as well as by using such materials in public construction works;

(e) Where appropriate, promote partnerships with the private sector and non-governmental organizations to create mechanisms for the commercial production and distribution of basic building materials for self-help construction programmes;

(f) Evaluate on a regular basis the progress made in the pursuit of the above objectives.

ARTICLE 71a

71 [(a) Intensify and support research efforts to find substitutes for or optimize the use of non-renewable resources, particularly fossil fuels, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;]

Reaffirm the obligation undertaken in 1981 through the General Assembly Resolution at the UN Conference on New and renewable Sources of Energy to move through “the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy. In addition, establish a time-table for the phasing out of the use of fossil fuel and of civil nuclear energy as proposed in the 1992 Nobel Laureate Declaration.

DOCUMENTATION OF PRECEDENTS

RE: DEVELOPING SAFE AND SOUND RENEWABLE ENERGY SOURCES

cooperate to increase the availability of capacity, capabilities and relevant technologies ...for utilizing and producing environmentally [safe and} sound renewable energy resources, such as solar, wind, geothermal, hydro-power and biomass, ... Each resource should be utilized in a manner that ... minimizes environmental stress and health impacts, (Section 9. Subsection 9 g Agenda 21, March 1992)

RE: CONVINCED OF THE IMPORTANCE OF DEVELOPING NEW AND RENEWABLE SOURCES OF ENERGY

Convinced of the importance of developing new and renewable sources of energy in order to contribute to meeting requirements for continued economic and social development, particularly in the

developing countries, through, inter alia, the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy, Stressing that the primary responsibility for promoting the development and utilization of new and renewable sources of energy rests with individual countries, that in this regard international co-operation is indispensable and should be directed to assist and support national efforts; that developed countries bear a special responsibility to ensure that both their bilateral and multilateral efforts contribute actively to this end and that other countries in a position to do so should also continue to promote efforts in this regard, (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: RECOGNIZING THE URGENT NEED FOR TRANSFERRING NEW AND RENEWABLE SOURCE OF ENERGY TO DEVELOPING COUNTRIES

Recognizing the urgent need for adopting effective measures to facilitate the transfer and adaptation of technology from developed to developing countries in particular and for mobilization of financial resources for the development of new and renewable sources of energy in developing countries (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: PHASING OUT OF FOSSIL FUEL AND NUCLEAR ENERGY
to establish a time-table for phasing out fossil fuel and nuclear energy and for the rapid development of solar and other forms of non-polluting energy, and for more efficient energy use (Nobel Laureate Declaration, UNCED, 1992)

RE: RECOGNIZING THE ADVERSE EFFECTS OF CLIMATE CHANGE

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low

and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof (Framework Convention on Climate Change, 1992).

RE: TREATING WASTE AS A RESOURCE

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I))

(b) In the development of human settlements, the quality of the environment must be preserved. Pollution should be prevented by minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)

(vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

72. *Vulnerability is the inability to compete on an equal basis for resources and opportunities.* Vulnerability is often caused by the marginalization in and exclusion from the socioeconomic mainstream and decision-making processes. If vulnerability is to be **eliminated** *reduced*, there is a need to *improve and* ensure the discharging of obligations to recognize the right of *access by* members of vulnerable groups to **healthy, safe and environmentally sound shelter, to social security, the right to be free from hunger, the right to be free from hunger as undertaken by states parties to the International Covenant of Social, Cultural and Economic Rights 1966.** This would include access to finance, infrastructure, basic social services, safety nets **and a genuine community involvement and participation in decision-making processes from the determining of the terms of reference and throughout the process.** [Depending on local conditions in the housing sector and the availability of legal protections guaranteeing equal access to resources and opportunities, vulnerable individuals come from disadvantaged groups, such as people living in poverty, homeless persons, older persons, women, youth, children (particularly street children), persons with disabilities, [documented] migrants, internally displaced persons, people affected by natural and technological disasters and environmental degradation, minorities and indigenous peoples.] With regard to shelter, members of vulnerable groups are especially at risk when they may have no security of tenure or where they lack basic services or face disproportionate environmental and health impacts, or because they may be excluded, either inadvertently or deliberately, from the housing market and services.

DOCUMENTATION OF PRECEDENT

RE: INCLUDING MIGRANTS IN LIST OF DISADVANTAGED GROUPS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people,

indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

72 ter. *[Inadequate shelter or lack of shelter contributes to a loss of dignity and health in the lives of refugees.]* There is a need to strengthen the support for the international protection of and assistance to refugees, especially refugee women and refugee children who are particularly vulnerable. Actions

RE: ACCORDING REFUGEES THE SAME TREATMENT AS IS ACCORDED TO CITIZENS GENERALLY

Except where this Convention contains more favourable provisions, a Contracting State shall accord to refugees the same treatment as is accorded to [citizens] generally. (Article 7, 1., Convention Relating to the Status of Refugees, 1951).

RE: ACCORDING THE SAME TREATMENT AND PUBLIC RELIEF TO REFUGEES

The Contracting States shall accord to refugees lawfully staying in their territory the same treatment with respect to public relief and assistance as is accorded to their nationals (Article 23, Convention Relating to the Status of Refugees, 1951).

DOCUMENTATION OF PRECEDENT

RE: INCLUDING MIGRANTS IN LIST OF DISADVANTAGED GROUPS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

ARTICLE 74

74. To provide for the shelter needs of vulnerable groups, Governments at appropriate levels, including local authorities, in cooperation with all *[stakeholders]*, **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision as appropriate**, should:

- (a) Provide, where appropriate, targeted and transparent subsidies, social services and various types of safety nets to the most vulnerable groups;
- (b) Work with the private and non-profit sectors and community-based organizations and other actors to provide adequate shelter for members of vulnerable groups, making special efforts to remove all physical constraints to the independent living of persons with disabilities and of older persons;
- (c) Strive to provide special living facilities and shelter solutions for members of vulnerable groups, as appropriate, such as shelters for women subjected to violence or shared living arrangements for persons with mental or physical disabilities;
- (d) Provide an environment that enables vulnerable groups to participate in the social, economic and political life of their community and country.

ARTICLE 75

75. To reduce vulnerability, Governments at appropriate levels, including local authorities, should:

- (a) Work with non-governmental organizations and community-based organizations to assist members of vulnerable groups to obtain secure tenure;
- (b) Composite ~~[[Enact and enforce laws to protect people from illegal evictions]; and to retain, and if not in place, to institute rent-control systems.~~
~~(b) [[Protect by law all people from illegal evictions, including dismantling of rent-control systems, and, where evictions are unavoidable, ensure that they are strictly according to the law];~~
 (b ter.)
- (c) Promote and support self-help housing programmes and initiatives;
- (d) *Promote, where appropriate, Ensure* compliance with and enforcement of all health and environmental laws, *especially* in low-income areas with vulnerable groups

DOCUMENTATION OF PRECEDENT**RE: ENSURING CORPORATE COMPLIANCE WITH THE LAW;**

“all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” (UN Conference on Women: Equality, Development and Peace. Section 167).

(d bis.) Facilitate actions aimed at, inter alia, ensuring legal security of tenure, capacity-building, and improving access to credit, which, apart from subsidies and other financial instruments, can provide safety nets that reduce vulnerability;

(e) Pursue policies that will provide information to and consultation with vulnerable groups;

(f) Facilitate the availability of legal information and assistance to vulnerable groups;

(g) Promote the use of tools for disaster prevention, mitigation, and preparedness in order to reduce the vulnerability of populations to natural, man-made and technological disasters. -----

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR IMPLEMENTATION

C. Sustainable human settlements development in an urbanizing world
Article 76—

ARTICLE 76

76. [Rapid urbanization, the concentration of urban population in large cities, the sprawl of cities into wider geographical areas and the rapid growth of mega-cities are among the most significant transformations of human settlements.] By the year 2000 more than half of the world's population will live in urban areas and approximately 40 per cent of them will be children. Urban areas will strongly influence the world of the twenty-first century, and urban and rural populations will be increasingly interdependent for their economic [, environmental] and social well-being. Among the economic and social factors influencing this process are population growth and voluntary and involuntary migration, real and perceived employment opportunities, cultural expectations, changing consumption and production patterns and serious imbalances and disparities among regions.

ARTICLE 77

NOTE INTEGRATE 77

77. [77 ter. Given the magnitude of the challenges that human settlements pose, society must value and take advantage of the wisdom, knowledge and skills of every person. **To draw upon the wisdom, knowledge and skills of citizens is the basis for genuine community involvement and participation. Individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision should be involved in the decision-making process. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the implementation and evaluation of the process.**

Urban settlements *hold/ held the* promise for human development and protection of the world's natural resources through their **potential** ability to support large numbers of people while limiting their impact on the natural environment. Yet, *many* cities are witnessing harmful patterns of growth, of production and consumption, of land use and of mobility, as well as degradation of their physical structure. Such problems are often synonymous with soil, air and water pollution, waste of resources and destruction of natural resources. Some human settlements are also subject to limited water supply, sanitation, drainage, and to dependency upon toxic and non-renewable energy fuel sources and irreversible loss of bio-diversity. Many of these trends are aggravated or accelerated by high population growth and the magnitude of rural-to-urban migration. **[As recognized in Agenda**

21 UNCED Demographic factors, combined with poverty and lack of access to resources *[[in some areas]]* and excessive consumption and wasteful production patterns in others/unsustainable patterns of production and consumption, particularly in industrialized countries, cause or exacerbate problems of environmental degradation and resource depletion and thus inhibit *sustainable socially equitable and environmentally sound* development.] Therefore, a largely urbanized world implies that *sustainable socially equitable and environmentally sound* development will depend very largely on the capacity of urban and metropolitan areas to manage production and consumption patterns, and the transport and waste disposal systems needed to preserve the environment.

ARTICLE 78

78. In the process of urbanization, policies and programmes for sustainable development of human settlements in both rural and urban areas require strong sub-national governmental institutions working in partnership with all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision-making process**

Such institutions are still weak in many countries, and their effectiveness is threatened by increasing problems of political regionalism and ethnic strife. All of these concerns and demands require a regional and cross-sectoral approach to human settlements planning which places emphasis on rural/urban linkages and treats villages and cities as two ends of a human settlement's continuum in a common ecosystem.

ARTICLE 79

79. Increasingly, cities have a network of linkages that extends far beyond their boundaries. *[Sustainable urban development should consider the carrying capacity of the entire ecosystem supporting such development, including the prevention and mitigation of adverse environmental impacts occurring outside urban areas]*. The unsafe disposal of waste leads to the degradation of the natural environment: aquifers, coastal zones, ocean resources, wetlands, natural habitats, forests and other fragile ecosystems are affected, as are the homelands of the indigenous people. *[Trade in hazardous, toxic and atomic waste and substances shall should [not] be carried out. /in accordance with relevant international agreements by parties to those agreements]*. Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems.

DOCUMENTATION OF PRECEDENTS

RE: DEFINING OF BIODIVERSITY AND ECOSYSTEM

Biodiversity” is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

“Ecosystem” means a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Convention on Biological Diversity, UNCED, 1992). Biodiversity is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

RE: REDUCING LOSS OF BIOLOGICAL DIVERSITY

The loss of biological diversity may reduce the resilience of ecosystems to climatic variations and air pollution damage. Atmospheric changes can have important impacts on forests, biodiversity, and freshwater and marine ecosystems, as well as on economic activities, such as agriculture (9.16., Atmosphere, Agenda 21, 1992)

RE: RECOGNIZING INCREASED MARINE ENVIRONMENT DEGRADATION

Degradation of the marine environment can result from a wide range of sources. Land-based sources contribute 70% of marine pollution, while maritime transport and dumping-at-sea activities contribute 10 % each (Marine, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING THE URGENCY FOR CONSERVING AND PRESERVING NATURE AND NATURAL RESOURCES

Man, Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and preserving nature (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982) World Charter of Nature, 1982)

l and social impact assessment are essential]]. **Social impact assessment takes into account affordability, accessibility, access to work, transport and services, environmental, health and security considerations. (CP)**

ARTICLE 80

80. The diversity of types of human settlements is a key component to creating just and sustainable societies. The living and working conditions in all human settlements, including regional urban centres, rural service centres, rural hamlets, rural communities, market towns and villages, must be improved, with particular emphasis on shelter, social and physical infrastructure, and services. The maintenance and development of rural settlements require sustainable agriculture and forestry activities and improved agricultural technologies, economic diversification and expanded employment opportunities created by encouraging appropriate and environmentally sustainable investment in industry and related economic production and service activities.

ARTICLE 81

81. International cooperation, including city-to-city cooperation, is both necessary and mutually beneficial in promoting sustainable human settlements development. Depending on the context and needs of the cities, towns and villages within each country and region, special attention should be paid to the most critical issues, such as changing production and consumption patterns; energy efficiency; sustainable resource and land-use management; poverty eradication; population and health; water supply, sanitation and waste management; disaster prevention, mitigation, preparedness and management; cultural, natural and historical heritage; environmental protection; industry; infrastructure; and basic services, such as health and education facilities and services. Habitat II provides an opportunity to focus on the effect that current patterns of human settlement development will have on our ability to achieve the objectives established at recent United Nations conferences. Close attention to trends in urban development is essential to the viability of sustainable human settlements development in rural and urban areas alike.

ARTICLE 82

[82 COMPOSITE Land is essential for the provision of food, water and energy for many living systems, and it is critical to human activity. In rapidly growing urban areas, access to land is rendered increasingly difficult by the potentially competing demands of housing, industry, commerce, infrastructure, transport, agriculture and the need for open spaces and green areas, and the protection of fragile ecosystems. The rising costs of urban land and other factors prevent persons living in poverty and members of other vulnerable and disadvantaged groups from gaining access to suitable land, the location of which does not pose economic, environmental or health risks to the residents because of such reasons as

proximity to polluting industrial facilities in appropriate geographical conditions or susceptibility to natural disasters. Bringing the development of urban areas into harmony with the natural environment and the overall system of settlements is one of the basic tasks to be undertaken in achieving a sustainable urbanized world. The tools for achieving a physically more balanced development include not only specific urban and regional policies and legal, economic, financial, cultural and other measures, but also innovative methods of urban planning and design and of urban development, revitalization and management. National, sub-national and local policies and problems need to be integrated. [The precautionary principle/approach and the use of environmental and social impact assessment are essential].

bis. Land-use is closely related to water resource management because of the critical need to protect aquifers and other fresh-water resources from harmful effects of human settlements. Special attention should be paid to **ensuring that trade in hazardous wastes and substances should not be carried out, and to guiding potentially hazardous activities away from the fragile areas. Oceans and the atmosphere should be protected from land-based sources of pollution, where appropriate.]**

Through mandatory international normative standards (INS, 1997), states shall invoke and ensure compliance with the precautionary principle. States shall ensure, as agreed in the Platform of Action, UN Conference on Women, that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).

DOCUMENT OF PRECEDENTS

RE: PROVIDING ACCESS TO WATER

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered; by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

RE: INVOKING THE PRECAUTIONARY PRINCIPLE

The precautionary principle has been enunciated in international documents since at least the 1972 United Nations Conference on Humans and the Environment (Stockholm Convention), where it appeared in a rudimentary form; it was then reinforced in the 1982 UN Resolution 37/7, the World Charter of Nature, and then re-enunciated throughout the UNCED documents.

The precautionary principle has been enunciated” as follows:

where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation
(version of precautionary principle in BC Working Group on Developing Criteria for Standards, 1994)

The precautionary principle shall be applied to all potentially harmful emissions, contaminants, agents of pollutants, or re concentrated substances—created through imbalance in biogeochemical cycles

States shall ensure that in all their activities and in the activities of corporations including transnational corporations there is adherence to the anticipatory principle.

In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).

In the international documents, different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

DOCUMENTATION OF PRECEDENTS

ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (World Charter of Nature)

RE: ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

Undertake measures to prevent soil erosion and promote erosion-control activities in all sectors. (13.16 Fragile ecosystem, Agenda 21)

RE: ENSURING CRADLE-TO-GRAVE

taking into account the cradle-to-grave approach to the management of hazardous wastes, in order to identify options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction (20.20 e Hazardous wastes, Agenda 21)

RE: ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

RE: ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products. (19.15 e, Toxic Chemicals, Agenda 21)

risk reduction involves broad-based approaches to reducing the risks of toxic chemicals, taking into account the entire life cycle of the chemicals. (19.45, Toxic chemicals, Agenda 21)

RE: ENSURING CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

RE: ENSURING RESPONSIBLE CARE

Industry should be encouraged to (19.51 Toxic chemicals) "develop application of a 'responsible care' approach by producers and

manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

RE; REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

RE; INVOKING THE ANTICIPATORY PRINCIPLE

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a trans-boundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

ARTICLE 83

83 (Composite). Many cities are using peripheral land for urban-related purposes in a wasteful manner while existing serviced land and infrastructure may not be adequately developed and used. To avoid unbalanced, unhealthy and unsustainable growth of human settlements, it is necessary to promote land-use patterns that minimize transport demands, save energy and protect open and green spaces. Appropriate urban density and mixed land-use guidelines are of prime importance for urban development. National, sub-national and local policies and development plans must be carefully re-examined to ensure optimal land use and geographically better-balanced economic development, including the protection of indispensable agricultural land; land that sustains biodiversity, water quality and groundwater recharge; fragile areas, including coastal areas; and other sensitive areas in need of protection. Green spaces and vegetation cover in urban and peri-urban areas are essential for biological and hydrological balance and economic development. Vegetation creates natural habitats and permits a better absorption of rainwater by natural means, which implies savings in water

management. Green areas and vegetation also play an important part in reducing air pollution and in creating more suitable climatic conditions, thereby improving the living environment in cities. Healthy and environmentally sound agricultural activities and the provision of common land should be integrated into the planning of urban and peri-urban areas.

ARTICLE 84e

84 (e) *Encourage* **Ensure genuine community involvement and participation among the public, private and voluntary sectors and other [stakeholders of individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]** in the caring for and the using *managing* land resources for **socially equitable and environmentally sound sustainable** urban development;

Urban and rural communities will not be environmentally sound until states shall undertake to ensure the phasing out of hazardous, toxic and nuclear activities, and actively promote and funding Best Environmentally Sound Technology (BEST).

[(e bis.) Promote urban planning, housing and industrial siting initiatives that ban and thus prevent *discourage* the siting of hazardous, toxic or nuclear industrial facilities in residential areas;] in any sensitive ecosystem, or eventually in any location. No toxic, hazardous or atomic wastes shall be produced after 1997. States shall immediately reduce and eventually eliminate the production of toxic, hazardous and atomic wastes, and states shall promote and fund active conversion to BEST (Best Environmentally Sound Techniques) practices.

[(e ter.) Seek to prevent or *minimize* pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that ban *discourage the disproportionate* siting of polluting industrial facilities, and in particular the disproportionate siting of industrial facilities in areas inhabited by people living in poverty or members of other vulnerable and disadvantaged groups;]

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or

hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States *should shall* effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

ARTICLE 84f & i

84 f*(f) Develop and support the implementation of improved **land-care and use management** practices that deal comprehensively with competing urban land requirements for housing, industry, commerce, infrastructure, transport, green spaces and forested areas, taking into account the need of spaces for everyday activities such as playgrounds, **wilderness, forests**, parks, sports and recreation areas and areas suitable for gardening and urban agriculture;

84 (i) Institutionalize a participatory approach to sustainable human settlements through the development and support of strategies and mechanisms that encourage open and inclusive dialogue among all **[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]**, with special attention to the needs and priorities of women, minorities, children, youth, people with disabilities, older persons and persons living in poverty and exclusion;

ARTICLE 85

85. To develop and support improved and integrated land-management, Governments at the appropriate levels, including local authorities, should:

(a) Develop integrated land information and mapping systems;

[(b) Consider, as appropriate, establishing local structures, such as commissions and tribunals for the enforcement of *land management* socially equitable and environmentally sound laws and regulations in order to make enforcement and appeals more equitable, efficient and effective;]

[(c) Develop the land market through the establishment of an effective and environmentally sound legal framework in order to mobilize/which encompasses lands with diverse tenure systems];

(d) Develop, with the participation of all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, comprehensive and environmentally sound land-care/use *strategies* at the local level.

ARTICLE 85

86. Promoting equitable, socially viable, **environmentally sound** and stable human settlements is inextricably linked to reducing and eradicating poverty. We share the concerns of the First United Nations Decade for the Eradication of Poverty which also acknowledges *[the increasing feminization of poverty]*. Poverty has various manifestations, which include homelessness and inadequate housing. The eradication of poverty requires, inter alia, sound macroeconomic policies aimed at creating employment opportunities, equal and universal access to economic opportunities, (and special efforts to facilitate such access for the disadvantaged); education and training that will promote sustainable livelihoods through freely chosen productive employment and work, and basic social services, including health facilities. However, there are no universal solutions which can be applied. People living in poverty must be empowered through freely chosen participation in all aspects of political, economic and social life. Other key elements of a poverty reduction strategy include policies geared to *[reducing inequalities, increasing opportunities, providing access to resources and [employment] income;]* providing social protection for those who cannot support themselves; recognizing the special needs and skills of women; developing human resources; improving and making more accessible infrastructure, including communication facilities; and *[taking comprehensive national responsibility for meeting]* the basic needs of all.

ARTICLE 87

87. To promote *[equitable]* the provision of services in human settlements, Governments at the appropriate level, including local authorities, should:

[(a) Formulate and implement integrated settlement development policies which ensure equal access to and maintenance of basic services, including those related to the provision of food security; food aid education; employment and livelihood; primary and universal health-care, including reproductive and sexual health care and services; safe drinking water and sanitation; adequate— affordable, accessible, healthy and safe, environmentally sound shelter with tenure- security; and access to open and green spaces; giving special priority to the needs and rights of women and children who often bear the greatest burden of poverty;] **As already committed to in the UNCED documents and in the Platform of Action UN Conference on Women: Equality, Development and Peace.**

DOCUMENTATION ON PRECEDENTS

RE: ENSURING FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty UNCED)

RE: PROVIDING FOOD SECURITY

Accepting and implementing the concept of forward planning of food aid

All donor countries **shall should accept and** implement the concept of forward planning of food aid and *make all efforts to provide* commodities and/or financial assistance that will ensure adequate quantities of grains and other food commodities (Section 12 Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: COOPERATING IN THE PROVISION OF FOOD AID

Co-operating in the provision of food aid for meeting emergency and nutritional needs as well as for stimulating rural employment through development projects (Section 12, Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: PROMOTING HEALTH CARE

Governments should establish measures that will directly or indirectly set up an effective primary health care and maternal health care system accessible to all " (3.7.e Combating Poverty)

the provision of a safe water supply and sanitation and the promotion of a safe food supply and proper nutrition. Particular attention should be directed towards food safety, with priority placed on the elimination of food contamination; comprehensive and sustainable water policies to ensure safe drinking water and sanitation to preclude both microbial and chemical contamination; and promotion of health education...education and appropriate services regarding responsible planning of family size... values... (6.3. Protecting and promoting health UNCED)

RE: PROVIDING ACCESS TO HEALTHY SHELTER

Access to safe and healthy shelter is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of national and international action. The right to adequate housing as a basic human right is enshrined in the Universal Declaration of Human rights and the International

Covenant on Economic, Social and Cultural rights. (7.6, Settlement, UNCED)

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. (3.7.o Combating Poverty, UNCED)

" provide the poor with access to fresh water and sanitation (3.7. p Combating Poverty, UNCED)

"provide the poor with access to primary education. (3.7.q Combating Poverty, UNCED)

RE: IMPROVING HEALTH AND ENVIRONMENT

The improvement of human health is one of the most important objectives of development. The deterioration of environmental quality, notably air, water and soil pollution owing to toxic chemicals, hazardous wastes, radiation and other sources, is a matter of growing concern. Malnutrition, poverty, poor human settlements, lack of good-quality potable water and inadequate sanitation facilities add to the problems of communicable and non-communicable diseases. As a consequence, the health and well-being of people are exposed to increasing pressures. (16.12 Biotechnology, UNCED)

RE: SATISFYING BASIC HUMAN NEEDS OF DRINKING WATER

freshwater resources are an essential component of the earth's hydrosphere and an indispensable part of all terrestrial ecosystems. (18.7 Fresh water, UNCED)

Priority must be given to the sustenance of land/water ecosystems, with particular attentions to wetlands and biodiversity, and the satisfaction of basic human needs for drinking-water, health protection and food security. (18.8. Fresh water, UNCED)

"One in three people in the developing world still lacks these two (safe drinking-water and sanitation) more basic requirements for health and dignity. (18.58 Freshwater UNCED)

"Water is a finite resource, essential for the sustenance of life on earth (18.2 Freshwater UNCED)

"water is needed in all aspects of life (18.6 fresh water UNCED)

ARTICLE 87 b

(b) Where appropriate, re-direct public resources to enable community-based management of services and infrastructure and promote the participation of *the*

private sector, local business engaged in **service industries and BEST practices** local residents, including people living in poverty, women, people with disabilities, indigenous people and members of disadvantaged groups, in the identification of public service needs, spatial planning and the design, provision and maintenance of urban infrastructure and open and green spaces.

ARTICLE 88

88. To promote social integration, Governments at the appropriate level, including local authorities, recognizing the importance of volunteer contributions and in close cooperation with non-governmental organizations, community-based organizations, the cooperative sector and public and private foundations, should:

- (a) Prohibit ~~[[all]]~~ discriminatory, exclusionary practices related to shelter, employment and access to social and cultural facilities;
- (b) Offer opportunities and physical spaces to encourage positive interaction among culturally diverse groups;
- (c) Involve marginalized and/or disadvantaged groups and individuals in the planning, decision-making, monitoring and assessment related to human settlements development;

~~[[d)] Encourage, in cooperation with relevant *[stakeholder individuals and organizations of civil society with a wide range of experience and expertise,]*, the development of school curricula geared to conscious understanding and cooperation among diverse cultural groups, through the promotion of principle-based education—education based on the fundamental principles enshrined within International documents related to guaranteeing respect for human rights, to preserving, protecting and conserving the environment, to enabling social justice, to achieving a state of peace; justice and security , and to participating in socially equitable and environmentally sound development.]~~

ARTICLE 90

90. **In order to promote the genuine involvement and participation of women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision-making process.** *gender-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, in collaboration with women's groups and other ~~[stakeholders [90 bis. [In order to develop the full potential of the youth and prepare them to take a responsible role in the development~~*

of human settlements, Governments at the appropriate levels, including local authorities and in partnership with private sector, non-governmental youth organizations and other non-governmental organizations as well as community-based organizations, should:

[90 ter. In order to promote disability-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, should:

ARTICLE 90 a

(a) Adopt, *where appropriate*, by-laws, standards and norms and develop planning guidelines that take into consideration the needs and situations of and in consultation with **women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process, and ensure their genuine involvement and participation from the determination of the terms of reference and throughout the planning of human settlements, development of human settlements and decision making processes about human settlements. as well as in the**

of women and men, and girls and boys in relation to human settlements planning, development and decision-making, and in the provision of and access to basic services, including public transportation, health and educational facilities;

(a bis.) Consider in the planning process that women are often involved in the informal sector and use their homes for business or market activities;

[(a) Integrate youth concerns into all relevant national, sub-national and local policies, strategies, programmes and projects;

[(a bis.) Enable youth by supporting and valuing their ability to play an active and creative role in building sustainable communities;

ARTICLE 90 b

(b) Promote representative structures, *while ensuring full and equal participation women's [and equal opportunities for]* and equal access to **all levels of education and training of for women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized in or from the educational system.**

[(c) Take special action to reduce the drop-out rate at all levels of education through increased relevance and quality education, and to facilitate the access of school leavers to sustainable livelihood;

Eliminate barriers

(d) Eliminate legal and customary barriers, where they exist, to women's equal access to and control of land and finance

ARTICLE 90 e*Genuine involvement and participation in decision making*

(c) Develop policy guidelines and programmes that encourage and actively pursue the involvement of women's groups in all aspects of community development related to environmental infrastructure and the provision of basic urban services and encourage women's own cooperatives, as well as their membership in other cooperatives;

(c bis.) Recognize that women, as primary family caregivers, spend a greater proportion of time in the home and community [and therefore, as experts in their own home and community, should participate fully and equally in all aspects of community development, especially environmental infrastructure and basic services];

[(e) Recognize that people with disabilities are experts in their own housing and community requirements and should be decision-makers, designers and implementers of them;

(f) Generate and disseminate [gender] disaggregated data, while ensuring that such statistics are collected, compiled, analyzed and presented [,] by age and sex; set up monitoring mechanisms in government structures, and integrate the results into mainstream policies for sustainable human settlements development;

Enhance awareness of issues

[(f bis.) Enhance community awareness of issues facing homeless and refugee women, especially those issues related to physical and sexual abuse, and design appropriate community responses;]

[(f) Enhance community awareness of health care issues facing persons with disabilities, such as physical and sexual abuse and substance abuse, and design appropriate community responses;

Equal access

[(g) Ensure equal access to housing, land and public services in the urban and rural areas in line with the International Convention on the Elimination of All Forms of Discrimination against Women.]

[(g) Develop policy and guidelines and provide services that would enable persons with disabilities to be housed in community-based settings;

Equal opportunity

[(h) Develop and implement programmes that enable people with disabilities to have an equal opportunity to realize an income sufficient to attain an adequate standard of living;

[(b) Promote representative structures, ensuring full and equal opportunities for participation of persons with disabilities;

[(i) Consider in the planning process that persons with disabilities are often involved in the informal sector and use their homes for business or market activities.]

(c ter.) Foster economic policies that have a positive impact on the employment and income of women workers in both the formal and informal sectors and adopt specific measures to address women's unemployment, in particular their long-term unemployment;

Establish programmes

(e bis.) Establish programmes that address the [severe/absolute] poverty found among rural women, focusing on their need for adequate shelter and employment;

Encourage awareness-raising

[(d) Encourage awareness-raising campaigns and other actions developed and implemented by youth that are aimed at promoting the appreciation by the youth of historical, natural and cultural heritage and at increasing their consciousness of the environmental values and environmental implications of their consumption and behavioral choices, especially those related to sustainable human settlements development.]

e) Promote equal access to all levels of education for girls, **youth, young with young** and women;

[(c) Promote equal access to all levels of education and skills development for persons with disabilities;

[(b) Provide equal access to basic education, while paying special attention to people living in poverty and to youth living in rural areas, and addressing constraints created by distance, lack of educational facilities and social or economic barriers;

Generate data

[(d) Generate and disseminate disaggregated data, while ensuring that such statistics are collected, compiled, analyzed and presented by age, sex and

work status; set up monitoring mechanisms in government structures and integrate the results into mainstream policies for sustainable human settlements developments;

ARTICLE 91

91. To prevent and reduce violence and crime, especially at the local levels, Governments, in partnership with *all* **[[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who have been excluded through fear and mistrust]]**, should:

(a) Design, create and maintain livable human settlements that encourage the use of public spaces as centres of community life so that they do not become places for criminal activity;

[[a bis.) Guarantee basic education to all;] [(a ter.) Assist crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and result in crime, including by addressing poverty and inequality as the two basic components of the social development approach;]

(b) Encourage youth and children, in particular street children, to become **[[stakeholders i] involved in determining** their own future and their community's future through education, recreation, and job training and counseling that can attract *private sector investment support from individuals and organizations of civil society support from non-profit organizations*;

(b bis.) Enhance women's safety in communities through the promotion of a gender perspective in crime prevention policies and programmes by increasing in those responsible for implementing these policies the knowledge and understanding of the causes, consequences and mechanisms of violence against women;

(c) Establish programmes designed to improve the skills of local leadership in group facilitation, conflict resolution and intervention;

(d) As appropriate, promote personal security and reduce fear by improving police services, making them more accountable to the communities they serve, and by encouraging and facilitating, whenever appropriate, the formation of lawful community-based crime prevention measures and systems;

(e) Provide accessible, affordable, impartial, prompt and humane local systems of justice by, inter alia, facilitating and strengthening, where appropriate, existing traditional institutions and procedures for the resolution of disputes and conflicts;

(e bis.) Encourage the establishment of programmes and projects based upon voluntary participation, especially of children, youth and older persons, to prevent violence, including violence in the home, and crime;

(e ter.) The concerted and urgent action to dismantle international and national sex trafficking networks.

ARTICLE 93

93. [Sustainable human settlements depend on the creation of a better environment for human health and well-being, which will improve the living conditions of people and decrease disparities in their quality of life. People are entitled to a healthy and productive life in harmony with nature; furthermore, improved health can also contribute more to economic and social development.]

(alternative text) [A better environment for human health and well-being is essential for sustainable human settlements. People are entitled to a healthy and productive life in harmony with nature. People with improved health can contribute more to economic and social development.]

The health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease. Children's well-being is a particularly reliable indicator for healthy urban environments. Measures to prevent ill health and disease are as important as the availability of appropriate medical treatment and care. It is, therefore, essential to take a holistic approach to health, whereby both prevention and care are placed within the context of the environmental policy, supported by effective management systems and plans of action incorporating targets that reflect local needs and capacities. [Education for all is a fundamental requirement for enabling women and men, young and old, to gain from improved practices and make use of and demand appropriate infrastructure and health and environmental services.]

ARTICLE 93

* [95. Many pollution-related risks to health are particularly high in urban areas, as well as in low-income areas, because of higher concentrations of pollutants from, inter alia, industry, traffic, fumes from cooking and heating devices, overcrowding and inadequate solid and liquid waste management. Environmental risks in the home and the work place may have a disproportionate impact on women's health because of women's different

susceptibility to the toxic effects of various chemicals and given the nature of tasks that women frequently undertake. Environmental risks in the home may also have a disproportionate impact on children, and on future generations.]

95 bis. Many environmental contaminants, such as radioactive materials and persistent organic pollutants, work their way into the food chain and eventually into human beings, thus compromising the health of present and future generations.

DOCUMENTATION OF PRECEDENT

RE: ENSURING THE PRESERVATION OF SPECIES AND ECOSYSTEMS FOR THE BENEFIT OF PRESENT AND FUTURE GENERATIONS

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: NOT COMPROMISING THE ABILITY OF FUTURE GENERATIONS TO MEET THEIR OWN NEEDS

Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

[95 ter. Unsustainable and wasteful production and consumption patterns [particularly in industrialized countries] also lead to increasing problems in waste management. It is essential to intensify efforts aimed at minimizing the production and discharge of waste, and at recycling and reuse as much as possible, and disposing of the remainder in an environmentally sound manner. This will require changes in attitudes and consumption patterns, as well as in the design of buildings and neighbourhoods as well as innovative, efficient and sustainable modalities for waste management.]

[95 quart. The design of the built environment is recognized as having an impact on people's well-being and behaviour and, thereby, on people's health. Good design in new housing and in upgrading and rehabilitation is important for the creation of sustainable living conditions. The large-scale development of high-rise housing can affect the micro-climate in an adverse way; it often has an alienating effect on social life; it reduces children's

access to safe outdoor play; and it is difficult to maintain and operate such a habitat. The large-scale development of high-rise housing requires proper maintenance, regular technical inspection, and social control and safety measures.]

ARTICLE 96

96. To improve the health and well-being of all people throughout their life span, particularly the people living in poverty, Governments at the appropriate levels, including local authorities, and *in partnership with the genuine involvement and participation of other [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, should:

(a) Develop and implement national, sub-national and local health plans or strategies and strengthen environmental health services to prevent, mitigate and respond to diseases and ill health from poor conditions in living and working environments and the conditions of people living in poverty;

[(a bis.) Continue work towards the Agenda 21 objective of achieving a 10 to 40 per cent improvement in health indicators by the year 2000;]

(b) Adopt measures to prevent and control air, water and soil pollution and to reduce noise levels, *where appropriate*, and develop, and develop and ensure access to appropriate preventive and curative health care systems in order to tackle related health problems;

(b bis.) Ensure adequate research to assess how and to what extent women and children are particularly susceptible or exposed to environmental degradation and hazards, including, as necessary, research and data collection on specific groups of women and children, particularly women with low income, indigenous women and women belonging to minorities;

(c) Improve shelter conditions so as to mitigate health and safety risks, particularly risks to women, older persons, children and people with disabilities, which are associated with activities in the home;

(d) Build capacity at all levels for effective environmental health management;

(d bis.) Develop and implement programmes to ensure availability of access to a full range of affordable, **universal** [good quality/basic] health care services for women [throughout their life span, including reproductive health care];

(d ter.) Develop, where appropriate, criteria for maximum permitted safe noise exposure levels and promote noise assessment control as part of environmental health programmes;

(e) Raise awareness of the inter-dependencies between environment and health and develop within communities the knowledge, attitudes and practices needed to improve personal and community health, with special attention to hygiene;

[(e bis.) Promote, where appropriate, planning and good design in human settlements, both in new developments and in upgrading and rehabilitation, while emphasizing aesthetic qualities as well as sound and sustainable technical and functional qualities, enriching and enlightening the overall quality of life of the people;]

(f) Establish processes to increase the exchange of information, experience and technical assistance among national, sub-national and local governments, [including among governments at the same level] and across sectors for environmental health improvements;

[(f bis.) Ensure that due priority is given and adequate resources made available, at the national, regional and international levels, to combat the threat to individuals and public health posed by the rapid spread of HIV/AIDS globally and by the re-emergence of major diseases, such as tuberculosis, malaria, onchocerciasis (river blindness) and diarrhoeal diseases, in particular, cholera;]

(g) Promote safe and healthy work place conditions for men and women.

