

PART 4

OF A THIRTEEN PART AFFIDAVIT FROM 1980 TO 2005; WHEN I WAS INVITED TO APPEAR BEFORE THE CANADIAN SENATE TO ADDRESS THE ISSUE OF MY BEING PLACED ON A RCMP THREAT ASSESSMENT LIST

In 1997 I had been put on an RCMP threat assessment list, but it was not until 1998 when there was an inquiry into what happened at APEC, that I found out.

One morning I received a phone call from a member of the media, she asked me if I knew that I was on the RCMP Threat Assessment list? She said she was going to write a piece about the national leader of the Green Party being on the list. I asked her to let me release it and to send me the evidence and she sent me the following:

STATE COMPLIANCE THROUGH A FRAMEWORK OF PRINCIPLES: APPLICATION FOR FUNDING HUMAN RIGHTS

For over 50 years, member States of the United Nations have incurred obligations through the founding Charter of the United Nations; through treaties, conventions and covenants; and member States have created expectations through declarations, conference action plans and General Assembly Resolutions. These obligations and expectations have been reflected in international instruments undertaking to guarantee

the enshrining of and respect for human rights; to preserve, protect and conserve the environment; prevent conflict and war; achieve social justice and to enable socially equitable and environmentally sound development.

Now that the final conference (the Habitat II Conference), of the series of major United Nations conferences has occurred, it is important to do a synthesis of the major obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; and of the major expectations created through conference agendas and action plans, declarations and General Assembly resolutions. The compiling of this information is proposed in this research project and will be carried out in a series of phases culminating with a series of books, educational material, advocacy documents for the 50th anniversary of the Universal Declaration of Human Rights in 1998, and for the culmination of the decade dedicated to international law in 1999.

At the World Conference on Human Rights, the member States of the United Nations expressed their concern about the urgency of the global human rights situation in the following way:

The conference expresses its dismay and condemnation that gross and systematic violations and situations that constitute serious obstacles to the full enjoyment of all human rights CONTINUE to occur in different parts of the world. Such violations and obstacles include: torture and cruelty, inhuman and degrading treatment or punishment, summary and arbitrary executions, disappearances, arbitrary detentions, all forms of racism, racial discrimination and apartheid, foreign occupation and alien domination, xenophobia, poverty, hunger and other denials of economic, social and cultural rights, religious intolerance, terrorism, discrimination against women and lack of the rule of law. (S. 30., World Conference on Human Rights, 1993)

Yet, although the World Conference on Human Rights recommends that, on the 50th Anniversary of the Universal Declaration of Human Rights, "special attention should be paid to assessing the progress towards the goal of universal ratification of international human rights treaties and protocols adopted within the framework of the United Nations system (Art. 100, Vienna Declaration, World Congress on Human Rights). The member States did not undertake to ratify all international human rights treaties and protocols for the 50th Anniversary.

At the United Nations Conference, the UN Conference on Women: Equality, Development and Peace, member States would only go as far as undertaking to:

Work actively towards ratification or accession to and implementation of international and regional human rights treaties; (230a)

At the Habitat II Conference, the delegate from Romania strongly advocated that the member States sign and ratify all human rights instruments; as well as enact the necessary legislation to ensure compliance (personal communication, at Habitat II). Yet, the member States of the United Nations, in Istanbul, agreed not to sign and ratify all legally binding international human rights instruments but to “reaffirm our commitment to ensure the full realization of the human rights set out in international instruments... to reaffirm that all human rights—civil, cultural, economic, political and social—are universal, indivisible, interdependent and interrelated. (Art 22).

What is essential for the 50th anniversary of the Universal Declaration, is not just “assessing the progress towards ratification”, “working actively towards” or “reaffirm a commitment to” but the actual universal ratification is the universal ratification of all international human rights treaties and protocols, along with the undertaking to enact the necessary legislation for the discharging of the obligations under these treaties.

The purpose of this project is two-fold: to carry out interdisciplinary research in Canada that will have an impact internationally and to extract principles from international documents in order to have an impact on educating for human rights in Canada. The first purpose will involve carrying out the necessary interdisciplinary research to give support to leading international agencies and NGOs to launch an international research campaign of human rights compliance. This campaign of compliance would call upon States to sign what they have not yet signed, to ratify what they have not yet ratified and to enact the necessary legislation to ensure compliance. The second purpose of this research proposal is to expand the knowledge of human rights in Canada by informing students in the school system as well as members of the public about what has been agreed to internationally. This research-based campaign will have two principal objectives.

OBJECTIVES:

1. To prepare a synthesis of human rights obligations incurred and expectations created through international instruments; to extract principles from these international instruments, to determine what would constitute adherence to and fulfillment of these principles, and to prepare a substantial lobby document to support the call for States to sign and ratify all human rights instruments, and for States to enact the necessary legislation to discharge treaty obligations and to ensure compliance for the 50th anniversary of the Universal Declaration of Human Rights. In addition, a future objective will be to extend this campaign to include international agreements in the area of peace and environment, and to call for the institution in 1999—the culmination of the decade devoted to international law, of an international court of compliance where citizens could take evidence of state non-compliance.
2. To extend and further develop principle based education— a method of teaching human rights issues within a Framework of International Principles, and to

conduct workshops across Canada, to initiate and participate in special events related to the 50th Anniversary of the Universal Declaration of Human Rights. .

MEANS TO ACHIEVE OBJECTIVES THROUGH THE GRANT PROPOSAL

MEANS TO ACHIEVE OBJECTIVE 1

RESEARCH BACKGROUND

My concern for human rights stems from an early childhood experience 50 years ago in 1946, in New York, when my father was working at the United Nations. At that time many of the United Nations delegates had to be housed in the Lido Beach hotel on Long Island because the coloured and black delegates could not be appropriately accommodated in New York. This act of discrimination left a lasting impression on me.

For over twenty years, I have been carrying out research on policy documents both internationally and nationally in the areas of human rights, environment and peace. I initiated the Global Compliance Research Project in 1994, and the associated Global Compliance Research Institute. In 1994-95, the Global Compliance Research (GCR) project received a \$50,000 CIDA grant to (a) carry out a content analysis of international agreements, and to prepare a compilation of the research for distribution at the UN Conference on Women: Equality, Development and Peace, and (b) set up an international network of women. At the New York Prep Com for the UN Conference on Women, the GCR Project circulated a 100 page draft version of the "Charter of Obligations", along with a resolution calling for state compliance with obligations and expectations (Global Compliance Resolution). Also, at the Prep Com, the GCR Project had the opportunity of addressing the UN Commission on the Status of Women; on the necessity of linking the Platform of Action with precedents reflecting obligations and expectations, and on the necessity of States' undertaking to discharge obligations and fulfill expectations at the co-incidence of the UN Conference on Women and the 50th anniversary of the United Nations. The GCR project also addressed the plenary; held in the General Assembly of the UN Congress on Public International Law.

The GCR Project completed the "Charter of Obligations" which had become a 350 page compilation in English, (and a 200 page French version) of 50 years of obligations incurred, and expectations created internationally through international agreements. The Charter of obligations placed a number of the contentious bracketed sections of the Platform of Action in the context of previous obligations incurred and expectations created. The Charter was classified as research material and was approved for official distribution as a research document to every state delegation at the Fourth UN conference on Women: Equality, Development and

Peace. The purpose of the Charter was to inform and remind States at the UN conference, that many of the presumably forward looking statements in the bracketed sections were little more than what States had already agreed to through previous obligations and expectations, and to encourage States to undertake new commitments beyond past precedents. The purpose of the Charter was not only to encourage States to move beyond what they had already agreed to but to persuade the non-Governmental Organizations to not ask for less than States were already obliged to do through previously negotiated, signed, or ratified conventions, treaties and covenants, or less than States were expected to do through adopted Conference Agendas and Action plans or through passed General Assembly Resolutions. The GCR project also prepared a set of three 4' x 5' Global Compliance charts with the States of the United Nations across the top and human rights, peace, and environment international instruments down the side. For this chart, information was gathered on which States had not signed, which States had signed but not ratified, and which States had both signed and ratified. This chart was placed in the NGO lounge at the UN Conference on Women, and displayed at numerous conferences and meetings including the March 1996 meeting of the UN Commission on the Status of Women. A copy of the charts is in the Women's Centre library at the United Nations in New York. The GCR project gave a workshop on the project at the NGO Forum, and co-conducted a workshop on "Bringing the Conventions to the Grassroots". The essence of the GCR project has been to call upon States to translate the words of rhetoric into the action of compliance, implementation and enforcement.

In June, 1995, at the "We the Peoples.." Conference in San Francisco, the GCR Project initiated and circulated a workshop on the Global Compliance Resolution. The Global Compliance Resolution was adopted by the plenary and forwarded to the Secretary General of the United Nations, Dr. Boutros Boutros Ghali, who subsequently sent a letter of support for the resolution (see enclosed correspondence). The Global Compliance resolution called upon States to demonstrate the political will on the 50th Anniversary to the United Nations; to discharge 50 years of obligations by signing what they have not yet signed, by ratifying what they had not yet ratified, by enacting the necessary legislation to ensure compliance and implementation, and to fulfill 50 years of expectations by conforming to Conference Action Plans and General Assembly Resolutions. Letters with a Global Compliance Resolution were sent to all the State contacts for the UN 50th Anniversary. The Compliance Resolution was also circulated in Beijing, at the Habitat II Conference and other international, national and local meetings, conferences and workshops. .

The GCR project also participated at the follow-up meeting of UN Commission on the Status of Women in New York in March 1996. The GCR project proposed, at one of the plenaries that was examining the proposed optional protocol to be linked to the Convention on the Elimination of all Forms of

Discrimination against Women, a call for an International Court of Compliance, where citizens could take evidence of state non-compliance with all international obligations incurred or expectations created. The GCR Project organized a workshop on the International Court of Compliance at the United Nations, presented the proposal to the NGO in the NGO briefing session and then circulated a petition to State delegations.

The GCR Project also participated in the Habitat II Conference and prepared a 150 page book, "A comment on the Habitat II Agenda: Moving Beyond Habitat I to discharging obligations and fulfilling expectations". This book included the articles of the Habitat II Agenda in sequence: placing each of the bracketed sections of the draft Habitat II Agenda in the context of Habitat I, and in (the context of previous obligations and expectations. This document was distributed to State delegates at the Habitat II Conference in Istanbul. At this conference, the GCR Project initiated a Global Compliance Caucus where the Global Compliance Resolution and the petition for an International Court of Compliance were reviewed, revised and distributed, chaired the urbanization caucus, and was on the editorial committee for preparing the NGO submission to Committee II. The GCR Project also made several interventions to Committee II on the need for Mandatory International Normative Standards (MINS) to drive BEST (Best Environmentally Sound Traditions) Practices. Another intervention was on the need to substantially reduce the military budget and transfer the funds. —thus released, as had been undertaken in numerous General Assembly resolutions and in recent conference action plans, to address inequality and further human rights and social justice, and thus ensure the right to shelter, the right to food, the right to safe drinking water, the right to universal health care, the right to education, and the right to work in socially equitable and environmentally sound employment are fully protected, guaranteed and implemented. A one-page position piece on reducing and transferring the military budget was presented as an intervention at the NGO presentation to Committee II. It was approved for circulation to the State delegations in the General Assembly: Committee I and Committee II.

At the end of the of the Beijing and Habitat conferences, the GCR Project had a network of over 100 representatives from over 70 States worldwide. It is undertaking to increase these representations to over 130 States. There is a network of over 20 women in Canada, involving activists and representatives from universities and research institutions from a wide range of disciplines. The GCR Project is currently revising the Charter of Obligations; incorporating issues raised in Beijing and Habitat II, and adding additional international obligations and expectations omitted in the previous publication or incurred or created through recent international agreements.

The Global Compliance Research Institute arose from the Global Compliance Research Project. This institute is intended to bring retired academics from a wide range of disciplines - particularly interdisciplinary thinkers, with recent

graduate students to work together on various projects related to the interdependence of human rights, environment, and peace issues and to recommend policy.

OBJECTIVE 1: RESEARCH FOR THE BORIS LASKIN PROJECT

In the proposed research project, I will be examining international documents in more depth and consulting with members in the GCRP across Canada; in particular with Diane Pask, Professor of Law at the University of Calgary, on what would constitute adherence to these principles; on what is the nature of the systemic constraints which are preventing States from discharging obligations, and from fulfilling expectations. The interaction between principle and cultural relativism will also be examined in depth.

MEANS TO ACHIEVE OBJECTIVE 2

RESEARCH BACKGROUND FOR PROJECT

For years, I have been involved with education and advocacy in the area of human rights: from addressing human rights issues in Franco's, Spain; through developing workshops on a multicultural approach to history; through reviewing multicultural educational material; through researching and advocating the need for world history courses to replace Western civilization courses; through speaking at anniversaries of the Universal Declaration of Human Right; through organizing and participating in workshops on racism and on the dissemination of hate literature; through co-founding the Vancouver Island Human Rights Coalition, to preparing the background research material for, and being the litigant in a successful charter challenger of the BC Education Act endorsing bible reading in the school classroom.

In 1985, for a Masters degree in curriculum development in Education, in collaboration with the Vancouver Human Rights Coalition and funded by the Secretary of State, I wrote a book on "A Method of Teaching Human Rights. This method was called issue-principal analysis and synthesis —principle-based education. Principle-based education is a method of examining issues within a framework of internationally agreed-to principles. This approach was also interdisciplinary in that human rights were linked with peace and environment and social justices issues.

In 1993, I prepared a complex diagram 4' X 6' on a delineation of what human rights have been guaranteed through international instruments, and what rights still need to be addressed. This diagram was distributed to the Canadian delegation and to senior participants in the World Conference on Human Rights (see enclosed correspondence).

OBJECTIVE 2: RESEARCH FOR THE BORIS LASKIN PROJECT

To address the urgency of the global situation, for over 50 years, the United Nations and member States of the United Nations, have incurred obligations through conventions, treaties, and covenants and have created expectations through declarations, conference action plans, and General Assembly resolutions. This urgency is reflected in the CONTINUED degradation of the environment, production of arms and the escalation of conflict and war, violation of human rights, and the inequitable distribution of resources. From international instruments such as the Universal Declaration of Human Rights, the Charter of the United Nations, the Convention on the Rights of the Child, the International Covenant on Social, Cultural and Economic Rights, the International Covenant on Civil and Political Rights, and Agenda 21—the action plan from United Nations Conference on Environment and Development, principles can be extracted and a complex of principles representing an expression of international concern about the need to address the urgent global situation can be discerned. This complex of globally adopted principles has become the foundation for a program called “Principle-Based” education.

In principle-based education, global /local issues are examined through selecting, examining and exploring issues within a principle-based framework. In principle based education, students are encouraged to examine and to appreciate the full complexity and interdependence of global /local issues within a framework of internationally agreed-to principles. The emphasis in the program, is on becoming knowledgeable about the principles and their application, on investigating the implications of these principles, on analyzing and synthesizing information on current issues in the light of these agreed to principles, on clarifying these principles and on proposing a range of possible solutions to practical problems emerging from the issues . In the program, students will be encouraged to investigate local issues within this framework of principles.

The program will entail the following processes: (1) examining principles enunciated in primary source material (international documents) (2) Examining human rights in local and global issues (3) compiling actual cases studies and hypothetical case studies (4) engaging in analytical processes of issue-principle analysis drawing upon a wide range of processes in creative and critical thinking (5) investigating a wide range of local and global concerns (6) thinking about the complexity and interdependence of issues within the framework of international principles (7) proposing solutions and resolutions based on the full examination of the principles and issues (8) integrating themes, principles and issues, and linking these principles with various disciplines (9) determining appropriate moments for integrating issues into the curriculum (10) developing lesson plans and educational materials based on issue-principle analysis (11) applying knowledge of global and local issues (12) Determining the linking of issues and principles to "organizers" within the curriculum such as those in principles of human rights and cultural relativism (13) encouraging the development of a responsible attitude towards local/ global issues; (14) Fostering working cooperatively and independently within interdisciplinary thought (see Annex 1 for an description of the Components of principle-based educational framework).

DISSEMINATION OF RESULTS OF THE RESEARCH PROJECT:

PURPOSE/OBJECTIVE 1

- Establishment of an extensive data base of research material available through disks
- Publication of a framework of principles to be circulated internationally .
- Presentations at various meeting leading up to the 50th Anniversary of the Universal Declaration of Human Rights across Canada

PURPOSE/OBJECTIVE 2

- Development of draft educational material will be submitted to Ministries of Education across Canada, distributed at workshops across Canada and then internationally possibly though United Nations agencies (see enclosed correspondence from UNDP)
- A final publication on principle-based education, incorporating the input from the workshops, will be prepared and circulated

ATTENTION: Members of the CEN International Affairs Caucus

When I was at the 1993 CEN Annual General Meeting, I had a resolution passed by the IAC (International Affairs Caucus) members attending the IAC meeting (see enclosed copy of the resolution).

Since then, I have been monitoring Canada's compliance with international obligations; specifically those arising from Agenda 21, and other UNCED documents.

Recently, I participated in a country-wide meeting organized by external affairs on Canada's report to the CSD. I made a lengthy submission at the meeting and then submitted comments on the draft report.

I mentioned to external affairs that I would be soliciting information across Canada on Canada's compliance with international obligations.

I have prepared a 50 page document of principles that I have extracted from UNCED and I am looking for examples of non-fulfillment with these principles. Could you send me information about HOT SPOTS from different areas in Canada, and I will be able to include these as examples in the report card.

Best regards,

Dr. Joan E. Russow

Chair, BCEN, International Affairs Caucus

Chair, International Affairs Caucus

RESOLUTION : To Prepare NGO Country Report on Canada

The following resolution was passed unanimously by the members attending the International Affairs Caucus meeting at the 1993 Annual Meeting of the CEN.

Given that Canada has international obligations under the Stockholm Declaration (UNCHE), under the UN convention for Preservation of Cultural and Natural Heritage; Historical Responsibility of States for the Preservation of Nature for Present and future Generations, (UN General Assembly Resolution 35.8), the World Charter of Nature, the Caracas Declaration , the UNCED documents and other international document, and

Given that Canada, as a follow-up to UNCED, is required to submit a report to the UN Commission on Sustainable Development, indicating how Canada has complied with obligations agreed to at the UNCED.

Be it resolved that the International Affairs Caucus of the C.E.N. prepare a complementary NGO report, indicating the way Canada has failed to fulfill these obligations, and has contravened its obligations. (And some examples, if any, of praiseworthy compliance). This NGO Country Report will be submitted to the UN Commission for Sustainable Development.

The views in this resolution passed at the International Affairs Caucus meeting, at the 1993 Annual General Meeting of the C.E.N., do not necessarily represent the views of the International affairs caucus of the C.E.N.

Moved by Joan Russow, delegate from British Columbia Environmental Network

Seconded by Rocky Kelly, delegate from British Columbia Environmental Network

() THAT on January 4, 1997, I sent in an application to represent the CEN at the Rio +5

Dear Cathy

Thank you for sending me the CEN INTERNATIONAL AFFAIRS CAUCUS WORKING GROUP... FORM

I was away in Mexico and just returned.

I would like to get involved in the UN Commission for Sustainable Development /Earth Summit II, and to attend the meeting in New York in June.

When I was at the 1993 CEN annual general meeting, I had a resolution passed by the IAC members attending the IAC meeting (I have enclosed a copy of the resolution).

Since then I have been monitoring Canada's compliance with international obligations specifically those arising from Agenda 21, and other UNCED documents.

Recently I participated in a country-wide meeting organized by external affairs on Canada's report to the CSD. I made a lengthy submission at the meeting and submitted comments on the draft report.

I mentioned to external affairs that I would be soliciting information across Canada on Canada's compliance with international obligations.

I have prepared a 50 page document of principles that I have extracted from UNCED, and I am looking for examples of non-fulfillment with these principles. Could you circulate a request for HOT SPOTS from different areas in Canada so I will be able to include these as examples in the report card?

Best regards,

Dr. Joan E. Russow

Chair, International Affairs Caucus

BCEN

Note: I had mentioned that I was bilingual but not trilingual. My application for funding was not accepted ; the person who won was trilingual. It would not have worked anyway because, when one is on the Canadian delegation, one is not supposed to lobby or go to the press. I did receive unconditional funding from Rod Dobell in the Department of Public administration : To Prepare NGO Country Report on Canada

The following resolution was passed unanimously by the members attending the International Affairs Caucus meeting at the 1993 Annual Meeting of the CEN:

Given that Canada has international obligations under the Stockholm Declaration (UNCHE), under the UN convention for Preservation of Cultural and Natural Heritage; Historical Responsibility of States for the Preservation of Nature for Present and future Generations, (UN General Assembly Resolution 35.8), The World Charter of Nature, the Caracas Declaration , the UNCED documents and other international document, and

Given that Canada, as a follow-up to UNCED, is required to submit a report, to the UN Commission on Sustainable Development, indicating how Canada has complied with obligations agreed to at the UNCED.

Be it resolved that the International Affairs Caucus of the C.E.N. prepare a complementary NGO report indicating the way Canada has failed to fulfill these obligations, and has contravened its obligations. (And some examples, if any, of praiseworthy compliance). This NGO Country Report will be submitted to the UN Commission for Sustainable Development.

The views in this resolution passed at the International Affairs Caucus meeting at the 1993 Annual General Meeting of the C.E.N. do not necessarily represent the views of the International affairs caucus of the C.E.N.

Moved by Joan Russow, delegate from British Columbia Environmental Network

Seconded by Rocky Kelly, delegate from British Columbia Environmental Network

() THAT in 1997, in January, I circulated a petition calling for a decade devoted to the moving away from car dependency

Joan Russow

Global Compliance Research Project

PETITION
TO THE UNITED NATIONS

RE: INTERNATIONAL DECADE DEVOTED TO MOVING AWAY FROM CAR
DEPENDENCY

Recalling that. member States incurred obligations at the UN Conference on Environment and Development (UNCED, 1992) under conventions such as the Convention on Biological Diversity and the Framework Convention on Climate Change to conserve Biodiversity, and to reduce CO2 emissions respectively.

Recalling further, that member States of the United Nations, through commitments at the United Nations Conference on Environment and Development and at the UN Conference on Human Settlements (Habitat II, 1996), undertook to move away from car dependency and to develop and promote environmentally sound transportation:

* through the obligation under the UN convention on the rights of the Child affirmed a child's right to a safe environment which would include the right to clean air

*through many UN Conferences and General Assembly resolutions made a commitment to move away from the current model of over consumption

* through a commitment at Habitat II (1996) made to support "the radical reversal of current trends, both in terms of facilities for and modes of transport in order to prevent further deterioration of the situation where larger cities are congested with private vehicles which in most countries cater only to a minority while adequate public transport is unavailable to urban and rural residents".

*through Universal Declaration of Human Rights undertook to ensure mobility rights

Commending the President of the General Assembly in the closing days of the Earth Day + 5, for conveying the recognition by the member States of their failure to act on the

commitments and obligations arising from the UNCED

Affirming that current global policy of actively promoting economic growth, over-consumption, truck transport, automobile infrastructures, highways, parking facilities, mega development, and of extensively subsidizing environmentally unsound technologies such as the fossil fuel and automobile industry is demonstrating disregard for the governments own international obligations and commitments.

THEREFORE, YOUR PETITIONERS REQUEST THAT THE UNITED NATIONS ENSURE:

THAT THERE BE AN INTERNATIONAL DECADE DEVOTED TO MOVING AWAY FROM CAR DEPENDENCY

1. That the "NORTH" begin to serve as an example that progress is moving away from car-dependency; not further entrenching car-dependency
2. That the NORTH undertakes to promote the notion that the CAR-DEPENDENT world is not a world to be emulated by the "SOUTH"
3. That the NORTH recognize that it has an obligation to substantially reduce its over-consumption, and car dependency and to not contribute to the further destruction of the SOUTH by promoting over-consumption, including car-dependent technology.
4. That all " subsidies to the fossil fuel and auto industries be immediately disCONTINUED including construction of new highways, parking lots, and fossil fuel exploration and development; and that the savings be transferred to promoting alternatives to the automobile
- 5.. That the North demonstrate its commitment to move away from car dependency by immediately transferring to local communities funding from the numerous policies and programs that promote corporate competitiveness in the fossil fuel and auto industry. This funding shall serve to develop environmentally sound public transport and non-motorized transportation and infrastructure.
6. That an International car-free day be established so that citizens, for at least one day a year can experience the community without cars. In recognition of the opening of the major conference on the Environment, UNCED on June 3, 1992, June 3 could be designated as International Car-free Day
7. That various rotational car free zones should be instituted so that each community can experience, on a rotational basis, a car-free zone.
8. That the central cores of all cities be car-free with a network of pedestrian and bike-ways, non-motorized traffic, and street calming (January 13, 1997).

ANNEX I

COMPONENTS OF PRINCIPLE-BASED EDUCATION FRAMEWORK:

Principle-based education encompasses several components within a principle based framework:

Component 1:

Exploration of Principles Related to Global/Local Issues

Principle-based education works within a framework based on globally adopted principles related to preventing the degradation of the environment, the escalation of conflict and war, the violation of human rights, and the perpetuation of inequality /inequity and social injustice. This framework has been developed not from a particular value system of the teacher, educator, or institution but from a complex of globally adopted principles over the period of the existence of the United Nations.

In Principle-based education, complex and controversial issues reflecting the urgency of the global/local situation are discussed in the classroom within a principle-based conceptual framework. In 'principle-based education'¹¹, principles related to preventing: (i) the violation of human rights (ii) the escalation of war, (iii) the destruction of the environment and (iv) the perpetuation of inequity and social injustice, have been extracted from international documents. These internationally endorsed principles become the foundation for an educational program. In this course, educators, students, and members of the public will be introduced to a range of international principles related to issues and to a range of analytical processes for exploring issues within a principle-based framework. educators will be involved with creating lesson plans and educational material which could become part of an international educational program. In this course, the urgency of problems will be acknowledged, the international document addressing the urgency will be examined, and the principles in the different documents will be explored and proposed international solutions offered through international law and obligations will be evaluated.

from the International instruments and compiled in a series of documents: *“A content analysis of UNCED documents”* (1992). *“Principles of action from Agenda 21”* (1992); Draft working document: Global Issues: Environmental and social dynamics of Global Change (A Collection of Writings and documents - notes for course (1994); *Charter of Obligations: human rights, peace, environment, and equity* (1995). Principle-based education has been introduced in North America at the National Association of Research into Science Teaching (NARST), and internationally at the Annual General Meeting the IUCN (World Conservation Union) Commission on Education and Communication.

¹ This includes policies and measures adopted by regional economic integration organizations.

¹ Entrenched structural and procedural obstacles preventing the policy formation and implementation necessary for change

² The term phase is used rather than s

Component 2:

Appreciating the complexity-interconnection-integration and interdependence of issues, and the Interdisciplinary nature of issues

A second component of the principle-based conceptual framework is the encouraging of students to appreciate that Global /local issues are complex, interconnected, and interdependent. Global /local issues defy the traditional disciplinary boundaries and are primarily interdisciplinary. Global issues could be introduced through the analytical processes in principle-based education into any discipline or subject area. Solutions to the global situation will be not in isolating and fragments the global but in appreciating and understanding the complexity, interconnection and interdependence of the issues within the global problem.

Complexity-interconnection-integration of issues

Interconnection Integration of Issues

The students will be encouraged to appreciate the interconnection and integration of issues through the following processes:

- focusing on the interrelationship and interconnection between local and global issues by examining the application of principles to both local and global issues
- experiencing the full complexity and interaction of aspects of issues within a principle-based framework
- integrating different human rights issues and integrating human rights issues with other issues.

Adoption of Interdisciplinary Perspective

Students will be encouraged to integrate global issues into various subject areas and to draw upon different disciplines to assist in the analysis of human rights problems. The importance of an interdisciplinary approach was affirmed in the "Junior Secondary Science Curriculum Guide and Resource Book.

No major scientific problem which our society is currently facing, whether it be acid rain or nuclear waste, is simply a problem of physical or life sciences. Students should therefore be led to see that the perspectives of various disciplines, when integrated, often create a more illuminating and comprehensive view of a problem. Investigation of pertinent issues with an holistic approach will also provide numerous diverse experiences ... some of these experiences must be creative and future oriented.

The program should be investigative to scientific processes and experiential to bridge varying levels of maturity. It should deal with practical problems helping students to cope and understand their lives. It should also attempt to show that the disciplines of science together, can contribute to a greater understanding of our world.

A program with these emphases requires flexibility in terms of teaching strategies, content and time allotments.

Provision of Background Knowledge About Different Issues

Students will be required to develop a knowledge base related to issues by doing the following:

- carrying out research into evidence about issues, and examining underlying assumptions
- documenting the global/local issues drawing upon different disciplines

Component 3:

Stimulation of Thinking about Issues Through Engaging in Analytic Processes and Decision Making within a Principle-based Framework

Thinking, Decision Making, and Analytical Processes

Stimulation of Thinking about Issues Through Engaging in Analytic Processes within a Principle-based framework

Students will be encouraged to develop a disposition of analysis and synthesis and reflection action through, and to examine, to explore and to appreciate the full complexity and interdependence of global /local issues within a framework of globally agreed to principles through engaging in a combination of the following analytical and reflective processes:

- Selection of issues to be examined
- Examination of principle-diagram to determine if there is an international principle addressing the issue
- Drafting of a principle from a complex of principles if no principle exists
- Location of principle within "International principle diagram"
- Statement of principle
- Exploration of principle
- Clarification of concepts and terms through ordinary language analysis
- Determining criteria for compliance with principle
- Establishing criteria for selecting issues to be examined
- Determination of issues emerging within principle
- Selection of actual cases related to principle
- Application of principle to actual cases
- Adjustment of principle in response to cases
- Generation of hypothetical cases
- Application of principle to hypothetical cases
- Adjustment of principle in response to hypothetical cases
- Clarification of principle
- Determination of action to support principle
- Engagement in action
- Justification of action
- Establishment of additional principles underlying action
- Exploration of principled action
- Determination of connection with other principles in "international principle diagram"

Through participating in the above analytical processes, students and pre-service teachers can be stimulated to think, both critically and creatively, about difficult, complex and controversial issues within a principled framework. Students, and pre-service teachers are encouraged to investigate the components of these globally adopted principles and to analyze the systemic constraints that could prevent the adherence to these principles.

An essential part of principle based education is to determine whether globally adopted principles exist to address specific issues. If a principle for the specific issue has not been enunciated in international instruments, then students will be encouraged to combine existing principles to craft a new draft principle. If a principle does exist for a specific issue, then the students will focus on understanding the principle, and on identifying opinions, bias and beliefs inherent within the principle. When investigating a principle or document, the students become engaged in (a) investigating the implications of these principles (b) analyzing and synthesizing information on current issues in the light of these agreed to principles (c) applying these principles to the examination of complex, difficult and controversial issues (d) clarifying the role of science and technology in relation to these principles (e) determining whether these principles have been incorporated in national and local law (f) identifying the systemic constraints preventing the adherence to these principles and (g) proposing a range of possible actions to address issues arising from the non-fulfillment of these principles.

Investigation of an Alternative Decision Making Process

Principle-based decision making which moves away from the current model of the "multi-stakeholder arena of competing vested interests", where various sectors, through asserting their interests within the consensus decision making process, often compromise and detract from the actions required to bring about societal change is proposed.

Component 4:

Action- solutions

An integral component of the principle-based conceptual framework is the linking between theory and practice (between principle and action):

Translation of Principle into Principle of Action

Principle could be translated into action through the following actions:

- investigating the application of international principles to local issues
- developing a basis for examining issues within an international context rooted in rights, obligations and responsibilities
- determining criteria for the translating of these principles into action
- examining the nature of actions that have to be taken to ensure that States live up to the principles enunciated in the documents
- examining the lag between the enunciation of principles to address the issues and the political will to actually address the issues
- indicating for which issues obligations have not yet been undertaken
 - the issues that are not being dealt with through international documents
- evaluating the "environment industry". prevention technology; the solution as part of the problem

Justification of Actions

Students could also be involved with determining the legitimacy of the actions undertaken through the following activities:

- exploring criteria for evaluating the justification of actions
- helping students become motivated to actively participate in ecosystem preservation, protection of the environment, prevention of pollution, protection human rights, and in prevention of conflict
- understanding the linking between life style, type of consumption patterns and the existence of global issues
- recognizing the nature of action that has to occur to bring the principles into action

ANNEX II

COPIES OF LETTERS FROM

DR NOEL BROWN (UNEP)

DR. ARTHUR CAMPEAU FORMER CANADIAN AMBASSADOR TO THE UN

DR BOUTROS BOUTROS GHALI SECRETARY GENERAL OF THE UNITED NATIONS

() THAT in 1997 January 22, 1997 I wrote

POLICY IMPERATIVES: DISCHARGING OBLIGATIONS AND FULFILLING
EXPECTATIONS FOR A CULTURE OF PEACE

Dr. Joan Russow

Global Compliance Research Project

or failed to determine what would constitute compliance.

CANADA AND TREATY-MAKING

OVERVIEW

To begin to achieve a “culture of peace”, citizens must be aware that international public policy related to a culture of peace already exists in the complex of United Nations documents, and that member States of the United Nations have failed either to comply with this international public policy or to determine what would constitute compliance. Once citizens have become aware of existing obligations and expectations, then citizens will be better informed about the commitments that still are needed to move States beyond existing obligations and expectations. For example, in the Declaration of Human Rights from 1948, member States undertook to “...reaffirm faith in fundamental human rights, in the dignity and worth of human person and in the equal rights of men and women...”. This statement of principle could be described as a statement of international public policy; yet what actions, cultural adjustments and attitudinal transformations would have been necessary to ensure the fulfilling of this expectation were never really determined.

For over fifty years, through international agreements, the member States of the United Nations have undertaken (i) to promote and fully guarantee respect for human rights; including the rights of women (ii) to ensure the preservation and protection of the environment (iii) to create a global structure that respects the rule of law (iv) to achieve a state of peace, justice and security and (v) to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions.

If these years of obligations had been discharged, and if these years of expectations had been fulfilled, respect for human rights might have been guaranteed, preservation and protection of the environment might have been ensured, threats to peace might have been prevented and removed, disarmament achieved and socially equitable and environmentally sound development might have been enabled.

Many of these obligations have never been discharged, States often fail to sign international legally binding treaties that they themselves have negotiated; States that sign legally binding conventions and treaties, often fail to ratify them and States that ratify these treaties often fail to enact the necessary legislation to ensure compliance and enforcement..

Many of the expectations have not been fulfilled. Expectations have been created through recent global Conferences and action plans such as those from United Nations Conference on Environment and Development (UNCED), the World Conference on Human Rights, the Social Development Conference, the International Conference on Population and Development and the UN Conference on Women: Equality, Development and Peace, and Habitat II. Although the major conference action plans have been adopted by all the member States of the United Nations, the action plans are not deemed to be legally binding.

These Conference Action plans, along with General Assembly Resolutions and Declarations, however, do create expectations that States will adhere to the agreed to principles and policy statements. In common law, there is a doctrine that acknowledges the legal implications arising from the creating of expectations: the Doctrine of Legitimate Expectations. This doctrine has been described in the following way: If a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully and without negligence and the citizens have a legitimate expectation that the government will discharge this obligation (Brent Parfit, Deputy Ombudsman, Ombuds office, British Columbia, Canada, 1995, Personal Communication). A further elaboration of this doctrine is "when an expectation is created there must be the ability to fulfill the promise it implies (BC. Ombudsman, Report, 1991). This doctrine could be used by citizens at the international level to strengthen the call for State compliance with expectations created through conference action plans.

Institutional memory, related to principles from past precedents, and related to obligations incurred and expectations created has been short and policy formation and implementation often reflects the absence of respect for precedents. These forgotten obligations and expectations provide a basis for policy formation and implementation. Not only have policy makers ignored past precedents embodied in principles of action but the general public is often unaware of the existence of government undertaking (particularly at the international level) and unappreciative of the relevancy of the international obligations to national, provincial and regional issues. In addition NGOs are often too preoccupied with reacting to immediate emergencies to have the time to carry out the needed content analysis of these undertakings.

Through international agreements nation States have undertaken (i) to guarantee human rights including the right to be free from discrimination, the right to shelter, the right to food, the right to social security (international human rights instruments); (ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the protection of Cultural and Natural Heritage, 1972) (iii) to eliminate weapons of mass destruction (UNCHE, 1972) (iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975) (v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981) (vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981) and to reallocating the funds thus saved to economic and social development; particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981) (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982) (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982) (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984) (x) to demand that policies of States be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984) (xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983) (xii) to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992) (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992) (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration) (xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity) (xvi) to preserve carbon sinks (Art. 4 1 d Framework Convention on Climate Change, 1992); and from the Habitat II Agenda (xvii) to reduce the ecological footprint (Art. 27 b) (ix) to protect fragile ecosystems and environmentally vulnerable areas (27e), to prevent anthropogenic disasters (27 i) (xx) to prevent environmental damage through knowledge of eco-cycles (Art. 135)... and so forth.

A key concept that has significant policy implications is that of international customary law. Simply put, where a principle of international law has been a long standing part of that law, it may be held to be a part of international customary law and deemed applicable as part of national law. For example, the principle of inter-generational equity (i.e. the rights of future generations to a safe environment) may be argued as falling within international customary law since it is found in a number of international documents beginning with the UN Conference on Humans and the Environment (UNCHE), 1972, included in the Convention on the Protection of Cultural and Natural Heritage (1972) through the World Charter of Nature (1982) to the various documents coming out of the United Nations Conference on the Environment (UNCED) 1992 (Agenda 21, The Convention on Biological Diversity and the Framework Convention on Climate Change).

Both the Doctrine of Legitimate Expectations and the Principles of International Customary Law are relevant to the national policy formation and implementation related to ethical governance in that obligations incurred or expectations created can be held to be enforceable in national law.

It is thus, essential for transforming a culture of violence into a culture of peace, to stress the importance of being concerned with questions of awareness, knowledge and education on the part of the judiciary and administrative bodies, as well as with heightened public awareness of the use of international documents and to the educational strength of these documents within various jurisdictions.

Nation States need to be called upon to fulfill and adhere to previously agreed-upon documented principles and courses of action and to enter into formal obligations derived from the legitimate expectations based on their previous statements and actions or pursuant to international customary law. The United Nations also needs to provide an international body for citizens to take evidence of state non-compliance with legally binding conventions and covenants; or with expectations created through General Assembly resolutions, Declarations and Conference Action plans.

CANADA'S TREATY IMPLEMENTATION POLICY

The need to eliminate the discrepancy between stated intention and policy formation and implementation, and to promote ethical governance through policy formation and implementation within a culture of peace is essential in Canada. Canada, as a federal state, often signs and ratifies agreements and then fails to enact the necessary legislation to ensure compliance.

Canada, as a signatory of the Vienna Convention on the Law of Treaties, is bound to perform any treaty in good faith by ensuring the necessary conditions are in place for the performance of the treaty.

Under the Vienna Convention on the Law of Treaties, adopted in 1969; signed by Canada, acceded to by Canada on 1970, and in force 1980, Canada, as a signatory to this Convention, has been obliged to ensure the performance of treaties in the following ways:

- (i) "to establish conditions under which justice and respect for obligations arising from treaties can be maintained" (Preamble)
- (ii) to demonstrate, through the process of ratification (accession) of a Treaty, that the State has "established on the international plane its consent to be bound by a treaty" (Article 2)
- (iii) to observe that "every treaty in force is binding upon the parties to it and must be performed by them in good faith. (Article 26)
- (iv) to interpret a treaty by agreeing that "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose. (Article 31)

Consequently, Canada, through acceding to and ratifying treaties has undertaken to perform treaties in good faith, has established on the international plane its consent to be bound, and to establish conditions for the maintaining of justice and respect for obligations under treaties.

There are serious discrepancies between the legal obligations undertaken by Canada internationally, and the discharging of these obligations in Canada, both federally and provincially. There is a positive duty is placed on States to enact the necessary legislation so as to enable the performance of treaties which have been signed by the Federal government with the endorsement of provinces.

L.C. Green, a Canadian specialist in international law, has remarked that a state is bound by the treaty prior to the enactment into national law:

the fact that a treaty has been signed and ratified but not yet enacted into national law does not preclude the international liability of the signatory under the treaty.

The requirement to enact enabling legislation has been expressed in numerous conventions, and could be considered to be a principle of international customary law. For example, this enabling legislation requirement is evident in the International Covenant of Civil and Political Rights.

In the International Covenant of Civil and Political Rights—adopted 1976, signed and acceded to by Canada and in force in 1976, the principle of "duty-to-adopt-legislative ...measures" is enunciated:

Where not already provided for by existing legislative or other measures, each State Party to the present Covenant undertakes to take the necessary steps in accordance with its constitutional processes and with the provisions of the present Covenant, to adopt such legislative or other measures as may be necessary to give effect to the rights recognized in the present Covenant.

International customary law places a duty on States to adopt such legislative, judicial or other measures as may be necessary to give effect to international treaties.

This requirement is further entrenched in External Affairs policy in Canada by the stated constitutional practice of ensuring that necessary legislation is enacted before signing international treaties. In a 1982, External Affairs document entitled "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", which deals with Canada's responsibility related to international obligations, it is stated that Canada will "not normally become party to an international agreement until the necessary legislation has been enacted by the provinces".

Also, in the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", the following references are made to international law and federal and provincial legislation:

If the existing laws of Canada (including Provincial and Federal Statutes, as well as the general rules of common law and the civil code of the Province of Quebec) do not confer upon the Government of Canada the capacity to discharge the obligations it proposes to undertake in a treaty, then it will be necessary for the appropriate legislative body, federal or provincial, to enact legislation to enable Canada to discharge its treaty obligations.

The "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" appeared to ensure that the treaty would be performed either by enacting the necessary legislation prior to becoming a party:

Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted.

or by passing implementing legislation:

The point we wish to make here is that in Canada implementing legislation is only necessary if the performance of treaty obligations cannot be done under existing law or thorough executive action.

In either case, it would appear that Canada has indicated in this document that the necessary legislation will be in place in order to perform the obligations under the treaty.

In an internationally legally binding document such as the CEDAW either the enabling legislation was in place prior to signing the treaties, or Canada is bound to enact legislation to enable Canada to perform its treaty obligations in such a way as to ensure that it will not defeat the purpose of the treaty. This external affairs practice has to also be considered in conjunction with article 18 of the Vienna Convention on the Law of Treaties. Canada it would appear, would not be able to defeat the purpose of the treaty from the moment of signing, and, in order to comply with this provision, Canada would have to ensure that the necessary legislation would be in place to prevent Canada from defeating the purpose.

If Canada followed the usual constitutional practice as indicated in the above provision, Canada will not normally become a party until the necessary legislation has been enacted. Thus, we can assume from the federal point of view, the federal government believed that the necessary legislation to ensure that Canada would not defeat the purpose of the conventions that Canada has ratified is in place. If prior to the moment of signing conventions related to peace, human rights and the environment, the Federal government was not certain that the necessary legislation was in place to prevent the defeating of the purpose of the conventions, then implementing legislation would have to have been in place in time for the ratification of these agreements.

In the 1982, "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" Canada has undertaken to only sign a treaty after there has been consultation with the provinces when the subject matter is within provincial jurisdiction:

A multilateral treaty dealing with matters within provincial jurisdiction would be signed by Canada only after consultation with the provinces had indicated that they accepted the basic principle and objectives of the treaty. Assurances would be obtained from the provinces that they are in a position, under provincial laws and regulations, to carry out the treaty obligations dealing with matters falling within provincial competence, before action is taken by the Government of Canada to ratify or acceded to such a treaty.

Canada thus only proceeds to ratify a treaty when the provinces have been consulted and the provincial laws and regulations are in place to carry out the treaty obligations.

Yet, in 1993, when an attempt was made in the Courts of British Columbia to use international instruments, one judge ruled that international law not expressed in Canadian law was irrelevant in the matter under discussion, and another judge expressed the in-applicability of international law in provincial courts in the following way:

I have not been shown and I have been quite unable to discern or identify, any pertinent or applicable principle of international law, whether developed

by custom and usage, treaty or convention, or legislative or judicial determination, which falls within the judicial capacity and function of the courts of this province (Court of Appeal for British Columbia, case VI 01984 December 6, 1994).

AN AUSTRALIAN COMPARISON

In the federal state of Australia international obligations are taken more seriously in the courts.

In the Commonwealth of Australia and another State of Tasmania and others of (C6 of 1983) High Court of Australia (Australian Law Reports 1983, pp 625-831), the court decided that all domestic law must conform to the treaty:

The law must conform to the treaty and carry its provisions into effect. The fact that the power may extend to the subject matter of the treaty before it is made or adopted by Australia, because the subject matter has become a matter of international concern to Australia, does not mean that Parliament may depart from the provisions of the treaty after it has been entered into by Australia and enact legislation which goes beyond the treaty or is inconsistent with it.

In another case, *Koowarta v Bjelke-Petersen* (1982) 56 ALJR 625: 39 ALR 417, the following principle was upheld that becoming a party to a convention entails the undertaking of actions that would discharge obligations under the Convention:

...that the enactment of the two sections was a discharge of Australia's obligation under the International Convention on the Elimination of all Forms of Racial Discrimination. By becoming a party to that convention, Australia undertook to prohibit and eliminate racial discrimination in all its forms by appropriate means, including legislation. ...

Effect to an obligation imposed by international convention

section gave effect to an obligation imposed by an international convention

In the *Koowarta* case, the following principle was upheld that entering into a genuine treaty, the state assumes international obligations to enact domestic laws:

The Majority opinion was expressed in the following way:

There existed a quite precise treaty obligation on a subject of major importance in international relationships, which called for domestic implementation within Australia (Stephen J. at 418)

It would seem to follow inevitably from the plenary nature of the external affairs power that it would enable the parliament to legislate not only for the ratification of a treaty but also for its implementation by carrying out any obligation to enact a law that Australia assumed by the treaty (Mason J. at 418)

If Australia in the conduct of its relations with other nations accepted a treaty obligation with respect to an aspect of Australia's internal legal order, the subject of the obligation thereby because (if it was not previously) an external affair, and a law with respect to that subject was a law with respect to external affairs (Brennan J. at 418)

CEDAW AND PLATFORM OF ACTION

The Convention on the Elimination of all Forms of Discrimination Against Women (CEDAW) (1979) , because it is a convention is deemed to be legally binding whereas the Platform of Action, United Nations Conference on Women: Equality, Development and Peace is not deemed to be legally binding. The Doctrine of Legitimate Expectation mentioned above, could be used to argue that women have a legitimate expectation that States will fulfill the expectations created in the Platform of Action.

Throughout CEDAW, there is a demand placed on Governments to ensure equality between men and women. In the Platform of Action there is less the language of demand but more the language of implementation. (See Russow, J. Covenant of Implementation: references to implementation in POA).

The attainment of equality in the form of equal access to an existing flawed system, does not really contribute to the transforming of a culture of violence into a culture of peace. In CEDAW, there are at least two additional conditions that are deemed essential for the attainment of real equality. The first condition for achieving equality is related to the adherence to the Declaration of a New International Economic Order based on equity and justice:

Convinced that the establishment of the new international economic order based on equity and justice will contribute significantly towards the promotion of equality between men and women (Preamble, CEDAW)

In the Preamble for the Declaration on the Establishment of a New International Economic Order. States undertook to establish a climate of cooperation , and social development and peace and justice.

Solemnly proclaim our united determination to work urgently for the Establishment of a New International Economic Order based on equity, sovereign equality, interdependence, common interest and co-operation among all States, irrespective of their economic and social systems which shall correct inequalities and redress existing injustices, make it possible to eliminate the widening gap between the developed and the developing countries and ensure steadily accelerating economic and social development and peace and justice for present and future generation... (Preamble, Declaration on the Establishment of a new international economic order, 1974)

States have failed to support the implementation of the “Declaration on the Establishment of the New International Economic Order” at the time that it was passed in the General Assembly, and at the time that it was agreed to in the Convention on the Elimination of All Forms of Discrimination Against Women.

The second condition necessary for the attainment of real equality within a culture of peace was the recognition that the achievement of peace required the participation of women.

Convinced that the full and complete development of a country, the welfare of the world and the cause of peace require the maximum participation of women on equal terms with men in all fields (CEDAW, Preamble)

It is interesting to note that the language in CEDAW is generally much stronger than that in the Platform of Action. For example, the use of “Shall”— reflecting strong government obligations in CEDAW, occurs over eighty times whereas the word “shall” occurs rarely in the “Platform of Action”. On the other hand, there was no mention of the “military” in CEDAW. Whereas, there was mention of the “military” in the Platform of Action. Also, there was no mention of “arms and weapons” in CEDAW, whereas, there was reference to arms including nuclear arms.

In section 145 (f) of the Platform of Action there was a reiteration of previous obligations and a renewed undertaking to carry out the following actions:

(i) Work actively towards general and complete disarmament under strict and effective international control;

(ii) Support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear- test-ban treaty that contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

(iii) Pending the entry into force of a comprehensive nuclear-test-ban treaty, exercise utmost restraint in respect of nuclear testing.

Also, in article 28 of the Beijing the Beijing Declaration, there was reaffirmation of the role of women in disarmament:

Take positive steps to ensure peace for the advancement of women and, recognizing the leading role that women have played in the peace movement, work actively towards general and complete disarmament under

strict and effective international control, and support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty which contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

In the section 142 of the Platform of Action member States have undertaken to foster a culture of peace:

Education to foster a culture of peace that upholds justice and tolerance for all nations and peoples is essential to attaining lasting peace and should be begun at an early age.

To attain the desired “culture of peace”, States must discharge all previous obligations incurred through conventions, treaties and covenants, and fulfill all expectations created through General Assembly resolutions, declarations and conference action plans. In addition, citizens must also demand that States then undertake new commitments that they have never been prepared to take because of the lack of international political will, and demand that the United Nations establish an international court of compliance where citizens can take evidence of state non-compliance. .

ANNEX 1 (27 pages)

SPECIFIC OBLIGATIONS AND EXPECTATIONS RELATED TO A There is urgency to redefine development and move towards a new “international economic order” based on socially equitable and environmentally sound development. This new order may require the political will to reduce the global military budget by at least 50% (from the current 800 Billion to 400 billion which it was in 1981, when there was a UN General Assembly resolution to freeze and reduce the military budget) with the undertaking to transfer the peace dividend to socially equitable and environmentally sound development. The States of the world must firmly adhere to the principle endorsed in the United Nations Conference on Human Environment where States agreed to eliminate weapons of mass destruction; which by definition would include nuclear as well and chemical and biological . In addition the global community must undertake to condemn the CONTINUED mining of uranium for weapons production, the use of civil nuclear reactors whose waste is a scourge for future generations, the use of plutonium from former nuclear weapons sites as a fuel for nuclear reactors, CONTINUE Sunset industries

- Draft International agreements that have not yet been adopted

Bold underlined:

- **Terms, phrases, or statements:**
suggested modification of NGO document

Peace depends on the prevention of the use or threat of the use of force, aggression, military occupation, interference in the internal affairs of others, the elimination of domination, discrimination, oppression and exploitation, as well as of gross and mass violations of human rights and fundamental freedoms. (§ Nairobi Forward Looking Strategies for the Advancement of Women, 1985)

Convinced *that life without war* “**peace with justice**” and not just the absence of war serves as the primary international prerequisite for the material well-being, development and progress of countries, and for the full implementation of the rights and fundamental human freedoms. (United Nations Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12, 1984)

Concerned about growing military expenditures

Deeply concerned about the ever-spiraling arms race and growing military expenditures, which constitute a heavy burden for the economies of all nations and have extremely harmful consequences on international peace and security (Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Perpetuation of massive humanitarian problems through military intervention

There exist situations in several regions of the world where the violation of principles of non-use of force, non-intervention, non-interference, non-aggression and the right to self-determination endangers international peace and security and creates massive humanitarian problems which constitute an impediment to the advancement of women and hence to the full implementation of the Nairobi Forward-looking strategies. In regard to these situations, strict adherence to and respect for the cardinal principles enshrined in the Charter of the United Nations and implementation of relevant resolutions consistent with the principles of the charter are an imperative requirement with a view to seeking solutions to such problems thereby ensuring a secure and better future for the people affected *most of whom are invariably women and children* (para 242, Nairobi Forward Looking Strategy for the advancement of women, 1985)

CONTINUED threat to peace through violation of UN Charter

The threat to peace resulting from continuing international tensions and violations of the United Nations Charter, resulting in **the build up of arms**, *the unabated arms race in particular in the nuclear field the proliferation of civil nuclear technology, which can be applied to military use*, as well as wars, armed conflicts, external domination, foreign occupation, acquisition of land by force, aggression imperialism, colonialism, neo-colonialism, racism, apartheid, gross violations of human rights, terrorism, repression, the disappearance of persons and discrimination on the basis of sex, **and the destruction and deterioration of the environment** are major obstacles to human progress, specifically to the advancement of women. (Para, Nairobi Forward looking strategies for the advancement of women, 1985)

CONTINUED war crimes against humanity, including genocide ethnic massacres , and “ethnic cleansing”

Increased destruction through war saturation of land mines

Increased war and civilian amputees as a result of land mines

CONTINUED displacement of people through war - proportion of the populations displaced and hundreds of thousands dead.