ARTICLE 97

97. To improve environmental conditions and reduce industrial and domestic waste and other forms of health risks in human settlements, Governments at the appropriate levels and in partnership with all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]* should:

(a) Develop and implement national and local *[sustainable socially equitable and environmentally sound development plans and]* policies and specific cross-sectoral programmes addressing all relevant chapters of Agenda 21. These should be action-oriented and have clear targets and schedules;

(b) Develop laws and policies that specify appropriate ambient environmental quality levels and set targets for environmental improvements and identify

instruments for their achievement appropriate to national and sub-national priorities and conditions;

(c) Establish, equip and build capacity for monitoring and evaluating compliance with environmental regulations and effectiveness of enforcement at all levels;

[(d) Set high mandatory environmental standards and technical regulations so as to drive and facilitate the selection and development of BEST (Best Ecologically Sound Technology) practices appropriate technologies and their appropriate use;]

[(d bis.) Identify and address, as appropriate, the disproportionately high and adverse effects of policies and programmes on the human health or the environment of the poor, minorities and other vulnerable populations;]

(d) Develop criteria and methodologies for the assessment of environmental impacts and resource requirements at the local level throughout the life cycle of products and processes;

(e) Provide incentives and disincentives to promote the use of clean production and energy- and water-saving processes and technologies that, among other things, can increase economic opportunities in the area of environmental technology, environmental clean-up and environmentally friendly products and can improve the attractiveness and competitiveness of human settlements for economic investments;

(f) Provide guidelines and training for the application of procedures for the assessment of environmental health impacts;

[(g) Undertake strategic environmental impact assessments for development projects that may significantly affect the quality of the environment;]

(h) Support mechanisms for consultations and partnerships among ***[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*** to prepare and implement local environmental plans and local Agenda 21's and specific cross-sectoral environmental health programmes;

(i) Raise awareness of environmental issues and develop within communities the knowledge, attitudes and practices needed for sustainable human settlements development;

(j) In cooperation with the international community, promote the protection of the living environment and strive to restore contaminated land, air and water to levels acceptable for sustainable human settlements.

DOCUMENTATION OF PRECEDENT

RE: DEVELOPING PROCEDURES FOR ENVIRONMENTAL IMPACT ASSESSMENT— CRADLE TO GRAVE APPROACH, AND ENVIRONMENTAL AUDITS

Governments...should develop procedures for environmental impact assessment, taking into account the cradle to grave approach, including environmental audits (Agenda 21, 20.19 e)

ARTICLE 98

98 [(a) Promote the conservation and sustainable use of urban and peri-urban biodiversity, including forests, local habitats and species biodiversity; the protection of biodiversity should be included within local **socially equitable and environmentally sound *sustainable development*** planning activities;

(aa) Incorporate the following principles and strategies in developing this integrated approach: [the precautionary principle], the ecosystem approach, pollution prevention, carrying capacity, and ecological footprint;

(a) Promote practices and consumption patterns that will conserve and protect freshwater and saltwater resources and top soil, as well as air and soil quality;

(a bis.) Ensure that clean water is available and accessible to all human settlements by the year 2000 through, inter alia, the adoption and improvement of technology, and ensure that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds;

DOCUMENTATION OF PRECEDENTS

RE: CONSERVING BIODIVERSITY

To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)

RE: PREVENTING LONG TERM DECLINE OF BIODIVERSITY

The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity,

thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)

[(b) Protect existing forest resources and promote afforestation around and within human settlements in order to fulfil basic needs relating to energy, construction, recreation and food security;

DOCUMENTATION OF PRECEDENT

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty)

ARTICLE 98 e

98 (e) Ensure *adequate* the opportunity for genuine community involvement and participation *public participation* by all [*stakeholders* individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] at all levels of environmental decision-making, including in determining the “terms of reference” and throughout the decision making process]

DOCUMENTATION OF PRECEDENTS

RE: ENSURING GENUINE PUBLIC PARTICIPATION E. (AGENDA ITEM 10 E)

Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

RE: MOBILIZING PARTICIPATION IN DECISION-MAKING

Participation is an integral part of the political processes of decision-making; in a field as complex as human settlements, it is also a necessity because the task is too great for Governments to accomplish without mobilizing the interest of inhabitants, using their ingenuity and skills and harnessing otherwise untapped resources. (III 17, Habitat I)

RE: ENSURING THE BENEFICIARY IS A PARTICIPANT IN COLLECTIVE DECISIONS

Public participation is the dynamic incorporation of the people in the economic, social and political life of a country which would ensure that the beneficiary is an effective participant in collective decisions with regard to the common good. (III 28, Habitat I)

RE: PROVIDING DIRECT INVOLVEMENT IN DECISIONS

A co-operative effort of the people and their Governments is a prerequisite for effective action on human settlements. The magnitude and intractability of the problems are too great for Governments to act alone. Citizen participation should be an integral part of the decision-making processes on the full range of human settlement issues. Citizens must be provided opportunities for direct involvement in the decisions that profoundly affect their lives. Such participation can heighten citizen awareness of the complexity and inter-relatedness of the problems and the urgent need for concerted action. Involvement of citizens can also be an important means of making creative use of their ingenuity and skills, thus making effective use of often untapped resources. (III 39, Habitat I)

RE: INVOLVING RESIDENTS IN THE MAKING OF DECISIONS

Participation can be conceived, from the top downwards, as the involvement of the higher echelons of government in the decision-making of smaller groups; laterally, as the co-operation between parallel or competing sectoral interests; or, from the base upwards, as the direct involvement of residents in the making of decisions and implementation of programmes which concern them. The first two forms of participation are the basis of strategies, planning procedures, implementation of programmes and, in general, management of human settlements; the last, under the label of popular participation, is becoming an indispensable element of a truly democratic process. (III 40, Habitat I)

RE: PROVIDING OPPORTUNITIES FOR EARLY AND CONTINUING INVOLVEMENT IN THE SELECTION OF ALTERNATIVES

Citizen participation, by definition, cannot be achieved by fiat. But it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. the inaccessibility of information and the absence of appropriate mechanisms for the

expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration (III 73 Habitat I)

ARTICLE 98 ter

[98 ter. Water resources in community's management in human settlements presents an outstanding challenge of sustainable *socially equitable and environmentally sound* development. It combines the challenge of securing for serves all the basic human need of a reliable supply of safe drinking water and meeting the competing the needs of businesses that engage in socially equitable and environmentally sound development and Best practices with local materials. industry and Agriculture, which are is crucial to socially equitable and environmentally sound economic development and food security and food self-sufficiency, without compromising the ability of future generations to meet their water needs. Meeting this challenge requires an integrated approach to water resources management that takes cognizance of the links between water, sanitation and health, between the economy and the environment, between cities and their hinterland, and harmonizes land-use planning and housing policies with water sector policies and ensures a comprehensive and coherent approach to setting and enforcing realistic standards. A strong political commitment, cooperation across disciplines and sectors, and an active partnership of all [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] will be essential to integrated water resources management. To this end, Governments, at the appropriate levels, and in partnership with other [stakeholder community- minded citizens and groups with a wide range of experience and expertise" including some members of the community that will be socially and environmentally disadvantaged by the decisions], should:

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

ARTICLE 99

[99. In a globalizing economy, the increasing occurrence of trans-boundary pollution and the transfer across national borders and regions of technologies hazardous — including toxic and nuclear technologies — to the environment represent a serious threat to the environmental conditions of human settlements and the health of their inhabitants. Governments should therefore cooperate to develop further bilateral and multilateral legal mechanisms to implement Principle 13 of the Rio Declaration regarding "liability and compensation for adverse effects of environmental damage caused by activities within their jurisdiction or control to areas beyond their jurisdiction." In this context, States should be guided by Principle 16 of the Rio Declaration which encourages the approach that the polluter should in principle bear the cost of pollution. The international community, international organizations and Governments should also seek appropriate preventive measures in cases of clear risk of major environmental accidents with trans-boundary effects.] **in addition citizens can legitimately expect that states will comply with Principle 14 of the Rio Declaration which calls for the prevention of the transfer of substances and activities that are harmful to human health or to the environment to other states, and to principle 15 which calls for the invoking of the precautionary principle which states that where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.**

DOCUMENTATION OF PRECEDENT

RE: PROMOTING NEW AND RENEWABLE ENERGY

The basic and ultimate objective of this programme area is to reduce adverse effects on the atmosphere from the energy sector by promoting policies or programmes, as appropriate, to increase the contribution of environmentally safe and sound and cost effective

energy systems, particularly new and renewable ones, through less polluting and more efficient energy production, transmission, distribution and use. This objective should reflect the need for equity, adequate energy supplies and increasing energy consumption in developing countries, and the need to take into consideration the situations of countries that are highly dependent on income generated from the production, processing and export, and/or consumption of fossil fuels and associated energy-intensive products and/or the use of fossil fuels for which countries have serious difficulties in switching to alternatives, and of countries highly vulnerable to adverse effects of climate change. (9:11 Atmosphere, UNCED)

RE: RESPECTING THE ATMOSPHERE THROUGH ENERGY ALTERNATIVES

Energy is essential to economic and social development and improved quality of life. Much of the world's energy, however, is currently produced and consumed in ways that could not be sustained if technology were to remain constant and if overall quantities were to increase substantially. The need to control atmospheric emissions of greenhouse and other gases and substances will increasingly need to be based on efficiency in energy production, transmission, distribution and consumption, and on growing reliance on environmentally sound energy systems, particularly new and renewable sources of energy.¹¹ All energy sources will need to be used in ways that respect the atmosphere, human health, and the environment as a whole (9.9. Atmosphere, UNCED).

ARTICLE 100

[100. The use of energy is essential in urban centres for transportation, industrial production, and household and office activities. Current dependence on fossil-fuel-based energy sources in most urban centres leads to climate change, air pollution, and consequential environmental and human health problems, and *[may]* represent a serious threat to **socially equitable and environmentally sound development**. *sustainable development*. Sustainable energy production and use can be enhanced by encouraging energy efficiency, by such means as pricing policies, fuel switching, alternative energy, mass transit and public awareness. Human settlements and energy policies should be actively coordinated.

DOCUMENTATION OF PRECEDENTS

RE: INCREASE AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: DEVELOPING SAFE, MORE EFFICIENT AND LESS POLLUTING TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

(c) Promote energy-efficient systems, for example, by introducing or supporting innovative energy-efficient measures in the generation, distribution and use of energy, such as combined heating and cooling systems that make use of waste heat recovery, and co-generation of heating and electricity;

(d) **Promote through regulations use of renewable sources of energy** and Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy;

(e) Encourage countries, in particular developing countries, to cooperate in exchanging knowledge, experience and know-how in the phasing out of lead gasoline, including the use of biomass ethanol as an environmentally sound substitute;

(f) Introduce or amend user charges and/or other measures to promote the efficient use of household energy;

(g) Stimulate, through fiscal incentives or other measures, and adopt energy-efficient and environmentally sound technologies in the rehabilitation of existing industries and services and in the construction of new ones;

(h) Support programmes for the reduction and neutralization of emissions of polluting gases, originating in the generation, transportation and use of energy;

(i) Provide for public education and media campaigns to encourage recycling, reuse and reduced energy consumption;

(j) Encourage the use of solar heating, cooling and electric technologies, energy efficient design, ventilation, and improved insulation of buildings, to reduce the consumption of energy in buildings;

(k) Encourage the use of safe industrial and agricultural waste products and other types of low-energy and recycled building materials in construction;

(l) Encourage and promote the development and dissemination of new and environmentally sound technologies, including the reduction of metal compounds as part of transportation fuels, and good practices in the use of energy.

ARTICLE 101 b

101 (b) Introduce energy-pricing policies and regulatory measures to promote use of renewable and safe sources of energy and to improve efficiency of energy use in human settlements, while ensuring that people living in poverty and their families are not disadvantaged;

DOCUMENTATION OF PRECEDENTS

"To develop and apply pollution control and measurement technologies for stationary and mobile sources of air pollution and to develop alternative environmentally [safe and] sound technologies; (see trans-boundary) (9.24 a Atmosphere)

Promote pilot plans and projects consisting of electrical, mechanical and thermal power (gasifiers, biomass, solar driers, wind-pumps and combustion systems) that are appropriate and likely to be adequately maintained. (14.95 a. Agriculture)

"As a first step towards the goal of providing adequate shelter for all, all countries should take immediate measures to provide shelter to their homeless poor, while the international community and financial institutions should undertake actions to support efforts of the developing countries to provide shelter to the poor. (7.9. Settlement)

" Promote cooperation between the parties to relevant international conventions and action plans with the aim of strengthening and coordinating efforts to conserve biological diversity and the sustainable use of biological resources. (15.8 e. biodiversity)

Strengthen support for international and regional instruments, programmes and action plans concerned with the conservation of

biological diversity and the sustainable use of biological resources.
(15.8 f Biodiversity)

" The aim of this programme area is to ensure safety in biotechnology development, application, exchange and transfer through international agreement on principles to be applied on risk assessment and management, *** (16.33 Biotechnology)

" Compile update and develop compatible safety procedures into a framework of internationally agreed principles to be applied on safety in biotechnology [as a basis for the development of an international agreement... (1635 c Biotechnology)

" to produce guidelines for acceptable exposure for a greater number of toxic chemicals, based on peer review and scientific consensus distinguishing between health or environment-based exposure limits and those relating to socioeconomic factors. (19.13 toxic chemicals)

" Develop an internationally agreed upon code of principles for the management of trade in chemicals, recognizing in particular the responsibility for making available information on potential risks and environmentally sound disposal practices if those chemicals become wastes, in cooperation with governments and relevant international organizations and appropriate agencies of the United Nations system (19.51 Toxic chemicals)

" A relevant and competent United Nations organization should take the lead, in cooperation with other organizations, to develop guidelines for estimating the costs and benefits of various approaches to the adoption of cleaner production and waste minimization and environmentally sound management of hazardous wastes, including rehabilitation of contaminated sites (see 1991 Nairobi meeting and Basel Convention) (20.13. j, Hazardous wastes)

"To facilitate the assessment of impacts and risks of hazardous wastes on human health and the environment by establishing appropriate procedures, methodologies, criteria and / or effluent-related guidelines and standards (20.22 g Hazardous Wastes)

"International organizations should provide assistance to member states in assessing the health and environmental risks resulting from exposure to hazardous wastes, and in identifying their priorities for controlling the various categories or classes of wastes (20.27 Hazardous wastes)

There is a need to harmonize the procedures and criteria used in various international and legal instruments. There is also a need to develop or harmonize existing criteria for identifying wastes dangerous to the environment and to build monitoring capacities.
(20.33 Hazardous wastes)

"To facilitate and strengthen international cooperation in the environmentally sound management of hazardous wastes, including control and monitoring of trans-boundary movements of such wastes, including wastes for recovery, by using internationally adopted criteria to identify and classify hazardous wastes and to harmonize relevant international legal instruments. (2034 a Hazardous wastes)
" Promote the development of clear criteria and guidelines, within the framework of the Basel Convention and regional conventions, as appropriate, for environmentally and economically sound operation in resource recovery, recycling reclamation, direct use of alternative uses and for determination of acceptable recovery practices, including recovery levels where feasible and appropriate, with a view to preventing abuses and false presentation in the above operations.
(20.35 e Hazardous wastes)

"States, in cooperation with relevant international organizations, where appropriate, should ...b) support efforts within IAEA to develop and promulgate radioactive waste safety standards or guidelines and codes of practices as an internationally accepted basis for the safe and environmentally sound management and disposal of radioactive wastes; (22.4 Radioactive wastes)

Many of these problems have arisen from a development model that is environmentally destructive and from a lack of protection. Ecological and human health effects are the measurable consequences... although the means to monitor them are inadequate or non-existent in many countries. There is a widespread lack of perception of the linkages between the development, management use and treatment of water resources and aquatic ecosystems.
(18.45 Fresh water)

ARTICLE 104 f

104 (f) Promote, regulate, and enforce quiet, use-efficient and low-polluting technologies, including fuel-efficient engine and emissions controls and fuel with a low level of polluting emissions and impact on the atmosphere and **actively fund and promote** other alternative forms of energy;

ARTICLE 109

109. Urban economies are integral to the process of economic transformation and development. They are a prerequisite for the creation of a diversified economic base capable of generating employment opportunities. Many new jobs will need to be created in urban areas. Cities currently generate more than half of national economic activities worldwide. If other factors, such as population growth and migration to cities, are addressed effectively through, inter alia, urban planning and control of the negative impacts of urbanization, cities could develop the capacity to maintain their productivity, to improve the living conditions of their residents and to manage natural resources in an ecologically sustainable way through **the establishment and enforcement of mandatory standards drawn from international principles in United Nations instruments *industry, together with trade and services*, will** provides the main impetus to this process. **by driving businesses to engage in socially equitable and environmentally sound practices.**

ARTICLE 110

110. Cities have traditionally served as economic centres and have become the primary providers of services. As engines of economic growth and development they function within a network of supporting economic activities located in their surrounding peri-urban and rural areas. For this reason, specific actions also need to be taken to develop and maintain efficient and affordable transport, information and communications systems and linkages with other urban centres and with rural areas and to seek reasonably balanced patterns of development, both geographically and economically. Rapid changes in production technologies and in trade and consumption patterns will lead to changes in urban spatial structures that, notwithstanding their nature, need to be addressed.

ARTICLE 111

111. Economic development and the provision of services can be enhanced through improved human settlements activities such as urban revitalization, construction, upgrading and maintenance of infrastructural facilities, and building and civil works. These activities are also important growth factors in the generation of employment, income and efficiency in other sectors of the economy. In turn, in combination with appropriate environmental protection policies, they result in the sustainable improvement of the living conditions of city residents as well as of the efficiency and productivity of countries.

Actions

ARTICLE 112

112. To establish an effective financial base for urban development, Governments at the appropriate levels, including local authorities, in cooperation with trade unions, consumer organizations, business, trade, and the financial sector, including the cooperatively organized business sector and non-governmental organizations, as appropriate, should:

(a) Formulate and implement financial policies which stimulate a broad range of urban employment opportunities;

(b) Encourage the formation of new public-private sector partnerships for institutions that are privately owned and managed but public in their function and purpose, and promote transparency and accountability of their operation.

ARTICLE 113

113. To provide opportunities for productive employment and private investment, Governments at the appropriate levels, including local authorities, in consultation with workers' and employers' organizations, chambers of commerce, industry, trade, consumer organizations, professional associations, and the financial sector, including the cooperative sector, and in the context of comprehensive urban planning, should:

(a) Implement sustainable urban development policies that take account of and respond effectively to the needs of locally owned enterprises, and are not detrimental to the natural and human environment;

(b) Facilitate access to all levels of education and training;

(c) Promote an adequate supply and the environmentally sound allocation of sufficiently serviced land for the needs of the business community, with due regard to the needs of the small and medium sized-enterprises;

(d) Offer opportunities for urban economic activities by facilitating, **through regulatory schemes**, the access of new and emerging **socially equitable and environmentally sound** businesses, and small and medium-sized enterprises, including the informal sector, to credit and finance, and by streamlining legal and administrative procedures;

(e) Facilitate, where appropriate, the opportunity for urban horticulture;

(f) Assist informal-sector enterprises to become more productive and progressively integrated into the formal economy;

(g) Consider designating select areas for redevelopment within urban centres by providing packages of fiscal and financial incentives along with appropriate regulatory arrangements and the development of partnerships.

ARTICLE 114

114. To improve opportunities, **through regulatory schemes**, for the **socially equitable and environmentally sound** small businesses and the micro-enterprise

and cooperative sectors, Governments at the appropriate levels, including local authorities, in consultation with non-governmental organizations, community-based organizations, financial and vocational training institutions, should, as appropriate:

(a) Facilitate the extension to the informal sector the protection of human rights in the field of labour and promote respect for the relevant International Labour Organization conventions, including those on the prohibition of forced and child labour, the freedom of association, the right to organize and bargain collectively, and the principle of non-discrimination;

(b) Promote and strengthen, as appropriate, programmes which integrate credit, finance, vocational training and technological transfer programmes in support of small and micro-enterprises and enterprises in the cooperative sector, particularly those developed and utilized by women;

(c) Encourage fair treatment of the informal sector, promote the use of environmentally sound practices, and encourage links between financial institutions and non-governmental organizations that support the informal sector where it exists;

(d) Integrate, where appropriate, the needs of the growing informal sector within planning, design and management systems, including by promoting its participation in the planning and decision-making process, and by strengthening its linkages with the formal economy;

(e) Promote training for small and micro-enterprises and enterprises in the cooperative sector, and support them in their efforts to improve their products, services, technology and distribution networks, and to identify new market opportunities.

ARTICLE 115

115. To strengthen urban economies so they may be competitive in a globalizing economy, Governments at the appropriate levels, including local authorities, in consultation with all *[[stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]]*, should, inter alia:

(a) Improve education and enhance job training in order to improve the quality of the local work-force;

(b) Support the re-structuring of local industries, where appropriate, and develop urban infrastructure and services, promote a reliable, efficient and environmentally sound supply of energy and enhance telecommunication networks;

(c) Review and revise, as appropriate, the regulatory framework in order to attract private investment;

(d) Prevent crime and enhance public safety in order to make urban areas more attractive for economic, social and cultural activities;

(e) Encourage sound financial practices at all levels of Government;

(f) Promote legislative action that may be necessary to implement the above.

ARTICLE 116

116. To alleviate the adverse impacts of measures for structural and economic transition, Governments at the appropriate levels, including, where appropriate, local authorities, should:

(a) Promote an integrated approach by addressing the social, economic and environmental consequences of reforms on human settlements development needs;

(b) Promote the integrated functioning of housing markets so as to avoid segregation of the social housing sector;

(c) Implement appropriate basic social programmes and adequate resource allocation, in particular those measures affecting people living in poverty, people with disabilities, other vulnerable segments of society, micro-enterprises and other **socially equitable and environmentally sound** small businesses;

(d) Review the impact of structural adjustment on social development by paying particular attention to gender-sensitive assessments;

(e) Design policies to promote more equitable and enhanced access to income and resources;

(f) Support, as appropriate, public and private enterprises in their efforts to adapt to the changing requirements of technological and human resources development.

9. Balanced development of settlements in rural regions

ARTICLE 117

117. Urban and rural areas are interdependent economically, socially and environmentally. At the turn of the century, a substantial proportion of the world's population will continue to live in rural settlements, particularly in developing countries. In order to achieve a more sustainable future for the earth, these rural settlements need to be valued and supported. Insufficient infrastructure and

services, lack of environmentally sound technology, and pollution resulting from the adverse impacts of unsustainable industrialization and urbanization contribute significantly to the degradation of the rural environment. Additionally, the lack of employment opportunities in rural areas increases rural-to-urban migration and results in a loss of human capacity in rural communities. Policies and programmes for the *sustainable socially equitable and environmentally sound* development of rural areas that integrate rural regions into the national economy require strong local and national institutions for the planning and management of human settlements that place an emphasis on rural-urban linkages and treat villages and cities as two ends of a human settlements continuum.

ARTICLE 118

118. Rural populations, including indigenous people, play an important role in ensuring food security and in sustaining the social and ecological balance over large tracts of land in many nations and thus contribute significantly to the task of protecting biodiversity and fragile ecosystems and to the sustainable use of biological resources.

Actions

ARTICLE 119

119. To promote *sustainable socially equitable and environmentally sound* development of rural settlements and to reduce rural-to-urban migration, Governments at the appropriate levels, including local authorities, should:

- (a) Promote the active **genuine involvement and** participation of all *stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. s*], including those in isolated and remote communities, in ensuring the integrated consideration of the environmental, social and economic objectives of rural development efforts;
- (b) Take appropriate measures to improve living and working conditions in regional urban centres, small towns and rural service centres;
- (c) Foster a sustainable and diversified agricultural system in order to have vibrant rural communities;
- (d) Provide infrastructure, services and incentives for investment in rural areas;
- (e) Promote education and training in rural areas to facilitate employment and the use of appropriate technology.

ARTICLE 120

120. To promote BEST (**Best Environmentally Sound Traditions**) practices *the utilization of new and improved endogenous technologies* and appropriate traditional practices in rural settlements development, Governments at the appropriate levels, including local authorities, in cooperation with the private sector, should:

(a) Improve access to information on agricultural production, marketing and pricing in rural and remote areas by using, inter alia, advanced and accessible communication technologies;

(b) In cooperation with farmers' organizations, women's groups and other *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, promote research and the dissemination of research findings in traditional, new and improved technologies for, inter alia, agriculture, aquaculture, forestry and agroforestry.

ARTICLE 121

121. In establishing policies **for socially equitable and environmentally sound development** *sustainable regional development and management*, Governments at the appropriate levels, including local authorities, should:

(a) Promote education and training programmes and establish procedures for the full participation of rural and indigenous people in the setting of priorities for balanced and ecologically viable regional development;

(b) Make full use of geographic information systems and environmental assessment methods for the preparation of environmentally sound regional development policies;

(c) Implement regional and rural development plans and programmes based on needs and economic viability, *[consistent with the goal of socially equitable and environmentally sound sustainable development]*;

(d) Establish an efficient and transparent system for the allocation of resources to rural areas based on people's needs, *[consistent with the goal of sustainable socially equitable and environmentally sound development]*.

DOCUMENTATION OF PRECEDENTS

(From Russow, J. (1995) Charter of Obligations,

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife **care management**, which use, maintain or increase biodiversity (15.5 d Biodiversity, Agenda 21 UNCED 1992)

Consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental *management* practices or systems that have a good impact on the environment (13.21., Fragile Ecosystem Agenda 21, UNCED, 1992)

Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c., Agriculture., Agenda 21 UNCED 1992)

Governments....*should shall*... Recognize and foster the traditional methods and the knowledge of indigenous *people peoples* and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (Unbracketed section in New York Prep Com, changed in final version. 15.4, g Biodiversity, Agenda 21, UNCED, 1992)

Promotion of collaborative research programmes especially in developing countries, to support activities outlined in this programmed area, with particular reference to cooperation with local and indigenous people and their communities in the conservation of biological diversity and sustainable use of biological resources, as well as the fostering of traditional methods and knowledge of such groups in connection with these activities (16.7 b, Agenda 21, UNCED, 1992)

Acknowledge and encourage beneficial traditional health care, especially that practiced by indigenous women, with a view to preserving and incorporating the value of traditional health care in the provision of health services, and support research directed to achieve this aim (Art.111 Advance Unedited Draft Declaration and Platform for Action, May, 15, 1995)

122. To strengthen [*sustainable* socially **equitable and environmentally sound development and**] employment opportunities in impoverished rural areas, Governments at the appropriate levels, including local authorities, should:

(a) Stimulate rural development by enhancing employment opportunities, providing educational and health facilities and services, improving housing, strengthening technical infrastructure, and encouraging rural enterprises and sustainable agriculture; (b) Establish priorities for regional infrastructure investments based on opportunities for economic return, social equity and environmental quality;

(c) Encourage the private sector to develop and strengthen contract-based wholesale markets and marketing intermediaries for rural products so as to improve and/or establish a cash-flow and futures contract economy in rural areas;

(d) Promote equitable and efficient access to markets as well as, where appropriate, pricing and payment systems for rural products, especially of food items consumed in urban areas;

(d bis.) Promote products from rural areas in urban markets and rural service centers by improving the access to market information and distribution centres and networks;

(e) Reduce significantly or eliminate environmentally harmful subsidies and other programmes, such as those which stimulate the excessive use of pesticides and chemical fertilizers, and price control or subsidy systems that perpetuate unsustainable practices and production systems in rural and agricultural economies.

123. An integrated approach is required to promote balanced and mutually supportive urban-rural development. To achieve this objective, Governments at the appropriate levels, including local authorities, with the support of the relevant international and regional institutions, should:

(a) Provide an appropriate legal, fiscal and organizational framework that is suitable to strengthen the networks of small- and medium-sized settlements in rural areas;

(a bis.) Facilitate the development of efficient communication and distribution infrastructure for the exchange of information, labour, goods, services and capital between urban and rural areas;

(b) Promote broad cooperation among local communities to find integrated solutions for land-use, transport and environmental problems in an urban-rural context;

(c) Pursue a participatory approach to balanced and mutually supportive urban-rural development, based on a continuous dialogue among the

[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.] involved in urban-rural development. 10. Disaster prevention, mitigation, preparedness and post-disaster rehabilitation capabilities

124. The impact on people and human settlements of natural and human-made disasters is on the increase. Disasters are frequently caused by vulnerabilities created by human actions, such as uncontrolled or inadequately planned human settlements, lack of basic infrastructure and the occupation of disaster-prone areas. Armed conflicts also have consequences that affect human settlements and the country as a whole and call for specific rehabilitation and reconstruction processes that may necessitate international involvement, at the request of the Government of the concerned country. The impact of such disasters and emergencies is especially severe in countries where prevention, preparedness, mitigation and response capacities are ineffective in dealing with such situations.

125. The most efficient and effective disaster preparedness systems and capabilities for post-disaster response are usually provided through volunteer contributions and local authority actions at the neighborhood level. These can operate independently and irrespective of reduced, damaged or destroyed infrastructure or capacity elsewhere. Specific actions are also required at the appropriate levels of Government, including local authorities, in partnership with the private sector and in close coordination with all community groups, to put into place disaster preparedness and response capacities that are coordinated in their planning but flexible in their implementation. The reduction of vulnerability, as well as the capacity to respond to disasters is directly related to the degree of decentralized access to information, communication, and decision-making and the control of resources. National and international cooperation networks can facilitate rapid access to specialist expertise, which can help to build capacities for disaster reduction and, to provide early warning of impending disasters and to mitigate their effects. Women and children are the most affected in situations of disaster, and their needs should be considered in all stages of disaster **prevention and in restoration after disasters management**. Women's active involvement in disaster **prevention and in restoration after disasters planning and management** should be encouraged.

Actions:

126. In improving natural and human-made disaster prevention, preparedness, mitigation and response, Governments at the appropriate levels, including local authorities, and in close consultation and cooperation with such entities as insurance companies, non-governmental organizations, community-based organizations, organized communities, the academic, health and scientific communities, should:

(a) Develop, adopt and enforce appropriate norms and by-laws for land-use, building and planning standards, that are based on professionally established hazard and vulnerability assessments;

(a bis.) Ensure the participation in disaster planning and management of all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society such as.]*, including women, children, the elderly, and people with disabilities, in recognition of their particular vulnerability to human-made and natural disasters;

(b) Encourage continued mobilization of domestic and international resources for disaster reduction activities;

(c) Promote and disseminate information on disaster-resistant construction methods and technologies for buildings and public works in general;

(d) Devise programmes to facilitate, where possible, voluntary relocation and access by all people to less disaster-prone areas;

(e) Develop training programmes on disaster-resistant construction methods for designers, contractors and builders. Some programmes should be directed particularly to small enterprises, which build the great majority of housing and other small buildings in the developing countries;

(f) Take measures to upgrade, where necessary, the resistance of important infrastructure, lifelines and critical facilities, in particular where damage can cause secondary disasters and/or constrain emergency relief operations.

[126 bis.) As a consequence of the development and testing of nuclear weapons, there is a need for the safe resettlement of displaced populations and the restoration of economic activity to the affected areas, especially for small island developing States and coastal regions. Noting the special responsibility towards those people of the former United Nations Trust Territories who have been adversely affected as a result of the nuclear-

weapons tests conducted during the period of the Trusteeship, all Governments and international organizations that have expertise in the field of cleanup and disposal of radioactive contaminants should consider giving appropriate assistance as may be required for remedial purposes in areas affected by radioactive contamination from nuclear weapons programmes.] **Note: Conventions on the elimination of nuclear weapons etc. and resolution from UNCHE 1972**

127. With respect to mitigation of disasters, Governments at the appropriate levels, including local authorities, in partnership with all [*stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society.*], should, as appropriate:

- (a) Establish a comprehensive information system that identifies and assesses the risks involved in disaster-prone areas and integrate it into human settlements planning and design;
- (b) Promote and support low-cost, attainable solutions and innovative approaches to address critical risks of vulnerable communities, including, inter alia, risk mapping and community-focused vulnerability reduction programmes;
- (c) Introduce a clear delineation of roles and responsibilities of, and communication channels among, the various key functions and actors in pre-event disaster management, mitigation and preparedness activities, such as hazard and risk assessment, monitoring, prediction, prevention, relief, resettlement and emergency response;
- (d) Promote and encourage all parts of society to participate in disaster preparedness planning in areas such as water and food storage, and fuel and first-aid, and in disaster prevention through activities that build a culture of safety;
- (e) Strengthen, and/or develop global, regional, national and local early-warning systems to alert populations to impending disasters.

127 bis. In order to prevent technological and industrial disasters, Governments at the appropriate levels, including local authorities, as appropriate, should:

- (a) Pursue the objectives of prevention of major technological accidents and the limitation of their consequences, inter alia, through land use policies and promotion of safe technology;
- (b) Take the necessary measures in order to control the siting of new developments surrounding dangerous industrial activities that may be liable to

increase the risk of the effects of a major accident by appropriate consultation procedures to facilitate the implementation of the policy established under subparagraph (a) above;

(c) Introduce a clear definition of roles and responsibilities and of communication channels among the various key functions of disaster preparedness and prevention including assessment, monitoring, prediction, prevention, relief, resettlement, and emergency response;

(d) Promote and encourage broad-based participation in disaster preparedness activities by giving to the population living in the vicinity of a dangerous activity adequate and regular information on the potential hazards;

(e) Strengthen, and/or develop global, regional and local early-warning systems to alert populations in case of a major technological accident.

128. In preparing for and implementing post-disaster relief, rehabilitation, reconstruction and resettlement, Governments at the appropriate levels, including local authorities, in partnership with all [*stakeholder individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society*], should:

(a) Establish or strengthen disaster preparedness and response systems that clearly define roles and responsibilities of, and communication channels between, the various functions and actors in disaster preparedness, and in post-event disaster management, including emergency management, relief and rehabilitation;

(b) Devise exercises to test emergency response and relief plans and promote research on the technical, social and economic aspects of post-disaster reconstruction and adopt effective strategies and guidelines for post-disaster reconstruction;

(c) Establish reliable communications, and response and decision-making capabilities, including at the national, local and community levels;

(d) Establish contingency plans, management and assistance systems and arrangements for rehabilitation, reconstruction and resettlement;

(e) Strengthen scientific and engineering capacities for damage assessment and monitoring and for special rehabilitation and reconstruction techniques;

(g) Identify and support approaches to cope with the urgent shelter requirements of returnees and internally displaced persons;

- (h) Identify approaches to minimize interruption to attendance in schools;
- (i) Support work for immediate removal of anti-personnel land mines following the cessation of armed conflict;
- (j) Ensure that the particular needs of women, children, persons with disabilities and vulnerable groups are considered in all communications, rescue, relocation, rehabilitation, and reconstruction;
- (k) Promote a cultural dimension in post-disaster rehabilitation processes.] -----

Notes:

23/ Paragraphs 66 - 75 were adopted by the Plenary of the third session of the Preparatory Committee on 16 February 1996.

24/ Paragraphs 100 - 128 were informally negotiated but not adopted by either Working Group II or Plenary; these paragraphs are all in brackets as agreed by the Plenary on 16 February. After the closure of informal negotiations on paragraphs 100 - 128, which led to the issuance of document

A/CONF.165/PC.3/L.3/Add 7, further informal negotiations took place on paragraphs 114, 124, 125, 126, 126 bis, 127, 127 bis and 128. This led to a number of corrections which are included in the bracketed texts of these paragraphs as shown in the present document.

25/ The results of the informal negotiations of Working Group II Subgroup

B on paragraphs 104, 105, and 106 were omitted by oversight from

A/CONF.165/PC.3/L.3/Add.7. They have been included in the present text. Header control, resource mobilization, partnership-building and local enterprise development, *inter alia*, through technical twinning and exchange of experience programmes;

(e) Enhance the performance of local authorities by undertaking comparative analysis of, and disseminating innovative practices in, the delivery, operation and maintenance of public goods and services and in exploiting the fiscal potential of their cities;

(f) Help institutionalize broad-based participation in decision-making and management processes at the local level;

- (g) Strengthen the capacity of local authorities to engage the local private and community sectors in goal-setting and establishing local priorities and environmentally sound standards for infrastructure development and services delivery, and local economic development;
- (h) Promote policy dialogue between all levels of Government, the private and community sectors to improve planning and coordination;
- (i) Collect, analyze and disseminate, as appropriate, comparative data on the performance of local authorities in providing for the needs of their citizens;
- (j) Reinforce measures to eradicate corruption **and institutional collusion between corporations including transnationals and state governments** and ensure greater transparency, efficiency and community participation in the management of local resources;
- (k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation, particularly to share good practice and innovative approaches to sustainable human settlements management;
- (l) Develop, in cooperation with UNCHS (Habitat), associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise.

**Part IV:
The Global Plan of Action, Strategies for Implementation**

D. Capacity-building and institutional development

1. Introduction

ARTICLE 130 (2)

2. Decentralization shall be carried out within a framework of globally agreed to principles drawn from the body of United Nations instruments related to the guaranteeing of human rights, the preserving, and protecting the environment and the fostering of peace and cooperation. Globally established mandatory standards based on these principles shall be established

Decentralization and strengthening of local authorities and their associations/networks

131. To ensure effective decentralization and strengthening of local authorities and their associations/networks **within a framework of international principles based on the guaranteeing of respect for human rights, the preserving, conserving and protecting the environment, the ensuring of social equity and justice, and the enabling of peace and prevention of war**, Governments at all appropriate levels, including local authorities, **where appropriate** should:

(a) Adopt and adapt, as appropriate, policies and legal frameworks from other Member States that are effectively implementing decentralization **while adhering to international principles**;

(b) Review and revise, as appropriate, legislation **to ensure compliance with international obligations**, increase local autonomy **participation** in decision-making, implementation, and resource mobilization and use, especially with respect to human **rights, allocation of funding for socially equitable and environmentally sound development** *technical and financial resources and local enterprise development*, within the overall framework of **international**, national, and local principles, obligations and undertakings *social, economic and environmental strategy* and **encourage genuine community involvement and participation in decision-making regarding their safe, healthy and environmentally sound communities** *city neighborhood or dwellings*;

(c) Seek **additional funding from reducing the military budget, and from requiring corporations including transnational corporations to pay deferred taxes, and thus support** local authorities reviewing revenue generating mechanisms;

(d) Facilitate the inter-transverse of **BEST (Best Environmentally Sound Technique) Practices** *exchange of technology, experience and management expertise* between local authorities in the delivery of services, expenditure control, resource mobilization, partnership-building and local enterprise development with businesses **that comply international obligations and demonstrate BEST practices, that have not violated human rights, caused environmental degradation or contributed to violence and conflict.**, *inter alia*, through technical twinning and **inter-transfer** *exchange* of experience programmes, **recognizing that the solutions to socially equitable and environmentally sound development could be found throughout the world;**

(e) Enhance the performance of local authorities **by requiring BEST practices**, and by undertaking comparative analysis of, and disseminating of innovative **BEST** practices in, the delivery, operation and maintenance of public goods and services, **and in fostering and developing** and *in exploiting the fiscal and other* potential of their cities;

(f) *Help institutionalize* **Ensure and implement** broad-based participation in decision-making and management processes at the local level **with genuine community involvement and participation in determining the terms of reference and in having input throughout the process;**

(g) **Ensure and** strengthen the capacity of local authorities **to seek, respect and rely on genuine community involvement and participation** *engage the local private and* community sectors in goal-setting and establishing local priorities and environmentally sound standards for infrastructure development and services delivery, and local **socially equitable and environmentally sound development** *economic development;*

(h) Promote **genuine community involvement and participation in a policy dialogue** ~~between~~ **among** all levels of Government, within **a framework of governance principles**, *the private and community sectors* to improve planning and coordination **in implementing socially equitable and environmentally sound development;**

(i) Collect, analyses and disseminate, through **public channels**, as appropriate, comparative data on the performance of local authorities in providing for the needs of their citizens; **and facilitate the opportunity for citizens to present evidence of noncompliance with obligations through national and international mechanisms**

(j) Reinforce measures to increase the participation of **indigenous peoples, migrant workers, women, children and youth and other**

disenfranchised groups. Eradicate corruption and ensure greater transparency through efficient **genuine community involvement and participation** in the **socially equitable and environmentally sound development** of local resources;

(k) Enable local authorities and their associations/networks to take initiatives in national and international cooperation **within a framework of international principles** particularly to share good **BEST** practices and innovative approaches to **socially equitable and environmentally sound development sustainable human settlements management**; and

(l) Develop, in cooperation with UNCHS (Habitat), **and other UN agencies**, associations/networks of local authorities and other international associations and organizations, a global and easily accessible information network to facilitate the exchange of experience, know-how and expertise. from diverse cultures, ethnic and historical backgrounds.

3. Participation, civic engagement and Government responsibility

ARTICLE 132

132. **Socially equitable and environmentally sound development** *Sustainable human settlements development* requires the active engagement of **individuals and organizations** of civil society —**those members of society that advocate the guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and the enabling of socially equitable and environmentally sound development.**

organizations, as well as the broad-based participation of all people. It equally requires responsive, transparent and accountable governmental structures at all levels. Civic engagement and responsible government both necessitate the strengthening of **genuine community involvement and participation participatory mechanisms**, including access to justice and community-based action planning, which will ensure that all voices are heard, including particularly women, youth, children and elderly and all other vulnerable groups (UNICEF) in identifying problems and priorities, setting goals, exercising legal rights, determining service standards, mobilizing resources and implementing policies, programmes and projects.

ARTICLE 133

133. To encourage and support civic engagement and the fulfillment of government **obligations, duties, commitments, undertakings and responsibilities**, national governments, local authorities and/or civil society organizations, as appropriate, should put into effect institutional and legal frameworks which facilitate and enable broad-based **genuine involvement and**

participation of all ~~citizens~~ **people** in decision-making, **including in the determining of the terms of reference and in having input throughout the decision making process, implementation** and monitoring of human settlements *strategies*, policies and programmes, **and in presenting evidence through legal channels of non-compliance with obligations and expectations**; these institutional and legal frameworks would be specifically aimed at; *inter alia*:

(a) **Guaranteeing and enshrining** *protecting* the basic human right to hold and express opinions and to disseminate ideas and information;

(b) Permitting, and facilitating the formation of independent non-governmental community local, national and international organizations **representing a civil society which advocates the guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and preventing of conflict and war, and the enabling of socially equitable and environmentally sound development.**

(c) Providing full, timely and comprehensible information, without undue financial burden to the applicant;

GLOBAL COMPLIANCE PROPOSAL COMBINING ELEMENTS IN UNICEF'S PROPOSAL WITH GLOBAL COMPLIANCE PROJECTS PRINCIPLE-BASED EDUCATION

(d) **undertaking education and training programs that promote the ensuring of social justice, the preservation, conservation and protection of the environment, the guaranteeing respect for human rights, and the elimination of conflict and war, and that are based on significant principles drawn from United Nations conventions, treaties, covenants, declarations, conference statements and General Assembly Resolutions.**

DOCUMENTATION OF PRECEDENT;

RE: SOCIAL SERVICES AND HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

(a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;

(b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women

and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice

(1 Habitat I)

(

(e) establishing regular **opportunities for genuine community involvement and participation** *and broad-based consultative mechanisms as individuals and organizations of civil society for involving civil society—both women and men* in the decision-making process, including in the determination of terms of reference and in having input throughout the process for all major policies, plans and programmes that will affect their lives; (*e bis.*) In addition, removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;

(f) establishing agenda-setting **for genuine community involvement and participation** *participatory mechanisms enabling citizens individuals, to ensure that communities and individuals and organizations of civil society organizations* to play a pro-active, constructive and substantive role in identifying and formulating new policies, plans and projects, **and in determining the terms of reference and in having input throughout the policy formation and the plans and projects development;**

(g) fostering an understanding of contractual relationships **between NGOs and businesses that observe the guaranteeing of respect for human rights, the preserving, conserving and protecting of the environment, the fostering of peace and the preventing of conflict and war, and the ensuring of socially equitable and environmentally sound development and BEST practices, and non-governmental organizations (NGOs) sectors to acquire the skills for participating in and developing projects that will benefit all people negotiating effective partnerships for project implementation, development and management that will maximize benefits to all people;**

(h) promoting equality, **social justice**, and **equity fairness**, *incorporate by incorporating* gender and age considerations and ~~involve~~ **involving** marginalized and low-income groups **including people with disabilities, migrant workers, indigenous peoples** through institutional measures to ensure their interests are represented in policy and decision-making processes, and through such techniques as advocacy training and seminars including ~~the development of those that develop~~ *mediating and consensus-building skills to* **and** facilitate effective networking and alliance formation;

ARTICLE 133 e

(i) **Ensuring** *Improving* access to judicial and administrative channels for affected **persons and (UNICEF) disadvantaged** groups to challenge, or seek

redress from decisions that deny social justice, that destroy the environment, that violate human rights, that are destructive to human health and wellbeing, or that contribute to war and conflict *from socially and environmentally harmful decisions and actions*; including legal mechanisms to ensure that all (UNICEF) State bodies **both national and local (UNICEF)** remain legally accountable for their actions, in accordance with their social *and* environmental and **human rights** obligations as defined in both national legislation and **in international conventions, treaties, covenants, declarations, conference action plans and general assembly resolutions. Affected individuals shall, after exhausting all domestic remedies, have access to an International Court of Compliance to bring evidence of state non-compliance. Removing legal barriers to participation in public life by socially marginalized groups and promoting non-discrimination legislation;**

(i) bis Ensuring access, when all domestic channels have been exhausted, to an International Court of Compliance where affected persons and groups can seek redress for decisions that deny social justice, that destroy the environment, that violate human rights or that contribute to war and conflict. Broadening the procedural right of individuals and civil society to take legal actions on behalf of affected communities or groups which do not have the resources or skills to take such action themselves, and promoting the representation of inter-generational interests, including children and future generations in decision-making processes.

(j) Facilitating access to legal services by people living in poverty (Canada) low-income and marginalized groups through provision of facilities such as legal aid and free legal advice centres. In addition, access to reliable scientific and medical expertise without undue financial burden to the applicant should be provided.

TEXT COMBINING ORIGINAL FAO EU AND GLOBAL COMPLIANCE PROJECT

(k) Strengthening **the capacity of international United Nations bodies to establish mandatory international standards and regulations based on fundamental principles enshrined in international customary law; and providing opportunities for local authorities and civil society organizations to review social, economic and environmental policies affecting their communities and to set local priorities and contribute to the setting of local standards, based on the mandatory international standards, for services in such areas basic education, public safety *drug-abuse awareness and environmental management: environmental protection and pollution prevention, social justice and basic needs and rights —right to housing, food, safe drinking water, social security, education and universal health care and safety.***
 , *as basic education, child care(EU), public* **enshrine the right to primary health care—free emergency health care including treatment completion and**

foster best practices for health promotion and disease prevention recognizing the value of traditional and natural remedies and to universal health care , water for domestic, agricultural and industrial use, public infrastructure,(FAO) public safety, drug-abuse awareness and environmental protection and pollution prevention *management*; (133)

ARTICLE 134

134. *Human settlements managers need to draw on the skills and resources of a diversity of people and institutions at many levels* **coupled with genuine community involvement and participation are essential for socially equitable and environmentally sound development of human settlements. . .** Scarcity of suitably qualified personnel *and* weakness of institutional systems *and* technical capacity, **as well as unwillingness to draw upon the individuals and groups from civil society that are experienced and aware of the physical and social service community facilities, that are active in the preservation, conservation and protection of the environment and that advocates of social justice and human rights** are among the main obstacles to the improvement of human settlements in many countries. **In addition, the use of BEST (Best Environmentally Sound Techniques) practices based on principles of socially equitable and environmentally sound development in *new skills, know-how and technology in all aspects of developing community-based planning of human settlements* *planning and management will be necessary.*** In countries where change is rapid there is a need for governments and the international community to ensure the effective development and transfer of leadership skills, *management* expertise and experience in guaranteeing the respect for human rights, in preserving , conserving and protecting the environment, in promoting peace and social justice, and in advocating BEST practices, *know-how and technology.*

NOTE FROM HERE TO THE END SECTION STILL IN PROGRESS

Actions

135. To improve human settlements *management*, Governments at all appropriate levels, including local authorities and their associations, should:

- (a) Support training programmes for administrators and civic officials at all levels, as appropriate, to enhance leadership qualities;
- (a) *as appropriate*, support training programmes that **reflect gender sensitivity policies and standards, quality assurance measurement tools** for administrators and civic officials at all levels to enhance leadership qualities **and promote the inclusion of women and young people in staff structures and decision-making;**

(b) Establish *private*-public, community, urban-rural sector, **BEST practices** business and economic forums to facilitate the transfer of expertise *management know-how* and experience;

(c) Develop and implement and comprehensive training, education in **socially equitable and environmentally sound** *and human resources* development policies and programmes involving a wide range of **individuals and groups of civil society including the participation of academics**, local authority associations, *academic*, research, training and educational institutions and the **BEST practices businesses** *private sector* focusing on:

(i) The **furthering of genuine community involvement and participation** *development of a multi-sectoral approach* to human settlements development, **which includes the participation of women, migrant workers, minority groups, indigenous peoples and other usually marginalized individuals and groups;**

(ii) The training of trainers to develop a core capacity for institution-strengthening and capacity-building;

(ii) the training of trainers to develop a core capacity for institution-strengthening and capacity-building **which includes an emphasis on gender awareness and needs of children, youth and the elderly as an integral component;**

(iii) The development of local capacity to define needs and undertake or commission applied research, particularly in social and environmental impact assessments, local economic growth and job creation, and to incorporate the findings in management systems;

(iii) the development of local capacity to define needs and to undertake or commission applied research, particularly in social and environmental impact assessments, local **economic** growth and job creation **which emphasizes the integration of women in non-traditional fields and trades**, and to incorporate the findings in management systems;

(d) Develop information systems for the exchange, transfer and sharing of experience, expertise, know-how and technology in human settlements management;

(e) Encourage, as appropriate, the involvement of private-sector entities in improving public-sector management and administration and the formation of entities that are public in their function, private in their management and publicly-privately funded; and

(e) develop information systems for **networking and accessing resources in a timely manner**, the exchange, transfer and sharing of experience, expertise, know-how and technology in human settlements management;

(f) Develop programmes in conflict resolution.

(g) **help** develop **mediation** programmes in conflict resolution **between competing agents in the access to, distribution and use of resources and spaces in settlements.**

4. Metropolitan planning and management

136. Although the managers of human settlements face many common challenges, those responsible for the management and development of metropolitan areas and mega-cities face unique problems caused by the size and complexity of their tasks and responsibilities. Among the characteristics of metropolitan areas that require special skills are increasing global competitiveness; their ethnically and culturally diverse populations; large concentrations of urban poverty; extensive infrastructure networks and transport and communications systems; their strategic role in national, regional and international production and consumption cycles, economic development, trade and finance; and their potential for severe environmental degradation. Large metropolitan areas and mega-cities also represent the largest potential risks of human, material and production-capacity loss in case of natural and human-made disasters. In some countries, the lack of a metropolitan-wide authority creates difficulty in urban management.

PROPOSALS

NGO Composite

136. ... Among the characteristics of metropolitan areas that require special skills (~~delete: are increasing global competitiveness~~) **to handle the negative impacts of the global economy on local economies**; their ethnically and culturally diverse populations **which include women and marginalized groups**; large concentrations of urban poverty **within economically deprived zones**; extensive infrastructure...

Actions

137. To address the special needs of metropolitan areas, Governments at all the appropriate levels, including local authorities, should:

(a) Promote metropolitan-wide planning **development** and management strategies;

137. (a) promote metropolitan-wide planning and management strategies **which include women at all levels of operation**;

(b) Monitor and analyse the effectiveness and efficiency of metropolitan structures and administrative systems, and incorporate the results into ~~public~~ **policies** for dealing with macroeconomic, social and environmental issues;

(c) Create a legislative framework and adopt organizational structures that ensure coordinated and efficient service delivery, resource mobilization and *sustainable* socially **equitable and environmentally sound** development throughout metropolitan areas;

(d) Strengthen the capacity and mandates of metropolitan authorities to deal effectively with issues of regional and national importance, such as land, energy and water resources management, environmental management, transport and communications, trade and finance, and social integration;

(d) strengthen the capacity and mandates of metropolitan authorities to deal effectively with issues of regional and national importance such as land **and property rights for women**, energy and water resources management, environmental management, **access to adequate social infrastructures**, transportation and communication, trade and finance and social integration;

(e) Develop, or where necessary, create a core of professional staff trained in the technical aspects of planning and development of primary infrastructure and in emergency planning;

(e) develop (~~delete:~~ or where necessary, create a core) **a coalition** of professional staff **which include women in all areas of expertise that are** trained in the technical aspects of planning and development of primary infrastructure and (~~delete:~~ in) **responsive to** emergency planning;

(f) Facilitate and promote policy dialogue and the exchange of experience, expertise, know-how and technology ~~between~~ **among** metropolitan authorities in such areas as transport and communications, waste management, energy conservation, social welfare and environmental management.

(f) facilitate and promote policy dialogue and **establish a consortium to facilitate** the exchange of experience, expertise, know-how and technology between metropolitan authorities in such areas as transport and communication, waste management, energy conservation, social welfare **which recognizes women and numerous marginalized groups** and environmental management.

5. Domestic financial resources and economic instruments

138. Funds to finance shelter and settlements development mainly come from domestic sources. Additional finance is increasingly being derived from international sources for the benefit of national Governments and local authorities. The largest impact on the financial base will derive, therefore, from improvements in economic development, sound financial practice and the capacity to mobilize domestic resources, control expenditure and efficiently manage budgets.

NGO Composite

138. Funds to finance (~~delete: shelter and settlements development~~) **transitional households and community** mainly come from domestic sources. Additional finance is increasingly being derived from international sources **that promote and mandate that women and gender sensitive policies are included at all levels of planning** for the benefit of national governments and local authorities. The largest impact on the financial base will derive, therefore, from improvements in economic development, sound financial practice **and financial accountability** and the capacity to mobilize domestic resources, control expenditures and efficiently managed budgets.

ARTICLE 139

139. Financing the future of urban development and sustaining the economic viability of cities represents a particular challenge which will require innovative systems of finance at national and local levels. Effective partnerships between the public and private sectors are needed which combine local taxes on production and consumption with fiscal incentives for investment by *industry, commerce, trade and the private service sector*. **needs of businesses that engage in socially equitable and environmentally sound practices with local materials and that provide socially equitable and environmentally sound employment** New forms of municipal finance are needed to meet the future needs of urban economic development and the costs of supporting infrastructure and services. **In addition, funding shall be sought from the reduction of the military budget and from requiring the payment of deferred taxes from industry.**

BACKGROUND

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget (UN General Assembly 36/81). Also, in 1981 the UN General Assembly undertook to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81).

In 1994 States, in adopting the statement from the International Conference on Population and Development, concurred that the attainment of “quantitative and qualitative goals of the present Programme of Action clearly require additional resources, some of which could become available from a reordering of priorities at the individual, national and international levels. However, none of the actions required—nor all of them combined— is expensive in the context of either current global development or military expenditures.(Article 1.19) In 1995, Similarly, states in adopting the statement from the Social Development Summit endorsed the calling for “the reallocation of military spending to ensure a greater pocket of resources to expand public services. Again, in 1995, member states of the United Nations reconfirmed these commitments by adopting the Platform of Action at the UN conference on Women, Equality, Development and Peace. In the Platform of Action States have made a commitment to maintain “peace and security at the global, regional and local levels, together with the prevention of policies of aggression ... and the resolution of armed conflict,” (Art. 14) and to reduce “...military expenditures, “(Art. 15). States have also made a commitment to the “prevention and resolution of conflicts,” (art 15) and to “increase and hasten, ... the conversion of military resources and related industries to development and peaceful purposes (145a)

In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). Yet, through sympathetic administrations states have for years failed to ensure corporate compliance with national laws, codes and regulations, and international agreements. States have continued to provide subsidies and tax deferrals to corporations, a large proportion of whom have engaged in socially inequitable and environmentally unsound development.

*** 139. ...and services. It is necessary to reduce military expenditures and production in order to finance programs for habitat.**

Actions**ARTICLE 140**

140. To strengthen the national and local economic and financial base with a view to addressing the needs of sustainable human settlements development, Governments at all appropriate levels, including local authorities, should:

(a) Strengthen, as appropriate, the capacity of local authorities to attract investments;

(b) Adopt macroeconomic policies and frameworks which encourage increased domestic savings and facilitate their use in housing, basic infrastructure and **other** settlements development;

(c) Develop efficient, equitable and buoyant sources of national and local revenues, including taxation, user charges, tariffs and betterment **fees levies** to promote national and local capacity for capital investment in housing, infrastructure and basic services; and devise, as appropriate, new financial instruments which penalize environmental damage;

140. (c) develop efficient, equitable and buoyant sources of national and local revenues including taxation, user charges, tariffs and betterment fees to promote national and local capacity for investment in housing, infrastructure and basic services; and devise, as appropriate, new financial instruments which penalize environmental damage **from both production and consumption activities**;

(d) Enhance national and local tax collection capabilities and expenditure control;

(d) enhance national and local tax collection capabilities and expenditure control **to reduce cost attainment and increase tax effort for revenue maximization**;

(e) Strive for full cost recovery of urban services through user charges, while at the same time addressing the needs of the poor, *inter alia*, through pricing policies and, where appropriate, by transparent subsidies;

(e) (~~delete~~: strive for full cost recovery of urban services through user charges while at the same time addressing the needs of (~~delete~~: the poor) **people in poverty**, *inter alia*, through pricing policies and where appropriate, by transparent subsidies;)

(f) Support local efforts to encourage voluntary private and community sector partnerships and participation in building, operating and maintaining basic infrastructure and services;

(f) support local efforts to encourage voluntary private and community sector partnerships and participation in building, operating and maintaining basic infrastructure and services **which employ gender sensitive policies, address**

the needs of marginalized groups and empower women with financial resources for home acquisition;

(g) Rationalize and Facilitate local authorities' access to national, regional and international capital markets and specialized lending institutions, including, *inter alia*, instituting municipal credit rating and credit systems, bearing in mind the borrower's capacity to repay the debt;

(g) rationalize and facilitate local authorities' access to national, regional and international capital markets and specialized lending institutions, including, *inter alia*, instituting municipal credit rating and credit systems **which guarantee that women are integral in program development**, bearing in mind the borrower capacity to repay the debt;

(h) Facilitate the role of local authorities in forming partnerships with the private, community and cooperative sectors and institutions for local enterprise development;

(i) Institutionalize budget mechanisms, where appropriate, and accounting to enable local authorities to engage in medium- and long-term investment programmes;

(j) Establish transparent systems and procedures to ensure financial accountability;

(k) Institutionalize, where appropriate, transparent, inter-governmental transfer mechanisms that are timely, predictable and performance- and need-based; and

(l) Attract private **and community** investment to urban development.

(m) use a reduction of national military budgets to fund local programmes for human settlement.

6. Information and communications

ARTICLE 141

141. Recent developments in information technology, in conjunction with the liberalization of trade and the free flow of capital on a global scale, will bring about radical changes in the roles and functions of cities, and their decision-making and resource allocation processes. Those Governments that make the necessary investments in information technology and infrastructure and enable and empower their citizens to make effective use of such technology can expect to foster tremendous productivity gains in industry, trade and commerce. This improved

information technology should be appropriately and optimally utilized to preserve and share **cultural and** moral values and enhance and improve education, training and public awareness of the social, economic and environmental issues affecting the quality of life, and to facilitate access by all **key actors and communities** to the exchange of habitat practices, including those which uphold the rights of children, women and other vulnerable groups in the context of growing urbanization.

Caucus on older people

141. ... which uphold the rights of children, women, **disabled, frail elderly, displaced** and other vulnerable groups in the context of growing urbanization.

Coalition for stable communities

141. ... including those which uphold the rights of **the family**, children, women and other vulnerable groups in the context of growing urbanization.

NGO Composite

141. Recent developments in information technology, in conjunction with the liberalization of trade and the free flow of capital on a global scale, (~~delete: will bring~~) **are bringing** about radical changes in the roles and functions of cities, and their decision-making and resource allocation processes. Those Governments that make the necessary investments in information technology and infrastructure and enable and empower their citizens to make effective use of such technology can expect to foster tremendous **additional** productivity gains in industry, trade and commerce. **However, in many countries these productivity gains have benefited only a fortunate few, while contributing to increasing income inequality and unemployment. Furthermore, these technologies are only available to those who can afford them and place the substantial majority of people who do not have access at an increasing disadvantage in a competitive global economy. It is recognized that this improved information technology** (~~delete: should be appropriately and optimally~~) **may potentially be** utilized (~~delete: to preserve and share moral values~~) and enhance and improve education, training and **development of employment programmes for women and marginalized groups and** public awareness on the social, economic and environmental issues affecting their quality of life, and to facilitate the access by all key actors and communities to the exchange of habitat practices including those which uphold the rights of children, women and other (~~delete: vulnerable~~) **marginalized** groups in the context of growing urbanization.

Actions

142. To improve the capacity to exploit these innovations, Governments **at all appropriate levels including** and local authorities should:

142. To improve the capacity to exploit these innovations **to enhance the public good**, governments and local authorities should:

(a) **Develop, upgrade, and maintain** information infrastructure and technology and encourage their use by all levels of Government, public institutions and civil society organizations;

(a) upgrade information structure and technology and encourage their use by all levels of government, public institutions and civil society organizations **CBOs and local employment programs for women, men and marginalized groups**;

(b) Train key actors in the use, **ways and means** of information technology;

142. (b) Train key actors **of all ages** in the use of information technology;

(b) (~~delete: train key actors~~) **develop and implement a training program for women, men and marginalized groups** in the use of information technology;

(c) Develop methods of sharing experiences through electronic means, such as the Internet, networks and libraries of local initiatives and the dissemination of **information on** best practices;

(c) develop methods of sharing experiences through electronic means, such as the Internet, networks and libraries of local initiatives and the dissemination of best practices **that utilize gendered governance policies**;

(d) Encourage participation of children, youth and educational institutions ~~in the~~ **especially by children and youth** use of public libraries and communications networks;

(d) **implement programs that** encourage participation of children, youth, **women, the elderly, incarcerated individuals** and educational institutions in the use of public libraries and communication networks;

(e) Facilitate the learning process through the dissemination of both successful and unsuccessful experiences in human settlements taken from the governmental, public, private and community sectors;

(f) Encourage policies that make information technology and services available and more accessible to the general public; and

(f) (~~delete: encourage~~) **establish** policies that make information technology and services available and more accessible to the general public; and

(g) Guarantee the free flow of, and access to, information in areas of public policy, decision-making and resource allocation.

IFS

142. (g). Substitute the word "ensure" for "guarantee." The latter would be unenforceable. Also add "all" before "areas Topic

A Conversation with Graham Saul and Linda Solomon Wood

Description

Executive Director of Nature Canada, Graham Saul joins Linda Solomon Wood to talk about environmental justice, a green recovery deal and how we can build better cities. Saul leads one of the oldest national nature conservation charities in Canada, Nature Canada. For 80 years, the organization has helped protect over 110 million acres of parks and wildlife areas in Canada and countless species.

(g) guarantee the free flow and access of information in areas of public policy, decision-making (~~delete:~~ and) resource allocation **and social developments which impact women, children and other marginalized groups.**

(h) assure market competition and broad public access in the provision of information technology and media services by strictly limiting concentrations of private ownership and control and by maintaining public information technology and media facilities for those who otherwise lack access.

RESTRUCTURING LAND OWNERSHIP

recommendation D 5

patterns of ownership

() Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

(c) special attention should be paid to:

(i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;

(ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;

(iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;

(iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.

(v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority;
(Habitat I)

(i) implement policy measures to assure that the benefits of productivity gains are broadly shared and contribute to livelihood creation rather to increased unemployment.

DY

142 bis. That dissemination of experiences that contribute to facilitate the access to adequate housing for all and the development of sustainable human settlements is helpful in the formulation of public policies on human settlements development. National governments, in partnership with social actors, should:

(a) Promote the selection of urban management practices which stand out by their positive impact in improving habitat, by their use of participatory modes of organization and operation, by their sustainable and lasting character, and by their tendency to become universal;

(b) Set up structures for the selection of the best practices with participation by non-governmental organizations active in the urban development field;

(c) Promote dissemination of the selected practices locally, nationally, regionally and internationally, in an integrated manner.

Suggestions forwarded by the United States of America

EXISTING TEXT

Part IV: GLOBAL PLAN OF ACTION: STRATEGIES FOR IMPLEMENTATION

E. International cooperation and coordination (143)

Paragraphs 143 - 157 were subject to informal negotiations, the results of which were issued as Informal Paper 2 during the third session of the Preparatory Committee. Due to insufficient time, they were not adopted by either Working Group II or the Plenary of the Preparatory Committee. Consequently, all of **Chapter E is in brackets** as agreed by the Plenary on 16 February.

A number of delegates requested that, in addition to the text of the informally negotiated paragraphs 143 - 157 (as contained in Informal Paper 2), their proposed amendments to these paragraphs, as they were presented during the informal negotiations, be annexed to this chapter in order to facilitate further negotiation at the Conference in Istanbul.

1. Introduction

[143. The goals of ensuring adequate shelter for all and making human settlements and communities **environmentally sound** productive, healthy, safe, more equitable and sustainable contribute to achieving world peace, development, stability and justice. International cooperation takes on added significance and importance in the light of recent trends in the globalization and the interdependence of the world economy. There is an urgent need to redefine and resuscitate the existing processes and structure of cooperation and to evolve new and innovative forms of cooperation with a view to enabling humankind to face the challenges posed by the development of rural and urban areas. **There is urgency to redefine development and move towards a new “international economic order” based on socially equitable and environmentally sound development. This new order may require the political will to reduce the global military budget by 50% (from the current 800Billion to 4 billion which it was in 1981 when there was a UN General Assembly resolution to freeze and reduce the military budget) at with the undertaking to transfer the peace dividend to socially equitable and environmentally sound development. The states of the world must firmly adhere to the principle endorsed in the United Nations Conference on Human Environment where states agreed to eliminate weapons of mass destruction, which by definition would include nuclear weapons as well and chemical and biological. In addition, the global community must undertake to condemn the continued mining of uranium for weapons production, the use of civil nuclear reactors whose waste is a scourge for future generations, the use of plutonium from former nuclear weapons sites as a fuel for nuclear reactors, CONTINUE Sunset industries. Thus there is a need for the political will of all States as well as specific action by**

the international community to establish and inspire new forms of cooperation, partnership, coordination and investment, including the local private sector, in order to contribute effectively to the provision and improvement of shelter conditions in human settlements, especially in developing countries, taking into account the diversity of the needs of human settlements among countries.

144. **Although** The formulation and implementation of strategies for human settlements development are the responsibility of each country at the national and local levels, and should take into account the economic, social and environmental diversity of conditions in each country, **fundamental principles established by the United Nations in over 50 years of Conventions, Treaties, Covenants Declarations Conference statements and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development.** The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of an international mandatory regulatory scheme that will drive the private sector and funding agencies such as the development banks to ensure that the development will encompass the principles of socially equitable and environmentally sound technology. Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting Best ecologically sound technology from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real collaborative partnership based on the highest tenable principles.** This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive the private sector to participate in socially equitable and environmentally sound development.** *participation in the shaping of international cooperation.* The international community, including multilateral financial institutions, **has an important role to play in providing funding that is conditional on the adherence to high global mandatory regulations and standards based on principles established over the past 50 years in international instruments. This new vision of global governments control was evident in section 167 of the Platform of Action where State shall ensure that corporations including transnational corporations comply with nation and international laws. WORDING.** In addition, the lending institutions shall supply funding to ensure not the “clean-up environment industries” which continue to perpetuate the old-world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially

equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound technology that *environmental to ensure that additional resources to reinforce* national efforts to foster *an enabling environment to* and achieve the objectives of adequate shelter for all and the **socially equitable and environmentally sound sustainable development of human settlements.**

144 bis. [International cooperation assumes added significance and importance in the wake of recent trends in the globalization of the world economy on the one hand and the continued deterioration of the plight of developing countries on the other hand. The problems resulting from poverty, urbanization, lack of adequate shelter including social housing, rapid population growth, rural-urban migration, economic stagnation and social instability are especially acute.]

145. Innovative approaches and frameworks for international cooperation in human settlements development and management must be sought and developed to include the active participation of all levels of Government, the **segment of private sector which is driven by high global mandatory regulations and standards** and cooperative sectors, non-governmental organizations and community-based organizations, in decision-making, policy formulation and resource allocation, implementation and evaluation. These approaches and frameworks should also include new and improved forms of cooperation and coordination between and among multilateral financial institutions, international organizations and various organs and bodies of the United Nations system, including south-south, north-south and south-north exchanges of best practices, the continuous development of policy, planning and management tools and instruments such as the application of shelter and urban indicators, human resources development and institutional capacity-building. **In this new global partnership at all levels decisions will be guided by principles reflected in International instruments endorsed by the states within the global system.**

145 bis. These innovative approaches should also include new forms of cooperation and partnerships between multilateral and bilateral assistance agencies on the one side, and civil society organizations and local authorities, on the other, based on the **adherence to principles related to the guaranteeing of the respect for human rights, the** *Whereas*, if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Whereas fulfillment of the purpose of the United Nations would require the discharging of the fifty-one years of obligations related to guaranteeing respect for

human rights, preserving and protecting the environment, promoting peace, and ensuring socially equitable and environmentally sound development;

Whereas, the freeing up of money through the peace dividend would assist in the discharging of these obligations,

Whereas the Fifty-first Anniversary of the United Nations provides a unique opportunity to reaffirm the support for and commitment to the purposes and principles of the Charter of the United Nations, and to undertake to discharge previous obligations undertaken through Charters, Covenants, Conventions, Declarations and Resolutions,

principles of local implementation of mandatory standards and regulations

Principles of "decentralized cooperation"; this implies recognition of the capacity of local authorities to develop international relations and cooperation, with the existing legal frameworks of each country, their right to devote their own resources for that purpose and to be associated in the process of defining international human settlements policies. Governments as well as bilateral and multilateral aid-agencies should commit themselves to encourage decentralized cooperation between local authorities as well as the strengthening of networks of associations of local authorities.

145 ter. [In recent years disparities in economic growth, environmental degradation, and labour-market asymmetries have increased international migration, and have impacted on spatial distribution of cities' population entailing the imbalances of human resources among countries of origin and countries of destination.]

Evidence of precedent

REDUCTION OF DISPARITIES

4. It is of paramount importance that national and international efforts give priority to improving the rural habitat. In this context, efforts should be made towards the reduction of disparities between rural and urban areas, as needed between regions and within urban areas themselves, for a harmonious development of human settlements. (III 4 Habitat I)

2. Enabling international context

146. The process of urbanization is linked to economic development, social development and environmental protection, which are interdependent and mutually

reinforcing components of *sustainable socially equitable and environmentally sound* development. The provision of adequate shelter for all and sustainable human settlements development are increasingly influenced by the global economy. In this context, it is imperative to enable all countries, especially developing countries, to improve living and working conditions in human settlements. This calls for an enabling international environment and integrated approaches at national and international levels which take account of the efforts of countries to implement programmes of economic reform or economic transition. Furthermore, technological developments are leading to major changes in the structure of employment. [It should be recognized that in social and economic terms the housing sector is a productive sector and should be treated on an equal basis with other productive sectors. Achievement of the goal of sustainable human settlements development at the global level would depend on fair and durable solutions of, *inter alia*, the issues of finance, debt, trade and transfer of technology.]

147. The international community should support governments in their efforts to cope with the impact of these changes on human settlements within a framework of enabling strategies. The international community should promote:

(a) The establishment of an open, equitable, co-operative and mutually beneficial international economic environment;

(b) The co-ordination of macroeconomic policies at all levels to achieve an international financial system that is conducive to stable and *sustained economic growth* and **socially equitable and environmentally sound** development;

(c) An international financial system that is more conducive to stable and sustainable human settlement development through, *inter alia*, a higher degree of stability in international financial markets, a reduction of the risk of financial crisis, and lower real interest rates;

(d) An environment in all countries, [including developing economies, economies in transition and developed economies,] that attracts foreign and domestic direct investment, and encourages savings;

(e) Enterprise development, productive investment and expanded access to open and dynamic markets in the context of an open, equitable, secure, non-discriminatory, predictable, transparent and multilateral rule-based international trading system, [and to technologies for all people, especially those living in poverty and the disadvantaged, as well as for the least developed countries];

(f) Capacity building in developing countries in all regions, particularly African countries and the least developed countries: and in countries with economies in transition;

(g) The strengthening and improvement of technical and financial assistance to developing countries in all regions to promote *sustainable socially equitable and environmentally sound* development and overcome hindrances to their full and effective participation in the world economy.