CONTINUED impact of radiation from nuclear testing on future generations

Reaffirming its conviction that an end to nuclear-weapon testing by all States in all environments would be a major step towards ending the qualitative improvement, development and proliferation of nuclear weapons, a means of relieving the deep apprehension concerning the harmful consequences of radioactive contamination for the health of present and future generations and a measure of the utmost importance in bringing the nuclear-arms race to an end. (Urgent Need for a Comprehensive Nuclear-test-ban treaty, General Assembly Resolution A/RES/38/63, 1983)

CONTINUED concern about the potentially harmful effects on present and future generations from levels of exposure to radiation

- (i) Taking note with appreciation of the report of the United Nations Scientific Committee on the Effects of Atomic Radiation,
- (ii) Concerned about the potentially harmful effects on present and future generations, resulting from the levels of radiation to which *man humans* are *is* exposed,
- (iii) Conscious of the CONTINUED need to examine and compile information about atomic and ionizing radiation and to analyze its effects on man and his environment, (Effects of Atomic Radiation, United Nations Resolution 36/14, 1981)

Extending non conditional assistance

Extension of active assistance to developing countries by the whole international community, free of any political or military conditions (4 k., Declaration on the Establishment of a New International Economic Order, 1974)

Mmajor causes of environmental degradation are industrial and military pollutants

Knowing that the major causes of environmental degradation are industrial and military pollutants, toxic wastes, and economic systems that exploit and misuse nature and people, we are outraged by suggestions that women's fertility rates (euphemistically called population pressures) are to blame (Women's Action AGENDA, 1992)

- **Opposing militarism**
- **Directing military spending towards social and environmental ends**
against militarism, demanding that military spending be re-directed towards social and environmental ends (Youth Treaty, UNCED, 1992, ii)

Preventing, eliminating and condemning the environmental impact of military activity

Realizing the disastrous environmental impact of all military activity, including research, development, production of weaponry, testing, maneuvers, presence of military bases, disposal of toxic materials, transport, and resources use (Women's Action Agenda, 1982)

Securing nature against degradation caused by warfare or other hostile activities

Nature shall be secured against degradation caused by warfare or other hostile activities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982)

Avoiding military activities damaging to nature

Military activities damaging to nature shall be avoided (Art. 22, UN Resolution, 37/7, World Charter of Nature, 1982)

Taking precautions to prevent discharge of radioactive or toxic wastes into natural systems

Special precautions shall be taken to prevent discharge [into natural systems] of radioactive or toxic wastes. (Art. 12 b UN Resolution, 37/7, World Charter of Nature, 1982)

Prohibiting the making of forests or other kinds of plant cover the object of attack by incendiary weapons

It is prohibited to make forests or other kinds of plant cover the object of attack by incendiary weapons *except when such natural elements are used to cover, conceal or camouflage combatants or other military objectives or are themselves military objectives* (Art. XI.1 Inhumane Weapon Convention of 1981, in force 1983)

Undertaking not to damage, directly or indirectly, any world heritage site

Each State Party to this Convention undertakes not to take any deliberate measures which might damage directly or indirectly the...natural heritage ...situated on the territory of other States Parties to this Convention. (Art. VI.3 Convention of the Protection of Cultural and Natural Heritage of 1972, in force 1975)

OBLIGATION TO ADDRESS THE URGENCY:

UNDERTAKING NOT TO MODIFY THE ENVIRONMENT FOR MILITARY PURPOSES

Undertaking to not engage in military or any other hostile use of environmental modification techniques

Environmental Modification Convention of 1977 (in force 1978)

Each State Party to this Convention undertakes not to engage in military or any other hostile use of environmental modification techniques having widespread, long-lasting or severe effects as the means of destruction damage or injury to any other State Party (Art. 1.1. Environmental Modification Convention of 1977, in force 1978)

OBLIGATIONS TO ADDRESS THE URGENCY

CONTROLLING THE MILITARY BY GOVERNMENT, PROMOTING CIVILIAN RULE

Guarding against the encroachment on civilian functions of government by the armed forces

An essential ingredient of democracy is civilian rule and respect

for civilian institutions and constitutional guidelines. It is critically important to guard against the encroachment on civilian functions of government by the armed forces -- both military and security forces. The armed forces must be subordinate to civilian institutions and must be subject to the same public scrutiny and accountability as the civilian government. In particular, military budgets and military involvement in the private sector must be subject to civilian control. External defense and internal security (police) functions must be clearly separated. Scarce public resources should not be devoted to

excessive military expenditures and military involvement in the private sector should be curtailed. Cases of alleged violation of the law by military personnel should be investigated promptly in accordance with recognized legal procedures (Declaration, Summit of the Americas, 1994).

Preventing the causes of conflict

Peace is indivisible and security is the right of all and not the privilege of a few. Global security can only be achieved and maintained if just and lasting solutions are found to all conflicts. Global security *should shall*, however, be viewed in terms of its multidimensional aspects and be based *not only on military imperatives but* on a combination of political, economic and social factors which together, could eliminate the risks to global security caused by problems such as underdevelopment, poverty, environmental degradation (Group of Fifteen, Submission to UNCED 1992)

Affirming that military strength is no guarantee of security

[International stability and security are prerequisites for economic growth and development. In the new international setting, military strength is no guarantee of security. The effects of mass migration, crime, the drug problem, disease, human rights violations, environmental degradation, pressures of population growth and underdevelopment transcend national borders. These new challenges to peace and security have implications at the local, regional and global levels] (Art. 140., Advance draft, Platform of Action, UN Conference on Women, May 15)

OBLIGATIONS TO ADDRESS THE URGENCY:

RESPECTING HUMAN RIGHTS OF CIVILIANS

Undertaking to not make works or installations releasing dangerous forces [substances and activities] that could impact on civilians

Works or installations containing dangerous forces, namely dams, dykes and nuclear electrical generating stations, shall not be made the object of attack, even where these objects are military objectives, if such attack may cause the release of dangerous forces and consequent severe losses among the civilian population. Other military objectives located at or in the vicinity of these works or installations shall not be made the object of attack if such attack may cause the release of dangerous forces from the works or installations and consequent severe losses among the civilian population. (Art. LVI.1 Bern [Geneva] Protocol II of 1977 on the Protection of Victims of Non-international Armed Conflicts in Force 1978)

Protecting victims of International armed conflicts

- Protected persons are entitled, in all circumstances, to respect for their persons, their honour, their family rights, their religious convictions and practices, and their manners and customs. They shall, at all times, be humanely treated and shall be protected especially against all acts of violence or threats thereof and against insults and public curiosity.
- Women shall be especially protected against any attack on their honour; in particular against rape, enforced prostitution, or any form of indecent assault.
- Without prejudice to the provisions relating to their state of health, age and sex, all protected persons shall be treated with the same consideration by the Party to the conflict in whose power they are, without any adverse distinction based, in particular, on race, religion or political opinion (Art. 27 Convention Relative to the Protection of Civilian Persons in Time of War, 1949)

Prohibiting the starvation of civilians through attacking objects indispensable to the survival of civilian population

Starvation of civilians as a method of combat is prohibited. It is therefore prohibited to attack, destroy, remove or render useless, for that purpose, objects indispensable to the survival of the civilian population, such as foodstuffs, agricultural areas for the production of foodstuffs, crops, livestock, drinking water installations and supplies and irrigation works. (Art. XIV Bern [Geneva] Protocol II of 1977 on the Protection of Victims of Non-international Armed Conflicts in force 1978)

OBLIGATIONS TO ADDRESS URGENCY

PREVENTING OF GENOCIDE

Declaring genocide to be a crime under international law contrary to the spirit and aims of the United Nations

Having considered the declaration made by the General Assembly of the United Nations in its resolution 96 (I) dated 11 December 1946 that genocide is a crime under international law, contrary to the spirit and aims of the United Nations and condemned by the civilized world;

Recognizing that at all periods of history genocide has inflicted great losses on humanity; and

Being convinced that, in order to liberate mankind from such an odious scourge, international co-operation is required (Preamble, Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Undertaking to prevent and punish genocide

The Contracting Parties confirm that genocide, whether committed in time of peace or in time of war, is a crime under international law which they undertake to prevent and to punish (Art. 1. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Recognizing what constitutes genocide

In the present Convention, genocide means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnic, racial or religious group, as such:

- (a) Killing members of the group
- (b) Causing serious bodily or mental harm to members of the group
- (c) Deliberately inflicting on the group conditions of life calculated to bring about its physical destruction in whole or in part
- (d) Imposing measures intended to prevent births within the group
- (e) Forcibly transferring children of the group to another group

(Art. 2. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Determining what is punishable

The following acts shall be punishable:

- (a) Genocide
- (b) Conspiracy to commit genocide
- (c) Direct and public incitement to commit genocide
- (d) Attempt to commit genocide
- (e) Complicity in genocide

(Art. 3. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Establishing who is punishable: constitutionally responsible rulers, public officials or private individuals

Persons committing genocide or any of the other acts enumerated in Article 3 shall be punished, whether they are constitutionally responsible rulers, public officials or private individuals (Art. 4. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Undertaking to enact the necessary legislation to give effect to the provisions

The Contracting Parties undertake to enact, in accordance with their respective Constitutions, the necessary legislation to give effect to the provisions of the present Convention and, in particular, to provide effective penalties for persons guilty of genocide or any of the other acts enumerated in Article 3. (Art. 5. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Pledging to grant extradition

Genocide and the other acts enumerated in Article 3 shall not be considered as political crimes for the purpose of extradition.

The Contracting Parties pledge themselves in such cases to grant extradition in accordance with their laws and treaties in force (Art. 7. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

Taking action under the Charter of United Nations to prevent acts of genocide

Any Contracting Party may call upon the competent organs of the United Nations to take such action under the Charter of the United Nations as they consider appropriate for the prevention and suppression of acts of genocide or any of the other acts enumerated in Article 3. (Art. 8. Convention on the Prevention and Punishment of the Crime of Genocide, 1948)

OBLIGATIONS TO ADDRESS URGENCY

SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE

Establish a new cooperative non-military preventive approach

A new cooperative non-military preventive approach is mandatory. This approach could be to have a peace force that is knowledgeable of the culture, and language etc. of different States, and that is capable at anticipating conflict.

Working with local groups to promote dialogue and nonviolent reconciliation in troubled places throughout the world

Promoting the widespread implementation of effective non-violent peacemaking in conflict areas around the world. To this end, peace-workers are recruiting, training, and organizing teams of international volunteers who will offer their services as non-violent peacemakers. (from Peace-workers Brochure, 1995.)

Implementing cooperative approaches to peace and security issues

[In implementing cooperative approaches to peace and security issues, emphasis shall [should] [this requires that] be given to preventive strategies and to peace building as a particular prevention-oriented concept. The perspectives of women would provide a more constructive approach to the use of power and to the resolution of conflict] (Art. 135., Advance draft, Platform of Action, UN Conference on Women, May 15)

Ensuring Encouraging preventive diplomacy

[Encourage diplomacy, [preventive diplomacy,] negotiation and peaceful settlement of disputes in accordance with the Charter of the United Nations in particular Article 2, paragraphs 3 and 4] (Art. 147 b., Advance draft, Platform of Action, UN Conference on Women, May 15)

OBLIGATIONS TO ADDRESS THE URGENCY

PROVIDING FOR AND PROTECTING CONSCIENTIOUS OBJECTORS

Protecting the rights of Conscientious objectors

(i) Conscience objection is exercised through a simple declaration that one is against military service on the grounds of conscience

(ii) With this public declaration, the objector releases himself or herself from the obligation to fulfill military service. This declaration is carried out before a civil court of the first instance.

(iii) In no way is the person who declares the objection obliged to compromise what he/she says, nor obliged to justify his/her ideas in front of a Tribunal of Conscience ^{∞∞}
(4.2. Declaration of Conscientious objection, [∞])

(iv) Article 24 of the National Constitution prohibits the molesting of objectors, or does not require an investigation of the reasons for the beliefs or ideology. Article 33 of the Constitution prohibits that the personal or family details or the family life of the objector will be investigated.

(v) No one can negate or prevent the right of the person to declare conscientious objection

(4.2. Declaration of Conscientious objection, [∞]) (translated from Spanish, from the Ecuadorian “La declaracion de objeccion de conciencia”)

Enact legislation to allow conscientious objectors to redirect the military portion of the state budget to peaceful purposes

(Conscience Canada, Peace tax Campaign, War Resisters International)

Enact legislation to allow for taxpayers to direct military portion of taxes to socially equitable and environmentally sound development

Ensuring the right of freedom of conscience to non-cooperation with Military expenditure

(i) All persons have rights and duties, both as individuals and as members of their communities, and they also have the responsibility to hold those rights and duties in balance.

(ii) **The right to freedom of conscience is a fundamentally human right. No person should be forced to violate a deeply-held conviction of conscience. Our concern is to contribute to the peaceful solution of conflicts; one aspect of this is our compelling concern for recognition of the right not to be involved, actively or passively, in the killing, injuring, maiming of our fellow human beings.**

(iii) Most citizens are educated to believe that military measures are a necessary part of international relations, but we hold the strong conviction that nobody should support military preparations or actions, either by personal service, by contribution through taxation or by any other means. We also hold it to be a violation of conscience that anybody should be forced into giving such support.

(iv) We appeal to our fellow citizens and governments, **and to the United Nations** that they respect our conscientious objections to military expenditure by legal measures. Our final aim is to abolish all military expenditure and activity. We must work together with all people in building a society in which **armies the military is non-existent are not existing anymore** and in which all human rights are respected.

(Declaration made by participants in the 5th International Conference of Peace Tax Campaigners and War tax, 1994)

OBLIGATIONS TO ADDRESS URGENCY

ELIMINATING THE THREAT OF WAR AND PREVENTING CONFLICT

Expressing will and the aspirations of all peoples to eradicate war

Expressing the will and the aspirations of all peoples to eradicate war from the life of mankind [humankind] and, above all, to avert a world-wide nuclear catastrophe

(Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984).

Declaring that the preservation of the right of peoples to peace is a fundamental obligation of each state

Solemnly declares that the preservation of the right of peoples to peace and the promotion of its implementation constitute a fundamental obligation of each State (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)

Eliminating the threat of war

Emphasizes that ensuring the exercise of the right of peoples to peace demands that the policies of States be directed towards the elimination of the threat of war, particularly nuclear war, the renunciation of the use of force in international relations and the settlement of international disputes by peaceful means on the basis of the Charter of the United Nations (3. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)

Preventing the causes of conflict

Peace is indivisible and security is the right of all and not the privilege of a few. Global security can only be achieved and maintained if just and lasting solutions are found to all conflicts. Global security *should shall*, however, be viewed in terms of its multidimensional aspects and be based not only on military imperatives but on a combination of political, economic and social factors which together could eliminate the risks to global security caused by problems such as underdevelopment, poverty, environmental degradation (Group of Fifteen, Submission to UNCED, 1992)

Declaring the right of peoples to peace

Convinced that life without war serves as the primary international prerequisite for the material well-being, development and progress of countries, and for the full implementation of the rights and fundamental human freedoms proclaimed by the United Nations (Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)

Proclaiming the peoples sacred right to peace

Solemnly proclaims that the peoples of our planet have a sacred right to peace (1. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)

Eliminating the threat of war

Recalling that in the Final Document of the Tenth Special Session of the General Assembly, the States Members of the United Nations solemnly reaffirmed their determination to make further collective efforts aimed at strengthening peace and international security and eliminating the threat of war, and agreed that in order to facilitate the process of disarmament, it was necessary to take measures and pursue policies to strengthen international peace and security and to build confidence among States.

Prohibiting any propaganda for war

Any propaganda for war shall be prohibited by law (Art. 20, International Covenant of Civil and Political Rights, 1966)

OBLIGATIONS TO ADDRESS THE URGENCY:

ENSURING THE PEACEFUL USE OF COMMON HERITAGE

Recognizing that the area (open sea) is the common heritage of *mankind* all humanity

Principles governing the Area Common heritage of *mankind* **all humanity** The Area and its resources are the common heritage of *mankind* **all humanity** (Article 136. Law of the Seas, 1982)

Undertaking to not implant or emplace on the seabed and the ocean any nuclear weapons or weapons of mass destruction

The States Parties to this Treaty undertake not to implant or emplace on the seabed and the ocean floor and in the subsoil thereof beyond the outer limit of a seabed zone [of 22 kilometre], any nuclear weapons or any other types of weapons of mass destruction as well as structures, launching installations or any other facilities specifically designed for storing, testing or using of such weapons (Art. 1.1. Seabed Treaty of 1971, in force 1972)

Prohibiting the establishment of military bases in Antarctica

Antarctica shall be used for peaceful purposes only. There shall be prohibited, inter alia, any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, as well as the testing of any type of weapons. (Antarctic Treaty of 1959, in force 1961)

Ensuring that the use of outer space is for the benefits of *all mankind* [humanity]

Outer Space Treaty of 1967 in force 1967

The exploration and use of outer space, including the moon and other celestial bodies, shall be carried out for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development, and shall be the province of all *mankind* **humanity**....

(Art. 1 Outer Space Treaty of 1967 in force 1967)

Forbidding the establishment of military bases, installations and fortifications and the testing of any type of weapon...

...the moon and other celestial bodies shall be used by all States Parties to the Treaty exclusively for peaceful purposes. The establishment of military bases, installations and fortifications, the testing of any type of weapons and the conduct of military maneuvers on celestial bodies shall be forbidden...(Art. IV Outer Space Treaty of 1967 in force 1967)

Reaffirming the importance of international co-operation in developing the rule of law in the peaceful use of outer space

Recalling its resolution 35/14 of 3 November 1980, Deeply convinced of the common interest of *mankind* **humanity** in promoting the exploration and use of outer space for peaceful purposes and in continuing efforts to extend to all States the benefits derived there from, as well as the importance of international co-operation in this field, for which the United Nations should CONTINUE to provide a focal point, reaffirming the importance of international co-operation in developing the rule of law in the peaceful exploration and use of outer space (The General Assembly, Resolution 36/35 International Co-operation in the Peaceful Uses of Outer Space, 1981).

[Affirming] that the moon shall be used for peaceful purposes

Moon Agreement of 1979, in force 1984

The Moon shall be used by all States Parties exclusively for peaceful, **humanitarian and environmentally safe** purposes (Art.. III.1 Moon Agreement of 1979, in force 1984)

Declaring Moon to be common heritage

The Moon and its natural resources are the common heritage of mankind **[humankind]**... (Art. XI.1. Moon Agreement of 1979, in force 1984)

OBLIGATIONS TO ADDRESS THE URGENCY PREVENTING NUCLEAR CATASTROPHE

Safeguarding world peace and averting a nuclear catastrophe

Safeguarding world peace and averting a nuclear catastrophe is one of the most important tasks today in which women have an essential role to play, especially by supporting actively the halting of the arms race followed by arms reduction and the attainment of a general and complete disarmament under effective international control...

(Par 250 Nairobi Forward Looking strategy for the Advancement of women, 1985) (§§
**NOTE THERE IS NO MENTION OF “NUCLEAR CATASTROPHE IN THE MAY 15
DRAFT PLATFORM OF ACTION: NOTE BRACKETED SECTION BELOW)**

Being convinced that the prevention of nuclear catastrophe is the most profound aspiration... of people

Convinced that the prevention of nuclear catastrophe is the most profound aspiration of billions of people on earth,(Condemnation of nuclear war General Assembly Resolution A/RES/38/75, 1983)

Recognizing the nature of a potential nuclear catastrophe

Worst case scenario would be the diversion of critical amounts of plutonium (even now there are materials unaccounted for MUF), the construction of even a crude atomic device, and the use or threat of use of this device by a terrorist group. In time this scenario would tend to become inevitable (Knelman, ERA Ecological Rights Association, 1995).

OBLIGATIONS TO ADDRESS THE URGENCY ELIMINATING WEAPONS OF MASS DESTRUCTION

Eliminating weapons of mass destruction

Man [Humans] and their environment must be spared the effects of nuclear weapons and all other means of mass destruction. States must strive to reach prompt agreement in the relevant international organs on the elimination and complete destruction of such weapons (UNCHE, 1972, Principle 26).

Expressing alarm by the threat to the survival of humanity and to the life-sustaining system posed by nuclear weapons

Alarmed by the threat to the survival of *mankind* **humanity** and to the life-sustaining system posed by nuclear weapons and by their use, inherent in concepts of deterrence (Convention on the prohibition of the use of nuclear weapons A/RES/38/75, 1983)

Promoting the elimination of [Eliminating] all weapons of mass destruction

[Promote the elimination Eliminate of all weapons of mass destruction, especially nuclear weapons] (Art. 145 f., Advance Draft Declaration and Platform for Action, May 15, 1995).

[Affirming that] peace depends on the prevention of the use or threat of the use of force...

Peace depends on the prevention of the use or threat of the use of force, aggression, military occupation, interference in the internal affair of others, the elimination of domination, discrimination, oppression and exploitation, as well as of gross and mass violation of human rights and fundamental freedoms (Par 13, Nairobi Forward Looking strategy for the Advancement of women, 1985)

Calling for the reduction of nuclear weapons until they are completely eliminated

Calls upon all States to unite and redouble their efforts aimed at removing the threat of nuclear war, halting the nuclear-arms race and reducing nuclear weapons until they are

completely eliminated (3 Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

Being convinced that nuclear disarmament is essential for the strengthening of international peace and security

Convinced that nuclear disarmament is essential for the prevention of nuclear war and for the strengthening of international peace and security, (Draft Convention on the prohibition of the use of nuclear weapons A/RES/38/75, 1983)

Being convinced that prohibition of the use or threat of use of nuclear weapons would lead to complete elimination of nuclear weapons and to disarmament

Further convinced that a prohibition of the use or threat of use of nuclear weapons would be a step towards the complete elimination of nuclear weapons leading to general and complete disarmament under strict and effective international control (draft Convention on the prohibition of the use of nuclear weapons A/RES/38/75, 1983)

Bringing about conditions among States in which a code of peaceful conduct would preclude the use or threat of use of nuclear weapons

Recalling its declaration, contained in paragraph 58 of the Final Document of the Tenth Special Session of the General Assembly, that all States *should shall establish a actively participate in efforts to bring about conditions in international relations among States in which a code of peaceful conduct of nations in international affairs could be agreed upon and* which would preclude the use or threat of use of nuclear weapons, **the production and testing of nuclear weapons** (draft Convention on the prohibition of the use of nuclear weapons, A/RES/38/75, 1983)

Reaffirming that the use of nuclear weapons would be a crime against humanity

Reaffirming the declaration that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity, contained in its resolutions 1653 (XVI) of 24 November 1961, 33/71 B of 14 December 1978, 34/83 G of 11 December 1979, 35/152 D of 12 December 1980 and 36/92 I of 9 December 1981,

Reiterating the request to commence negotiations on a convention for the prohibiting the use or threat of use of nuclear weapons

Reiterates its request to the Conference on Disarmament to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, ∞)

OBLIGATIONS TO REMOVE THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR

Calling for the removing of the threat of nuclear war

Calls upon all States to unite and redouble their efforts aimed at removing the threat of nuclear war, halting the nuclear-arms race and reducing nuclear weapons until they are completely eliminated (3 Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983).

Condemning of nuclear war

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983).

Reaffirming call for a convention on the prohibition of the use of nuclear weapons

Reaffirming its call for the conclusion of an international convention on the prohibition of the use of nuclear weapons with the participation of all the nuclear-weapon States, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

Condemning of nuclear war as being contrary to human conscience and reason

Condemning of nuclear war as being the most monstrous crime against peoples

Resolutely, unconditionally and for all time condemns nuclear war as being contrary to human conscience and reason, as the most monstrous crime against peoples and as a violation of the foremost human right - the right to life (1 Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983).

Condemning the formulation of propaganda of political and military doctrines intended to provide “legitimacy” for the first use of nuclear weapons

Condemns the formulation, propounding, dissemination and propaganda of political and military doctrines and concepts intended to provide 'legitimacy' for the first use of nuclear weapons and in general to justify the 'admissibility' of unleashing nuclear war (2 Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

OBLIGATIONS TO ADDRESS THE URGENCY

BANNING THE TESTING OF NUCLEAR WEAPONS

Reaffirming urgent need for a comprehensive nuclear-test ban treaty

Reaffirming its conviction that an end to nuclear-weapon testing by all States in all environments would be a major step towards ending the... improvement, development and proliferation of nuclear weapons, a means of relieving the deep apprehension concerning the harmful consequences of radioactive contamination for the health of present and future generations and a measure of the utmost importance in bringing the nuclear-arms race to an end. (General Assembly Resolution A/RES/38/63 Urgent need for a Comprehensive Nuclear-test-ban Treaty, 1983)

Condemning nuclear testing

vi against nuclear testing and in favor of the dismantlement of nuclear plants (Youth Treaty, UNCED, 1992)

Undertaking to prohibit and prevent *atmospheric* [all] nuclear weapons testing

Each of the Parties to this Treaty undertakes to prohibit, to prevent and not to carry out any nuclear weapon test explosion, or any other nuclear explosion * *at any place under its jurisdiction or control:*

(i) *in the atmosphere; beyond its limits, including outer space; or under water including territorial waters or high seas (a); or*

(ii) *in any other environment if such explosion causes radioactive debris to be present outside the territorial limits of the State under whose jurisdiction or control such explosion is conducted... (b)*

(Partial Test Ban Treaty of 1963 in force 1963)

* note the phrase “any other nuclear explosion” in article I.1. is interpreted to mean “ any other non-hostile nuclear explosion”)

OBLIGATIONS TO ADDRESS THE URGENCY

RECOGNIZING THE LINKING BETWEEN CIVIL NUCLEAR ENERGY AND NUCLEAR ARMS AND NEED TO PHASE OUT CIVIL NUCLEAR POWER

Recognizing the linking of civil nuclear energy and nuclear arms

There is a tragic link between civil nuclear power and nuclear weapons. Uranium is the starting material for both technologies. All major uranium mines in the world are civilian operated. Nevertheless military nuclear operations manage to secure the critical materials to produce nuclear weapons (Knelman, ERA Ecological Rights Association, 1995)

Phasing out the mining of uranium and civil nuclear power

We urge that All new nuclear research, development, production, and use be stopped, that uranium mining be halted, and that nuclear power production and use be phased out and replaced by environment-friendly energy sources (Women’s Action Agenda, 1992).

Phase out nuclear energy and fossil fuel

The phasing out of nuclear energy and fossil fuels was proposed in the 1992 Nobel Laureate Declaration for UNCED

Undertaking to not receive or transfer nuclear arms devices or information to other States

Each non-nuclear-weapon State Party to the Treaty undertakes not to receive the transfer from any transferor whatsoever of nuclear weapons or other nuclear explosive devices or of control over such weapons or explosive devices directly, or indirectly; not to manufacture of otherwise acquire nuclear weapons or other nuclear explosive devices; and not to seek or receive any assistance in the manufacture of nuclear weapons or

other nuclear explosive devices. (Art. II, Nuclear-weapon Non-proliferation Treaty of 1968, in force 1970)

Limiting of means of injuring belligerents

Annex Article XXII *the right of belligerents to adopt means of injuring the enemy is not unlimited* **A belligerent state has no right to injure another**

Annex Article LV The occupying State shall only be regarded as administrator and usufructuary of the public buildings, real property, forests and agricultural works belonging to the hostile State, and situated in the occupied country. It must protect the capital of these properties, and administer it according to the rules of usufruct. (Hague Convention ii of 1899 with respect to the laws and customs of war on land and reaffirmed in Hague Convention IV of 1907, in force 1910 respecting the Laws and Customs of War on Land)

OBLIGATIONS TO ADDRESS THE URGENCY

VIOLATING ARMS CONTROL

COMMENT ON VIOLATION IN ARMS CONTROL

Non-Proliferation Treaty (NPT)

Article 1: prohibits the transfer of weapons directly or indirectly from States in possession of nuclear weapons to States not in possess

Article II: disallows receipt or manufacture of nuclear weapons by non nuclear weapon States

Article III: seeks to assure that materials and facilities in non-nuclear weapon States are used for peaceful purposes only by application of safeguards by the IAEA

Article VI: commits all parties to pursue negotiations in good faith on measures to end the nuclear arms race and to achieve disarmament.

VIOLATION IN ARMS CONTROL

(F.H. Knelman Ph.D.)

Military Budgets and Strategic Policy

A dramatic rise in military budgets occurred during the eight years of the Reagan Administration. 1980-1988. For example, in 1981 the Global military budget stood at 580 Billion, while by 1991 it had just about doubled to approximately 1 trillion. The Reagan administration, through a group of secret presidential directives, had abandoned the strategy of deterrence or Mutual Assured Destruction i.e. MAD in favour of a clear nuclear war-fighting, war-winning strategy. The weapon systems and their delivery systems were re-designed for first strike and “decapitation” i.e. destruction of the Soviet’s command and control installations. The above strategy has largely remained in place through the Bush and Clinton Administrations. First use/first strike options are operational even against non-nuclear weapon States.

Arms control

Two key treaties mark the most successful accomplishment of arms control. These are the non-proliferation Treaty NPT which came into force in 1970 and the anti-ballistic missile ABM treaty of 1972.

The essence of NPT was a treaty between two classes of adherents, the “nuclear weapon States” (NWS) i.e. those who had detonated nuclear weapons prior to 1967 i.e. U.S., Britain, France, China, and U.S.S.R and the “Non nuclear weapon States” (NNWS) those who had not. The NNWS agreed not to manufacture or receive or acquire nuclear explosives of any kind including so-called peaceful nuclear explosives (PNEs) and to accept the role and safeguards of the international Atomic Energy Commission of Vienna (IAEA) as the Agency that would monitor through “Full-scope safeguards”. All ratifiers agreed not to export nuclear equipment or materials to NNWS except under IAEA safeguards and NWS

agreed not to assist NNWS to acquire nuclear weapons. All countries with knowledge of civil nuclear power pledged to assist those who wished to acquire it. Finally the NNWS pledged to pursue negotiations in good faith to end the arms race and achieve nuclear disarmament under International control (Article VI) in practice this only applied to the U.S.. and the U.S.S.R.

NPT also was to last 25 years with 5 year reviews, the last review being on May 12, 1995. The renewal period would then be subject to a vote based on whether the articles of the treaty had been fulfilled and pursued in good faith.

At the same time certain auxiliary arms control initiatives became informally attached to NPT and in particular to its post 1995 extension. These were broadly supported by the group on non-aligned NPT signatories. The first and perhaps most important of these was a call for the criminalization of nuclear weapons “by use or threat of use” (The World Court Project). This culminated in an UN General Assembly resolution passed in December 1994 requesting a judgment by the International Court of Justice on this matter. This initiative reflected the frustration over some two decades of violation of Article VI of NPT. Finally it should be noted that the “threat of use” was not in the original world Court Proposal and that this author played a role in its addition.

Further to the question of the violation of article VI, the total number of nuclear weapons in 1970, the date of the signing of NPT was 39,595. The total number as of late 1994 was 49,910. In other words not only was article VI completely violated but the number of nuclear weapons increased by some 25% in the 25 year period but even if we go to the year 2003, when it is hoped START 1 and START II will have been completed, the U.S. and Russia will still have some 10,000 each of which about 3500 will be strategic, the remainder tactical. At the same time the arsenals of China, France and the UK will CONTINUE to grow, let alone those of Israel, India and Pakistan (non- signatories of NPT). START II is in jeopardy. Both U.S. and Russia [or former Soviet Union] are having second thoughts but there is also an even greater deception regarding Article VI. While the actual number of strategic weapons will be reduced significantly in the two countries, the operational and force effectiveness of particularly the U.S. arsenal will actually be superior than that of the pre-START period. This deception is a loophole not considered in the NPT article VI was also consistently violated by the other three weapons States. This CONTINUEs to this day.

The other conditions that became attached to the renewal of NPT in 1995 are:

1. A comprehensive Test Ban Treaty (CTB).

The Atmospheric Test Ban Treaty (ATB) of 1967 was one of significant arms control initiatives and the result of a world-wide protest against the

biological hazards of fall-out. However, the U.S. followed by the U.S.S.R. circumvented the full intent of this treaty by going underground. Despite this, there was much so-called accidentally venting from such tests, particularly high yield ones. Moreover there were serious geological hazards also involved. This led to the 1974 Threshold Test Ban Treaty (TTBT) which limited the yield of such tests to 150 kilotons (Hiroshima Bomb was 20 K). This was consistently violated by both superpowers. Despite the fact that the vast majority of independent scientists agreed that it was not necessary to explode nuclear devices either to test new warheads or maintain the reliability of the arsenal, the two superpowers conducted thousands of tests.

2. An immediate cut-off in the production of weapons grade fissionable materials and uranium 235 and Plutonium 239 i.e. a suffocation policy.

This was totally ignored by the weapon States. There is a serious loophole in the entire NPT safeguards regime which has been completely ignored by uranium exporters such as Canada and by IAEA. It has to do with “depleted uranium” i.e. uranium 238 which is left over from the enrichment process. It also should be noted that the NWS are not subject to any IAEA monitoring, a serious flaw in NPT, (e.g. Canada’s sale of a CANDU to China).

3. An agreement to never use nuclear weapons first against any NNWS that signed NPT, later extended to a general “No first Use” pledge. We know for certain that the U.S. and NATO have a “first use “ policy against any state they define as an enemy or threatening their security or extra-sovereign interests.

4. To abide strictly to the Anti Ballistic Missile (ABM) Treaty of 1972.

This is one of the most important arms control treaties. It limits anti-missile sites to only two in the U.S. and now Russia. It was an agreement not to attempt to create invulnerability, by one of the superpowers thereby violating the basic deterrent principle of MAD. The Reagan initiative “Star Wars” was considered by almost all experts as a clear violation of ABM. Unfortunately the Clinton administration has decided to develop such a system but to delay deploying it. The Republican majority are in favour of deployment.

In general all of the above conditions have been thwarted while Article VI CONTINUEs to be violated in multiple ways including a lack of being

comprehensive i.e. involving all NWSS. Qualitative developments in all aspects of the nuclear weapons systems CONTINUES unabated. By agreeing to an indefinite extension of NPT on May 12 1995, the signatories have become a party to past and future violations, having given the NWSS, a blank cheque.

OBLIGATIONS TO ADDRESS THE URGENCY

ELIMINATING THE PRODUCTION, SALE, AND USE OF LAND MINES

Banning the production, sale and use of land mines

Dismantling of existing antipersonnel land mines.

Imposing conflict damage reparation against nations and private corporate equipment

Ban the production, sale and use of land mines and

Dismantling of existing antipersonnel land mines.

Impose conflict damage reparation against nations and private or corporate equipment;
(Anti-Land Mines... publication, 1995)

OBLIGATIONS TO ADDRESS THE URGENCY

PROHIBITING DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES

Ban all trade fairs for weapons and military equipment;

Ban all trade fairs for weapons and military equipment (Voice of Women, 1995)

Eliminate all subsidies to military research, production, marketing and trade

All subsidies to military research, production, marketing and trade shall be eliminated (Voice of Women, 1995)

Recognizing that women's NGO have called for reduction.. of international trade, trafficking and proliferation of weapons

Many women's non-governmental organizations have called for reductions in military expenditures world wide, as well as international trade, trafficking and proliferation of weapons... (139, May 15 draft of the Platform of Action)

Supporting the international campaign to ban Land mines

States and all citizens shall support the international campaign to ban land mines and demand that countries responsible for laying mines, and countries which have profited from the sale of land mines contribute to the costs of the de-mining process (Drawn from Land mine Abolition, A Background Report on Cambodia, 1995)

Prohibiting the use in war of poison gas and biological warfare

{the parties accept a prohibition of} the use in war of asphyxiating, poisonous or other gases, and of all analogous liquids, materials or devices [and] agree to extend this prohibition to the use of bacteriological methods of warfare (Geneva Protocol of 1925 on Chemical and Bacteriological Warfare, in force, 1928)

Undertaking to never develop, produce or stockpile biological toxins for purpose of warfare

Bacteriological and Toxin Weapon Convention of 1972 in force 1975

Each State Party to this Convention undertakes never in any circumstances to develop, produce, stockpile, or otherwise acquire or retain: 1. Microbial or other biological agents, or toxins whatever their origin or method of production, of types and in quantities that have no justification for prophylactic protective or other peaceful purposes; 2. Weapons, equipment or means of delivery designed to use such agents or toxins for hostile purposes or in armed conflict. (Article 1, Bacteriological and Toxin Weapon Convention of 1972 in force 1975)

Prohibiting or restricting use of certain conventional weapons which may be deemed to be excessively injurious or to have indiscriminate effects

Recalling with satisfaction the adoption, on 10 October 1980, of the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects, together with the Protocol on Non-Detectable Fragments (Protocol I), the Protocol on Prohibitions or Restrictions on the Use of Mines, Booby Traps and Other Devices (Protocol II) and the Protocol on Prohibitions or Restrictions on the Use of Incendiary Weapons (Protocol III) (United Nations Resolution, 38/71, 1993)

Disarming and the terminating of weapon production

The promotion of complete disarmament, the termination of all weapon production and trade, and the ending of military technology transfer

(Interfaith Charter response through the Internet, 1994)

OBLIGATIONS TO ADDRESS URGENCY:

REDUCING, FREEZING OF THE MILITARY BUDGET

[Note that it is not only women's NGOs that have called for the reduction of the military expenditures; several General Assembly resolutions have also called for not only the reduction of military budget but the freezing of the military budget at 1981 levels]

Recognizing that women's NGOs have called for reductions in military budget

Many women's non-governmental organizations have called for reductions in military expenditures world wide, as well as international trade, trafficking and proliferation of weapons. Those affected most negatively by [conflict] [excessive military spending] are people living in poverty, who are deprived because of the lack of investment in

basic services. Women living in poverty, and particularly rural women, also suffer from the effects of the use of arms that are particularly injurious or have indiscriminate effects. There are more than one hundred million anti-personnel land-mines scattered in 64 countries globally. *[Excessive military spending is one of the main constraints for development.] [At the same time, maintenance of national security and peace [is an important factor] [is essential] for economic growth and development and the empowerment of women]* (Art. 139 Advance draft, Platform of Action, UN Conference on Women, May 15)

Expressing concern about military expenditures and the consequent waste of human and economic resources

- Deeply concerned by the arms buildup and trends in military expenditures, the consequent waste of human and economic resources and the resulting risks for world peace and security
- Also concerned by the extent of the crisis affecting the world economy, particularly the developing countries (Relationship between Disarmament and Development, UN resolution 38/71, 1983)

Considering the magnitude of military expenditures and the implications can not be ignored

Considering that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order (Relationship between Disarmament and Development, UN resolution 38/71, 1983)

Reducing... excessive military expenditures

To facilitate the implementation of the Platform for Action, Governments should shall reduce, as appropriate, excessive military expenditures and investments for arms production and acquisition, to 1982 levels as agreed in UN resolution 36/82 consistent with national security requirements (Art. 350. Advance draft, Platform of Action, UN Conference on Women, May 15)

Reinforcing the need to reduce the military budget with a view to freeze, reduce or otherwise restrain military expenditures

Reaffirms the urgent need to reinforce the endeavours of all States and international action in the area of the reduction of military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Exercising self-restraint in military expenditures with view to reallocating funds to benefit developing countries

Reiterates the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Achieving agreement to freeze, reduce or otherwise restrain

Recalling its resolution 34/83 F of 11 December 1979, in which it considered that a new impetus should be given to endeavours to

achieve agreements to freeze, reduce or otherwise restrain, in a balanced manner, military expenditures, including adequate measures of verification satisfactory to all parties concerned (Preamble, UN Resolution 36/82 Reduction of Military Budgets, 1981)

Reaffirming possibility of CONTINUED and systematic reductions in military budget without detriment to national security

Reaffirming that it is possible to achieve CONTINUED and systematic reductions in military budgets without affecting the military balance to the detriment of the national security of any State, (Preamble, UN Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Renewing efforts to reach agreement on the reduction of military expenditures

Recalling the Declaration of the 1980s as the Second Disarmament Decade, which provides that during this period renewed efforts should be made to reach agreement on the reduction of military expenditures and the reallocation of resources thus saved to economic and social development, especially for the benefit of developing countries, (Preamble, UN Resolution 36/82 1981, Reduction of Military Budgets)

OBLIGATIONS TO ADDRESS URGENCY:

TRANSFERRING THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ECOLOGICALLY SOUND DEVELOPMENT

Canceling debt burden by multilateral financial and development institutions

By multilateral financial and development institutions, including the World Bank, the International Monetary Fund and regional development institutions, and through bilateral development cooperation:

[Cancel or substantially reduce the debt burden, or convert debt services of developing countries, in particular the highly indebted low-income countries, in order to help them to finance programmes and projects targeted at development, including the advancement of women, and to achieve sustained economic growth and sustainable development without falling into a new debt crisis] (61 c Advance draft, Platform of Action, UN Conference on Women, May 15)

Restricting of “military charges” for the increase of material and moral welfare of *mankind* humanity

The conference is of the opinion that the restriction of military charges, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of *mankind*.” **humanity** (Preamble of resolution Final Act Hague Peace Conference 1899)

Limiting of armed forces by land and sea and of war budgets

The Conference expresses the wish that the Governments, taking into consideration the proposals made at the Conference, may examine the possibility of an agreement as to the limitation of armed forces by land and sea and of war budgets (4 Final Act Hague Peace Conference 1899)

Transferring money from weapons to food

The money spent by the world on weapons in one week is enough to feed all the people on Earth for a year. When millions of people go hungry each day how can we spend another dollar on war? (statement from “Food not Bombs”, 1995)

Reaffirming a close relationship between disarmament and development

Reaffirming that there is a close relationship between disarmament and development and that progress in the field of disarmament would considerably promote progress in the field of development and that resources released through disarmament measures *should shall* be devoted to the economic and social development and well-being of all peoples and, in particular, those of the developing countries, Declaration on the Right to Development, General Assembly resolution 41/128 of 4 December 1986

Reallocating resources released by effective disarmament measures...to...development particularly for the benefit of developing countries

Reaffirming the provisions of the Final Document of the Tenth Special Session of the General Assembly, according to which gradual reduction of military budgets on a mutually agreed basis, for example, in absolute figures or in terms of percentage, particularly by nuclear-weapon States and other militarily significant States, would contribute to curbing the arms race and would increase the possibilities of reallocation of resources now being used for military purposes to economic and social development, particularly for the benefit of the developing countries (Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Exercising self-restraint pending the conclusion of agreements on the reduction of military expenditures

Reiterates the appeal to all States, in particular, the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981)

Reallocation of resources saved by reduction of military budget to...benefit of developing countries

Recalling the Declaration of the 1980s as the Second Disarmament Decade, which provides that during this period renewed efforts should be made to reach agreement on the reduction of military expenditures and the reallocation of resources thus saved to economic and social development, especially for the benefit of developing countries, (Preamble, UN Resolution 36/82 1981, Reduction of Military Budgets)

Releasing additional resources especially from nuclear weapon and other militarily important States for benefit of the developing States

Also considering that a reduction of arms expenditures, especially by nuclear-weapon States and other militarily important States, on a mutually agreed basis would be a measure that would curb the arms buildup and would make it possible to release additional resources for use in economic and social development, particularly for the benefit of the developing countries (Relationship between disarmament and development, UN resolution 38/71, 1983)

Ensuring that the resources released by effective disarmament measures used for development by developing countries

All States *should* **shall** promote the establishment, maintenance and strengthening of international peace and security and, to that end, *should do their utmost to* **shall** achieve general and complete disarmament under effective international control, as well as to ensure that the resources released by effective disarmament measures are used for comprehensive development, in particular that of the developing countries. (Declaration on the Right to Development Adopted by General Assembly resolution 41/128 of 4 December 1986)

Transferring of the global military budget

The global military budget shall be transferred to achieve social justice, to protect human rights, to preserve ecological heritage, to create ecologically safe and sound employment. (ERA Ecological Rights Association UN Proclamation for Translating Rhetoric into Action, 1992)

COMMENT: REDIRECTING THE GLOBAL MILITARY BUDGET

Reducing of global military budget immediately to 1981 as agreed to through UN General Assembly resolutions

Reducing of global military budget to 1981 levels, and transferring of funds to socially equitable and environmentally sound development.

In 1981 the General Assembly undertook to freeze the global military budget which was 50% of the current military budget in 1995. There must be an immediate 50% reduction of the global military budget, with an undertaking to reduce the budget by an additional 5% each year, and an immediate transfer of this budget to socially equitable and environmentally sound development. The \$400 billion, approximately 50% of the current global 1995 military budget, could be spent in the following way:

Proposing socially equitable and environmentally sound use of global military budget

Socially equitable and environmentally sound development Cost per annum in billions.

Safe, clean water	\$ 50
Shelter for all	\$ 21
Food for all and end to hunger	\$ 19
Health care for all	\$ 15
End of illiteracy	\$ 5
Education to stabilize population	\$ 10.5
Clean, safe renewable energy	\$ 17
Prevention of soil erosion	\$ 24
Prevent acid rain	\$ 8
Prevent climate change	\$ 8
Stop ozone depletion	\$ 5
Stop deforestation	\$ 7
TOTAL	\$189.5

(Source: 1991 W.C. Institute)

U.S. nuclear and toxic sites \$500+
(no technically feasible way of cleaning up nuclear sites; thus need for a phasing out of use of nuclear)

Former Soviet Union nuclear and toxic sites \$500+

Contingency \$ 10.5

TOTAL \$400

PROPOSAL BY THE ERA ECOLOGICAL RIGHTS ASSOCIATIONS

Reallocation of military spending to ensure a greater resource for public services

Access to public services calls for the reallocation of military spending to ensure a greater pocket of resources to expand public services (Prep Com II, UN Secretariat plan of Action, World Summit for Social Development, 1995)

Increasing the conversion of military resources and related industries to [socially equitable and environmentally sound] development /peaceful

Increase and hasten, as appropriate, to national security

considerations, the conversion of military resources and related industries to [development/peaceful] purposes (145 a Advance draft, Platform of Action, UN Conference on Women, May 15)

Conversion of all Military training facilities

Convert all military training facilities into civilian institutions • Undertake a time-bound program for conversion of military structures. (Voice of Women, 1995)

Reordering of priorities: not expensive in context of military expenditures

Many of the quantitative and qualitative goals of the present Programme of Action clearly require additional resources, some of which could become available from a reordering of priorities at the individual, national and international levels. However, none of the actions required—nor all of them combined— is expensive in the context of either current global development or military expenditures.(1.19 1994 International Conference on Population and Development, 1994)

Redirecting of military spending towards social and environmental ends

Against militarism, demanding that military spending be re-directed towards social and environmental ends (ii. Youth Treaty, UNCED, 1992)

Redirecting of monies from military expenditures to socially equitable and environmentally sound development

The monies derived from military expenditures shall be transferred into socially equitable and environmentally-sound development, and in particular to the fulfillment of basic human needs.

Increasing and hastening conversion of military resources and related industries

Increase and hasten, as appropriate, to national security

considerations, the conversion of military resources and related industries to **[development/peaceful]** purposes (Art. 145 a, Advance draft, Platform of Action, UN Conference on Women, May 15)

THE WORLD WEEK OF PEACE

GENERAL ASSEMBLY PROCLAIMS WORLD WEEK OF PEACE

The United Nations General Assembly has proclaimed a World Week of Peace to commemorate the fiftieth anniversary of the United Nations. The week is to begin on 24 October 1995. The Assembly took this decision by adopting submitted by Costa Rica on behalf of sixty-one States Members of the United Nations: Algeria, Andorra, Antigua and Barbuda, Argentina, Australia, Bahamas, Barbados, Belize, Benin, Bolivia, Cambodia, Cameroon, Cape Verde, Chile, Colombia, Comoros,

Congo, Costa Rica, Cote d'Ivoire, Cyprus, Dominican Republic, Ecuador, Egypt, El Salvador, Equatorial Guinea, Gabon, Georgia, Grenada, Guatemala, Latvia, Liechtenstein, Monaco, Mongolia, Morocco, Nepal, New Zealand, Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, San Marino, Slovenia, Solomon Islands, Suriname, Togo, Trinidad and Tobago and Uruguay.

Cognizant of the fact that the promotion of peace and the prevention of war recognizing that the Preamble to the Charter of the United Nations States generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind [Humanity], peace through peaceful means and through negotiation, as well as to promote

Recalling also its resolution 47/120 A of 18 December 1992, in which it (A/47/277-S/24111), stressing the importance of preventive diplomacy and peace-keeping operations,

Recognizing the important role that Disarmament Week, which will be observed concurrently with the World Week of Peace, is playing in promoting international peace and security,

Recognizing also that the United Nations is universal in nature and is the moral authority and the influence to promote and maintain world peace,

Recognizing further the importance of promoting the culture of peace,

Concerned that recent conflicts between States have brought with them

Deeply concerned at the large proportion of civilians, especially women and children, who have been killed and injured, and whose numbers have increased in recent years,

Recognizing that civil society organizations are now playing a more important role in promoting tolerance and understanding, truce can offer opportunities for building a just and lasting peace,

Noting with satisfaction the valuable initiative taken by the United Nations of "Weeks of Peace", which have been used to provide humanitarian relief, such as immunization, health care, food and clothing, to children trapped by armed conflicts

1. Decides to proclaim the World Week of Peace, beginning on 24 October 1995, and to invite all States to observe it, and to request the Secretary-General to disseminate information on the World Week of Peace to all States and to the public, and to request the Secretary-General to coordinate the World Week of Peace with the activities of the United Nations, and to request the Secretary-General to report on the implementation of the present resolution to the General Assembly at its fiftieth session
2. Approves the Proclamation of the World Week of Peace, the text of which is annexed to the present resolution, and requests the Secretary-General to disseminate the Proclamation to all States and to the public, and to request the Secretary-General to coordinate the World Week of Peace with the activities of the United Nations, and to request the Secretary-General to report on the implementation of the present resolution to the General Assembly at its fiftieth session
4. Requests the Secretary-General to ensure the broadest possible dissemination of information on the World Week of Peace to all States and to the public, and to request the Secretary-General to coordinate the World Week of Peace with the activities of the United Nations, and to request the Secretary-General to report on the implementation of the present resolution to the General Assembly at its fiftieth session
5. Requests the Secretary-General to report on the implementation of the present resolution to the General Assembly at its fiftieth session

PROCLAMATION OF THE WORLD WEEK OF PEACE

The United Nations, in commemoration of the fiftieth anniversary of the United Nations, and in recognition of the primary goals of the United Nations, rededicated itself to the effort to establish a universal peace according to the purposes and principles of the Charter of the United Nations, signed at San Francisco,

Whereas, in increasing the size and scope of its peace-keeping operations, the United Nations has demonstrated its commitment to the task of peace-keeping and peacemaking.

Whereas the World Week of Peace offers a special opportunity for resolution, cease-fires and truces, and for a period of universal peace that could be used for the humanitarian relief that has become so critically necessary.

Peace sections in POA

28. Take positive steps to ensure peace for the advancement of women and, recognizing the leading role that women have played in the peace movement, work actively towards general and complete disarmament under strict and effective international control, and support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty which contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects

145 (f) Recognizing the leading role that women have played in the peace movement:

- (i) Work actively towards general and complete disarmament under strict and effective international control;
- (ii) Support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty that contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

145. By Governments:

- (a) Increase and hasten, as appropriate, subject to national security considerations, the conversion of military resources and related industries to development and peaceful purposes;**

(b) Undertake to explore new ways of generating new public and private financial resources, inter alia, through the appropriate reduction of excessive military expenditures, including global military expenditures, trade in arms and investment in arms production and acquisition, *taking into consideration national security requirements*, so as to permit the possible allocation of additional funds for social and economic development, in particular for the advancement of women;

DISARMAMENT

Declaration 28. Take positive steps to ensure peace for the advancement of women and, recognizing the leading role that women have played in the peace movement, work actively towards general and complete disarmament under strict and effective international control, and support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty which contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

145 (f) Recognizing the leading role that women have played in the peace movement:

- (i) Work actively towards general and complete disarmament under strict and effective international control;

AFFIRMING THAT THE STRENGTHENING OF INTERNATIONAL PEACE AND SECURITY,

RELAXATION OF INTERNATIONAL TENSION, MUTUAL CO-OPERATION AMONG ALL States

IRRESPECTIVE OF THEIR SOCIAL AND ECONOMIC SYSTEMS, **GENERAL AND COMPLETE**

DISARMAMENT, AND IN PARTICULAR NUCLEAR DISARMAMENT UNDER STRICT AND EFFECTIVE INTERNATIONAL CONTROL,(PREAMBLE, CONVENTION ON THE ELIMINATION OF ALL FORMS OF DISCRIMINATION AGAINST WOMEN

weapons (nuclear in bold)

AFFIRMING THAT THE STRENGTHENING OF INTERNATIONAL PEACE AND SECURITY, RELAXATION OF INTERNATIONAL TENSION, MUTUAL CO-OPERATION AMONG ALL States IRRESPECTIVE OF THEIR SOCIAL AND ECONOMIC SYSTEMS, **GENERAL AND COMPLETE DISARMAMENT, AND IN PARTICULAR NUCLEAR DISARMAMENT UNDER STRICT AND EFFECTIVE INTERNATIONAL CONTROL,(PREAMBLE, CONVENTION ON THE ELIMINATION OF ALL FORMS OF DISCRIMINATION AGAINST WOMEN**

Declaration 28. Take positive steps to ensure peace for the advancement of women and, recognizing the leading role that women have played in the peace movement, work actively towards general and complete disarmament under strict and effective international control, and support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty which contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

139. Many women's non-governmental organizations have called for reductions in military expenditures worldwide, as well as in international trade and trafficking in and the proliferation of weapons.

Those affected most negatively by conflict and excessive military spending are people living in poverty, who are deprived because of the lack of investment in basic services. Women living in poverty, particularly rural women, also suffer because of the use of arms that are particularly injurious or have indiscriminate effects. There are more than 100 million anti-personnel land-mines scattered in 64 countries globally. The negative impact on development of excessive military expenditures, the arms trade, and investment for arms production and acquisition must be addressed. At the same time,

maintenance of national security and peace is essential for economic growth and development and the empowerment of women.

Actions to be taken

145. By Governments:

(e) Recognizing that women and children are particularly affected by the indiscriminate use of antipersonnel land-mines:

- (i) Undertake to work actively towards ratification, if they have not already done so, of the 1981 Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons Which May Be Deemed to Be Excessively Injurious or to Have Indiscriminate Effects, particularly the Protocol on Prohibitions or Restrictions on the Use of Mines, Booby Traps and Other Devices (Protocol II), with a view to universal ratification by the year 2000;**

(f) Recognizing the leading role that women have played in the peace movement:

(i) Work actively towards general and complete disarmament under strict and effective international control;

(ii) Support negotiations on the conclusion, without delay, of a universal and multilaterally and effectively verifiable comprehensive nuclear-test-ban treaty that contributes to nuclear disarmament and the prevention of the proliferation of nuclear weapons in all its aspects;

(iii) Pending the entry into force of a comprehensive nuclear-test-ban treaty, exercise utmost restraint in respect of nuclear testing.

**CONVENTION ON THE ELIMINATION OF ALL FORMS OF DISCRIMINATION
AGAINST WOMEN 83 references to shall**

The States Parties to the present Convention,

Noting that the Charter of the United Nations reaffirms faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of man and women,

Noting that the Universal Declaration of Human Rights affirms the principle of the inadmissibility of discrimination and proclaims that all human beings are born free and equal in dignity and rights and that everyone is entitled to all the rights and freedoms set forth therein, without distinction of any kind, including distinction based on sex,

Noting that the States Parties to the International Covenants on Human Rights have the obligation to ensure the equal right of men and women to enjoy all economic, social, cultural, civil and political rights,

Considering the international conventions concluded under the auspices of the United Nations and the specialized agencies promoting equality of rights of men and women,

Noting also the resolutions, declarations and recommendations adopted by the United Nations and the specialized agencies promoting equality of rights of men and women,

Concerned, however, that despite these various instruments extensive discrimination against women CONTINUEs to exist,

Recalling that discrimination against women violates the principles of equality of rights and respect for human dignity, is an obstacle to the participation of women, on equal terms with men, in the political, social, economic and cultural life of their countries, hampers the growth of the prosperity of society and the family and makes more difficult the full development of the potentialities of women in the service of their countries and of humanity,

Concerned that in situations of poverty women have the least access to food, health, education, training and opportunities for employment and other needs,

Convinced that the establishment of the new international economic order based on equity and justice will contribute significantly towards the promotion of equality between men and women,

Emphasizing that the eradication of apartheid, of all forms of racism, racial discrimination, colonialism, neo-colonialism, aggression, foreign occupation and domination and interference in the internal affairs of

States is essential to the full enjoyment of the rights of men and women,

Affirming that the strengthening of international peace and security, relaxation of international tension, mutual co-operation among all States irrespective of their social and economic systems, **general and complete disarmament, and in particular nuclear disarmament under strict and effective international control**, the affirmation of the principles of justice, equality and mutual benefit in relations among countries and the realization of the right of peoples under alien and colonial domination and foreign occupation to self-determination and independence, as well as respect for national sovereignty and territorial integrity, will promote social progress and development and as a consequence will contribute to the attainment of full equality between men and women,

Convinced that the full and complete development of a country, the welfare of the world and the cause of peace require the maximum participation of women on equal terms with men in all fields,

Bearing in mind the great contribution of women to the welfare of the family and to the development of society, so far not fully recognized, the social significance of maternity and the role of both parents in the family and in the upbringing of children, and aware that the role of women in procreation should not be a basis for discrimination but that the upbringing of children requires a sharing of responsibility between men and women and society as a whole,

Aware that a change in the traditional role of men as well as the role of women in society and in the family is needed to achieve full equality between men and women,

Determined to implement the principles set forth in the Declaration on the Elimination of Discrimination against Women and, for that purpose, to adopt the measures required for the elimination of such discrimination in all its forms and manifestations,

Have agreed on the following:

PART I

Article 1. For the purposes of the present Convention, the term "discrimination against women" shall mean any distinction, exclusion or restriction made on the basis of sex which has the effect or purpose of impairing or nullifying the recognition, enjoyment or exercise by women, irrespective of their marital status, on a basis of equality of men and women, of human rights and fundamental freedoms in the political, economic, social, cultural, civil or any other field.

Article 2. States Parties condemn discrimination against women in all its forms, agree to pursue by all appropriate means and without delay a policy of eliminating discrimination against women and, to this end, undertake:

- (a) To embody the principle of the equality of men and women in their national constitutions or other appropriate legislation if not yet incorporated therein and to ensure, through law and other appropriate means, the practical realization of this principle;
- (b) To adopt appropriate legislative and other measures, including sanctions where appropriate, prohibiting all discrimination against women;
- (c) To establish legal protection of the rights of women on an equal basis with men and to ensure through competent national tribunals and other public institutions the effective protection of women against any act of discrimination;
- (d) To refrain from engaging in any act or practice of discrimination

against women and to ensure that public authorities and institutions shall act in conformity with this obligation;

(e) To take all appropriate measures to eliminate discrimination against women by any person, organization or enterprise;

(f) To take all appropriate measures, including legislation, to modify or abolish existing laws, regulations, customs and practices which constitute discrimination against women;

(g) To repeal all national penal provisions which constitute discrimination against women.

Article 3. States parties shall take in all fields, in particular in the political, social, economic and cultural fields, all appropriate measures, including legislation, to ensure the full development and advancement of women, for the purpose of guaranteeing them the exercise and enjoyment of human rights and fundamental freedoms on a basis of equality with men.

Article 4. 1. Adoption by States Parties of temporary special measures aimed at accelerating de facto equality between men and women shall not be considered discrimination as defined in the present Convention, but shall in no way entail as a consequence the maintenance of unequal or separate standards; these measures shall be discontinued when the objectives of equality of opportunity and treatment have been achieved.

2. Adoption by States Parties of special measures, including those measures contained in the present Convention, aimed at protecting maternity shall not be considered discriminatory.

Article 5. States Parties shall take all appropriate measures:

(a) To modify the social and cultural patterns of conduct of men and women, with a view to achieving the elimination of prejudices and customary and all other

practices which are based on the idea of the inferiority or the superiority of either of the sexes or on stereotyped roles for men and women;

- (b) To ensure that family education includes a proper understanding of maternity as a social function and the recognition of the common responsibility of men and women in the upbringing and development of their children, it being understood that the interest of the children is the primordial consideration in all cases.

Article 6. States Parties shall take all appropriate measures, including legislation, to suppress all forms of traffic in women and exploitation of prostitution of women.

PART II

Article 7. States Parties shall take all appropriate measures to eliminate discrimination against women in the political and public life of the country and, in particular, shall ensure to women, on equal terms with men, the right:

- (a) To vote in all elections and public referenda and to be eligible for election to all publicly elected bodies;
- (b) To participate in the formulation of government policy and the implementation thereof and to hold public office and perform all public functions at all levels of government;
- (c) To participate in non-governmental organizations and associations concerned with the public and political life of the country.

Article 8. States Parties shall take all appropriate measures to ensure to women, on equal terms with men and without any discrimination, the

opportunity to represent their Governments at the international level and to participate in the work of international organizations.

Article 9. 1. States parties shall grant women equal rights with men to acquire, change or retain their nationality. They shall ensure in particular that neither marriage to an alien nor change of nationality by the husband during marriage shall automatically change the nationality of the wife, render her stateless or force upon her the nationality of the husband.

2. States Parties shall grant women equal rights with men with respect to the nationality of their children.

PART III

Article 10. States Parties shall take all appropriate measures to eliminate discrimination against women in order to ensure to them equal rights with men in the field of education and in particular to ensure, on a basis of equality of men and women:

- (a) The same conditions for career and vocational guidance, for access to studies and for the achievement of diplomas in educational establishments of all categories in rural as well as in urban areas; this equality shall be ensured in preschool, general, technical, professional and higher technical education, as well as in all types of vocational training;
- (b) Access to the same curricula, the same examinations, teaching staff with qualifications of the same standard and school premises and

- equipment of the same quality;
- (c) The elimination of any stereotyped concept of the roles of men and women at all levels and in all forms of education by encouraging coeducation and other types of education which will help to achieve this aim and, in particular, by the revision of textbooks and school programmes and the adaptation of teaching methods;
 - (d) The same opportunities to benefit from scholarships and other study grants
 - (e) The same opportunities for access to programmes of continuing education including adult and functional literacy programmes, particularly those aimed at reducing, at the earliest possible time, any gap in education existing between men and women;
 - (f) The reduction of female student drop-out rates and the organization of programmes for girls and women who have left school prematurely
 - (g) The same opportunities to participate actively in sports and physical education
 - (h) Access to specific educational information to help to ensure the health and well-being of families, including information and advice on family planning

Article 11. 1. States Parties shall take all appropriate measures to eliminate discrimination against women in the field of employment in order to ensure, on a basis of equality of men and women, the same rights, in particular:

- (a) The right to work as an inalienable right of all human beings;
- (b) The right to the same employment opportunities, including the application of the same criteria for selection in matters of employment;
- (c) The right to free choice of profession and employment, the right to

promotion, job security and all benefits and conditions of service and the right to receive vocational training and retraining, including apprenticeships, advanced vocational training and recurrent training

- (d) The right to equal remuneration, including benefits, and to equal treatment in respect of work of equal value, as well as equality of treatment in the evaluation of the quality of work
- (e) The right to social security, particularly in cases of retirement, unemployment, sickness, invalidity and old age and other incapacity to work, as well as the right to paid leave
- (f) The right to protection of health and to safety in working conditions, including the safeguarding of the function of reproduction

2. In order to prevent discrimination against women on the grounds of marriage or maternity and to ensure their effective right to work, States Parties shall take appropriate measures:

- (a) To prohibit, subject to the imposition of sanctions, dismissal on the grounds of pregnancy or of maternity leave and discrimination in dismissals on the basis of marital status;
- (b) To introduce maternity leave with pay or with comparable social benefits without loss of former employment, seniority or social allowances;
- (c) To encourage the provision of the necessary supporting social services to enable parents to combine family obligations with work responsibilities and participation in public life, in particular through promoting the establishment and development of a network of child-care facilities;

(d) To provide special protection to women during pregnancy in types of work proved to be harmful to them.

3. Protective legislation relating to matters covered in this article shall be reviewed periodically in the light of scientific and technological knowledge and shall be revised, repealed or extended as necessary.

Article 12. 1. States Parties shall take all appropriate measures to eliminate discrimination against women in the field of health care in order to ensure, on a basis of equality of men and women, access to health care services, including those related to family planning.

2. Notwithstanding the provisions of paragraph 1 of this article, States Parties shall ensure to women appropriate services in connection with pregnancy, confinement and the post-natal period, granting free services where necessary, as well as adequate nutrition during pregnancy and lactation.

Article 13. States Parties shall take all appropriate measures to eliminate discrimination against women in other areas of economic and social life in order to ensure, on a basis of equality of men and women, the same rights, in particular:

- (a) The right to family benefits;
- (b) The right to bank loans, mortgages and other forms of financial credit;
- (c) The right to participate in recreational activities, sports and all aspects of cultural life.

Article 14. 1. States Parties shall take into account the particular problems faced by rural women and the significant roles which rural women play in the economic survival of their families, including their work in the non-monetized sectors of the economy, and shall take all appropriate measures to ensure the application of the provisions of this Convention to women in rural areas.

2. States Parties shall take all appropriate measures to eliminate discrimination against women in rural areas in order to ensure, on a basis of equality of men and women, that they participate in and benefit from rural development and, in particular, shall ensure to such women the right:

- (a) To participate in the elaboration and implementation of development planning at all levels;
- (b) To have access to adequate health care facilities, including information, counselling and services in family planning;
- (c) To benefit directly from social security programmes;
- (d) To obtain all types of training and education, formal and non-formal, including that relating to functional literacy, as well as, inter alia, the benefit of all community and extension services, in order to increase their technical proficiency;
- (e) To organize self-help groups and co-operatives in order to obtain equal access to economic opportunities through employment or self-employment;
- (f) To participate in all community activities;
- (g) To have access to agricultural credit and loans, marketing facilities, appropriate technology and equal treatment in land and agrarian reform as well as in land resettlement schemes;
- (h) To enjoy adequate living conditions, particularly in relation to

housing, sanitation, electricity and water supply, transport and communications.

PART IV

Article 15. 1. States Parties shall accord to women equality with men before the law.

2. States Parties shall accord to women, in civil matters, a legal capacity identical to that of men and the same opportunities to exercise that capacity. In particular, they shall give women equal rights to conclude contracts and to administer property and shall treat them equally in all stages of procedure in courts and tribunals.

3. States Parties agree that all contracts and all other private instruments of any kind with a legal effect which is directed at restricting the legal capacity of women shall be deemed null and void.

4. States Parties shall accord to men and women the same rights with regard to the law relating to the movement of persons and the freedom to choose their residence and domicile.

Article 16. 1. States Parties shall take all appropriate measures to eliminate discrimination against women in all matters relating to marriage and family relations and in particular shall ensure, on a basis of equality of men and women:

(a) The same right to enter into marriage;

- (b) The same right freely to choose a spouse and to enter into marriage only with their free and full consent;
- (c) The same rights and responsibilities during marriage and at its dissolution;
- (d) The same rights and responsibilities as parents, irrespective of their marital status, in matters relating to their children; in all cases the interests of the children shall be paramount;
- (e) The same rights to decide freely and responsibly on the number and spacing of their children and to have access to the information, education and means to enable them to exercise these rights;**
- (f) The same rights and responsibilities with regard to guardianship, wardship, trusteeship and adoption of children, or similar institutions where these concepts exist in national legislation; in all cases the interests of the children shall be paramount;
- (g) The same personal rights as husband and wife, including the right to choose a family name, a profession and an occupation;
- (h) The same rights for both spouses in respect of the ownership, acquisition, management, administration, enjoyment and disposition of property, whether free of charge or for a valuable consideration.

2. The betrothal and the marriage of a child shall have no legal effect, and all necessary action, including legislation, shall be taken to specify a minimum age for marriage and to make the registration of marriages in an official registry compulsory.

PART V

Article 17. 1. For the purpose of considering the progress made in the implementation of the present Convention, there shall be established a Committee on the Elimination of Discrimination against Women (hereinafter referred to as the Committee) consisting, at the time of entry into force of the Convention, of eighteen and, after ratification of or accession to the Convention by the thirty-fifth State Party, of **twenty-three experts of high moral standing and competence in the field covered by the Convention.**

The experts shall be elected by States Parties from among their nationals and shall serve in their personal capacity, consideration being given to equitable geographical distribution and to the representation of the different forms of civilization as well as the principal legal systems.

2. The members of the Committee shall be elected by secret ballot from a list of persons nominated by States Parties. Each State Party may nominate one person from among its own nationals.

3. The initial election shall be held six months after the date of the entry into force of the present Convention. At least three months before the date of each election the Secretary-General of the United Nations shall address a letter to the States Parties inviting them to submit their nominations within two months. The Secretary-General shall prepare a list in alphabetical order of all persons thus nominated, indicating the States Parties which have nominated them, and shall submit it to the States Parties.

4. Elections of the members of the Committee shall be held at a meeting of States Parties convened by the Secretary-General at United Nations Headquarters. At that meeting, for which two thirds of the States Parties

shall constitute a quorum, the persons elected to the Committee shall be those nominees who obtain the largest number of votes and an absolute majority of the votes of the representatives of States Parties present and voting.

5. The members of the Committee shall be elected for a term of four years. However, the terms of nine of the members elected at the first election shall expire at the end of two years; immediately after the first election the names of these nine members shall be chosen by lot by the Chairman of the Committee.

6. The election of the five additional members of the Committee shall be held in accordance with the provisions of paragraphs 2, 3 and 4 of this article, following the thirty-fifth ratification or accession. The terms of two of the additional members elected on this occasion shall expire at the end of two years, the names of these two members having been chosen by lot by the Chairman of the Committee.

7. For the filling of casual vacancies, the State Party whose expert has ceased to function as a member of the Committee shall appoint another expert from among its nationals, subject to the approval of the Committee.

8. The members of the Committee shall, with the approval of the General Assembly, receive emoluments from United Nations resources on such terms and conditions as the Assembly may decide, having regard to the importance of the Committee's responsibilities.

9. The Secretary-General of the United Nations shall provide the necessary

staff and facilities for the effective performance of the functions of the Committee under the present Convention.

Article 18. 1. States Parties undertake to submit to the Secretary-General of the United Nations, for consideration by the Committee, a report on the legislative, judicial, administrative or other measures which they have adopted to give effect to the provisions of the present Convention and on the progress made in this respect:

- (a) Within one year after the entry into force for the State concerned;
and
- (b) Thereafter at least every four years and further whenever the Committee so requests.

2. Reports may indicate factors and difficulties affecting the degree of fulfillment of obligations under the present Convention.

Article 19. 1. The Committee shall adopt its own rules of procedure.

2. The Committee shall elect its officers for a term of two years.

Article 20. 1. The Committee shall normally meet for a period of not more than two weeks annually in order to consider the reports submitted in accordance with article 18 of the present Convention.

2. The meetings of the Committee shall normally be held at United Nations Headquarters or at any other convenient place as determined by the Committee.

Article 21. 1. The Committee shall, through the Economic and Social

Council, report annually to the General Assembly of the United Nations on its activities and may make suggestions and general recommendations based on the examination of reports and information received from the States Parties. Such suggestions and general recommendations shall be included in the report of the Committee together with comments, if any, from States Parties.

2. The Secretary-General shall transmit the reports of the Committee to the Commission on the Status of Women for its information.

Article 22. The specialized agencies shall be entitled to be represented at the consideration of the implementation of such provisions of the present Convention as fall within the scope of their activities. The Committee may invite the specialized agencies to submit reports on the implementation of the Convention in areas falling within the scope of their activities.

PART VI

Article 23. Nothing in this Convention shall affect any provisions that are more conducive to the achievement of equality between men and women which may be contained:

- (a) In the legislation of a State Party; or**
- (b) In any other international convention, treaty or agreement in force for that State.**

Article 24. States Parties undertake to adopt all necessary measures at the national level aimed at achieving the full realization of the rights recognized in the present Convention.

Article 25. 1. The present Convention shall be open for signature by all States.

2. The Secretary-General of the United Nations is designated as the depository of the present Convention.

3. The present Convention is subject to ratification. Instruments of ratification shall be deposited with the Secretary-General of the United Nations.

4. The present Convention shall be open to accession by all States. Accession shall be effected by the deposit of an instrument of accession with the Secretary-General of the United Nations.

Article 26. 1. A request for the revision of the present Convention may be made at any time by any State Party by means of a notification in writing addressed to the Secretary-General of the United Nations.

2. The General Assembly of the United Nations shall decide upon the steps, if any, to be taken in respect of such a request.

Article 27. 1. The present Convention shall enter into force on the thirtieth day after the date of deposit with the Secretary-General of the United Nations of the twentieth instrument of ratification or accession.

2. For each State ratifying the present Convention or acceding to it after the deposit of the twentieth instrument of ratification or accession, the Convention shall enter into force on the thirtieth day after the date of

the deposit of its own instrument of ratification or accession.

Article 28. 1. The Secretary-General of the United Nations shall receive and circulate to all States the text of reservations made by States at the time of ratification or accession.

2. A reservation incompatible with the object and purpose of the present Convention shall not be permitted.

3. Reservations may be withdrawn at any time by notification to this effect addressed to the Secretary-General of the United Nations, who shall then inform all States thereof. Such notification shall take effect on the date on which it is received.

Article 29. 1. Any dispute between two or more States Parties concerning the interpretation or application of the present Convention which is not settled by negotiation shall, at the request of one of them, be submitted to arbitration. If within six months from the date of the request for arbitration the parties are unable to agree on the organization of the arbitration, any one of those parties may refer the dispute to the International Court of Justice by request in conformity with the Statute of the Court.

2. Each State Party may at the time of signature or ratification of this Convention or accession thereto declare that it does not consider itself bound by paragraph 1 of this article. The other States Parties shall not be bound by that paragraph with respect to any State Party which has made such a reservation.

3. Any State Party which has made a reservation in accordance with paragraph 2 of this article may at any time withdraw that reservation by notification to the Secretary-General of the United Nations.

Article 30. The present Convention, the Arabic, Chinese, English, French, Russian and Spanish texts of which are equally authentic, shall be deposited with the Secretary-General of the United Nations.

IN WITNESS WHEREOF the undersigned, duly authorized, have signed the present Convention.

This objective is to establish a comprehensive interdisciplinary framework of principles related to ethical governance, to propose principle-based decision making and education, and to recommend policy formation and implementation based on this framework of principles. The following interdependent objectives will assist in the realization of this general objective.

1. Prepare a comprehensive interdisciplinary framework of principles related to ethical governance; these principles will be drawn from a discourse analysis of a sampling from different disciplines, and drawn from a content analysis of international agreements.
2. Determine what would constitute adherence to and fulfillment of these principles contained within the comprehensive interdisciplinary framework.
3. Delineate the significant dilemmas found within the complexity of ethical governance, meaningful participation by civil society, and policy formation and implementation.
4. Discern and clarify the systemic constraints preventing adherence to and fulfillment of these principles, and contributing to non-compliance with obligations and expectations.

5. Recommend the formation and implementation of mechanisms for overcoming individual, institutional and governmental systemic constraints.

6. Place a collaborative principle-based decision making process within the comprehensive interdisciplinary framework of principles.

7. Broaden and foster the understanding and the appreciation of the complexity and interdependence of legal principle and ethical governance through development of programs for educators in the areas of judicial, administrators and public education.

In the “Charter of Obligations” (J. Russow (1995) , Charter of Obligations, Global Compliance Research project), a preliminary (i) content analysis of some of the international agreements, (ii) delineation of systemic constraints, (iii) development for principle-based decision making and education have been documented. The proposed research in ethical governance carries this preliminary research further, and builds on a previous literature review in interdisciplinary studies.

This project will provide a comprehensive synthesis of principles, and will carry the project past the synthesis of principles to the determining of what would constitute adherence to principles in policy formation and implementation related to ethical governance. It is essential to become aware of the principles but it is equally essential to understand what would constitute compliance. The development of a foundation of principles provides touchstones pursuant to which policy formation and implementation derive consistency. Finally, the project will develop material for educational purposes in order that judicial, administrative and public knowledge and skills will be developed, leading to the increased application of international principles in decision-making. This is a crucial component in the development of the institutional memory and skills referred to above. It is increasingly recognized that principles are dysfunctional without the addition of application and monitoring mechanisms. The knowledge and skills involved in programs of judicial, administrative and public education are required in order to ensure that application and monitoring occur and that support for this work CONTINUES.

Thank you for your comprehensive email of December 13, 1996.

Your contribution and comments on the United Nations Commission on Sustainable Development (CSD) Canadian National Country Profile was greatly appreciated.

I thought that it would be better for me to release the information; which I did.

After years of going through numerous channels in 2023, I still do not know the reason for my being put on this list. I believe that, over the years, I have engaged in legitimate dissent so I decided to compile a document in the form of an affidavit and dedicate it the RCMP and let the reader determine if I have been a threat; and if so, to whom?

1997 Jan 27

OUTLINE

CHARTER OF RESOLUTIONS: OBLIGATIONS AND EXPECTATIONS

RESOLUTIONS FOR MOVING TO A CULTURE OF PEACE

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member States of the United Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and the fulfilling of expectations.

For over fifty years through international agreements, the member States of the United Nations have undertaken: to promote and fully guarantee respect for human rights; to ensure the preservation and protection of the environment; to create a global structure that respects the rule of law, to achieve a state of peace; justice and security, and to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions. If these years of obligations had been discharged, and if these fifty years of expectations had been fulfilled, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In international agreements, member States of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations through enacting the necessary legislation and through enforcing this legislation.

Expectations that have been created from General Assembly Resolutions, Declarations and Conference Action plans could be judicable under the Doctrine of Legitimate Expectation. The doctrine of legitimate expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

This Charter delineates a series of principles drawn from international agreements, and couples this series with additional principles suggested by non-governmental organization. Non-governmental Organization principles are included as a reflection of a new development in United Nations Conferences. In the Habitat II Conference a second committee had been set up to receive input from “partners” one of whom was the non-governmental organization community, and for the first time a report from the NGOs was included in the official documentation to be circulated by the United Nations.

This Charter comprises resolutions with the preambular clauses drawn from International instruments, and international NGO agreements; and with the operative clauses drawn from specific issue-focus groups and from resolutions of different organizations. In this document, principles are enunciated and some of the actions that would need to be undertaken to ensure fulfillment of these principles have been proposed. This document delineate further what would constitute compliance with the principles.

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

On June 2, the Secretary General of the Habitat Conference, Dr. Wally N’Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment- ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction and continuing human misery - many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet when called upon to seriously address the urgency by rejecting old recipes, many States lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of States to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions, Conference Action Plans and Declarations

The failure of States to sign instruments, to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation

The failure of States to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens, to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice and the reluctance of States to revoke the charters of corporations for failing to adhere to these standards

The failure on the part of States to accept the authority of international bodies reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The fact that there is no clear agreement on the relationship between the authority of international bodies and sovereign States.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past

REDUCTION OF GLOBAL MILITARY BUDGET AND TRANSFER OF THE FUNDS TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Cities will be habitable when there is the international political will to make fundamental global change to provide for essential needs. Both humans and ecosystems have basic identifiable needs for survival and quality of life and function.

Concerned that currently (1996) the Global Community spends \$860 billion on the military budget at a time when the right to housing, the right to food, the right to health care, the right to equality of all, the right to education, the right to safe drinking water, and the right to a safe environment have not been fulfilled

Noting that the commitment was made to transfer a substantial proportion of the military budget to social programs (as undertaken through expectations created in general Assembly resolutions from 1981)

Noting also that in 1981, in general assembly resolution entitled the reduction of the military budget, the majority of the member States did the following:

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries

Reminded that this request for transfer of the funds from the military budget was further reinforced in a 1983 General Resolution on the Relationship between disarmament and development, that curbing the arms build-up would make it possible to release additional

resources for use in economic and social development, particularly for the benefit of the developing countries. Also in this resolution state, considered that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order.

We call upon the member States of the United Nations:

- to immediately reduce the military budget to 50% of what it currently is and to transfer these funds into socially equitable and environmentally sound development
- to embark on plans for military conversion with the remaining 50%, and with the setting up of alternative structures for preventing conflict and war through an international regime that respects the rule of international law, and through establishing an international court of compliance where citizens could take evidence of state non-compliance with international law

AFFIRMATION OF THE NEED TO PROMOTE THE INTERDEPENDENCE OF ISSUES

Welcoming the appreciation of the interdependence of issues as expressed in the preamble of the International Conference on Population and Development:

“The 1994 conference was explicitly given a broader mandate on development issues than previous population conferences, reflecting the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation” (Preamble, 1.5., International Conference on Population and Development, 1994).

Welcoming also the recognition in the Convention on Prevention of Natural Disasters that

“The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation

will significantly enhance our ability to achieve real progress in **preventing** *mitigating* disasters through the transfer of **Best Ecologically Sound Techniques** *technology* and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral

and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention to Prevent Natural Disasters, 1994).

Welcoming also the additional recognition of the interdependence of issues reflected in the Convention to Combat Desertification when States have undertaken to bear in mind “ the relationship between desertification and other environmental problems of global dimension facing the international and national communities, the Parties shall encourage the coordination of activities carried out under this Convention and, if they are Parties to them, under other relevant international agreements, particularly the United Nations Framework Convention on Climate Change and the Convention on Biological Diversity, in order to derive maximum benefit from activities under each agreement while avoiding duplication of effort. The Parties shall encourage the conduct of joint programmes, particularly in the fields of research, training, systematic observation and information collection and exchange, to the extent that such activities may contribute to achieving the objectives of the agreements (United Nations Convention to Combat, Desertification Article 1, 1994)

Noting the recommendation in ... SEE UNESCO DOCUMENT

We call upon States:

- **to support the consideration of the interdependence of issues related to Peace, human rights, social justice, environment, and socially equitable and environmentally sound development**
- **to undertake , as recommended in the International Conference on Population and Development research** on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994)

DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS

Concurring with the United Nations Charter that “to maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international

disputes or situations which might lead to a breach of the peace” (Article 1, United Nations Charter)

Recalling that under the terms of the Charter of the United Nations the peoples have declared themselves determined:

- to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind [humanity];
- to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and
- to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained...
- to unite our strength to maintain international peace and security...

NOTING for over fifty years, since the formation of the United Nations, member States of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations and Resolutions,

Convinced that if these fifty years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Concerned that unfortunately many States have not as yet signed conventions, treaties and covenants, others have signed but not ratified them, and others have failed to enact the necessary legislation to ensure the discharging of their obligations

Cognizant that 1999 is the culmination of the decade devoted to the furtherance of international law

We call upon member States of the United Nations:

- to sign and ratify all existing international agreements, enact the necessary legislation to ensure compliance and ensure the discharging of their obligations.
- to formalize the undertaking to discharge obligations in a General Assembly Resolution on the 52 sitting of the General Assembly, on October 25, 1997
- to ensure that these obligations are fully discharged before October 1999 in celebration of the culmination of the decade devoted to the furtherance of international law

FORMATION OF AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE

Reminded that the International Court of Justice provides only for state participation

Convinced that an incentive for the discharging of obligations and for the fulfilling of expectations could be an international forum where citizens could take evidence of state non-conformance

Noting that international agreements such as the International Covenant of Civil and Political Rights provides for the opportunity for citizens, after exhausting domestic remedies, to submit cases to an international body

We call upon the member States of the United Nations:

- to agree to the formation of an International Court of Compliance where citizens could take evidence of state non-compliance

TABLE OF CONTENTS

(NOTE: THIS TABLE OF CONTENTS CONTAINS ONLY THE TITLE OF THE RESOLUTION. THE CHARTER OF RESOLUTIONS IS OVER 200 PAGES)

COLLECTION OF RESOLUTIONS WITH PREAMBULAR SECTIONS DRAWN FROM INTERNATIONAL OBLIGATIONS INCURRED THROUGH THE U.N. CHARTER, CONVENTIONS, TREATIES, AND COVENANTS , AND THROUGH EXPECTATIONS CREATED THROUGH

DECLARATIONS, GENERAL ASSEMBLY RESOLUTIONS, AND CONFERENCE ACTION PLANS (IN SOME CASES FROM INTERNATIONAL NGOS) . OPERATIVE CLAUSES ARE DRAWN PRIMARILY FROM NGO DOCUMENTS.

PRINCIPLES REFLECTED IN INTERNATIONAL AGREEMENTS: OBLIGATIONS INCURRED AND LEGITIMATE EXPECTATIONS CREATED

PREAMBLE

A CALL TO ACTION

RESOLUTION: UNDERSTANDING THE INTERDEPENDENCE OF ISSUES SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: CONDEMNATION OF THE UNSUSTAINABLE PATTERN OF CONSUMPTION, AND PROVIDING FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: ENDORSEMENT OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: REDEFINITION OF "DEVELOPMENT" IN EQUITABLE AND ECOLOGICAL TERMS

*RESOLUTION: REDEFINITION OF WHAT CONSTITUTES GLOBAL SECURITY
(COMMON SECURITY LINKING PEACE, ENVIRONMENT AND SOCIAL JUSTICE)

SOCIAL JUSTICE, AND EQUITY
AND SECURITY

RESOLUTION: GUARANTEEING THE RIGHT TO SECURITY INCLUDING
GUARANTEED ANNUAL INCOME SUPPLEMENT

RESOLUTION : FULFILLING THE RIGHT TO BASIC NEEDS

RESOLUTION: PREVENTION OF POVERTY THROUGH FULFILLING BASIC NEEDS,
PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING
HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND
PREVENTING WAR AND CONFLICT

RESOLUTION: GUARANTEEING THE RIGHT TO FOOD

RESOLUTION: THE PROMOTION OF ORGANIC AGRICULTURE THROUGH
REGULATIONS AND EDUCATION, AND PHASING OUT THE USE OF CHEMICAL
PESTICIDES

RESOLUTION: ENSURING THE RIGHT TO SHELTER

RESOLUTION: GUARANTEEING THE RIGHT TO SHELTER

RESOLUTION: ENSURING THE RIGHT TO SAFE DRINKING WATER,
FIND UNCED AND HABITAT II

RESOLUTION: GUARANTEEING THE RIGHT TO UNIVERSAL HEALTH CARE

*RESOLUTION: INSTITUTING PREVENTIVE HEALTH CARE

RESOLUTION: PERTAINING TO STANDARDS FOR ELECTROMAGNETIC RADIATION (EMR)

RESOLUTION: GUARANTEEING THE RIGHT TO WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK

*RESOLUTION: PREVENTION OF CRIME THROUGH SOCIAL PROGRAMS

ENVIRONMENT AND HEALTH

RESOLUTION: ELIMINATION, PREVENTION AND REDUCTION OF HEALTH AND ENVIRONMENT HAZARDS

RESOLUTION: BANNING OF GENETICALLY ENGINEERED FOOD, AND IRRADIATED FOOD (See Dr. FAGAN'S, Dr. Cummins MATERIAL)

RESOLUTION: BANNING OF GENETICALLY MODIFIED ORGANISM

RESOLUTION: BANNING THE PATENTING OF HUMAN GENES

RESOLUTION: LIMITATION AND CONTROL OF BIOTECHNOLOGY

RESOLUTION: SUPPORTING OF ALTERNATIVE MEDICINE

RESOLUTION: RESPECTING THE WISDOM OF INDIGENOUS KNOWLEDGE

RESOLUTION REDEFINING FOOD GUIDE STANDARDS

RESOLUTION: PROMOTION THE HIGHEST ATTAINABLE STANDARDS OF PHYSICAL, MENTAL AND ENVIRONMENTAL HEALTH

RESOLUTION: PROTECTION AGAINST PRODUCTS HARMFUL TO HEALTH AND THE ENVIRONMENT:

RESOLUTION: ELIMINATING ENVIRONMENTALLY INDUCED DISEASES (+)

RESOLUTION: LIMITING AND MONITORING REPRODUCTIVE TECHNOLOGIES

RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

*RESOLUTION: PERMITTING EUTHANASIA UNDER LIMITED CONDITIONS

*RESOLUTION: DEVELOPMENT OF CRITERIA FOR DETERMINING MEDICAL CHOICES

RESOLUTION: GUARANTEEING THE RIGHT TO SAFE, HEALTHY AND ENVIRONMENTALLY SOUND WORKING CONDITIONS

NATURE, ENVIRONMENT AND
SOCIAALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: RECOGNIZING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

RESOLUTION: ENSURING THE ETHICAL TREATMENT OF ANIMALS

RESOLUTION: ENSURING THE PREVENTION OF DISASTERS INCLUDING NATURAL AND TECHNOLOGICAL DISASTERS

RESOLUTION: INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

RESOLUTION: INVOKING THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

RESOLUTION: ENSURING THE IMPLEMENTATION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

RESOLUTION: ENFORCEMENT OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)

RESOLUTION: REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

RESOLUTION: THE INSTITUTION OF ENVIRONMENTAL MEASURES, INCLUDING RESPECTING THE CARRYING CAPACITY OF ECOSYSTEM

RESOLUTION: PREVENTING THE TRANSFERENCE TO OTHER States OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION

RESOLUTION: ELIMINATION OF TOXIC, HAZARDOUS AND NUCLEAR WASTES

RESOLUTION: BANNING OF PERSISTENT ORGANIC POLLUTANTS

*RESOLUTION: ENSURING ZERO EMISSION DISCHARGES

EXTEND THIS RESOLUTON TO INTERNATIONAL STATISTICS

*RESOLUTION: INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

*RESOLUTION: ELIMINATION OF THE PRODUCTION AND CONSUMPTION OF OZONE DEPLETING SUBSTANCES

RESOLUTION: PREVENTION OF CLIMATE CHANGE THROUGH ELIMINATION AND REDUCTION OF GREENHOUSE GAS EMISSIONS

RESOLUTION ON CLIMATE CHANGE: PROTECTING CARBON SINKS AND 1988 CHANGING ATMOSPHERE CONFERENCE (STRONGER THAN THE FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992)

RESOLUTION : GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY

RESOLUTION: PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS

CONSERVATION, BIODIVERSITY AND FORESTS

RESOLUTION : GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY

RESOLUTION: ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: BANNING clear-cutting THROUGH INTERPRETATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: ENSURING THAT THE BIODIVERSITY CONVENTION APPLIES TO ALL LANDS (PRIVATE AND PUBLIC)

RESOLUTION: IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

RESOLUTION: BANNING THE EXPORT OF RAW LOGS

GREEN SPACES, PARKS AND CONSERVATION

RESOLUTION: THE PRESERVATION AND PROTECTION OF GREEN SPACES

RESOLUTION: PROTECTING ENDANGERED SPECIES AND HABITATS

RESOLUTION: DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES

RESOLUTION: ENSURING ADEQUATE SIZE OF PARKS INCLUDING CONSERVATION CORRIDORS TO PROTECT BIODIVERSITY

MARINE, AND FRESH WATER ORGANISMS

RESOLUTION: PROTECTION OF FISH STOCKS

RESOLUTION: RATIFICATION OF THE LAW OF THE SEAS

RESOLUTION: PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

RESOLUTION: PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)

RESOLUTION: ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT

RESOLUTION: ESTABLISHMENT OF MARINE PROTECTED AREAS -

RESOLUTION: MANDATORY WATER CONSERVATION

ENVIRONMENT, TRANSPORTATION AND ENERGY

RESOLUTION: ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY

RESOLUTION: PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -

RESOLUTION: DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION

RESOLUTION: PROMOTING AND ENSURING ENVIRONMENTALLY SOUND TRANSPORTATION, AND ENVIRONMENTALLY SOUND ENERGY

ENVIRONMENTALLY SOUND ENERGY

RESOLUTION: DEVELOPING ENVIRONMENTALLY SOUND ENERGY

RESOLUTION PROVIDING FOR 100% ENVIRONMENTALLY SOUND ENERGY SOURCES BY 1999

RESOLUTION: REQUIRING THE CONSERVATION OF ENERGY

*RESOLUTION: REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE

*RESOLUTION: CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES

*RESOLUTION: MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASES INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY

*RESOLUTION: REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY

ENVIRONMENTALLY SOUND PRACTICES

RESOLUTION: REQUIRING ENVIRONMENTAL SOUND PRACTICES

RESOLUTION: THE REQUIREMENT OF BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES

RESOLUTION: ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS APPLY TO FOREIGN POLICY RELATED TO ENVIRONMENTALLY SOUND PRACTICES

RESOLUTION: STRENGTHENING AND PROMOTING TRADITIONAL PRACTICES

EQUITABLE AND ENVIRONMENTALLY
SOUND FINANCE

RESOLUTION: CANCELING DEBT/DEBT FORGIVENESS AND REPARATION

RESOLUTION: ENSURING THAT .07% OF GNP (U.N. UNDERTAKING) FOR FOREIGN "REPARATION"

RESOLUTION: CONVERTING VESTED ECONOMIC INTEREST GATT TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES

RESOLUTION: CONDEMNING SHIFT FOREIGN AID POLICY FROM INTERNATIONAL CO-OPERATION AND HELPING THE POOR TO A SELF-INTERESTED STRATEGY TO BENEFIT STATE BUSINESS.

RESOLUTION: LIMITING FOREIGN AID TO ENVIRONMENTALLY SOUND PROJECTS

RESOLUTION: PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN

RESOLUTION: REQUIRING ADHERENCE TO THE trans-boundary PRINCIPLE BY PREVENTING ALL ENVIRONMENTALLY UNSOUND ACTIVITIES

RESOLUTION: THE REQUIREMENT OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE

RESOLUTION: ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE, AND DEVELOPMENT ASSISTANCE

RESOLUTION: REDUCTION OF ENVIRONMENTALLY HARMFUL SUBSIDIES

RESOLUTION: ELIMINATION OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY

MILITARY CONVERSION AND TRANSFER FUNDS
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: REDUCTION AND TRANSFER OF THE MILITARY BUDGET
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: INSTITUTING MILITARY CONVERSION

RESOLUTION: ELIMINATING URANIUM MINING

RESOLUTION: ELIMINATING THE PRODUCTION OF WEAPONS OF MASS
DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL

RESOLUTION: PREVENTING NUCLEAR CATASTROPHE THROUGH THE
ELIMINATION OF NUCLEAR WEAPONS

RESOLUTION: REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR

*RESOLUTION: ELIMINATION OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999
(CROSS REFERENCE WITH RESOLUTION RELATED TO THE CESSATION OF CIVIL ...)

*RESOLUTION: PROHIBITION OF THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES

*RESOLUTION: UNDERTAKING NOT TO MODIFY THE ENVIRONMENT FOR MILITARY PURPOSES

RESOLUTION: IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS

• RESOLUTION: BANNING THE TESTING OF NUCLEAR WEAPONS

RESOLUTION: RECOGNITION OF THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY

* RESOLUTION: MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.

RESOLUTION: CESSATION OF PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)

RESOLUTION: REDUCTION OF CONVENTIONAL WEAPONS

PREAMBLE: FIND CONVENTION ON CONVENTIONAL WEAPONS

RESOLUTION: INSTITUTING REGULATIONS FOR GUN CONTROL

RESOLUTION: REDUCTION AND TRANSFER OF THE MILITARY BUDGET TO
 SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

* RESOLUTION: PROTECTING AND PROVIDING FOR CONSCIENTIOUS
 OBJECTORS

RESOLUTION: SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS
 PEACE WITH JUSTICE

RESOLUTION: PROMOTING CIVILIAN RULE

RESOLUTION: UNDERTAKING NOT TO MODIFY THE ENVIRONMENT FOR
 MILITARY PURPOSES

SEE CONVENTION

RESOLUTION: ELIMINATION OF THE PRODUCTION OF WEAPONS OF MASS
 DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999

HUMAN RIGHTS AND RESPONSIBILITIES

RESOLUTION: PREVENTING GENOCIDE

OUTLINE

CHARTER OF RESOLUTIONS: OBLIGATIONS AND EXPECTATIONS

RESOLUTIONS FOR MOVING TO A CULTURE OF PEACE

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member States of the United Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified and through enacting the necessary legislation to ensure the discharging of obligations and the fulfilling of expectations.

For over fifty years, through international agreements, the member States of the United Nations have undertaken: to promote and fully guarantee respect for human rights; to ensure the preservation and protection of the environment; to create a global structure that respects the rule of law, to achieve a state of peace, justice and security and to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions. If these years of obligations had been discharged and if these fifty years of expectations had been fulfilled, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved and socially equitable and environmentally sound development could have been enabled.

In international agreements, member States of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations through enacting the necessary legislation and through enforcing this legislation.

Expectations that have been created from General Assembly Resolutions, Declarations and Conference Action plans could be judicable under the Doctrine of Legitimate Expectation. The doctrine of legitimate expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

“To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies” (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

This Charter delineates a series of principles drawn from international agreements, and couples this series with additional principles suggested by non-governmental organization. Non-governmental Organization principles are included as a reflection of a new development in United Nations Conferences. In the Habitat II Conference a second committee had been set up to receive input from “partners” one of whom was the non-governmental organization community, and for the first time a report from the NGOs was included in the official documentation to be circulated by the United Nations.

This Charter comprises resolutions with the preambular clauses drawn from International instruments and international NGO agreements and with the operative clauses drawn from specific issue-focus groups and from resolutions of different organizations. In this document, principles are enunciated and some of the actions that

would need to be undertaken to ensure fulfillment of these principles have been proposed. This document delineates further what would constitute compliance with the principles.

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

On June 2, the Secretary General of the Habitat Conference, Dr. Wally N'Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment- ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction, and continuing human misery - many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet, when called upon to seriously address the urgency by rejecting old recipes, many States lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of States to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions, Conference Action Plans and Declarations.

The failure of States to sign instruments, to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation.

The failure of States to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens; to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice and the reluctance of States to revoke the charters of corporations for failing to adhere to these standards.

The failure on the part of States to accept the authority of international bodies reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The fact that there is no clear agreement on the relationship between the authority of international bodies and sovereign States.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past.

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past.

REDUCTION OF GLOBAL MILITARY BUDGET AND TRANSFER OF THE FUNDS TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Cities will be habitable when there is the international political will to make fundamental global change to provide for essential needs. Both humans and ecosystems have basic identifiable needs for survival and quality of life and function.

Concerned that currently (1996) the Global Community spends \$860 billion on the military budget at a time when the right to housing, the right to food, the right to health care, the right to equality of all, the right to education, the right to safe drinking water, and the right to a safe environment have not been fulfilled.

Noting that the commitment was made to transfer a substantial proportion of the military budget to social programs (as undertaken through expectations created in general Assembly resolutions from 1981)

Noting also that in 1981, in general assembly resolution entitled the reduction of the military budget, the majority of the member States did the following:

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries

Reminded that this request for transfer of the funds from the military budget was further reinforced in a 1983 General Resolution on the Relationship between disarmament and development; that curbing the arms build-up would make it possible to release additional resources for use in economic and social development; particularly for the benefit of the developing countries. Also, in this resolution state, considered that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order.

We call upon the member States of the United Nations

- to immediately reduce the military budget to 50% of what it currently is and to transfer these funds into socially equitable and environmentally sound development
- to embark on plans for military conversion with the remaining 50%, and with the setting up of alternative structures for preventing conflict and war through an international regime that respects the rule of international law, and through establishing an international court

of compliance where citizens could take evidence of state non-compliance with international law

AFFIRMATION OF THE NEED TO PROMOTE THE INTERDEPENDENCE OF ISSUES

Welcoming the appreciation of the interdependence of issues as expressed in the preamble of the International Conference on Population and Development:

“The 1994 conference was explicitly given a broader mandate on development issues than previous population conferences, reflecting the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation”. (Preamble, 1.5., International Conference on Population and Development, 1994)

Welcoming also the recognition in the Convention on Prevention of Natural Disasters that

“The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to save human lives, since natural disasters do not respect borders. Regional and international cooperation will significantly enhance our ability to achieve real progress in **preventing mitigating** disasters through the transfer of **Best Ecologically Sound Techniques technology** and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts” (3 a Convention to Prevent Natural Disasters, 1994).

Welcoming also the additional recognition of the interdependence of issues reflected in the Convention to Combat Desertification when States have undertaken to bear in mind “ the relationship between desertification and other environmental problems of global dimension facing the international and national communities, the Parties shall encourage the coordination of activities carried out under this Convention and, if they are Parties to them, under other relevant international agreements, particularly the United Nations Framework Convention on Climate Change and the Convention on Biological Diversity, in order to derive maximum benefit from activities under each agreement while avoiding duplication of effort. The Parties shall encourage the conduct of joint programmes,

particularly in the fields of research, training, systematic observation and information collection and exchange, to the extent that such activities may contribute to achieving the objectives of the agreements” (United Nations Convention to Combat, Desertification Article 1, 1994)

Noting the recommendation in ... SEE UNESCO DOCUMENT

We call upon States,

- **to support the consideration of the interdependence of issues related to Peace, human rights, social justice, environment, and socially equitable and environmentally sound development**
- **to undertake , as recommended in the International Conference on Population and Development research** on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994

DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS

Concurring with the United Nations Charter that “to maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace” (Article 1, United Nations Charter),

Recalling that under the terms of the Charter of the United Nations the peoples have declared themselves determined:

- to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind [humanity];
- to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

- to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained...
- to unite our strength to maintain international peace and security...

NOTING for over fifty years, since the formation of the United Nations, member States of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations and Resolutions,

Convinced that, if these fifty years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled,

Concerned that, unfortunately many States have not as yet signed conventions, treaties and covenants, others have signed but not ratified them, and others have failed to enact the necessary legislation to ensure the discharging of their obligations.

Cognizant that, 1999 is the culmination of the decade devoted to the furtherance of international law

We call upon member States of the United Nations:

- to sign and ratify all existing international agreements, enact the necessary legislation to ensure compliance and ensure the discharging of their obligations.
- to formalize the undertaking to discharge obligations in a General Assembly Resolution on the 52 sitting of the General Assembly, on October 25, 1997
- to ensure that these obligations are fully discharged before October 1999 in celebration of the culmination of the decade devoted to the furtherance of international law.

FORMATION OF AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE

Reminded that the International Court of Justice provides only for state participation

Convinced that an incentive for the discharging of obligations and for the fulfilling of expectations could be an international forum where citizens could take evidence of state non-conformance

Noting that international agreements such as the International Covenant of Civil and Political Rights provides for the opportunity for citizens, after exhausting domestic remedies, to submit cases to an international body

We call upon the member States of the United Nations:

- to agree to the formation of an International Court of Compliance where citizens could take evidence of state non-compliance

TABLE OF CONTENTS

(NOTE: THIS TABLE OF CONTENTS CONTAINS ONLY THE TITLE OF THE RESOLUTION. THE CHARTER OF RESOLUTIONS IS OVER 200 PAGES)

COLLECTION OF RESOLUTIONS WITH PREAMBULAR SECTIONS DRAWN FROM INTERNATIONAL OBLIGATIONS INCURRED THROUGH THE UN CHARTER, CONVENTIONS, TREATIES, AND COVENANTS , AND THROUGH EXPECTATIONS CREATED THROUGH

DECLARATIONS, GENERAL ASSEMBLY RESOLUTIONS, AND CONFERENCE ACTION PLANS (IN SOME CASES FROM INTERNATIONAL NGOS) . OPERATIVE CLAUSES ARE DRAWN PRIMARILY FROM NGO DOCUMENTS.

PRINCIPLES REFLECTED IN INTERNATIONAL AGREEMENTS: OBLIGATIONS INCURRED AND LEGITIMATE EXPECTATIONS CREATED

PREAMBLE

A CALL TO ACTION

RESOLUTION: UNDERSTANDING THE INTERDEPENDENCE OF ISSUES

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: CONDEMNATION OF THE UNSUSTAINABLE PATTERN OF CONSUMPTION, AND PROVIDING FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: ENDORSEMENT OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: REDEFINITION OF "DEVELOPMENT" IN EQUITABLE AND ECOLOGICAL TERMS

*RESOLUTION: REDEFINITION OF WHAT CONSTITUTES GLOBAL SECURITY
(COMMON SECURITY LINKING PEACE, ENVIRONMENT AND SOCIAL JUSTICE)

SOCIAL JUSTICE, AND EQUITY
AND SECURITY

RESOLUTION: GUARANTEEING THE RIGHT TO SECURITY INCLUDING
GUARANTEED ANNUAL INCOME SUPPLEMENT

RESOLUTION : FULFILLING THE RIGHT TO BASIC NEEDS

RESOLUTION: PREVENTION OF POVERTY THROUGH FULFILLING BASIC NEEDS,
PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING
HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND
PREVENTING WAR AND CONFLICT

RESOLUTION: GUARANTEEING THE RIGHT TO FOOD

RESOLUTION: THE PROMOTION OF ORGANIC AGRICULTURE THROUGH
REGULATIONS AND EDUCATION, AND PHASING OUT THE USE OF CHEMICAL
PESTICIDES

RESOLUTION: ENSURING THE RIGHT TO SHELTER

RESOLUTION: GUARANTEEING THE RIGHT TO SHELTER

RESOLUTION: ENSURING THE RIGHT TO SAFE DRINKING WATER,
FIND UNCED AND HABITAT II

RESOLUTION: GUARANTEEING THE RIGHT TO UNIVERSAL HEALTH CARE

*RESOLUTION: INSTITUTING PREVENTIVE HEALTH CARE

RESOLUTION: PERTAINING TO STANDARDS FOR ELECTROMAGNETIC RADIATION (EMR)

RESOLUTION: GUARANTEEING THE RIGHT TO WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK

*RESOLUTION: PREVENTION OF CRIME THROUGH SOCIAL PROGRAMS

ENVIRONMENT AND HEALTH

RESOLUTION: ELIMINATION, PREVENTION AND REDUCTION OF HEALTH AND ENVIRONMENT HAZARDS

RESOLUTION: BANNING OF GENETICALLY ENGINEERED FOOD, AND IRRADIATED FOOD (See Dr. FAGAN'S, Dr. Cummins MATERIAL)

RESOLUTION: BANNING OF GENETICALLY MODIFIED ORGANISM

RESOLUTION: BANNING THE PATENTING OF HUMAN GENES

RESOLUTION: LIMITATION AND CONTROL OF BIOTECHNOLOGY

RESOLUTION: SUPPORTING OF ALTERNATIVE MEDICINE

RESOLUTION: RESPECTING THE WISDOM OF INDIGENOUS KNOWLEDGE

RESOLUTION REDEFINING FOOD GUIDE STANDARDS

RESOLUTION: PROMOTION THE HIGHEST ATTAINABLE STANDARDS OF PHYSICAL, MENTAL AND ENVIRONMENTAL HEALTH

RESOLUTION: PROTECTION AGAINST PRODUCTS HARMFUL TO HEALTH AND THE ENVIRONMENT:

RESOLUTION: ELIMINATING ENVIRONMENTALLY INDUCED DISEASES (+)

RESOLUTION: LIMITING AND MONITORING REPRODUCTIVE TECHNOLOGIES

RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

*RESOLUTION: PERMITTING EUTHANASIA UNDER LIMITED CONDITIONS

*RESOLUTION: DEVELOPMENT OF CRITERIA FOR DETERMINING MEDICAL CHOICES

RESOLUTION: GUARANTEEING THE RIGHT TO SAFE, HEALTHY AND ENVIRONMENTALLY SOUND WORKING CONDITIONS

NATURE, ENVIRONMENT AND
 SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: RECOGNIZING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

RESOLUTION: ENSURING THE ETHICAL TREATMENT OF ANIMALS

RESOLUTION: ENSURING THE PREVENTION OF DISASTERS INCLUDING NATURAL AND TECHNOLOGICAL DISASTERS

RESOLUTION: INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

RESOLUTION: INVOKING THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

RESOLUTION: ENSURING THE IMPLEMENTATION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

RESOLUTION: ENFORCEMENT OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)

RESOLUTION: REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

RESOLUTION: THE INSTITUTION OF ENVIRONMENTAL MEASURES, INCLUDING RESPECTING THE CARRYING CAPACITY OF ECOSYSTEM

RESOLUTION: PREVENTING THE TRANSFERENCE TO OTHER States OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION

RESOLUTION: ELIMINATION OF TOXIC, HAZARDOUS AND NUCLEAR WASTES

RESOLUTION: BANNING OF PERSISTENT ORGANIC POLLUTANTS

*RESOLUTION: ENSURING ZERO EMISSION DISCHARGES
EXTEND THIS RESOLUTION TO INTERNATIONAL STATISTICS

*RESOLUTION: INSTITUTING PROGRAMS FOR TREATING WASTE AS A
RESOURCE

*RESOLUTION: ELIMINATION OF THE PRODUCTION AND CONSUMPTION OF
OZONE DEPLETING SUBSTANCES

RESOLUTION: PREVENTION OF CLIMATE CHANGE THROUGH ELIMINATION AND
REDUCTION OF GREENHOUSE GAS EMISSIONS

RESOLUTION ON CLIMATE CHANGE: PROTECTING CARBON SINKS AND
1988 CHANGING ATMOSPHERE CONFERENCE (STRONGER THAN THE
FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992)

RESOLUTION : GUARANTEEING THE PRESERVATION, CONSERVATION AND
PROTECTION OF BIODIVERSITY

RESOLUTION: PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN
FORESTS THROUGH FOREST PROTOCOLS

CONSERVATION, BIODIVERSITY AND FORESTS

RESOLUTION : GUARANTEEING THE PRESERVATION, CONSERVATION AND
PROTECTION OF BIODIVERSITY

RESOLUTION: ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: BANNING clear-cutting THROUGH INTERPRETATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY

RESOLUTION: ENSURING THAT THE BIODIVERSITY CONVENTION APPLIES TO ALL LANDS (PRIVATE AND PUBLIC)

RESOLUTION: IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

RESOLUTION: BANNING THE EXPORT OF RAW LOGS

GREEN SPACES, PARKS AND CONSERVATION

RESOLUTION: THE PRESERVATION AND PROTECTION OF GREEN SPACES

RESOLUTION: PROTECTING ENDANGERED SPECIES AND HABITATS

RESOLUTION: DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES

RESOLUTION: ENSURING ADEQUATE SIZE OF PARKS INCLUDING CONSERVATION CORRIDORS TO PROTECT BIODIVERSITY

MARINE, AND FRESH WATER ORGANISMS

RESOLUTION: PROTECTION OF FISH STOCKS

RESOLUTION: RATIFICATION OF THE LAW OF THE SEAS

RESOLUTION: PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

RESOLUTION: PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)

RESOLUTION: ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT

RESOLUTION: ESTABLISHMENT OF MARINE PROTECTED AREAS

RESOLUTION: MANDATORY WATER CONSERVATION

ENVIRONMENT, TRANSPORTATION AND ENERGY

RESOLUTION: ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY

RESOLUTION: PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -

RESOLUTION: DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION

RESOLUTION: PROMOTING AND ENSURING ENVIRONMENTALLY SOUND TRANSPORTATION, AND ENVIRONMENTALLY SOUND ENERGY

ENVIRONMENTALLY SOUND ENERGY

RESOLUTION: DEVELOPING ENVIRONMENTALLY SOUND ENERGY

RESOLUTION PROVIDING FOR 100% ENVIRONMENTALLY SOUND ENERGY SOURCES BY 1999

RESOLUTION: REQUIRING THE CONSERVATION OF ENERGY

*RESOLUTION: REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE

*RESOLUTION: CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES

*RESOLUTION: MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASES INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY

*RESOLUTION: REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY

ENVIRONMENTALLY SOUND PRACTICES

RESOLUTION: REQUIRING ENVIRONMENTAL SOUND PRACTICES

RESOLUTION: THE REQUIREMENT OF BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES

RESOLUTION: ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS APPLY TO FOREIGN POLICY RELATED TO ENVIRONMENTALLY SOUND PRACTICES

RESOLUTION: STRENGTHENING AND PROMOTING TRADITIONAL PRACTICES

EQUITABLE AND ENVIRONMENTALLY SOUND FINANCE

RESOLUTION: CANCELING DEBT/DEBT FORGIVENESS AND REPARATION

RESOLUTION: ENSURING THAT .07% OF GNP (UN UNDERTAKING) FOR FOREIGN "REPARATION"

RESOLUTION: CONVERTING VESTED ECONOMIC INTEREST GATT TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES

RESOLUTION: CONDEMNING SHIFT FOREIGN AID POLICY FROM INTERNATIONAL CO-OPERATION AND HELPING THE POOR TO A SELF-INTERESTED STRATEGY TO BENEFIT STATE BUSINESS.