148. With specific reference to sustainable human settlements development and the provision of shelter, the international community should:

(a) Ensure that the benefits of global economic growth improve people's quality of life in all nations, regardless of where people live;

(b) Mobilize national and international financial resources for shelter provision and sustainable human settlements development;

(c) Facilitate increased access by all levels of government and the private sector in developing countries and countries with economies in transition to international financial resources to enable them to attract investment in shelter and infrastructure for sustainable human settlements development;

(d) In a manner consistent with national legislation, seek to increase the ability of local authorities, non-governmental organizations and the private sector to link directly with global capital markets, in accordance with prudential safeguards in those markets, to finance their shelter and infrastructure programmes and to establish international and local mechanisms and instruments to facilitate risk sharing and credit enhancement for investing agencies - local, regional and national;

(e) Promote strategies to ensure substantial, well-directed public and private investments in shelter, infrastructure and health, education and other basic services, including through the provision of appropriate technical and financial assistance;

[[f) Encourage international cooperation, in order to address the negative impact of international migration through technical assistance, management know-how, exchange of information as well as by ensuring equitable wages and working conditions for both migrant and native workers.]]

[[g) Continue to provide support to refugees in order to meet their needs, and to assist in assuring them a just, durable solution in accordance

with relevant United Nations resolutions and international law, noting that sustainable human settlements can only be established for them on their land of origin.]

3. Financial resources and economic instruments

149. The demand for shelter and infrastructural services in human settlements is continuously increasing. Communities and countries, especially developing countries, have difficulties in mobilizing adequate financial resources to meet rapidly rising costs of shelter, services, and physical infrastructure. [New and additional financial resources, from various sources, are necessary to achieve the goals of adequate shelter for all and sustainable human settlements development in an urbanizing world. The existing resources available to developing countries - public, private, multilateral and bilateral - need to be enhanced through appropriate and flexible mechanisms and economic instruments to support sustainable human settlements development.]

150. Implementation of the Habitat Agenda, particularly in developing countries of all regions, especially those in Africa and the least developed countries, will need additional financial resources to be mobilized at national and international levels and more effective development cooperation and assistance. This will require, inter alia:

(Note of the drafting group of Subgroup A of Working Group II: It is intended that paragraph 150 contain a series of specific sub-paragraphs. Consideration of them has not been completed, but it has been informally agreed that this could more effectively take place if these sub-paragraphs, and the alternative formulations that have been suggested for them, were organized under specific subject headings. These are: General, Official financial resources, Partnerships, Improving the effectiveness of financial resources, Private financial resources, Existing economic instruments, Innovative economic instruments, and Special financing needs/issues. It is emphasized that it is not intended that these headings would appear in the final document. They would appear only to facilitate discussion. When that discussion has been concluded they would be removed. All of these sub-paragraphs of paragraph 150 are in brackets)

General

[150. (a) Translating the commitments of Habitat II into financial implications for the provision of adequate shelter and human settlements development in developing countries in all regions, particularly those in Africa and the least developed countries;

(b) Promoting assistance for shelter and human settlements activities;

Official financial resources

(c) Raising the priority of adequate shelter for all and sustainable human settlements development among multilateral and bilateral donors and mobilizing their support for national, sub-regional and regional plans of action of developing countries, especially for interested beneficiary countries;

(d) Striving to fulfil the 0.7 percent of GDP target and the 0.15 percent of GNP target for assistance to the least developed countries as soon as possible, and to increase, where appropriate, the share of funding for sustainable human development programs;

(e) Achieving the agreed targets of 0.7 percent of GNP for overall official development assistance (ODA), and 0.15 percent of GNP for assistance to the least developed countries, as soon as possible, and no later than the year 2000, and increasing the share of funding for adequate shelter and human settlement development programmes, commensurate with the scope and scale of activities required to achieve the objectives and goals of the Habitat Agenda;

(f) Striving to ensure that structural adjustment programmes respond to the needs of sustainable human settlements development;

(g) Inviting the international financial institutions to examine innovative approaches to assisting low-income countries with a high proportion of multilateral debt, with a view to alleviating their debt burden;

Partnerships

(h) Encouraging multilateral development institutions and donors to support nations in their effort to pursue enabling strategies through which national and local governments, communities and the private and cooperative sectors can form partnerships to participate in shelter and sustainable human settlements activities;

(i) Inviting multilateral and bilateral donors to support countries, particularly developing countries, in their efforts to pursue enabling strategies through which governments, local authorities, communities, and the private and cooperative sectors can form partnerships to participate in the provision of adequate shelter, including social housing and sustainable human settlements development activities;

(j) Exploring ways and means to strengthen support and expand south-south cooperation based on the concept of triangular cooperation,

partnership between developing and developed countries, as well as enhanced cooperation among developing countries;

(k) Consolidating solidarity of the international community and its organizations to provide adequate shelter for all and sustainable human settlements development for people living under foreign occupation;

Improving the effectiveness of financial resources

(l) Striving to enhance the effectiveness of existing ODA and other external financial flows through improving coordination between and among donors and the UN operational activities, and through better coherence between those flows and internal sustainable human settlements strategies;

(m) Supporting programmes that increase the effectiveness and transparent utilization of public and private resources, reduce wasteful and untargeted expenditure and increase access to housing and services for people living in poverty;

(n) Recognizing the negative effect of excessive military expenditures, trade in arms, especially of those arms that are particularly injurious or have indiscriminate effects, and excessive investment for arms production and acquisition;

DOCUMENTATION

WASTE AND MISUSE OF RESOURCES FOR WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

(o) Giving preference, wherever possible, to the utilization of competent national experts or, where necessary, of competent experts from within the sub-region or region or from other developing countries, in projects and programmes design, preparation and implementation, and to the building of local expertise where it does not exist;

(p) Maximizing projects and programmes efficiency by keeping overhead costs to a minimum;

(q) Integrating practical measures for reducing disaster-vulnerability in development programmes and projects, in particular construction of buildings and communication systems, financed by the international community, and ensuring that such measures become an integral part of feasibility studies and project identification;

Private financial resources

(r) Developing economic policies to promote and mobilize domestic savings and attract external resources for productive investments, and seeking innovative sources of funding, both public and private, for adequate shelter and sustainable human settlements development programmes, while ensuring their effective utilization;

(s) Strengthening financial and technical assistance for community-based development and self-help programs, and strengthen cooperation among governments at all levels, community organizations, cooperatives, formal and informal banking institutions, private enterprises and international institutions, with the aim of mobilizing local savings, promoting the creation of local financial networks, and increasing the availability of credit and market information to low-income individuals, women, and vulnerable and disadvantaged groups for shelter and human settlements development;

(t) Facilitating access to global finances for governments and local authorities which are initiating or are involved in public-private partnership programmes;

(u) Establishing and supporting linkages of informal credit mechanisms to the global pool of resources and increasing access by a majority of the population to housing finance through participatory processes involving communities, non-governmental organizations, credit unions, global financial institutions and other relevant actors;

Existing economic instruments

(v) Attracting international flows of public finances for shelter provision and settlements development through appropriate economic instruments;

(w) Considering means to facilitate foreign private sector investment in sustainable human settlements projects, particularly in the areas of infrastructure and transportation, for example by way of BOT schemes;

(x) Assisting countries, particularly developing countries, in implementing effective and equitable pricing mechanisms for adequate shelter and sustainable human settlements, infrastructure and services to induce greater flows of private, domestic and global funds, while ensuring transparent and targeted subsidies for people living in poverty;

(y) Examining appropriate debt-equity swapping measures in favour of shelter and infrastructure development in human settlements;

Innovative economic instruments

(z) Developing innovative sources of funding, both public and private, for human settlements development, and creating a supportive environment for the mobilization of resources by civil society, including beneficiary and individual voluntary contributions;

Special financing needs/issues

(aa) Providing assistance for shelter and human settlement development activities in favour of people living in poverty, particularly women, and vulnerable groups, such as refugees, internally displaced persons, people with disabilities, street children, migrants and the homeless through specific targeted grants;

(bb) Promoting assistance for shelter and human settlement activities in favour of vulnerable groups, such as refugees and internally displaced persons, documented migrants and the homeless through specific targeted grants and other assistance programmes;

15 The highest priority should be placed on the rehabilitation of expelled and homeless people who have been displaced by natural or man-made catastrophes, and especially by the act of foreign aggression. In the latter case, all countries have the duty to fully cooperate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

(cc) Recognizing the need for shelter and human settlements development in order to address the special conditions of some countries experiencing natural and human-made disasters and the urgent need to reconstruct their economies and human settlements;

(dd) Implementing the commitments of the international community to the special needs and vulnerabilities of human settlements in the small island developing States, in particular by providing effective means, including adequate, predictable, new and additional resources for human settlements programmes, in accordance with the Declaration of Barbados and on the basis of relevant provisions of the Programme of Action for the Sustainable Development of Small Island Developing States;

(ee) Providing international support and assistance to the land-locked developing countries and their neighbour transit developing countries in their efforts to implement the outcome of Habitat II, taking into account the challenges and problems characteristic to those countries;

(ff) Agreeing on a mutual commitment between interested developed and developing country partners to allocate, on average, 20 per cent of ODA and 20 per cent of the national budget, respectively, to basic social programmes;

(gg) Providing soft loans and grants to enable all nations to specifically address the needs of vulnerable groups.]

(The following paragraph is to be incorporated into section F in square brackets)

[Set up an advisory centre to identify appropriate financial institutions such as ADB and World Bank to avail themselves to assist member states to secure financial assistance/funding for the implementation of shelter and human settlements programmes.]

4. Technology Transfer and Information Exchange

151. [The use and transfer of environmentally sound technologies which have a profound impact on consumption and production patterns is one of the prerequisites for sustainable human settlements development. Advanced and appropriate technologies and the knowledge-based systems which support their application offer new opportunities for more efficient use of human, financial and material resources, more sustainable industrial practices and new sources of employment. International agencies including UNCHS (Habitat) have an essential role in disseminating and facilitating access to information on available technologies and options for their transfer. It is understood that the transfer of technology includes assurances of adequate protection of intellectual property and mutually agreed allocation of commercial benefits].

152. The international community, in promoting and facilitating the transfer of technology and expertise in support of the implementation of national plans of action, should:

(a) Establish and reinforce, as appropriate, global networks among all **[stakeholders] individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society** to facilitate information exchange on environmentally sound technologies particularly those related to shelter and human settlements;

(b) Ensure that the process of technology transfer is fair and avoids dumping of environmentally unsound technologies on the recipients;

(c) [Facilitate] [Develop and intensify] technical cooperation with and among all regions including south - south cooperation in order to exchange experiences particularly on best practices, foster the development of technology and technical skills and to increase the efficiency of shelter and human settlements policies and management, with backing of coordinated and complimentary support from multilateral and bilateral arrangements;

(c bis.) Ensure use of appropriate technology and production of local building materials;

INDIGENOUS TECHNOLOGIES

(d) Place special emphasis on the funding, and promotion and dissemination of applied research and innovation in all areas which could contribute to enhancing the capabilities of developing countries particularly those in Africa and least developed countries, to provide shelter, urban services, infrastructure and amenities to their communities;

(d bis.) Support the development of international, sub-regional and regional networks of research, production, dissemination and commercialization institutions for locally produced building materials;

(e) [Enhance the identification and dissemination of new and promising technologies related to human settlements which generate employment and lower cost of infrastructure, make basic services more affordable, and minimize detrimental environmental impacts, and identify specific roles for existing United Nations organizations, [especially UNCHS (Habitat)] which would promote these goals].

5. Technical Cooperation

153. [To face the challenges of the rapidly urbanizing world, there is need to ensure that international and regional networks facilitate more effectively the exchange and transfer of knowledge and experience on institutional, legal

and regulatory framework, and to disseminate best practices on sustainable human settlements in rural and urban areas. UNCHS (Habitat) should [play central role] and act as catalyst in mobilizing technical cooperation. Opportunities for improved dissemination and exchange of ideas on technical cooperation at national and regional levels could be explored.]

154. More specifically, the international community should:

(a) Establish, [within existing resources] cost-effective global human settlement information networks in the form of permanent and "electronic conferences" which will contain updated information and the Global Plan of Action, best practices, as well as progress reports on the implementation of national plans of action;

(b) Through global human settlements information networks, assist Governments at all levels, all major groups of actors and international development agencies, in assessing information and policies, strategies, programmes and projects on sustainable human settlements development and shelter provision;

(c) [Under the leadership of the Commission on Human Settlements, and supported by the United Nations regional economic commissions and UNCHS (Habitat), develop awareness-building and information activities to ensure that human settlements development issues in general, and concerted policy and programme responses to urbanization in particular, are brought into the mainstream of the development objectives of the international community and national Governments];

(d) Develop and strengthen, with a view to supporting and facilitating national and local efforts in human settlements management, capacity-building programmes and promote exchange of experiences and policy responses to urbanization and integration of regional development within the framework of national development strategies;

(e) Through the secretariat of the United Nations Commission on Human Settlements, UNCHS (Habitat), supported by information gathered by United Nations regional economic commissions, develop capacity building strategies in order to enhance the capabilities of national and local authorities to identify and analyze critical human settlements issues; to formulate and effectively implement policies and programmes which respond to them; and to efficiently manage the process of settlements development at the local levels;

(e bis.) Through appropriate institutions, continue to promote capacity-building in developing countries with effective utilization of national experts;

(f) Continue to support technical cooperation programmes aimed at mitigating the effects of natural and human-made disasters, as well as reconstruction activities in affected countries;

(g) Enable UNCHS (Habitat), [within existing resources], to provide technical, legal and institutional assistance to Governments at all appropriate levels upon request, in particular, in closer cooperation with UNDP's capacity building efforts.

6. *Institutional cooperation*

155. The task of pursuing the goals of adequate shelter for all and sustainable human settlements development, in the face of increasing global economic interaction, necessitates international cooperation of public and private institutions operating in the areas of human settlement development, whereby resources, information and capacities are pooled for a more effective response to human settlements problems.

156. [The Habitat Agenda adds new elements to the agenda for national actions and international cooperation, reaffirming, building on the results of the recent major United Nations conferences. Governments confirm the need for a coordinated follow-up of the major world conferences, including Habitat II. The very nature of urban challenges requires an integrated approach to *sustainable* socially **equitable and environmentally sound** development and thus increased cooperation and coherence. Existing intergovernmental bodies within the United Nations system should be used to promote communication and coordination between governments, international bodies - including those of the United Nations system and the Bretton Woods system, as well as other relevant [stake-holders] - and to strengthen a common perception of human settlements priorities].

156 bis. [Implementation of The Habitat Agenda should take place within a coordinated framework which ensures that all the United Nations Conferences are comprehensively followed-up and the agreed programmes of action fully implemented, monitored and reviewed, together with the results of other recent United Nations Conferences where they are related to human settlements, particularly the World Summit for Children, the United Nations Conference on Environment and Development, the World Conference on Human Rights, the World Conference on Natural Disaster Reduction, the Global Conference on the Sustainable Development of Small Island Developing States, the World Summit for Social Development, the International Conference on Population and Development, and the Fourth World Conference on Women. This will require better coordination and cooperation between multilateral and bilateral partners and joint programming, leading to increased and more effective cooperation between UNCHS and other entities within and outside the United Nations system].

157. The United Nations family of agencies, including the Bretton Woods institutions, the regional and sub-regional development banks and funds and bilateral support agencies [where appropriate] should:

(a) Establish and strengthen, where appropriate, cooperative mechanisms to integrate into their policies, programmes and operations, sustainable human settlements development commitments and actions, particularly those from The Habitat Agenda and taking into account the outcome of the relevant sections of other recent United Nations Conferences;

(b) Establish and strengthen partnerships with international associations of local authorities, non-governmental and community-based organizations and with all other **[stakeholders individuals and organizations of civil society drawing upon a wide range of experience and expertise, including that from marginalized members of society]** to achieve the goals of the Conference;

(c) Develop activities aimed at strengthening the capacity of local authorities;

(d) Intensify their cooperation with non-governmental organizations, voluntary groups and community associations, and private and cooperative sectors in sustainable human settlements development;

(e) Support public-private partnerships in shelter delivery, service provision and other development activities for sustainable human settlements;

(f) Encourage the involvement of all actors at local level in reaching agreements and local measures, programmes and actions necessary to implement The Habitat Agenda, Global Plan of Action and national plans of action including through Local Agenda 21 processes as mandated by the United Nations Conference on Environment and Development.]

unsustainable patterns of production and consumption raise these problems in especially acute forms. (Art. 6)

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR IMPLEMENTATION

F. Implementation and follow-up of the Global Plan of Action
(Paragraphs 158 - 185)

Note on Part IV, Chapter F:

Chapter F was informally negotiated during the third session of the Preparatory Committee. Chapter F in the document A/CONF.165/PC.3/4, as submitted to the Preparatory Committee, contained only 5 paragraphs (158 - 162), and was considered incomplete as the inter-sessional informal drafting group did not have sufficient time to consider this Chapter in its entirety. The written proposals by delegations and others, as presented during the informal negotiations at PrepCom 3, focused, therefore, not only on amendments to existing paragraphs 158 - 162, but also on introducing new paragraphs.

At the conclusion of informal negotiations on Chapter F, Informal Paper Number 3 was issued, containing paragraphs 158 - 184. The entire paper was bracketed. It was never adopted by either Working Group II or the Plenary. An additional paragraph 185, informally negotiated, was omitted inadvertently from Informal Paper Number 3 and was issued separately. It is included here in brackets. The Plenary confirmed, on 16 February, that all the paragraphs of Chapter F would be bracketed for the Conference.

There was a consensus among delegations that in addition to the text, in brackets, of paragraphs 158 - 185 as informally negotiated, the proposed amendments, as they were presented during informal negotiations, be annexed to this Chapter in order to facilitate further negotiations at the Habitat II Conference in Istanbul.

1. Introduction

[158. **Before governments undertake new commitments, they shall be made aware of relevant existing obligations incurred through Conventions, Treaties, Covenants Declarations, Conference Action Plans and General Assembly Resolutions. The initial commitment shall be for states to fulfill years of previous obligations by signing what they have not yet signed, ratifying what they have not yet ratified, enacting legislation to ensure compliance, and by establishing an enforcement infrastructure to ensure discharging of these obligations. 1990-1999 is the Decade for International Law and during this decade it would be appropriate for states to finally undertake to discharge their accrued obligations.** The long-term impact of the commitments made by Governments and the international community at Habitat II will depend on the implementation of actions agreed upon at all levels including local, national and international levels. Also, national plans of action and/or other relevant national programmes and actions on sustainable human settlements development and shelter provision will need to be developed or strengthened, where appropriate, and their implementation will need to be monitored and evaluated by Governments and their partners at the national level in *sustainable development socially equitable and environmentally sound development*. Similarly progress in implementing the Global Plan of Action needs to be assessed, with a view to encouraging and enabling all *stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by non-fulfillment of expectations from the Global Plan of Action*.]to improve their performance and strengthen international cooperation.

2. Implementation at the national level

158 bis. Governments have the primary responsibility of implementing the Global Plan of Action. Governments as central partners will create and strengthen effective partnerships with families, communities, local authorities, the private sector, non-governmental organizations, women, youth, elderly, vulnerable groups and indigenous people (**s**) in each country. National mechanisms should be installed or improved, as appropriate, to coordinate actions at all relevant government levels which have impact on human settlements and to assess this impact prior to governmental actions. Local authorities should be supported in their approach to implement this Global Plan of Action inasmuch as local action is required. All appropriate participatory mechanisms, including Local Agenda 21, should be developed and employed. **It should be recognized that many of the provisions necessary for achieving socially equitable and environmentally sound development and for ensuring ecologically sustainable communities were already evident in Agenda 21, and that what is necessary is the political will of states to enact the necessary legislation and mandatory standards**

and regulations to ensure compliance. In the Platform of Action in Beijing in Art. 167 states undertook to ensure that corporations including transnationals comply with existing national and international law.

3. Implementation at the international level

159. The effective implementation of the outcome of the United Nations Conference on Human Settlements (Habitat II) should take into account the integration of sustainable human settlements development with broader environmental, social and economic considerations. The main actors at the global level for the implementation and follow-up of the Habitat Agenda will continue to be Member States of the United Nations, the United Nations General Assembly, the Economic and Social Council, the Secretary-General of the United Nations, the United Nations Commission on Human Settlements and its Secretariat, the United Nations Centre for Human Settlements (Habitat), and all other specialized agencies of programmes in the United Nations system engaged in activities pertaining to the provision of adequate shelter for all and sustainable human settlements development in an urbanizing world.

4. Tracking progress on the Global Plan of Action

160. **The implementation of the Habitat agenda will require the discharging of obligations incurred in Conventions, Treaties, Covenants Declarations, Conference action plans and General Assembly resolutions.** Member States of the United Nations shall *exert concerted efforts to achieve the implementation* **implement** of the Habitat Agenda through bilateral, sub-regional, regional and international mechanisms for cooperation as well as through the United Nations system and the Bretton Woods institutions. **The lending policy of the Bretton Woods institutions shall be determined by a set of principles extracted from a body of international United Nations instruments.**

161. The General Assembly, as the highest intergovernmental body is the principal policy-making and appraisal organ on matters relating to the follow-up of Habitat II. At the Special Session of the General Assembly convened for 1997 for the purpose of an overall review and appraisal of Agenda 21, due attention should be given to the issue of human settlements in the context of *sustainable socially equitable and environmentally sound* development. Also, the Assembly should include the follow-up to the Conference in its agenda as an item entitled "Implementation of the Outcome of the Second United Nations Conference on Human Settlements (Habitat II)." In its fifty-first session, it should review the outcome of the conference as well as the steps required to implement the Habitat Agenda;

162. The General Assembly should hold a special session in the year 2006 for an overall mid-term review and appraisal of the implementation of the outcome of Habitat II and should consider further actions and initiatives.

163. The Economic and Social Council, in accordance with its role under the Charter of the United Nations and with relevant General Assembly Resolutions and ECOSOC Decisions, would oversee system-wide coordination in the implementation of the Global Plan of Action and make recommendations in this regard. The Council should be invited to review at its substantive session in 1997 the implementation of the Global Plan of Action. As coordinating body, the Council should be invited to review in 1997 the role and functioning of the Commission on Human Settlements, taking into account the need for synergy and effective coordination with other related commissions and conference follow-up, and with a view to ensure a clear division of labour and coordination of multi-year programmes of work. In addition, it should consider dedicating one high-level segment before the year 2001 to human settlements and implementation of the Global Plan of Action with the active involvement and participation, inter alia, of the specialized agencies, including the World Bank and IMF.

164. The Economic and Social Council (ECOSOC), may convene meetings of high-level representatives to promote international dialogue on the critical issues pertaining to adequate shelter for all and sustainable human settlements development as well as on policies for addressing them through international cooperation.

165. The ECOSOC, in the context of its role under the Charter of the United Nations vis-à-vis the General Assembly and in accordance with the relevant General Assembly resolutions, would facilitate system-wide coordination in the implementation of the outcome of Habitat II and make recommendations in this regard. It should look at ways to strengthen, consistent with the mandates of the Charter of the United Nations, the role and authority, structures, resources and processes of ECOSOC, for bringing economic and social development agencies into a closer working relationship with it so that it can review progress made towards implementing the outcome of Habitat II.

166. The General Assembly and ECOSOC should promote sub-regional and regional cooperation in the implementation of the Habitat Agenda. In this regard, the regional commissions, in cooperation with the regional intergovernmental organizations and banks, should convene meetings at the highest political levels to review progress made towards implementing the outcome of Habitat II, exchange views on their respective experiences, particularly in the best practices, and adopt appropriate measures. The regional commissions should report to the Council on the outcome of such meetings.

167. As a functional commission assisting the Economic and Social Council, the Commission on Human Settlements should have an important role in monitoring, within the United Nations system, the implementation of the Global Plan of Action.

168. The mandate of the Commission will be strengthened and expanded to incorporate and implement the Habitat Agenda. Similarly, UNCHS (Habitat) will be strengthened and revitalized in accordance with the relevant resolutions of the General Assembly with a view to enabling it to effectively implement the expanded mandate contained in the Habitat Agenda under the overall policy direction of the United Nations Commission on Human Settlements. UNCHS should be evolved into a highly competent technical secretariat capable of implementing the Habitat Agenda. For the purpose, UNCHS (Habitat) will be restructured and strengthened to deal effectively with the Habitat Agenda.

169. The United Nations Commission on Human Settlements under the United Nations Economic and Social Council will have the following main objectives:

(a) To promote integrated and cohesive policies aimed at achieving the goals of the provision of adequate shelter for all and sustainable human settlements development in all countries in accordance with the Habitat Agenda;

(b) To track the progress in the implementation of the Habitat Agenda and activities related to shelter provision and sustainable settlements development, including the relevant commitments contained in Agenda 21;

(c) To assist countries and regions in increasing and improving their own efforts to solve shelter and human settlements problems;

(d) To receive and analyze relevant inputs from governments, local authorities and relevant non-governmental organizations in the context of the overall implementation of the Habitat Agenda;

(e) To promote greater international cooperation in order to increase the availability of resources to developing countries, especially those in Africa and the least developed countries;

(f) To provide appropriate recommendations to the General Assembly through the Economic and Social Council on the basis of the analysis and synthesis of the information received and to inform the Commission on Sustainable Development;

(g) To facilitate cooperation and partnerships in this domain among all countries and regions.

170. The United Nations Commission on Human Settlements will have the following main functions and responsibilities:

(a) To develop and promote policy objectives, priorities and guidelines regarding existing and planned programmes of work in the fields of adequate shelter and sustainable human settlements, as contained in the recommendations of the United Nations Conference on Human Settlements (Habitat II) and endorsed by the General Assembly;

(b) To lead the United Nations system and to cooperate with other international organizations in the field of adequate shelter and sustainable human settlements and to propose, when appropriate, ways and means by which the over-all policy objectives and goals in these fields within the United Nations system might be best achieved;

(c) To ensure that adequate shelter for all and sustainable human settlements development are implemented in harmony with the recommendations adopted by the United Nations Conference on Environment and Development, particularly Chapter 7 of Agenda 21 and the declarations and plans of action relating to shelter and human settlements adopted by the World Summit on Children; the World Conference on Human Rights; the Global Conference on Sustainable Development of Small Island Development States; the International Conference on Population and Development; the World Summit on Social Development; and the Fourth World Conference on Women;

(d) To promote the implementation of the Habitat Agenda recommendations pertaining to national actions recommended by the United Nations Conference on Human Settlements (Habitat II);

(e) To study in the context of the Habitat Agenda new issues and problems with a view to evolving solutions for adequate shelter for all and sustainable human settlements, particularly those of a regional or international character;

(f) To continue to give overall policy guidance and carry out supervision of the operations of the United Nations Centre for Human Settlements, including the United Nations Habitat and Human Settlements Foundation;

(g) To review and approve periodically the utilization of funds at its disposal for carrying out shelter and human settlements development activities at the global, regional and sub-regional levels;

(h) To monitor and evaluate the progress made toward achieving the goals of The Habitat Agenda and recommend appropriate measures at the mid-term review to be undertaken by the year 2006 and alternative actions as deemed necessary to enhance the dynamic nature of the Agenda;

(i) To evaluate, at the mid-term review, through an international meeting or conference, the effective contribution of the private sector in the implementation of the Habitat Agenda.

171. The United Nations Centre for Human Settlements, UNCHS (Habitat), located in Nairobi, shall continue to service the Commission on Sustainable Human Settlements and serve as the focal point for actions and coordination of activities related to adequate shelter for all and sustainable human settlements action within the United Nations system. The Centre shall be headed by an Executive Director, at the level of Under-Secretary-General, who shall report to the Secretary-General of the United Nations. The Centre shall be entrusted, inter alia, with the following responsibilities:

(a) To ensure the harmonization of adequate shelter for all and sustainable human settlements development programmes planned and carried out by the United Nations system;

(b) To assist the Commission of Human Settlements in formulating recommendations for coordinating adequate shelter and sustainable human settlements development activities in the United Nations system, to keep them under review and to assess their effectiveness;

(c) To execute adequate shelter and human settlements development programmes and projects;

(d) To serve as the focal point for a global exchange of information about adequate shelter for all and human settlements development;

(e) To provide substantive support to the Commission on Human Settlements;

(f) To deal with interregional issues relating to adequate shelter for all and human settlements development;

(g) To supplement the resources of the regions in formulating and implementing adequate shelter for all and human settlements development programmes and projects when so required;

- (h) To promote and consolidate collaboration with all partners including private sector and non-governmental organizations in the Habitat Agenda for adequate shelter and human settlements development;
- (i) To maintain and update a global directory of consultants and advisers to supplement the skills available within the United Nations system and, where necessary, to assist in the recruitment of experts at the global level, including those belonging to developing countries;
- (j) To initiate public information activities on adequate shelter for all and human settlements development in cooperation with the Office of Public Information of the United Nations Secretariat;
- (k) To promote increased use of audio-visual and information technology relating to adequate shelter and human settlements development;
- (l) To carry out any other mandate, responsibilities and functions entrusted to it by the United Nations General Assembly.

172. The United Nations Centre for Human Settlements (Habitat) and the secretariats of the regional economic commissions as well as the principal financial and technical institutions and all other partners at the regional and global levels should consolidate and expand cooperation and coordination in the fields of adequate shelter for all and sustainable human settlements development.

173. Within their mandates, other subsidiary bodies of the Economic and Social Council, such as the Commission on and Commission on Social Development should give due regard to human settlements issues, as set out in the Global Plan of Action.

174. To promote implementation of the Global Plan of Action at the regional and sub-regional levels, the regional commissions of the United Nations, in cooperation with the regional inter-governmental organizations and banks, could convene, on a biennial basis, a meeting at a high political level to review progress made towards implementing the outcomes, exchange views on respective experiences and adopt the appropriate measures. The regional commissions should report to the Economic and Social Council through the appropriate mechanisms on the outcome of such meetings.

175. The Secretary General is invited to ensure effective coordination of the implementation of the Global Plan of Action, and adequate consideration of human settlements needs in all activities of the United Nations. The Administrative Committee on Coordination (ACC) should review its procedures at the inter-agency level to ensure system-wide coordination and full participation of its

entities in the implementation of the Global Plan of Action. These entities should examine their programmes to determine how they can best contribute to the coordinated implementation of the Global Plan of Action. ACC should be invited to establish a task force on The Habitat Agenda. UNCHS (Habitat) should be added to the membership of ACC and to the task force on The Habitat Agenda.

176. The Secretary General is invited to continue to ensure effective functioning of the United Nations Centre for Human Settlements (Habitat). In conjunction with the review of the mandate of the Commission on Human Settlements, the functions of the Centre should be assessed by the Economic and Social Council.

177. The important role of the Committee on Economic, Social and Cultural Rights in monitoring those aspects of the Statement of Principles and Commitment on Global Plan of Action that relate to compliance, by States Parties, with the International Covenant on Economic, Social and Cultural Rights should be emphasized.

178. To strengthen their support for actions at the national level and to enhance their contributions to an integrated and coordinated follow-up by the United Nations, specialized agencies and other organizations of the United Nations system should identify the specific actions they will undertake to meet the priorities identified in the Global Plan of Action.

179. In order to improve the efficiency and effectiveness of United Nations organizations in providing support to the efforts for the provision of adequate shelter for all and sustainable human settlements development at the national level, and to enhance their capacity to achieve the objectives of Habitat II, there is a need to renew, reform and revitalize the various parts of the United Nations system, in particular its operational activities. All specialized agencies and related organizations of the United Nations system are invited to strengthen and adjust their activities, programmes and medium-term strategies, as appropriate, to take into account the follow-up to Habitat II. Relevant governing bodies should review their policies, programmes, budgets and activities in this regard.

(a) The United Nations Development Programme (UNDP) should enhance its efforts to support the implementation of The Habitat Agenda through its network of field offices;

(b) The International Labour Office (ILO) should coordinate and support concrete actions at the policy and programme levels for the implementation of the Habitat Agenda with regard to the expansion and protection of employment and work;

(c) The United Nations Children's Fund (UNICEF) should consider integrating its Urban Basic Service Programmes, the Mayors Defenders of Children Initiative, and the Decentralization of the UNICEF National Plans of Action with the Habitat Agenda through broad partnerships for sustainable community development and community management;

(d) The United Nations Conference on Trade and Development (UNCTAD) should contribute to analyzing and monitoring major trends of urbanization and impact of urban and rural policies in connection with changes in the global economic environment;

(e) The United Nations Environment Programme (UNEP) should develop and promote policies to enhance the environment and integrate environmental considerations in human settlements development and adequate shelter for all and catalyze action to achieve these goals at the international, regional, sub-regional and national levels;

(f) The United Nations Fund for Population Activities (UNFPA) in coordination and cooperation with other United Nations entities, should pursue activities related to basic social services for all;

(g) The United Nations Industrial Development Organization (UNIDO) in implementing the Habitat Agenda should address areas which require the competitiveness of export-oriented enterprises and competitive local and national enterprise growth;

(h) The World Health Organization (WHO) should in the implementation of The Habitat Agenda be guided by the global importance of health issues, the linkage of those issues to sustainable human settlements and adequate shelter, and the close relationship between public health and basic urban and rural services and the need to place human beings at the centre of development.

180. International financial institution should **be proactive and be involved with driving BEST endogenous practices** through **requiring that funding being conditional on compliance with (MINS 1997) — mandatory, international normative standards and technical regulation drawn from international instruments, and in this way** contribute to the mobilization of resources for the implementation of The Habitat Agenda. To this end, the relevant institutions are urged to take the following measures:

(a) The World Bank, the International Monetary Fund, the regional and sub-regional development banks and funds, and all other international finance organizations *should shall* undertake to require **mandatory international**

normative standards (MINS) drawn from principles in international instruments as a condition to funding projects; In addition they should further integrate adequate shelter for all and sustainable human settlement development goals in their policies, programmes and operations, including by giving higher priority to these goals, where applicable, in their lending programmes;

(b) The Bretton Woods institutions and other organizations and bodies of the United Nations system should work together with concerned countries particularly developing countries to improve policy dialogues and develop new initiatives **to ensure socially equitable and environmentally sound development** *that structural adjustment programmes promote sustained economic growth*, with particular attention to the necessity to provide adequate—**affordable, accessible, safe and environmentally sound, with tenure security** shelter for all and **socially equitable and environmentally sound sustainable human settlement** development to people living in poverty and vulnerable groups;

(c) The United Nations system, **shall actively institute mandatory international normative standards (MINS) in 1997—the last year of the decade dedicated to the promotion and the furthering of international law, and ensure that the Bretton Woods institutions be guided by these international standards in accessing to** including the Bretton Woods institutions and specialized agencies, should expand and improve their cooperation in the field of adequate shelter for all and sustainable human settlements development to ensure that the efforts are complementary and, where possible, should combine resources in joint initiatives for adequate shelter for all and sustainable human settlements development build around the objectives of Habitat II;

(d) The World Trade Organization (WTO) should consider **how it might through promoting and requiring adherence to the principles established in international instruments** drive *contribute* to the implementation of The Habitat Agenda, including activities in cooperation with the United Nations system, **and specifically the promotion of BEST practices.**

5. Indicators, best practices and performance evaluation

181. It is essential to evaluate the impact of policies, strategies and actions on the provision of adequate shelter and the achievement of sustainable human settlements development. The results of these evaluations will be considered by the relevant United Nations functional commissions, including the United Nations Commission on Human Settlements. UNCHS (Habitat), together with other relevant organizations, will establish an appropriate process for analyzing and monitoring major trends of urbanization and the impact of urban policies. In particular, information on the impact of urbanization on vulnerable and disadvantaged groups, including children, should be collected.

182. All partners of The Habitat Agenda, including local authorities, the private sector and communities, will regularly monitor and evaluate their own performances in the implementation of The Habitat Agenda through comparable human settlements and shelter indicators and documented best practices, the guidelines for which will be provided by UNCHS (Habitat). The data collection and analysis capabilities of all these partners will be strengthened and assisted at national, sub-regional and global levels.

183. As part of their commitment to strengthening their existing shelter- and settlements-related data collection and analysis capabilities, Governments at the appropriate levels, including local authorities, should continue to identify and disseminate best practices, develop and apply shelter and human settlements development indicators. This and other relevant information, as appropriate, will be used for assessing the national implementation of the global plan of action. Such information could be considered within the framework of an appropriate consolidated reporting system of the United Nations, taking into account the different reporting procedures in the economic, social and environmental fields.

184. UNCHS (Habitat) will be designated as the Global Habitat Observatory to promote, monitor and evaluate the trends and progress in the implementation of The Habitat Agenda through locally, nationally and regionally supported indicators and best practices programmes. It should continue to produce and publish the Global State of Human Settlements Report and other periodical monitoring and evaluation publications to track the progress on the implementation of The Habitat Agenda.

185. UNCHS as focal point should:

(a) Set up an advisory secretariat/centre to assist Member States in developing their national housing and urban indicators for at least one major city;

(b) Set up a research centre to assist member states in undertaking studies and research on sustainable approaches and methods concerning building materials and construction technology and disseminate such information to all Member States.]

END

Preliminary comment based on having only had an opportunity to look at the Habitat document for a couple of days.