RESOLUTION: LIMITING FOREIGN AID TO ENVIRONMENTALLY SOUND PROJECTS

RESOLUTION: PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN

RESOLUTION: REQUIRING ADHERENCE TO THE trans-boundaryPRINCIPLE BY PREVENTING ALL ENVIRONMENTALLY UNSOUND ACTIVITIES

RESOLUTION: THE REQUIREMENT OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE

RESOLUTION: ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE, AND DEVELOPMENT ASSISTANCE

RESOLUTION: REDUCTION OF ENVIRONMENTALLY HARMFUL SUBSIDIES

RESOLUTION: ELIMINATION OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY

MILITARY CONVERSION AND TRANSFER FUNDS
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: REDUCTION AND TRANSFER OF THE MILITARY BUDGET

TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RESOLUTION: INSTITUTING MILITARY CONVERSION

RESOLUTION: ELIMINATING URANIUM MINING

RESOLUTION: ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL

RESOLUTION: PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS

RESOLUTION: REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR

*RESOLUTION: ELIMINATION OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999
(CROSS REFERENCE WITH RESOLUTION RELATED TO THE CESSATION OF CIVIL ...)

*RESOLUTION: PROHIBITION OF THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES

*RESOLUTION: UNDERTAKING NOT TO MODIFY THE ENVIRONMENT FOR MILITARY PURPOSES

RESOLUTION: IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS

• RESOLUTION: BANNING THE TESTING OF NUCLEAR WEAPONS

RESOLUTION: RECOGNITION OF THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY

* RESOLUTION: MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.

RESOLUTION: CESSATION OF PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)

RESOLUTION: REDUCTION OF CONVENTIONAL WEAPONS

PREAMBLE: FIND CONVENTION ON CONVENTIONAL WEAPONS

RESOLUTION: INSTITUTING REGULATIONS FOR GUN CONTROL

RESOLUTION: REDUCTION AND TRANSFER OF THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

* RESOLUTION: PROTECTING AND PROVIDING FOR CONSCIENTIOUS OBJECTORS

RESOLUTION: SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE

RESOLUTION: PROMOTING CIVILIAN RULE

RESOLUTION: UNDERTAKING NOT TO MODIFY THE ENVIRONMENT FOR MILITARY PURPOSES

SEE CONVENTION

RESOLUTION: ELIMINATION OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999

HUMAN RIGHTS AND RESPONSIBILITIES

RESOLUTION: PREVENTING GENOCIDE

RESOLUTION: PREVENTING ALL FORMS OF RACIAL DISCRIMINATION

RESOLUTION: PROMOTING AFFIRMATIVE ACTION

RESOLUTION: PREVENTING ALL FORMS OF DISCRIMINATION AGAINST WOMEN

RESOLUTION: RESPECTING THE LIMITATIONS OF FUNDAMENTAL RELIGIOUS FREEDOMS: CONDEMNATION OF EXTREMISM

RESOLUTION: GUARANTEEING AND EXTENDING OF HUMAN RIGHTS PROTECTION

RESOLUTION: GUARANTEEING THE RIGHTS OF THE FAMILY AND THE ACCEPTANCE OF ALL FORMS OF THE FAMILY

RESOLUTION: GUARANTEEING THE RIGHTS OF THE CHILD

*RESOLUTION: AFFIRMING THE RIGHTS OF PERSONS WITH DISABILITIES

RESOLUTION: GUARANTEEING THE RIGHTS OF INDIGENOUS PEOPLES

RESOLUTION: AFFIRMATION OF THE RIGHTS OF SELF-DETERMINATION

(

∞RESOLUTION: RESPECTING CULTURAL INTEGRITY AND CULTURAL PROPERTY, AND APPROPRIATENESS, AND RETURNING OR RESTITUTING OF CULTURAL PROPERTY TO THE COUNTRIES OF ORIGIN

RESOLUTION: GUARANTEEING INTELLECTUAL PROPERTY RIGHTS OF INDIGENOUS PEOPLES

(SEE indigenous Women's declaration from Beijing)

RESOLUTION: REDUCING THE NEED FOR IMMIGRATION BY GUARANTEEING HUMAN RIGHTS, BY PROTECTING AND PRESERVING THE ENVIRONMENT, AND BY PREVENTING CONFLICT AND WAR

RESOLUTION: GUARANTEEING THE RIGHTS OF REFUGEES

RESOLUTION: GUARANTEEING THE RIGHTS OF MIGRANT WORKERS

RESOLUTION: GUARANTEEING THE RIGHTS OF FUTURE GENERATIONS

COMMUNICATION AND EDUCATION

RESOLUTION: STRENGTHENING THE MEDIA AS AN INSTRUMENT OF PUBLIC TRUST

RESOLUTION: GUARANTEEING THE RIGHT TO EDUCATION

RESOLUTION: PROVIDING FREE UNIVERSITY EDUCATION THROUGH INCOME SUPPLEMENT PLAN TO ASSIST STUDENTS

RESOLUTION: ELIMINATION OF ALL CORPORATE DETERMINING OF PHILOSOPHICAL UNDERPINNINGS OF EDUCATION

RESOLUTION: ELIMINATION OF ALL CORPORATE DIRECTION OF UNIVERSITY

RESOLUTION: RIGHT TO EDUCATION THAT IS EQUITABLE, COLLABORATIVE, AND MEANINGFUL

RESOLUTION: INFLUENCE AWARENESS OF HUMAN RIGHTS, ENVIRONMENT, AND PEACE ISSUES THROUGH EDUCATION

RESOLUTION: AVOIDANCE OF COMPROMISE THROUGH INDUSTRY FUNDING OF UNIVERSITY RESEARCH

RESOLUTION: REQUIREMENT OF ARMS LENGTH RESEARCH FROM INDUSTRY

*RESOLUTION: REQUIREMENT OF SCIENTISTS TO SERVE THE PUBLIC TRUST, PEACE, ENVIRONMENTAL PROTECTION AND THE GUARANTEEING OF HUMAN RIGHTS

RESOLUTION: GUARANTEEING THE RIGHT TO WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK

COMPLIANCE, COMPENSATION AND IMPLEMENTATION

RESOLUTION: DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS

*RESOLUTION: FULFILLING EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND CONFERENCE ACTION PLANS, RECOGNIZING THE APPLICABILITY OF THE DOCTRINE OF LEGITIMATE EXPECTATIONS

*RESOLUTION: ENFORCING GLOBE-WIDE PREVENTION, REDUCTION AND ELIMINATION

RESOLUTION: FORMATION OF AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE

RESOLUTION: ESTABLISHMENT OF MANDATORY INTERNATIONAL STANDARDS (MINS) WITH REGULATIONS FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR

RESOLUTION: REQUIRING REGULATIONS AND STANDARDS: FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR

RESOLUTION: ENSURING CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES AND INTERNATIONAL LAW

RESOLUTION: ENSURING CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH THE ENVIRONMENTAL STANDARDS OF THEIR HOME States OR INTERNATIONAL STANDARDS WHICH EVER ARE HIGHER

RESOLUTION : REJECTION OF ISO 14000 PROCESS OF CORPORATE CONFORMANCE WITH SELF-INITIATED STANDARDS

RESOLUTION: PREVENTING THE RELAXING OF STANDARDS OR REGULATIONS TO ATTRACT INDUSTRY

RESOLUTION: REVOKING OF CHARTERS OF CORPORATION FOR HUMAN RIGHTS VIOLATION, ENVIRONMENT DEGRADATION AND FOR CONTRIBUTING TO CONFLICT AND WAR

RESOLUTION: COMPENSATION FOR HUMAN RIGHTS VIOLATION AND ENVIRONMENT DEGRADATION

RESOLUTION: ENSURING REHABILITATION OF AREA DEGRADED BY HUMAN ACTIVITIES

RESOLUTION: INSTITUTING JUDICIAL REFORM

RESOLUTION: BINDING OF INTERNAL GOVERNMENTS BY INTERNATIONAL PRINCIPLES

PRINCIPLE-BASED DECISION MAKING AND
PUBLIC ACCESS TO INFORMATION

RESOLUTION: IMPLEMENTING PRINCIPLE BASED DECISION MAKING MOVING FROM VESTED INTEREST DECISION MAKING TO PRINCIPLE-BASED DECISION MAKING

*RESOLUTION: ENSURING GENUINE COMMUNITY PARTICIPATION AND INVOLVEMENT WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES DRAWN FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS

RESOLUTION: ENDORSEMENT OF AND PROVISION FOR A FREEDOM OF INFORMATION AND ACCESS TO INFORMATION ACT

RESOLUTION: BANNING THE PRODUCTION AND EXPORT OF INSTRUMENTS OF TORTURE

Comments:

() THAT in 1997 on January 27, I wrote and circulated the following outline:

CHARTER OF RESOLUTIONS: OBLIGATIONS AND EXPECTATIONS

RESOLUTIONS FOR MOVING TO A CULTURE OF PEACE

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member States of the United Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified and through enacting the necessary legislation which would ensure the discharging of obligations and the fulfilling of expectations.

For over fifty years, through international agreements, the member States of the United Nations have undertaken: to promote and fully guarantee respect for human rights, to ensure the preservation and protection of the environment, to create a global structure that respects the rule of law, to achieve a state of peace, justice and security and to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions. If these years of obligations had been discharged, and if these fifty years of expectations had been fulfilled, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In international agreements, member States of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations through enacting the necessary legislation, and through enforcing this legislation.

Expectations that have been created from General Assembly Resolutions, Declarations and Conference Action plans could be judicable under the Doctrine of Legitimate Expectation. The doctrine of legitimate expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

This Charter delineates a series of principles drawn from international agreements, and couples this series with additional principles suggested by non-

governmental organization. Non-governmental organizational principles are included as a reflection of a new development in United Nations Conferences. In the Habitat II Conference, a second committee had been set up to receive input from “partners” one of whom was the non-governmental organization community and, for the first time, a report from the NGOs was included in the official documentation to be circulated by the United Nations.

This Charter comprises resolutions with the preambular clauses drawn from international instruments and international NGO agreements; and with the operative clauses drawn from specific issue-focus groups and from resolutions of different organizations. In this document, principles are enunciated, and some of the actions that would need to be undertaken to ensure fulfillment of these principles have been proposed. This document delineates further what would constitute compliance with the principles.

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

On June 2, the Secretary General of the Habitat Conference, Dr. Wally N’Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment: ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction, and continuing human misery. Many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet, when called upon to seriously address the urgency by rejecting old recipes, many States lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of States to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions and Conference Action Plans and Declarations.

The failure of States to sign instruments or to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation.

The failure of States to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens, to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice; and the reluctance of States to revoke the charters of corporations for failing to adhere to these standards.

The failure, on the part of States, to accept the authority of international bodies; reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The fact that there is no clear agreement on the relationship between the authority of international bodies and sovereign States.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past.

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past.

REDUCTION OF GLOBAL MILITARY BUDGET AND TRANSFER OF THE FUNDS TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Cities will be habitable when there is the international political will to make fundamental global change to provide for essential needs. Both humans and ecosystems have basic identifiable needs for survival and quality of life and function.

Concerned that currently (1996) the Global Community spends \$860 billion on the military budget at a time when the right to housing, the right to food, the right to health care, the right to equality of all, the right to education, the right to safe drinking water, and the right to a safe environment have not been fulfilled.

Noting that the commitment was made to transfer a substantial proportion of the military budget to social programs (as undertaken through expectations created in general Assembly resolutions from 1981)

Noting also that in 1981, a general assembly resolution entitled the Reduction of the Military Budget, the majority of the member States did the following:

- (i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.
- (ii) Recognized that the military budget constituted a heavy burden for the economies of all nations resulting in extremely harmful consequences to international peace and security.
- (iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States (in particular the most heavily armed States) pending the conclusion of agreements on the reduction of military expenditures; to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development- particularly for the benefit of developing countries

Reminded that this request for transfer of the funds from the military budget was further reinforced in a 1983 General Resolution on the Relationship between disarmament and development; that curbing the arms build-up would make it possible to release additional resources for use in economic and social development- particularly for the benefit of the developing countries. Also, in this resolution, States considered that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued, within the international community, to secure the recovery of the world economy and the establishment of a new international economic order.

We call upon the member States of the United Nations:

- to immediately reduce the military budget by 50% of what it currently is and to transfer these funds into socially equitable and environmentally sound development
- to embark on plans for military conversion with the remaining 50%; and with the setting up of alternative structures for preventing conflict and war through an international regime that respects the rule of international law; and through establishing an international court of compliance where citizens could take evidence of state non-compliance with international law

AFFIRMATION OF THE NEED TO PROMOTE THE INTERDEPENDENCE OF ISSUES

Welcoming the appreciation of the interdependence of issues as expressed in the preamble of the International Conference on Population and Development:

“The 1994 conference was explicitly given a broader mandate on development issues than previous population conferences; reflecting the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected- that none of them can be considered in isolation”. (Preamble, 1.5., International Conference on Population and Development, 1994)

Welcoming also the recognition in the Convention on Prevention of Natural Disasters that

“The world is increasingly interdependent. All countries shall act in a new spirit of partnership to build a safer world based on common interests and shared responsibility to

save human lives; since natural disasters do not respect borders, regional and international cooperation is expected.

...will significantly enhance our ability to achieve real progress in **preventing mitigating** disasters through the transfer of **Best Ecologically Sound Techniques technology** and the sharing of information and joint disaster prevention *and mitigation* activities. Bilateral and multilateral assistance and financial resources should be mobilized to support these efforts (3 a Convention to Prevent Natural Disasters, 1994).

Welcoming also the additional recognition of the interdependence of issues reflected in the Convention to Combat Desertification when States have undertaken to bear in mind “ the relationship between desertification and other environmental problems of global dimension facing the international and national communities, the Parties shall encourage the coordination of activities carried out under this Convention and, if they are Parties to them, under other relevant international agreements, particularly the United Nations Framework Convention on Climate Change and the Convention on Biological Diversity, in order to derive maximum benefit from activities under each agreement while avoiding duplication of effort. The Parties shall encourage the conduct of joint programmes, particularly in the fields of research, training, systematic observation and information collection and exchange, to the extent that such activities may contribute to achieving the objectives of the agreements (United Nations Convention to Combat, Desertification Article 1, 1994)

Noting the recommendation in ... SEE UNESCO DOCUMENT

We call upon States,

- **to support the consideration of the interdependence of issues related to Peace, human rights, social justice, environment, and socially equitable and environmentally sound development**
- **to undertake , as recommended in the International Conference on Population and Development research** on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994

DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS

Concurring with the United Nations Charter that “to maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace” (Article 1, United Nations Charter),

Recalling that under the terms of the Charter of the United Nations, the peoples have declared themselves determined:

- to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind [humanity];
- to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and
- to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained...
- to unite our strength to maintain international peace and security...

NOTING, for over fifty years, since the formation of the United Nations, member States of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations and Resolutions,

Convinced that if these fifty years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

Concerned that unfortunately, many States have not as yet, signed conventions, treaties and covenants, others have signed but not ratified them, and others have failed to enact the necessary legislation to ensure the discharging of their obligations.

Cognizant that 1999 is the culmination of the decade devoted to the furtherance of international law

We call upon member States of the United Nations:

- to sign and ratify all existing international agreements, enact the necessary legislation to ensure compliance and ensure the discharging of their obligations.
- to formalize the undertaking to discharge obligations in a General Assembly Resolution on the 52 sitting of the General Assembly, on October 25, 1997
- to ensure that these obligations are fully discharged before October 1999 in celebration of the culmination of the decade devoted to the furtherance of international law.

FORMATION OF AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE

Reminded that the International Court of Justice provides only for State participation

Convinced that an incentive for the discharging of obligations and for the fulfilling of expectations could be an international forum where citizens could take evidence of state non-conformance

Noting that international agreements such as the International Covenant of Civil and Political Rights provides for the opportunity for citizens, after exhausting domestic remedies, to submit cases to an international body

We call upon the member States of the United Nations:

- to agree to the formation of an International Court of Compliance where citizens could take evidence of state non-compliance

TABLE OF CONTENTS

(NOTE: THIS TABLE OF CONTENTS CONTAINS ONLY THE TITLE OF THE RESOLUTION. THE CHARTER OF RESOLUTIONS IS OVER 200 PAGES)

COLLECTION OF RESOLUTIONS WITH PREAMBULAR SECTIONS DRAWN FROM INTERNATIONAL OBLIGATIONS INCURRED THROUGH THE UN CHARTER, CONVENTIONS, TREATIES, AND COVENANTS , AND THROUGH EXPECTATIONS CREATED THROUGH

DECLARATIONS, GENERAL ASSEMBLY RESOLUTIONS, AND CONFERENCE ACTION PLANS (IN SOME CASES FROM INTERNATIONAL NGOS) . OPERATIVE CLAUSES ARE DRAWN PRIMARILY FROM NGO DOCUMENTS.

PRINCIPLES REFLECTED IN INTERNATIONAL AGREEMENTS: OBLIGATIONS INCURRED AND LEGITIMATE EXPECTATIONS CREATED

FEBRUARY FEBRUARY

() THAT in 1997 in February 1, I Participated in a "Stakeholder meeting" with Foreign Affairs Minister, John Fraser on Canada's submission to the United Nation's Earth Summit +5; drove home with Vicky Husband. Women speaking for the Coal industry [a new role for women: as spokespersons for the dirty industries]; we urged John Fraser to be honest about the environmental problems in Canada

For the UNCED conference, Canada had submitted a glossy report to the UN about all the measures that Canada has undertaken to fulfill its obligations and commitments [at a press conference I said: "UNCED is a time to dispel myths not to perpetuate them".

() THAT in 1997 February, I prepared documents for participation in "Abolition 2000" in Ottawa, and participated in the Abolition 2000 meeting on behalf of the Voice of Women. I stressed the importance of condemning the role of civil nuclear energy and uranium mining in the development of nuclear weapons

() THAT in 1997, on February 4

I wrote a letter requesting an addition to the report on the CULTURE OF PEACE proposal

EXHIBIT

Dear Ann

I was talking with Janis this morning and she mentioned that you would be writing a report.

I arrived back in Victoria to be greeted by U.S.S. Nimitz

EXHIBIT

I hope you can mention something about the need to prohibit nuclear powered vessel visits to Canadian waters and harbours. The U.S.S. Nimitz, the world's largest warship powered by two nuclear reactors, carries 100 aircraft and displaces 93400 tons of water; has a crew 6000 Nuclear weapons capability and nuclear bombs carried by the various aircraft aboard. The biggest bomb is the B28 bomb which is equivalent to 1.43 million tons of TNT. Hiroshima was 15,000 tons. Price tag, 3.5 billion U.S.

Traditionally, the policy has been to neither confirm or deny the presence of nuclear arms on board. This time they did confirm that they were not carrying weapons.

The Canadian Government has agreed to the "prevention principle" and has undertaken to prevent anthropogenic disasters. The visits are a "disaster waiting to happen". Continuing to allow these visits is one element of continuing the culture of violence.

The federal government issued an order in council in 991 to bypass the requirement to do an environmental assessment review of these nuclear visits under the Environmental Assessment Review Program.

Bye for now

Joan Russow

() THAT in 1997 on February 9, I wrote to the CEN

() THAT in 1997, on February 9 I had written a resolution about the linking of forests to the legally binding UNFCCC and the convention on Biological Diversity

EXHIBIT

RESOLUTION: PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH THE UNFCCC AND THE CONVENTION ON BIOLOGICAL DIVERSITY

Aware of the existence of legally binding international conventions that are applicable to forests such as the Convention for the protection of Cultural and Natural Heritage, the

Convention of Biological Diversity, the Framework Convention on Climate Change, Vienna Convention on Protection of Ozone, the Basel Convention on trans-boundary pollution, the Convention on Environmental Impact Assessment Review trans-boundary Activities, the Convention to Combating Desertification, the Convention Natural Disaster Reduction, Environmental Modification Convention, UN Convention on International Trade in Endangered Species of Wild Fauna and Flora, etc.

Recognizing that many States have neither signed nor ratified these conventions, many States have signed but not ratified, and many States have signed and ratified but failed to enact the necessary legislation to discharge their obligations, and finally many States have failed to enforce the legislation necessary to ensure compliance. In addition many of the national and regional courts do not find these international instruments judicable.

Aware of the existence of many General Assembly resolutions, declaration and conference action plans that created an expectation that forests will be preserved and protected , and that logging practices will be socially equitable and environmentally sound

Be it resolved that forest protocols be linked with legally binding conventions

Be it also resolved that States sign, and ratify United Nations Conventions related to forests, and that States enact the necessary legislation to ensure compliance with these conventions, and to ensure that the international legally binding instruments can be used by citizens in the national and regional court systems.

RESOLUTION: BANNING clear-cutting THROUGH INTERPRETATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY and UNFCCC

Aware that the Convention on Biological Diversity requires the invocation of the precautionary principle, which States "where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat",

Bearing un mind that it is not necessary to establish scientific certainty that clear-cut logging and other ecologically unsound practices will cause loss and reduction of biodiversity for the practice of clear-cutting and other ecologically unsound practices to be banned

Aware that the Biodiversity Convention requires that States party to the Convention identify biodiversity, and understanding that States by their own admission have not begun to identify vertebrates let alone invertebrates

Knowing that the original old growth forests are habitats of significant biodiversity

Aware that the Biodiversity Convention calls for an environmental impact assessment of activities that could contribute to the loss or reduction of Biodiversity

Convinced that current logging practices have been shown to contribute to a loss and reduction of biodiversity

Knowing that under the objective of the legally binding UNFCCC is the requirement to conserve carbon sinks, and that old growth forests function as significant carbon sinks

We call upon the Member States of the United Nations:

To acknowledge that States are in violation of the Biodiversity Convention by continuing to permit logging in areas of old growth

- To conserve the little remaining old growth forests
- To undertake a full environmental impact assessment of current forest practices.
- To conserve carbon sinks by preserving old growth forests

RESOLUTION: ENSURING THAT THE BIODIVERSITY CONVENTION APPLIES TO ALL LANDS (PRIVATE AND PUBLIC)

RESOLUTION: IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

Aware that the Convention on Biological Diversity requires the invocation of the precautionary principle, which states "where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat",

Aware that the Biodiversity Convention requires that States party to the Convention identify biodiversity, and

Understanding that States by their own admission have not begun to identify vertebrates let alone invertebrates

Knowing that the original old growth forests are habitats of significant biodiversity

Aware that the Biodiversity Convention calls for an environmental impact assessment of activities that could contribute to the loss or reduction of Biodiversity

Convinced that current logging practices have been shown to contribute to a loss and reduction of biodiversity

Aware that the Framework Convention on Climate Change requires the conservation of carbon sinks

Knowing that old growth forests function as significant forest sinks

We call upon the Member States of the United Nations:

- to concur that it is not necessary to establish scientific certainty that clear-cutting and other ecologically unsound practices will cause loss and reduction of biodiversity for the practice of clear-cutting and other ecologically unsound practices to be banned

- to concur that States are in violation of the Biodiversity Convention by continuing to permit logging in areas of old growth
- to conserve the little remaining old growth forests
- to undertake a full environmental impact assessment of current forest practices.
- to conserve carbon sinks by preserving old growth forests

To the CEN

I am sorry to find out that it is no longer possible to have input in the Forest Convention issue. I have been raising it as an issue since June 1992, and especially last year. I had asked for you to distribute material and resolutions related to the Forest Convention at the meetings in Ottawa. Suddenly, a year later, I receive a response a day after the deadline for comments. I have often asked to be involved at the international level specifically to address this issue. Yet Martin responded by saying that this issue was not under discussion.

Regards

Joan Russow, Chair of the BCEN International Affairs Caucus

What is needed is Mandatory International Normative Standards (MINS) drawn from international principles from UN instruments already in place. The stewardship program itself is not strong enough because it is mandatory and often is compromised by too moderate recommendations.

I have enclosed some material as background material as an attachment.

The International Affairs caucus is doing a report on Canada's failure to live up to obligations incurred and expectations created through UNCED documents. This report will be submitted to the Commission on Sustainable Development as a parallel report to the Canada state report

Please let me know if you have not been able to access the attachment it is in Microsoft 5.1

Joan Russow

() THAT in 1997 on February 9, I endorsed the abolition 2000 Declaration

EXHIBIT:

RE ABOLITION 2000 Declaration

Drafted by NGO leaders at the Nuclear Non-proliferation Treaty conference in 1995, the following declaration has been endorsed by more than 300 citizen groups around the world.

A secure and livable world for our children and grandchildren and all future generations requires that we achieve a world free of nuclear weapons and redress the environmental degradation and human suffering that is the legacy of fifty years of nuclear weapons testing and production.

Further, the inextricable link between the “peaceful” and warlike uses of nuclear technologies and the threat to future generations inherent in the creation and use of long-lived radioactive materials must be recognized. We must move toward reliance on clean, safe, renewable forms of energy production that do not provide the materials for weapons of mass destruction and do not poison the environment for thousands of centuries. The true “inalienable” right is not to nuclear energy but to life, liberty, and security of person in a world free of nuclear weapons.

We recognize that a nuclear weapons free world must be achieved carefully and in a step-by-step manner. We are convinced of its technological feasibility. Lack of political will, especially on the part of the nuclear weapons States, is the only true barrier. As chemical and biological weapons are prohibited, so must nuclear weapons be prohibited.

We call upon all States—particularly the nuclear weapons States, declared and de facto—to take the following steps to archive nuclear weapons abolition. We further urge the States party to the NPT to demand binding commitments by the declared nuclear weapons States to implement these measures.

- 1) Conclude by the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time-bound framework, with provisions for effective verification and enforcement. *
- 2) Immediately make an unconditional pledge not to use or threaten to use nuclear weapons
- 3) Rapidly complete a truly comprehensive test ban treaty with a zero threshold and with stated purpose of precluding nuclear weapons development by all States
- 4) Prohibit the military and commercial production and reprocessing of all weapons-usable radioactive materials
- 5) Subject all weapons-usable radioactive materials and nuclear facilities in all States to international accounting, monitoring, and safeguards, and establish a public international registry of all weapons-usable radioactive materials.
- 7) Prohibit nuclear weapons research, design, development, and testing through laboratory experiments including but not limited to non-nuclear hydrodynamic explosions and computer simulations, subject all nuclear weapons laboratories to international monitoring, and close all nuclear test sites.
- 8) Create additional nuclear weapons free zones such as those established by the Treaties of Tlatelolco and Raratonga.

9) Recognize and declare the illegality of threat or use of nuclear weapons, publicly and before the World Court

10) Establish an international energy agency to promote and support the development of sustainable and environmentally safe energy sources

11) Create mechanisms to ensure the participation of citizens and NGOs in planning and monitoring the process of nuclear weapons abolition.

A world free of nuclear weapons is a shared aspiration of humanity. This goal cannot be achieved in a non-proliferation regime that authorizes the possession of nuclear weapons by a small group of States. Our common security requires the complete elimination of nuclear weapons. Our objective is definite and unconditional abolition of nuclear weapons.

* The convention should mandate irreversible disarmament measures, including but not limited to the following withdraw and disable all deployed nuclear weapons systems; disable and dismantle warheads; place warheads and weapon-usable radioactive materials under international safeguards; destroy ballistic missiles and other delivery systems. The convention could also incorporate the measures listed above which should be implemented independently without delay. When fully implemented, the convention would replace the NPT.

Could you please add my name

Joan Russow

Global compliance Research Project

Subject: Sustainable Development Strategy Discussion Paper

() THAT in 1997, on February 9, I circulated a piece on the forest convention

EXHIBIT

Why was nothing done on the Forest Convention issue when I have been raising it as an issue since January 1994, and specifically last year. I had asked for you to distribute material and resolutions related to the Forest Convention at the meetings in Ottawa. Dear Dr. Russow:

Thank you for your comprehensive email of December 13, 1996. Your contribution and comments on the United Nations Commission on Sustainable Development (CSD) Canadian National Country Profile was greatly appreciated.

The information you provided was distributed to the appropriate chapter drafters. You may wish to know that the final draft of the CSD Canadian National Profile was recently completed and sent to the CSD in New York. The profile will be available shortly on CSD and the Department of Foreign Affairs and International Trade website.

Thank you again for your extensive input and suggestions into Canada's preparation of the CSD Canadian National Profile. The Government of Canada encourages the active involvement of Canadians in the preparation of all international events. We will CONTINUE to try and provide you with information and reports in as timely a manner as possible, and look forward to receiving your comments and opinions on Canadian positions for future international events.

Yours sincerely,

Peter Fawcett

COMMENT

I had agreed to have an input into their document if they would agree to put my input up on their website

EXHIBIT

()1996 **SUMISSION TO ENVIRONMENT CANADA MADE TO THE RIO+5 INTERSESSION ISECTION BY SECTION COMMENT**

NOTE THAT COMMENTS BY JOAN RUSSOW ARE IN CAPITAL LETTERS.

NOTING STILL THAT THE URGENCY REMAINS

Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

THIS IS THE TIME TO ENSURE THAT THE DOCUMENTS FROM UNCED WHICH ATTEMPTED TO BE ALL-EMBRACING FULLY INCORPORATE THE ADVANCES MADE IN OTHER CONFERENCES. OTHERWISE THE WHOLE REVIEW PROCESS OF UNCED WILL BE RETROGRESSIVE. IN ADDITION TO INTEGRATING RECOMMENDATIONS FROM RECENT CONFERENCES INCLUDING HABITAT II, THE UN SHOULD MOVE BEYOND UNCED BY INTEGRATING THE OBLIGATIONS INCURRED THROUGH THE, CHARTER OF THE UNITED NATIONS, CONVENTIONS, TREATIES AND COVENANTS; THE EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, AND DECLARATIONS, AND THE COMMITMENTS MADE THROUGH CONFERENCE ACTION PLANS.

AS IT IS THE DOCUMENT THAT RECENTLY EMERGED HAS REGRESSED FROM THE DOCUMENTS

DRAFT REPORT OF THE AD HOC INTERSESSIONAL WORKING GROUP
OF THE COMMISSION ON SUSTAINABLE DEVELOPMENT
(New York 24 February - 7 March 1997)

INTRODUCTION

In accordance with the mandate given by the United Nations General Assembly and reconfirmed by the Fourth session of the CSD, the goal of the meeting of the Ad-Hoc Inter-Sessional Working Group was to assist the Fifth session of the CSD in the preparations for the Nineteenth Special Session of the Assembly to be held in accordance with its resolutions 50/113 and 51/181 in June 1997 for the purpose of an overall review and appraisal of the implementation of Agenda 21.

The document entitled "Proposed outcome of the Special Session" contained in this report is a compilation of the main proposals made and concerns expressed during the meeting by the participants regarding the key issues that should be addressed in the context of further preparatory work for the Special Session. It was prepared by the Co-Chairmen of the Working Group on the basis of detailed discussions held during the meeting. It is not a negotiated text.

It was agreed that the document would be further studied by all delegations and groups, including in their capitals, during the period between the Ad-hoc Working Group and the Fifth Session of the CSD and would serve as the starting point for further

discussion at the High-Level Segment of the CSD.

Proposed Outcome of the Special Session.

IT SHOULD BE RECOGNIZED INITIALLY THAT STATES HAVE INCURRED OBLIGATIONS FROM CONVENTIONS, TREATIES, AND COVENANTS THAT SHOULD FORM THE BASIS OF THE REASSESSMENT.

IN ADDITION, STATES HAVE CREATED EXPECTATIONS THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS,

AND MADE COMMITMENTS FROM CONFERENCE ACTION PLANS

NOTING THAT THE YEARS OF ACCRUED STATE OBLIGATIONS TO IMPROVE THE QUALITY OF LIFE THROUGH RECOGNIZING THE RIGHT TO SHELTER, THE RIGHT TO SOCIAL SECURITY, THE RIGHT TO EQUALITY, THE RIGHT TO PEACE AND THE RIGHT TO A SAFE ENVIRONMENT HAVE NOT YET BEEN DISCHARGED. IN 1974 THROUGH GENERAL ASSEMBLY RESOLUTIONS WE RECOGNIZED "UNITED DETERMINATION TO WORK URGENTLY FOR THE ESTABLISHMENT OF A NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY, INTERDEPENDENCE, COMMON INTEREST AND COOPERATION WITH SYSTEMS WHICH SHALL CORRECT INEQUALITIES AND ADDRESS EXISTING INJUSTICES... AND TO ENSURE STEADILY SOCIAL DEVELOPMENT AND PEACE AND JUSTICE FOR PRESENT AND FUTURE GENERATIONS (PREAMBLE,

DECLARATION ON THE ESTABLISHMENT OF AN NEW INTERNATIONAL ECONOMIC ORDER, 1974).

I. Statement of commitment

1. This could be either a Preamble to a "consolidated text" or a self-standing concise declaration to which other part(s) could be annexed or cross-referred to. The statement *inter alia* should:

- be politically attractive, forward looking and provide a clear focus,

- reaffirm the final documents of Rio as the foundation and long-term policy framework for sustainable development,
- highlight the main achievements since UNCED at international, national and institutional level, and the significant contribution made by the major groups;
- address the vicious circle of poverty, lack of capacity and resources in developing countries and the importance of global partnership and international cooperation to support their efforts to achieve sustainable development;
- reiterate the need for changing consumption and production patterns;

RESOLUTION: CONDEMNATION OF THE UNSUSTAINABLE PATTERN OF CONSUMPTION, AND PROVIDING FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RECOGNIZING THE CONCERN EXPRESSED IN HABITAT I ABOUT EXCESSIVE CONSUMPTION "HUMAN SETTLEMENT POLICIES AND PROGRAMMES SHOULD DEFINE AND STRIVE FOR PROGRESSIVE MINIMUM STANDARDS FOR AN ACCEPTABLE QUALITY OF LIFE. THESE STANDARDS WILL VARY WITHIN AND BETWEEN COUNTRIES, AS WELL AS OVER PERIODS OF TIME, AND THEREFORE MUST BE SUBJECT TO CHANGE IN ACCORDANCE WITH CONDITIONS AND POSSIBILITIES.

SOME STANDARDS ARE MOST APPROPRIATELY DEFINED IN QUANTITATIVE TERMS, THUS PROVIDING PRECISELY DEFINED TARGETS AT THE LOCAL AND NATIONAL LEVELS. OTHERS MUST BE QUALITATIVE, WITH THEIR ACHIEVEMENT SUBJECT TO FELT NEED. AT THE SAME TIME, SOCIAL JUSTICE AND A FAIR SHARING OF RESOURCES DEMAND THE DISCOURAGEMENT OF EXCESSIVE CONSUMPTION (III 16 HABITAT I, 1976)

CONCURRING WITH THE PLATFORM OF ACTION ABOUT THE CONTINUED IMPACT ON ENVIRONMENTAL DEGRADATION ARISING FROM UNSUSTAINABLE PRODUCTION AND CONSUMPTION PATTERNS: "ENVIRONMENTAL AND NATURAL RESOURCE DEGRADATION, DERIVING FROM, INTER ALIA, UNSUSTAINABLE PRODUCTION AND CONSUMPTION PATTERNS, DROUGHT, POOR QUALITY WATER, GLOBAL

WARMING, DESERTIFICATION, SEA-LEVEL RISE, HAZARDOUS WASTE, NATURALDISASTERS, TOXIC CHEMICALS AND PESTICIDE RESIDUES, RADIOACTIVWASTE, ARMED CONFLICTS" (ART 246, ADVANCE DRAFT, PLATFORM OACTION, UN. CONFERENCE ON WOMEN, MAY 15)

CONCURRING WITH AGENDA 21, UNCED, THAT "THE MAJOR CAUSE OF THECONTINUED DETERIORATION OF THE GLOBAL ENVIRONMENT IS THE UNSUSTAINABLE PATTERN OF CONSUMPTION AND PRODUCTION, PARTICULARLY IN INDUSTRIALIZED COUNTRIES, WHICH IS A MATTER OF GRAVE CONCERN, AGGRAVATING POVERTY AND IMBALANCES. (4.3. CHANGING CONSUMPTIONPATTERNS, AGENDA 21. 1992, UNCED)

CONCURRING ALSO WITH AGENDA 21, UNCED, THE GROWTH OF WORLD POPULATION AND PRODUCTION COMBINED WITH UNSUSTAINABLE CONSUMPTION PATTERNS PLACES INCREASINGLY SEVERE STRESS ON THE LIFE-SUPPORTING CAPACITIES OF OUR PLANET. THESE INTERACTIVE PROCESSES AFFECT THE USE OF LAND, WATER, AIR, ENERGY AND OTHER RESOURCES. RAPIDLY GROWING CITIES, UNLESS WELL-MANAGED, FACE MAJOR ENVIRONMENTA LPROBLEMS. THE INCREASE IN BOTH THE NUMBER AND SIZE OF CITIES CALLS

FOR GREATER ATTENTION TO ISSUES OF LOCAL GOVERNMENT AND MUNICIPAL MANAGEMENT. THE HUMAN DIMENSIONS ARE KEY ELEMENTS TO CONSIDER IN THIS INTRICATE SET OF RELATIONSHIPS AND THEY SHOULD BE ADEQUATELY TAKEN INTO CONSIDERATION IN COMPREHENSIVE POLICIES FOR SUSTAINABLE DEVELOPMENT. SUCH POLICIES SHOULD ADDRESS THE LINKAGES OF DEMOGRAPHIC TRENDS AND FACTORS, RESOURCE USE, APPROPRIATE TECHNOLOGY DISSEMINATION, AND DEVELOPMENT. POPULATION POLICY SHOULD

ALSO RECOGNIZE THE ROLE PLAYED BY HUMAN BEINGS IN ENVIRONMENTAL AND DEVELOPMENT CONCERNS. THERE IS A NEED TO INCREASE AWARENESS OF THIS ISSUE AMONG DECISION MAKERS AT ALL LEVELS AND TO PROVIDE

BOTH BETTER INFORMATION ON WHICH TO BASE NATIONAL AND INTERNATIONAL POLICIES AND A FRAMEWORK AGAINST WHICH TO INTERPRET THIS INFORMATION (5.3. DEMOGRAPHIC DYNAMICS AND SUSTAINABILITY, AGENDA 21, UNCED, 1992)

CONCURRING ALSO WITH THE SUBSEQUENT REAFFIRMATION IN THE PLATFORM OF ACTION, UN CONFERENCE ON THE MAJOR CAUSE OF THE CONTINUED DETERIORATION OF THE GLOBAL ENVIRONMENT IS THE UNSUSTAINABLE PATTERN OF CONSUMPTION AND PRODUCTION, PARTICULARLY IN INDUSTRIALIZED COUNTRIES, WHICH IS A MATTER OF GRAVE CONCERN, AGGRAVATING POVERTY AND IMBALANCES. (4.3. CHANGING CONSUMPTION PATTERNS, AGENDA 21. 1992), AND REAFFIRMED IN ART. 37 OF THE PLATFORM OF ACTION, UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE)

NOTING IN HABITAT II THAT MEMBER STATES OF THE UNITED NATIONS UNDERTOOK TO REDUCE THE ECOLOGICAL FOOTPRINT

RECOGNIZING THE FAILURE OF CORPORATE VOLUNTARY PROGRAMS WHICH HAVE TOO OFTEN BEEN REPLACED THE GOVERNMENT REGULATORY ROLE. THROUGH THE CANADIAN STANDARDS ASSOCIATION SUPPORT FOR ISO 14000 THE GOVERNMENT

IS MOVING AWAY FROM WHAT IS DESCRIBED BY INDUSTRY AS "COMMAND AND CONTROL". FOR YEARS THROUGH SYMPATHETIC ADMINISTRATIONS, CORPORATIONS HAVE BEEN ABLE TO CONTROL THE MODEL OF CONSUMPTION. ISO 14000 REFLECTS THE RELEGATION OF GOVERNMENT RESPONSIBILITY. ISO 14,000 IS NON-MANDATORY NON-NORMATIVE AND NON-PERFORMANCE BASED (IN CONTRAST TO THE EMAS). IN ESSENCE WITH THE ISO 14000 INDUSTRY ESTABLISHES ITS OWN ENVIRONMENTAL POLICY AND THEN IS ASSESSED BY

"ENVIRONMENTAL AUDITORS" ON HOW WELL THE INDUSTRY CONFORMS TO ITS SELF INITIATED STANDARDS.

NOTING THAT IN THE PLATFORM OF ACTION FROM THE UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE (1995) AND IN THE HABITAT II AGENDA FROM THE HABITAT II CONFERENCE (1996) MEMBER STATES HAVE UNDERTAKEN "TO ENSURE THAT CORPORATIONS, INCLUDING TRANSNATIONAL CORPORATIONS, COMPLY WITH NATIONAL LAWS AND CODES, SOCIAL SECURITY

REGULATIONS, APPLICABLE INTERNATIONAL AGREEMENTS AND CONVENTIONS, INCLUDING THOSE RELATED TO THE ENVIRONMENT, AND OTHER RELEVANT LAWS. (ARTICLE 167). IN HABITAT II THIS UNDERTAKING WAS REAFFIRMED AND THEN EXTENDED TO INCLUDE THE UNDERTAKING BY STATES TO ENSURE THAT THE "PRIVATE SECTOR" ALSO COMPLY (ARTICLE 148).

WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS, PARTICULARLY THOSE IN THE DEVELOPED COUNTRIES, TO REDUCE THE ECOLOGICAL FOOTPRINT BY CHANGING THE CURRENT MODEL OF CONSUMPTION

THE SIGNIFICANCE OF THE ORIGINAL EARTH SUMMIT WAS THAT FOR THE FIRST TIME AT A CONFERENCE THERE WAS A WILLINGNESS TO EXAMINE THE COMPLEXITY AND INTERDEPENDENCE OF ISSUES, BUT THE LACK OF POLITICAL WILL TO ADDRESS THE MILITARY CONTRIBUTED TO THE UNDERMINING OF THE WHOLE ENDEAVOUR. . ALTHOUGH MANY OF THE ISSUES THAT NEEDED TO BE ADDRESSED WERE EXAMINED, THE RESOLVE TO ACT TO BRING ABOUT CHANGE APPEARED TO BE LESS IN MANY CASES THAN WHAT HAD BEEN EXPRESSED IN

OTHER PREVIOUS UN INSTRUMENTS.

IN THE FIRST SUMMIT AS HAS BEEN THROUGHOUT THE UNITED NATIONS, DOCUMENTS EMERGE AS WELL-CRAFTED STATEMENTS AND PRINCIPLES WITH AN ABUNDANCE OF "NOTWITHSTANDING" AND "AS APPROPRIATE" CLAUSES". UNFORTUNATELY, MANY OF THE STRONG PRINCIPLES HAVE BEEN PERCEIVED MORE AS GUIDELINES OR GOALS AND NOT AS OPERATIVE PRINCIPLES OF ACTION. OFTEN THESE PRINCIPLES ARE ENUNCIATED BUT WHAT WOULD CONSTITUTE COMPLIANCE WITH THE PRINCIPLE IS NOT CLEARLY DETERMINED.

CORPORATIONS INCLUDING TRANSNATIONALS WITH THE SUPPORT OF

SYMPATHETIC ADMINISTRATIONS HAVE CONTINUED TO DISREGARD PRINCIPLES. WHAT IS NEEDED NOW IS COMPLIANCE WITH PRINCIPLES REFLECTED IN

Precedence: bulk

PREVIOUS OBLIGATIONS, EXPECTATIONS AND COMMITMENTS. FOR EXAMPLE, A STRONG PRINCIPLE SUCH AS PRINCIPLE 14 OF THE RIO DECLARATION, THAT "STATES SHOULD PREVENT THE TRANSFER TO OTHER STATES OF SUBSTANCES AND ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION OR ARE HARMFUL

TO HUMAN HEALTH" HAS NOT BEEN IMPLEMENTED AND COMPLIED WITH. STATES HAVE NOT PREVENTED THE TRANSFER OF TOXIC, HAZARDOUS, AND ATOMIC WASTES TO OTHER STATES; STATES STILL SELL NUCLEAR REACTORS, AND

CIRCULATE AND BERTH NUCLEAR POWERED AND NUCLEAR ARMED VESSELS. IN THE RECENT COMMISSION ON SUSTAINABLE DEVELOPMENT (CSD) DOCUMENT THE STATES HAVE USED THE NOTION OF "PRIOR INFORMED CONSENT" WHICH HAS BECOME A DEVICE FOR AVOIDING EXTRATERRITORIALITY. (WHAT RIGHT HAVE

WE TO IMPOSE OUR HIGH STANDARDS ON DEVELOPING COUNTRIES THEY HAVE EVERY RIGHT TO ACCEPT OUR TOXIC, HAZARDOUS AND ATOMIC WASTES PARTICULARLY IF THERE IS PRIOR INFORMED CONSENT)

IF THE EARTH SUMMIT II IS TO BE IMPORTANT IT MUST BE A TIME OF COMPLIANCE, AND TIME OF DISCHARGING OBLIGATIONS, FULFILLING

EXPECTATIONS, AND ACTING ON COMMITMENTS.

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

FOR FIFTY -TWO YEARS THROUGH INTERNATIONAL AGREEMENTS, THE MEMBER STATES OF THE UNITED NATIONS HAVE UNDERTAKEN:

- (I) TO PROMOTE AND FULLY GUARANTEE RESPECT FOR HUMAN RIGHTS;
- (II) TO ENSURE THE PRESERVATION AND PROTECTION OF THE ENVIRONMENT;
- (III) TO CREATE A GLOBAL STRUCTURE THAT RESPECTS THE RULE OF LAW;
- (IV) TO ACHIEVE A STATE OF PEACE; JUSTICE AND SECURITY, AND
- (V) TO ENABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

INTERNATIONAL AGREEMENTS INCLUDE BOTH OBLIGATIONS INCURRED THROUGH THE UNITED NATIONS CHARTER, THE UNITED NATIONS CONVENTIONS, TREATIES, AND COVENANTS; EXPECTATIONS CREATED THROUGH THE UNITED NATIONS DECLARATIONS, AND GENERAL ASSEMBLY RESOLUTIONS; AND COMMITMENTS MADE THROUGH UN CONFERENCE ACTION PLANS.

IF THESE YEARS OF OBLIGATIONS HAD BEEN DISCHARGED, IF THESE FIFTYYEARS OF EXPECTATIONS HAD BEEN FULFILLED, AND IF YEARS OF COMMITMENTS HAD BEEN ACTED UPON, RESPECT FOR HUMAN RIGHTS COULDHAVE BEEN GUARANTEED, PRESERVATION AND PROTECTION OF THEENVIRONMENT COULD HAVE BEEN ENSURED, THREATS TO PEACE PREVENTED ANDREMOVED, DISARMAMENT ACHIEVED, AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT COULD HAVE BEEN ENABLED.

IN JUNE 1997, THE EARTH SUMMIT II MEETING OF GOVERNMENT LEADERS WILL TAKE PLACE IN NEW YORK. AT THIS MEETING THEY WILL BE ENDORSING A DOCUMENT RELATED TO THE FOLLOW-UP TO THE UNITED NATIONS CONFERENCE ON THE ENVIRONMENT AND DEVELOPMENT (UNCED),

"A MODEST PROPOSAL"

THE EARTH SUMMIT II IS IMPORTANT PRIMARILY FOR CITIZENS TO REVEAL THAT YEARS OF OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS, CONVENTIONS, TREATIES AND COVENANTS; OF EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, AND OF

COMMITMENTS MADE THROUGH CONFERENCE ACTION PLANS HAVE NOT BEEN UNDERTAKEN, AND THAT MOST OF THE OBLIGATIONS, EXPECTATIONS AND COMMITMENTS HAVE NEITHER BEEN DISCHARGED, FULFILLED, NOR ACTED UPON, AND THAT IT IS TIME FOR COMPLIANCE THROUGH ACTION.

SUGGESTED ACTIONS FOR EARTH SUMMIT II IN JUNE, 1997

1. (A) ON JUNE 23, 1997 AT THE FIFTH ANNIVERSARY OF THE UNITED NATIONS CONFERENCE ON ENVIRONMENT AND DEVELOPMENT, WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS THAT WE HAVE NOT YET SIGNED AND RATIFIED, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT. IN ADDITION, WE UNDERTAKE TO FULFILL EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND TO ACT UPON COMMITMENTS ARISING FROM CONFERENCE ACTION PLANS.

II ESTABLISH MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS (MINS) DRAWN FROM INTERNATIONAL PRINCIPLES AND FROM THE HIGHEST AND STRONGEST REGULATIONS FROM MEMBER STATES HARMONIZED CONTINUALLY UPWARDS. MINS WILL THEN DRIVE INDUSTRY TO BEST (BEST EQUITABLE/ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES

1(B) IN ADDITION, WE REAFFIRM THE UNDERTAKING IN THE PLATFORM OF ACTION IN THE UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE AND IN THE HABITAT II AGENDA "TO ENSURE THAT CORPORATIONS INCLUDING TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY LAWS, INTERNATIONAL LAWS, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW".

II REVOKE LICENCES AND CHARTERS OF CORPORATIONS INCLUDING TRANSNATIONALS IF THE CORPORATIONS HAVE VIOLATED HUMAN RIGHTS, CAUSED ENVIRONMENTAL DEGRADATION, OR CONTRIBUTED TO CONFLICT AND WAR.

1 (C) FURTHER, WE UNDERTAKE TO ESTABLISH AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE AND CORPORATE NON-COMPLIANCE.

2. (A) ON JUNE 24, 1997. WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE TO EMBARK IMMEDIATELY AND CONCLUDE BEFORE THE YEAR 2000 NEGOTIATIONS ON A NUCLEAR WEAPONS ABOLITION CONVENTION THAT REQUIRES THE PHASED ELIMINATION OF ALL NUCLEAR WEAPONS WITHIN A TIME BOUND FRAMEWORK WITH PROVISIONS FOR EFFECTIVE VERIFICATION AND ENFORCEMENT

WE UNDERTAKE IMMEDIATELY TO REDUCE THE MILITARY BUDGET BY 50% AND TRANSFER THE SAVINGS (I) INTO GUARANTEEING THE RIGHT TO FOOD, THE RIGHT TO SAFE AND AFFORDABLE SHELTER, THE RIGHT TO UNIVERSAL HEALTH CARE, THE RIGHT TO SAFE DRINKING WATER, THE RIGHT TO A SAFE ENVIRONMENT, THE RIGHT TO EDUCATION AND THE RIGHT TO PEACE,

(II) INTO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK, AND

(III)

INTO STRENGTHENING THE UNITED NATIONS.