Apart from the following reference in Article 2 of the Habitat II Agenda to Habitat I as having occurred there is no reference in the Habitat II agenda to Habitat 1.

4 Having considered the experience since the United Nations Conference on Human Settlements (Habitat), held in Vancouver, Canada, in 1976, Habitat II r

There were many far reaching substantive provisions in Habitat I that should have formed the basis from which Habitat II could reach further.

The Habitat II Agenda is calling for commitments often in areas where states have undertaken previous obligations which they have never discharged. Habitat II agenda, like so many recent conference agendas is not sufficiently acknowledging previous obligations from the precedents of legally binding conventions, treaties, covenants and from "ethical expectations" from Declarations and general assembly resolutions. In the case of Habitat II, the obligations undertaken in Habitat I have been virtually ignored.

An integrated human settlement policy

- (i) be formulated through a truly interdisciplinary approach, concurrently with policies relation to other aspects of social and economic development
- (ii) be consistent with the preservation, restoration and improvement of the natural and man-made environment, cognizant of the positive role of environment in national economic and social development.
- (v) be considered in all efforts to implement the New International Economic Order

Many of the obligations are communicated in the following ways:

(1) through the use of strong change language

In many cases the concepts might be included but the language is stronger in the habitat I document than in the Habitat II Agenda

In many cases the concepts conveyed by the language in Habitat I are not included in Habitat II

(2) through condemnation of practices

Many of the inequitable and ecologically unsound practices that were condemned in Habitat I are no longer condemned in the Habitat Agenda

(3) through proposal of solutions and actions

Many of the solutions proposed in Habitat I go beyond what states are prepared to agree to in Habitat II

BRIEF CONTENT ANALYSIS OF HABITAT I

ADEQUATE SHELTER

Adequate shelter and services - basic human right

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better-balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

adequate shelter...places an obligation

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavor to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better-balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT) "SPECULATION" "NOT USED IN HABITAT II

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resource; without public control land is a prey to speculation and urban encroachment.

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation.

(c) Such control may be exercised through

(i) zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;

(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises;

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

Recommendation D3

Recapturing plus value.

(a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to the public at large the benefits of the unearned increase in land values.

(b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community), unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies.

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land;

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices;

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start;

BASIC NEEDS

Recommendation C 12

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered; by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

CONSERVATION

Conservation and recycling technologies

21 Due attention should be given to implementation of conservation and recycling technologies. (III 21 Habitat 1)

CONSUMPTION (CONDEMNATION)

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

DISARMAMENT (NOT in TEXT HABITAT II)

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

Armament Arms 150 in brackets in Habitat II

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

3. Economic development should lead to the satisfaction of human needs and is a necessary means towards achieving a better quality of life, provided that it contributes to a more equitable distribution of its benefits among people and nations. In this context particular attention should be paid to the accelerated transition in developing countries from primary development to secondary development activities, and particularly to industrial development.

ENDOGENEOUS TECHNOLOGY

18. Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefore be:

(kk) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating employment and income.

(iv) Conceived to utilize traditional techniques suitable adapted to new materials

(v) emerging from original indigenous research

(vi) Planned so as to take full account of their environmental impact

ENVIRONMENTAL AND CULTURAL PRESERVATION

2. It is the responsibility of Governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy, linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity** mankind. (III 2, Habitat I)

Energy renewable [NO MENTION OF SOLAR MENTIONED IN HABITAT II]

Recommendation C. 5

NOTE "RENEWABLE" is mentioned in 3 sections 71, 100 101 which are all still in brackets

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)

Human settlements are consuming more and more energy just when mankind has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources.

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design and management and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 Habitat i)

(iv) emphasizing where possible the use of renewable over non-renewable energy sources and the rationalization of technologies which are currently known to be hazardous to the environment.

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification, and district heating and cooling, including the utilization of solar and geothermal energy and heat pumps as appropriate.

ENVIRONMENT AS COMMON HERITAGE (NOT IN TEXT) OF HABITAT II)

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of mankind and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

EQUITABLE DISTRIBUTION

3. Economic development should lead to the satisfaction of human needs and is a necessary means towards achieving a better quality of life, provided that it contributes to a more equitable distribution of its benefits among people and nations. In this context particular attention should be paid to the accelerated transition in developing countries from primary development to secondary development activities, and particularly to industrial development. (II, 3 Habitat I)

b) Human settlements policies should aim to improve the condition of human settlements particularly by promoting a more equitable distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4, b Habitat I)

(c) this can be done through:

(i) the location of public sector investments;

(ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups

(iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas

(iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived

(v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;

(vi) Measures to improve the quality of life of vulnerable groups which have special needs-such as children, the elderly, the handicapped and the disabled. Such measure includes provision of basic social services, adequate shelter and social and physical access to facilities.

Recommendation C 11

Infrastructure policy

(a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.

(b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.

(c) this implies

(i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population

(ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures;

HOMELESS OF THOSE DISPLACED BY NATURAL OR

15 The highest priority should be placed on the rehabilitation of expelled and homeless people who have been displaced by natural or *man-made anthropogenic* catastrophes, and especially by the act of foreign aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

INDIGENOUS PEOPLES

i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

Condemnation of displacement of native population

(e) In all occupied territories, changes in the demographic composition, or the transfer or uprooting of the native population, and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. The heritage and national identity must be protected. Any policies that violate these principles must be condemned.

INFORMATION ACCESS

(c) This implies

(vi) development and use of methods for assessing economic, social and environmental impacts from proposed projects in a form useful to the public;

(vii) Consideration of land use characteristics including ecological tolerances and optimum utilization of land so as to minimize pollution, conserve energy, and protect and recover resources;

(viii) Undertake the necessary studies on precautions that can be taken to safeguard life and property in case of natural disaster.

INTERDISCIPLINARY APPROACH ADVOCATED

(i) be formulated through a truly interdisciplinary approach, concurrently with policies relation to other aspects of social and economic development (Rec. A 2, Habitat I)

LAND OWNERSHIP

recommendation D 5

patterns of ownership

(i) Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

(c) special attention should be paid to:

(i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;

(ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;

(iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;

(iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.

(v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority;

(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved.

MEANINGFUL EMPLOYMENT [NOT IN HABITAT II TEXT] EMPLOYMENT

5. In fact, the very construction of the physical components of human settlements—be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of meaningful employment, instead of being treated as a residual of so-called “productive” activities. (Chapt II A. 5 Habitat)

NEW INTERNATIONAL ECONOMIC ORDER (REFERENCE TO 1974 RESOLUTION IGNORED IN HABITAT II)

4. To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 14, Habitat I)

14. Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas, between regions and within regions themselves. Governments should adopt policies, which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

NUCLEAR DISARMAMENT (see ALSO section on Waste related to choices of energy)

12. The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be

utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

PUBLIC PARTICIPATION E. (AGENDA ITEM 10 E)

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

17. Participation is an integral part of the political processes of decision-making; in a field as complex as human settlements, it is also a necessity because the task is too great for Governments to accomplish without mobilizing the interest of inhabitants, using their ingenuity and skills and harnessing otherwise untapped resources.

28. Public participation is the dynamic incorporation of the people in the economic, social and political life of a country which would ensure that the beneficiary is an effective participant in collective decisions with regard to the common good.

39. A co-operative effort of the people and their Governments is a prerequisite for effective action on human settlements. The magnitude and intractability of the problems are too great for Governments to act alone. Citizen participation should be an integral part of the decision-making processes on the full range of human settlement issues. Citizens must be provided opportunities for direct involvement in the decisions that profoundly affect their lives. Such participation can heighten citizen awareness of the complexity and inter-relatedness of the problems and the urgent need for concerted action. Involvement of citizens can also be an important means of making creative use of their ingenuity and skills, thus making effective use of often untapped resources.

40 Participation can be conceived, from the top downwards, as the involvement of the higher echelons of government in the decision-making of smaller groups; laterally, as the co-operation between parallel or competing sectoral interests; or, from the base upwards, as the direct involvement of residents in the making of decisions and implementation of programmes which concern them. The first two forms of participation are the basis of strategies, planning procedures, implementation of programmes and, in general, management of human settlements; the last, under the label of popular participation, is becoming an indispensable element of a truly democratic process.

73 Citizen participation, by definition, cannot be achieved by fiat. But it can be facilitated by removal of political and institutional obstacles and by providing information in clear and meaningful terms. It can also be stimulated by providing opportunities for early and continuing involvement in the selection of alternatives. The inaccessibility of information and the absence of appropriate mechanisms for the expression of alternative views are often major stumbling blocks for effective involvement of citizens in shaping their future.

95 Public participation implies not only efforts to convey information but also a very important effort of education and formation to allow both specialist and public participation to play a determining role in evaluating the economic, technical and administrative consequences of the measures under consideration

PARTICIPATION OF WOMEN

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be guaranteed. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize productive employment. (III 11, Habitat I)

PROVIDING FOR THE PROTECTION, PRESERVATION AND ENHANCEMENT OF THE ENVIRONMENT (Preservation of the environment is not used in Habitat II) ... providing for the protection, preservation and enhancement of the environment. (II, 8 Habitat I)

REDUCTION OF DISPARITIES

4. It is of paramount importance that national and international efforts give priority to improving the rural habitat. In this context, efforts should be made towards the reduction of disparities between rural and urban areas, as needed between regions and within urban areas themselves, for a harmonious development of human settlements. (III 4 Habitat I)

PRIORITY OF SOCIAL SERVICES

Recommendation C 15
Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:

(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;

PUBLIC CONTROL AND BENEFIT FROM LAND (NO MENTION OF PUBLIC CONTROL IN HABITAT II AGENDA

D. Land (Agenda item 10 (d)

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice. If left unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people can only be achieved if land is used in the interests of society as a whole.

2. Instead, the pattern of land use should be determined by the long-term interests of the community; especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment and a crucial link in an often-delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies.

Recommendation D1

Land resource management

(a) Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest is the single most important means of improving the capacity of human settlements to absorb changes and movements in population; modifying their internal structure and achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered.

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal

regions and other areas subject to the impact of development, recreation and tourism activities.

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore Governments must maintain full jurisdiction and exercise complete sovereignty over such and exercise complete over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed; by foreign nations which enjoy the benefits while preventing its rational use.

SOCIAL JUSTICE (TERM NOT USED IN HABITAT II)

1. *Mankind Humanity* must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national governments and international community; aimed at mobilization of economic resources, institutional changes and international solidarity by:

(a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions

(b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups (especially children, women and the infirm) in order to ensure the provision of health, services, education, food and employment within a framework of social justice (Habitat I)

TRANSFER OF TECHNOLOGY QUALIFIED

19. Access should be granted, on more favourable terms, to modern technology, which should be adapted, as necessary, to the specific economic, social and ecological conditions and to different stages of development of the developing countries. Efforts must be made to ensure that the commercial practices governing the transfer of technology are adapted to the needs of the developing countries and to ensure that buyers' rights are not abused. (III 19 Habitat I)

TRANSNATIONAL CORPORATIONS (NO MENTION OF TRANSNATIONALS IN HABITAT II AGENDA)

17. Every State; has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I)

TRANSPORTATION (NO CONDEMNATION OF THE AUTOMOBILE IN HABITAT II AGENDA)

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further

deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents.

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles.

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel.

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic;

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system.

TRANSNATIONALS

17. Control over transnationals (NO PROVISION FOR CONTROL OVER TRANSNATIONAL)

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I

WASTE = RESOURCES

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates,

together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a))

(b) In the development of human settlements, the quality of the environment must be preserved. Pollution should be prevented by; minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource.

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load;

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste;

(iii) Innovative use of unavoidable waste as a by-product

(vi) Use of sources of energy which have a low or no waste production

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society;

URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

(i) securing legislation, legal instruments and regulations;

(iv) active participation of a well-informed public

(v) protection of ecosystems and critical land

(ix) Integration and improvement of squatter and marginal settlements.

WASTE = RESOURCES

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a))

PART 1 PREAMBLE

1. We recognize that **years of accrued state obligations to improve the quality of life through recognizing the right to shelter, the right to social security, the right to equality, the right to peace and the right to a safe environment have not yet been discharged. In 1974 through General Assembly resolutions we recognized “united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of an New International Economic Order, 1974).**

DOCUMENTATION OF PRECEDENT

RE: ESTABLISHING A NEW INTERNATIONAL ECONOMIC ORDER AS ADVOCATED IN HABITAT 1 (REFERENCE TO A 1974 GENERAL ASSEMBLY RESOLUTION IGNORED IN HABITAT II)

To achieve universal progress in the quality of life, a fair and balanced structure of the economic relations between States has to be promoted. It is therefore essential to implement urgently the New International Economic Order based on the Declaration and Programme of Action approved by the General Assembly in its sixth special session, and on the Charter of Economic rights and Duties of States. (II 4, Habitat I)

Human settlements are characterized by significant disparities in living standards and opportunities. Harmonious development of human settlements requires the reduction of disparities between rural and urban areas, between regions and within regions themselves. Governments should adopt policies ;which aim at decreasing the differences between living standards and opportunities in urban and non-urban areas. Such policies at the national level should be supplemented by policies designed to reduce disparities between countries within the framework of the New International Economic Order. (II 14, Habitat II)

We affirm the imperative need **and urgency** to improve the quality of human settlements which profoundly affects the daily lives and well-being of *our* people. There is a sense of great opportunity and hope that a new world can be built in

which economic development, social development and environmental protection as interdependent and mutually reinforcing components of *sustainable development* **socially equitable and environmentally sound development** can be realized through solidarity and cooperation within and between countries, and through effective partnerships at all levels. International cooperation and universal solidarity, guided by the ~~[[purposes and]]~~ principles of the Charter of the United Nations, **and by over 50 years of obligations accruing through Conventions, Treaties, and Covenants; and by over 50 years of expectations arising through Declarations, Conference action plans and General Assembly Resolutions** *In a spirit of partnership*, are crucial in order to improve the quality of life of the peoples of the world. **The constant vigilance by individuals and organizations of civil society is essential and should be facilitated through the undertaking by states to discharge previous obligations and fulfill previous expectations; and through the establishment of an International Court of Compliance where citizen can take evidence of state non-compliance.**

DOCUMENTATION OF PRECEDENT:

RE: PROMOTING NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY

Solemnly proclaim our united determination to work urgently for the Establishment of a New International Economic Order based on equity, sovereign equality, interdependence, common interest and co-operation among all States, irrespective of their economic and social systems which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development and peace and justice for present and future generation... (Preamble, Declaration on the Establishment of a new international economic order, 1974)

RE: ADVOCATING LOCAL SERVICES AND HUMAN SCALE

Mankind Humanity must not be daunted by the scale of the task ahead. There is need for awareness of and responsibility for increased activity of the national Governments and international community, aimed at mobilization of economic resources, institutional changes and international solidarity by:

- (a) Adopting bold, meaningful and effective human settlement policies and spatial planning strategies realistically adapted to local conditions;
- (b) Creating more livable, attractive and efficient settlements which recognize human scale, the heritage and culture of people and the special needs of disadvantaged groups especially children, women

and the infirm in order to ensure the provision of health, services, education, food and employment within a framework of social justice (1 Habitat I)

DOCUMENT OF PRECEDENTS:

RE: UNDERTAKING TO GUARANTEE RIGHTS

In compliance with the fundamental obligations laid down in article 2 of this Convention, States Parties undertake to prohibit and to eliminate racial discrimination in all its forms and to *guarantee* ensure the right of everyone, without distinction as to race, colour, or national or ethnic origin, to equality before the law, notably in the enjoyment of the following rights:

- (a) The right to equal treatment before the tribunals and all other organs administering justice;
- (b) The right to security of person and protection by the State against violence or bodily harm, whether inflicted by government officials or by any individual, group or institution;
- (c) Political rights, in particular the rights to participate in elections--to vote and to stand for election--on the basis of universal and equal suffrage, to take part in the Government as well as in the conduct of public affairs at any level and to have equal access to public service;
- (d) Other civil rights, in particular:
 - (i) The right to freedom of movement and residence within the border of the State;
 - (ii) The right to leave any country, including one's own, and to return to one's country;
 - (iii) The right to nationality;
 - (iv) The right to marriage and choice of spouse;
 - (v) The right to own property alone as well as in association with others;
 - (vi) The right to inherit;
 - (vii) The right to freedom of thought, conscience and religion;
 - (viii) The right to freedom of opinion and expression;
 - (ix) The right to freedom of peaceful assembly and association;
- (e) Economic, social and cultural rights, in particular:
 - (i) The rights to work, to free choice of **meaningful** employment, to just and favourable conditions of work, to

protection against unemployment, to equal pay for equal work, to just and favourable remuneration;

(ii) The right to form and join trade unions;

(iii) The right to housing;

(iv) The right to public health, medical care, social security and social services;

(v) The right to education and training;

(vi) The right to equal participation in cultural activities;

- (f) The right of access to any place or service intended for use by the general public, such as transport, hotels, restaurants, cafes, theatres and parks.
(Elimination of all forms of discrimination, 1965)

ARTICLE 1 bis

Recognizing that it is only through the discharging at the global level of years of state obligations and through fulfilling at the global level of years of expectations that the goals of Habitat can be achieved

ARTICLE 2

The purpose of the second United Nations Conference on Human Settlements (Habitat II) is to address two themes of equal global importance: **the right to Adequate- shelter for all and Sustainable human settlements development. *in an urbanizing world.* The rights of Human beings limited by the carrying capacity of the ecosystem** are at the centre of concerns for **socially equitable and environmentally sound *sustainable* development**, including shelter for all **and socially equitable and environmentally sound *sustainable* settlements**, and they are entitled to a healthy and *productive meaningful* life in harmony with nature. As to the first theme, a large segment of the world's population lacks shelter and sanitation, particularly in developing countries. **Another segment of the world's population in developed countries has been experiencing the problem of urban sprawl, widening gaps between the rich and the poor, excessive environmental destruction as a result of unsustainable models of development.** We recognize that **the right to social security and [the right to adequate housing, as affirmed in the International Covenant of Cultural, Economic and Cultural rights, reaffirmed in the Convention of Elimination of all Form of Discrimination, reaffirmed in Chapter 7 of Agenda 21, and reaffirmed in the International Conference on Population and Development, 1994) which includes]** access to **affordable, accessible, inclusive, free-from illegal forced evictions, security of tenure, and environmentally sound, and safe and healthy shelter and basic services** is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of our urgent actions for the more than one billion people without decent living conditions. We **also recognized that there already exists a state obligation in international law to enshrine and guarantee this right, and that this state obligations has not yet been fully discharged by any of the member states of the United Nations.** Our objective is to achieve adequate shelter for all and especially for the deprived urban and rural poor **and landless poor** through an enabling approach to the development and improvement of shelter that is environmentally sound. **Our objective is also to strive to change peoples' attitudes towards the people in poverty and other marginalized groups, and towards those that are different. People in poverty should never be blamed for their condition, and there should be trust in not fear of those that are different.**

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE WASTEFUL AND ECOLOGICAL DESTRUCTIVENESS OF URBAN SPRAWL

(a) Expected population growth and migration mean that urban expansion will be the most common and universal development challenge. However, urban expansion can take the form of urban sprawl, and it is then costly, wasteful and ecologically destructive. (Rec B, Habitat I)

(c) it requires special provisions for:

- (i) securing legislation, legal instruments and regulations;
- (iv) active participation of a well informed public
- (v) protection of ecosystems and critical land
- (ix) Integration and improvement of squatter and marginal settlements. (Habitat I)

RE: PLACING AN OBLIGATION TO PROVIDE ADEQUATE SHELTER AND SERVICES - AS A BASIC HUMAN RIGHT

Adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO PEOPLE IN POVERTY AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

As to the second theme, socially **equitable and environmentally sound** development **of healthy, safe and environmentally sound communities-settlements** combines **social equity and environmentally sound development with** environmental protection and full *economic development, social development and environmental protection*, with full respect for all human rights and fundamental freedoms, including the right to development, and offers a means to achieving a world of greater stability and peace, built on ethical *and spiritual* vision. **To achieve this vision states shall undertake to ensure compliance with a body of established international principles by establishing mandatory international normative standards (MINS) related to the ensuring of social justice, the enshrining and guaranteeing of the respect for human rights, the preserving, conserving and protecting of the environment, and the preventing of conflict and war. MINS shall be used to drive industry to adopt BEST (Best Environmentally Sound Traditions) practices.**

DOCUMENTATION OF PRECEDENTS

RE: EXERCISING EFFECTIVE CONTROL OVER TRANSNATIONAL CORPORATIONS

Every State has the sovereign right to rule and exercise effective control over foreign investments, including the transnational corporations—within its national jurisdiction, which affect directly or indirectly the human settlements programme (II 17, Habitat I

RE: STATE REQUIREMENT TO ENSURE COMPLIANCE

states to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws” (Section 167 Platform of Action UN Conference on Women: Equality, Development and Peace).

[Democracy, and transparent, representative and accountable governance and administration throughout society *in all sectors of society* are indispensable foundations for the realization of **socially equitable and environmentally sound sustainable** development. However, the lack of **socially equitable and environmentally sound** development and the existence of widespread absolute poverty inhibit the full and effective **assurance of the enjoyment of human rights** and render fragile democracy and popular participation.]

DOCUMENTATION OF PRECEDENTS

RE: PROVIDING FOR PARTICIPATION

11 Since a genuine human settlement policy requires the effective participation of the entire population, recourse must therefore be made at all times to technical arrangements permitting the use of all human resources, both skilled and unskilled. The equal participation of women must be **ensured guaranteed**. These goals must be associated with a global training Programme to facilitate the introduction and use of technologies that maximize *productive meaningful* employment. (III 11, Habitat I)

RE: ADVOCATING THE EXPRESSION “SOCIALY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT” TO REPLACE THE EXPRESSION “SUSTAINABLE DEVELOPMENT”

The expression “socially equitable and environmentally sound development” was used in the International Conference on Population and Development:.

None the less, the effective use of resources, knowledge and technologies is conditioned by political and economic obstacles at the national and international levels. Therefore, although ample resources have been available for some time, their use for socially equitable and environmentally sound development has been

seriously limited” (Preamble 1.1. International Conference on Population and Development, 1994)

NOTE: [In the Habitat Agenda the expression “environmentally sound” is used as often as Sustainable Development —a term that reflected neither the real equitable nor environmental component so necessary in development.]

ARTICLE 3

3. Recognizing the global nature of these issues, the international community, in convening Habitat II, has decided that **the collective political will to discharge previous obligations, and to fulfill previous expectations, as well as the undertaking of new commitment is essential for achieving these goals. a concerted global approach could greatly enhance progress toward achieving these goals. As recognized in Agenda 21 (UNCED) [The cross-national and global impacts of unsustainable patterns of production and consumption, particularly in industrialized countries, environmental degradation, demographic changes, widespread and persistent poverty, and social and economic inequality are clearly visible.]. As also confirmed through Environmental Conventions such as the Vienna Convention on Ozone Depletion with the Montreal Protocol, the Convention on Biological Diversity and the Framework Convention on Climate Change, the global community has undertaken to discharge its international obligations related to conserving and protecting the environment through banning ozone depleting substances, through preserving biodiversity, and through reducing and eliminating climate change agents. It is recognized that the discharging of these obligations is essential to the establishment of socially equitable and environmentally sound community development.**

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF UNSUSTAINABLE PATTERN OF CONSUMPTION

...the major cause of the continued deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992), and reaffirmed in Art. 37 of the Platform of Action, UN Conference on Women: Equality, Development and Peace)

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well

as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

**RE: ACKNOWLEDGING THE IMPACT ON AGRICULTURE (PREY TO SPECULATION AND URBAN ENCROACHMENT)
(Sections from Habitat I)**

(a) Agricultural land, particularly on the periphery of urban areas, is an important national resources; without public control land is a prey to speculation and urban encroachment. (Habitat I)

(b) Change in the use of land especially from agricultural to urban, should be subject to public control and regulation. (Habitat I)

(c) Such control may be exercised through
(i) zoning and land-use planning as a basic instrument of land policy in general and control of land-use changes in particular;
(ii) Direct intervention, e.g. the creation of land reserves and land banks purchasing compensated expropriation and/or pre-exemption, acquisition of development rights, conditioned leasing of public communal land, formation of public and mixed development enterprises; (Habitat I)

(ii) Legal controls, e.g. compulsory registration, changes in administrative boundaries, development building and local permits, assembly and re-plotting;

RESTRUCTURING LAND OWNERSHIP

recommendation D 5

patterns of ownership

(a) Many countries are undergoing a process of profound social transformation; a review and restructuring of the entire system of ownership rights is, in the majority of cases, essential to the accomplishment of new national objectives.

(b) Past patterns of ownership rights should be transformed to match the changing needs of society and be collectively beneficial.

- (c) special attention should be paid to:
- (i) Redefinition of legal ownership including the rights of women and disadvantaged groups and usage rights for a variety of purposes;
 - (ii) Promoting land reform measures to bring ownership rights into conformity with the present and future needs of society;
 - (iii) Clear definition of public objectives and private ownership rights and duties which may vary with time and place;
 - (iv) Transitional arrangements to change ownership from traditional and customary patterns to new systems, especially in connection with communal lands, whenever such patterns are no longer appropriate.
 - (v) Methods for the separation of land ownership rights from development rights, the latter to be entrusted to a public authority; (Habitat I)

The sooner communities, and local governments, *partnerships among the public, and private and community sectors* join efforts to create comprehensive, bold and innovative **plans strategies** for shelter and human **communities settlements**, the better the prospects will be for the safety, health and well-being of people and the brighter the outlook for solutions to global environment and social problems. **As previously recognized in Habitat I, communities should take more control over the planning and ownership of public lands and that greater benefit should accrue to the public from the sale of land.**

RE: REDISTRIBUTING BENEFITS TO THE PUBLIC

Recommendation D3

Recapturing plus value.

(a) Excessive profits resulting from the increase in land value due to development and change in use are one of the principal causes of the concentration of wealth in private hands. Taxation should not be seen only as a source of revenue for the community but also as a powerful tool to encourage development of desirable locations, to exercise a controlling effect on the land market and to redistribute to the public at large the benefits of the unearned increase in land values. (Habitat I)

(b) The unearned increment resulting from the rise in land values resulting from change in use of land, from public investment or decision or due to the general growth of the community must be subject to appropriate recapture by public bodies (the community),

unless the situation calls for other additional measures such as new patterns of ownership, the general acquisition of land by public bodies. (Habitat I)

(c) Specific ways and means include:

(i) levying of appropriate taxes, e.g. capital gains taxes, land taxes and betterment charges, and particularly taxes on unused or under-utilized land; (Habitat I)

(ii) Periodic and frequent assessment of land values in and around cities and determination of the rise in such values relative to the general level of prices; (Habitat I)

(iii) Instituting development charges or permit fees and specifying the time-limit within which construction must start; (Habitat I)

RE: CONSERVING OF ENERGY

ENERGY (NOTE ENERGY CONSERVATION MENTIONED ONLY IN 137 IN HABITAT II THAT IS STILL BEING NEGOTIATED)

Human settlements are consuming more and more energy just when Humanity *mankind* has become aware of the need to cease environmentally degrading and wasteful use of non-renewable energy resources. (Habitat I)

(i) reducing energy consumption by changes in land-use planning, building design, living patterns and appropriate transportation systems including emphasis on mass transportation.

(ii) Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 (Habitat I)

(iv) emphasizing where possible the use of renewable over non-renewable energy sources and the rationalization of technologies which are currently known to be hazardous to the environment. (Habitat I)

(vi) Developing and implementing special small-scale power generating, delivery and use systems more appropriate for water supply, rural electrification, and district heating and cooling, including the utilization of solar and geothermal energy and heat pumps as appropriate. (Habitat I)

ARTICLE 4

4. **Having acknowledged the applicability of previous international instruments to the Habitat II Agenda, having been forced to acknowledge that many previous obligations have not been discharged and expectations have not been fulfilled including those arising from Habitat I, and having considered the experience since the United Nations Conference on Human Settlements (Habitat I), held in Vancouver, Canada, in 1976, Habitat II reaffirms the results from relevant conventions, treaties covenants, declarations, resolutions and conference action plans recent world conferences and has developed them into an agenda for human communities settlements: the Habitat Agenda. Among many of the relevant obligations included in Habitat II are those existing in the following Conventions or Conventions: The Universal Declaration of Human Rights, the International Covenant of Civil and Political Rights, the International Covenant of Cultural, Economic, Cultural Rights, the Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of All Forms of Discrimination Against Women, along with all the Conventions and Treaties related to the Environment and Peace, In addition, Habitat II incorporates expectations arising from General Assembly resolutions, Declarations and conference action plans from recent conferences such as Agenda 21 from the United Nations Conference on Environment and Development -- The Earth Summit -- held in Rio de Janeiro in 1992, produced Agenda 21. At this Conference, the international community agreed to a framework for the sustainable development of human communities settlements. and other conference action plans from Each of the other conferences, including the Fourth World Conference on Women (Beijing, 1995); the World Summit for Social Development (Copenhagen, 1995); the International Conference on Population and Development (Cairo, 1994); the Global Conference on the Sustainable Development of Small Island Developing States (Barbados, 1994); and the World Conference on Human Rights (Vienna, 1993), as well as the World Summit on Children (New York, 1990) and the World Conference on Education for All (Jomtien, Thailand, 1989) and Habitat I also address important socially equitable and environmentally sound development social, economic and environmental issues, including components of the sustainable development agenda, for which successful implementation requires action at the local, national and international levels. The Global Strategy for Shelter to the Year 2000, adopted in 1988, which emphasizes the need for improved production and delivery of shelter, revised national housing policies, and an enabling means of ensuring adequate shelter strategy, offers useful guidelines for the realization of adequate shelter for all in the next century.**

ARTICLE 5

During the course of history, urbanization has been associated with economic and social progress, *the promotion of literacy and education, the improvement of the general state of health, greater access to social services, and cultural, political and religious participation.* **Unfortunately urbanization and progress have also been associated with increased violations of human rights, unmitigated environmental degradation, perpetuated unsustainable patterns of economic consumption, widened gaps between the rich and poor (the enfranchised and disenfranchised), increased abuse of the marginalized, and increased incidents of conflict, violence and crime.** The growth of cities and towns causes social, **economic and environmental changes that go beyond city boundaries, through urban sprawl** The growth of cities and towns causes social, **economic and environmental changes that go beyond city boundaries, through urban sprawl and industrial conversion of productive land and of areas worthy of preservation.**

Cities and towns have been engines of growth **often beyond the carrying capacity of the ecosystem that contains them** and incubators of civilization or **destroyers of culture** and have facilitated or **repressed** the evolution of knowledge, culture and tradition, *as well as of industry and commerce.*

Urban **communities settlements**, properly planned *and managed*, **in harmony with rural communities, within the carrying capacity of the ecosystem and within a system of preserved ecosystems could** hold the promise for **socially equitable and environmentally sound** human development and for **the preservation of nature and for** protection of the world's natural resources through their ability to support large numbers of people while limiting their impact on the natural environment. Habitat II deals with all settlements - large, medium and small - and reaffirms the need for universal improvements in living and working conditions. **While** decentralized, participatory planning *and management which* are important features of a successful urban future, **the planning should be grounded in fundamental principles related to the enshrining and guaranteeing of human rights, the ensuring of social justice, the preserving, protecting and conserving of the environment, and the promoting of peace.** It should be acknowledged that although there has been some increased participation by individuals and groups of civil society in bringing about the necessary global changes for the establishment of socially equitable and environmentally sound development of communities, there is a long way to go to achieve the necessary *Democratization has enhanced such access and meaningful participation and involvement for of civil society actors, and for public-private partnerships;*

ARTICLE 6

6. To overcome current problems and to ensure *future progress in the improvement of economic, social and environmental conditions* **socially equitable and environmentally sound** in human settlements, we must begin with a recognition of the challenges facing cities and towns. According to current projections, by the turn of the century, more than three billion people - one-half of

the world's population - will live and work in urban areas. The most serious problems confronting cities and towns and their inhabitants include **severe environmental degradation resulting from either lack of mandatory regulations that drive industry, or from institutional governments/industry collusion that weakens the resolve to establish or enforce regulations;** inadequate financial resources **to promote socially equitable and environmentally sound development,** lack of **meaningful** employment opportunities **in BEST practices,** spreading homelessness and expansion of squatter settlements, increased poverty and a widening gap between rich and poor arising from **the imposition of over-consumptive models of development and of ill-conceived structural adjustment programs,** growing insecurity and rising crime rates **caused by the failure to ensure social equity including the positive human rights of the right to social security, health care, shelter, food etc.**

DOCUMENTATION OF PRECEDENTS

RE: GENERATING OF MEANINGFUL EMPLOYMENT

In fact, the very construction of the physical components of human settlements- be they rural or urban, in the form of dwellings or roads, with traditional or modern technologies — in sufficient volume to meet the needs of society could become a leading sector of the economy and a major generator of meaningful employment, instead of being treated as a residual of so-called “productive” activities. (Chapt II A. 5 Habitat 1)

RE: PREVENTING WASTE AND MISUSE OF RESOURCES IN WAR

The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. part of the resources thus released should be utilized so as to achieve a better quality of life for humanity and particularly the peoples of developing countries (II, 12 Habitat 1)

RE: REDUCING OF AVAILABLE RESOURCES THROUGH EXCESSIVE MILITARY EXPENDITURES

Excessive military expenditures, including global military expenditures and arms trade or trafficking, and investments for arms production and acquisition have reduced the resources available for social development. As a result of the debt burden and other economic difficulties, many developing countries have undertaken structural

adjustment policies. **Moreover, there are structural adjustment programmes that have been poorly designed and implemented, with resulting detrimental effects on social development. The number of people living in poverty has increased disproportionately in most developing countries, particularly in the heavily indebted countries, during the last decade. (Art. 15 Platform of Action, UN Conference on Women: Equality, Development and Peace, 1995)**

RE: REASSESSING STRUCTURAL ADJUSTMENT PROGRAMS
Ensuring continued provision of basic services to the poor and needy

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ACCOMMODATING THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through** natural or *man-made* **anthropogenic** catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: PREVENTING CRIME

Reaffirming that crime prevention and criminal justice should be considered in the context of...social and cultural systems

Reaffirms that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order (2 Crime Prevention

and Criminal Justice and development, the General Assembly Resolution, 1981)

inadequate and deteriorating building stock, services and infrastructure, lack of health and educational facilities, improper land use, insecure land tenure, rising traffic congestion, increasing pollution, lack of green spaces, inadequate water supply and sanitation, uncoordinated urban development, and an increasing vulnerability to disaster **including for example the continued production of toxic, hazardous and atomic wastes , the continued reliance on non-renewable sources of energy or on unsafe sources of energy such as that of civil nuclear energy, the continued visits of nuclear powered military vessels in urban ports and of the continued development and testing of nuclear weapons.**

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING PUBLIC CONTROL AND BENEFIT FROM LAND

D. Land (Agenda item 10 (d))

Preamble

Land, because of its unique nature and the crucial role it plays in human elements, cannot be treated as an ordinary asset, controlled by individuals and subject to the pressures and inefficiencies of the market. Private land ownership is also a principal instrument of accumulation and concentration of wealth and therefore contributes to social injustice; if unchecked, it may become a major obstacle in the planning and implementation of development schemes. Social justice, urban renewal and development, the provision of decent dwellings and healthy conditions for the people can only be achieved if land is used in the interests of society as a whole (Habitat I)

2. Instead, the pattern of land use should be determined by the long-term interests of the community, especially since decisions on location of activities and therefore of specific land uses have a long-lasting effect on the pattern and structure of human settlements. Land is also a primary element of the natural and man-made environment and a crucial link in an often delicate balance. Public control of land use is therefore indispensable to its protection as an asset and the achievement of the long-term objectives of human settlement policies and strategies. (Habitat I)

Recommendation D1

Land resource

a Land is one of the most valuable natural resources and it must be used rationally. Public ownership or effective control of land in the public interest is the single most important means of improving the capacity of human settlements to absorb changes and movements in population, modifying their internal structure and achieving a more equitable distribution of the benefits of development whilst assuring that environmental impacts are considered. (Habitat I)

(b) Land is a scarce resource whose management should be subject to public surveillance control in the interest of the nation

(c) This applies in particular to land required for:

(v) The protection and enhancement of the natural environment especially in sensitive areas of special geographic and ecological significance such as coastal regions and other areas subject to the impact of development, recreation and tourism activities. (Habitat I)

(d) Land is a natural resource fundamental to the economic, social and political development of peoples and therefore Governments must maintain full jurisdiction and exercise complete sovereignty over such and exercise complete over such land with a view to freely planning development of human settlements throughout the whole of the natural territory. This resource must not be the subject of restrictions imposed by foreign nations which enjoy the benefits while preventing its rational use. (Habitat I)

All of these have seriously challenged the capacities of governments, particularly those of developing countries, at all levels to realize *economic development, social development and environmental protection, which are interdependent and mutually reinforcing components of socially equitable and environmentally sound development*, the framework for our efforts to achieve a higher quality of life for all people. Rapid rates of international and internal migration to, as well as population growth in, cities and towns, and unsustainable patterns of production and consumption raise these problems in especially acute forms. In these cities and towns, large sections of the world's urban population live in inadequate conditions and are confronted with serious problems, including environmental problems, that are exacerbated by inadequate planning *and managerial capacities*, and **by unsustainable patterns of production and consumption** lack of investment *and technology* in **BEST (best environmentally sound Traditions) practices (prevention technology that does it right the first time); too often environmentally unsound technologies have been introduced as a result of north/south transfer and then the “coupling” clean-up technologies are introduced. The continued introduction of these ecologically unsound technologies contributes to environmental degradation, undue stress on the**

disadvantaged, dependency on external “solutions” that could be equally bad or even worse than the problem they were intended to solve. These ecologically unsound technologies and technological fixes perpetuate a cycle of attempted rectification of error, and contribute to insufficient mobilization of financial resources to ecologically sound technologies and inappropriate allocation of financial resources to ecologically unsound technologies such as non-renewal sources of energy or to the production of substances and activities that cause environmental degradation and are harmful to human health. In the Rio Declaration states were urged to prevent the transfer of substances and activities that could cause environmental degradation or be harmful to human health to other states; this would mean that no state should transfer substances such as toxic, hazardous, or atomic wastes or activities that would produce these wastes to other states.

DOCUMENTATION OF PRECEDENTS RELATED TO TRANSFER OF HARMFUL SUBSTANCES

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 16 Habitat I)

RE: RECOGNIZING THE DAMAGE TO HEALTH AND THE ENVIRONMENT CAUSED BY EXPORT OF BANNED OR PERMANENTLY WITHDRAWN PRODUCTS

Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT SOME PRODUCTS HAVE BEEN SEVERELY RESTRICTED BECAUSE TOXIC EFFECTS ON HEALTH AND THE ENVIRONMENT

Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have

been severely restricted in their consumption and/or sale owing to their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should **shall** effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

RE: REFUSING TO ACCEPT PERMISSION TO BE HARMED

No support shall be given for the justification of the transfer of harmful substances to human health and to the environment on the grounds that the recipient state has granted permission for this transfer.

Under no circumstances shall a State agree to accept hazardous, toxic, or atomic wastes from another State. Also under no circumstances shall a State that has less stringent regulations be called upon to accept activities or substances that are deemed to be ecologically unsafe and unsound in another State that has more stringent regulations. Similarly, this principle shall also apply within a state where industry or a government within a state seeks to deposit toxic, hazardous or atomic wastes in different areas of the State, in particular on indigenous lands or in areas in which the disenfranchised members of the population live.

as well as by a lack of social and economic opportunities.

In the case of international migration, migrants have **[particular]** needs for housing and basic services, education, **meaningful** employment, and social integration

without a loss of cultural identity, and they are to be given adequate protection and attention within host countries.

DOCUMENTATION OF PRECEDENTS

RE: CONTINUED INSUFFICIENT PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include people in poverty small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should *shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women,

women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to [quality] education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, place of birth, **nature of residence** or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

- The right to life of migrant workers and members of their families shall be protected by law (Art. 9)
- No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).
- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)
- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).
- Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983)

ARTICLE 7

7. In the process of globalization and growing interdependence, rural settlements represent a great challenge and opportunity for renewed **socially equitable and environmentally sound** developmental initiatives at all levels and in all fields. Many rural settlements, however, are facing a lack or an *inadequacy of economic opportunities* **inadequate infrastructure of environmentally sound practices**, especially **meaningful** employment, and of infrastructure and services, particularly those related to water, sanitation, health, education, communication, ecologically-**sound public** transportation and **ecologically safe and sound renewable** energy. Appropriate efforts and **BEST practices technologies** for rural development can

help to reduce, inter alia, imbalances, unsustainable practices, poverty, isolation, environmental pollution and insecure land tenure. Such efforts can contribute to improving the linkage of rural settlements with the mainstream of economic, social and cultural life, to assuring sustainable communities and safe environments, and to reducing pressures on urban growth.

DOCUMENTATION OF PRECEDENTS

RE: ADVOCATING RADICAL REVERSAL OF TRANSPORTATION TRENDS (

recommendation C 14 Transportation and communication

(a) Consideration should be given to the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents. (Habitat I)

(b) Policies on transportation and communication should promote desired patterns of development to satisfy the needs of the majority of the population, to assure the distribution of activities to favour mass transportation, and to reduce congestion and pollution by motor vehicles. (Habitat I)

(c) This could be achieved through:

(i) a more deliberate use of land-use planning and policies for the location of traffic generating activities, in order to minimize the need for travel. (Habitat I)

(ii) the active development of a system of public transportation with adequate incentives for its use in preference to individual use of motor vehicles (Habitat I)

(vi) provide for the separation of pedestrian and motor circulation, as well as separate paths for bicycles, and other categories of vehicular traffic; (Habitat I)

(vii) Over the short-term, transportation improvements should be designed to make more efficient use of existing highways and transit systems;

(vii) Innovative transportation systems need to be encouraged for reducing energy consumption and conserving resources and avoiding pollution (Habitat I)

(x) The study of new techniques to avoid the air and environmental pollution caused by the present automobile system. (Habitat I)

RE: RECOGNIZING IMPACT OF INCREASED AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE; DEVELOPING MASS TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 8

8. Cities, towns and rural settlements are linked through the **environment, transportation, energy and through** the movements of goods, , resources and people. Urban-rural linkages have a crucial importance for the sustainability of human settlements. As rural population growth has outpaced the generation of **meaningful** employment and economic opportunities, rural-to-urban migration has steadily increased, particularly in developing countries, which has put enormous pressure on urban infrastructure and services already under serious stress. It is urgent to eradicate rural poverty and to improve the quality of living conditions, as well as to create **meaningful** employment and educational opportunities in rural settlements, regional centres and secondary cities. Full advantage must be taken of the complementary contributions and linkages of rural and urban areas **through socially equitable and environmentally sound development. by balancing their different economic, social and environmental requirements.**

ARTICLE 9

9. More people than ever are living in absolute poverty and without adequate shelter. Inadequate shelter and homelessness are growing plights in many countries **including the most affluent countries of the North**, threatening standards of health, security and even life itself. ~~[[Everyone *should* shall be~~ entitled to an adequate- **high standard of living, including adequate—affordable, accessible, safe and healthy food, clothing and inclusive adequate — affordable, accessible, safe and environmentally sound, with**

tenure security housing, and to the continuous improvement of living conditions.] All the states signatory to the international Covenant of Social Cultural and Economic Rights have “recognize the right of everyone to an adequate standard of living, including food, clothing and housing” (Art. 11.1 International Covenant of Economic, Social and Cultural Rights — ICESCR, 1966). In addition, states have undertaken the international obligation to recognize the “right of everyone to social security (Art. 9), and “the right of everyone to the enjoyment of the highest attainable standard of physical and mental health” (Article 12, ICESCR).

DOCUMENTATION OF PRECEDENT

RE: PROVIDING FOR THE HOMELESS

The highest priority should be placed **on providing support services for economic and social dislocation** on the rehabilitation of expelled and homeless people who have been displaced by **economic, political, and institutional practices, and by inequitable distribution of benefits, unfair expropriation, mal-conceived structural adjustment programs . In addition displacement occurs through** natural or *man-made anthropogenic* catastrophes, and especially by the act of foreign **and internal** aggression. In the latter case, all countries have the duty to fully co-operate in order to guarantee that the parties involved allow the return of displaced persons to their homes and to give them the right to possess and enjoy their properties and belongings without interference. (II, 15 Habitat I)

RE: ACKNOWLEDGING ADEQUATE SHELTER AND SERVICES - BASIC HUMAN RIGHT. OBLIGATION ON GOVERNMENTS TO ENSURE ADEQUATE SHELTER

8. adequate shelter and services are a basic human right which places an obligation on Governments to ensure their attainment by all people, beginning with direct assistance to the least advantaged through guided programmes of self-help and community action. Governments should endeavour to remove all impediments hindering attainments of these goals. Of special importance is the elimination of social and racial segregation, inter alia, through the creation of better balanced communities, which blend difference social groups, occupation, housing and amenities. (III 8 Habitat I)

RE: PROMOTING OF EQUITABLE DISTRIBUTION OF BENEFITS

(b) Human settlements policies should aim to improve the condition of human settlements particularly by promoting a more equitable

distribution of the benefits of development among regions; and by making such benefits and public services equally accessible to all groups. (Rec. A 4,b Habitat I)

(c) this can be done through:

(i) the location of public sector investments;

(ii) the allocation of direct subsidies and priority of investment, to selected disadvantaged regions and groups

(iii) the use of incentives and disincentives-fiscal, legal and other to favour or discourage selected activities or areas

(iv) The creation of special employment, training and social services opportunities training and social services opportunities in favour of the most deprived

(v) the deliberate improvement of conditions in the most disadvantaged settlements, so as to enhance attraction of such areas in relation to others;

(vi) Measures to improve the quality of life of *vulnerable marginalized* groups which have special needs-such as children, the elderly, the handicapped and the disabled.

Such measures include: provision of basic social services, adequate shelter and social and physical access to facilities. (Habitat I)

Recommendation C 11

Infrastructure policy

(a) The unequal distribution of wealth between population groups, within human settlements and between urban and rural settlements is exacerbated by the inequalities in access to goods, services and information.

(b) Infrastructure policy should be geared to achieve greater equity in the provision of services and utilities, access to places of work and recreational areas as well as to minimize adverse environmental impact.

(c) this implies

(i) Enforcement of minimum and maximum standards of infrastructure for all segments of the population

(ii) More efficient use of resources and elimination of excessive consumption through development and implementation of maximum standards, education, conservation and other appropriate measures;

(Habitat I)

9 bis. The rapidly increasing number of displaced persons including refugees, other displaced persons in need of international protection and internally displaced

persons, as a result of natural and human-made disasters in many regions of the world, is aggravating the shelter crisis, highlighting the need for a speedy solution to the problem on a durable basis.

9 ter. Acknowledging that often the lack of respect and trust of youth, and the exclusion of youth from the decision making process have contributed to a reciprocal lack of trust on the part of youth, and thus affirming that t *The rights and needs of children and youth and of future generations have to be taken fully into account [recognizing the rights, duties and responsibilities of parents and other persons legally responsible for children, consistent with the Convention on the Rights of the Child].* Special attention needs to be paid to participatory processes dealing with the shaping of cities, towns and neighbourhoods; this is in order to secure the living conditions of children and of youth and to make use of their insight, creativity and thoughts on the environment. Special attention must be paid to shelter needs of **vulnerable children from marginalized groups**, such as street children, refugee children and children who are victims of sexual exploitation.

DOCUMENTATION FOR PRECEDENT

RE: RECOGNIZING THE PROFOUND IMPORTANCE OF PARTICIPATION OF YOUTH

- Recognizing the profound importance of the direct participation of youth in shaping the future of *mankind humanity* and the valuable contribution that youth can make in the implementation of the new international economic order based on equity and justice,
- Considering it necessary to disseminate among youth the ideals of peace, respect for human rights and fundamental freedoms, human solidarity and dedication to the objectives of progress and development, social and cultural advancement of peoples, the implementation of the new international economic order, the preservation of world peace and the promotion of international co-operation and understanding (The General Assembly Resolution 36/28 International Youth Year: Participation, Development, Peace, 1981)

ARTICLE 10

10. *Although All many countries, particularly developing countries, lack the necessary legal, institutional, financial, technological and human resources to respond adequately to rapid urbanization., many local authorities are taking on these challenges with open, accountable and effective leadership and are eager to bring people into the sustainable and the political will to achieve socially equitable and environmentally sound development process.* Enabling structures that facilitate independent initiative and creativity, and that encourage the wide range of **genuine community involvement and participation partnerships,**

including with the **members in private sector enterprises that are advocating strong mandatory regulations to facilitate and drive socially equitable and environmentally sound development**, within and between countries, should be promoted. Furthermore, empowering all people, especially *[(members of)] vulnerable marginalized* and disadvantaged groups and people living in poverty, to participate equally and effectively in all activities related to human settlements is the basis for civic engagement, facilitated by the national authorities. Indeed, the Habitat Agenda provides a framework to enable people to take responsibility for the promotion and creation of **socially equitable and environmentally sound human sustainable human settlements**.

10 bis. [Human settlements problems are of multidimensional nature that has its main roots in poverty and underdevelopment and, in many countries, is aggravated by the scarcity of resources. It is recognized that human settlements are not isolated from the social and economic development of countries and that they cannot be set apart from the need for a favourable international framework for sustained economic growth and sustainable development.]

ARTICLE 11

11. There are critical differences regarding human **communities settlements** in different regions and countries and within countries. These differences, specific situations and varying capacities of each community and country need to be taken into account in the implementation of the Habitat Agenda. **Even though these critical differences exist there are overarching principles that have been agreed to internationally within which to group these differences; these principles are related to the enshrining and the guaranteeing of human rights, the preserving, protecting and conserving of the environment, the ensuring of social justice and the enabling of socially equitable and environmentally sound development.** *[(International, regional, sub-regional and national institutional arrangements, including the enhancement of the Commission on Human Settlements and the United Nations Centre for Human Settlements (Habitat) as the global focal points and allocation of resources, are central to the implementation of the Habitat Agenda.].* **In addition, it is essential that UNCHS recognize that the successful implementation of Habitat II depends on the necessity of examining the interdependence of issues and continually work with agencies involved in Environment, Human Rights, and Peace promotion.**

ARTICLE 12

12. The Habitat Agenda is a global call to action at all levels. It offers, within a framework of goals and principles, **previous obligations incurred and expectations created and new commitments undertaken**, a positive vision of **socially equitable and environmentally sound development of sustainable**

human settlements -- where all have adequate shelter, a healthy and safe environment, basic services, and *productive*, **environmentally sound** and freely chosen **meaningful** employment. The Habitat Agenda will guide all efforts to **finally** turn this vision, **which has been articulated through multiple international forums for over 50 years** into reality.

**PART II.
GOALS AND PRINCIPLES, OBLIGATIONS, AND EXPECTATIONS**

ARTICLE 13

13. We, the States participating in the United Nations Conference on Human Settlements (Habitat II) ~~[,are have undertaken committed to a political, economic, environmental, ethical and spiritual vision of human settlements based on the principles of equality, solidarity, partnership, human dignity, respect and cooperation, through obligations incurred and expectations created in international instruments. [We adopt the We undertake to observe the goals and principles, discharge obligations and fulfill expectations inherent in ensuring the right to of adequate shelter for all as agreed in previous international instruments and to socially equitable and environmentally sound human settlements. sustainable human settlements development in an urbanizing world]. [We believe that the observance of principles, the discharging of obligations and the fulfilling of expectations attaining these goals will promote ensure a world more stable and free from injustice and conflict and contribute to just, comprehensive and lasting peace and to global equitable economic and social development and environmental protection.] [Civil, ethnic and religious strife, violation of human rights, nuclear armament, armed conflicts, alien and colonial domination, foreign aggression and occupation, international economic imbalance, coercive economic measures, poverty, organized crime, and terrorism in all its forms are destructive to socially equitable and environmentally sound development sustainable human settlement development and should therefore be renounced by all States.] At the national level we will reinforce and attain peace by promoting ensuring tolerance, non-violence and respect for diversity, and by settling disputes by peaceful means, by undertaking to reduce the production of arms, moving towards the ultimate elimination of arms production, and to discharge the obligation to eliminate the production and testing of weapons of mass destruction. At the local level, the prevention of crime and the promotion of sustainable communities are essential to the attainment of safe and secure societies. Crime prevention through social justice, equity and equality including the right to social security, the right to shelter and satisfaction of basic needs within a community of trust. development is essential to crime prevention one crucial key to these goals. At the international level, we will promote ensure international peace and security by undertaking immediately the substantial reduction the global military budget to that of 1981 the year in which there was a general assembly resolution calling for the freezing and reducing of the military budget and make and support all efforts to settle international disputes by peaceful means in accordance with the Charter of the United Nations.] We reaffirm and are guided by the purposes and principles of the Charter of the United Nations and by over 50 years of~~

obligations incurred and expectations undertaken through international instruments and we reaffirm our commitment to ensure the realization of the human rights set out in international instruments [including the right to adequate housing as provided for] in the Universal Declaration on Human Rights, the International Covenant on Economic, Social and Cultural Rights, the International Convention on the Elimination of all Forms of Racial Discrimination, the Convention on the Elimination of all Forms of Discrimination against Women and the Convention on the Rights of the Child [*, taking into account that the right to adequate housing should shall be realized progressively*]. We reaffirm that all human rights - civil, cultural, economic, political and social - are universal, indivisible and interdependent and interrelated. We subscribe to the following principles and goals to guide us in our actions.

ARTICLE 14

14. Equitable human settlements are those in which all people, without discrimination of any kind as to race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin, nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age**, language, religion **or conviction**, political or other opinion, *national or, social origin*, property, *birth, nature of residency* or other status have equal access to safe and **healthy** housing, infrastructure, health services, adequate food and water, education and open spaces. In addition, such human settlements provide equal opportunity for a *productive meaningful* and freely chosen livelihood; equal access to economic resources[*, including the right to inheritance*],/As agreed in the **Convention on the Elimination of All Forms of Discrimination** 5 d (vi) The right to inherit;

ARTICLE 16

16. [*Sustainable socially equitable and environmentally sound development is essential to human settlements development, while giving full consideration for the needs and necessities of achievement of economic growth in all countries, particularly in developing countries. Special consideration needs to be given to the specific situation of countries with economies in transition.*] Human settlements shall be planned, developed and improved in a manner that takes full account of **sustainable socially equitable and environmentally sound** development principles **observed and expectations created and all its components, as set out** in Agenda 21 and other related outcomes of the United Nations Conference on Environment and Development. Sustainable human settlements development ensures **socially equitable and environmentally sound economic development, meaningful** employment opportunities and social **justice progress**, in harmony with the environment. It incorporates, among the principles of the Rio Declaration which are equally important and other outcomes of the United Nations Conference on Environment and Development, that of the precautionary *approach* principle,

pollution prevention, respect for the carrying capacity of ecosystems, and preservation of natural heritage and socially equitable and environmentally sound opportunities for future generations. Production, consumption and transportation should be **developed** *managed* in ways that protect and conserve the stock of resources while drawing upon them. Science and technology have a crucial role in shaping sustainable human settlements and sustaining the ecosystems they depend upon. **As expressed in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of Humanity from 1975, there is continued concern “that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamentals”.** Sustainability of human settlements entails their balanced geographical distribution or other appropriate distribution in keeping with national conditions, promotion of **socially equitable and environmentally sound development** *economic and social development*, and human health and education, the **conservation and protection of** *maintenance* of biodiversity *promotion of economic and social development*, human health and education, and cultural diversity, as well as air, water, vegetation and soil qualities at standards sufficient to sustain human life and well-being for all time.

DOCUMENTATION OF PRECEDENTS

RE: CONDEMNING OF EXCESSIVE CONSUMPTION

16. Human settlement policies and programmes should define and strive for progressive minimum standards for an acceptable quality of life. These standards will vary within and between countries, as well as over periods of time, and therefore must be subject to change in accordance with conditions and possibilities. Some standards are most appropriately defined in quantitative terms, thus providing precisely defined targets at the local and national levels. Others must be qualitative, with their achievement subject to felt need. At the same time, social justice and a fair sharing of resources demand the discouragement of excessive consumption (III 6 Habitat I)

Re: Precautionary principle

The expression “the Precautionary Principle” is used throughout the UNCED documents in Agenda 21, Convention on Biological Diversity, The Framework Convention on Climate Change, and the Rio Declaration

RE: ENSURING ENVIRONMENTAL AND CULTURAL PRESERVATION

It is the responsibility of Governments to prepare spatial strategy plans and adopt human settlement policies to guide the socioeconomic development efforts. Such policies must be an essential component of an over-all development strategy, linking and harmonizing them with policies on industrialization, agriculture, social welfare, and environmental and cultural preservation so that each supports the other in a progressive improvement in well-being of all **humanity** *mankind*. (III 2, Habitat I)

RE: PRESERVING OR PROTECTING NATURAL HERITAGE

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)
- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)
- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

RE: PROTECTING ENVIRONMENT AS COMMON HERITAGE

11. The nations must avoid the pollution of the biosphere and the oceans and should join in the effort to end irrational exploitation of all environmental resources, whether non-renewable or renewable in the long term. The environment is the common heritage of **humanity** *mankind* and its protection is the responsibility of the whole international community. All acts by nations and people should therefore be inspired by a deep respect for the protection of the environmental resources upon which life itself depends. (II, 11 Habitat I)

RE: PROCLAIMING USE OF SCIENTIFIC AND TECHNOLOGICAL DEVELOPMENT FOR STRENGTHENING INTERNATIONAL PEACE AND SECURITY

PROCLAIMING that all States shall promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975),

ARTICLE 17

17. The quality of life of the people depends, among other economic, social, environmental and cultural factors, on the physical conditions and spatial characteristics of our villages, towns and cities. City lay-out and aesthetics, land-use patterns, population and building densities, transportation and ease of access for all to basic goods, services and public amenities have crucial bearing on the livability of settlements. This is particularly important to *vulnerable marginalized* and disadvantaged persons, many of whom face barriers in access to shelter and in participating in shaping the future of their settlements. People's needs for community and their aspirations for more livable neighbourhoods and settlements should guide the process of **planning**, and **designing, management and maintenance** of human settlements. Objectives of *this endeavour* include protecting public health, providing for safety and security conditions, education, and social integration, promoting equality, respect for diversity and cultural identities, **increased ing** accessibility for persons with disabilities, and **preservation** of natural heritage and cultural heritage—historic, spiritual, religious and culturally significant buildings and districts, respecting local landscapes and treating the local environment with respect and care **through**

living within the carrying capacity of the ecosystem. [The preservation of **natural heritage** and historical monuments and buildings, particularly in the case of those declared by UNESCO as part of the **cultural and natural patrimony** of humanity, should be assisted through international cooperation.] **including states undertaking to sign and ratify the convention on the Protection of Cultural and Natural Heritage, and to enact the necessary legislation to ensure that significant cultural and natural heritage are protected and presented for international world heritage designation.**² It is also of crucial importance that spatial diversification and mixed uses of types of housing and services be promoted at the local level in order to meet the diversity of needs and expectations.

DOCUMENTATION OF PRECEDENTS

RE: PRESERVING, PROTECTING AND ENHANCING OF THE ENVIRONMENT

Every State has the right to exercise full and permanent sovereignty over its wealth, natural resources and economic activities, adopting the necessary measures for the planning ... of its resources, providing for the protection, preservation and enhancement of the environment. (II 8 Habitat I)

RE: PRESERVING OF NATURAL HERITAGE

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of mankind [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 19

19. All people have basic rights and must also accept their responsibility to respect and protect the rights of others - including **the rights of** future generations - and to contribute actively to the common good. **Socially equitable and environmentally sound Sustainable** human settlements are those that, inter alia, generate a sense of citizenship and identity, cooperation and dialogue for the common good, and a spirit of voluntarism and civic engagement, where all people are encouraged and have equal opportunity **for genuine community involvement and participation including the participation of those who have usually been marginalized from**

the decision making process to participate in decision-making and development. Governments at all appropriate levels, including local authorities, have a responsibility to ensure access to education and to protect their population's health, safety and general welfare. This requires, as appropriate, establishing policies, laws and regulations for both public and private activities, encouraging responsible private activities in all fields, facilitating community groups' participation, adopting transparent procedures, encouraging public-spirited leadership and public-private—**individuals and enterprises that engage in BEST (Best environmentally sound Traditions) practices or socially equitable and environmentally sound development— cooperation partnerships**, and helping people to understand and exercise their rights and responsibilities through open and effective participatory processes, universal education and information dissemination.

ARTICLE 20

**20. Partnerships Cooperation among countries and among all individuals and groups in society actors within countries from public, private, voluntary, and community-based organizations, the cooperative sector, non-governmental organizations and individuals are essential to the achievement of socially equitable and environmentally sound sustainable human settlements Genuine community involvement and participation in decision making from the determining of the terms of reference and throughout the process is essential to achieving socially equitable and environmentally sound human settlements. To be inclusive particularly for the benefit of groups that are usually marginalized all decision making processes shall avoid jargon, buzz words, euphemism, unnecessary compilation or veiled intention. development and the provision assurance of adequate shelter for all and basic services. Partnerships can integrate and mutually support objectives of broad-based participation through, inter alia, forming alliances, pooling resources, sharing knowledge, contributing skills and capitalizing on comparative advantages of collective actions. The processes can be made more effective by strengthening civil organizations at all levels. Every effort must be made to encourage collaboration and partnership of all sectors of society and among all actors in decision-making processes as appropriate. **

ARTICLE 21

21. Solidarity with those who are less fortunate, disadvantaged and *vulnerable marginalized groups*, including people living in poverty, as well as **commitment to tolerance, non-discrimination and cooperation among all people, families and communities are foundations for social cohesion. Solidarity, cooperation and assistance should be enhanced by the international community as well as by States and all other relevant institutions and bodies actors to respond to challenges of socially equitable and environmentally sound development in human settlements development.** The international community and governments at

all appropriate levels are called upon to **discharge obligations and fulfill expectations** through enacting the necessary legislation to **ensure socially equitable and environmentally sound development** *the promote sound and effective policies and instruments, thereby* and through strengthening cooperation among governments and non-governmental organizations, as well **through providing as to mobilize** complementary resources to meet these challenges.

ARTICLE 22

22. [To safeguard the global needs and rights *interest* of present and future generations in human settlements including the right to a safe environment, the right to natural heritage, the right to social security and shelter, and to socially equitable and environmentally sound development including social justice is one of the fundamental goals of the international community. The implementation of the Global Plan of Action will require a willingness to make the necessary attitudinal changes, particularly in relation to respecting and trusting the present generation of youth, and in relation to ensuring the rights of the present generation of youth, of marginalized people in global societies, and the rights of future generations; and a flow of new and additional financial support from different sources including from reducing of the global military budget and from deferred taxes from corporations including transnational corporations and to transfer resources to developing countries in order to cover the incremental costs of the socially equitable and environmentally sound actions they have to undertake to address *deal with human settlements* problems and to accelerate socially equitable and environmentally sound development *sustainable development*.] In additions compensation shall be sought from corporations that have violated human rights, caused environmental degradation, and contributed to conflict and war.

DOCUMENTATION OF PRECEDENT

RE DESIGNATING OF HERITAGE OF OUTSTANDING INTEREST

- Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).
- Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

- Reaffirming that *man* [**humans**] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

RE: CONSERVING BIODIVERSITY FOR FUTURE GENERATIONS

- To conserve and sustainably use biological diversity for the benefit of present and future generations, (preamble, Convention of Biological Diversity, UNCED, 1992)
- The use of components of biological diversity in a way and at a rate that does not lead to the long-term decline of biological diversity, thereby maintaining its potential to meet the needs and aspirations of present and future generations (Definition, Convention on Biological Diversity, UNCED, 1992)
- Recognizing the longer-term realities and implications of current actions, the [states shall accept the] development challenge *is* to meet the needs of present generations and improve their quality of life without compromising the ability of future generations to meet their own needs (Chapter III, 3.1 International Conference on Population and Development, 1994)

Part III.

OBLIGATIONS DISCHARGED, EXPECTATIONS FULFILLED AND COMMITMENTS UNDERTAKEN

[The Global Plan of Action *is* shall be revised to be *drawn up* in full conformity with the purposes and principles of the Charter of the United Nations, and with the over-51 years of obligations incurred in Treaties, Conventions, and Covenants, and of expectations created in Declarations, General Assembly Resolutions and Conference Agendas. *The implementation of the recommendations contained in this plan of action is the sovereign right of each State consistent with national laws and development priorities, as well as with full respect for the various religious, ethical values, cultural backgrounds and philosophical convictions of its people, and in conformity with universally recognized international human rights.*]/4 The implementation of the recommendations in this plan of action should reflect sovereign equality as specified in the original Charter of the United Nations. Sovereign equality does not mean that states have the sovereign right to not comply with obligations or fulfill expectations from previous international instruments.

COMMENT ON OBLIGATIONS AND EXPECTATION

We are mindful *that since* the formation of the United Nations, member states of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Treaties, Covenants, Conventions, and have created expectations reflected in Declarations, General Assembly Resolutions, and Conference Agendas, and that if these fifty-one years of obligations had been honored and acted upon, respect for human rights could have been ensured, preservation and protection of the environment could have been preserved, protected and conserved, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Cognizant that only when these obligations are discharged and expectations fulfilled will we have the global community that is socially equitable and environmentally sustainable.

RECOGNIZING that for fifty-one years since the formation of the United Nations, member states have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of Transboundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legal required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

States undertake to introduce the following resolution in the General Assembly.

BE IT RESOLVED THAT IN 1996, STATES SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. STATES WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

ARTICLE 23

23. [Embracing the foregoing principles of compliance and equality through the discharging of obligations, through the fulfillment of expectations and through the undertaking of commitments we, as participating States in this Conference, *commit ourselves* undertake to implement the Habitat Agenda including through sub-national, national, sub-regional and regional plans of action and other policies and programmes drafted and executed in cooperation with all individuals and members of civil society that embrace the international principles related to enshrining and guaranteeing human rights, to preserving, protecting and preserving the environment, and to ensuring social justice and the prevention of conflict and war **key actors** at all levels and supported by the international community. In implementing these commitments we shall give special attention to the circumstances and needs of people who are homeless, living in poverty, or are in some other way disadvantaged or marginalized *vulnerable*, especially those who are women, children, older people, indigenous people, displaced people or people with disabilities.]/6 In addition, we recognize *taking into account* that there shall be respect for nature beyond human purpose and that human beings are crucial in the promotion of *are at the centre of concerns* for *sustainable* socially equitable and environmentally sound development, including adequate shelter for all and sustainable human settlements development, and they are entitled to a healthy and *productive meaningful* life in harmony with nature.]/5

A. ADEQUATE SHELTER FOR ALL

ARTICLE 24

24. [We reaffirm our *commitment to the progressive realization* obligation to ensure enactment of the right to adequate— affordable, accessible, tenure security, safe, healthy and environmentally sound— housing, as set out in numerous international instruments. In this context, we recognize the fundamental obligation of governments to enable people to obtain shelter and to protect and improve dwellings and neighbourhoods, and to foster and facilitate genuine involvement and participation in the development of the community.] We commit ourselves to the goal of improving living and working conditions on an equitable and sustainable basis, so that everyone will have adequate shelter which is healthy, safe, secure, accessible and affordable and which includes basic services, facilities and amenities and the enjoyment of freedom from discrimination in housing and legal security of tenure. We shall implement and promote this objective in a manner fully consistent with human rights standards./7

ARTICLE 25

25 displaced, migrants, indigenous groups and victims of natural and human-made disasters;]

DOCUMENT FOR PRECEDENT

RE: PRESERVING LAND RIGHTS OF INDIGENOUS PEOPLES

i(vii) The land rights of indigenous peoples so that their cultural and historical heritage is preserved. (recommendation D5 Patterns of ownership Habitat I)

RE: CONDEMNING DISPLACEMENT OF NATIVE POPULATION

(e) In all occupied territories, changes in the demographic composition, or the transfer or uprooting of the native population, and the destruction of existing human settlements in these lands and/or the establishment of new settlements for intruders, is inadmissible. the heritage and national identity must be protected. Any policies that violate these principles must be condemned.

RE: ESTABLISHING SUFFICIENT PROTECTING OF THE RIGHTS OF MIGRANT WORKERS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

RE; ENSURING THAT MEASURES [PREVENTIVE AND CURATIVE] ARE IMPLEMENTED BY PUTTING IN PLACE INTERNATIONAL SAFEGUARDS AND MECHANISMS FOR COOPERATION TO ELIMINATE ALL FORMS OF EXPLOITATION, ABUSE, HARASSMENT AND VIOLENCE AGAINST WOMEN

Countries *should shall* take full measures to eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. This implies both preventive actions and rehabilitation of victims. Countries *should take full measures to* shall eliminate all forms of exploitation, abuse, harassment and violence against women, adolescents and children. Countries *should shall* pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Action 4.9. International Conference on Population and Development, 1994)

RE: PROTECTING THE RIGHTS OF THOSE IN EXPLOITABLE SITUATIONS [AND PREVENTING THE EXPLOITATION]

Countries should **shall** pay special attention to protecting the rights and safety of those...in exploitable situations, such as migrant women, women in domestic service and school girls (Actions 4.9., International Conference on Population and Development, 1994)

RE: ENSURING ACCESS TO QUALITY EDUCATION FOR WOMEN OF DISABILITIES

Ensure access to *[quality]* education and training at all proper levels for adult women with little or no education, for women with disabilities and for documented migrant, refugee and displaced women to improve their work opportunities (Art.84. k Advance draft, Platform of Action, UN Conference on Women, May 15)

RE: [ENSURING] IMPROVING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

(General Assembly Resolution /RES/38/86, 1, Measures to Improve the Situation and Ensure the Human Rights and Dignity of All Migrant Workers 1983)

RE: PROGRESSING TOWARDS THE PROTECTION OF THE RIGHTS OF MIGRANT WORKERS

Recognizing also the progress made by certain States on a regional or bilateral basis towards the protection of the rights of migrant workers and members of their families, as well as the importance and usefulness of bilateral and multilateral agreements in this field (Preamble, International Convention on the Protection of the Rights of all Migrant Workers and Members of their Families)

RE: UNDERTAKING TO RESPECT AND ENSURE TO ALL MIGRANT WORKERS AND MEMBERS OF THEIR FAMILIES THE RIGHTS PROVIDED FOR IN THE PRESENT CONVENTION

States Parties undertake, in accordance with the international instruments concerning human rights, to respect and to ensure to all migrant workers and members of their families within their territory or subject to their jurisdiction the rights provided for in the present Convention without distinction of any kind such as sex, **sexual orientation**, race, colour, language, religion or conviction, political or other opinion, national, ethnic or social origin, nationality, age, economic position, property, marital status, birth or other status (Art. 7. International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families (Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to

torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

RE: ENSURING THE HUMAN RIGHTS AND DIGNITY OF ALL MIGRANT WORKERS

Reiterating that, in spite of the existence of a body of principles and standards already established, there is need to make further efforts to improve the situation and ensure the human rights and dignity of all migrant workers and their families (Measures to Improve the Situation and Ensure the Human Rights and Dignity of all Migrant Workers 1982)

RE: ASSURING PROTECTION FOR INDIVIDUALS WHO ARE NOT CITIZENS

Question of the international legal protection of the human rights of individuals who are not citizens of the country in which they live (General Assembly Resolution A/RES/38/87, 1983

¶ **CHECK on follow-up conventions**

DOCUMENTATION OF PRECEDENTS

RE: AFFIRMING THE RIGHT TO EDUCATION

- Recalling its resolutions 34/170 of 17 December 1979, 35/191 of 15 December 1980 and 36/152 of 16 December 1981 on the right to education,
- Recalling the International Covenant on Economic, Social and Cultural Rights, adopted by its resolution 2200 A (XXI) of 16 December 1966, which recognizes the right of everyone to education,
- Bearing in mind the importance of the Convention against Discrimination in Education, adopted on 14 December 1960 by the General Conference of the United Nations Educational, Scientific and Cultural Organization (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: REAFFIRMING THE IMPORTANCE OF IMPLEMENTING THE RIGHT TO EDUCATION

Reaffirming the paramount importance of the implementation of the right to education for the full development of the human personality and for the enjoyment of other fundamental human rights and freedoms (GA Resolution, The Right to Education 37/178 17 December 1982)

RE: AFFIRMING THE RIGHT OF EDUCATION FOR ALL REGARDLESS OF STATUS

Recalling that, since its establishment, the United Nations Educational, Scientific and Cultural Organization has constantly striven for effective realization of the right to education and equality of educational opportunities for all, without distinction as to race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, economic status or birth and that, for many years past, activities directed to securing the right to education and the extension and improvement of educational and training systems in Member States, more particularly in the developing countries, have occupied a central place in that organization's programme (GA Resolution, The Right to Education 37/178 17, December 1982)

RE: AFFIRMING UNIVERSAL ACCESS TO EDUCATION

We commit ourselves to promoting and attaining the goals of universal and equitable access to quality education, the highest attainable standard of scholarly, academic, ethical, physical and

mental health, and universal access of all to primary health care, making particular efforts to rectify inequalities relating to social conditions, and without distinction as to race, tribe, national origin, gender, age or disability, **sexual orientation, family structure and other status in the achievement of socially equitable and environmentally-sound development** (Commitment 6, ICPD)

To this end, at the national level, we will:

B. Emphasize lifelong learning by seeking to improve the quality of education to ensure that people of all ages are provided with useful knowledge, reasoning ability, skills and ethical and social values required to develop their full capacities in health and dignity. In this regard, women and girls should be considered a priority group. (ICPD)

Recognize and support the right of indigenous people to education in a manner that is responsive to their specific needs, aspirations and cultures, and ensure their full access to health care (g Commitment 6, ICPD)

Develop broad-based education programmes that promote and strengthen respect for all human rights and fundamental freedoms, including the right *to development* to **socially equitable and environmentally-sound development**, promote the values of tolerance, responsibility and respect for the diversity and rights of others, and provide training in peaceful conflict resolution, in recognition of the United Nations Decade for Human Rights Education (1995-2005, Commitment 6, ICPD)

Education is a basic human right and an essential tool for achieving the goals of equality, development, **environmental integrity** and peace (71 Platform of Action).