CURRENTLY THE GLOBAL COMMUNITY SPENDS 850 BILLION ON THE MILITARY. IT SHOULD BE NOTED THAT IN 1981 THERE WAS A GENERAL ASSEMBLY RESOLUTION TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING

COUNTRIES. IN 1981 THE MILITARY BUDGET WAS LESS THAN 50% OF WHAT IT IS NOW.

3. ON JUNE 25 1997. WE THE MEMBER STATES OF THE UNITED NATIONS WILL DEMAND AND ENSURE COMPENSATION AND REPARATION WILL BE SOUGHT FROM CORPORATIONS AND SYMPATHETIC ADMINISTRATIONS FOR THE ENVIRONMENTAL DEGRADATION AND HUMAN RIGHTS VIOLATION IN DEVELOPING COUNTRIES, ON LANDS OF INDIGENOUS PEOPLES AND IN THE COMMUNITIES OF THE MARGINALIZED CITIZENS IN BOTH DEVELOPING AND DEVELOPED COUNTRIES. THE SO-CALLED DEBT OF THE DEVELOPING COUNTRIES IS NOT A DEBT TO BE FORGIVEN BUT RATHER AN OBLIGATION OF THE DEVELOPED STATES TO REDRESS, COMPENSATE AND RESTORE. DEBT IMPLIES BENEFIT AND LITTLE BENEFIT WAS DERIVED FROM THE YEARS OF CORPORATE, ALONG WITH SYMPATHETIC ADMINISTRATION EXPLOITATION OF DEVELOPING COUNTRIES, INDIGENOUS PEOPLES, AND MARGINALIZED CITIZENS. IT IS A TIME FOR REDRESS, COMPENSATION AND RESTORATION.

- focus strongly on implementation and commitments.

II. Assessment of progress reached after Rio.

2. The five years since Rio have been characterized by accelerated "globalization" of interaction of countries in world trade, foreign direct investment and capital markets. Some developing countries have been able to take advantage of these trends, have attracted large inflows of external private capital and experienced significant export-led growth and acceleration of growth in per capita GDP. OFTEN WITH SERIOUS ENVIRONMENTAL AND SOCIAL CONSEQUENCES. Many other countries, however, were not able to do so. As a result, they have generally experienced stagnating or falling per capita GDP through 1995. While continuing their efforts to achieve sustainable development and to attract new investments, these countries continue to be heavily dependent on a declining volume of official development assistance for the capacity-building and infrastructure development required for provision of basic needs and more effective participation in a globalizing world economy.

ONE OF THE REASONS THAT THERE HAS BEEN A DECLINE IN OFFICIAL DEVELOPMENT ASSISTANCE IS THAT GLOBAL INSTITUTIONS, AND STATES HAVE BEEN DEVOLVING THEMSELVES FROM THE RESPONSIBILITY OF DIRECTION AND GOVERNANCE. THESE INSTITUTIONS, AND STATES HAVE BEEN PLACED IN A POSITION OF OBSEQUIOUSNESS IN THE FACE OF THE CONTINUED RISE OF

CORPORATE POWER. NOW IS CERTAINLY A "DEFINING MOMENT" AND IF THE UNITED NATIONS ALONG WITH THE MEMBER STATES OF THE UNITED NATIONS, AND THE UN INSTITUTIONS DO NOT MOVE TO A STRONG REGIME OF MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS BASED ON EXISTING PRINCIPLES IN INTERNATIONAL INSTRUMENTS, AND DRAWN FROM THE HIGHEST

STATE PRACTICES WITH UPWARD HARMONIZATION, THE UN WILL NO LONGER BE EFFECTIVE OR ABLE TO FUNCTION.

3. While economic growth, reinforced by globalization, has allowed some countries to reduce the proportion of people in poverty, marginalization has increased for others; too many countries have seen economic conditions worsen, and the total number of people in the world living in poverty has increased. Income inequality has increased both among and within countries, unemployment has worsened in many countries, and the gap between the least developed countries and other countries has grown rapidly in recent years. More positively, population growth rates have been declining globally, largely as a result of expanded basic education and health care. This trend is expected to lead to a stable world population in the middle of the next century. There has also been progress in social services, with expanding access to education, declining infant mortality, and increasing life expectancy in most countries. However, many people, particularly in the least developed countries, still do not have access to basic social services or to clean water and sanitation. Reducing current inequities in the distribution of wealth and access to resources, both within and among countries, is among the most serious challenges facing humankind.

CURRENTLY THE GLOBAL COMMUNITY SPENDS 850 BILLION ON THE MILITARY.IT SHOULD BE NOTED THAT IN 1981 THERE WAS A GENERAL ASSEMBLY RESOLUTION TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING COUNTRIES. IN 1981 THE MILITARY BUDGET WAS LESS THAN 50% OF WHAT IT IS NOW. TO ADDRESS THE INEQUALITY, THERE SHOULD BE AN IMMEDIATE REDUCTION OF THE MILITARY BUDGET BY 50% AND THE TRANSFER OF THE SAVINGS INTO SOCIAL PROGRAMS AND EDUCATION AND INTO CREATING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK. IN ADDITION, A PORTION OF THIS BUDGET SHOULD BE TRANSFERRED INTO THE UNITED NATIONS AND ITS PROGRAMS SO THAT THE INTERNATIONAL BODY CAN PROPERLY FUNCTION TO BRING ABOUT THE NEEDED CHANGE. THE MEMBER

STATES OF THE UNITED NATIONS HAVE FOR OVER 50 YEARS THROUGH THE UN PROCESS UNDERTAKEN TO GUARANTEE HUMAN RIGHTS, TO PROTECT THE ENVIRONMENT, TO PREVENT WAR AND CONFLICT, TO ENABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT AND TO ENSURE THE RESPECT FOR INTERNATIONAL LAW.

4. Five years after UNCED, the global environment has continued to deteriorate, as UNEP's Global Environment Outlook makes clear, and significant environmental problems remain deeply embedded in the socio-economic fabric of nations in all regions. Progress has been made in terms of institutional development, international consensus building, public participation and private sector actions and, as a result, some countries have succeeded in curbing pollution and slowing the rate of resource degradation. IT

IS QUESTIONABLE IF PROGRESS HAS REALLY BEEN MADE IN THESE AREAS. THERE HAVE BEEN MANY PUBLIC PROCESSES IN NAME ONLY. CITIZENS CAN EXPRESS THEIR CONCERNS BUT THEIR CONCERNS ARE NOT ADDRESSED. THE PRIVATE SECTOR HAS BEEN PROMOTING VOLUNTARY CONFORMANCE THROUGH SELF-INITIATED NON-NORMATIVE ENVIRONMENTAL POLICIES THROUGH ISO 14000. WHAT IS NEEDED IS MANDATORY INTERNATIONAL NORMATIVE

STANDARDS/REGULATIONS (MINS) DRAWN FROM THE HIGHEST TENABLE PRINCIPLES FROM STATES SO THAT THERE IS ALSO HARMONIZING UPWARDS. STATES MUST TAKE BACK CONTROL OF INDUSTRY AND IMPLEMENT THE UNDERTAKING IN RECENT CONFERENCES TO ENSURE THAT CORPORATIONS

COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, AND INTERNATIONAL LAW INCLUDING INTERNATIONAL ENVIRONMENTAL LAW. STATES SHOULD BE PREPARED TO DEMAND COMPENSATION AND REVOKE LICENCES AND CHARTERS OF CORPORATIONS THAT HAVE VIOLATED HUMAN RIGHTS, CAUSED ENVIRONMENTAL DEGRADATION, AND CONTRIBUTED TO CONFLICT AND WAR.

Overall, however, trends are worsening. Many polluting emissions, notably toxic substances, greenhouse gases and waste volumes, continue to rise in the industrialized countries, and their wasteful production and consumption patterns remain

fundamentally unchanged.

TO LIVE CONTENT WITH SMALL MEANS; TO SEEK ELEGANCE RATHER THAN LUXURY, AND REFINEMENT RATHER THAN FASHION; TO BE WORTHY, NOT RESPECTABLE (WILLIAM HENRY CHANDLER)

Many countries undergoing rapid economic growth and urbanization are experiencing increasing levels of air and water pollution, with rising impacts on human health. Acid rain and transboundary air pollution, once considered a problem only in the industrialized world, are increasingly apparent in many developing regions. In many poorer regions of the world, persistent poverty contributes to accelerating degradation of productive natural resources, and desertification has spread. Inadequate and unsafe water supplies are affecting an increasing number of people worldwide, aggravating problems of ill health and food insecurity among the poor. Natural areas and fragile ecosystems are still deteriorating in all regions of the world with attendant reductions in biological diversity. At the global level, renewable resources, notably fresh water, forests, topsoil and marine fish stocks, continue to be used at rates beyond their natural rates of regeneration, a situation which is clearly unsustainable.

5. Trends in consumption and production patterns continue to deplete non-renewable resources despite some improvement in material and energy efficiency. Associated pollution emissions threaten to exceed the capacity of the global environment to absorb them, potentially increasing the obstacles to economic and social development in developing countries.

6. Since UNCED, extensive efforts have been made by Governments to integrate environment and development concerns into decision-making by elaborating new policies and strategies for sustainable development or by adapting existing policies and plans. As many as 150 countries have established national level commissions or coordinating mechanisms designed to develop an integrated

approach to sustainable development. HOWEVER, THESE EFFORTS HAVE NOT SUCCEEDED EITHER BECAUSE GOVERNMENTS ARE COERCED OR ARE IN COLLUSION WITH THE POLLUTING INDUSTRIES, AND GOVERNMENTS HAVE BEEN PERSUADED TO OPT FOR VOLUNTARY CONFORMANCE BY INDUSTRY.

7. Major groups have demonstrated what can be achieved through committed action, sharing of resources and building consensus.

These have been grass-roots expressions of concern and involvement. The efforts of Local Authorities are making Agenda 21 a reality at the local level through the implementation of Local Agenda 21 programmes. Educational institutions and the media have increased public awareness and discussion of the relations between environment and development in all countries.

SINCE UNCED, CHAPTER 36 HAS BEEN MISCONSTRUED AS JUSTIFYING CORPORATE INTRUSION INTO THE EDUCATIONAL SYSTEM WHERE THERE HAS BEEN CORPORATE INVOLVEMENT IN DETERMINING THE PHILOSOPHICAL UNDERPINNING OF EDUCATION, IN PARTICULAR ENVIRONMENTAL EDUCATION. FOR EXAMPLE, IT IS NOT UNUSUAL TO HAVE EDUCATIONAL PROGRAMS SUCH AS LEARNING FOR SUSTAINABILITY WITH CORPORATE BOARD MEMBERS, OR NETWORK ORGANIZATIONS OF ENVIRONMENTAL EDUCATORS WITH REPRESENTATION ON THE STEERING COMMITTEE FROM THE MINING, THE FORESTRY AND THE OIL. INDUSTRIES.

UNFORTUNATELY, MANY OF THE EDUCATIONAL INSTITUTIONS SUCH AS UNIVERSITIES ARE RECEIVING MORE AND MORE FUNDING FROM THE CORPORATE SECTOR, AND RESEARCH IS BEING CONTROLLED AND DIRECTED BY THE CORPORATE SECTOR. INSTITUTES OF SUSTAINABILITY, OF GLOBAL

STUDIES OR SUSTAINABLE DEVELOPMENT, AND CENTRES OF EXCELLENCE HAVE BEEN

SET UP AND ARE GENERALLY SUBSTANTIALLY FUNDED BY INDUSTRY. CONFLICT OF INTEREST WHICH WAS ONCE CONDEMNED IS NOT ONLY CONDONED BUT GLORIFIED.

Hundreds of small and large businesses have made "green business"

a new operating mode. Workers and trade unions have established

partnerships with employers and communities to encourage

sustainable development in the workplace. THERE IS A LOT OF TALK

ABOUT SUSTAINABLE DEVELOPMENT. UNFORTUNATELY, IT HAS USUALLY COME TO MEAN BUSINESS AS USUAL, VOLUNTARY CONFORMANCE TO SELF-INITIATED STANDARDS REPLACING REGULATIONS WITH A LITTLE CLEAN-UP TECHNOLOGY

THRIVING ON DEREGULATION.

Indigenous peoples have

played an increasing role in addressing issues affecting their

interests. USUALLY THEY ARE IGNORED, OR PRESSURED INTO ACCEPTING HARM THROUGH THE NOTION OF INFORMED PRIOR CONSENT. FOR EXAMPLE, NATIVE LEADERS IN MEADOW LAKE CANADA HAVE BEEN PERSUADED TO ACCEPT RADIOACTIVE WASTES FROM DISMANTLED MILITARY SITES IN THE UNITED STATES. ACTIVITIES THAT CAUSE ENVIRONMENTAL DESTRUCTION AND ARE CULTURAL INAPPROPRIATE ARE CONTINUED ON INDIGENOUS LAND (CHAPTER

26, AGENDA 21) IN AREAS UNDER DISPUTE FOR LAND RIGHTS, NO INTERIM MEASURES ARE IN PLACE AND THE LAND IS DESTROYED PRIOR TO THE NEGOTIATIONS BEING COMPLETED.

Young people and women around the world have played a prominent

role in galvanizing communities to recognize their responsibilities

to future generations THEY HAVE PARTICIPATED AND THEY HAVE BEEN

ARRESTED OFTEN FOR CALLING FOR LITTLE MORE THAN FOR STATES TO UNDERTAKE TO PROTECT BIODIVERSITY IN OLD GROWTH FORESTS.

8. Among the achievements after UNCED were the entry in force of the United Nation Framework Convention on Climate Change, ENTERING INTO FORCE IS IMPORTANT BUT FEW STATES HAVE REALLY DETERMINED WHAT WOULD CONSTITUTE COMPLIANCE WITH THIS CONVENTION. STATES ARE STILL AS CAR-DEPENDENT AS EVER IF NOT MORE SO, AND CARBON SINKS IN THE FORM OF OLD GROWTH FORESTS ARE BEING RAPIDLY DESTROYED.

the Convention on Biological Diversity WITH ITS IMPORTANT PROVISIONS FOR IDENTIFYING BIODIVERSITY, INVOKING THE PRECAUTIONARY PRINCIPLE, AND FOR CARRYING OUT AN ENVIRONMENTAL ASSESSMENT REVIEW OF ACTIONS THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY HAVE BEEN IGNORED. INDUSTRY WITH THE HELP OF FOREST RESOURCE COUNTRIES LIKE CANADA ARE PUSHING FOR A FOREST CONVENTION SO THAT THE PROVISIONS IN THE BIODIVERSITY CONVENTIONS WILL NOT APPLY TO FOREST. , the Convention to Combat

Desertification; reaching Agreement on Straddling and Migratory Fish Stocks; adoption of the Global Programme of Action on Sustainable Development of Small Island Developing States and elaboration of the Global Programme of Action for the Protection of the Marine Environment from Land-Based Activities.

AGAIN, AND AGAIN GOVERNMENTS NEGOTIATE THESE AGREEMENTS AND THEN FAIL TO SIGN, FAIL TO RATIFY, OF FAIL TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT. IT IS ONLY WHEN THERE IS A GLOBAL UNDERTAKING TO DISCHARGE THESE OBLIGATIONS THAT CHANGE WILL BEGIN TO OCCUR.

Implementation of these important commitments at the global level, together with those adopted before UNCED, however, still remains to be carried through, and in many cases, further strengthening of their provisions is required. TO ADDRESS THE FAILURE TO IMPLEMENT WE HAVE ORGANIZED ON JUNE 23, 1997, AN OFFICIAL SIGNING AND RATIFYING CEREMONY IN NEW YORK. The establishment, funding and replenishment of GEF were a major achievement, but

funding is still not sufficient to fully meet its objectives. THE

GEF BY ESTABLISHING CONDITIONAL FUNDING NEEDS TO STRENGTHEN ITS STANDARDS, AND HAVE A COMPLEMENTARY PROGRAM WHERE CORPORATIONS THAT HAVE CAUSED ENVIRONMENTAL DEGRADATION, OR THAT HAVE VIOLATED HUMAN

RIGHTS WILL BE REQUIRED TO PAY COMPENSATION AND REPARATION. SOME OF THIS ADDITIONAL FUNDING ALONG WITH THE GLOBAL INCREASE OF CORPORATE TAXES COULD SERVE TO REPLENISH THE GEF FUND. IN A RECENT PRESENTATION AT THE IUCN A REPRESENTATIVE FROM THE WORLD BANK STATED THAT THE BEST ENVIRONMENTAL PROTECTION IS WHERE THERE ARE STIFF REGULATIONS. THIS OBSERVATIONS SHOULD SERVE TO JUSTIFY THE

STRENGTHENING OF STANDARDS FOR CONDITIONAL FUNDING.

9. Progress has been made in incorporating the Rio Principles,

including that of common but differentiated responsibilities, in

a variety of international and national legal instruments. THIS

PRINCIPLE OF FLEXIBILITY OF INTERNATIONAL AND NATIONAL LEGAL

INSTRUMENTS APPEAR TO CONFLICT WITH STATE UNDERTAKINGS IN

TWO RECENT CONFERENCES (THE UN CONFERENCE ON WOMEN AND HABITAT II) WHERE STATES UNDERTOOK TO ENSURE THAT CORPORATIONS INCLUDING

TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, WITH INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW.

IT SHOULD BE NOTED THAT THE PRECAUTIONARY PRINCIPLE IS RARELY FOLLOWED AND OFTEN IT HAS BEEN MISCONSTRUED BY INDUSTRY TO MEAN THAT THERE IS NO SCIENTIFIC CERTAINTY THAT CURRENT PRACTICES WILL CONTRIBUTE TO ENVIRONMENTAL DEGRADATION THEREFORE WE WILL CONTINUE THE PRACTICES.

PRINCIPLE 15 CALLING UPON STATES TO PREVENT THE TRANSFER TO OTHER STATES OF SUBSTANCES AND ACTIVITIES THAT COULD CAUSE ENVIRONMENTAL DEGRADATION OR THAT COULD BE HARMFUL TO HUMAN HEALTH HAVE BEEN

COMPLETELY IGNORED. STATES HAVE BEEN PRESSURED TO ACCEPT TOXIC, HAZARDOUS INCLUDING ATOMIC OR RADIOACTIVE WASTES, AND THEN IT IS ASSERTED THAT THERE IS INFORMED PRIOR CONSENT. INDUSTRIALIZED STATES ARE PROMOTING THE CONTINUED SALE OF NUCLEAR REACTORS SUCH AS THE CANDU REACTOR.

10. A number of recent United Nations conferences have advanced international commitment to the social and economic aspects of sustainable development, such as the eradication of poverty, social integration, population and gender issues, education, trade, growth and development, human settlements and food security, among others, thus contributing to the achievement of the long-term goals and objectives of sustainability.

POVERTY WILL NOT BE ERADICATED UNTIL WE ARE SERIOUS ABOUT OUR PRIORITIES. THERE ARE GLOBAL MISPLACED PRIORITIES WITH 850 BILLION BEING SPENT ON THE MILITARY AND CORPORATE TAXES UNFAIRLY LOW, AND MISGUIDED ASSUMPTION THAT "QUASI UNBRIDLED ECONOMIC GROWTH WILL SUFFICE TO ERADICATE POVERTY.

11. The Commission on Sustainable Development, which was established to review progress achieved in the implementation of

Agenda 21, forward global dialogue and foster partnerships

A

EUPHEMISM FOR INDUSTRY-DIRECTED POLICY for sustainable development, has catalyzed new action and commitments among a wide variety of partners within and outside the UN system. Its Ad-hoc Intergovernmental Panel on Forests made a significant contribution to the advancement of the world forest agenda. IN THE DIRECTION THAT WAS WANTED BY THE FORESTRY COMPANIES AND FORESTRY DEPENDENT STATES.

12. However, much remains to be done to activate the means of implementation set out in Agenda 21, in particular, in the areas of finance and technology transfer. IN PARTICULAR IN THE AREAS OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

TECHNOLOGY TRANSFER HAS OCCURRED SUCH AS THE SALE OF CANDU REACTORS, AND CLEAN-UP TECHNOLOGY THAT JUSTIFIES DEREGULATION OF TOXIC, HAZARDOUS INCLUDING ATOMIC WASTES ETC.

13. Most developed countries have still not reached the UN target, reaffirmed at UNCED, of committing 0.7 percent of their GNP to ODA, nor the agreed UN target of committing 0.15 per cent of GNP as ODA to the least developed countries. On average, ODA as a percentage of GNP declined in the post-Rio period, from 0.34 per cent in 1992 to 0.27 per cent in 1995.

IN 1981 THROUGH GENERAL ASSEMBLY RESOLUTIONS, STATES UNDERTOOK TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING COUNTRIES. AT THAT TIME THE MILITARY BUDGET WAS 50% OF WHAT IT IS NOW. 0.7 PERCENT IS FAR TOO LOW. THE CURRENT GLOBAL MILITARY BUDGET IS ESTIMATED AT 850 BILLION DOLLARS ANNUALLY. UNFORTUNATELY, THE UNITED NATIONS HAS BEEN FACED WITH A DAUNTING TASK OF ADDRESSING THE MISPLACED PRIORITIES OF ITS MEMBER STATES. 425 BILLION DOLLARS SHOULD BE

TRANSFERRED TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT PRIMARILY IN THE SOUTH BUT ALSO IN THE NORTH, AS WELL AS TO STRENGTHEN THE ROLE OF THE UNITED NATIONS.

14. In many developing countries, the debt situation remains a major constraint on sustainable development. While the debt situation of many middle-income countries has improved, enabling them to re-enter international capital markets, many heavily-indebted poor countries (HIPC's) continue to face unsustainable external debt burdens. The recent World Bank/IMF HIPC Initiative could help to address this issue with the cooperation of creditor countries. Further efforts by the international community will also be necessary to reduce debt as an impediment to sustainable

development. THE WHOLE NOTION OF DEBT SHOULD BE REEXAMINED. MOST OF THE DEBT RIDDEN COUNTRIES DID NOT BENEFIT FROM THE DEBT. PERHAPS WHAT SHOULD BE DONE IS THAT THE DEBT SHOULD BE REPHRASED IN TERMS OF COMPENSATION AND REPARATION THAT WOULD BE OWED TO THE DEBT-RIDDEN STATES. THE MEMBER STATES OF THE UNITED NATIONS SHOULD DEMAND AND ENSURE COMPENSATION AND REPARATION WILL BE SOUGHT FROM

CORPORATIONS AND SYMPATHETIC ADMINISTRATIONS FOR THE ENVIRONMENTAL DEGRADATION AND HUMAN RIGHTS VIOLATION IN DEVELOPING COUNTRIES, ON LANDS OF INDIGENOUS PEOPLES AND IN THE COMMUNITIES OF THE MARGINALIZED CITIZENS IN BOTH DEVELOPING AND DEVELOPED COUNTRIES.

THE SO-CALLED DEBT OF THE DEVELOPING COUNTRIES IS NOT A DEBT TO BE FORGIVEN BUT RATHER AN OBLIGATION OF THE DEVELOPED STATES TO REDRESS, COMPENSATE AND RESTORE. DEBT IMPLIES BENEFIT AND LITTLE BENEFIT WAS DERIVED FROM THE YEARS OF CORPORATE, ALONG WITH SYMPATHETIC ADMINISTRATION EXPLOITATION OF DEVELOPING COUNTRIES, INDIGENOUS PEOPLES, AND MARGINALIZED CITIZENS. IT IS A TIME FOR REDRESS, COMPENSATION AND RESTORATION.

15. Similarly, the level of technology transfer and technology-

related investment from public and private sources in developed countries directed to developing countries has not been realized as foreseen in Agenda 21. WHY IS THERE A PRESUMPTION THAT

TECHNOLOGICAL CHANGE IS THE BEST WAY OF FULFILLING COMMITMENTS UNDER AGENDA 21. AND OTHER INSTRUMENTS THAT CAME OUT OF UNCED? WILL TECHNOLOGICAL CHANGE HELP STATES COMPLY WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE OR WITH THE CONVENTION ON BIOLOGICAL DIVERSITY. THE BEST WAY TO BRING ABOUT THE NEEDED CHANGE IS FOR THE NORTH TO DRASTICALLY REDUCE ITS TECHNOLOGICAL DEPENDENCE, TRANSFER

FUNDS TO THE SOUTH FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND

DEVELOPMENT, AND ENGAGE IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT ITSELF. THE NEEDED CHANGE WILL ONLY BE BROUGHT ABOUT IF THERE ARE MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS (MINS) DRAWN FROM INTERNATIONAL PRINCIPLES AND FROM THE HIGHEST AND STRONGEST REGULATIONS FROM MEMBER STATES HARMONIZED CONTINUALLY UPWARDS. MINS WILL THEN DRIVE INDUSTRY TO

BEST (BEST EQUITABLE/ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES.

Increased private flows have led to investments in industry and technology in some developing countries and economies in transition. However, many developing countries have been left behind, slowing the process of technological change in these countries and limiting their ability to meet their commitments under Agenda 21 and other international agreements. The commitment made by developed countries to foster the transfer of technology has not been realized as agreed in Agenda 21.

III. Implementation in Areas Requiring Urgent Action

16. Agenda 21 and the Rio Principles established a comprehensive global approach to the achievement of sustainable development, recognizing the principle of common but differentiated responsibilities and the importance of international cooperation. This approach is as relevant, and as urgently needed, as ever. The preceding assessment shows that, while progress has been made in some areas, a major new effort will be required to achieve the goals established at Rio. The following proposals set out strategies to accelerate progress towards sustainable development. Sections A, B and C are equally important and must be seen and implemented in a balanced and integrated way.

TWO VERY IMPORTANT PRINCIPLES FROM UNCED HAVE BEEN COMPLETELY IGNORED OR MISINTERPRETED. PRINCIPLE 14, ON THE TRANSFER OF SUBSTANCES AND ACTIVITIES, AND PRINCIPLE 15, THE PRECAUTIONARY PRINCIPLE. IN REFERENCE TO PRINCIPLE 14, DEVELOPED STATES ARE STILL TRANSFERRING SUBSTANCES AND ACTIVITIES THAT COULD BE HARMFUL TO HUMAN HEALTH AND THAT COULD CAUSE ENVIRONMENTAL DEGRADATION. THE DEVELOPED STATES HOWEVER HAVE USED THE NOTION OF "INFORMED PRIOR CONSENT" TO JUSTIFY CONTINUING TO TRANSFER SUBSTANCES AND ACTIVITIES. I THINK ENSHRINING THE RIGHT TO BE HARMED APPEARS LESS THAN PRUDENT.

IN REFERENCE TO PRINCIPLE 15 I HAVE HEARD INDUSTRY IN CONJUNCTION WITH SYMPATHETIC ADMINISTRATIONS CLAIMING THAT THERE IS NOT SCIENTIFIC EVIDENCE THAT HARM HAS OCCURRED FROM THE EXISTING PRACTICE THEREFORE THE PRACTICE SHOULD CONTINUE. THIS MISCONSTRUING OF THE PRINCIPLE WAS USED TO JUSTIFY LOGGING IN A COMMUNITY WATERSHED.

A. Integration of Economic, Social and Environmental

Objectives

17. Economic growth is an essential precondition of sustainable development, especially in developing countries.

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT NOT ECONOMIC GROWTH IS AN ESSENTIAL PRECONDITION. POVERTY IS NOT NECESSARILY ERADICATED THROUGH ECONOMIC GROWTH; IN MANY CASES AS RECOGNIZED EARLIER IN SECTION 3. ECONOMIC GROWTH IN THE WAY THAT IT HAS BEEN OCCURRING CONTRIBUTES MORE TO INEQUALITY. AND INEQUITY.

Sustainable development cannot be achieved without greater integration at policy-making and operational level. THE PRECONDITION FOR ALL THESE SECTORS IS THAT THEY ARE ENVIRONMENTALLY SOUND. FACTORING IN THE ENVIRONMENTAL COSTS IS ESSENTIAL BUT PREVENTION THROUGH ENGAGING IN ENVIRONMENTALLY SOUND PRACTICES MAKES BOTH ENVIRONMENTAL AND ECONOMIC SENSE. THE NOTION OF TRADING PERMITS IS INEQUITABLE AND APPEARS TO SANCTION ENVIRONMENTALLY UNSOUND PRACTICES. Economic sectors such as industry, agriculture, energy, transport and tourism must take responsibility for the impacts of their activities on human well-being and the physical environment NOT ONLY FOR FUTURE BUT SHOULD PAY COMPENSATION FOR PAST IMPACTS. LICENCES AND CHARTER OF CORPORATIONS, INCLUDING TRANSNATIONALS, SHOULD BE REVOKED IF THE CORPORATION HAS VIOLATED HUMAN RIGHTS, CAUSED ENVIRONMENTAL DEGRADATION, OR CONTRIBUTED TO CONFLICT, VIOLENCE OR WAR.

As shown by the preceding assessment, the need for integration is particularly urgent at the present moment in the case of energy and transport because of the adverse effects developments in these sectors can have on human health and ecosystems; in agriculture and water use, where inadequate land use planning, poor water management and inappropriate technology can result in the degradation of natural resources and human impoverishment; and in the management of marine resources, where competitive over-exploitation can damage the resource base, food supplies and the livelihood of fishing communities, as well as the environment.

ENVIRONMENTAL ASSESSMENT

OF PROJECTS SHOULD NOT BECOME JUST A PROJECT REVIEW WHERE ECONOMIC INTERESTS HOLD SWAY OVER ENVIRONMENTAL IMPACTS. Sustainable development strategies are important mechanisms to enhance and link national capacity, bringing together the priorities in social, economic and environmental policies. In the context of good governance, properly constructed strategies can enhance prospects

SOCIALLYEQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT for economic growth and for employment at the same time as protecting the environment. All sectors of society should be involved in their development and implementation BUT NO SECTORS OF SOCIETY SHOULD PARTICIPATE IN THE DECISION-MAKING PROCESS IF THERE IS CONFLICT OFINTEREST OR EVEN A PERCEIVED CONFLICT OF INTEREST.

a By the year 2002, national strategies for sustainable development should be adopted in all countries with assistance provided, where needed, through international cooperation, taking into account the special needs of least developed countries. THE LEAST DEVELOPED COUNTRIES DO NEED FAIR TRADE NOT FREE TRADE. Countries which already have national strategies should continue their efforts to enhance and effectively implement them. Assessment of progress achieved and exchange of experience among Governments should be promoted. Local Agenda 21 programmes should also be actively encouraged;

b a broad package of policy instruments, including regulation MANDATORY INTERNATIONAL NORMATIVE STANDARD/REGULATIONS DRAWN FROM THE HIGHEST TENABLE PRINCIPLES FROM STATES SO THAT THEREIS ALSO HARMONIZING UPWARDS AND NO STATE SHALL BE PENALIZED FOR RAISING STANDARDS. Economic instruments SUCH AS REVOKING OF LICENCES, FINES, COMPENSATION BUT NOT TRADING IN POLLUTION PERMITS WHICH GIVE A LICENCE TO POLLUTE AND ARE INEQUITABLE., information and voluntary partnerships between Governments and non-Governmental actors EXCLUDING INDUSTRY, will be necessary to ensure that integrated approaches are effective and cost efficient; NOTING THAT MEMBER STATES OF THE UNITED NATIONS HAVE UNDERTAKEN TO ENSURE THAT CORPORATIONS, INCLUDING TRANSNATIONALS, COMPLY WITH NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW, INCLUDING ENVIRONMENTAL LAW

c transparent and participatory processes TO DATE

PARTICIPATORY AND CONSULTATIVE PROCESSES HAVE BEEN HEARINGS, PERHAPS EVEN LISTENING "TOS", BUT RARELY IS THE INFORMATION ACTED UPON. AFTER UNCED THERE WAS A FLURRY OF CONSULTATION PROCESSES,

will also be required to ensure the complementarity of economic, environmental and social objectives. In addition to the major groups WHY NOT NAME THEM INDUSTRY "MAJOR GROUPS" HAS BECOME A EUPHEMISM FOR INDUSTRY.

Identified in Agenda 21, other social actors and groups, such as the elderly, the media, educators, the financial community and parliaments, should be acknowledged and included in the decision-

making process; ROUND TABLE DECISION MAKING PROCESSES REFLECTING A GLORIFICATION OF CONFLICT OF INTEREST, OFTEN LEADING TO THE LOWEST COMMON DENOMINATOR THROUGH CONSENSUS, HAS BEEN PROMOTED PARTICULARLY SINCE THE BRUNDTLAND REPORT. THERE HAS NOT BEEN PRINCIPLE-BASED DECISION-MAKING GROUNDED IN PRINCIPLES FROM INTERNATIONAL DOCUMENTS AND DRAWING UPON CONCERNED CITIZENS WITH VARYING AREAS OF EXPERIENCE AND EXPERTISE BUT THERE HAVE BEEN ARENAS OF VESTED SELF INTEREST.

d full participation of women in political, economic, cultural and other activities is essential, both as a central objective of sustainable development, and to ensure that the skills and experience of women are fully used in decision-making at all levels.

Eradicating Poverty

THE MAJOR CAUSE OF THE CONTINUED DETERIORATION OF THE GLOBAL ENVIRONMENT IS THE UNSUSTAINABLE PATTERN OF CONSUMPTION AND

PRODUCTION, PARTICULARLY IN INDUSTRIALIZED COUNTRIES, WHICH IS A MATTER OF GRAVE CONCERN, AGGRAVATING POVERTY AND IMBALANCES. (4.3. CHANGING CONSUMPTION PATTERNS, AGENDA 21. 1992), AND REAFFIRMED IN ART. 37 OF THE PLATFORM OF ACTION, UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE)

18. The eradication of poverty is one of the fundamental goals of the international community and the entire United Nations system.

In the long term, poverty eradication depends on THE REALIGNMENT OF PRIORITIES; CURRENTLY THE GLOBAL COMMUNITY SPENDS

CURRENTLY THE GLOBAL COMMUNITY SPENDS 850 BILLION ON THE MILITARY.IT SHOULD BE NOTED THAT IN 1981 THERE WAS A GENERAL ASSEMBLY RESOLUTION TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING COUNTRIES.

IN 1981, THE MILITARY BUDGET WAS LESS THAN 50% OF WHAT IT IS NOW. TO ADDRESS THE INEQUALITY, THERE SHOULD BE AN IMMEDIATE REDUCTION OF THE MILITARY BUDGET BY 50% AND THE TRANSFER OF THE SAVINGS INTO SOCIAL PROGRAMS AND EDUCATION AND INTO CREATING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK. IN ADDITION, A PORTION OF THIS BUDGET SHOULD BE TRANSFERRED INTO THE UNITED NATIONS AND ITS PROGRAMS SO THAT THE INTERNATIONAL BODY CAN PROPERLY FUNCTION TO BRING ABOUT THE NEEDED CHANGE. THE MEMBER STATES OF THE UNITED NATIONS HAVE FOR OVER 50 YEARS THROUGH THE UN PROCESS UNDERTAKEN TO GUARANTEE HUMAN RIGHTS, TO PROTECT THE ENVIRONMENT, TO PREVENT WAR AND CONFLICT, TO ENABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT AND TO ENSURE THE RESPECT FOR INTERNATIONAL LAW.

The full integration of people living in poverty into economic, social and political life.

Policies to combat poverty, in particular, provision of basic social services and food security, promote such integration, as well as broader socio- economic development

[SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT],

since enhancing the productive capacity of poor people increases both their well-being and that of their communities and societies, and facilitates their participation in resource conservation and environmental protection. Full implementation of the Programme of Action of the World Summit for Social Development is essential, with the participation of non-governmental organizations, women's groups and community organizations. Priority actions include:

a improving access to sustainable livelihoods, entrepreneurial opportunities FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT and productive resources, including land, water, credit, technical and administrative training, and appropriate technology, with particular efforts to reach the rural poor and the urban informal sector;

b providing universal access to basic social services, including basic education, health care, nutrition, clean water and sanitation; ENSURING THAT THE RIGHT TO AFFORDABLE AND SAFE SHELTER, RIGHT TO HEALTHY ORGANICALLY GROWN FOOD, RIGHT TO SOCIAL SECURITY ETC. AS AGREED THROUGH HUMAN RIGHTS INSTRUMENTS ARE GUARANTEED

c progressive development SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT NOT PROGRESSIVE DEVELOPMENT IS NEEDED, in accordance with the

financial and administrative capacities of each society, of social protection systems to support those who cannot support themselves, either temporarily or permanently.

d addressing the disproportionate impact of poverty on women, in particular by removing legislative, policy, administrative and customary barriers to women's equal access to productive resources and services, including access to and control over land and other forms of property, credit, inheritance, education, information, REPRODUCTIVE HEALTH /CHOICE, health care and technology.

Full implementation of the Beijing Platform for Action is essential.

Changing Consumption and Production Patterns

19. Unsustainable patterns of production and consumption, particularly in the industrialized countries, are identified in Agenda 21 as the major cause of continued deterioration of the global environment. Similar patterns are emerging in the higher income groups in some developing countries. Policy making should take place at both the international and national levels, in accordance with the principle of common but differentiated responsibilities, applying the POLLUTION PREVENTION PRINCIPLE, RESPECTING THE CARRYING CAPACITY PRINCIPLE, REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLES, ENVIRONMENTAL ASSESSMENT PRINCIPLE, THE ANTICIPATORY PRINCIPLE, THE REVERSE ONUS AND THE PRECAUTIONARY PRINCIPLE polluter pays principle and encouraging producer responsibility and adopting a sectoral approach where relevant, The promotion of

REGULATIONS WITH PRINCIPLES THAT DRIVE INDUSTRY RATHER THAN
 INDUSTRY COMPROMISING PRINCIPLES IS NEEDED eco-efficiency, cost
 internalization and product policies are key strategies towards
 making consumption and production patterns more sustainable.

Subject: RESPONSE TO AD HOC INTERSESSIONAL WORKING GROUP (re-send)

Mime-Version: 1.0

Sender: owner-csdgen@nywork3.undp.org

Precedence: bulk

Actions in this area should focus on:

a promoting measures to internalize environmental costs
 and benefits in the price of goods and services, particularly
 with a view to encouraging the use of environmentally preferable of
 environmentally preferable

products and commodities IS THIS A EUPHEMISM TO REPLACE

ENVIRONMENTALLY SOUND. THERE WAS ALWAYS A PROBLEM WITH "BEST
 AVAILABLE TECHNOLOGY". BEST PRACTICES WAS USED IN HABITAT. BEST
 SHOULD BE DEFINED AS BEST EQUITABLE /ENVIRONMENTALLY SOUND
 TRADITIONS,

products and commodities, and moving towards natural resource pricing that fully reflects
 economic scarcity;

b developing core indicators to monitor critical trends

in consumption and production patterns; INDICATORS HAVE BEEN USED

BY INDUSTRY TO WEAKEN HARD LAW BY CONVERTING IT INTO SOFT LAW. FOR EXAMPLE, IN A DOCUMENT ON FOREST INDICATORS THERE WAS AN INITIAL DISCLAIMER STATING THAT THE INDICATORS WERE VOLUNTARY, AND THEN MENTION THE FIRST INDICATOR AS BEING TO CONSERVE BIODIVERSITY THUS, POSSIBLY OR MORE LIKELY, PROBABLY TAKING "CONSERVING BIODIVERSITY" OUT OF THE LEGAL DOMAIN OF THE CONVENTION ON BIOLOGICAL DIVERSITY.

c identification of best practices BEST

(EQUITABLE/ENVIRONMENTAL SOUND TRADITIONS) PRACTICES through evaluations of policy measures, especially in developed countries, with respect to their environmental effectiveness, efficiency, WHAT DOES THIS MEAN? And implications for social equity, and dissemination of the results;

d taking account of the linkages between urbanization, the environmental and developmental effects of consumption and production patterns in cities, so promoting more sustainable patterns of urbanization;

e adopting international and national targets or action

programmes for ENVIRONMENTALLY SOUND RENEWABLE [NOTING THAT RENEWABLE DOES NOT INCLUDE NUCLEAR AND BREEDER REACTORS, OR the SCHEME TO USE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN REACTORS] energy and material efficiency, with timetables

for their implementation AND TIME TABLES FOR THE PHASING OUT OF THE USE OF NUCLEAR ENERGY AND FOSSIL FUELS, thereby stimulating the continued

implementation of eco-efficiency measures in both the private and public sectors; in this context, establishing goals to improve energy and material efficiency, such as those advocated in Factor

10 WHAT IS FACTOR 10 ?? or similar policy approaches, deserves attention;

f encouraging Governments to take the lead IN ENSURING THAT CORPORATIONS INCLUDING TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW INCLUDING INTERNATIONAL, ENVIRONMENTAL LAW, THROUGH ENSURING MANDATORY INTERNATIONAL NORMATIVE STANDARDS AND in changing consumption patterns by improving their own environmental performance with timetabled, action-oriented policies on procurement, management of public facilities, and the further integration of environmental concerns in national policy making;

g harnessing the role of media, advertising and marketing in shaping consumption patterns and encouraging the use REGULATIONS TO DRIVE CORPORATIONS AWAY FROM PRODUCING PRODUCTS THAT CONTRIBUTE TO OVERCONSUMPTION of eco-labeling towards this end;

h in promoting measures favouring eco-efficiency PROVIDING THAT ECO-EFFICIENCY IS NOT BEING USED AS A MEANS OF AVOIDING REGULATION, developed countries should pay special attention to the needs of developing countries, in particular, encouraging positive and avoiding negative impacts on export opportunities and market access for these countries;

i encouraging educational programmes to promote sustainable consumption and production patterns AND ENSURING THAT CORPORATE SECTOR IS NOT INVOLVED WITH DETERMINING THE PHILOSOPHICAL UNDERPINNINGS OF EDUCATION [FOR EXAMPLE THERE IS A

PROGRAM" LEARNING FOR SUSTAINABILITY" THAT HAS BOARD MEMBERS FROM INDUSTRY. IN ADDITION, RATHER THAN ENCOURAGE CORPORATE INVOLVEMENT IN UNIVERSITIES, CORPORATE TAXES SHOULD BE RAISED, TAX DEFERRALS COLLECTED AND DISCONTINUED, AND THE MONEY SO GAINED SHOULD GO, IN PART, TO PROMOTING EDUCATION. IN CHAPTER 36, INDUSTRY IS DESIGNATED AS THE RECIPIENT OF ENVIRONMENTAL EDUCATION NOT THE ONE TO DETERMINE THE PHILOSOPHICAL UNDERPINNINGS OF EDUCATION.

Making Trade, Environment and Sustainable Development

Mutually Supporting

20. In order to accelerate economic growth and poverty

eradication THE LINKING BETWEEN ECONOMIC GROWTH, IF IT IS NOT SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND, AND POVERTY ERADICATION IS AN UNPROVED ASSUMPTION., there is a need for macro economic conditions in both developed and developing countries which favour the development of instruments and structures enabling all countries

to benefit from globalization IT IS QUESTIONABLE IF COUNTRIES WILL

BENEFIT FROM GLOBALIZATION UNLESS THERE IS A UN GLOBAL REGIME WITH MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS THAT ENSURES THE GUARANTEEING OF HUMAN RIGHTS, THE PROTECTING AND PRESERVING OF THE ENVIRONMENT, THE PREVENTION OF WAR AND CONFLICT, AND THE ENABLING OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT. CHARTERS OF CORPORATIONS INCLUDING TRANSNATIONALS

SHOULD BE REVOKED FOR NOT ADHERING TO A GLOBAL REGIME, AND ANY DEVELOPMENT FUNDING SHOULD BE CONDITIONAL ON THIS UN GLOBAL REGIME

Cooperation and other support for capacity-building in trade, environment and development should be strengthened through renewed system-wide efforts in the United Nations, WTO and Bretton Woods institutions. NOTE THAT AT An IUCN PLENARY THE WORLD BANK CLAIMED THAT THE BEST ENVIRONMENTAL PROTECTION IS WHERE THERE ARE REGULATIONS THAT ARE STRICTLY ENFORCED There should be a balanced and integrated approach to trade and

Sustainable development, based on a combination of trade liberalization, economic development and environmental protection. To achieve this, trade liberalization should be accompanied by environmental and resource management policies in order to realize its full potential contribution to improved environmental protection and promotion of sustainable development through more efficient allocation and use of resources. The multilateral trading system should have the capacity to further integrate environmental considerations and enhance its contribution to sustainable development without undermining its open, equitable and non-discriminatory character. International cooperation is needed and unilateralism should be avoided. The following actions are required: THERE SHOULD BE FAIR TRADE NOT FREE TRADE

a timely and full implementation of the results of the Uruguay Round negotiations, and full use of the Comprehensive and Integrated WTO Plan of Action for the Least Developed Countries: WTO PLAN OF ACTION MUST BE SUBSERVIENT TO INTERNATIONAL LAW that SHOULD BIND STATES EVEN IF THEY HAVE NOT SIGNED OR RATIFIED EXISTING AGREEMENTS THE GUARANTEEING OF HUMAN RIGHTS, THE PROTECTING AND PRESERVING OF THE ENVIRONMENT, THE PREVENTION OF WAR AND CONFLICT, AND THE ENABLING OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT. FOR EXAMPLE, THE US HAS SIGNED AND RATIFIED FEW AGREEMENTS INCLUDING THE RATIFICATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY, AND SIGNIFICANT HUMAN RIGHTS INSTRUMENTS SUCH AS THE INTERNATIONAL COVENANT OF SOCIAL ECONOMIC AND CULTURAL RIGHTS AND CAN JUSTIFY UNDERMINING THESE AGREEMENTS THROUGH TRADE AGREEMENTS.

b there is continued need to promote an open, non-

discriminatory and equitable multilateral trading system, as well as the rapid accession of developing countries, while PREVENTING NOT JUST MITIGATING IS NOT GOOD ENOUGH mitigating possible economic adverse AND ENVIRONMENTALLY ADVERSE effects on certain developing countries that might arise from the implementation of certain aspects of the Uruguay Round Agreements;

c further work is needed to ensure that the implementation OF THE TRADE AGREEMENT DOES NOT PREVENT STATES FROM MOVING TO MORE STRINGENT ENVIRONMENTAL STANDARDS AND REGULATIONS SO THAT THE MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS WILL BE HARMONIZED CONTINUALLY UPWARDS. INTERNATIONAL STANDARDS AND REGULATION SHOULD NEVER PENALIZE A STATE THAT IS WILLING TO STRENGTHEN REGULATIONS. of environmental measures does not result in disguised or unnecessary restrictions on trade, particularly those that have adverse effects on existing market access opportunities of developing countries. There is also a need to strive for complementarity between globalization promoted by trade liberalization and the environmental, social and sustainable development goals of UNCED and other recent UN conferences; TRADE NEGOTIATIONS SHALL NEVER UNDERMINE INTERNATIONAL LAW INCLUDING OBLIGATIONS INCURRED THROUGH CONVENTION, TREATIES, AND COVENANTS, EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND COMMITMENTS MADE THROUGH CONFERENCE ACTION PLANS.

d further analysis of environmental effects of international transport of goods is warranted;

e National governments and private bodies should explore concepts such as mutual recognition and equivalency in the context of eco-labeling, taking into account differing environmental and developmental conditions across countries;

UNFORTUNATELY, ECO-LABELING IS A VOLUNTARY PROGRAM; WE HAVE ENOUGH OF A BODY OF INTERNATIONAL ENVIRONMENTAL LAW TO ENSURE THAT, THROUGH MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS AND THROUGH REQUIRED COMPLIANCE, ALL PRODUCTS WILL BE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND.

f positive measures, including enhanced market access for products of export interest to developing countries, should be promoted. The General System of Preferences (GSP) could be used to provide incentives for sustainable production; WHAT IS GSP?

g further action should also focus on issues such as: (i) the role of positive measures in multilateral environmental agreements; (ii) special conditions and needs of small and medium-sized enterprises (SMEs) in the trade and environment interface; (iii) trade and environment issues at the regional level, including in the context of regional economic and trade agreements; and (iv) environment and sustainable development issues in the context of domestic and foreign direct investment, including in the context of the Multilateral Agreement on Investment.

Population

21. The current decline in population growth rates must be further promoted through national and international policies

promoting SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT [NOTE THAT THIS EXPRESSION CAME FROM THE INTERNATIONAL CONFERENCE ON POPULATION AND DEVELOPMENT] economic development, poverty reduction and further expansion of basic education, with equal access for girls and women, and health care INCLUDING REPRODUCTIVE HEALTH, including family and maternal health care. Priority actions for reducing pressures from Population growth and meeting the needs of growing urban and rural populations include the full implementation of the Programme of Action of the 1994 International Conference on Population and Development, with international assistance for implementation in developing countries.

Health

22. The goals of sustainable development cannot be achieved when a high proportion of the population is afflicted with debilitating illnesses. An overriding goal for the future is to implement the Health for All programmes and to enable all people, particularly the world's poor, to achieve a higher level of health and well-being and to improve their economic productivity and social potential. Protecting children from Environmental health threats is particularly urgent since children are More susceptible than adults to these threats. Top priority should be attached to efforts, by countries and international organizations, to eradicate the major infectious diseases, particularly malaria which is on the increase; and to the improvement and expansion of basic health and sanitation services and the provision of safe drinking water. Strategies for local and indoor air pollution should be developed, bearing in mind

their serious impacts on human health. A CLEAR LINKAGE BETWEEN HEALTH AND ENVIRONMENT IN AGENDA 21 HAS ALREADY BEEN ESTABLISHED UNFORTUNATELY, RESEARCH MONEY, OFTEN DIRECTED BY VESTED CORPORATE INTERESTS, IS NOT PUT INTO CARRYING OUT RESEARCH IN ENVIRONMENTALLY INDUCED DISEASES. needs to be established. Health issues should be fully integrated into national and sub-national sustainable development plans, and incorporated into project and programme development as a component of Environmental Impact Assessments.

Sustainable Human Settlements

THE RIGHT TO SHELTER WAS ENSHRINED IN THE INTERNATIONAL COVENANT OF SOCIAL CULTURAL AND ECONOMIC RIGHTS. THIS RIGHTS WAS QUALIFIED IN HABITAT II. THE RIGHT TO SAFE AFFORDABLE ENVIRONMENTALLY SOUND MUST BE GLOBALLY GUARANTEED

23. Approximately half the world's population already lives in urban settlements and, by early in the next century, the majority - over five billion people - will be urban residents. Urban problems are concerns common to both developed and developing countries, although urbanization is occurring most rapidly in developing countries, leading to increased social and environmental stresses. Urgent action is needed to implement fully the commitments made at the United Nations Conference on Human Settlements (Habitat II) and in Agenda 21. Technology transfer, capacity building and private-public partnerships THAT ENSURE BEST (BEST EQUITABLE AND ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES to improve the provision and management of urban infrastructure and social services AND UNIVERSAL HEALTH CARE should be accelerated to achieve more sustainable cities.

B. Sectors and Issues

24. This section identifies a number of specific areas which are of widespread concern since failure to reverse current trends, notably in regard to resource degradation, will have potentially disastrous effects on social and economic development, particularly in developing countries.

Freshwater

WATER IS NOT AN ECONOMIC GOOD IT IS AN ECOLOGICAL RIGHT

25. Water resources are essential for satisfying basic human needs, health and food production, the preservation of ecosystems and for economic and social development in general. There is growing concern over the increasing stress on water supplies caused by unsustainable use patterns, affecting both water quality and quantity and the wide-spread lack of access to safe water supply and suitable sanitation in many developing countries. This calls for the highest priority to be given to the serious freshwater problems facing many regions, especially in the developing world. There is an urgent need to:

INSTITUTE REGULATIONS THAT PREVENT THE MISUSE OF FRESH WATER. URBAN AND RURAL WASTE, RATHER THAN BEING CONVERTED INTO A RESOURCE:

a assign high priority, in accordance with specific national needs and conditions, to the formulation and implementation of policies and programmes for integrated watershed management, including issues related to pollution and waste, the interrelationship between water and mountains,

forests, upstream and downstream users, biodiversity and the preservation of aquatic ecosystems, land degradation and desertification;

b strengthen regional and international cooperation for technological transfer and the financing of integrated water resources programmes and projects, in particular those designed to increase access to safe water supply and sanitation; WHAT ARE

THE IMPLICATIONS OF THIS? DOES THIS JUSTIFY DIVERSION AS WAS DONE BY THE US WHEN THEY DIVERTED THE COLORADO RIVER AND PREVENTED A DROP OF WATER FROM GOING INTO MEXICO.

c manage water resource development and use in ways that provide for the participation of local communities and women in particular;

d provide an enabling environment which encourages investments from public and private sources

PRIVATE SOURCES SHOULD NOT BE INVOLVED IN PROVIDING COMMUNITY SERVICES. CORPORATIONS SHOULD BE FAIRLY TAXED SO THAT PUBLIC FUNDS CAN BE USED FOR THE PUBLIC GOOD; to improve water supply and sanitation services, especially in fast-growing urban areas, as well as in poor rural communities;

e recognize WATER IS NOT AN ECONOMIC GOOD IT IS ECOLOGICAL RIGHT; taking into account the satisfaction of basic human needs, global food security, and poverty alleviation. Gradual implementation of pricing policies geared toward cost recovery and an equitable and efficient allocation of water will be necessary to manage the

sustainable development of scarce water resources and generate financial resources for investment in new water supply and treatment facilities;

f strengthen the capability of information management systems of governments and international institutions, including obtaining of scientific, social and environmental data, in order to facilitate the integrated management of water resources and foster regional and international cooperation for information dissemination and exchange;

g strengthen international cooperation for the integrated development of water resources in developing countries through initiatives such as the Global Water Partnership. **WHAT IS THIS? WHO ARE THE PARTNERS?**

h make progress on multilateral agreements among riparian countries for the harmonious development of international water courses; **HARMONIZING UPWARD TO THE HIGHEST AND MOST STRINGENT STANDARDS AND REGULATIONS.**

i foster an inter-governmental dialogue, under the aegis of the CSD, aimed at building a consensus which **MUST BE BASED ON PRINCIPLES ESTABLISHED THROUGH THE U.N. SYSTEM AND NOT ON VESTED INTERESTS** on issues related to the sustainable management and use of water resources at the national, regional and international levels.