RE: RESTRUCTURING OF EDUCATIONAL SYSTEM:

The United Nations, through its almost 50 years of operation, has strongly supported the development of international instruments to address the violation of human rights, the escalation of war and conflict, the degradation of the environment, and the denial of equality/equity (including specifically gender Equality/equity) and social justice. Similarly, states have undertaken obligations through international conventions treaties, resolutions, to address these issues.

In most of the international documents there has been provision for educating the global community in a way that would achieve the “goals of justice”. To legitimately reflect these issues in education, requires a complete restructuring of the educational system. The global community should begin to embrace a new vision of education that fosters a commitment to addressing the above issues, along with a stimulation of thinking, in a non-evaluative collaborative environment.

Equal access to an educational system that is inequitable, competitive and hierarchical will not provide the necessary changes to address the issues facing the global community. Equal access plus a complete restructuring of the educational system is essential.

To achieve the above vision, and to discharge international obligations related to the promotion of socially equitable and environmentally-sound development, peace, and respect for human rights, the international community must move from an inequitable, hierarchical, biased, and competitive, model dependent educational system —a system that reproduces the current socioeconomic, political global structure to a new vision of education that is one of tolerance cooperation and intellectual stimulation.

RE: ENSURING UNIVERSAL ACCESS TO HEALTH CARE

Ensure, on a basis of equality of men and women, universal access to health-care service, including those related to reproductive health care, which include family planning and sexual health. Reproductive health-care programmes should provide the widest range of services without any form of coercion (Principles 8 International Conference on Population and Development, 1994)

[(j) Formulating or strengthening of measures to provide (legal) migrants, migrant workers and their families access to adequate housing and social services.]

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE PRIORITY OF SOCIAL SERVICES

Recommendation C 15
Social services

(b) the provision of health, nutrition, education, security, recreation and other essential services in all parts of the country should be geared to the needs of the community and receive an effective priority in national and development planning and in the allocation of resources

(c) Areas for priority action include the following:
(v0 Priority orientation of the above actions towards the promotion of health and the prevention of malnutrition, communicable diseases and other avoidable health risks and the provision of essential services and spiritual and physical recreational facilities;
(Recommendation C 15, Habitat I)

RE: RECOGNIZING HUMAN RIGHTS OF ALL MIGRANT WORKERS AND THEIR FAMILIES

Human rights of all migrant workers and members of their families
(Part III

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

-The right to life of migrant workers and members of their families shall be protected by law (Art. 9)

-No migrant worker or member of his or her family shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment (Art. 9).

- No migrant worker or member of his or her family shall be held in slavery or servitude (11.1)

- No migrant worker or member of his or her family shall be required to perform forced or compulsory labour (11.2).

-Migrant workers and members of their families shall have the right to hold opinions without interference (13.1).

International Convention on the protection of the Rights of all Migrant Workers and Members of their Families)

[(k) Protecting within the national context, the traditional rights to land and other resources of pastoralists, fishery workers and nomadic and indigenous people and strengthening land management;]

[(l) Avoiding forced illegal evictions, when possible; when unavoidable, to strive for rehabilitation.]

B. SUSTAINABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND HUMAN SETTLEMENTS

ARTICLE 26

[26. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *the goal of socially equitable and environmentally sound sustainable human settlements in an urbanizing world* by developing economies that will preserve, protect and conserve the environment, and that will make efficient use of limited resources, through BEST practices, within the carrying capacity of ecosystems and by providing all people with equal opportunities for a healthy, safe and *productive meaningful* life in harmony with nature and with natural and cultural heritage and spiritual and cultural values, ensuring social justice *progress*.

DOCUMENTATION OF PRECEDENTS

RE: BEING WITH THE CARRYING CAPACITY OF ECOSYSTEMS

Recommended extensively throughout all literature on Ecology and the Environment. The need for socially equitable and environmentally sound development within the carrying capacity of ecosystems is an essential principle of sustainability.

ARTICLE 27

27. We further *commit ourselves to the objectives of:* recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the following:

(a) *Promoting ensuring* socially integrated human settlements, combating segregation, discriminatory and other exclusionary policies and practices and recognizing and respecting the rights of all, *especially women and the poor*; including those who have been discriminated on the basis of gender, sex sexual orientation, marital status, age, disabilities, race, tribe, or culture, colour, ethnicity, national, ethnic or social origin, nationality, place of birth, refugee or immigrant status, aboriginal ancestry, religion or conviction, language, political or other opinion, socioeconomic conditions, nature of residency and other status

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THE INHERENT DIGNITY OF ALL MEMBERS OF THE HUMAN FAMILY AS BEING THE FOUNDATION OF FREEDOM, JUSTICE AND PEACE

Recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the World (Preamble, Universal Declaration of Human Rights, 1948)

RE: ENSURING EQUALITY BEFORE THE LAW

All persons are equal before the law and are entitled without any discrimination to the equal protection of the law. In this respect, the law

shall prohibit any discrimination and guarantee to all persons equal and

effective protection against discrimination on any ground such as race,

colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status (Art. 26, International Covenant of Civil and Political Rights, 1966)

RE; ENCOURAGING TOLERANCE AND ELIMINATING OF ALL FORMS OF DISCRIMINATION

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, tribe, colour, sex, language, religion, political or other opinion, national or social origin, property, birth, **sexual orientation, family structure**, or other status. (Art. 2, The Universal Declaration of Human Rights, 1948)

RE: BEING CONVINCED THAT ANY DOCTRINE OF SUPERIORITY BASED ON RACIAL DIFFERENTIATION IS SCIENTIFICALLY FALSE...

Convinced that any doctrine of superiority based on racial differentiation

is scientifically false, morally condemnable, socially unjust and dangerous, and that there is no justification for racial discrimination, in

theory or in practice, anywhere (Preamble, International Convention on the Elimination of All Forms of Racial Discrimination, 1965)

RE: STRENGTHENING LEGAL FRAMEWORKS FOR ACCESS TO LAND AND OWNERSHIP...IN PARTICULAR FOR WOMEN

Consider strengthening/developing legal frameworks for land management, access to land resources and land ownership - in

particular, for women - and for the protection of tenants (3.8.h Combating Poverty, Agenda 21, UNCED, 1992)

RE: UNDERTAKING ACTIONS TO PROMOTE FOOD SECURITY

Undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.8. l., Combating Poverty, Agenda 21, UNCED 1992)

RE: INTEGRATING TRADITIONAL METHODS THAT HAVE BEEN SHOWN TO BE ENVIRONMENTALLY SUSTAINABLE

Support research on and integration of traditional methods of production that have been shown to be environmentally sustainable (3.8. m., Combating Poverty, Agenda 21, UNCED, 1992)

RE: IMPROVING ACCESS TO LAND FOR THE LANDLESS POOR

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. In many instances special considerations for women are required. Strict feasibility appraisals are needed for borrowers to avoid debt crises (3.8. o., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ENSURING CONTINUED PROVISION OF BASIC SERVICES TO THE POOR AND NEEDY

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: PROMOTING INTERNATIONAL COOPERATION TO ADDRESS THE ROOT CAUSES OF POVERTY

Promote international cooperation to address the root causes of poverty. The development process will not gather momentum if developing countries are weighted down by external indebtedness, if development finance is inadequate, if barriers restrict access to markets and if commodity prices and the terms of trade in developing countries remain depressed (3.10. f., Combating Poverty, Agenda 21, UNCED, 1992)

RE: ELIMINATING THE PRACTICE OF ADDING POVERTY PROGRAMS AS AN AFTERTHOUGHT

How can poor and traditionally excluded people gain an integral role in economic development that addresses squarely the poverty and inequality that is crippling the hemisphere? Poverty programs should not be added to development strategies as an afterthought. Poor people, small farmers and small businesses must be treated as potential generators of wealth and engines of economic growth. Critical issues of food security, land tenure and agricultural policy for the majority of the region's farmers (PROMISES TO KEEP The Unfinished Agenda for Human Rights and Economic Justice in the Americas, 1994)

ARTICLE 27 b-h

(b) Ensuring the acknowledging and harnessing the potential of the informal sector, where appropriate, in providing housing and services for the people in poverty *poor*;

(c) Ensuring *Promoting* changes in production and consumption patterns and settlements structures that will protect **natural environment natural resources - including water, air, bio-diversity, energy and land - providing a healthy living environment for all;**

(d) Ensuring *Promoting spatial development* the development of spatial patterns that reduce transport demand, as well as that create *creating* efficient, effective and environmentally sound publicly owned transportation systems that improve accessibility to work, goods, services and amenities;

(e) Preserving natural ecosystems and protecting agricultural *productive* land in urban and rural areas and protecting fragile ecosystems from the negative impacts of human settlements;

(f) Preserving, protecting and maintaining natural, historic and cultural heritage, including traditional shelter and settlements patterns and *pathways*, as appropriate, as well as landscapes and urban flora and fauna in open and green spaces;

DOCUMENTATION OF PRECEDENTS.

RE: PRESERVATION OF HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* [**humankind**] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

Noting the recognition of the World Heritage committed meeting in 1993 when the committee recognized the protection of cultural pathways

(g) Ensuring cooperative socially equitable and environmentally sound development and meaningful employment *Enabling competitive and sustainable economic development that will attract investments, generate employment and provide revenues for human settlements development;*

(h) *Alleviating* preventing and eliminating undesired impacts of structural adjustment and economic transition on human settlements by undertaking to develop a socially equitable and environmentally sound alternative with genuine community participation and involvement; and

COMMENT

RE: RE-EXAMINING THE IMPACT OF STRUCTURAL ADJUSTMENT PROGRAMS

Increasing negative impact of structural adjustment programs
The international debt crisis, which has forced nations to undergo structural adjustment programs, has undermined nation states to implement or maintain food security policies. Increased trade liberalization with the World Trade Agreement will further restrict the nation state from implementing food security policies. The negative consequences of structural adjustment programmes have had negative consequences such as increased poverty, unemployment, social disintegration, health care decline, environmental degradation, reduced access to education, and escalation of conflict. (Global Compliance Research Project)

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING REVIEW OF STRUCTURAL ADJUSTMENT

Examine the international economic framework, including resource flows and structural adjustment programmes, to ensure that social and environmental concerns are addressed, and in this connection, conduct a review of the policies of international organizations, bodies and agencies, including financial institutions, to ensure the continued provision of basic services to the poor and needy (3.10. e., Combating Poverty, Agenda 21, UNCED, 1992)

RE: CRITICIZING OF STRUCTURAL ADJUSTMENT PROGRAMS

Concerned about the negative impact on the poor, especially women and children, of the International Monetary Fund and World Bank structural adjustment policies (Women's Action Agenda, 1992)

In many countries, in particular in developing and least-developed countries, [structural adjustment,] [the deterioration of public health systems, a decrease in public health spending and in some cases, increasing privatization of health care systems without appropriate guarantees of universal access] further reduce health care availability. This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles including within the family and the community are often not acknowledged and as such do not receive the necessary social, psychological and economic

support (93 Advanced Draft Platform of Action, UN Conference on Women, 1995)

RE: CONTRIBUTING OF STRUCTURAL ADJUSTMENT TO DETERIORATION OF PUBLIC HEALTH SYSTEMS

In many countries, especially in developing countries, in particular the least developed countries, a decrease in public health spending and, in some cases, structural adjustment, contribute to the deterioration of public health systems. In addition, privatization of health-care systems without appropriate guarantees of universal access

to affordable health care, further reduces health-care availability.

This situation not only directly affects the health of girls and women, but also places disproportionate responsibilities on women, whose multiple roles, including their roles within the family and the community, are often not acknowledged; hence they do not receive the

necessary social, psychological and economic support (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: ASSESSING IMPACT OF STRUCTURAL ADJUSTMENT ON WOMEN AND GIRL CHILDREN

22. Macro and micro-economic policies and programmes, including structural adjustment, have not always been designed to take account of

their impact on women and girl children, especially those living in poverty. Poverty has increased in both absolute and relative terms, and

the number of women living in poverty has increased in most regions.

There are many urban women living in poverty; however, the plight of women living in rural and remote areas deserves special attention given

the stagnation of development in such areas. In developing countries, even those in which national indicators have shown improvement, the majority of rural women continue to live in conditions of economic underdevelopment and social marginalization (93 Platform of Action. UN Conference on Women: Equality, Development and Peace)

RE: PROPOSING DEBT FORGIVENESS

Find effective development-oriented and durable solutions to external debt problems in order to help them to finance programmes and projects targeted at development, including the advancement of women, inter alia, through the immediate

implementation of the terms of debt forgiveness agreed upon in the Paris Club in December 1994, which encompassed debt reduction, including cancellation or other debt relief (Habitat II) measures and develop techniques of debt conversion applied to social development programmes and projects in conformity with Platform priorities; (61 c Platform of Action. UN Conference on Women: Equality, Development and Peace)

. ARTICLE 27 J

(i) **Preventing and reducing the impact of natural and human-made disasters on human communities settlements, by enshrining the notion of healthy community as “healthy, safe and environmentally sound communities,” by eliminating patterns of consumption and development that have increased societal vulnerability to disasters, by promoting and funding BEST practices, and by embracing a culture of safety.**

DOCUMENTATION OF PRECEDENTS

RE: PROMOTING A CULTURE OF SAFETY

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(7.60, Disasters)

This principle involves the commitment to act to prevent rather than to [correct]

"to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out:
(Agenda 21, 7.60)

Profoundly concerned that the situation of children in many parts of the world remains critical as a result of inadequate social conditions, natural disasters, armed conflicts, exploitation, illiteracy, hunger and disability, and convinced that urgent and effective national and international action is called for **and needed** (Preamble, Convention on the Rights of the Child, 1989)

RE: PREVENTING DISASTER

The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation

will significantly enhance our ability to achieve real progress in **preventing** *mitigating* disasters through the transfer of **Best Ecologically Sound Traditions** *technology* and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention on Natural Disaster, 1994).

RE: RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL DISASTERS

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability ...(A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

RE: RECOGNIZING DISASTER PREVENTION...BETTER THAN DISASTER RESPONSE

Disaster prevention, *mitigation and preparedness* **are** better than disaster response in achieving the goals and objectives of the Decade. Disaster response alone is not sufficient, as it yields only temporary results at a very high cost. We have followed this limited approach for too long.

This has been further demonstrated by the recent focus on response to complex emergencies which, although compelling, should not divert from pursuing a comprehensive approach. Prevention contributes to lasting improvement in safety and is essential to integrated disaster management (3 a Convention on Natural Disaster, 1994).

RE: DEVELOPING A GLOBAL CULTURE OF PREVENTION

Development of a global culture of prevention as an essential component of an integrated approach to disaster reduction; (9 a The World Conference on Natural Disaster Reduction, 1994)

RE: INCORPORATING DISASTER PREVENTION...IN DEVELOPMENT PLANNING

Incorporate disaster reduction prevention *or mitigation* in socioeconomic development planning based on the

assessment of the risk (11a i The World Conference on Natural Disaster Reduction, 1994)

**RE: STIMULATING GENUINE COMMUNITY INVOLVEMENT...
REDUCING VULNERABILITY OF COMMUNITIES TO NATURAL
DISASTERS**

Stimulate genuine community involvement and empowerment of women and other socially disadvantaged groups at all stages of disaster management programmes in order to facilitate capacity building, which is an essential precondition for reducing vulnerability of communities to natural disasters (11 q Convention on Natural Disaster Reduction, 1994).

**RE: EXPRESSING THE POLITICAL COMMITMENT
TO...THROUGH LEGISLATION....AT [GLOBAL] NATIONAL,
COMMUNITY LEVEL**

Express the political commitment to reduce their vulnerability, through declaration, legislation, policy decisions and action at the highest level, which would require the progressive implementation of disaster **prevention assessment and reduction** plans at the **global** national and community levels (11 a Convention on Natural Disaster Reduction 1994)

**RE: EXTENDING THE CONCEPT OF DISASTER REDUCTION TO
COVER NATURAL AND OTHER DISASTER SITUATIONS
INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL
DISASTERS (NA-TECHS)**

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries (B i Convention on Natural Disaster, 1994)

**RE; RECOGNIZING SOME PATTERNS OF CONSUMPTION HAVE
POTENTIAL FOR INCREASING VULNERABILITY TO NATURAL
DISASTERS**

Some patterns of consumption, production and development have the potential for increasing the vulnerability to natural disasters, particularly of the poor and socially disadvantaged

groups. However, *sustainable development* **socially equitable and environmentally-sound development** can contribute to reduction of this vulnerability, if planned and managed in a way to ameliorate the social and economic conditions of the affected groups and communities. (A. 4. Basis for the Strategy, Convention on Natural Disaster reduction, 1994)

C. Means of Discharging Obligations and Fulfilling Expectations *Enabling Action*

ARTICLE 28

28. We recognize that through international agreements we have incurred obligations, and created expectations and we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring the *We commit ourselves to the strategy of enabling all key actors, in the public, private and the community sectors, the genuine involvement and participation of individuals and groups of civil society to play an effective role - at national, state/provincial, metropolitan and local levels-in the socially equitable and environmentally sound development of human settlements and shelter development.*

ARTICLE 29

29. We further ensure *commit ourselves to the objectives of:*

(a) *Exercising public authority and The using of public resources with openness transparency and accountability;*

(b) *The Decentralizing within a framework of overarching international principles, authority and resources, as appropriate, as well as functions and responsibilities to the level most effective in addressing needs of people in their settlements;*

(c) *Promoting The establishing of institutional and legal frameworks and capacity-building conducive to civic engagement and to inclusive genuine community involvement and participation in socially equitable and environmentally sound development of settlements broad-based participation in human settlements development;*

(d) *The providing of capacity-building for the socially equitable and environmentally sound development of human settlements management and development;*

(e) *The supporting of institutional and legal enabling frameworks for mobilizing providing financial resources for socially equitable and environmentally sound development of human settlements sustainable shelter and human settlements development;* and

(f) *The promoting equal access to reliable information, utilizing, where appropriate, modern communications technology and networks.]*

[Gender Equality

29 bis.. We recognize that through international agreements we have incurred obligations related to the equality of women from the inception of the United Nations Charter and throughout subsequent human rights documents, and we recognize that further expectations have recently been created in the Platform of Action from the UN Conference on Women: Equality, Development and Peace, we thus commit ourselves to discharging these obligations and fulfilling these expectations by ensuring *We commit ourselves to the goal of gender equality in human settlements development. We further commit ourselves to the objectives of ensure:*

(a) Integrating gender perspectives in human settlement-related policies, programmes and projects, and the promotion of the full and equal participation of women in human settlement planning and decision-making; and

(b) Developing methodologies for incorporating gender perspectives in shelter planning, development and evaluation, such as the collection, analysis and dissemination of gender-disaggregated data and information, and the development of gender-based indicators.]

D. Financing shelter and human settlements

[30. We commit ourselves to **undertake to strengthening existing financial mechanisms and, where appropriate, developing new sources of funding mechanisms** for financing the implementation of the Habitat Agenda, such as **funding from a substantial reduction of the global military budget, from deferred taxes from corporations or transnationals, or from compensation for environmental degradation.**

COMMENT:

The international community spent 370 billion on the military in 1981, and is now spending over 800 billion. Yet in 1981, the General Assembly passed a resolution supporting the reduction and freezing of the military budget and a resolution to reallocate resources saved from the proposed reduction to economic and social needs (UN General Assembly Resolution 36/81.

which will mobilize increased sources of finance - public, private, multilateral and bilateral - at international, regional, national and local levels; and will promote the efficient, effective and accountable resource allocation and management.]

[31. We further commit ourselves to the objectives of :

(a) Stimulating national and local economies, through **ensuring socially equitable and environmentally sound development** *enabling competitive and sustainable economic development, that will attract public and international financial resources and private investments, generate employment and increase revenues, providing a stronger financial base to support shelter and human settlements development;*

(b) Strengthening fiscal and financial management capacity, at all levels, to fully develop the taxation base, pricing mechanisms and other sources of revenue;

(c) Enhancing public revenue through the use, as appropriate, of fiscal instruments which are conducive to environmentally friendly practices, in order to promote direct support for **socially equitable and environmentally sound development** *sustainable human settlements;*

(d) Strengthening regulatory and legal frameworks such as **MINS 1997 to drive the development, promotion and implementation of BEST (Best Environmentally Sound Traditions) practices** *to enable markets to work and to facilitate independent initiative and creativity, as well as to encourage a wide range of partnerships to finance shelter and human settlements development;*

(e) Promoting increased equitable access to credit for all;

(g) targeting, where appropriate, subsidies to those who are not served by the market, and promoting appropriate credit mechanisms and other instruments to address their needs.]

E. International cooperation/12

ARTICLE 32

[32. We commit ourselves - in the interests of international peace, security, justice and stability - to **reduce the global military budget by 50 % and to reallocate the financial resources saved from the reduction to economic and social as undertaken through General Assembly Resolutions in 1981. In addition we commit to enhancing international cooperation and partnerships which will assist in the to implement implementation of the national and the global plans of action and the attainment of the goals of the Habitat Agenda,**

by contributing to and participating in multilateral, regional and bilateral cooperation programmes and institutional arrangements and *technical and financial assistance programmes*; by the interchange of **BEST (Best Environmentally Sound Traditions) practices** *exchange of appropriate technology*; by the collection, analysis and dissemination of information about shelter and human settlements, and by international networking.]

ARTICLE 33

[33. We further commit ourselves to the objectives of:

(a) Striving for the fulfillment of the accepted target of 0.7 per cent of gross national product for official development assistance **for socially equitable and environmentally sound development** as soon as possible; as well as increasing, within it, the share for funding for **socially equitable and environmentally sound development human settlements and shelter development**;

(b) Using resources and economic instruments in an effective, efficient and equitable manner, at the local, national, regional and international levels; and

(c) Promoting responsive international cooperation between public, *private* **BEST practices enterprises** and non-profit, non-governmental and community organizations.]

F. Assessing the discharging of obligations and the fulfillment of expectations *progress*

ARTICLE 34

[34. We commit ourselves to monitor and evaluate, within our own countries, efforts to implement national plans of action, striving to ensure efficiency and effectiveness in meeting the goals of adequate shelter for all and sustainable human settlements development.] **In addition we also commit to discharge our previous obligations incurred through Conventions, Treaties and Covenants by signing what we have not yet signed, ratifying what we have not yet ratified, enacting legislation to ensure compliance, and establishing an enforcement infrastructure to ensure the discharging of these obligations and the fulfilling of these expectations, and we commit to fulfilling previous expectations created through Declarations, General Assembly Resolutions and Conference action statements. To demonstrate our commitment to over 50 years of obligations and expectations we also commit to the establishment of an International Court of Compliance where citizens can take evidence of state non-compliance with obligations and**

expectations. For this purpose we pledge to support a General Assembly Resolution in the 51 session of the United Nations to commemorate the culminating of the Decade devoted to the promotion and furtherance of International Law.

ARTICLE 35

[35. We further commit ourselves to the objective of enhancing the role and strengthening the institutional capacity of UNCHS (Habitat) as an agency of coordination and cooperation assisting the Member States of the United Nations to monitor and evaluate the implementation of the Habitat Agenda, using *shelter and urban indicators and best BEST (Best Environmentally Sound Traditions) practices* as a basis for assessing global conditions and trends in shelter and **socially equitable and environmentally sound development human settlements development.**]

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

A. Introduction

ARTICLE 36

36. Twenty years ago in Vancouver, at the First United Nations Conference on Human Settlements (Habitat I), the world community adopted an agenda for human settlements development. Since then, there have been remarkable changes in population and social, political, environmental and economic circumstances **that could have with the needed international and national political will have permitted the fulfillment of the expectations of Habitat I. affect strategic outlook.** These changes have led many Governments to adopt and promote enabling policies to facilitate actions by individuals, families, communities and the private sector to improve human settlements conditions. However, it is estimated that at least 1 billion human beings still lack adequate shelter and are living in unacceptable conditions of poverty, mostly in developing countries.

ARTICLE 37

37. While the rate of population growth is on the decline, during the past twenty years world population has increased from about 4.2 billion to about 5.7 billion, with nearly one third under 15 years of age, and an increasing number of people living in towns, cities, and mega-cities. By the turn of the century, humankind will be crossing a threshold where over 50 per cent of the population live in urban areas. Meeting the needs of the nearly 2 billion more people expected in the coming two decades and managing human settlements towards sustainability will be a daunting task. In developing countries, in particular, rapid urbanization and the growth of towns, cities, and mega-cities, where public and private resources tend to concentrate, represent new challenges and at the same time new opportunities: there is a need to address the root causes of these phenomena, including rural to urban migration.

ARTICLE 38

38. [Globalization of the world economy and deepening interdependence among nations presents challenges and opportunities as well as risks and uncertainties for the future of the world economy. As a result, the level of economic development has increased in some countries, while the situation in a large number of them remains critical and uncertain. At the same time, the gap between developing and developed countries, the poor and rich - countries as well as people - has widened. New communications technology makes information much more widely accessible and accelerates all processes of change. In many societies, new issues of social cohesion and personal security have emerged and the issue of solidarity has become

central. Poverty, unemployment, environmental degradation, social disintegration and the increasing movement of people, as well as intolerance and violence have also emerged as critical factors. We must keep these new conditions in view as we draw up **plans for socially equitable and environmentally sound human settlements strategies** for the first two decades of the twenty-first century.

ARTICLE 39

39. While Habitat II is a Conference of States and there are many things national Governments can do to enable local communities to solve problems, the **people actors** who will determine success or failure in improving the **condition of human settlements condition** are mostly found at the community level *in* with the public, *private* the **BEST practices enterprises**, and **the individuals and groups of civil society non-profit sectors**. It is they, local authorities, **in Best practices enterprises and other [stakeholders], individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society** who are on the front line in achieving the goals of Habitat II. **Although the principles and standards arising from obligations and expectations should be established at the international level**, structural causes of the problems have often to be dealt with at the national and sometimes the international level, **progress the discharging of obligations and the fulfillment of expectations** will depend to a large degree on local authorities, **with genuine community involvement and participation civic engagement and the forging of partnerships** at all levels of government with the *private sector* the **BEST practices enterprises**, and **the individuals and groups of civil society, such as** the cooperative sector, non-governmental and community-based organizations., *workers and employers and civil society at large*.

ARTICLE 40

40. Habitat II is one in an extraordinary series of World Conferences held under the auspices of the United Nations over the past five years. All addressed important issues of people-centred **sustainable socially equitable and environmentally sound development**. **These Conferences, though significant, should not minimize the extensive obligations previously incurred by states in conventions, treaties and covenants, and the extensive expectations created in Declarations, General Assembly resolutions and other pre-1992 conference action plans**. It is easy with short institutional memory to ignore past obligations and expectations. Habitat II provides a unique opportunity to incorporate significant obligations and expectations from pre-1992 international instruments with post-1992 international instruments including **the four previous conferences in this series**. *including sustained economic growth and equity, for which successful implementation requires action at all levels, particularly at the local level. Strategies on social, economic, environmental, disaster reduction, population, disability and gender issues will have to be*

implemented in urban and rural areas and, in particular, where the problems are acute and generate tension.

ARTICLE 41

41. In Habitat II, Governments at all levels, **the BEST practices enterprises**, and **the individuals and groups of civil society** *the community and the private sector* considered how the achievement of the two principal goals of "Adequate shelter for all" and "socially equitable and environmentally sound *Sustainable* human settlements *development in an urbanizing world*" can be furthered at the local level through an enabling process in which individuals, families and their communities play a central role **through genuine community involvement and participation**. **The implementation of the Habitat Global Plan of Action requires the genuine involvement and participation of governments at all levels, the BEST practices enterprises, and the individuals and groups of civil society** *This is what is special about the Habitat II Global Plan of Action and its strategies for implementation. Implementation of these measures will need to be adapted to the specific situation of each country and community.*

ARTICLE 42

42. *The strategy of* **The implementation of** the Global Plan of Action is **dependent based on enabling element the involvement and participation of citizens in a process that is honest, genuine and open transparency and participation**. *Under this strategy,* **government** efforts are based on establishing legislative, institutional and financial frameworks that will enable **the BEST practices enterprises, and the individuals and groups of civil society** to fully contribute to **socially equitable and environmentally sound development** *[sustainable development, including sustained growth]* and enable all women and men to work with each other and in their communities with governments at all levels, **to establish terms of reference**, determine collectively their future, decide on priorities for action, identify and allocate resources fairly and *build partnerships* **work cooperatively** to achieve common goals. **This cooperative process will set up** the conditions for women and men to exercise their individual rights and responsibilities equally and to engage their abilities effectively in activities that will improve and sustain their living environments (b);

Enablement creates:

(a) A situation in which the full potential and resources of all actors in the shelter production and improvement process are mobilized;

Article 42 (c)

42 (c) The conditions for organizations and institutions to interact and network, **building fostering and ensuring genuine community involvement and**

participation *partnerships* for socially equitable and environmentally sound development [*sustained economic growth and sustainable development*];

...

Part IV.

GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

B. Adequate shelter for all/14

ARTICLE 44

44. [Since the adoption of the Universal Declaration of Human Rights in 1948, the right to adequate housing has been recognized as an important component of the right to an adequate standard of living. All nations without exception have *some form of an obligation to provide for in the shelter sector, as exemplified by their creation of ministries of housing or agencies, by their allocation of funds for the housing sector and by their policies, programmes and projects.*]

[The provision of adequate housing for everyone requires action not only by governments, but by **all society working cooperatively sectors of society**, including the **BEST practices enterprises**, and the **individuals and groups of civil society private sector, non-governmental organizations**, local authorities, as well as by international organizations (community)] *Within the overall context of an enabling approach, governments* should take appropriate action [in order to promote, protect and, ensure *the progressive realization of the enactment of the right to adequate housing*]. These include, but are not limited to, **ensuring the following**:

1. *Providing Adequate* legal protection from, and effective remedies against discrimination of any kind in housing as to *race, colour, sex, language, religion, political or other opinion, national or social origin, [[property, birth or other status];* race, tribe, or culture, **colour**, ethnicity, **national ethnic or social origin**, **nationality, place of birth, refugee or immigrant status, colour, sex, sexual orientation, marital status, disabilities, age**, language, religion **or conviction**, political or other opinion, *national or, social origin*, property, *birth*, **nature of residency** or other status
2. *Providing* Legal security of tenure and equal access to land among all, including women and those living in poverty, as well as effective protection [from illegal forced evictions]/15;
3. *Adopting* Policies aimed at making housing habitable, affordable and accessible, including for those who are unable to secure adequate housing through their own means, by inter alia:
 - a) Expanding the supply of affordable housing through *appropriate* regulatory measures, **including rent control** and market incentives;

- b) Increasing affordability through provision of subsidies and rental and other forms of housing assistance to people living in poverty;
- c) Supporting community-based, cooperative and non-profit rental and owner occupied housing programmes;
- d) Promoting supporting services to homeless and other *vulnerable marginalized* groups;
- e) *Mobilizing Providing* innovative [~~domestic~~] financial and other resources - public and private - for housing and community development;
- f) Creating and promoting market based incentives to encourage the private sector to meet the need for affordable rental and owner occupied housing;
- g) Promoting **socially equitable and environmentally sound** *sustainable spatial* development patterns and **environmentally sound** transportation systems that improve accessibility to goods, services amenities and work.

4. Effective monitoring and evaluation of housing conditions including the extent of homelessness and inadequate housing and, in consultation with the affected population, to formulate and adopt appropriate housing policies and implement effective *strategies* means and plans to address these problems.

ARTICLE 47

47. International and national cooperation at all levels will be both necessary and beneficial in promoting adequate shelter for all. This is especially needed in areas that are affected by war or by natural, industrial or technological disasters, and in situations in which reconstruction and rehabilitation needs surpass national resources.

ARTICLE 48

48 ter. [To ensure the continuing *progress* discharging of obligations and the fulfilling of expectations in the enactment of the right to *toward realizing* an adequate standard of living for all, national and local governments , *as appropriate*, should adopt:

(a) Provisions to ensure:

(i) freedom from discrimination based on race, ethnicity, gender, family composition, and disability status in housing and credit markets, and specifically, recognition that the right to an adequate standard

of living pertains to every person, including those in female-headed households; and

(ii) legal security of tenure and equal access to land among all, including women and people living in poverty;

(b) Policies aimed at making housing habitable, affordable, and accessible, including:

(i) creation of *market-based* incentives to encourage the **BEST practices enterprises** to meet the need for affordable rental housing and home ownership;

48 (ii) promoting spatial development patterns and **safe and environmentally sound public transportation systems** that improve accessibility to goods, services and amenities;

NOTE WORDING ALREADY AGREED TO IN ARTICLE 44 G

DOCUMENTATION OF PRECEDENTS

RE: PREVENTING AIR, WATER AND LAND POLLUTION

In many locations around the world the general environment, (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.39., Protecting and Promoting of Human Health Conditions, Agenda 21, UNCED, 1992)

RE: PROVIDING SAFE AND *LESS POLLUTING* BEST PRACTICES — BEST ECOLOGICALLY SOUND TRANSPORTATION

"to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere)

ARTICLE 48 (iii—viii)

(iii) *mobilizing* providing innovative sources of domestic finance - public and private - for housing and community development;

(iv) expanding the supply of affordable housing through appropriate regulatory and market incentives;

(v) promoting socially equitable and environmentally sound development through working cooperatively with genuine community involvement and participation *sustainable economic development through community partnerships*;

(vi) increasing affordability through provision of rental assistance to people living in poverty, and through establishing, and extending rent controls;

(vii) supporting community-based programmes that provide shelter and supportive services to the homeless;

48 (viii) **Preserving, protecting and maintaining historical and cultural and Natural heritage, and urging non-party states to sign and ratify the Convention on the Protection of Cultural and Natural Heritage]**

DOCUMENTATION OF PRECEDENT.

RE: PROTECTING HERITAGE OF OUTSTANDING INTEREST

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of *mankind* **[humanity]** as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Preamble, Convention for the Protection of the World cultural and Natural Heritage, 1972)

ARTICLE 51 (b-h)

51 (b) **[Take full account of the need for Ensure socially equitable and environmentally sound *sustained economic growth, of sustainable development principles and of the basic needs for human development and health*];/17**

(c) Encourage the development of environmentally sound and affordable construction methods and production and distribution of building materials, including strengthening the indigenous building materials industry, based as far as possible on locally available resources;

(d) Promote the free exchange of information on the entire range of the environmental health aspects of construction, including the development and dissemination of databases on the adverse environmental effects of building materials, through the collaborative efforts of **governments and individuals and groups of civil society**. *the private and public sectors.*

52 (g) Encourage the development of environmentally sound and affordable construction methods, and production and distribution of building materials, including strengthening the local building materials industry, based as far as possible on locally available resources;

(h) Promote, *where appropriate*, the use of labour-intensive construction and maintenance **BEST practices technologies** that generate **meaningful** employment in the construction sector for the underemployed labour force found in most large cities, at the same time promoting the development of skills in the construction sector.

ARTICLE 53

53. In many countries, *markets serve as the primary housing delivery mechanism*, and hence their effectiveness and efficiency are important to the goal of **sustainable socially equitable and environmentally sound** development. It is the responsibility of Governments to create an enabling framework for a well-functioning housing market. The housing sector should be viewed as an integrating market in which trends in one segment affect performance in other segments. Government interventions are required to address the needs of disadvantaged and **vulnerable marginalized** groups, who are insufficiently served by markets.