26. Some progress has been achieved with regard to various aspects of the protection of oceans. To address the need for improving global decision-making in the marine environment,

periodic intergovernmental reviews will be undertaken by the United Nations Commission on Sustainable Development of all aspects of the marine environment and its related issues, for which the overall legal framework is provided by the United Nations Convention on the Law of the Sea, as agreed by the Commission at its fourth session in its decision 4/15. In this context, there is an urgent need for:

a FOR ALL STATES TO RATIFY THE LAW OF THE SEA AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT.

an integrated, comprehensive approach to the implementation and monitoring of existing legal instruments and mechanisms, based on more effective coordination of policies and actions at national, sub-regional, regional and international levels, and on international cooperation;

b urgent implementation AND UNDERTAKING TO RATIFY AT THE RATIFICATION CEREMONY ON JUNE 23, 1997 IN NEW YORK, at the international, regional and national level, of relevant agreements, instruments and decisions dealing with oceans and seas. /1 Despite this large number of agreements, major problems persist in some areas of ocean management. The continuing decline of many marine fish stocks and rising coastal pollution levels highlight the need for concerted action; NOTE THAT MEMBER STATES OF THE UN UNDERTOOK, THROUGH THE HABITAT II AGENDA, TO PREVENT DISASTERS. ONE POTENTIAL SEA DISASTER IS THAT POTENTIALLY ARISING FROM THE CIRCULATING AND BERTHING OF NUCLEAR POWERED AND NUCLEAR ARMED VESSELS. THIS PRACTICE MUST DISCONTINUE IMMEDIATELY.

Precedence: bulk

c Governments TO NOT JUST CONSIDER BUT TO PHASE OUT to consider the establishment of measurable objectives, including the phasing-out of subsidies, where appropriate, to eliminate or reduce excess fishing fleet capacity at global, regional and national level;

d in the context of the 1998 International Year of the Ocean, proclaimed by the General Assembly in resolution 49/ 131, Governments should take action, individually and through their participation in the United Nations Commission for Sustainable Development, UNEP and its Regional Seas Programme, the Intergovernmental Oceanographic Commission of UNESCO and the FAO, to improve the quality and quantity of scientific data related to oceans and to enhance public awareness of oceans as a finite economic and ecological asset that must be preserved and protected. In particular, the Global Ocean Observing System (GOOS) should be fully implemented and the United Nations inter-agency Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection (GESAMP) should be supported. Greater international cooperation is required to assist developing countries and, in

particular, the small island developing States, to operationalize data networks and clearing houses for information sharing concerning oceans.

Forests

THE FOREST INDUSTRY, THROUGH SYMPATHETIC ADMINISTRATIONS LIKE THE CANADIAN GOVERNMENT AND OTHER FOREST STATE GOVERNMENTS, HAVE BEEN PUSHING FOR A "COMPREHENSIVE FOREST CONVENTION"; GIVEN THAT THERE ARE EXISTING INSTRUMENTS SUCH AS THE CONVENTION ON BIOLOGICAL DIVERSITY, FRAMEWORK CONVENTION ON CLIMATE CHANGE (CARBON SINKS), CONVENTION TO PREVENT DESERTIFICATION, VIENNA CONVENTION ON PREVENTING THE DEPLETION OF THE OZONE LAYER ETC. AND MANY OTHERS ARE APPLICABLE TO FORESTS AND COULD HAVE FOREST PROTOCOLS ATTACHED.

27. The report of the Intergovernmental Panel on Forests includes a number of options which will be considered at the Fifth Session of the CSD.

Energy

28. Energy plays a key role in achieving economic, social and environmental objectives of sustainable development and access to reliable and cost effective supplies of energy is essential. However, the current patterns of production, distribution and use of energy are not consistent with the pursuit of sustainable development. Therefore, there is an urgent need for:

a international cooperation for provision of adequate ENVIRONMENTALLY SOUND energy services to unserved populations, using modern renewable

energy sources EVERY WHERE. where this is the best option;

STATES SHALL STOP ALL SUBSIDIES FOR NUCLEAR AND FOSSIL FUEL INDUSTRIES AND BEGIN IMMEDIATELY TO ESTABLISH A TIME LINE FOR THE PHASING OUT OF NUCLEAR AND FOSSIL FUEL. [SEE RECENT IUCN RESOLUTION ON THIS TOPIC] ENVIRONMENTALLY SOUND RENEWABLE [NOTING THAT RENEWABLE DOES NOT INCLUDE NUCLEAR AND BREEDER REACTORS, OR SCHEMES TO USE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN REACTORS]

b all countries to develop comprehensive energy policies which include economic, social and environmental aspects of production, distribution and use, and to promote more sustainable patterns of energy production and consumption;

c PROVIDE AND REQUIRE ENVIRONMENTALLY SAFE AND SOUND RENEWABLE ENERGY SOURCES SUCH AS SOLAR, WIND, FUEL CELLS, AND PHASE OUT THE USE OF FOSSIL FUELS AND NUCLEAR ENERGY.
countries to systematically increase use of modern renewable energy sources and cleaner fossil fuel technologies, to improve efficiency in energy production, distribution and use;

d concerted efforts to increase investment and R&D in renewable energy technologies at the international and national levels by the energy sector and institutions and governments;

e governments and the private sector to move towards energy pricing that reflects full economic and environmental costs, as well as social benefits, including consideration of elimination of environmentally-damaging subsidies for energy production and consumption, especially for fossil and nuclear energy, within ten years, while taking into account specific

conditions of countries; eliminate ALL SUBSIDIES TO NUCLEAR, LARGE SCALE HYDRO DAMS, AND FOSSIL FUEL ENERGY. ESTABLISH REGULATIONS TO ENSURE THE FUNDING AND SUBSIDIES FOR ENVIRONMENTALLY SOUND ENERGY. PHASING OUT NUCLEAR AND FOSSIL FUEL ENERGY.

f development of a common strategy as a reference framework for better coordination of energy related activities in the UN system.

Transport

29. Over the next twenty years, transportation is expected to be the major reason for growing world demand for energy, particularly oil. The transport sector is the largest end-user of energy in developed countries and the fastest growing one in most developing countries. Current levels and patterns of fossil energy use for transport have particularly damaging impacts on the global atmosphere, as well as local air quality and human health. There is an urgent need for:

a promotion of integrated transport policies which consider alternative approaches to meeting commercial and private mobility needs and improve performance in the transport sector, at the national, regional and global levels, with international cooperation to support the development of more sustainable, ENVIRONMENTALLY SOUND TRANSPORTATION WITH EMPHASIS ON PUBLIC TRANSPORTATION, AND NON-MOTORIZED TRANSPORTATION, AND PERMANENT CAR-FREE ZONES, ALONG WITH ROTATIONAL CAR FREE CITY AND TOWN DAY. REQUIRE PURCHASE OF PUBLIC TRANSIT PASSES. FREE PUBLIC TRANSIT SERVICES. INITIATE INTERNATIONAL CAR-FREE DAY JUNE 24, 1997
REDESIGNING CITIES TO BE ECOCITIES. .

patterns of transport; IN ADDITION, IN THE HABITAT II AGENDA, STATES AGREED TO MOVE AWAY FROM CAR-DEPENDENCY

b integration of land use and urban, peri-urban and rural transport planning, taking into account the need to preserve ecosystems GOOD; INCLUDING URBAN AND PERIURBAN BIODIVERSITY

c use MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS of a broad spectrum of policy instruments to improve energy efficiency and efficiency standards in transportation and related sectors:

d promotion of guidelines for environmentally-friendly IS FRIENDLY DIFFERENT THAN SOUND WHICH WOULD BE BETTER FOR THE ENVIRONMENT OR ARE THEY EQUIVALENT? ENVIRONMENTALLY SOUND WAS USED ALL THE WAY THROUGH HABITAT II.

transport and targets for reducing vehicle emissions of carbon monoxide, particulate matter and volatile organic compounds and the phasing-out of lead additives in motor gasoline within the next ten years; IT IS NOT NECESSARY JUST TO REDUCE EMISSIONS. OFTEN SUGGESTIONS OF FUEL REPLACEMENT STILL MAINTAIN THE INFRASTRUCTURE OF THE CAR AND POSSIBLY NEW SOURCES OF ENERGY SUCH AS THAT SUGGESTED BY SOME PEOPLE INVOLVED WITH ELECTRIC CARS (NUCLEAR HAS BEEN SUGGESTED AS A POSSIBILITY).

e partnerships at the national level, involving governments, local authorities, NGOs and the private sector for strengthening of transport infrastructures and development of innovative mass transport schemes.

Atmosphere

30. So far, very little progress has been made in reducing greenhouse gases (GHG) emissions. There is a need for reinforcement of the UNFCCC through additional agreements to limit GHG emissions. It is of great importance that the COP III of UNFCCC, to be held in Kyoto, Japan, later this year, should adopt a legally-binding protocol, or other legal instrument, which fully encompasses the remit of the Berlin Mandate. COP III should call upon the industrialized world to endorse a substantial reduction target for GHGs from 1990 levels by the year 2005, and to agree on coordinated measures to ensure the target's implementation.

AT THE CHANGING OF THE ATMOSPHERE CONFERENCE IN TORONTO IN 1988 THERE WAS AN AGREEMENT TO UNDERTAKE TO REDUCE CO2 EMISSIONS BY APPROXIMATELY 20% OF 1988 LEVELS BY THE YEAR 2005 AS AN INITIAL GLOBAL GOAL. CLEARLY, THE INDUSTRIALIZED NATIONS HAVE A RESPONSIBILITY TO LEAD THE WAY, BOTH THROUGH THEIR NATIONAL ENERGY POLICIES AND THEIR BILATERAL AND MULTILATERAL ASSISTANCE ARRANGEMENTS

SUBSTANTIAL EFFORT HAS TO BE MADE TO EVEN ATTEMPT TO GO BEYOND THAT GOAL AND ACHIEVE 20% OF 1988 BY THE YEAR 2000. CLIMATE 2000. TO

ACHIEVE THIS STATES WOULD HAVE TO SERIOUSLY MOVE AWAY FROM CAR DEPENDENCY, CEASE LOGGING IN OLD GROWTH FORESTS SO AS TO PRESERVE CARBON SINKS, AND TO CEASE ALL BROADCAST BURNS.

SYSTEMIC CONSTRAINT

OFTEN THE CAR INDUSTRY IS AT THE TABLE AND PREVENTING THE NECESSARY CHANGES. SIMILARLY, THE FOREST INDUSTRY IS AT THE TABLE FIGHTING AGAINST THE PRESERVATION OF OLD GROWTH CARBON SINKS. UNTIL WE MOVE AWAY FROM VESTED INTEREST DECISION MAKING CHANGE WILL NOT OCCUR.

31. The recent successful conclusion of the replenishment negotiations of the Montreal Protocol Multilateral Fund is welcomed. Future replenishment should also be adequate to ensure timely implementation of the protocol. There is also a need for implementation of effective measures against the illegal trade in ozone depleting substances. GOOD Rising levels of transboundary air pollution should be countered through the further development of regional agreements and conventions aimed at the reduction of polluting emissions. POSSIBLE PROBLEM THAT RECYCLING OF CFCS TECHNIQUES HAS BEEN USED TO ARGUE THAT THE UNDERTAKING TO ELIMINATE THE PRODUCTION AND CONSUMPTION OF CFC SHOULD BE MODIFIED, AND THAT CONSUMPTION DOES NOT INCLUDE RECYCLED MATERIAL. THERE IS FEAR THAT RECYCLING COULD NOW BE USED TO JUSTIFY THE CONTINUED PRODUCTION AS WELL.

Chemicals and Wastes

NOTE THAT NUCLEAR /ATOMIC/ RADIOACTIVE TECHNOLOGY AND WASTES SHOULD BE INCLUDED UNDER THE BASEL CONVENTION.

ALSO, PRINCIPLE 14 OF THE RIO CONVENTION SHOULD APPLY TO ALL TOXIC, CHEMICAL, BIOTECHNICAL AND ATOMIC WASTES

32. Substantial progress has been made with implementation of the Basel and Bamako Conventions and the establishment of the Intergovernmental Forum on Chemical Safety (IFCS) and the Inter-organizational Programme for the Sound Management of Chemicals (IOMC). Further action at the international level includes recent decisions of the UNEP Governing Council and the second session of the IFCS to prepare for the expeditious conclusion of conventions

on Prior Informed Consent (PIC) and Persistent Organic Pollutants (POPs); bearing in mind the need for a comprehensive approach to the control of such pollutants, including necessary international mechanisms to assist developing countries and economies in transition to implement those conventions. There is also a need for the IFCS, the IOMC and relevant UN and national agencies to develop criteria to identify chemicals beyond the 12 specified POPs that could be included in a POPs convention. It is necessary to conclude the Protocol on Liability and Compensation under the Basel Convention. Storage, transportation, transboundary movements and disposal of radio-active wastes must be guided by the principles of the Rio Declaration. Increased regional cooperation is required to improve the management of radioactive wastes; storage of radioactive wastes in countries or territories without internationally accepted safe storage facilities should be prevented.

Land and Sustainable Agriculture

PROMOTING ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES THROUGH REGULATIONS AND EDUCATION

Concurring with the Universal Declaration on the Eradication of Hunger and Malnutrition , on the importance of assuring "the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must

collaborate in order to facilitate the preservation of the environment...". (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

Recognizing that the Green Revolution has failed because it could not ensure global food security and to a high extent has caused and promoted the accelerated degradation of the earth's natural ecosystems. More than ever before, the harmonization of human activity and its natural environment ...is the key to the survival of many living communities, including human kind. IFOAM (International Federation of Organic Agriculture Movements) promotes the constructive integration of organic agriculture and nature conservation.

33. Land loss and degradation threatens the livelihood of millions of people and future food security, with implications for water resources and the conservation of biodiversity. There is an urgent need to define ways to combat or to reverse the worldwide acceleration of soil degradation and to integrate land and watershed management, taking into account the needs of populations living in mountain ecosystems. The international community has recognized the need for an integrated approach to land-use management that involves all stakeholders, NOT STAKEHOLDERS BUT INDIVIDUALS AND GROUPS WITH VARYING EXPERTISE AND EXPERIENCE at local as well as national levels, that includes women, small-scale food producers, indigenous peoples and community-level NGOs. The eradication of poverty remains essential to improve food security and provide adequate nutrition for more than 800 million undernourished people, located mainly in

developing countries. Comprehensive rural policies are required to improve access to land, combat poverty, create employment and reduce rural emigration. To meet these objectives, Governments should attach high priority to implementing the commitments of the Rome Declaration on World Food Security and the Plan of Action, adopted at the World Food Summit in November 1996, especially its call for a minimum target of halving the number of undernourished people in the world by 2015.

Desertification and Drought

34. Governments are urged to sign, ratify and implement as soon as possible the Convention to Combat Desertification, which entered into force on 26 December 1996, and to support its first Conference of the Parties, which will be held in Rome in September of this year. The international community should also support the Global Mechanism so as to ensure adequate financial resources for advancing the implementation of the Convention on Desertification and its annexes.

Biodiversity

THE ESSENTIAL PRINCIPLES OF ACTION IN THE BIODIVERSITY CONVENTION HAVE NOT BEEN ADHERED TO. * BIODIVERSITY IS OFTEN DESTROYED BEFORE IT HAS BEEN IDENTIFIED * THE REQUIREMENT TO CARRY OUT AN ENVIRONMENTAL ASSESSMENT REVIEW

OF ACTIONS THAT COULD CONTRIBUTE TO REDUCTION AND LOSS OF BIODIVERSITY (SUCH AS FOREST PRACTICES) HAS NOT BEEN DONE

* THE PRECAUTIONARY PRINCIPLE HAS NOT BEEN INVOKED. FOR EXAMPLE

WHEN THERE IS THE POSSIBILITY OF LOSS OR REDUCTION OF BIODIVERSITY WE DO NOT HAVE TO WAIT UNTIL THERE IS SCIENTIFIC CERTAINTY THAT HARM WILL OCCUR FOR ACTION TO BE TAKEN.

THERE IS SUFFICIENT EVIDENCE THAT "CLEAR-CUT LOGGING" AND OTHER ECOLOGICALLY UNSOUND LOGGING PRACTICES DESTROY BIODIVERSITY FOR THESE PRACTICES TO BE DISCONTINUED. SIMILARLY, IN THE WETLANDS. SIMILARLY, THERE IS SUFFICIENT EVIDENCE THAT GENETICALLY MODIFIED ORGANISMS WILL CONTRIBUTE TO LOSS REDUCTION OF BIODIVERSITY.

35. Identifying values of biodiversity and integrating those values into national decision making poses a challenge for economists and decision makers. It is of critical importance that Governments and the international community fully implement the commitments DISCHARGE THE OBLIGATIONS of the Convention on Biodiversity. Special attention should be given to the Leipzig Declaration on Plant Genetic Resources and the Plan of Action which focuses on the conservation and sustainable use of agro-biodiversity. More attention must be given to the equitable sharing of the benefits arising from the utilization of genetic resources, including access to genetic resources and transfer of technologies. Governments should also respect, preserve and maintain knowledge innovations and practices of indigenous and local communities embodying traditional lifestyles and encourage equitable sharing of the benefits arising from indigenous peoples' traditional knowledge so that they are properly rewarded. A Biosafety Protocol under the Biodiversity Convention should be rapidly concluded. In the meantime, countries should adhere to, and implement, the UNEP International Guidelines for Safety in Biotechnology STATES SHOULD INVOKE THE REVERSE ONUS PRINCIPLE IN RESPECT TO GENETICALLY MODIFIED ORGANISM. IN THIS CASE IT SHOULD BE THE PROPONENT OF THE INTERVENTION IN THE ECOSYSTEM THAT MUST

DEMONSTRATE SAFETY RATHER THAN THE OPPONENT HAVING TO DEMONSTRATE HARM. AND THE PRECAUTIONARY PRINCIPLE MUST BE APPLIED. AND AS EVIDENCE EMERGES OF HARM GOVERNMENTS DO NOT HAVE TO WAIT FOR SCIENTIFIC CERTAINTY TO REVOKE APPROVAL

Sustainable Tourism

36. The tourism sector is now the world's largest industry and the fastest growing economic sector. Tourism is a major employer and contributor to national and local economies. Tourism, like other sectors, uses resources and generates wastes, and creates environmental, cultural and social costs and benefits in the process. A particular concern in this regard, is the degradation of biodiversity and fragile eco-systems such as coral reefs, mountains, coastal areas and wetlands. To achieve sustainable tourism, it is essential to strengthen integrated policy development, nationally and internationally, using physical planning, impact assessment, economic, social, and regulatory instruments. Policy development and implementation should take place in cooperation with all stakeholders, especially the private sector and local communities, including indigenous peoples. The CSD should develop an action-oriented international programme of work on sustainable tourism, to be defined in cooperation with the World Tourism Organization, UNCTAD, UNEP and other relevant organizations, and in support of related work in the context of the implementation of the Convention on Biological Diversity. Sustainable development of tourism is of particular importance for SIDS. International cooperation is needed to facilitate tourism development in SIDS,

including the development and marketing of eco-tourism, bearing in mind the importance of conservation policies required to secure long-term benefits from development in this sector in the context of the Barbados Programme of Action.

Small Island Developing States

37. The international community reaffirms its commitment to the implementation of the Barbados Programme of Action for Small Island Developing States. The Commission on Sustainable Development carried out a mid-term review of selected programme areas of the Programme at its fourth session in 1996. A full review of the Programme is scheduled for 1999. (CSD-5 should make adequate provision for the full review in accordance with the provisions of the Barbados Programme of Action).

38. Considerable efforts are being made at the national and regional levels to implement the Programme of Action. These efforts need to be supplemented by effective financial support from the international community. External assistance for the building of requisite infrastructure, national capacity building, including human and institutional capacity, and for facilitating access to information on sustainable development practices and transfer of environmentally sound technologies is crucial for SIDS to effectively attain the goals of the Barbados Programme of Action. To assist national capacity building, SIDSNET and SIDSTAP should be operationalized as soon as possible with the support of existing regional and sub-regional institutions.

Natural Disasters

IN THE CONVENTION ON THE REDUCTION OF DISASTERS THERE WAS THE RECOGNITION OF NATURAL DISASTERS. IN HABITAT II STATES UNDERTOOK TO PREVENT DISASTERS, INCLUDING ANTHROPOGENIC DISASTERS. DISASTER PREVENTION INCLUDES THE DISCONTINUING OF THE PRODUCTION AND TESTING OF NUCLEAR ARMS, THE MINING OF URANIUM, THE CIRCULATING AND BERTHING OF NUCLEAR ARMED AND NUCLEAR-POWERED VESSELS, THE BANNING OF LAND MINES, THE GENETIC ENGINEERING OF FOOD, THE TRANSPORTING OF

PLUTONIUM FOR NUCLEAR REACTORS, THE USING OF CIVIL NUCLEAR ENERGY, THE PRODUCTION OF TOXIC AND HAZARDOUS WASTE, THE GENERATION OF GREENHOUSE GASES, AND OZONE DEPLETING SUBSTANCES. STATES SHOULD IMMEDIATELY UNDERTAKE TO START THE IMMEDIATE DRAFT OF A CONVENTION THAT WILL LEAD TO THE COMPLETION OF A CONVENTION ON THE ABOLITION OF ALL NUCLEAR WEAPONS INCLUDING THE PRODUCTION OF NUCLEAR WEAPONS. ENDORSEMENT OF ABOLITION 2000,

39. Natural disasters have disproportionate consequences for developing countries, in particular SIDS. Programmes for sustainable development should give higher priority to implementation of the commitments made at the Yokohama World Conference on Natural Disaster Reduction. There is a particular need for the promotion and facilitation of the transfer of early-warning technologies to those developing countries and countries with economies in transition which are prone to natural disasters.

C. Means of Implementation

Financial Resources and Mechanisms

MILITARY BUDGET

TRANSFER 50% OF THE EXISTING MILITARY BUDGET INTO PROVIDING FOR SOCIAL PROGRAMS AND SUPPORTING ORGANIZATIONS LIKE THE UNITED NATIONS. [IN CHAPTER 33 IN AGENDA 21, EVERY STATE MADE A COMMITMENT TO RE-ALLOCATE MILITARY EXPENSES]

ADDITIONAL MEASURES

1. THAT LICENCES OF CORPORATIONS THAT VIOLATE HUMAN RIGHTS, THAT CAUSE ENVIRONMENTAL DEGRADATION, THAT CONTRIBUTE TO CONFLICT AND WAR, AND THAT DENY SOCIALLY EQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT SHALL BE REVOKED. (SEE THE WORK OF RICHARD GROSSMAN "TAKING CARE OF BUSINESS").

2. THAT COMPENSATION AND REPARATION BE PAID BY CORPORATIONS TO COUNTRIES TO INDIGENOUS PEOPLES, AND TO DISENFRANCHISED PEOPLE WHOSE LAND HAS BEEN DEGRADED, WHOSE RIGHTS HAVE BEEN VIOLATED AND WHOSE LIVES HAVE BEEN DESTROYED THROUGH CORPORATE SUPPORT FOR OPPRESSIVE REGIMES. IT IS NOT SO MUCH DEBT FORGIVENESS BUT COMPENSATION AND REPARATION FOR THE DEVASTATION CAUSED BY THE OVERCONSUMPTIVE MODELS OF DEVELOPMENT IMPOSED ON DEVELOPING COUNTRIES THAT IS NECESSARY.

3. THAT CORPORATE TAXES BE CONSIDERABLY RAISED AND IMMEDIATELY TRANSFERRED INTO SOCIAL PROGRAMS SUCH AS EDUCATION, HEALTH AND SOCIAL SECURITY.

4. THAT ALL SUBSIDIES TO CORPORATE ACTIVITY THAT PERPETUATE SOCIAL INEQUITY AND ENVIRONMENTALLY UNSOUND DEVELOPMENT BE IMMEDIATELY DISCONTINUED. IN ADDITION, THE 10.4 BILLION SUBSIDY TO THE MILITARY SHOULD BE REDUCED TO AT LEAST HALF AND THE SAVINGS TRANSFERRED INTO TRANSFER PAYMENTS FOR HEALTH, EDUCATION, SOCIAL PROGRAMS AND ENVIRONMENTALLY SOUND EMPLOYMENT GENERATION.

5. THAT ALL DEFERRED TAXES FOR CORPORATE ACTIVITIES THAT HAVE PERPETUATED SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT BE COLLECTED IMMEDIATELY.

6. THAT ALL MULTI-STAKEHOLDER ROUND TABLES EXTOLLING A DECISION-MAKING PROCESS THAT GLORIFIES CONFLICT OF INTEREST BE DISCONTINUED. THESE TABLES IN PRACTICE INVITE CORPORATE INTERESTS TO DETERMINE THROUGH CONSENSUS POLICIES THAT DIRECTLY AFFECT THEM AND MUST BE STOPPED.

7. THAT ALL ATTEMPTS BY INDUSTRY, THROUGH THE INTERNATIONAL STANDARDIZATION ORGANIZATION'S (ISO) 14,000 TO MOVE AWAY FROM "COMMAND AND CONTROL" AND REGULATIONS, BE DISALLOWED.

8. THAT TO ENSURE THAT CORPORATIONS COMPLY, STATE GOVERNMENTS MUST UNDERTAKE TO SIGN AND RATIFY AGREEMENTS THAT THEY HAVE NOT YET SIGNED AND RATIFIED WHICH THEY HAVE EARLIER PROMISED TO SIGN AND RATIFY AND ENACT THE LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT.

9. THAT ALL CORPORATE INTRUSION INTO EDUCATION AT ALL LEVELS BE ENDED

10. THAT CORPORATIONS NO LONGER BE ALLOWED TO DONATE FUNDS OR GOODS AND SERVICES IN KIND TO FEDERAL CANADIAN POLITICAL PARTIES. IN ADDITION, ALL CORPORATE CONNECTIONS OF CANDIDATES INCLUDING THOSE FOR THE LEADERSHIP OF PARTIES BE REVEALED.

11 THAT AN INTERNATIONAL COURT OF COMPLIANCE BE INSTITUTED WHERE CITIZENS COULD TAKE EVIDENCE OF STATE AND CORPORATE NON-COMPLIANCE.

40. Financial resources and mechanisms play a key role in the implementation of Agenda 21. Urgent and renewed efforts are essential to ensure that all sources of funding - international and domestic as well as private and public -

contribute to sustainable development.

41. The commitments made at UNCED to provide new and additional resources to developing countries remain a key element to support their efforts to achieve sustainable development. In view of the need to ensure effective implementation of Agenda 21, there is an urgent need to fulfill all financial commitments of Agenda 21, especially those in chapter 33. Developed countries should therefore, reaffirm their commitments, including the achievement of the United Nations target of 0.7 per cent of GNP, as soon as possible, and in particular reverse the recent downward trend in the ratio of ODA to GNP. In this context, it is essential to consider strategies that would restore donor support for aid programmes and revitalize the commitments that donors made at UNCED. Some countries already meet or exceed the 0.7 per cent agreed target. As a minimum, those donor countries with declining ODA should return to 1992 shares of GNP within five years. Other countries in a position to do so should also be encouraged to provide ODA support.

42. Official financial flows to developing countries remain an essential element of the partnership embodied in Agenda 21. ODA has a significant role in capacity building, infrastructure, combating poverty and environmental protection in developing countries, and a crucial role in the least developed countries.

43. Official financial flows can also play an important catalytic role in supporting policy reforms, promoting institutional

development, and leveraging private investment, and, at this stage, cannot be replaced by private flows.

44. Private foreign capital is a major engine of economic growth in a large number of developing countries. Enhancing its contribution to sustainable development depends mainly on sound and predictable domestic policies, including policies that internalize environmental costs. Therefore, both at the national and international level, further work should be undertaken on the design of appropriate policies for attracting private foreign capital (in particular FDI), reducing its volatility, and enhancing its contribution to sustainable development, for example, through promoting innovative schemes, such as co-financing and "green" credit lines and investment funds.

45. The GEF needs further expansion and development. In the first instance, the satisfactory replenishment of GEF resources, for example, through a doubling, deserves high priority; further consideration could then be given to the expansion of its scope and coverage beyond existing focal areas.

46. Further studies should be undertaken on foreign private flows to developing countries, including the design of an appropriate policy environment for attracting FDI and how host countries can maximize the positive impacts of FDI on sustainable development through strengthening social policies and environmental policies and regulations.

47. To resolve the remaining debt problems of the highly indebted poorest countries, creditor and debtor countries and international financial institutions should continue their efforts towards finding effective, comprehensive, durable and development-oriented solutions, including measures such as debt reduction, debt swaps, debt cancellation, and increased grants and concessional flows. In this context, the joint World Bank/IMF HIPC Initiative is a step in the right direction, and effective and flexible implementation of the Initiative promises to reduce debt as an impediment to sustainable development.

48. Since financing for Agenda 21 in all countries will come mainly from their own public and private sectors, policies aimed at mobilizing domestic financial resources are crucial. Apart from the importance of the support provided by international cooperation, sustainable development must rely on domestic efforts. Policies for promoting domestic resources mobilization should include macroeconomic and structural reforms, public expenditure reforms, the promotion of environmental taxes and charges, a review of existing subsidy policies, and financial sector development to promote personal saving and access to credit, taking into account the characteristics and capabilities of individual countries. The expanded use of environmental taxes and user charges is particularly attractive because they generate win-win possibilities by shifting consumer and producer behaviour in more sustainable directions, at the same time as generating financial resources that can be used for sustainable development or reducing taxes elsewhere.

49. There is a need for making existing subsidies more transparent in order to be aware of their actual economic, social and environmental impact and to reform them. Further national and international research in this regard should be promoted in order to assist Governments in identifying and reducing subsidies that have trade-distorting and environmentally-damaging impacts. In general, subsidy reductions should take full account of the specific conditions of individual countries and consider potentially regressive impacts. In addition, it would be desirable to use international cooperation and coordination to promote concerted national reduction of subsidies where these have important implications for competitiveness.

50. In order to reduce the barriers to an expanded use of economic instruments, governments and international organizations should collect and share information on the use of economic instruments, and introduce pilot schemes. When introducing economic instruments that raise the cost of economic activities for households and SMEs, Governments should consider gradual phase-ins, public education programmes, and targeted technical assistance as strategies to reduce distributional impacts.

51. A number of innovative financial mechanisms are currently under discussion in international and national fora. In view of the widespread interest in these mechanisms, appropriate organizations, including the World Bank and the IMF, are invited to conduct forward-looking studies regarding concerted action on these mechanisms, so that they can be taken up in CSD and other

relevant intergovernmental meetings.

Transfer of environmentally sound technologies

ENVIRONMENTAL SOUND TECHNOLOGIES ARE THOSE THAT DO IT RIGHT THE FIRST TIME. CLEAN-UP TECHNOLOGIES THAT THRIVE ON DEREGULATION ONLY DISPLACE THE PROBLEM. PARTICULARLY TO LAND AND WATER BODIES OF DEVELOPING COUNTRIES, LAND AND WATER BODIES OF INDIGENOUS PEOPLES OR URBAN AREAS OF DISENFRANCHISED MEMBERS OF THE COMMUNITY.

52. There is urgent need for developing countries to acquire greater access to environmentally sound technology if they are to meet the obligations agreed at UNCED and in the respective international conventions. THIS UGENT NEED WILL ONLY BE ADDRESSED IF THERE ARE MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS THAT WILL DRIVE INDUSTRY TO DEVELOP ENVIRONMENTALLY SOUND TECHNOLOGY, ALONG WITH GOVERNMENT FUNDING ONLY ENVIRONMENTALLY SOUND TECHNOLOGY. Hence, renewed commitment is needed from developed countries, "to promote, facilitate, and finance, as appropriate, the access to and the transfer of ESTs and corresponding know-how, in particular to developing countries, on favourable terms, including on concessional and preferential terms, as mutually agreed, taking into account the need to protect intellectual property rights as well as the special needs of developing countries for the implementation of Agenda 21".

53. Technology transfer and development of the human and institutional capacity to adapt, absorb and diffuse technologies, and to generate technical knowledge and innovations are part of the same process, and must be given equal importance. While technology transfer is usually a business-to business

transaction, governments have a particular responsibility to develop the institutional and human capacities that form the basis for effective technology transfer.

54. Much of the most advanced environmentally sound technology OR RATHER MUCH OF THE BEST CLEAN-UP TECHNOLOGY; THE BEST ENVIRONMENTALLY SOUND TECHNOLOGY HAS BEEN RARELY FUNDED AND SUPPORTED BY GOVERNMENTS, AND THE ENVIRONMENTALLY SOUND TECHNOLOGY OF DEVELOPING COUNTRIES HAS BEEN EQUALLY IGNORED. PERHAPS IT IS TIME THAT FAIR TRADE IN ENVIRONMENTALLY SOUND TECHNOLOGY FROM DEVELOPING COUNTRIES BEGINS TO REPLACE THE TRANSFER OF ENVIRONMENTALLY UNSOUND TECHNOLOGY FROM THE DEVELOPED COUNTRIES.

Is developed and held by the private sector. Creation of an enabling environment, on the part of both developed and developing countries, including supportive economic and fiscal measures, as well as a practical system of environmental regulations and compliance mechanisms, can help to stimulate private sector investment in and transfer of environmentally sound technology to developing countries. GOOD New ways of financial inter-mediation for the financing of ESTs, such as "green credit lines" should be examined. The links between foreign direct investment, ODA and technology transfer should be explored in greater depth.

GOVERNMENTS SHOULD ONLY FUND ENVIRONMENTALLY SOUND TECHNOLOGY, AND BE INVOLVED WITH DETERMINING FUNDING AT UNIVERSITIES. ALL CORPORATE FUNDING OF UNIVERSITIES SHOULD BE DISCONTINUED. Further efforts could be made by Governments of developed countries to acquire privately owned technology in order to transfer it on concessional terms to developing countries, especially LDCs.

55. A proportion of technology is owned by public institutions, or results from publicly funded research and development

activities. The government's control over the technological knowledge produced in publicly funded research and development institutions opens up a potential for the generation of publicly owned technologies that could be made accessible to developing countries, and could be an important means for governments to catalyze private sector technology transfer. Proposals for further study of these technologies to meet developing country needs are to be welcomed.

56. Governments should play a key role in establishing **MANDATORY INTERNATIONAL NORMATIVE STANDARDS/ REGULATIONS TO DRIVE INDUSTRY** ...public-private partnerships, within and between developed and developing countries and economies in transition. These partnerships are essential to link the advantages of the private sector - access to finance and technology, managerial efficiency, entrepreneurial experiences and engineering expertise - with the capacity of governments to create a policy environment that is conducive to technology-related private sector investments and long-term sustainable development objectives.

57. Governments have an important role in bringing together companies from developed and developing countries and economies in transition so they can create **SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND LINKAGES** Sustainable and mutually beneficial business linkages. Incentives should be given to stimulate the building of joint ventures between small and medium-sized enterprises (SMEs) in developed and developing countries and economies in transition.

58. Governments of developing countries should take appropriate measures to strengthen South-South cooperation for technology transfer and capacity-building. Such measures could include networking of existing national information systems and sources on ESTs and of national cleaner production centres, as well as the establishment of sector-specific regional centres for technology transfer and capacity-building. Donor countries and international organizations should further assist developing countries in these efforts.

59. There is a need to enhance exploitation of the potential of global electronic information and telecommunication networks that would enable countries to choose among the available technological options that are most appropriate to their needs.

Capacity Building

60. Renewed commitment and support from the international community is essential to support national efforts for capacity building in developing countries and economies in transition.

61. The Capacity 21 Programme of UNDP should be further strengthened. It should give priority attention to building capacity for the elaboration of sustainable development strategies based on participatory approaches.

62. Capacity building efforts should pay particular attention to

the needs of women, in order to ensure that their skills and experience are fully used in decision-making at all levels. The special needs of indigenous peoples must be recognized.

International financial institutions should enhance their funding of capacity building for sustainable development in developing countries and countries with economies in transition.

Special attention should also be given to strengthening the ability of developing countries to absorb and generate technologies. The role of the private sector in capacity building should be further promoted and enhanced. South-South cooperation in capacity building should be further supported through "triangular" cooperative arrangements.

Science

RESOLUTION: REQUIRING SCIENTISTS TO ABIDE BY THE "DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY"

Concurring with the assessment in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, that "while scientific and technological developments provide ever-increasing opportunities to better the conditions of life of peoples and nations, in a number of instances they can give rise to social problems, as well as threaten the human rights and fundamental freedoms of the individuals (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Concurring with the concern expressed in Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity about scientific and technological achievements can be used to intensify the arms race production:

"Noting with concern that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamental freedoms (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity", 1975)

Also noting with concern that scientific and technological achievements can entail dangers for the civil and political rights of the individual or of the group and for human dignity (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Noting the urgent need to make full use of scientific and technological developments for the welfare of man humanity and to neutralize the present and possible future harmful consequences of certain scientific and technological achievements (Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

63. Public and private investment RATHER THAN PRIVATE INVESTMENT

BEING MADE IN SCIENCE AND EDUCATION, THE PRIVATE SECTOR SHOULD PAY INCREASED TAXES SO THAT GOVERNMENTS WILL BE ABLE TO EFFECTIVELY CONTRIBUTE TO EDUCATION THAT IS FOR THE BENEFIT OF HUMANITY. In science, education and training, and in research and development, should be increased significantly at the national level.

64. International consensus building is facilitated by the availability of authoritative scientific evidence.

To: csdgen@nygate.undp.org

need for further scientific cooperation, especially across academic disciplines, in order to verify and strengthen scientific evidence for environmental change.

65. Greater efforts to build and strengthen scientific and technological capacity in developing countries is an objective of the highest priority and greatest urgency. Multilateral and bilateral donor agencies and governments, as well as specific funding mechanisms such as the GEF, should enhance significantly their support to developing countries in this regard.

Education and Awareness

RESOLUTION: REQUIRING SCIENTISTS TO ABIDE BY THE "DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY"

CONCURRING WITH THE ASSESSMENT IN THE DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY, THAT "WHILE SCIENTIFIC AND

TECHNOLOGICAL DEVELOPMENTS PROVIDE EVER-INCREASING OPPORTUNITIES TO BETTER THE CONDITIONS OF LIFE OF PEOPLES AND NATIONS, IN A NUMBER OF INSTANCES THEY CAN GIVE RISE TO SOCIAL PROBLEMS, AS WELL AS THREATEN THE HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS OF THE INDIVIDUALS (PREAMBLE, DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY, 1975)

CONCURRING WITH THE CONCERN EXPRESSED IN DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY ABOUT SCIENTIFIC AND TECHNOLOGICAL ACHIEVEMENTS CAN BE USED TO INTENSIFY THE ARMS RACE PRODUCTION:

"NOTING WITH CONCERN THAT SCIENTIFIC AND TECHNOLOGICAL ACHIEVEMENTS CAN BE USED TO INTENSIFY THE ARMS RACE, SUPPRESS NATIONAL LIBERATION MOVEMENTS AND DEPRIVE INDIVIDUALS AND PEOPLES OF THEIR HUMAN RIGHTS AND FUNDAMENTAL FREEDOMS (PREAMBLE, DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY", 1975)

ALSO NOTING WITH CONCERN THAT SCIENTIFIC AND TECHNOLOGICAL ACHIEVEMENTS CAN ENTAIL DANGERS FOR THE CIVIL AND POLITICAL RIGHTS OF THE INDIVIDUAL OR OF THE GROUP AND FOR HUMAN DIGNITY (PREAMBLE, DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY, 1975)

NOTING THE URGENT NEED TO MAKE FULL USE OF SCIENTIFIC AND TECHNOLOGICAL DEVELOPMENTS FOR THE WELFARE OF MAN HUMANITY AND TO NEUTRALIZE THE PRESENT AND POSSIBLE

FUTURE HARMFUL CONSEQUENCES OF CERTAIN SCIENTIFIC AND TECHNOLOGICAL ACHIEVEMENTS (DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY, 1975)

66. Education increases human welfare and is a decisive factor in enabling people to become productive and responsible members of a sustainable society. A fundamental pre-requisite for sustainable development is an adequately financed and effective educational system at all levels, but particularly at the primary and secondary level, including life-long education, accessible to all, that augments both human capacity and well-being. Priority should be given to women's and girls' education, as it also plays a critical role in improving family health, nutrition, and income. Education should also be seen as a means of empowering youth and other vulnerable and marginalized groups, including those in the rural areas. Even in nations with strong education systems, there is a need to reorient education, awareness and training to increase widespread public understanding and support for sustainable development. Education for a sustainable future should engage a wide spectrum of institutions and sectors to address the concepts and issues of sustainable development embodied throughout Agenda 21 and stressed further in the CSD Work Programme on the subject adopted in 1996, that will be further developed by UNESCO in cooperation with others.

International Legal Instruments and the Rio Declaration

67. The implementation and application of the Rio principles should be the subject of regular assessment and reporting.

68. Access to information, public participation and the right to complaint are hallmarks of environmental democracy; there should be wider access to relevant court systems to pursue environmental justice.

69.

ON JUNE 23, 1997 AT THE FIFTH ANNIVERSARY OF THE UNITED NATIONS CONFERENCE ON ENVIRONMENT AND DEVELOPMENT, WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS THAT WE HAVE NOT YET SIGNED AND RATIFIED, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT. IN ADDITION, WE UNDERTAKE TO FULFILL EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND COMMITMENTS MADE FROM CONFERENCE ACTION PLANS.

Implementation of and compliance with international treaties in the field of sustainable development needs further improvement. Secure, sustained and predictable financial support, sufficient institutional capacity and human resources and adequate access to technology may promote implementation of international legal instruments. Full implementation of international commitments can eliminate potential sources of conflict and the development of cooperative, nonjudicial and transparent mechanisms for implementation should be pursued.

Information and tools to measure progress

70. The further development of cost-effective tools to collect and disseminate information for decision-makers at all levels, through strengthened data collection, compilation and analysis, is urgently needed.

71. The CSD work programme on indicators for sustainable development should result in an adequate set of indicators, including a limited number of aggregated indicators, to be used at the national level by the year 2000. Indicators play an important role in monitoring progress towards sustainable development and to facilitate national reporting, as appropriate.

72. National reports provided on the implementation of Agenda 21 IT

SHOULD BE NOTED THAT THE SUMMIT II SHOULD BE A TIME TO DISPEL MYTHS AND NOT PERPETUATE THEM. HOW MANY OF THE REPORTS FROM THE COUNTRIES WERE HONEST? SUBMISSIONS BY CONCERNED CITIZENS HAVE BEEN MADE TO BE INCLUDED IN THE REPORTS BUT THESE SUBMISSIONS HAVE BEEN IGNORED. WHAT IS NECESSARY ARE TWO REPORTS: ONE FROM THE GOVERNMENT AND THE OTHER FROM CONCERNED CITIZENS. BOTH OF THESE REPORTS SHOULD BE PLACED ON A GOVERNMENT WEB SITE, AND SHOULD BE SUBMITTED TO THE

COMMISSION ON SUSTAINABLE DEVELOPMENT. OFTEN WHEN CITIZENS READ THE REPORTS THEY WONDER IF THEY ARE LIVING IN THE SAME COUNTRY. IF THERE IS TO BE CHANGE THERE MUST FIRST BE HONESTY. AN OLD PRINCIPLE OF ALCOHOLIC ANONYMOUS.

have proven to be a valuable means of sharing information at international and regional levels, and even more importantly, of providing a focus for coordination of issues related to sustainable development within a country. This national reporting should continue, and should reflect all aspects of Agenda 21, including domestic action and international commitments. The

reporting system could be complemented by peer reviews organized at the regional level.

To be added in the course of CSD-V: action regarding the streamlining of national reporting.

IV. International Institutional Arrangements /2

73. Achievement of sustainable development requires continued support from international institutions. The institutional framework outlined in Chapter 38 of Agenda 21 and determined by the General Assembly in its resolution 47/191, including specific functions and roles of various organs, programmes and organizations within and outside the United Nations system, will continue to be fully relevant in the period after the Special Session. Within that framework, achievement of the following goals and objectives would be particularly important.

Greater coherence in various intergovernmental organizations and processes

74. Given the increased number of decision-making bodies concerned with various aspects of sustainable development, including those related to the international conventions, there is an ever greater need for better policy coordination at the intergovernmental level through consistent and coherent positions of governments in these various fora, as well as enhanced collaboration among their secretariats. The ECOSOC should play a

strengthened role in this area bearing in mind its functions related to the coordination of the United Nations system in the economic and social fields.

75. Strengthening the ACC's Inter-Agency Committee on Sustainable Development and its system of Task Managers is needed, with a view to further enhancing inter-sectoral cooperation and policy coordination at the national, regional and international level for the implementation of Agenda 21 and for the promotion of a coordinated and integrated follow-up to the major UN conferences as they relate to sustainable development.

76. Appropriate and effective arrangements should be established in order to better support regional and sub-regional organizations, including the UN Regional Commissions, bearing in mind the role these organizations play in the achievement of sustainable development objectives agreed at the international level.

Role of relevant organizations and institutions of the United Nations system

77. All organizations and programmes of the United Nations system should, in their further individual and joint efforts to implement Agenda 21, and in cooperation with national governments, give more emphasis to action at the country level, ensure greater support to community-driven initiatives and promote more active involvement of major groups.

78. The role of the United Nations Environment Programme (UNEP) and of its Governing Council, as the principal United Nations body in the field of environment, should be further enhanced in conformity with the Nairobi Declaration on the Role and Mandate of UNEP, with a view to enabling the Programme to serve as the leading environmental authority and that sets the global environmental agenda, promotes the coherent, implementation of the environmental dimension of sustainable development within the United Nations system and acts as an authoritative advocate for the global environment. UNEP's role in the further development of international environmental law including the development of inter-linkages among existing environmental conventions should be strengthened. A revitalized UNEP should be supported by adequate funding. UNEP should continue providing effective support to the CSD through scientific, technical and policy information and advise on the environment.

UNEP IN ITS LEADERSHIP ROLE MUST ASSIST STATES IN ENSURING THAT CORPORATIONS INCLUDING TRANSNATIONAL CORPORATION COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW AS WAS UNDERTAKEN IN THE PLATFORM, OF ACTION AND HABITAT II. IN THIS ROLE UNEP SHOULD ACT TO ESTABLISH MANDATORY INTERNATIONAL NORMATIVE STANDARDS /REGULATIONS BASED ON

INTERNATIONAL LAW, AND CONTINUALLY INCORPORATE MORE STRINGENT REGULATIONS AS THEY APPEAR IN DIFFERENT STATES SO AS TO CONTINUALLY MOVE INTERNATIONAL LAW TO HARMONIZE UPWARD.

79. The United Nations Development Programme (UNDP) should strengthen its contribution to sustainable development and the implementation of Agenda 21 given its role at the national and

local levels, particularly in the area of promoting capacity building in cooperation with other organizations. SHOULD ALWAYS BE GUIDED BY PRINCIPLES RELATED TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

80. The United Nations Conference on Trade and Development (UNCTAD) should continue to play a key role in the implementation of Agenda 21 through integrated examination of linkages among trade, investment, technology, finance and sustainable development BUT SHOULD ALWAYS BE GUIDED BY PRINCIPLES RELATED TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

81. The WTO Committee on Trade and Environment, UNCTAD and UNEP should advance their coordinated work on trade and environment, building upon the accomplishments so far and involving other appropriate international and regional organizations in their cooperation and coordination. UNCTAD and UNEP should play a major role in both analysis and action-oriented efforts to promote the integration of trade, environment and development. The CSD has an important role to play in the process of widening the trade and environment debate to include an integrated consideration of all factors relevant for achieving sustainable development.

82. The contribution and commitment to sustainable development of International financial institutions should be further strengthened. The World Bank has a significant role to play, bearing in mind its expertise and the overall volume of resources it commands. Governments should consider an IDA12 replenishment at a level at least comparable to IDA10. Negotiations for the

replenishment of the GEF will have special importance for its future work, as well as a direct impact on the availability of new and additional grant and concessional funding for sustainable development with global benefits at the global, regional and national level.

Future role and Programme of Work of the CSD

THE COMMISSION ON SUSTAINABLE DEVELOPMENT AS THE OVERSEER OF THE MOST COMPLEX SET OF INTERNATIONAL NORMS AND PRINCIPLES BE RESPONSIBLE FOR ALWAYS INTEGRATING NEW NORMS AND PRINCIPLES AS THEY EMERGE FROM OBLIGATIONS IN TREATIES, COVENANTS AND CONVENTIONS,

FROM EXPECTATIONS IN GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND COMMITMENTS FROM CONFERENCE ACTION PLANS.

83. The Commission on Sustainable Development will continue to provide a central forum for reviewing further progress in the implementation of Agenda 21 and of other Rio commitments, for policy debate and consensus-building on sustainable development, as well as for catalyzing action and long-term commitment to sustainable development at all levels. The CSD should perform its functions in coordination with other subsidiary bodies of the Economic and Social Council that contribute to the achievement of specific economic and social goals of sustainable development.

84. The CSD, while carrying out its functions outlined in the Assembly resolution 47/191, should focus its deliberations on those issues which are of major significance to achieving the goals of sustainable development, involve promotion of policies which integrate economic, social and environmental

dimensions of sustainability and provide for integrated consideration of linkages both between sectors and between sectoral and cross-sectoral aspects of Agenda 21.

85. In light of the above, it is recommended that the Economic and Social Council decides on the Multi-Year Programme of Work of the CSD for the period 1998-2002 as contained in Annex (Text to be added at a later stage after further discussion during the Fifth session of the CSD. Proposals of the Secretary-General on this issue are contained in document E/CN.17/1997/2).

CSD's methods of work

86. Based on the experience gained in the period 1993-1997, the CSD, under the guidance of the Economic and Social Council, should:

a strive to attract greater involvement in its work of ministers and high-level national policy-makers responsible for specific economic sectors, who, in particular, are encouraged to participate in the High-Level Segments in the CSD jointly with the ministers and policy-makers responsible for environment and development. The high level segments of the CSD should become more interactive and focus on the priority issues being considered at a particular session;

b continue to provide a forum for the exchanges of national experiences in sustainable development. In this context,

the Commission should consider more effective modalities for reviewing progress in the implementation of commitments made in Agenda 21, with an appropriate emphasis on those related to the means of its implementation;

c develop a better regional focus. CSD should monitor the growing number of regional initiatives and regional collaborations for sustainable development, and link its work more closely to such developments;

d establish closer inter-action with international financial institutions, GEF and the World Trade Organization, which in turn, are invited to take fully into account the results of policy deliberations in the CSD in their own work programmes and activities;

e continue to explore more effective and systematic ways to involve the representatives of major groups in its work, including the business community, with a view to enhancing their contribution and accountability in the implementation of Agenda 21, thus demonstrating the value of their participation more widely;

f organize the implementation of its next Multi-Year Programme of Work in the most effective and productive way. Preparation for consideration of issues by the CSD can take the form of Ad hoc Inter-sessional Working Groups or arrangements similar to the Intergovernmental Panel on Forests. Furthermore,

government-hosted inter-sessional expert meetings have proven to be effective;

g The High-level Advisory Board on Sustainable Development with the view to promote more direct inter-action between the CSD and the Board and to enhance the contribution of the Board to the deliberations in the Commission.

87. Functioning of the Committee on New and Renewable Sources of Energy and on Energy for Development and the Committee on Natural Resources should become more closely integrated with the work programme of the CSD.

88. Arrangements for election of the Bureau should be changed in order to allow the same Bureau to provide guidance for the preparation for, and lead work during, the annual session of the CSD The CSD would benefit greatly from such a change and the Economic and Social Council is invited to examine the possibility of taking the necessary action in this regard.

89. The next comprehensive review of progress achieved in the implementation of Agenda 21 will take place in 2002.

Notes:

1/ The United Nations Convention on the Law of the Sea; the

Agreement relating to the Implementation of Part XI of the Convention; the Agreement for the Implementation of the Provisions of the Convention relating to the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks; the Agreement to Promote Compliance with International Conservation and Management Measures by Vessels Fishing in the High Seas; the FAO Code of Conduct for Responsible Fisheries; the Global Programme of Action for the Protection of the Marine Environment from Land-based Activities; the Barbados Programme of Action for the Sustainable Development of Small Island Developing States; the International Coral Reef Initiative; the Rome Consensus on World Fisheries of the 1995 FAO Ministerial Meeting on Fisheries; the Jakarta Mandate on the Conservation and Sustainable Use of Marine and Coastal Biological Diversity; the Kyoto Declaration and Plan of Action on the Sustainable Contribution of Fisheries to Food Security; the International Whaling Commission's Moratorium on Commercial Whaling; various international agreements on the conservation of small cetaceans; United Nations General Assembly resolutions A/51/34, A/51/35, A/51/36 and A/51/189; and relevant decisions of the nineteenth session of the Governing Council of the United Nations Environment Programme.

NOTE: 2018**NOTHING IF NOT PAID MERCENARY

There was an invitation, from environment ministry for environmental groups to have input into Canada's above submission for rio+5. When there was a conference call with the ministry, I was the only one on line. When I asked why, I was told that the environment refused to participate unless they were paid

() THAT in 1997 on February 12, I received correspondence 13:26:23

To: Steering Cmte 96/97 From: Annemarie sleeman <asleeman@alternatives.com

Subject: Sustainable Development Strategy Discussion Paper

Hi. Environment Canada just couriered over a document for review (in their usual timely manner). It is a draft Sustainable Development Strategy. The department is interested in any views or comments that you may have regarding the Draft Strategy. They want comments by March 3rd. There is a NEW department which is interested in any views or comments that you may have regarding the Draft Strategy. They want comments by March 3rd. There is a face-to-face meeting on Wed. Feb 19th in Vancouver (only BC date). As far as I know, there are no travel funds. Anyone want me to inquire further on travel funds?