ARTICLE 55 (d)

55 D [(d) Apply transparent, comprehensive, easily accessible and progressive taxation and incentive mechanisms to stimulate efficient, environmentally sound and equitable use of land, and exploit the full potential of land-based and other forms of **regulations and taxation** in mobilizing financial resources for service provision by local authorities;]

ARTICLE 57 (c)

57 [(c) Encourage the multiplicity and diversity of intervention of *all [stakeholders,]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process**

men and women alike, acting within the market system;] (d) Develop a legal framework of land use aimed at balancing the need for construction with the protection of the environment, minimizing risk and diversifying uses;

ARTICLE 58

58. To eradicate legal and social barriers to the ~~equal and equitable~~ access to land, especially the access of women, people with disabilities and other *vulnerable marginalized* groups, Governments, at the appropriate levels, in partnership with the private sector, non-governmental organizations, the cooperative sector, and community-based organizations should:

ARTICLE 58a

(a) Address the cultural, ethnic, religious, social and disability-based causes that result in the creation of barriers that lead to segregation and exclusion, including by encouraging **principle-based education founded upon international principles related to promoting and fully enshrining and guaranteeing respect for human rights; to preserving, conserving and protecting the environment; to creating a global structure that respects the rule of law, to achieving a state of peace through prevention and peaceful resolution of conflicts; justice and security, and to participating in socially equitable and environmentally sound development. and training for peaceful conflict resolution;**

ARTICLE 59 e

59 (e) *Capitalize on* **Draw upon** the potential contribution of key ~~stakeholders~~ in the private formal and informal sectors, and support the engagement of non-governmental organizations, community organizations and the private sector in participatory and collective initiatives and mechanisms appropriate to conflict resolution; **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process**

ARTICLE 63

63. To facilitate **equitable** access to housing for those not served by existing finance mechanisms, Governments *should review and rationalize, where appropriate, systems of subsidies by policies that will ensure their viability, [equity] and transparency, thus allowing that* many people without access to credit and land to enter the market.

(e) Ensuring access to basic infrastructure and services

ARTICLE 65

65. To safeguard the health, safety, welfare and improved living environment of all people and to provide adequate and affordable basic infrastructure and services, Governments at the appropriate levels, including local authorities, should promote:

(a) The supply of and access to adequate quantities of safe drinking water;

[(b) Adequate sanitation and [technically] [environmentally sound] waste systems management, based on perceiving “waste” as a resource, and on drawing upon innovative traditional practices.

ARTICLE 66

66. To ensure the [equitable] provision of basic infrastructure and service delivery systems, Governments at the appropriate levels, including local authorities, should:

(a) Work with all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision related to** *in* providing serviced land and *in* to allocating adequate space for basic services, as well as for recreational and open space in the development of new schemes and the upgrading of existing ones;

(g) Promote dialogue among all *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision** to help provide basic services and infrastructure.

ARTICLE 69

69. To respond effectively to the requirements for **healthy and environmentally safe and sound** *appropriate* planning, design, construction, maintenance, and rehabilitation of shelter, infrastructure and other facilities, Governments at the appropriate levels should:

(a) Encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology;**

DOCUMENTATION OF PRECEDENT

RE: SUPPORTING THE USE OF NATURAL MATERIALS

In cases where natural materials can satisfy the requirements of market, new investment for the expansion of the capacity to produce synthetic materials and substitutes *should shall* not be made (3 a xii,

Food, Programme of Action for the establishment of a New International Economic Order, 1974)

RE: SUPPORTING ENDOGENOUS TECHNOLOGY

Governments and the international community should facilitate the transfer of relevant technology and experience and should encourage and assist the creation of endogenous technology better suited to the sociocultural characteristics and patterns of population by means of bilateral or multilateral agreements having regard to the sovereignty and interest of the participating States. The knowledge and experience accumulated on the subject of human settlements should be available to all countries. Research and academic institutions should contribute more fully to this effort by giving greater attention to human settlements problems. (III 18 Habitat 1)

Recommendation C4

Designs and technologies for shelter infrastructure and services

C. the solutions arising from such choices should therefor be:

(kk) based on the best possible use of available local materials and local resources within a process of constructive rationalization allowing for the effective use of locally existing know-how and unskilled labour in countries with abundant **human power** manpower, thereby generating employment and income.

(iv) Conceived to utilize traditional techniques suitable adapted to new materials

(v) emerging from original indigenous research

(vi) Planned so as to take full account of their environmental impact (Habitat

l)

ARTICLE 70

70. To promote and support an adequate supply of locally produced, environmentally sound, affordable, and durable basic building materials, Governments at the appropriate levels, in cooperation with all other *[stakeholders, individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision]* should:

(a) Where appropriate, encourage and support the establishment and expansion of environmentally sound, small-scale local building materials industries and the expansion of their production and commercialization through, inter alia, legal and fiscal incentives, provision of credit, research and development, and information;

(b) As required, provide policies and guidelines to facilitate fair market competition for building materials with enhanced participation of local *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.** and establish a public mechanism to enforce them;

(c) Promote information exchange and flow of appropriate, environmentally sound, affordable and accessible building technologies and facilitate the **intertransfer of BEST (Best Ecologically Sound Traditions) practices technology recognizing that in many cases traditional practices could be the most ecologically sound.**

(d) With *adequate* attention to safety needs, **and BEST (Best Environmentally Sound Traditions) Practices**, reformulate and adopt building standards and by-laws, **and to ensure compliance to safety and Best practices, where appropriate**, to promote and permit the use of low-cost **endogenous** building materials in housing schemes, as well as by using such materials in public construction works;

(e) Where appropriate, promote partnerships with the private sector and non-governmental organizations to create mechanisms for the commercial production and distribution of basic building materials for self-help construction programmes;

(f) Evaluate on a regular basis *the progress the discharging of obligations and the fulfilling of expectations made in the pursuit of the above pertinent to the above* objectives.

ARTICLE 71a

71 [(a) Intensify and support research efforts to find substitutes for or *optimize the use of* non-renewable resources, particularly fossil fuels, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;]

Reaffirm the obligation undertaken in 1981 through the General Assembly Resolution at the UN Conference on New and renewable Sources of Energy to move through “the transition form the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy. In addition establish a time-table for the phasing out of the use of fossil fuel and of civil nuclear energy as proposed in the 1992 Nobel Laureate Declaration.

RE: DEVELOPING SAFE AND SOUND RENEWABLE ENERGY SOURCES

cooperate to increase the availability of capacity, capabilities and relevant technologies ...for utilizing and producing environmentally [safe and] sound renewable energy resources, such as solar, wind, geothermal, hydro-power and biomass,... Each resource should be utilized in a manner that ... minimizes environmental stress and health impacts, (Section 9. Subsection 9 g Agenda 21, March 1992)

RE: DEVELOPING NEW AND RENEWABLE SOURCES OF ENERGY

Convinced of the importance of developing new and renewable sources of energy in order to contribute to meeting requirements for continued economic and social development, particularly in the developing countries, through, inter alia, the transition from the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy, Stressing that the primary responsibility for promoting the development and utilization of new and renewable sources of energy rests with individual countries, that in this regard international co-operation is indispensable and should be directed to assist and support national efforts; that developed countries bear a special responsibility to ensure that both their bilateral and multilateral efforts contribute actively to this end and that other countries in a position to do so should also continue to promote efforts in this regard, (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: RECOGNIZING THE URGENT NEED FOR TRANSFERRING NEW AND RENEWABLE SOURCE OF ENERGY TO DEVELOPING COUNTRIES

Recognizing the urgent need for adopting effective measures to facilitate the transfer and adaptation of technology from developed to developing countries in particular and for mobilization of financial resources for the development of new and renewable sources of energy in developing countries (General Assembly Resolution1. United Nations Conference on New and Renewable Sources of Energy, 1981)

RE: PHASING OUT OF FOSSIL FUEL AND NUCLEAR ENERGY
to establish a time-table for phasing out fossil fuel and nuclear energy and for the rapid development of solar and other forms of non-

polluting energy, and for more efficient energy use (Nobel Laureate Declaration, UNCED, 1992)

RE: RECOGNIZING THE ADVERSE EFFECTS OF CLIMATE CHANGE

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof (Framework Convention on Climate Change, 1992).

RE: TREATING WASTE AS A RESOURCE

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I)

(b) In the development of human settlements the quality of the environment must be preserved. Pollution should be prevented by ;minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and

measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)

(vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

ARTICLE 72

72. *Vulnerability is the inability to compete on an equal basis for resources and opportunities. Vulnerability Marginalization* is often caused by *the marginalization in and exclusion from the socioeconomic mainstream and decision-making processes*. If *vulnerability marginalization* is to be **eliminated reduced**, there is a need to *improve and ensure the discharging of obligations* to recognize the right of *access by members of vulnerable marginalized groups to healthy, safe and environmentally sound shelter, to social security, the right to be free from hunger, the right to be free from hunger as undertaken by states parties to the International Covenant of Social, Cultural and Economic Rights 1966. This would include access to finance, infrastructure, basic social services, safety nets and a genuine community involvement and participation in decision-making processes from the determining of the terms of reference and throughout the process.* [. [Depending on local conditions in the housing sector and the availability of legal protections *ensuring guaranteeing equal access to resources and opportunities, vulnerable marginalized individuals come from disadvantaged groups, such as people living in poverty, homeless persons, older persons, women, youth, children (particularly street children), persons with disabilities, [documented] migrants, internally displaced persons, people affected by natural and technological disasters and environmental degradation, minorities and indigenous peoples.*] With regard to shelter, members of *vulnerable marginalized groups* are especially at risk when they may have no security of tenure or where they lack basic services or face disproportionate environmental and health impacts, or because they may be excluded, either inadvertently or deliberately, from the housing market and services.

DOCUMENTATION OF PRECEDENT

RE: INCLUDING MIGRANTS IN LIST OF DISADVANTAGED GROUPS

Convinced that the rights of migrant workers and members of their families have not been sufficiently recognized everywhere and therefore require appropriate international protection (Preamble. International Convention on the protection of the Rights of all Migrant workers and members of their families)

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor small holders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (3.5. c., Combating Poverty, Agenda 21, UNCED, 1992)

72 ter. ~~[Inadequate shelter or lack of shelter contributes to a loss of dignity and health in the lives of refugees.]~~ There is a need to strengthen the support for the international protection of and assistance to refugees, especially refugee women and refugee children who are particularly vulnerable. Actions

RE: ACCORDING REFUGEES THE SAME TREATMENT AS IS ACCORDED TO CITIZENS GENERALLY

Except where this Convention contains more favourable provisions, a Contracting State shall accord to refugees the same treatment as is accorded to [citizens] generally. (Article 7, 1., Convention Relating to the Status of Refugees, 1951).

RE: ACCORDING THE SAME TREATMENT AND PUBLIC RELIEF TO REFUGEES

The Contracting States shall accord to refugees lawfully staying in their territory the same treatment with respect to public relief and assistance as is accorded to their nationals (Article 23, Convention Relating to the Status of Refugees, 1951).

ARTICLE 73

73. To remove barriers and eradicate discrimination in the provision of

shelter, Governments at the appropriate levels, including local authorities, *should shall:*

(c) *Work with the private sector* **Ensure that** cooperatives and local communities and other *[stakeholders]* **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision work to raise the awareness of the need to** eliminate prejudice and discrimination in housing transactions and provision of services;

ARTICLE 74

74. To provide for the shelter needs of *vulnerable marginalized* groups, Governments at appropriate levels, including local authorities, in cooperation with all *[stakeholders]*, **individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision as appropriate, should shall:**

(a) *Provide, where appropriate, targeted and transparent* **Ensure that** subsidies, social services and various types of safety nets **are provided** to the most *vulnerable marginalized* groups;

(b) Work with **the BEST practices enterprises, and the individuals and groups of civil society** *the private and non-profit sectors and including* community-based organizations *and other actors* to provide adequate shelter for members of *vulnerable marginalized* groups, making special efforts to remove all physical constraints to the independent living of persons with disabilities and of older persons;

(c) Strive to provide special living facilities and shelter solutions for members of *vulnerable marginalized* groups, as appropriate, such as shelters for women subjected to violence or shared living arrangements for persons with mental or physical disabilities;

(d) Provide an environment that enables *vulnerable marginalized* groups to participate in the social, economic and political life of their community and country.

ARTICLE 75

75. To reduce **marginalization of individuals and groups vulnerability,** Governments at appropriate levels, including local authorities, should:

(a) Work with non-governmental organizations and community-based organizations to assist members of *vulnerable marginalized* groups to obtain secure tenure;

(b) Composite [Enact and enforce laws to protect people from illegal evictions]; and **to retain, and if not in place, to institute rent-control systems.**

(b) [Protect by law all people from illegal evictions, including dismantling of rent-control systems, and, where evictions are unavoidable, ensure that they are strictly according to the law];

(b ter.)

(c) Promote and support self-help housing programmes and initiatives;

(d) *Promote, where appropriate, Ensure* compliance with and enforcement of all health and environmental laws, *especially* in low-income areas with *vulnerable marginalized* groups

DOCUMENTATION OF PRECEDENT

RE: ENSURING CORPORATE COMPLIANCE WITH THE LAW;

“all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” (UN Conference on Women: Equality, Development and Peace. Section 167).

(d bis.) Facilitate actions aimed at, inter alia, ensuring legal security of tenure, capacity-building, and improving access to credit, which, apart from subsidies and other financial instruments, can provide safety nets that reduce *vulnerability marginalization*;

(e) Pursue policies that will provide information to and consultation with *vulnerable marginalized* groups;

(f) Facilitate the availability of legal information and assistance to *vulnerable marginalized* groups;

(g) Promote the use of tools for disaster prevention, mitigation, and preparedness in order to reduce the vulnerability of populations to natural, man-made and technological disasters. -----

Part IV.
GLOBAL PLAN OF ACTION: STRATEGIES FOR MEANS AND METHODS OF IMPLEMENTATION

C. Sustainable human settlements development in an urbanizing world
Article 76—

ARTICLE 76

76. [Rapid urbanization, the concentration of urban population in large cities, the sprawl of cities into wider geographical areas and the rapid growth of mega-cities are among the most significant transformations of human settlements.] By the year 2000 more than half of the world's population will live in urban areas and approximately 40 per cent of them will be children. Urban areas will strongly influence the world of the twenty-first century, and urban and rural populations will be increasingly interdependent for their economic [,environmental] and social well-being. Among the economic and social factors influencing this process are population growth and voluntary and involuntary migration, real and perceived **meaningful** employment opportunities, cultural expectations, changing consumption and production patterns and serious imbalances and disparities among regions.

ARTICLE 77

77. [77 ter. Given the magnitude of the challenges that human settlements pose, society must value and take advantage of the wisdom, knowledge and skills of every person. **To draw upon the wisdom, knowledge and skills of citizens is the basis for genuine community involvement and participation. Individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision should be involved in the decision making process. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the implementation and evaluation of the process.**

Urban settlements *hold a held the* promise for human development and protection of the world's natural resources through their **potential** ability to support large numbers of people while limiting their impact on the natural environment. Yet, *many* cities are witnessing harmful patterns of growth, of production and consumption, of land use and of mobility, as well as degradation of their physical structure. Such problems are often synonymous with soil, air and water pollution, waste of resources and destruction of natural resources. Some human settlements are also subject to limited water supply, sanitation, drainage, and to dependency upon toxic and non-renewable energy fuel sources and irreversible loss of bio-diversity. Many of these trends are aggravated or accelerated by high population growth and the magnitude of rural-to-urban migration. **[As recognized in Agenda**

21 UNCED Demographic factors, combined with poverty and lack of access to resources *[[in some areas]]* and excessive consumption and wasteful production patterns in others/*unsustainable patterns of production and consumption, particularly in industrialized countries, cause or exacerbate problems of environmental degradation and resource depletion and thus inhibit sustainable socially equitable and environmentally sound development.*] Therefore, a largely urbanized world implies that *sustainable socially equitable and environmentally sound* development will depend very largely on the capacity of urban and metropolitan areas to manage production and consumption patterns, and the transport and waste disposal systems needed to preserve the environment.

ARTICLE 78

78. *In the process of urbanization, Policies and programmes for socially equitable and environmentally sound sustainable development of human settlements in both rural and urban areas require strong sub-national governmental institutions working in partnership with all [stakeholders]. individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision. This genuine community involvement and participation shall include determining the terms of reference and having input throughout the decision making process.* Such institutions are still weak in many countries, and their effectiveness is threatened by increasing problems of political regionalism and ethnic strife. All of these concerns and demands require a regional and cross-sectoral approach to human settlements planning which places emphasis on rural/urban linkages and treats villages and cities as two ends of a human settlements continuum in a common ecosystem.

ARTICLE 79

79. Increasingly, cities have a network of linkages that extends far beyond their boundaries. *[Sustainable Socially equitable and environmentally sound urban development should consider the carrying capacity of the entire ecosystem supporting such development, including the prevention and mitigation of adverse environmental impacts occurring outside urban areas].* The unsafe disposal of waste leads to the degradation of the natural environment: aquifers, coastal zones, ocean resources, wetlands, natural habitats, forests and other fragile ecosystems are affected, as are the homelands of the indigenous people. *[Trade in hazardous, toxic and atomic waste and substances shall should not be carried out . /in accordance with relevant international agreements by parties to those agreements].* Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems.

DOCUMENTATION OF PRECEDENTS

RE: DEFINING OF BIODIVERSITY AND ECOSYSTEM

Biodiversity” is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

“Ecosystem” means a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Convention on Biological Diversity, UNCED, 1992). Biodiversity is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

RE: REDUCING LOSS OF BIOLOGICAL DIVERSITY

The loss of biological diversity may reduce the resilience of ecosystems to climatic variations and air pollution damage. Atmospheric changes can have important impacts on forests, biodiversity, and freshwater and marine ecosystems, as well as on economic activities, such as agriculture (9.16., Atmosphere, Agenda 21, 1992)

RE: RECOGNIZING INCREASED MARINE ENVIRONMENT DEGRADATION

Degradation of the marine environment can result from a wide range of sources. Land-based sources contribute 70% of marine pollution, while maritime transport and dumping-at-sea activities contribute 10 % each (Marine, Agenda 21, UNCED, 1992)

RE: ACKNOWLEDGING THE URGENCY FOR CONSERVING AND PRESERVING NATURE AND NATURAL RESOURCES

Man Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and preserving nature (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)World Charter of Nature, 1982)

Social impact assessment takes into account affordability, accessibility, access to work, transport and services, environmental, health and security considerations. (CP)

ARTICLE 80

80. The diversity of types of human settlements is a key component to creating just and sustainable societies. The living and working conditions in all human settlements, including regional urban centres, rural service centres, rural hamlets, rural communities, market towns and villages, must be improved, with particular emphasis on shelter, social and physical infrastructure, and services. The maintenance and development of rural settlements require sustainable agriculture and **ecologically sound forest practices** *forestry activities* and improved agricultural **BEST practices** *technologies*, economic diversification and expanded **meaningful** employment opportunities created by encouraging appropriate and environmentally **sound sustainable** investment in industry and related economic production and service activities.

ARTICLE 81

81. International cooperation, including city-to-city cooperation, is both necessary and mutually beneficial in promoting **socially equitable and environmentally sound sustainable** human settlements *development*. Depending on the context and needs of the cities, towns and villages within each country and region, special attention should be paid to the most critical issues, such as changing production and consumption patterns; **as requiring the phasing out of non-renewable or unsafe sources of energy, and** the conserving of energy and the promoting of efficiency; **as ensuring socially equitable and environmentally sound resource and land use** *sustainable resource and land-use management*; Other critical issues are **the eradicating of poverty** *eradication*; **the stabilizing of population with necessary reproductive choice and social programs, the providing of universal health care; the ensuring of a safe ,environmentally sound water supply, sanitation and waste** *as resource system management*; **the preventing of disaster** *prevention, mitigation, preparedness and management*; **the preserving and protecting of** cultural, natural and historical heritage; **the preserving, protecting and conserving of the** *environmental protection*; **the driving of industry to embrace BEST practices; the establishing** of infrastructure; and basic services, such as health and education facilities and services. Habitat II provides an opportunity **to explore the interdependence of these issues within a framework of obligations incurred and expectations created, and** to focus on the effect that current patterns of human settlement development will have on our ability **to discharge the obligations incurred through Conventions, Treaties and Covenants, and to fulfill the expectations created through Declarations, General Assembly Resolutions and Conference Action Statements.** *achieve the objectives established at recent United Nations*

conferences. Close attention to trends in urban development is essential to the viability of **socially equitable and environmentally sound sustainable** human settlements development in rural and urban areas alike.

ARTICLE 82

[[82 Land is essential for the provision of food, water and energy for many living systems, and it is critical to human activity. In rapidly growing urban areas, access to land is rendered increasingly difficult by the potentially competing demands of housing, industry, commerce, infrastructure, transport, agriculture and the need for open spaces and green areas, and the protection of fragile ecosystems. The rising costs of urban land and other factors prevent persons living in poverty and members of other *vulnerable marginalized* and disadvantaged groups from gaining access to suitable land, the location of which does not pose economic, environmental or health risks to the residents because of such reasons as proximity to polluting industrial facilities in appropriate geographical conditions or susceptibility to natural disasters. Bringing the development of urban areas into harmony with the natural environment, **especially within the carrying capacity of the ecosystem** and the overall system of settlements is one of the basic tasks to be undertaken in achieving a **socially equitable and environmentally sound sustainable** urbanized world. The *tools means to for* achieving a physically more balanced development include not only specific urban and regional policies and legal, economic, financial, cultural and other measures, but also innovative methods of urban planning and design and of urban development, **and revitalization and management**. National, sub-national and local policies and problems need to be integrated. [The precautionary principle/*approach* and the use of environmental and social impact assessment are essential].

bis. Land-use is closely related to water resource management because of the critical need to protect aquifers and other fresh-water resources from harmful effects of human settlements. Special attention should be paid to **ensuring that trade in hazardous, including atomic, and toxic wastes and substances should not be carried out, and to guiding potentially hazardous activities away from the fragile areas. Oceans and the atmosphere should be protected from land-based sources of pollution, where appropriate.]** Through mandatory international normative standards (INS, 1997), states shall invoke and ensure compliance with the precautionary principle. States shall ensure, as agreed in the Platform of Action, UN Conference on Women, that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167).

DOCUMENT OF PRECEDENTS

RE: PROVIDING ACCESS TO WATER

In the less developed countries, nearly two thirds of the population do not have reasonable access to safe and ample water supply, and even a greater proportion lack the means for hygienic waste disposal

(b) Safe water supply and hygienic waste disposal should receive priority with a view to achieving measurable qualitative and quantitative targets serving all the population by a certain date; targets should be established by all nations and should be considered by the forthcoming united nations conference on water.

(c) in most countries urgent action is necessary to

(i) adopt programmes with realistic standards for quality and quantity to provide water for urban and rural areas by 1990, if possible.

(ii) adopt and accelerate programmes for the sanitary disposal of excreta and waste water in urban and rural areas;

(v) reduce inequalities in service and access to water as well as over-consumption and waste of water supply;

RE: INVOKING THE PRECAUTIONARY PRINCIPLE

The precautionary principle has been enunciated in international documents since at least the 1972 United Nations Conference on Humans and the Environment (Stockholm Convention), where it appeared in a rudimentary form; it was then reinforced in the 1982 UN Resolution 37/7, the World Charter of Nature, and then re-enunciated throughout the UNCED documents.

The precautionary principle has been enunciated " as follows:

where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation

(version of precautionary principle in BC Working Group on Developing Criteria for Standards, 1994)

The precautionary principle shall be applied to all potentially harmful emissions, contaminants, agents of pollutants, or re concentrated substances—created through imbalance in bio-geochemical cycles. States shall ensure that in all their activities and in the activities of corporations

including transnational corporations there is adherence to the anticipatory principle. In 1995, states have also undertaken in the Platform of Action of the UN Conference on Women: Equality, Development and Peace to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws. and international environmental law” (Section 167). In the international documents different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

DOCUMENTATION OF PRECEDENTS

RE: ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (World Charter of Nature)

RE: ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

Undertake measures to prevent soil erosion and promote erosion-control activities in all sectors. (13.16 Fragile ecosystem, Agenda 21)

RE: ENSURING CRADLE-TO-GRAVE

taking into account the cradle-to-grave approach to the management of hazardous wastes, in order to identify options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction (20.20 e Hazardous wastes, Agenda 21)

RE: ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

RE: ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products. (19.15 e, Toxic Chemicals, Agenda 21)

risk reduction involves broad-based approaches to reducing the risks of toxic chemicals, taking into account the entire life cycle of the chemicals. (19.45, Toxic chemicals, Agenda 21)

RE: ENSURING CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

RE: ENSURING RESPONSIBLE CARE

Industry should be encouraged to (19.51 Toxic chemicals)) "develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

RE; REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

RE; INVOKING THE ANTICIPATORY PRINCIPLE

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a trans-boundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

ARTICLE 83

83 Many cities are using peripheral land for urban-related purposes in a wasteful manner while existing serviced land and infrastructure may not be adequately developed and used. To avoid unbalanced, unhealthy and unsustainable growth of human settlements, it is necessary to promote land-use patterns that minimize transport demands, save energy and protect open and green spaces. Appropriate urban density and mixed land-use guidelines are of prime importance for urban development. National, sub-national and local policies and development plans must be carefully re-examined to ensure optimal land use and geographically better balanced economic development, including the protection of indispensable agricultural land; land that sustains biodiversity, water quality and groundwater recharge; fragile areas, including coastal areas; and other sensitive areas in need of protection. Green spaces and vegetation cover in urban and peri-urban areas are essential for biological and hydrological balance and economic development. Vegetation creates natural habitats and permits a better absorption of rainwater by natural means, which implies savings in water management. Green areas and vegetation also play an important part in reducing air pollution and in creating more suitable climatic conditions, thereby improving the living environment in cities. Healthy and environmentally sound agricultural activities and the provision of common land should be integrated into the planning of urban and peri-urban areas.

ARTICLE 84e

84 (e) *Encourage* **Ensure genuine community involvement and participation among the public, private and voluntary sectors and other [stakeholders of individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]** in the caring for and the using *managing* land resources for **socially equitable and environmentally sound sustainable** urban development; **Urban and rural communities will not be environmentally sound until states shall undertake to ensure the phasing out of hazardous, toxic and nuclear activities, and actively promote and funding Best Environmentally Sound Technology (BEST).**

[(e bis.) Promote urban planning, housing and industrial siting initiatives that ban and thus prevent discourage the siting of hazardous, toxic or nuclear industrial facilities in residential areas;] in any sensitive ecosystem, or eventually in any location. No toxic, hazardous or atomic wastes shall be produced after 1997. States shall immediately reduce and eventually eliminate the production of toxic, hazardous and atomic wastes, and states shall promote and fund active conversion to BEST (Best Environmentally Sound Traditions) practices.

[(e ter.) Seek to prevent *or minimize* pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that **ban discourage the disproportionate** siting of polluting industrial facilities, and in particular the **disproportionate siting of industrial facilities** in areas inhabited by people living in poverty or members of other *vulnerable* marginalized and disadvantaged groups;]

DOCUMENTATION OF PRECEDENTS

RE: RECOGNIZING THAT REDUCTION IN THE GENERATION OF HAZARDOUS WASTES IS THE MOST EFFECTIVE WAY OF PROTECTING HUMAN HEALTH AND THE ENVIRONMENT

Mindful also that the most effective way of protecting human health and the environment from the dangers posed by such wastes is the reduction of their generation to a minimum in terms of quantity and/or hazard potential (Preamble Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, 1992)

RE: [ENFORCING] THE NON- TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States *should shall* effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14 Rio Declaration, UNCED, 1992)

ARTICLE 84f & i

84 f*(f) Develop and support the implementation of improved land-**care and use management** practices that deal comprehensively with competing urban land requirements for housing, industry, commerce, infrastructure, transport, green spaces and forested areas, taking into account the need of spaces for everyday activities such as playgrounds, **wilderness, forests**, parks, sports and recreation areas and areas suitable for gardening and urban agriculture;

(i) Institutionalize a participatory approach to **socially equitable and environmentally sound sustainable** human settlements through the development and support of **means and methods strategies and mechanisms** that encourage open and inclusive dialogue among all *[stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.]*, with special attention to the needs and

priorities of women, minorities, children, youth, people with disabilities, older persons and persons living in poverty and exclusion;

ARTICLE 85

85. To develop and support improved and integrated land- **care and use management**, Governments at the appropriate levels, including local authorities, **should shall**:

(a) Develop integrated land information and mapping systems;

[[*(b) Consider, as appropriate, Establishing local structures, such as commissions and tribunals for the enforcement of **land management socially equitable and environmentally sound** laws and regulations in order to make enforcement and appeals more **equitable, efficient and effective**;*]

[[*(c) Develop the land market through the establishment of an effective and environmentally sound legal framework in order to mobilize/which encompasses lands with diverse tenure systems*];

(d) Develop, with the participation of all [*stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly those marginalized members of society who may be adversely affected by any decision.*], comprehensive and environmentally sound land-**care/use strategies** at the local level.

ARTICLE 86

86. Promoting equitable, socially viable, **environmentally sound** and stable human settlements is inextricably linked to reducing and eradicating poverty. We share the concerns of the First United Nations Decade for the Eradication of Poverty which also acknowledges [*the increasing feminization of poverty*]. Poverty has various manifestations, which include homelessness and inadequate housing. The eradication of poverty requires, inter alia, sound macroeconomic policies **linked to BEST practices** aimed at creating **meaningful** employment opportunities, equal and universal access to economic opportunities, (and special efforts to facilitate such access for the disadvantaged); education and training that will promote sustainable livelihoods through freely chosen **productive meaningful** employment and work, and basic social services, including health facilities. **However, Although** there are no universal solutions which can be applied, **there are principles reflected in obligations incurred and expectations created through international instruments that can provide a framework for assisting in the achieving of the vision of Habitat II.** People living in poverty must be empowered through freely chosen participation in all aspects of political, economic and social life. Other **key elements of actions to reduce poverty a poverty reduction strategy** include **policies geared to ensuring**[*reducing inequalities,*

increasing opportunities, providing access to resources and **[(meaningful employment] income;**] providing social protection for those who cannot support themselves; recognizing the special needs and skills of women; developing human resources; improving and making more accessible infrastructure, including communication facilities; and **[(taking comprehensive national responsibility for meeting)]** the basic needs of all.

ARTICLE 87

87. To promote **and provide** **[(equitable)]** *the provision of services* in human settlements, Governments at the appropriate level, including local authorities, **shall should:**

[(a) Formulate and implement integrated settlement development policies which ensure equal access to and maintenance of basic services, including those related to the provision of food security; education; meaningful employment and livelihood; primary and universal health-care, including reproductive and sexual health care and services; safe drinking water and sanitation; adequate— affordable, accessible, healthy and safe, environmentally sound shelter with tenure- security; and access to open and green spaces; giving special priority to the needs and rights of women and children who often bear the greatest burden of poverty;] As already committed to in the UNCED documents and in the Platform of Action UN Conference on Women: Equality, Development and Peace.

DOCUMENTATION ON PRECEDENTS

RE: ENSURING FOOD SELF SUFFICIENCY

"undertake activities aimed at the promotion of food security and, where appropriate, food self-sufficiency within the context of sustainable agriculture (3.7.I Combating Poverty UNCED)

RE: PROVIDING FOOD SECURITY

Accepting and implementing the concept of forward planning of food aid

All donor countries **shall should accept and** implement the concept of forward planning of food aid and *make all efforts to provide* commodities and/or financial assistance that will ensure adequate quantities of grains and other food commodities (Section 12 Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: COOPERATING IN THE PROVISION OF FOOD AID

Co-operating in the provision of food aid for meeting emergency and nutritional needs as well as for stimulating rural employment through

development projects (Section 12, Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

RE: PROMOTING HEALTH CARE

Governments should establish measures that will directly or indirectly set up an effective primary health care and maternal health care system accessible to all " (3.7.e Combating Poverty)

the provision of a safe water supply and sanitation and the promotion of a safe food supply and proper nutrition. Particular attention should be directed towards food safety, with priority placed on the elimination of food contamination; comprehensive and sustainable water policies to ensure safe drinking water and sanitation to preclude both microbial and chemical contamination; and promotion of health education...education and appropriate services regarding responsible planning of family size... values... (6.3. Protecting and promoting health UNCED)

RE: PROVIDING ACCESS TO HEALTHY SHELTER

Access to safe and healthy shelter is essential to a person's physical, psychological, social and economic well-being and should be a fundamental part of national and international action. The right to adequate housing as a basic human right is enshrined in the Universal Declaration of Human rights and the International Covenant on Economic, Social and Cultural rights. (7.6, Settlement, UNCED)

Consider making available lines of credit and other facilities for the informal sector and improved access to land for the landless poor so that they can acquire the means of production and reliable access to natural resources. (3.7.o Combating Poverty, UNCED)

" provide the poor with access to fresh water and sanitation (3.7. p Combating Poverty, UNCED)

"provide the poor with access to primary education.(3.7.q Combating Poverty, UNCED)

RE: IMPROVING HEALTH AND ENVIRONMENT

The improvement of human health is one of the most important objectives of development. The deterioration of environmental quality, notably air, water and soil pollution owing to toxic chemicals, hazardous wastes, radiation and other sources, is a matter of growing concern. ..Malnutrition, poverty, poor human settlements, lack of good-quality potable water and inadequate sanitation facilities

add to the problems of communicable and non-communicable diseases. As a consequence, the health and well-being of people are exposed to increasing pressures. (16.12 Biotechnology, UNCED)

RE: SATISFYING BASIC HUMAN NEEDS OF DRINKING WATER

freshwater resources are an essential component of the earth's hydrosphere and an indispensable part of all terrestrial ecosystems. (18.7 Fresh water, UNCED)

Priority must be given to the sustenance of land/water ecosystems, with particular attentions to wetlands and biodiversity, and the satisfaction of basic human needs for drinking-water, health protection and food security. (18.8. Fresh water, UNCED)

"One in three people in the developing world still lacks these two (safe drinking-water and sanitation) more basic requirements for health and dignity. (18.58 Freshwater UNCED)

"Water is a finite resource, essential for the sustenance of life on earth (18.2 Freshwater UNCED)

"water is needed in all aspects of life (18.6 fresh water UNCED)

ARTICLE 87 b

(b) Where appropriate, re-direct public resources to enable community-based *management provision* of services and infrastructure and promote the participation of *the private sector, local business entrepreneurs that engage in service industries and BEST practices*, local residents, including people living in poverty, women, people with disabilities, indigenous people and members of disadvantaged groups, in the identification of public service needs, spatial planning and the design, provision and maintenance of urban infrastructure and open and green spaces.

ARTICLE 88

88. To promote social integration, Governments at the appropriate level, including local authorities, recognizing the importance of volunteer contributions and in close cooperation with non-governmental organizations, community-based organizations, the cooperative sector and public and private foundations, **shall should**:

(a) Prohibit **[a]]** discriminatory, exclusionary practices related to shelter, employment and access to social and cultural facilities;

(b) Offer opportunities and physical spaces to encourage positive interaction among culturally diverse groups;

(c) Involve marginalized and/or disadvantaged groups and individuals in the planning, decision-making, monitoring and assessment related to human settlements development;

[(d) Encourage, in cooperation with relevant *[stakeholder individuals and organizations of civil society with a wide range of experience and expertise,]*, the development of school curricula geared to conscious understanding and cooperation among diverse cultural groups, through the promotion of principle-based education—education based on the fundamental principles underlying International documents related to enshrining and guaranteeing respect for human rights, to preserving, protecting and conserving the environment, to enabling social justice, to achieving a state of peace; justice and security, and to participating in socially equitable and environmentally sound development.]

ARTICLE 90

General

90. In order to promote the genuine involvement and participation of women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process.

gender-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, in collaboration with women's groups and other [stakeholders [90 bis. [In order to develop the full potential of the youth and prepare them to take a responsible role in the development of human settlements, Governments at the appropriate levels, including local authorities and in partnership with private sector, non-governmental youth organizations and other non-governmental organizations as well as community-based organizations, should:

[90 ter. In order to promote disability-sensitive planning and management of human settlements, Governments at the appropriate levels, including local authorities, should:

(a) Adopt, *where appropriate*, by-laws, standards and norms and develop planning guidelines that take into consideration the needs and situations of and in consultation with **women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized from the decision making process, and ensure their genuine involvement and participation from the determination of the terms of reference and throughout the planning of human settlements, development of human settlements and decision making processes about human settlements.**

[(a) Integrate youth concerns into all relevant national, sub-national and local policies, strategies, programmes and projects;

[(a bis.) Enable youth by supporting and valuing their ability to play an active and creative role in building sustainable communities;

(b) Promote representative structures, *while* ensuring full and equal participation *women's* [and equal opportunities for] and equal access to **all levels of** education and training *of for women, people living in poverty, people with disabilities, youth, the elderly, citizens in rural areas, indigenous peoples, migrant workers, refugees, and any other status that may have been marginalized in or from the educational system.*

Data Generation

[(c) Generate and disseminate disaggregated data, while ensuring that such statistics are collected, compiled, analyzed and presented by age, sex and work status; set up monitoring mechanisms in government structures and integrate the results into mainstream policies for sustainable human settlements developments;

Equal access

(d) Eliminate legal and customary barriers, where they exist, to women's equal access to and control of land and finance

[(e) Ensure equal access to housing, land and public services in the urban and rural areas in line with the International Convention on the Elimination of All Forms of Discrimination against Women.]

[(f) Develop policy and guidelines and provide services that would enable persons with disabilities to be housed in community-based settings;

[(g) Promote equal access to all levels of education and skills development for persons with disabilities;