The document itself is posted on Environment Canada's Green Lane (Internet site). A discussion forum has been established to permit you to submit your comments. The address is: http://www.ec.gc.ca/sd-dd_consult

The phone number for more info: (819)997-1816. Happy Reading!

() THAT in 1997 on February 13 as the Chair of the International Affairs Caucus, I received a request through the BCEN to participate in a conference call with Environment Canada

EXHIBIT

() THAT in 1997, I agreed to this request. I had placed the Environment Canada's document in the context of principles derived from international agreements, and that I indicated that I would comment providing that they were prepared to put my comments up on their web site [which they agreed to]

(*) THAT in 1997 I participated in their conference call and was surprised that I was the only environmentalist on the call, and that I asked them why, and was told that none of the other environmental groups was prepared to participate because there was no funding [I always thought that having input into government documents was an act of

activism because the government could never say that no activist had ever suggested a particular action should be undertaken].

() THAT in 1997, in February, I had been invited to have input into the environmental section of the alternative Budget being prepared by the Centre for Policy Alternatives

EXHIBIT:

Some difficult decisions have to be made about the Alternative budget. Last year I was part of the process in Victoria, and I worked with others on proposing a section for the environment part of the document. We were sure that it would be given serious consideration. Last year the budget was funded by the Unions (\$100,000). When I saw the report last April, I noticed that there was virtually nothing about the environment in the document. I raised this concern at a meeting at the University, and was told that the Unions had difficulty with the environment section. When I was in Vancouver in May for the NAFTA Environmental Cooperation division meeting, I met the Alternative Budget Environment chair, and he mentioned that the unions had definitely made the decision not to include the environment section. He mentioned to me that he would like to work on an alternative budget for the Green party.

Here is what I passed on to the organizers again. Most of the document was from last January (1996) Environment group submission

EXHIBIT:

I have mentioned to the organizers that I read the 1996 budget and I think that there were excellent provisions in the budget related to social justice issues. I will CONTINUE to attend the meetings.

What do you think we should do? I am afraid that we could CONTINUE to work on the AFB and the same thing could happen again, that suddenly all specific actions related to the environment will be left out.

Joan

Dear Tony,

I found last year's submission to the process. This is a copy of last years with some additions.

I think we need more of an action set of statements.

Joan

IT WAS SUGGESTED LAST YEAR THAT THIS STATEMENT BE INCLUDED IN THE PREAMBLE TO THE BUDGET

In the Platform of Action from the UN Conference on Women: Equality, Development and Peace (1995) and in the Habitat II Agenda from the Habitat II Conference (1996) member States have undertaken "to ensure that corporations, including transnational corporations,

comply with national laws and codes, social security regulations, applicable international agreements and conventions, including those related to the environment, and other relevant laws. (Article 167). In Habitat II this undertaking was reaffirmed and then extended to include the undertaking by States to ensure that the “private sector” also comply (Article 148).

OVERARCHING STATEMENT SUCH AS THE FOLLOWING

Conserving natural capital, ecosystem integrity and life support systems—air, water, and soil— takes primacy in all economic decision making. A series of international treaty obligations already exist to guide decision making in these areas in Canada and the Provinces. A responsible long-term economic program must have as its central pillar, the protection of the environment and the prevention of environmental degradation. This pillar shall be based on the adherence to fundamental principles that have been agreed to internationally such as the precautionary principle, the pollution prevention principle, the environmental assessment review principle, the “reducing of the ecological footprint” principle, and the implementing of the polluter pays principle.

Socially equitable and environmental sound principles will be achieved through the following processes:

1. Developing alternative criteria based not on economic growth but on equitable and environmentally sound principles
2. Fostering locally-based economies within an overarching framework of socially equitable and environmentally sound principles.
3. Strengthening environmental regulatory regimes, including setting performance-based standards, reporting and monitoring, and ensuring compliance and enforcement with significant penalties.
- 4.. Providing international leadership on environmental policy issues. Canada signs and ratifies agreements but fails to enact the necessary legislation to ensure compliance
- 5.. Developing achievable strategies for meeting Canada’s international obligations incurred through conventions such as the Framework Convention on Climate Change, the Convention on Biological Diversity, the Montreal protocol (eliminating the production and consumption of ozone depleting substances), the Basel Convention and the Convention on Environmental Impact Assessment in a trans-boundary Context, Convention on the Prevention of Disasters, and other relevant convention. In addition, Canada shall fulfill expectations created through General Assembly Resolutions, Declarations and Conference Action plans.
7. Removing the tax and direct subsidies for resource depletion, for environmentally unsound transportation (fossil fuels and other non-renewable sources), for environmentally unsound energy (fossil fuel and other non-renewable sources and

nuclear] and for other environmentally unsound technologies. Promoting and funding BEST (Best Environmentally Sound Traditions) practices.

8. Promoting research on means to prevent climate change, ozone depletion, and reduction and loss of biodiversity and other ecological effects of production process. Lobbying for reduction of greenhouse gas emissions to 20% from 1990 levels by the year 2000, and for the conservation of carbon sinks such as old growth forests.

9. Ensuring that an environmental assessment review be carried out on all activities that could contribute to a loss or reduction of biodiversity, including activities that come under the Ministry of defence

10. Preventing the transfer to other States of activities or substances that are harmful to human health or to the environment. This would include the transfer of toxic, hazardous, or atomic substances, activities or wastes. (This would include the sale of CANDU) reactors

11. Suffocating uranium mining, and phasing out the use of civil nuclear energy.

12. Implementing a fair transition program in all sunset industries that are not environmentally sound. Retooling plants for environmentally sound energy, transportation and technology

13. Reducing waste and energy use at all stages of the production process, treating waste as a resource, and reducing the transport of goods via shorter-loop systems. In addition, preventing relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health or that cause environmental degradation (Principle, Rio Declaration UNCED)

14. Moving away from the current over-consumptive model of development.

IT WAS SUGGESTED THAT THIS STATEMENT BE INCLUDED IN THE PREAMBLE TO THE BUDGET

In the Platform of Action from the UN Conference on Women: Equality, Development and Peace (1995) and in the Habitat II Agenda from the Habitat II Conference (1996) member States have undertaken "to ensure that corporations, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements and conventions, including those related to the environment, and other relevant laws. (Article 167). In Habitat II this undertaking was reaffirmed and then extended to include the undertaking by States to ensure that the "private sector" also comply (Article 148).

SUGGESTIONS RELATED TO THE ENVIRONMENT SECTION.

NEED FOR AN OVERARCHING STATEMENT SUCH AS THE FOLLOWING

Conserving natural capital, ecosystem integrity and life support systems—air, water, and soil— takes primacy in all economic decision making. A series of international treaty obligations already exist to guide decision making in these areas in Canada and the Provinces. A responsible long-term economic program must have as its central pillar, the protection of the environment and the prevention of environmental degradation. This pillar shall be based on the adherence to fundamental principles that have been agreed to internationally such as the precautionary principle, the pollution prevention principle, the environmental assessment review principle and the “reducing of the ecological footprint” principle.

DELETE THE PARAGRAPH STARTING WITH THE ONLY JUSTIFICATION AND REPLACE WITH

Socially equitable and environmental sound principles will be achieved through the following processes:

- 1. Developing alternative indicators based not on economic growth but on equitable and environmentally sound principles**
- 2. Fostering locally-based economies within an overarching framework of socially equitable and environmentally sound principles.**
- 3. Strengthening environmental regulatory regimes, including setting performance-based standards, reporting and monitoring, and ensuring compliance and enforcement with significant penalties.**
- 4.. Providing international leadership on environmental policy issues. Canada signs and ratifies agreements but fails to enact the necessary legislation to ensure compliance]**
- 5.. Developing achievable strategies for meeting Canada’s international obligations incurred through conventions such as the Framework Convention on Climate Change, the Convention on Biological Diversity, the Montreal protocol (eliminating the production and consumption of ozone depleting substances), the Basel Convention and the Convention on Environmental Impact Assessment in a trans-boundary Context, Convention on the Prevention of Disasters, and other relevant convention. In addition, Canada shall fulfill expectations created through General Assembly Resolutions, Declarations and Conference Action plans.**

[NOTE THE ABOVE STATEMENT THAT GOVERNMENTS HAVE UNDERTAKEN TO ENSURE THAT CORPORATIONS, INCLUDING TRANSNATIONAL CORPORATIONS, COMPLY WITH NATIONAL LAWS AND CODES, SOCIAL SECURITY REGULATIONS, APPLICABLE INTERNATIONAL AGREEMENTS AND CONVENTIONS, INCLUDING THOSE RELATED TO THE ENVIRONMENT, AND OTHER RELEVANT LAWS. (PLATFORM OF ACTION, ARTICLE 167).

7. AS IS

8. Removing the tax and direct subsidies for resource depletion, for environmentally unsound transportation (fossil fuels and other non-renewable sources), for environmentally unsound energy (fossil fuel and other non-renewable sources and nuclear] and for other environmentally unsound technologies. Promoting and funding BEST (Best Environmentally Sound Traditions) practices.

9. Endorsing the polluter pay principle (Agenda 21, UNCED) NOT FULLY DISCUSSED FELT THIS NEEDED WORK

10. Promoting research on means to prevent climate change, ozone depletion, and reduction and loss of biodiversity and other ecological effects of production process

11. Reducing waste and energy use at all stages of the production process, treating waste as a resource, and reducing the transport of goods via shorter-loop systems. In addition, preventing relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health or that cause environmental degradation (Principle, Rio Declaration UNCED)

we all thought that more work needs to be done on the environment section and that we would be willing to participate on an environment committee for the 1998 budget

() THAT in 1997 on February,17, I proposed a Green book to the Green Party

From: Lucy Segatti <segatti@web.net

Tel/Fax. (250) 598-2740

Attention Brant Thompson

Council of Canadians

I am on the Board of Directors of the Victoria Branch of the Council of Canadians, and was responsible for submitting the resolution calling upon governments to comply with international obligations by signing and ratifying international agreements and by enacting the necessary legislation to ensure compliance.

I have had a paper accepted for an International law conference in Washington. The Conference is sponsored American Society of International Law's wildlife section

- Green Life Society - North America
- Georgetown International Environmental Law Review
- Colorado Journal of International Environmental Law & Policy
- Environmental Law Society, American University School of Law
- Detroit College of Law-Michigan State University

The papers will be published in the Colorado Journal of International Law. I will be on the first panel on the precautionary principle with the following academics:

Drs. Jonathan Verschuuren & Chris Backes, Faculty of Law, Tilburg

University, Netherlands, "The Precautionary Principle in European and Dutch

Wildlife Protection Law and Policy;"

- Dr. Joan E. Russow, Co-ordinator, Global Compliance Research project & Sessional lecturer, Global Issues, Environmental Studies Program, U. Of Victoria, "The Implications of Compliance with the Precautionary Principle: Report to the Commission on Sustainable Development;"

- Dr. W.M. von Zharen, College of Wildlife and Agriculture; College of Geosciences and Maritime Studies, Texas A&M University, Galveston, Texas, U.S.A, "Stewarding Marine Species: Beyond the Precautionary Principle;"

- William C. Burns, Director, Greenlife Society - North America, "Using Reverse Listing to Implement the Precautionary Principle in the Context of the Convention on International Trade in Endangered Species of Wild Fauna and Flora;"

- Dr. Sudhir K. Chopra, Visiting Professor, Department of Environmental Science and Policy and Department of International Relations, Central European University, Budapest, Hungary & Craig Hanson, Member, Illinois state bar, "Deep Ecology to the Precautionary Principle: Ethical Principles Evolve into Customary International Law."

At this conference I will be trying to put a resolution on the floor calling upon States to sign what they have not yet signed, to ratify what they have not ratified and to enact the necessary legislation to ensure compliance and enforcement.

I am writing to ask if the Council of Canadians might be able to make a contribution to my airfare.

Thanks.

Yours sincerely

PS Chretien will be in Washington at the same time.

Joan Russow

Joan Russow

() THAT in 1997 in February, I wrote a spoof on the obsequiousness of the citizen of Victoria, because of their welcoming the U.S.S Nimitz with signs of “welcome boys” in the store windows

() THAT in 1997 in February, I distributed the following resolutions to the BCEN international Affairs caucus

EXHIBIT

RESOLUTION: FORMATION OF AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE

Reminded that the International Court of Justice provides only for state participation

Convinced that an incentive for the discharging of obligations and for the fulfilling of expectations could be an international forum where citizens could take evidence of state non-conformance

Noting that international agreements such as the International Covenant of Civil and Political Rights provides for the opportunity for citizens, after exhausting domestic remedies, to submit cases to an international body

We call upon the member States of the United Nations:

- to agree to the formation of an International Court of Compliance where citizens could take evidence of state non-compliance

RESOLUTION: ESTABLISHMENT OF MANDATORY INTERNATIONAL STANDARDS (MINS) WITH REGULATIONS FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR

Mindful that at the United Nations Conference on Women, and the Habitat II Conference, members States have undertaken “to ensure that corporations including transnationals, comply with national laws and codes... applicable international agreements and conventions, including those related to the environment and other relevant laws” (Art 167). In Habitat II this undertaking was reaffirmed and then extended to include the “private sector” (Article 148). Underlying this undertaking is the assumption that each state government would itself comply with its own national codes and would discharge its own international obligations.

Convinced of the necessity of establishing of mandatory international normative standards to drive corporations, including transnationals to BEST (Best Environmentally sound Traditions) practices.

Aware that some States have limited capacity to monitor and regulate the activities of transnational corporations to prevent environmental and social impacts of socially inequitable and environmentally unsound practices

Mindful that different States have different standards and concurring that the highest state standard shall be the international standard

We call upon the member States of the United Nations:

- to establish Mandatory International Normative Standards drawn from United Nations principle to drive industry to BEST (Best Environmentally Sound Traditions) practices based on the highest tenable principles some of which already established through International instruments., and if a state standards is higher than the current international standards the highest state standard shall become the international standard
- to ensure that all transnationals operate under the highest state standard or the highest international standard whichever is higher and more stringent
- to revoke charters of transnationals that have failed to comply with international law through their violating human rights, their causing environmental degradation, or through their contributing to conflict or war
- to carry out environmental audits linked to Mandatory International Normative Standards, and the factor into development the costs of ecological consequences (as agreed to in Agenda 21)

RESOLUTION: REQUIRING REGULATIONS AND STANDARDS: FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR

Convinced about the need for complying with all international, national, bilateral and regional agreements, protocols and conventions as a minimum. if there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail

Convinced also of the need to ensure that every activity or substance that could prevent the protection and conservation of the environment will be included in environmental legislation, regardless of whether the activity or substance is, or is presumed to be covered under another Act

Mindful also that there is an expressed need to ensure that [Observing international obligations as a minimum] by following the most conducive provisions for achieving [objective]

Nothing in this Convention shall affect any provisions that are more conducive to the achievement of equality between men and women which may be contained in the legislation of a State Party or

in any other international convention, treaty or agreement in force for that State.
(Paraphrase of Article 23, Convention on the Elimination of all forms of Discrimination against women, 1979)

Convinced of the need to undertake not relax standards related to socially equitable and environmental sound development

Undertaking to not relax environmental standards and technical regulations, or human rights protection, or social justice and equality/equity provisions to attract short-term economic benefit

Convinced also of the need to ensure that standards and technical regulation will not be relaxed to attract investment

the argument that in a pristine environment that has not yet been polluted by industrial activity shall be able to have emission standards relaxed is inherently invalid and should be discounted. In other words a licence to pollute could be given to industry in an pristine area because the area is not yet officially been designated as being polluted

Stressing the need to ensuring that redefinition of practices will not enable industry to bypass regulations

Polluting industries that have been regulated under statutory law, shall not through redefinition of practice be excluded from the previous regulations [where a plant with “industrial” air emissions is redefined as a recycling plant and thus the regulations related to “industrial....] is deemed inapplicable

Stressing again the need to ensuring that relaxation of standards and regulations shall not be used to attract polluting industry

No proposal to relax standards or technical regulations shall be used to attract industry [see principle enunciated in NAFTA. (re: relaxation of standards to attract industry)]

Recalling the expressed need for the political commitment to...through legislation....at [global] national, community level

Express the political commitment to reduce their vulnerability, through declaration, legislation, policy decisions and action at the highest level, which would require the progressive implementation of disaster **prevention assessment and reduction** plans at the **global** national and community levels (11 a Convention on Natural Disasters, 1994)

Affirming the need for establishing and enforcing reduction and elimination targets

Ambient criteria, or environmental quality criteria refers to levels of contaminants in the environment that must be zero use, production, and release in all cases where a toxic substance is persistent or bio-accumulative. It also applies when a substance will generate persistent or bio-accumulativetoxic by-products or breakdown products during its productions, use or disposal

Concurring with habitat ii that governments at all appropriate levels, including local authorities have a responsibility to ensure access to education and to protect their

population's health, safety and general welfare. this requires, as appropriate, establishing policies, laws and regulation for both public and private activities...(habitat ii, 19)

Cognizant of the proposal in habitat ii of establish [ing] and adopt [ing] a regulatory framework, and provide [ing] institutional support for facilitating participation and partnership arrangements at all levels. (habitat ii, 50 e)

Concurring also with habitat ii on the establishing legislative and regulatory frameworks, institutional arrangements and consultative mechanisms for involving organizations in the design, implementation and evaluation of human settlements strategies and programmes (habitat ii, 180?)

Aware of the expectation created in habitat ii to ..."ensure that the private sector, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws... observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children (habitat, ii 148 * e)

Noting with habitat II, that to face the challenges of the rapidly urbanizing world, there is need to ensure that international and regional networks facilitate more effectively, the exchange and transfer of knowledge and experience on institutional, legal and regulatory framework; and to disseminate best practices on sustainable human settlements in rural and urban areas; including inter alia, those reflected in the outcome of the Dubai international conference on best practices for improving the living environment, held in November 1995. The United Nations centre for human settlements (habitat) should, within its mandate, act as a catalyst in the mobilization of technical cooperation. Opportunities for improved dissemination and exchange of ideas on technical cooperation at the national and international levels could be explored. (153, Habitat II)

Aware of the responsibility to regulated services undertaken through Habitat II in the recognition that "Basic infrastructure and services at the community level include the delivery of safe water, sanitation, waste management, social welfare, transport and communications facilities, energy, health and emergency services, schools, public safety, and the management of open spaces. The lack of adequate basic services, a key component of shelter, exacts a heavy toll on human health, productivity and the quality of life, particularly for people living in poverty in urban and rural areas. Local and state /provincial authorities, as the case may be, have the primary responsibility to provide or enable delivery of services, regulated by appropriate legislation and standards."(Habitat II 64)

Concurring with the importance of "promot[ing], where appropriate, compliance with and enforcement of all health and environmental laws, especially in low-income areas with vulnerable groups (75 d Habitat II)

Call upon member States of the United Nations:

- to establish the necessary regulatory framework based on the principles derived from international law, including conventions, treaties, covenants, declarations, General Assembly resolutions and conference action plans, and drawn from the highest and most stringent state practices if there are practices that exceed international standards

RESOLUTION: ENSURING CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES AND INTERNATIONAL LAW

Concerned that the proposal from the “Establishment of a New International Economic Order (1974) that “All efforts should **shall be made to formulate, adopt and implement an international code of conduct for transnational corporations “ **has been ignored****

(v. Regulation and Control over the Activities of Transnational Corporations Programme of Action on the Establishment of a New International Economic Order, 1974)

Concurring with the proposal to limit the power of transnational corporations through charters: “When we look at the history of our States [U.S.] we learn that citizens intentionally defined corporations through charters—the certificates of incorporation. In exchange for the charter, a corporation was obligated to obey all laws, to serve the common good and to cause no harm. Early state legislators wrote charter laws and actual charters to limit corporate authority and to ensure that when a corporation caused harm, they could revoke its charter (Grossman, R.. Taking Care of Business: Citizenship and the Charter of Incorporation).

A corporation in law is just what the incorporating act makes it. It is the creature of the law and may be molded to any shape or for any purpose that the Legislature may deem most conducive for the general good (Grossman, R.. Taking Care of Business: Citizenship and the Charter of Incorporation).

Cognizant of the recommendation by NGOs: to revoke Charters of Incorporation of industries and transnationals that have caused environmental destruction, violated human rights and contributed to conflict or war (Recommendation to NGO Response to Platform of Action, UN Conference on Women: Equality, Development and Peace; it was agreed to by consensus in the NGO plenary in New York but not included in the NGO submission).

Aware that some States have limited capacity to monitor and regulate the activities of transnational firms in primary, secondary and tertiary sectors of their economics, to minimize environmental and social impacts of poor practices or misconduct;

Noting that developments by such corporations, particularly in the primary and secondary sectors, are often of a nature and scale which are not in keeping with the development status, aspirations or regulatory capacity of host countries and communities in those areas where they are planned or located;

Mindful that different countries have different environmental standards, based on different policies and procedures (both regulatory and voluntary) for setting and ensuring compliance with such standards but that States share a common goal of achieving the highest environmental standards and lowest pollution loads;

Mindful also that significant principles can be drawn from obligations undertaken through the Charter of the United Nations through Conventions, treaties, and covenants; and from expectations created through General Assembly resolution and conference action plans, and that these principles could form a basis for Mandatory International Normative Standards;

Aware that, in general, developed countries within which most transnational corporations have their home base, usually have higher standards and superior capacity to monitor and regulate such corporations compared to developed countries within which most of their operations are often located;

Asserting, as a matter of principle, that corporations operating overseas from their home or base country are morally and should be legally obliged to operate to environmental standards at least as high as those prevailing within the territorial jurisdiction of their home country or with international standards which ever are higher;

Concurring with Habitat II, that every State has the sovereign right to rule and exercise effective control over foreign investments (including the transnational corporations within its national jurisdiction, which affect directly or indirectly the human settlements Programme (II 17, Habitat I); yet this control should be tempered by the requirement to adhere to the highest tenable standards currently in existence;

Concerned that often transnational corporations threaten to move their operations from their home base when environmental regulations are stiffened;

Concerned also, that States lower environmental standards or fail to enforce standards to attract industry

We call upon the member States of the United Nations:

- **to ensure, as agreed in Art. 167 of the Platform of Action (UN Conference on Women), that** “corporations, including transnationals, comply with national laws and codes... applicable international agreements and conventions, including those related to the environment and other relevant laws”
- to undertake to establish Mandatory International Normative Standards drawn from the highest tenable practices and from the highest tenable principles; extracted from the body of international obligations and expectations related to the guaranteeing of human rights, the preservation, conservation and protection of the environment, the prevention of conflict and war, and the achievement of social equity and justice
- To ensure that corporations, including transnational corporations, comply with these Mandatory International Normative Standards

- To revoke charters of transnationals that violate human rights, that cause environmental degradation and loss and reduction of biodiversity, that contribute to conflict and war, and that deny social equity and justice

RESOLUTION: ENSURING CORPORATIONS, INCLUDING TRANSNATIONAL CORPORATIONS, COMPLY WITH THE ENVIRONMENTAL STANDARDS OF THEIR HOME States OR INTERNATIONAL STANDARDS WHICH EVER ARE HIGHER

RESOLUTION : REJECTION OF ISO 14000 PROCESS OF CORPORATE CONFORMANCE WITH SELF-INITIATED STANDARDS

Aware that criteria and indicators, as currently conceived, are neither mandatory normative nor performance based;

Recognizing that voluntary criteria and indicators, such as those developed through the ISO 14000 process, only assess conformance to self initiated environmental policy;

Fearing that criteria and indicators, or ISO 14000 standards will be confused with mandatory, normative, performance based standards;

Understanding that voluntary standards would be in violation of the expectation created in Article 167 of the Platform of Action, Beijing, 1995 that States should ensure that corporations, including transnationals, comply with all international agreements including international environmental law, and with the expectation created that this would extend to the private sector in **article** (Habitat II, 1996

We call upon the member States of the United Nations:

- to establish mandatory, normative international standards based on principles drawn from the body of international law, including the Charter of the United Nations, conventions, treaties, and covenants and from declarations, General Assembly Resolutions, and Conference Action plans.
- to fulfill their expectation of ensuring compliance by supporting the establishment of Mandatory International Normative standards (MINS)
- to forbid labels related to standards be permitted to be placed on forest products unless these standards are mandatory, normative, environmentally sound and performance based

RESOLUTION: STRENGTHENING AND PROMOTING TRADITIONAL PRACTICES

Mindful that, through international standards, States shall refrain from imposing external devised technologies and encourage the development of BEST local and indigenous technologies:

Mindful that throughout the UNCED documents there is a call for the respect of indigenous practices and local technologies:

"...promote development in accordance with indigenous practices and adopt technologies appropriate to local conditions" (7.42 c)

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 Biodiversity)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment"(13.21.a Fragile ecosystem)

" Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes" (14.47 c, Agriculture)

" Governmentsshould ... Recognize and foster the traditional methods and the knowledge of indigenous people and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge" (15.4, g Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity" (15.5 d Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity" (15.5 d Biodiversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ..." (15.6 g. Biodiversity)

Governments... consistent with the requirements of international law, should, as appropriate, collect, assess and make available relevant and reliable

information in a timely manner and in a form suitable for decision-making at all levels with the full support and participation of local and indigenous people and their communities.

(15.6 f Biodiversity)

"promotion of collaborative research programmes... fostering of traditional methods and knowledge of such groups (local and indigenous) in connection with these activities." (16.7 b Biotechnology)

States shall cooperate with a view to the conservation of marine mammals and, in the case of cetaceans, shall in particular work through the appropriate international organizations for their conservation, management and study" (17.50 Marine)

We call upon the member States of the United Nations:

- to encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and, as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology** (Article 69(a) Habitat II, 1996);
- to encourage and support the use of appropriate building technology and the production of local building materials, as well as supporting the development of international, sub-regional and regional networks of institutions involved in research, production, dissemination and commercialization of locally produced building materials (Article 152 * c bis merged with d bis) Habitat II, 1996);
- To strengthen the indigenous building materials industry, based as far as possible on locally available resources. (51 d Habitat II, 1996))

RESOLUTION: DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS

Concurring with the United Nations Charter, that “to maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace” (Article 1, United Nations Charter),

Recalling that under the terms of the Charter of the United Nations, the peoples have declared themselves determined:

- to save succeeding generations from the scourge of war which, twice in our lifetime, has brought untold sorrow to mankind [humanity];
- to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and
- to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained...
- to unite our strength to maintain international peace and security...

NOTING, for over fifty years, since the formation of the United Nations, member States of the United Nations have undertaken in UN system governing bodies obligations reflected in Charters, Covenants, Conventions, Declarations and Resolutions;

Convinced that, if these fifty years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled;

Concerned that, unfortunately many States have not as yet signed conventions, treaties and covenants, others have signed but not ratified them, and others have failed to enact the necessary legislation to ensure the discharging of their obligations;

Cognizant that 1999 is the culmination of the decade devoted to the furtherance of international law;

We call upon member States of the United Nations:

- to sign and ratify all existing international agreements; enact the necessary legislation to ensure compliance and ensure the discharging of their obligations
- to formalize the undertaking to discharge obligations in a General Assembly Resolution on the 52 sitting of the General Assembly, on October 25, 1997
- to ensure that these obligations are fully discharged before October 1999 in celebration of the culmination of the decade devoted to the furtherance of international law.

***RESOLUTION: FULFILLING EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND CONFERENCE ACTION PLANS, RECOGNIZING THE APPLICABILITY OF THE DOCTRINE OF LEGITIMATE EXPECTATIONS**

Aware of the expectations created through General Assembly resolutions and conference Action Plans

Convinced of the applicability of the Doctrine of Legitimate Expectations which comprises the following elements:

- **Not breaking and undertaking as one pleases**
- **Compatibility with public duty**
- **Public interest may be better served by honouring their undertaking than by breaking it**

But that principle does not mean that a corporation can give an undertaking and break it as they please; so long as the performance of the undertaking is compatible with their public duty, they must honour it. And I should have thought that this undertaking was so compatible....The public interest may be better served; by honouring their undertaking than by breaking it.(Lord Denning, Central London Property Trust Ltd. v High Trees House Ltd. [1947] KB 130, 594

- **Fulfilling the expectation must assist in performing rather than inhibiting the performance of its statutory duties**

If I thought that the effect of granting to the applicants the relief sought was to prevent the council validly using those powers which Parliament has conferred on it, I would refuse relief. But that is not the present case. It seems to me the relief claimed will in the end, as counsel for the corporation ultimately conceded, assist the council to perform rather than inhibit the performance of its statutory duties" (Lord Roskill Central London Property Trust Ltd. v High Trees House Ltd. [1947] KB 130, 596)

- **Expectation must be based upon statements or undertaking on behalf of the public authority which has the duty of making the decision**

The expectation may be based upon statement or undertaking by or on behalf of, the public authority which has the duty of making the decision, if the authority, has through its officers, acted in a way that would make it unfair or inconsistent with good administration for him to be denied such an inquiry (Lord Fraser, [1983] 2 All. ER 350)

- **Expectation is based on an assurance given by a Minister of the Crown as to the way in which discretionary power.. would be exercised.**
- **Assurance was given so as to induce this very expectation**

....it is upon an express assurance that the expectation is based: an assurance given by a Minister of the Crown as to the way in which the discretionary power conferred upon him by statute would be exercised. any fair reading... leads to the inference that assurance was given so as to induce this very expectation in the minds of...such as the Plaintiff, so that they might come forward and reveal to the authorities...(Stephen j.

[1977]14 A.I.R., 1, p 34), cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good**

The powers of public authorities are...essentially different from those of private persons.... But a public authority may do neither [examples of 'unfettered discretion'] unless it acts reasonably and in good faith and upon lawful and relevant grounds of public interest. Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good ((H.W. R. Wade's Administrative Law, referred to by Mr. Justice Cook in (1983) 1 NZL R 646 cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Expectation arising from Government holding itself out to do something**
- **Legitimate expectation that Government will discharge this obligation**

If a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligation

- **Expectation that when public authorities establish procedures and publish policies they are bound to follow them**

Where public authorities establish procedures and publish policies, they are bound to follow them. The concept of legitimate expectations has extended the requirements of natural justice to situations where citizens may legitimately be expected to be treated fairly (Ombudsman office, personal communication)

There does not have to be a specific legal right or interest affected for the concept to apply. "Legitimate expectation" means 'reasonable expectation' and it can be invoked where fairness and good administration justify a right to be heard or some other substantial procedural right (ombudsman office, personal communication)

- **When an expectation is created there must be the ability to fulfill the promise it implies**

"To create an expectation, is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its

ability to fulfill the promise it implies". (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

We call upon member States of the United Nations:

-to acknowledge that under this doctrine, it could be argued that the statements enunciated in international instruments — legally binding documents (conventions, Treaties, Covenants); globally adopted Platforms of Action, and Action plans, and majority-passed General Assembly Resolutions and Declarations — could all reflect “promises” that create an “expectation” that citizens can demand to be fulfilled

- to formalize the undertaking to fulfill expectations created through majority passed General Assembly Resolutions, and globally adopted Conference statements , in a General Assembly Resolution on the 52 sitting of the General Assembly, on October 25, 1997

- to ensure that these expectations are fully fulfilled before October 1999 in celebration of the culmination of the decade devoted to the furtherance of international law.

and Victoria in a state of Obsequiousness: the Visit of the U.S.S Nimitz

() THAT 1997, on February 16, I attended the celebration of life for the wonderful Beth Hill. Diana Chalm, from Voice of Women, read Tennyson's poem I am a part of all that I have met. It was coincidence because I had planned on reciting the same passage.

EXHIBIT

() THAT in 1997, on February 16, I wrote a spoof to Clinton but did not send for fear that he might think it was serious

EXHIBIT

Dear Mr. President

We welcome your nuclear peace mission; we know that only through a display of nuclear force, will peace be maintained in the unipolar world.

We will encourage our citizens to bring their children down to see your big vessels so that the youth of today can appreciate the magnitude of your mission.

We know that the member States of the United Nations agreed to eliminate weapons of mass destruction in 1972 at the UN Conference in Stockholm. But we agree with your position that nuclear weapons are not weapons of mass destruction, and that atomic wastes are not hazardous wastes.

We agree that civil nuclear reactors that we are selling around the world have nothing to do with nuclear weapons, and it is just a coincidence that some of the countries that have CANDU reactors have developed nuclear weapons.

We will ignore the World Court Decision that the use or the threat to use, nuclear weapons is contrary to humanitarian law:

We know that your nuclear powered and nuclear capable vessels that visit our ports have had accidents but that does not mean that the vessels are not safe.

We know that you have agreed, through international instruments, to prevent disasters so you would not hide any information about previous nuclear vessel accidents.

We agree that, if an accident does occur in our waters, that you should detonate any bombs on board for security reasons thus protecting your intellectual property rights.

We will ignore the reports from the subversive elements in our society that there have been several accidents on nuclear powered vessels.

We will reprimand and marginalize those subversive citizens in our cities that misrepresent your mission and fill us with fear about the dangers of your visits.

We know that a renegade Commonwealth country New Zealand has become a nuclear-free zone and will not permit visits of nuclear powered, nuclear arms capable or nuclear armed vessels, and we appreciate the necessary measures that you have taken against New Zealand.

We can understand why your nuclear powered and nuclear armed vessels are not permitted in the harbour of New York city; it would not be because there is a perception of potential risk or danger to the citizenry or of potentially serious environmental impacts.

We know that you and your vice president are concerned about protecting the environment and would not engage in any activity that could cause serious irreversible environmental consequences or could contribute to loss or reduction of biodiversity.

We will issue an order in council to bypass the requirement to do an environmental assessment review of activities that could potentially cause environmental harm so that your nuclear ship visits can proceed unhindered.

We will be grateful to you for stimulating our local economies, in particular one of our growth special services such as prostitution, and one of our expanding industries the junk food chains.

Yes Mr. President, we agree with the Christian Round table that "nuclear weapons are part of God's design" and we will support your carrying out of His design as we all move towards the Millennium.

In humble servitude,

John Christ for the Federal Government of Canada

Robert de Poulet Canadian Ambassador to the UN

O Simmer for the Military

Bob Criss for the City of Victoria

Global Compliance Research project

() THAT in 1997, on February 19, I wrote and circulated the following resolution:

EXHIBIT

REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”

Concurring with the assessment in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, that “while scientific and technological developments provide ever-increasing opportunities to better the conditions of life of peoples and nations, in a number of instances they can give rise to social problems, as well as threaten the human rights and fundamental freedoms of the individuals (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Concurring with the concern expressed in Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity about scientific and technological achievements can be used to intensify the arms race production:

“Noting with concern, that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamental freedoms (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity”, 1975)

Also noting with concern, that scientific and technological achievements can entail dangers for the civil and political rights of the individual or of the group and for human dignity (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Noting the urgent need to make full use of scientific and technological developments for the welfare of *man* **humanity** and to neutralize the present and possible future harmful consequences of certain scientific and technological achievements (Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

() THAT In 1997, on February 20, I recirculated the excellent condemnation of clear-cut logging from the Conference on Environmental Ethics at the Goethe institute in Vancouver in 1992

The practice of clear-cutting, followed by artificial reforestation has undoubtedly many technical and organizational advantages. In the course of time, however, soil scientists and ecologists found out that the practice of clear-cutting automatically leads to considerable drawbacks:

-wounding of the soil surface through logging operations.

- Risk of erosion

-High irradiation and higher climatic extremes alter the microclimate, the flora and the microflora and deteriorate the growing conditions for a number of valuable tree species. - -
Soil compression and a reduction of species richness

-An accelerated decomposition of organic matter occurs, combined with a wash out of nutrients, and the eutrophication of ground water, rivers and lakes occur

(Dr Schutt, from The institute Biological Department, University of Munich, Environmental Ethics Conference, 1992, Vancouver)

from the last one.

I would like to see about a 25 page booklet with cartoons.

j

FEBRUARY 1997 CANADA REPORT TO RIO+5

SUMMARY

MY COMMENTS ARE IN RED

The United Nations Conference on Environment and Development (UNCED) in Rio de Janeiro in 1992 resulted in the global community committing itself to the goal of sustainable development.

Among UNCED's major outcomes, was Agenda 21, an ambitious plan of action on some thirty-nine environment and development issues. The United Nations General Assembly subsequently created the United Nations Commission on Sustainable Development (CSD) to monitor global progress in achieving the goals laid out in Agenda 21 and UNCED's other outcomes. Each annual session of the CSD includes a review of selected chapters of Agenda 21. A full review of Agenda 21 and UNCED's other outcomes will be held in 1997.

The CSD encourages countries to report on the progress made in achieving Agenda 21 goals, the challenges that exist in attaining sustainable development, and future directions for action. These reports permit each country to share with other CSD participants lessons learned since UNCED and future steps it intends to take.

General Trends in the Implementation of Agenda 21

Canada is a country of diversity, and its sustainable development agenda belongs to all Canadians. Our political and economic structures provide a place for all to contribute to solutions. That sense of shared commitment is true of both our domestic progress and our support of international initiatives.

The years since UNCED have seen much greater use of information technology in support of sustainable development. The Internet and similar innovations link people and communities, allowing access to education and information that was once almost impossible. These technologies allow people and organizations to share valuable perspectives coming from sources such as the traditional environmental knowledge of Aboriginal people and new processes to measure sustainability. New approaches to community action emphasize communication of successes and the revitalization of communities. New forms of support from government and the private sector are furthering these processes.

Strengthening the Role of Major Groups

The involvement of major groups in society in defining and achieving sustainable development goals has a long tradition in Canada and has become a standard part of Canadian public policy making. There have been two important trends in major group activity since UNCED.

The first trend is the expanding effort to develop dialogue and consensus, wherever possible, among these groups. The resulting consultative forums can be a crucial source of advice for policy makers on a wide range of legislative, policy, and program issues. These forums also permit representatives of major groups to find common ground among themselves.

The second trend is the growth of coalitions among major groups. Such coalitions allow groups to work together on issues of common concern and pool resources and expertise. In a time for many organizations, this is a particularly effective way of taking action.

Financial Resources and Mechanisms

Canada believes that strong and mutually beneficial economic relations between developed and developing countries support sustainable development. Canada intends to liberalize access to its markets for least developed countries and help its developing country trading partners find ways to, take advantage of Uruguay Round opportunities.

Official Development Assistance (ODA) will CONTINUE to be an essential part of meeting Agenda 21 priorities. Canada will CONTINUE to direct most of its ODA to low-income countries and to sectors where it will be most effective in encouraging self-sustaining, environmentally sound development.

Canada strongly supports efforts to reform United Nations and Bretton Woods institutions to ensure effectiveness and efficiency in the promotion of global sustainable development.

Environmentally Sound Technology

A strong environmental industry sector has grown up in Canada. The federal and some provincial governments have developed strategies aimed at assisting companies to identify and respond to domestic and international demands. These activities contribute to achieving overall sustainable development objectives. Pollution prevention technologies and processes are sub sectors in which Canadian researchers and companies are particularly active.

Governments have established a number of means of facilitating environmental technology companies to identify opportunities and act on them, including the transfer of technology to developing countries. Similar means are available to help transfer Canadian expertise in environmental policy and programming.

To comply with increasingly stringent regulations and to satisfy consumer demands for green products and services, the Canadian pulp and paper industry is leading the development of a zero effluent technology that aims at virtual elimination of harmful discharge into water bodies. The effort by government and industry research institutes to focus on innovative, clean-process technology is another example of Canada's commitment to shift from end-of-the-pipe control to pollution prevention. Environmentally sound technologies and know-how make such a shift possible and help improve the competitiveness of Canadian industry in national and international markets.

Combating Poverty

CANADA HAS RATIFIED THE INTERNATIONAL COVENANT ON ECONOMIC , SOCIAL AND CULTURAL RIGHTS WHICH INCLUDES THE RIGHT TO HOUSING AND THE RIGHT TO BE FREE FROM HUNGER

THIS COVENANT WAS NOT INCLUDED IN THE CANADIAN CONSTITUTION OR CHARTER OF RIGHTS AND FREEDOMS.

Although Canada is an affluent country, it has a growing number of people with low incomes. Many of the programs and policies developed to assist persons with low income are changing to focus more on assisting them to become more employable.

Internationally, Canada's ODA programs help people and communities address poverty. Poverty reduction is integrated into programming with broader goals and is built on community participation. This is consistent with the approach that Canada has encouraged multilateral development bodies to adopt in their programming and in the Canadian International Development Agency's new Poverty Reduction Policy.

Changing Consumption Patterns

Canadian industry and government have made progress in reducing consumption in many areas; including in their production of bulk wastes and specific pollutants. Reducing personal and household consumption is a greater challenge, particularly in the area of personal transportation. A variety of programs now exist to help consumers understand the environmental impacts of their consumption decisions and to make choices that are better for the environment. Experiments in the pricing of goods and services are part of this process.

In 1995, the federal government introduced the National Energy Code for Buildings, which provides guidance for cost-effective, energy-efficient construction. The Federal Buildings Initiative (FBI) also helps federal departments reduce energy consumption. Under the FBI, departments will reduce energy consumption by 15 to 20 percent or more and realize potential savings in excess of \$160 million per year. The initiative will involve capital expenditures from the private sector of over \$1 billion and create 20,000 person-years of employment.

Demographic Dynamics and Sustainability

Canada has focused primarily on supporting population and reproductive health efforts in developing countries. Programs in this area have placed great emphasis on the value of education as an effective tool to reduce population growth. Through this work, Canada has come to recognize that the most important contribution to demographic targets comes from effective social and economic development policies. This recognition has been reflected in recent Canadian policy and program decisions.

Most of Canada's direct support for population-related programming is channeled through international agencies. Canada is committed to maintain and, if possible, increase spending in this area.

CANADA HAS MISCONSTRUED CHAPTER 36 BY ALLOWING CORPORATIONS TO PROVIDE CORPORATE MATERIAL INTO CLASSROOMS

Promoting Education, Public Awareness, and Training

Activities aimed at educating and informing the public about environment and sustainable development issues have increased considerably in the last twenty years. Canadians have created opportunities for educators to exchange resources and successful strategies through multi-stakeholder organizations, networks, and conferences.

A similar trend exists in the larger field of public awareness and environmental citizenship. There are many projects under way that encourage the public to take specific, concrete actions to support environmental protection and a more sustainable future. Some of these projects also seek to involve Canadians as workers and as business people in environmental issues in the workplace and where they live.

CANADA HAS REFUSED TO RATIFY THE CONVENTION ON THE PROTECTION OF MIGRANT WORKERS AND THEIR FAMILIES

Because literacy is a life-long learning skill, Agenda 21 underscores the importance of reducing adult illiteracy. Governments and educators need precise measures of the actual literacy skills of Canadians in order to target and promote initiatives for improvement. Since 1989, Statistics Canada has been conducting adult literacy assessments in Canada.

Integrating Environment and Development into Decision Making

All sectors of Canadian society are working in partnership to make progress on sustainable development.

The federal government's principal means of improving decision making is to build sustainable development into policies, programs, and operations of all federal departments and agencies through the following:

- a legislated requirement that each department and agency prepare a results-oriented sustainable development strategy;

- the establishment of a legislated accountability mechanism--the Commissioner of the Environment and Sustainable Development, who will monitor and report to Parliament on the government's performance in integrating the principles of sustainable development into decision making and environmental assessment legislation to integrate sustainable development into federal project planning.

Most provincial and territorial governments have now developed sustainable development plans and passed environmental assessment legislation. These plans and legislation are important means of integrating environmental considerations into their planning and decision-making activities.

Various Canadian industries have undertaken the development of guidelines, codes of practice and other initiatives in an effort to incorporate environmental factors into the design of their activities, products, processes, and services.

The 1994 federal Task Force on Economic Instruments and Disincentives to Sound Environmental Practices was the first well-defined exercise to incorporate environmental considerations into a budget-making process in Canada. The 1995 federal budget addressed a number of the task force's short-term recommendations. Longer term proposals are now under study.

Integrating Environment and Development in International Legal Instruments and Mechanisms

The role of international legal instruments in promoting sustainable development is demonstrated by Canadian actions in recent international negotiations. An important objective of Canadian negotiators has been the integration of environmental and developmental concerns. This integration is reflected in provisions of (among others) the high seas fishing agreement and the Arctic Environmental Protection Strategy.

To advance progress in global negotiations on sustainable development issues, Canada has, on a number of occasions, provided assistance to the developing world to participate in international negotiations. Regionally, the North American Agreement on Environmental Cooperation is an example of an international agreement that emphasizes the complementary roles of cooperation and enforcement.

Protection of the Atmosphere

Canada is working in a number of ways to protect the atmosphere. It is contributing to the expansion of scientific understanding of atmospheric and climate issues through domestic research and cooperation with international atmospheric research programs.

Canada also supports a domestic energy development strategy that includes policies and programs to implement environmentally safe, cost-effective energy systems. Objectives include promoting energy efficiency, reducing demand, increasing the contribution of new and renewable energy sources, and minimizing the adverse effects of energy consumption, often through voluntary actions.

Natural Resources Canada has set new priorities for its Program on Energy

Research and Development which includes research initiatives on greenhouse gases, climate interactions, greenhouse gas abatement and disposal, and the overall impacts of Canada's strategy on the energy sector.

Dealing with transportation issues is crucial to atmospheric protection. Canadian governments have introduced programs to reduce or eliminate price distortions, decrease vehicle emissions, and conserve resources. These actions are part of an overall pollution prevention approach that features a shift to redesigned processes and new technologies that reduce atmospheric impacts.

They also form part of Canada's response to trans-boundary air quality issues with the United States.

Canada has made stratospheric ozone depletion a priority in its research, monitoring, and public information programs. It has met and exceeded its international commitments to eliminate ozone-destroying substances.

Protection of the Oceans and Other Seas

CANADA HAS NOT RATIFIED THE LAW OF THE SEAS. IT HAS RECEIVED BENEFITS FROM THE CONVENTION BUT NOT UNDERTAKEN THE OBLIGATIONS.

CANADA STILL PERMITS RAW SEWAGE INTO THE OCEAN.

Canada is moving to an approach to oceans issues that integrates environmental and development priorities. The proposed Oceans Act is the legislative framework for an Oceans Management Strategy that will establish an ecosystem approach to the management of the oceans and coasts based on principles of sustainable development.

Protection of marine environments from land and sea-based threats has been increased by governments through legislation, regulation, and programs. This is consistent with international commitments and domestic priorities. One of those priorities is protection of the Arctic Ocean. Canada is working in concert with other circumpolar States and with the indigenous peoples of the Arctic.

Fisheries issues have been an important part of ocean-related activity. The closure of important Atlantic fisheries has underlined the need for more sustainable approaches. New policies, better training, and more effective fisheries management are among domestic responses. Canada encouraged a complementary international response to protect adjacent high seas fisheries. Sharply improved controls on fishing by all States in the northwest Atlantic have been negotiated.

Canada also played a key role in the new high seas fishing agreement that will close a serious gap in the international legal regime for the conservation of fish stocks on the high seas. It has cooperated with other States, particularly developing countries, to address a range of other fisheries and marine pollution issues.

CANADA HAS NOT ESTABLISHED STRICT LIABILITY AGAINST CORPORATE DESTRUCTION OF FISH HABITAT.

Sustainable Development of Small Island States

Canada's ODA programs have provided support to many small island States in the Caribbean with which Canada has long-standing ties. These programs have focused on improving transportation and communications infrastructure, human resource development, and regional institutions. Canada shares many concerns about marine and fisheries issues with South Pacific States. It has provided support to regional organizations in the South Pacific that deal with ocean management and development issues.

INTRODUCTION

This third Report of the United Nations Commission on Sustainable Development (CSD) summarizes our progress, lessons learned, and challenges in achieving, the goals of sustainable development. It concentrates on the chapters and themes in Agenda 21 that will be discussed at the 1996 session of the CSD. Rather than simply listing actions, it attempts to isolate the major trends and themes in Canadian responses to each of those chapters. It also includes short summaries of recent development in topics related to the sectoral chapters discussed during the April 1995 session of the CSD.

In this report, Canada uses the definition of sustainable development offered by the World Commission on Environment and Development (also known as the Brundtland Commission) - "development that meets the needs of the present without compromising the ability of future generations to meet their own needs".

Canada recognizes that all individuals, major groups, and orders of government are responsible for integrating the principle of sustainable development into their activities. Accordingly, this report draws on examples from the diversity of Canadian responses to Agenda 21. Where those responses involve expenditures, amounts are expressed in Canadian dollars unless otherwise noted.

The Government of Canada has prepared this report using the guidelines provided by the CSD as a general framework. It has consulted with other governments in Canada and with representatives of major groups. However, it has not been possible to include every example generated by these consultations. Nonetheless, the Government has drawn from these examples to provide a representative indication of the extent of activities that are under way across the country.

PART I

GENERAL TRENDS IN THE IMPLEMENTATION OF AGENDA 21

Canada--An Overview

The Land and Its People

Canada covers 7 percent of the world's land mass and is bounded by three oceans. With the longest navigable coastline in the world, Canada is blessed with a large proportion of the globe's coastal and marine resources, which have contributed significantly to the nation's economic growth.

The country's population of more than 29 million is concentrated within less than 100 kilometres of the Canada/United States border. About three quarters of the people live in urban areas. Rural population away from the cities is declining and aging as the young move to urban centres.

Our substantial natural resource endowment is an important factor in our environment and economy. This endowment includes about 9 percent of the planet's renewable freshwater, 10 percent of its forests, and significant reserves of fossil fuels and minerals.

Canada's State of the Environment Report for 1996 will be accessible on
Environment Canada's Green Lane on the Internet. This well-known publication

provides up-to-date information for a variety of audiences including communities, corporations, academic institutions, and government and nongovernmental organizations. The full report will contain sixteen chapters, which will be released as they become available, commencing in early 1996.

Canada's Climate

Canada is a land of climatic contrasts and extremes. Many unusual weather events occurred across Canada in 1995. Canada experienced the third warmest June/July period in 101 years. Towns in southern Alberta were inundated by 1 in 100-year floods (flooding that has one chance in one hundred of being equaled or exceeded in any given year). Severe summer storms contributed to our second worst year ever for forest fires in Canada. Some 1700 icebergs have traversed Newfoundland waters.

In combination, these events provide some support to the prediction that climate is indeed changing according to global circulation models. These observations give dramatic illustration to the view held by the Intergovernmental Panel on Climate Change that human impacts on the environment, for example, the burning of fossil fuels, are a significant factor in causing climate change.

CANADA HAS RATIFIED THE UNFCCC BUT FAILED TO ENACT THE NECESSARY LAW TO ENSURE COMPLIANCE

CANADA HAS FAILED TO PROTECT CARBON SINK SUCH AS OLD GROWTH FORESTS

CANADA HAS RATIFIED THE CONVENTION ON BIOLOGICAL DIVERSITY VALUES

AT UNCED CANADA UNDERMINED THE FOREST PRINCIPLES DOCUMENT BY COLLABORATING WITH CANADIAN FOREST COMPANIES

BUT FAILED TO ENACT THE NECESSARY LAW TO ENSURE COMPLIANCE

CANADA HAS RATIFIED THE CONVENTION ON THE PROTECTION OF CULTURAL AND

NATURAL HERITAGE\ YET CANADA FAILS TO PROTECT AREAS OF UNIVERSAL VALUE

The Canadian Economy

Canada's economy is based largely on free market principles. It is highly integrated into the global economy. Our private sector has substantial freedom of action and as a result, is a significantly responsible for many aspects of sustainable development.

CANADA HAS IGNORED THE FINANCIAL PROPOSAL IN CHAPTER 33 16 E

THE REALLOCATION OF RESOURCES AT PRESENT COMMITTED TO MILITARY PURPOSES.

E.

Cooperatives are businesses owned and controlled by the 12 million people who use them. They contribute to community sustainability because they are member-driven organizations, surpluses stay in the community, and decisions generally reflect a sensitivity to local public interest/needs. There are 9878 cooperatives in Canada.

Governments

Canada is a federal state with ten provinces and two territories. Its constitutional and political system gives all orders of government (federal, provincial/territorial, municipal) some degree of authority for environmental, economic and social issues related to sustainable development.

Governments have created mechanisms to coordinate their sustainable development policy making and activities. They also act independently within their spheres of jurisdiction. For example, the provinces own and control the use of most of the natural resources within their boundaries.

The Changing Nature of Governance

The political, fiscal, and societal forces taking place in Canada are affecting governmental roles and the way decisions are made. The transition to sustainable development is increasingly recognized as a shared responsibility between different orders of governments, individuals, and nongovernmental organizations and businesses. Government roles are also evolving with respect to Aboriginal peoples in the context of land claims settlements and self-government initiatives that call for the shared management of natural resources.

Decision-making processes are becoming more open to interested citizens and groups. The creation of round tables and the widespread use of processes that involve all sectors of society are redefining the balance between hierarchical and shared decisions.

The Manitoba Round Table on the Environment and the Economy has created the Sustainable Development Awards of Excellence Program. Since 1992, it has recognized projects and efforts of Manitobans that exemplify the principles of sustainable development. Award categories include research and development, small business, the public sector, large business, education, youth, nongovernmental organizations, and households/ neighbourhoods.

An example of the improved level of government accountability is the establishment of a federal Commissioner of the Environment and Sustainable Development. Additional information on this and other aspects of the changing nature of decision making in Canada is found in the sections of this report on strengthening the role of major groups and on integrating environment and development into decision making.

Trends

Every year Canada highlights several trends in its sustainable development agenda. This report notes the emergence of new approaches to education and understanding sustainability. It considers trends in community action. It discusses some impacts of information technology.

New Approaches to Education and Understanding Sustainable Development

Education is essential to engendering the values and attitudes necessary for Canadians to understand and support sustainable development. In Canada, education is considered to be a life-long learning process and is discussed in the section of this report on education, public awareness, and training. The use of new technologies and alternative ways of understanding our relationship with the Earth are also important trends.

Distance Education

As a sparsely populated country, Canada has always promoted forms of distance education. Advances in technology have created new opportunities for individuals to learn; breaking down barriers of distance between learners and educators. Examples include: specialized education computer networks (such as STEM-Net in Newfoundland), the Ontario Education Highway, Alberta's ARNet, and SchoolNet. For example, SchoolNet has been created to encourage all of Canada's 16,000 primary and secondary schools and 200 colleges and universities to connect to the Internet by 1998. Initiated by Industry Canada and launched in 1993, SchoolNet receives support from many sectors such as the private sector and the academic community.

There are now three Canadian universities whose sole method of instruction is distance learning: British Columbia Open University, Athabasca University in Alberta, and Télé-université, which is part of the Université du Québec network and the only francophone distance education university in North America.

Traditional Environmental Knowledge

Canada's Aboriginal people have a deep tradition of respect for and understanding of the environment based on life in harmony with the Earth. Aboriginal people have developed a profound knowledge of their environments over thousands of years. The documentation and application of this traditional environmental knowledge is a growing field of research in Canada.

The Dene Cultural Institute Pilot Project in the Northwest Territories is an example of a participatory community project. It is designed to document the traditional environmental knowledge of the people of Fort Good Hope and Colville Lake. The ultimate goal of the project is to integrate traditional environmental knowledge and western science for the purpose of community-based natural resource management.

A cooperative project between five Aboriginal communities located in Alberta, Manitoba, Ontario, Quebec, and New Brunswick, is illustrating Naturalized Knowledge Systems including local Aboriginal and non-Aboriginal systems. These systems demonstrate how knowledge is transferred within the community between people and generations. They also show how a community has adapted to social and cultural change. A major focus of the project will be the clarification of indigenous environmental indicators that are important to members of the community. The Mohawk Council of Akwesasne and the University of Ottawa are working in partnership with the five communities to empower each of them with this knowledge.

CANADA HAS FAILED TO ACT ON THE COMMITMENTS TO INDIGENOUS PEOPLE BY ATTEMPTING IN 1992 TO PREVENT THE "S" TO BE SDEDED TO INDIGENOUS PEOPLE

CANADA HAS FAILED TO ACT ON COMMITMENTS IN CHAPTER 26 SUCH AS NOT DOING ANYTHING ON INDGENOS LANDS THAT IS CULTRALLY INAPPROPRIATE

On 18 July 1995, the Haudenosaunee Six Nations Confederacy along with Cambridge University each received an award from the United Nations Environment Programme in recognition of their work and dedication toward protecting the environment. The "Haudenosaunee Environmental Restoration: Indigenous Strategy for Human Sustainability" is an environmental agenda, using the Naturalized Knowledge Systems of the Haudenosaunee. The Haudenosaunee have territories in the Great Lakes area.

The "Ecological Footprint"

The concept of the "ecological footprint" was developed by faculty and graduate students at the School of Community and Regional Planning and the Task Force on Healthy and Sustainable Communities at the University of British Columbia. It helps people to understand the link between their lifestyles and nature and allows them to visualize the impacts of their consumption patterns on nature; much like a footprint in the earth.

The ecological footprint is the land that is required to support a particular or defined lifestyle indefinitely. It is an accounting tool that uses land area as its measurement unit to find out whether nature can provide enough resources and assimilate waste in order to secure good living conditions for everyone in a community. Various categories of human consumption and waste generation are translated into areas of productive land required to support those items. From that, the area of land required by a given group of people (household, city, or country) to provide its resources and assimilate its waste products can be calculated. This land area is known as the "appropriated carrying capacity" or, more simply and graphically, the group's ecological footprint.

The ecological footprints of individual regions are much larger than the land areas they physically occupy. For example, it was found that the residents of the Lower Fraser Valley in British Columbia "appropriate" the productivity of an area nineteen times the

size of their home region to satisfy present consumption levels of food, forest products, and fossil fuels.

Ecological footprint analysis can be applied to projects, policies, programs, and technologies. As a planning tool, it enables communities to envisage the limits to their consumption by pointing out likely shortfalls and use this knowledge toward reducing their footprint. As an educational tool it engenders awareness of the ecological impacts of consumption.

Trends in Community Action

Canadians are organizing groups to advance the sustainability of their communities.

Community-based groups drawing from all sectors of society can be found in every province and territory. These groups are identifying issues and finding solutions based on consensus using a variety of tools.

Under the Arctic Environmental Strategy (AES), the Community Resource Management Program supports projects driven by community priorities and interests. For example, the program contributed to a project of the Stewart Valley Salmon for the Future Society. Before adding to salmon stocks in the Stewart Mayo River system, the society surveyed salmon, salmon fry, other fish species (as well as predatory bird populations) to determine how many extra Chinook salmon the river system could handle. Members of Nacho Nyak Dun First Nation and local junior high-school students conducted the surveys. More information on the AES is in the section of this report on protection of the oceans and other seas.

Sharing Best Practices

Canadian communities are learning from each other by sharing information on best practices. Best practices are examples of actions that could be recommended for further application, whether in a similar or adapted form. They are actions, initiatives, or projects that have resulted in clear improvements in the quality of life and the living environments of people in a sustainable way.

For example, in British Columbia, Vancouver is creating new downtown waterfront neighbourhoods in an area formerly dedicated to industrial, rail, and port activities. Once the redevelopment is complete, the waterfront neighbourhoods will provide social diversity, urban design distinction, pedestrian-friendly environments, continuous public access to the water's edge, environmental conservation, and an array of urban innovations to support high-density living.

The Federation of Canadian Municipalities supports the sharing of best practices beyond Canadian borders by encouraging partnerships between Canadian municipalities and municipalities in Africa, Latin America, and Southeast Asia. It is also facilitating training activities in China that focus on urban environmental management.

The first national urban sustainability workshop, held in June 1995, focused on appropriate frameworks, criteria, and selection of "core" indicators. Major trends in rural Canada based on fourteen indicators were published this past year in "Rural Canada: A Profile". Additional information on indicators is in the section of this report entitled Information for Decision Making: The Role of Indicators.

Enhanced Communication

Communities are using the Internet as a bridge to a wider world of services, information, and expertise needed for sustainability. It is already proving to be an excellent tool to link people and organizations in rural and remote areas. Access to the Internet may help to furnish communities with opportunities for growth and jobs. As noted above, it is improving their access to learning and information. It will also enable them to communicate easily with each other, conduct business, and exchange information and ideas. To help provide rural communities with affordable public access to the Internet, as well as the skills to use it effectively, a national network of community access sites is being established across Canada.

Using Heritage to Revitalize Communities

An aspect of sustainable development is the preservation and revitalization of existing buildings and community features. One example is the revitalization of commercial main streets through partnerships between downtown merchants and municipalities. Downtown revitalization offers economic and environmental benefits, including the CONTINUED use of buildings and infrastructure especially by small businesses. It has also proven to be a strong deterrent to low-density suburban sprawl. The rehabilitation of older buildings now exceeds the dollar value of new construction in Canada.

Heritage conservation is also contributing to rural and regional regeneration. Communities are now forming partnerships to develop corridors based on scenic roads, historic waterways, paths, and trails, and as alternate uses for abandoned railway lines.

Action 21

Action 21 is a new federal program to help Canadians take action in their communities in support of healthy environments. This Environment Canada program has two

components. It has a public awareness initiative to encourage all Canadians to become active participants in environmental solutions. It also has a community funding program that provides financial support to non-government, non-profit groups to carry out local environmental projects.

Action 21 provides support to organizations to take action in their communities. It supports projects that have a positive impact on the environment, provide opportunities for Canadians to take action at the local level, encourage more people to practise environmentally responsible behaviours, and address priority environmental issues. In addition, Action 21 is currently sponsoring a project with Health Canada that helps communities link health and environment issues and build their capacity to take action on the issues that they identify as priorities.

The Business Development Bank of Canada has a variety of products and services tailored to the needs of non traditional entrepreneurs such as women, Aboriginal groups, young people, and members of ethnocultural communities. Services such as specialized financing, business training, counseling, and mentoring are helping them to achieve sustainable livelihoods. Many of the bank's initiatives are developed and delivered in partnership with private sector groups, associations and government departments.

1997 KEY ISSUE FUNDING IF WILLING TO COMPROMISE NAFTA side agreement

() THAT in 1997, I received a notification of a possibility of funding but it would be unethical to accept funding from a NAFTA side agreement because I have called for the abrogation of NAFTA

Subject: North America Fund for Environmental Cooperation

The Commission for Environmental Cooperation is once again accepting funding proposals for community-based environmental initiatives. Proposals must be

submitted before March 31, 1997. If you are interested in finding out more about potential funding opportunities, you can contact their web site at www.cec.org and select "North America Fund for Environmental Cooperation".

Corporate Citizenship

Many businesses have developed policies and practices that support sustainable development. An element of that trend has been corporate involvement in similar efforts at the community level.

Some of these are directly related to corporate business priorities. For example, the Consumers Gas Company, together with a number of other companies, is involved in the Ottawa / Carleton Green Communities Initiative in Ontario. This is an energy and conservation project that has benefited users and the company itself.

In 1992, Shell Canada Chemical Company established an external Product Line Sustainability Advisory Panel to help it understand the sustainability of its business units and products. The eleven panel members, who have expertise in a range of disciplines, have since developed sustainability criteria related to life cycle potential impact and risks and incorporated them in an evaluation tool for product lines and capital investments.

Corporate support for community sustainable development activities is a relatively new phenomenon. It builds on the long tradition of business support for charitable work, health, culture, and sport. Corporate citizenship takes many forms, such as the contribution of goods and services, the sharing of skills and expertise, and financial support.

The Conference Board of Canada established the Canadian Centre for Business in the Community in 1995. It reflects the increasingly multidimensional corporate citizenship issues facing business. The centre is dedicated to helping business organizations assume a more effective role in developing and enhancing the communities in which they operate.

Engendering Public Awareness

Corporations are bringing environmental issues to the attention of the public, and the response is influencing public policy. For example, in October 1994, The Body Shop, a skin care and cosmetics company, launched a campaign on the need for endangered species legislation in Canada. It included the distribution of information through its retail outlets across the country, a petition drive, and a letter-writing campaign to the federal Minister of the Environment. Young children, pretending that they were endangered species, sent some 5000 letters and drawings on behalf of the animals. The campaign culminated in the presentation of a 75,000-signature petition to the minister on 17 November 1994, which reinforced the minister's intention to introduce endangered species legislation, an instrument for which various nongovernmental groups and concerned citizens had pressured. On that same day, the minister released a document entitled "Endangered Species Legislation in Canada: A Discussion Paper", which invited public comment, and promised to table endangered species legislation. On 17 August 1995, the Minister released a "plain language" version of the Canadian Endangered Species Protection Act, a legislative proposal, for further public comments.

Because of shared jurisdiction on this issue, the federal government has led the development of a national approach that will provide for the protection and recovery of endangered species across Canada.

International Cooperation

Canada has a long tradition of international cooperation. The primary vehicle for official development assistance is the Canadian International Development Agency (CIDA). For CIDA, the concept of sustainable development rests on five pillars: environmental, economic, political, social, and cultural sustainability. Information on official development assistance may be found in the section of this report on financial resources and mechanisms.

Two other organizations that play a significant role in international development are the International Development Research Centre (IDRC) and the International Institute for Sustainable Development (IISD).

The federally funded IDRC assists scientists in developing countries to find solutions. The focus of this work includes problems relating to food security, technology development and use, the conservation of biodiversity, and the integration of social, economic, and environmental policies.

Created in 1970, IDRC is the world's first research institution devoted exclusively to international development and has served as a model for the establishment of similar organizations in the United States, Sweden, Australia, and Germany. Since its founding as a public corporation, IDRC has funded over 5000 projects in nearly 100 countries; it has offices in Canada, Africa, Asia, and Latin America.

Independent organizations such as IISD are an important source of expertise and activity. IISD was created to promote sustainable development in decision making in Canada and internationally. Institute programs focus on identifying and applying principles such as its Trade and Sustainable Development Principles applied to the General Agreement on Tariffs and Trade and to the World Trade Organization; surveying best practices and cases; measuring performance; and establishing measures of sustainable development at the sub national and organizational level and applying them to eco-zones. One of IISD's best-known contributions is the Earth Negotiations Bulletin, which provides daily coverage of UN negotiations related to environment and development.

To mark the United Nations' 50th anniversary, The Friends of the United Nations commissioned an international panel of advisors to choose fifty model communities that had demonstrated an outstanding collective approach to environmental issues and the social development of their inhabitants. Three of the fifty winners were from Canada: the Sanikiluaq Inuit community in the Northwest Territories, the Walpole Island First Nation in Ontario, and the Oujé-Bougoumou Cree community in Quebec.

The Challenges Ahead

There are many challenges that face Canada as it works to meet its sustainable development objectives. Some of the more important ones are described below.

Instilling Environmental Citizenship

Environmental citizenship means changing personal decisions and broadening understanding of sustainable development issues. For example, our challenge is to find a way to balance human consumption and nature's limited productivity to ensure that our communities are sustainable locally, regionally, and globally. This clearly means reducing consumption by Canadians, which will require attitudinal and behavioural change.

Due to funding pressures, public educational institutions are having to reduce the range of courses offered to students. In the courses that remain, the challenge is to instill citizenship in students, including a sense of awareness and responsibility for the environment.

Meeting the Needs of an Aging Population

In the next few decades, Canada will experience a change in the makeup of its society due to the relative growth in the number of people sixty-five years of age and over. This rapid growth is projected to CONTINUE well into the next century, peaking in the year 2031 when all of the "baby boom" generation will be seniors. While dramatic increases for all age categories over sixty-five are forecast, of particular significance for policy and program planners is the increasing number of older seniors, those seventy-five years of age and over, and their corresponding needs for housing, health, and other services, and special facilities.

Coping with the Consequences of the Information Highway

The information highway has become the term that describes all the changes in computing, communications, and associated products and processes that are affecting Canadian society and the Canadian economy today. It represents a shift from an

economy based on producing goods to one primarily concerned with generating and adding value to information. To maintain sustainable livelihoods, there are important unresolved issues that Canadians will have to address over the coming years relating to the changing nature of work, jobs, and careers as well as access to technology, jobs, and training.

The Northern Information Network allows users to discuss environmental and development issues through an electronic bulletin board and to find geographically referenced information in its meta-database. It has become a useful tool for industry, business, land use planning offices, communities, interest groups, government departments, northern decision makers, and research and educational institutions.

Facing Financial Constraints

All orders of Canadian government, nongovernmental organizations, and communities large and small are facing significant financial pressures. As well, the capacity of all levels of government to levy more taxes is increasingly limited. Government and nongovernmental organizations are actively seeking innovative ways to share knowledge and resources and to foster broad-based participation to promote a sustainable economy and society given this restricted financial base.

PART II, SECTION I

Strengthening the Role of Major Groups

Introduction

Chapters 23 to 31 of Agenda 21 stress the need to involve all sectors of society in the promotion of sustainable development. Canada has made broad public participation in decision making a priority for many years. In the years since the United Nations Conference on Environment and Development (UNCED), that trend has intensified. Since major group activity takes so many forms in Canada, this section focuses on two trends that have become significant since 1992.

Access to Decision Making: The Maturing of Inter-Sectoral Dialogue

Governments have increased their efforts to find effective means of involving major groups and citizens in shaping the sustainable development agenda. Forums that bring together representatives of many different groups have become important vehicles in these consultative processes. The intent of such forums is to encourage debate and consensus building that crosses traditional major group lines. These kinds of

consultative processes support the public consultation requirements central to such basic environmental laws as the Canadian Environmental Protection Act, the Canadian Environmental Assessment Act, the Quebec Environmental Quality Act, and the Alberta Environmental Protection and Enhancement Act.

Development and implementation of these laws have involved the full range of environmental groups, industry, labour, Aboriginal people, other major groups, and citizens.

Similar consultative mechanisms have been part of the development of policies, programs, and responses that address specific environmental challenges. These challenges have included work on issues facing the Great Lakes and St. Lawrence River ecosystems, the Atlantic coastal zone, British Columbia's Fraser Valley, and northern river basins.

Provincial governments have also put in place consultative mechanisms to foster effective public responses to sustainable development challenges. Both New Brunswick (through its Commission on Land Use and the Rural Environment) and British Columbia (through the Commission on Resources and Environment), involve citizens, communities, and organizations in resource planning and integrated environmental management. In Quebec, Regional Environmental Councils created by non-governmental organizations are facilitating consensus building among stakeholders.

This development of consultative mechanisms can also be found at the municipal level. For example, the Vision 2020 project in Hamilton-Wentworth is an example of efforts to give a voice to citizens and their organizations in shaping the economic future and well-being of their community.

Much of this inter-sectoral dialogue builds on the work of the National Round Table on the Environment and the Economy, which has been discussed extensively in previous reports. The National Round Table and similar round table processes at the provincial and local levels have provided new avenues for achieving consensus on sustainable development issues. These processes have helped engage diverse sectors of society in a search for more answers.

Initiatives aimed at bringing major groups together to address key issues can also be found outside government. The Whitehorse Mining Initiative (the Canadian minerals and metals industry), the Forestry Round Table (the Canadian pulp and paper sector), and the Economic Instruments Collaborative (facilitated by the National Round Table) are all examples of this continuing trend.

Many believe that inter-sectoral dialogue has improved the quality of public and private decisions. It has also strengthened respect and understanding between major groups as people look beyond labels to find solutions.

Coalition Building: Developing Synergy and Concerted Action for Sustainability

There is encouraging evidence that major groups are now sharing resources and expertise and finding the means to tackle specific issues and challenges jointly. Coalitions led by environmental groups on climate change and biodiversity are building on the resources and strengths of participating group members to promote action.

Labour and business groups are also working cooperatively to address environment-related issues in the workplace. For example, the Canadian Auto Workers Union and Chrysler Canada have formed a Joint National Environmental Committee to develop educational programs about the environment for communities and to enlist broad-based support for action at the local and national levels.

Labour organizations are also reaching out to schools to promote sustainability. In Quebec, the Fondation en éducation relative à l'environnement and the Interdepartmental Committee on Environmental Education have joined forces with the departments of Education and Environment and Wildlife, RECYC-QUÉBEC, the Centrale de l'enseignement du Québec, school boards, and Hydro-Québec to develop curricula and materials to increase awareness of sustainable development issues among students.

Through the Canadian Centre for Sustainable Development Research, an effort is being made to foster greater collaboration between academia, government, industry, and nongovernmental organizations.

Non-profit organizations such as the Canadian Standards Association (CSA) are also playing a major role in bringing groups together to achieve a common cause. The CSA is working with representatives from many sectors of society to develop environmental quality objectives, standards, and guidelines for environmental management by industry, small- and medium-sized business, institutions, and the public sector.

Aboriginal people are increasingly involved in sustainable development initiatives with other groups. Many deal with resource management questions that involve sharing decision-making powers with provincial governments on such matters as land use, forest practices, resource use by Aboriginal people, and economic development. For example, the Porcupine Caribou Management Board in Canada's North involves representatives from Gwich'in and Inuvialuit peoples as well as three government jurisdictions. It manages issues pertaining to one of the largest caribou herds in the world through a traditional consensus process. Similarly, the agreement between the federal and Quebec governments and the Algonquins of Barrière Lake will lead to the development of an integrated forest and wildlife management plan based on the principles of sustainable development.

Organizations representing youth, women, and senior citizens are increasingly extending their networks, including those to the scientific community, health organizations, and educational institutions on a range of issues. Some of these networks are described in the section of this report on education, public awareness, and training.

Challenges and Next Steps

Many nongovernmental organizations in Canada face tight budgets at the same time as they are faced with growing demands on their resources. This trend has forced them to be more strategic in **allocating resources to consultative and consensus-building efforts**. They are now placing more importance on assessing the likely impact of their efforts before agreeing to take part in new activities. Many are looking for partnerships with other stakeholders to maximize their contribution. The results of these broadly based coalitions are, in some cases, very promising. In other cases, progress is less obvious. An important challenge for many organizations is to translate strategies into concrete action plans for their sectors of interest.

A key challenge for Canadian institutions is to link their commitment to environmental and sustainability goals with open and transparent accountability processes. The nature and scope of sustainability issues demand that our accountability processes be fully responsive to the pluralistic expression of the needs and interests of all major groups in Canadian society.

The true contribution of major groups to the resolution of sustainability issues will ultimately be measured by their influence on decisions and actions. Taking a broader perspective, that contribution will also depend on the ability of major groups and their organizations to work cooperatively with other sectors of society. To achieve this goal, groups will need to be more effective in sharing experiences, lessons, and best practices both within and between sectors. The new communication channels opened by Canada's presence on the information highway should facilitate the process of sharing and learning experiences and best practices.

PART II, SECTION II

FINANCIAL RESOURCES AND

MECHANISMS

Introduction

Canada recognizes that a key element of international cooperation in support of global sustainable development is the provision of assistance, including financial resources, to developing countries to help them to meet their commitments under Agenda 21. The flow of financial assistance from the developed to the developing world should supplement the

mobilization of domestic financial, technical, and human resources in developing countries that is fundamental to implementing Agenda 21. The bulk of Canadian assistance to this end is provided through the federal government's official development assistance (ODA) program. The work of organizations like the Ottawa- Development Research Centre (**IDRC based International**) and the Winnipeg-based **International Institute for Sustainable Development** is also important.

Innovative Mechanisms

Canada is increasingly aware that sustainable development requires the establishment and maintenance of strong and mutually beneficial economic relations between developed and developing countries. In its early 1995 foreign policy statement, "Canada in the World", the federal government committed itself to expanding Canada's trade and investment relationships with the developing world.

In recognition of the role of international trade in encouraging sustainable development, Canada has announced its intention to implement fully its commitments under the Uruguay Round of **multilateral trade negotiations that concluded in 1994**. Of particular interest to least developed countries, is the Canadian government's announcement that it will be reforming Canada's General Preferential Tariff to provide better access to least developed countries to the Canadian market. The Canadian International Development Agency (CIDA) has also undertaken a study of the impact of the Uruguay Round on developing countries. One of the goals of this study is to identify a role for ODA agencies in helping to alleviate any negative impacts of the Uruguay Round while assisting developing countries to take advantage of the new trade opportunities arising out of the Uruguay Round. The results of CIDA's study should be available by mid-1996.

Canadian Official Development Assistance Official development assistance has been identified as the main source **of external funding to assist developing countries in the implementation of Agenda 21**. Canada remains committed to reaching the target of 0.7 percent of the gross national product for ODA that was confirmed at UNCED as a long-term goal. The financial resources needed to attain this goal will be dependent on a strong Canadian economy.

"Canada in the World" States that the purpose of Canada's ODA is to "support sustainable development in developing countries, in order to reduce poverty and contribute to a more secure, equitable and prosperous world". With this in mind, Canada will CONTINUE to direct most of its ODA to low-income countries. Canadian ODA will concentrate resources on six priorities: basic human needs, women in development, infrastructure services, human rights, democracy, and good governance, private-sector development and the environment. Within the framework of these priorities, assistance will be targeted where it will be most effective in encouraging self-sustaining, environmentally sound development. The goal will be to promote long-term, mutually beneficial relations between Canada and the countries of the developing world.

Multilateral Development Assistance and Funding

Mechanisms

Canada believes the establishment of an international financial and economic system that is conducive to sustainable development must be a cornerstone of efforts to implement Agenda 21. Canada strongly supports efforts to reform international organizations to ensure effectiveness and efficiency in the promotion of global sustainable development. At the eighteenth United Nations Environment Programme (UNEP) Governing Council, Canada actively supported UNEP's efforts to refocus its program to achieve these ends.

Moreover, Canada has been active in the follow-up to the 1995 G-7 Summit, which addressed the issue of reform of international financial institutions. Canada views multilateral development banks as fundamental to the implementation of sustainable development. The Global Environment Facility (GEF) is also a key vehicle to help meet common environmental challenges in the areas of biodiversity, climate change, international waters, and ozone depletion. To support that work, Canada has pledged to contribute \$111.1 million to the 1994/1996 replenishment of the GEF.

Further debt relief is essential if severely indebted countries are to effectively mobilize resources for sustainable development. In the G-7 and the Paris Club (the group of major international lender governments), Canada has been a strong proponent of debt relief and has been encouraging other creditor countries to consider mechanisms to ease the debt burden of developing countries which severely hampers their efforts to develop in a sustainable manner. It is this sort of cooperation between developed and developing countries that will ensure that the resources needed for the implementation of Agenda 21 are available and can be mobilized effectively in meeting our common challenges.

Challenges and Next Steps

One of the main obstacles to implementing Agenda 21 remains the mobilization of adequate financial resources. Recognizing the serious constraints on the availability of ODA, it is increasingly important that developed and developing countries work together to identify and pursue alternatives to traditional financial mechanisms. To this end, Canada will CONTINUE to participate actively in the Commission on Sustainable Development (CSD) finance inter-sessional meeting, the most appropriate and productive forum for this type of discussion.

PART II, SECTION III

ENVIRONMENTALLY SOUND

TECHNOLOGY

Introduction

A fundamental tenet of Agenda 21 is that significant advances in the development and transfer of environmentally sound technologies are essential in achieving sustainable development. During the 1992/1995 period, Canada made solid progress in transferring technology both within the country and abroad. Key elements in this progress include the development of public policies that encourage the use and transfer of clean technologies, a strong Canadian environment industry, private sector initiatives as well as work between governments, the private sector, nongovernmental organizations, and other domestic and international partners.

Public Policies and Initiatives

Canadian governments have established policies and initiatives that facilitate the use and transfer of environmentally sound technologies. The federal policy on pollution prevention, for example, encourages industry to focus on innovative "clean" technologies and practices and to move away from "end-of-pipe" solutions. The use of various environmental management tools such as regulations, voluntary actions, and economic instruments also help shape the technology transfer and advancement process. Governmental "green industry" initiatives, such as the Canadian government's Canadian Environmental Industry Strategy (CEIS), foster Canadian technologies and the environment industry.

The Canadian Environment Industry--An Enabling Industry

Canada has developed a strong environment industry sector that is expected to grow annually by 10 percent over the next five years. Sales are expected to reach \$22 billion by the year 2000. The sector is now represented by the Canadian Environment Industry Association; an umbrella organization for nine autonomous provincial / territorial associations. The industry meets emerging technological needs in many other industrial sectors in Canada as well as abroad. Environmental technologies, processes, products, and services developed domestically play an instrumental role in developing Canada's resources in an environmentally sustainable manner. For example, new technologies will enable some pulp and paper mills to meet more stringent environmental regulations and the rising environmental expectations of consumers.

Private Sector Initiatives

Some private sector initiatives are the result of the development of new technology. For example, a company in British Columbia, in partnership with the federal and British Columbia governments and B.C. Transit, is developing a vehicle propulsion system using a hydrogen fuel cell to produce electricity. Commercial development of this innovative technology is anticipated for buses and cars within a few years.

A Vancouver company is developing a vehicle propulsion system using electricity produced by a hydrogen fuel cell. Unlike conventional vehicles, which emit hydrocarbons, nitrogen oxides, carbon dioxide, particulates, and other pollutants, the chemical reaction between hydrogen and oxygen inside the cell produces only water. The state-of-the-art technology will help reduce local smog problems and global greenhouse gas emissions. The joint government industry effort to develop and commercialize the zero- emission technology is a success. Application of the hydrogen fuel cell technology to a demonstration fleet of city buses is planned.

Other private sector initiatives are spurred by finding new processes that reduce costs and environmental impacts. Chemical suppliers at one vehicle assembly plant in Ontario are now paid on the basis of the number of vehicles produced at a set cost per unit. Previously, they were paid for the total amount of chemicals used. Chemical suppliers have responded with new or adapted technologies that minimize chemical use significantly. Canada has a large number of companies that provide environmental management expertise. In Quebec, one company does so from an Aboriginal perspective, capitalizing on traditional ecological knowledge and advanced technologies.

Technology Transfer--Domestic and International

Partnership

A major focus since UNCED has been to increase access to environmental technologies and to forge new partnerships for technology transfer and commercialization. In 1994, the federal government, a number of provincial / territorial governments, private companies, and environment industry associations joined forces. They have established three Canadian Environmental Technology Advancement Centres (CETACs) across the country. CETACs provide support to small and medium-sized environmental companies. They focus on international technologies information, technology assessment assistance, regulatory and financial advice, export support, business counseling, and other services on technology transfer and commercialization. Government science and technology institutes undertake research and development on environmental technologies. The national institutes have performed much of their recent work in alliance with the private sector, academics, and other governments, including foreign ones.

Canada is one of the leaders in the advancement of atmospheric science to help the world understand the thinning of the ozone layer. The signing of the Montreal

Protocol to ban ozone-depleting substances is a landmark in Canada's effort to gain international agreement to rectify this global problem. Because of the Montreal Protocol, the Canadian environment industry has successfully developed and marketed several leading-edge innovative technologies either to capture and recycle CFCs already in use or to produce CFC-free materials as substitutes. Green technologies and know-how bridge the gap between the understanding of a global problem and the action required to achieve results.

Internationally, Canada has been active in technology transfer with other countries, such as China, Mexico, and Chile. Measures have included environmental trade missions, bilateral memoranda of understanding, and other institutional links and initiatives. Canada has transferred expertise on environmental regulations, policies, and technical programs to several developing countries under the International Environmental Management Initiative, an integral component of the CEIS. Similarly, **IDRC has an ongoing Sustainable Technologies Program based in Asia that facilitates** the development, diffusion, and adoption of cleaner production technologies. CIDA oversees many of Canada's international technology programs.

Information Products and Networks

Canada has developed processes to transfer technology as well as for access to technological information. Computer-based networks have been established to aid information exchange.

Examples of information products and networks include the following:

ENV-I-NET, an on-line bulletin board service that includes information on environmental technologies and priorities in developing countries to be financed by multilateral international financial organizations; and Canadian Environmental Solutions, a vendor-oriented multimedia tool that gives Canadian companies an opportunity to use their technologies, products, and services to the benefit of developing countries and countries in transition.

Challenges and Next Steps

Canada has made significant progress toward promoting, facilitating, and financing access to and the transfer of environmentally sound technologies while seeking to preserve intellectual property rights and maintaining fair trading practices. Looking ahead, the creativity, commitment, and partnership that led to the development of this infrastructure must be maintained and enhanced. One urgent requirement is to accelerate the transfer of cost-effective and innovative environmental technologies to developing countries and countries with economies in transition. Private enterprises and institutions, both in Canada and in recipient countries, will play a central role in successfully meeting this requirement.

PART II, SECTION IV

COMBATING POVERTY

Introduction

Chapter 3 of Agenda 21 recognizes the links between poverty and the environment. It notes that natural resources are often the only resources available to the world's poor and that the poor must have alternative means of achieving a sustainable livelihood to avoid destructive dependence on primary resources. It calls on countries to enable the poor to achieve sustainable livelihoods. A large number of measures are suggested in Chapter 3 to achieve this goal. Canada's response to the chapter is both a domestic and international one.

Addressing Poverty in Canada

While Canada is a developed country, there has been an increase in the number of Canadians living in poverty in recent years. "Living in poverty" is usually defined as living below a low income cut-off figure that is based on the percentage of income spent on basic necessities, family size, and location. Using that measure, the percentage of Canada's population living in poverty increased from 15.2 percent in 1990 to 17.9 percent in 1993.

Various initiatives have been put in place to combat poverty in Canada. Among the most significant in terms of resource transfers are the following: the federal government's Unemployment Insurance Program, which provides income support to people who lose their jobs; a range of social services and income, health, and housing programs for persons in need provided by provincial, territorial, and municipal governments; much of which is funded by the federal government under the Canada Assistance Plan; and income support provided to older people through the Old Age Security Program and the Guaranteed Income Supplement.

Federal social programs and those in many provinces are being reformed to focus more emphasis on improving the ability of Canadians to obtain and keep jobs through better employment skills. A number of ways of consulting with individual Canadians,

communities, and nongovernmental organizations at the national and community level on poverty issues have been established. Examples range from formal Parliamentary hearings to informal community efforts.

Addressing Poverty Internationally

Canada makes an important contribution to enabling people living in poverty around the world to achieve sustainable livelihoods through ODA. Canada's bilateral ODA program, managed by CIDA, CONTINUEs to have worldwide reach.

CIDA works with a wide range of partners. Through its Partnership Branch, a variety of approaches have been used, including the provision of funding to Canadian nongovernmental organizations working with developing country partners at the grassroots level. These projects are generally designed and implemented in close association with local communities.

Poverty-reduction projects are important parts of Canada's bilateral programs in Africa, Asia, and Latin America. The percentage of these projects rose from 7.4 percent in 1983 to 34.4 percent in 1993.

Projects aimed at reducing poverty for a clearly identified target group and with a good delivery mechanism is an approach favoured by CIDA. Using this approach, some 13.6 percent of total bilateral projects were targeted to the poor in the 1987/1992 period.

A good example is the Rural Maintenance Project (RMP) in Bangladesh. It responds to two major problems: lack of routine maintenance of earthen farm-to-market roads and the Bangladesh government's inability to provide assistance to destitute women who fall outside existing relief and employment programs.

From 1989 to 1995, the RMP employed 60,000 destitute women to maintain 60,000 miles (96,540km) of roads in return for wages and assistance designed to reduce their destitution gradually. The RMP's success stems from three main factors:

- it directly assists the most disadvantaged; it meets the women's immediate needs for steady employment and an adequate income; it also has a longer-term impact by introducing them to a non-traditional occupation, enhancing their role in the family and improving their community status; and it provides a practical solution to the need for better roads.

Canada's strategy in multilateral agencies has been to push for integration of poverty into mainstream programming, with a greater focus on participatory development and specific targeting. Canada has advocated the use of policy dialogue and reforms for poverty reduction. It has worked with other countries to put poverty on the World Bank and United

Nations agendas (e.g., Human Development Report, UN World Summit for Social Development).

In reviewing its experience in poverty-reduction programming, CIDA has identified the need for a CIDA-wide strategy on poverty reduction that sets out clear objectives and develops programming consistent with Canadian capacity.

Challenges and Next Steps

While Canadian governments look for new and more-effective tools to respond to domestic poverty issues within the constraints imposed by reduced resources, poverty in developing countries is also becoming a clearer priority for action.

In June 1995, CIDA announced its Poverty Reduction Policy, which commits the agency to a number of specific activities designed to improve Canada's response to poverty in the developing world. For example, poverty profiles and reduction strategies will be integrated into the country and regional policy frameworks that guide CIDA's activities in specific countries and regions. A key objective of this activity is to ensure that CIDA's strategies are complementary to those of recipient countries.

More generally, the new policy commits CIDA to ensuring that its programming is consistent with the Canadian foreign policy goal of poverty reduction. CIDA will be concentrating its programming on sectors where it has a comparative advantage, including both poverty-focused projects and policy-level interventions. In the implementation of the new policy, the main challenge will be to work effectively with developing countries to support sustainable solutions to the problem of poverty within the limited resources now available for development assistance programming.

PART II, SECTION V

CHANGING CONSUMPTION PATTERNS

Introduction

In Chapter 4 of Agenda 21, governments pledge to improve their understanding of the role of consumption in sustainable development and how consumption patterns could be changed. They also undertake to develop national policies and strategies that encourage changes in consumption patterns.

This section describes only a small portion of the actions and initiatives that Canadian individuals, organizations, and governments have undertaken to deal with consumption issues. Other examples relevant to the objectives of this chapter are mentioned in other sections of this report, particularly the section devoted to environmentally sound technology. A number of other examples were mentioned in the consumption section of the Report of Canada to the United Nations Commission on Sustainable Development that was tabled in 1994.

Improving Understanding of Production and Consumption

Canadians are now taking a variety of steps to improve their understanding of the role and impact of consumption on sustainable development. Many of these are focused on establishing databases, indicators, and approaches to national accounts that track various aspects of production and consumption.

For example, the National Energy Use Database compiles data on energy consumption in different sectors, enabling improvements in energy efficiency to be evaluated. The National Packaging Monitoring System, developed under the Canadian Council of Ministers of the Environment's National Packaging Protocol, tracks progress toward achieving our national goals of reducing packaging waste disposal by 50 percent by the year 2000. As well, the federal government, the Canadian Standards Association, and a number of Canadian raw material producers are developing a Canadian Raw Material Database. This database will provide industry-averaged data on energy and raw material inputs and environmental releases during raw material acquisition and manufacturing.

In Chapter 4 of Agenda 21, governments pledge to "consider how economies can grow and prosper while reducing the use of energy and materials and the production of harmful materials". Some initiatives described in the section of this report on environmentally sound technology indicate how new technologies and processes can contribute to achieving this goal.

Statistics Canada is developing a set of natural resource and environmental accounts that will serve as satellite accounts to the System of National Accounts. They will record natural resource stock, natural resource use, and waste output in Canada and current and capital spending intended to conserve or protect natural resources and the environment.

National Policies and Strategies to Encourage Changes in Consumption

Chapter 4 covers such issues as greater efficiency in the use of energy and resources, minimized generation of wastes, assistance to individuals in environmentally sound purchasing decisions, increased environmental content in government purchasing, and moves toward environmentally sound pricing.

Examples of all these activities exist in Canada, however, more progress has been achieved in changing institutional and industrial consumption than in changing the habits of individuals and households.

Canadians are finding ways to minimize the generation of both bulk wastes and specific pollutants. The federal government's pollution prevention strategy promotes the adoption of processes, practices, materials, and products that avoid or minimize the creation of pollutants and waste. The federal and provincial governments are continuing work toward the goal of reducing solid and packaging waste sent to disposal by 50 percent of 1988 levels by the year 2000. The latest figures from the National Solid Waste Inventory indicated a 13-percent reduction in municipal solid wastes from 1992. In Quebec, mandatory deposit for single-use beer and soft-drink bottles has made it possible to recover nearly 73 percent of containers on the market. That amounted to 31,100 tonnes or 741 million containers in 1994 (most recent data available).

Many measures have been aimed at industry and government because of their high consumption of energy, raw materials, and other products. Making production more efficient is a means of making overall consumption more sustainable. The Burnside Industrial Park in Nova Scotia is an illustration of the efforts being made to improve material-use efficiency. At Burnside, small businesses are using wastes generated by other companies inside the park. These wastes would otherwise have gone to landfill. Most provincial governments and the federal government have also instituted environmentally friendly procurement policies.

The federal and provincial governments have signed pollution prevention agreements with the motor vehicle manufacturing, dry-cleaning, metal finishing, and printing and graphics sectors. These commit companies to verifiable reductions in the generation, use, and release of specific substances. Pollution prevention efforts such as these also improve the efficiency of Canada's consumption of materials.

In 1992, The Canadian Association of University Business Officers gave a Quality and Productivity Award to Dalhousie University in Halifax, Nova Scotia.

Dalhousie University had sponsored a project that integrated waste reduction/recycling initiatives on its campus with a new credit course on waste management and the environment. The environmental teaching module and demonstration projects developed during the project were designed to be transferable to other institutions.

Canadian governments also CONTINUE to assist individuals to make environmentally sound purchasing decisions. Terra-Choice Environmental Services is continuing the federal government's Environmental Choice Program, evaluating products and providing information to Canadian consumers through its Eco Logo label. In addition, under the Energy Efficiency Act, the federal government requires energy efficiency information labels on some energy-using products. Initiatives in the difficult area of environmentally sound pricing are under way. For example, some municipalities encourage waste reduction by charging households for waste removal on a volume basis. Vernon, British Columbia, has introduced a water rate structure based on metered consumption that has resulted in a 28-percent reduction in household water use. In Halifax, Nova Scotia, household water bills now compare water use with the same period of the previous year.

Governments have imposed levies on the purchase prices of products such as paint, and tires, batteries, and air conditioners for motor vehicles.

Challenges and Next Steps

While major economic producers in Canada are making substantial progress in improving their consumption patterns, sustainability will not be achieved without more progress in changing individual consumption patterns.

Perhaps the most significant challenge will be to make personal transportation more sustainable. Although urban transit use is increasing (total kilometres traveled), it represents less than 5 percent of motorized travel in urban areas, while urban automobile use CONTINUES to grow. A 1992 finding indicated that 82 of every 100 kilometres traveled by individual Canadians is in an automobile (see figure). Automobile fuel efficiency is improving but too slowly to prevent Canada's total energy and fossil fuel consumption from increasing because of increases in automobile travel.

Indicator: Fossil fuel use by automobiles

Sources: Royal Commission on National Passenger Transportation, Canadian Urban Transit Association, Environment Canada, and Statistics Canada.

Indicator prepared by: State of the Environment Directorate, Environment Canada.

Between 1984 and 1992, fossil fuel use leveled off as the improvements in fuel efficiency slowed and were offset by an increase in automobile travel.

Canada's vast geography and severe climate, combined with its market freedoms, make it difficult for citizens to change personal consumption habits quickly. This makes the effective promotion of a conservation ethic among consumers a real challenge.

PART II, SECTION VI

DEMOGRAPHIC DYNAMICS AND SUSTAINABILITY

Introduction

Chapter 5 of Agenda 21 emphasizes the relationship between population issues and sustainable development. The environmental impacts of demographic change are not a significant domestic issue in Canada given its relatively low birth rate and population density.

Canada's principal demographic policy focus has been its support for population and reproductive health efforts in developing countries. Canada recognizes, however, that effective social and economic development policies are the key to achieving demographic targets. Canada's ODA programming has assisted national governments, international agencies, nongovernmental organizations, and community organizations to address demographic issues for many years.

This section describes developments in Canada's demographic policies and programs since UNCED.

Canada's Evolving International Population Policies

Canadian foreign policy recognizes the importance of population issues. Demographic issues can have an impact on the achievement of sustainable development goals and global security. These and other factors have all led to population issues attaining a higher public profile in recent years. The significance of population issues was reflected in Canada's 1995 foreign policy statement, which identified family planning as part of Canada's commitment to make basic human needs a core ODA priority. Demographic issues also play a part in other ODA priorities, such as women in development and the environment. Population issues were a significant part of the agenda of the International Conference on Population and Development (ICPD) in Cairo and the Fourth World Conference on Women in Beijing. Canada participated actively in both conferences in an effort to ensure effective outcomes.

Perspectives on population issues have been changing in recent years. In 1994, CIDA developed a Statement on Population and Sustainable Development that set out four objectives:

to promote a better understanding of the impact of population dynamics on progress toward sustainable development;

to support the development of policies and strategies aimed at addressing the pressure of population growth on sustainable development;

to support the provision of comprehensive client-oriented reproductive health care for women, men, and adolescents centred on high quality family planning services that include information, education, and communication components; and to support development programs that emphasize health, education, and income generation for women, in order to foster population levels consistent with sustainable development.

Delivering Effective Population Programming

Canada recognizes that some programs that affect demographic issues do so only indirectly. For example, economic development has been linked to lower fertility levels across a society.

Canada's direct support for population programming has been approximately \$30 million annually during the last two years. Most of this support went to three complementary programs: the United Nations Fund for Population Activities, the Fourth Bangladesh Population Project, and the International Planned Parenthood Federation.

Challenges and Next Steps

Population issues are sensitive. They are at the very heart of human relationships. Canada has been supportive of the steady progress that has been made since UNCED through the Program of Action of the ICPD and, most recently, at the Beijing conference. Canada welcomes the expansion of population issues from the traditional focus on family planning to broader issues of women's health, reproductive health, and the social, educational, and economic factors that influence demographic change.

In its ODA programming, Canada will CONTINUE to pursue approaches that are driven by the needs of individuals and that recognize the full range of considerations affecting population levels. To emphasize that support, Canada has committed itself to maintaining and, to the extent possible, increasing its support for population activities. Moreover, this commitment has been made at a time when ODA programming is facing financial constraints.

PART II, SECTION VII

PROMOTING EDUCATION, PUBLIC

AWARENESS, AND TRAINING

Introduction

Chapter 36 of Agenda 21 emphasizes the importance of building education, public awareness, and training for sustainable development. Efforts to realize these objectives in Canada are building on more than twenty years of domestic experience.

Education

Because elementary and secondary school education falls under the jurisdiction of the provinces in Canada, no national sustainability education strategy exists. Nonetheless, educators, education organizations, students, and interested groups have taken a wide variety of actions to build networks and to create and provide environmental education materials. Some of these actions are described below.

FEESA An Environmental Education Society in Alberta has involved business, government, and environmental community groups in a consensus-based approach to education supporting sustainable development for ten years.

In October 1992, only four months after UNCED, the World Congress on Education and Communication on Environment and Development (ECO-ED), took place in Toronto. One of its key objectives was to increase the potential of environmental education to meet the challenge of UNCED by forming new partnerships and exchanging information and perspectives. ECO-ED brought together more than 260 key presenters and 4500 participants from eighty-four countries.

In 1992, thirteen national education associations agreed to form a Coalition of Education Leaders to promote environmental citizenship in their respective communities.

In 1993, the Canadian Network for Environmental Education and Communication (EECOM) was formed to help educators from the formal and the non-formal sectors. It helps them network and better coordinate environmental education activities. EECOM also facilitates the identification and sharing of resources.

To ensure that all jurisdictions work together to promote environmental education in Canada, the Canadian Council of Ministers of the Environment established an Environmental Education Task Group in 1993 that also works in collaboration with the Council of Ministers of Education, Canada.

At the post-secondary level, the government of New Brunswick has established two Chairs in Sustainable Development to study and promote this concept. One is at the French language Université de Moncton; the other at the English language University of New Brunswick. These have received funding for the first five years from both the government and industry.

Many environmental nongovernmental organizations, industry associations, and governments have developed programs related to sustainable development education.

For example, the Learning for a Sustainable Future program promotes sustainability education in the formal school system nationwide. The Evergreen Foundation supports the "naturalization" of school grounds, and the Harmony Foundation conducts summer workshops for educators on environmental values.

The Canadian Forestry Association has conducted national workshops for teachers on sustainable forests and compiled an exhaustive catalogue of forest education materials.

The Learning Partnership, a non-profit organization of business people, educators, and community leaders, is helping students to understand the importance of education in relation to the workplace through its "Take our kids to work" initiative. On 8 November 1995, Grade 9 students (around fourteen years of age) throughout Ontario were invited to go to work for the day with a parent, a guardian, relative, family friend, or volunteer host. The initiative is province-wide and will likely be undertaken in other parts of Canada.

Public Awareness

In schools and the community, young people are often central to actions in support of sustainable development. Students have set up environmental groups and organized conferences to educate other students, their institutions, and the community.

In Quebec, more than 200 schools have earned the status of "école verte Brundtland" for their success in meeting certain conditions regarding environmental protection and the promotion of sustainable development.

In 1994, young people and partners from governments, nongovernmental organizations, education associations, and individuals helped develop the Canadian Youth Action Guide for Agenda 21. The guide will be distributed to all schools and select community groups in printed form. It will also be available in electronic form on SchoolNet, a government-sponsored network available through the Internet. Young people in Canada's 16,000 schools will have an opportunity to exchange information on sustainable development projects undertaken by their own communities and to find ways to develop a personal Agenda 21.

Girl Guides of Canada/Guides du Canada, in partnership with Environment Canada, has implemented the Water for Tomorrow program for more than 250,000 members and leaders. The program encourages Guides to sustain water resources through wise and efficient water use in their homes, schools, and communities. The World Council of Girl Guides has recognized the success of this program. Various components have been adopted in other countries.

As part of the grassroots effort to increase awareness regarding environmental education, the Canadian magazine Green Teacher was started about five years ago. Current readership comprises 8,000 Canadian educators and 3,000 Americans. Articles relate the efforts of environmental educators and development educators side-by-side to help readers readily see the connections between these two themes. Two years ago, an entire issue was dedicated to the concept of sustainability.

The National Round Table on the Environment and the Economy has produced a guide for educators and facilitators to the round table process and sustainable development. This tool has been the basis of workshops with more than 2000 high school students in Canada.

The federal government recently announced a new program, Action 21, to help Canadians take action in support of a healthy environment. Action 21 has two components: a community funding program for non-government, non-profit organizations, and a public awareness initiative to encourage Canadians to make choices in favour of the environment in their daily lives.

Many organizations across Canada are promoting environmental citizenship at the community level. One example is the Enviro-towns program of the Clean Nova Scotia Foundation.

Training

Occupational training related to environmental issues is growing. The Canadian Labour Congress has produced a program on workers' environmental rights that stresses the creation of joint union-management environment committees for extending the mandate of existing health and safety committees. It also promotes introducing a right to environmental information from employers and a right to refuse to pollute as an extension of the right to refuse unsafe or unhealthy work. Some corporations have engaged training specialists to empower employees to change their environmental behaviour in the workplace.

Universities are training tomorrow's environmental leaders by offering programs in environmental science, environmental management, and other topics related to sustainable use of resources.

The Canadian Council for Human Resources in the Environment Industry is an industry-initiated body. Its mission is to ensure an adequate supply of people with the appropriate skills and knowledge to meet the environmental needs of the public and private sectors.

Challenges and Next Steps

In spite of considerable progress, there are obstacles that challenge the promotion of environmental education, public awareness, and training in Canada. The lack of a consistent environmental education strategy is compounded by an absence of formal training available for environmental and sustainability educators. Environmental education and public awareness programs are affected by the same financial restraints as many other areas. In the private sector, training programs are slow in coming. It is increasingly important that individuals and organizations work together in partnerships to expand access to and understanding of sustainable development information. It will be essential to reach out to groups that may have been excluded.

DEVELOPMENT INTO DECISION

MAKING

Introduction

Chapter 8 of Agenda 21 focuses on the need to integrate better environment and development considerations at the policy, planning, and management levels. This has been a growing priority in Canada for years.

Canadian governments recognize that an integrated approach to planning and decision making is necessary to achieve sustainable development. They understand this approach should reflect the visions and expectations of Canadians. This approach requires that decision makers seek out more opportunities to work with others in partnership and use the full range of suitable tools to accomplish the objectives of sustainable development. In Canada, integrated decision-making processes have evolved considerably over the last few years. This section highlights the key steps taken toward integrated decision making by governments and the private sector in Canada.

Other sections of this report, particularly the section on strengthening the role of major groups, demonstrate that public involvement and consultation have become essential to this process. Sound science is another important element of Canada's approach to improved decision making related to the environment. The science for sustainable development section in last year's CSD report summarizes many of the major activities now under way.

Improved Decision Making at All Levels

Federal Government

In 1994, the federal government emphasized the need for an integrated approach to social, economic, environmental, and foreign policy in its Speech from the Throne. A series of recent legislative and policy initiatives have given practical meaning to this commitment.

The government incorporated sustainable development into the new mandates of its ministers of Industry, Agriculture and Agri-Food, and Natural Resources in 1994. Sustainable development has also been built into key statutes such as the Canadian Environmental Assessment Act, the North American Free Trade Agreement Implementation Act, and the Canadian Environmental Protection Act.

The 1994 federal Task Force on Economic Instruments and Disincentives to Sound Environmental Practices was the first well-defined exercise to incorporate environmental

considerations into a budget-making process in Canada. The 1995 federal budget addressed a number of the task force's short-term recommendations. Longer term proposals are now under study.

In 1995, the Canadian Environmental Assessment Act came into force to integrate environmental considerations into all federal project planning. The Act requires that an environmental assessment be completed prior to substantive action on any federal project. The government also introduced amendments to the Auditor General Act to establish a Commissioner of the Environment and Sustainable Development. Within two years, all federal ministers will be required to present sustainable development strategies for their departments to Parliament. To assist departments in the preparation of these strategies, the federal government has released "A Guide to Green Government". It includes objectives, as well as policy and management tools, to aid the transition to sustainable development. It also notes that departmental sustainable development strategies must be comprehensive, results-oriented, and prepared in consultation with partners. Preparation and implementation of these departmental strategies will require innovation both in policy and management terms, and a commitment to continuous improvement. The Commissioner will present an annual report to Parliament on how well departments are doing in achieving their sustainable development goals.

Provincial and Territorial Governments

Nearly all provincial and territorial governments have, or are in the process of developing, sustainable development or conservation strategies. Each pursues its own approach to environment economy integration.

Over the last two decades, all provinces and one territory have also established environmental assessment legislation. Most require public involvement and provide for an independent body to examine complex or high profile environmental assessments. Jurisdictions often provide for mediation and conflict resolution throughout the assessment process.

Provincial and territorial governments have also undertaken a number of other initiatives toward integrated decision making. Examples include the following:

The Commission on Resources and Environment in British Columbia has been profiled in previous reports. It uses regional land use plans and public participation in decision making to resolve conflicts and to advance a comprehensive, sustainable approach to natural resources development in the province.

In 1992, Alberta consolidated eight environment-related statutes into the Alberta Environmental Protection and Enhancement Act. This provides an integrated approach to the protection of air, water, and land.

Ontario's Environmental Bill of Rights came into law in February 1994. It incorporates features such as a requirement that Statements of Environmental Values be prepared by fourteen provincial ministries; the creation of a public electronic registry of proposals for environmentally significant policies and legislation; enhanced access to courts; and the appointment of an Environmental Commissioner, reporting to the Legislature, to investigate alleged contraventions of environmental laws.

Round tables have become a way for all sectors of society and communities to address sustainable development issues. The Manitoba Department of Rural Development has encouraged the use of this process and sixty-two community round tables now involve half of the province's 202 municipalities.

Governments in Canada often work in partnership in developing national responses to key domestic and international issues. Governments are also working to harmonize policy and regulatory frameworks to improve the effectiveness and efficiency of environmental management across Canada. To this end, a number of federal/provincial cooperative arrangements have been developed.

Private Sector

Many companies are designing Environmental Management Systems (EMS) to integrate environmental considerations into their activities, processes, products, and services. In 1994, KPMG Management Consultants carried out a survey of Canadian companies, hospitals, municipalities, universities, and school boards. Some 69 percent reported EMS's are in place. Under the aegis of the Canadian Standards Association, there is also an ongoing effort to refine existing EMS efforts by organizations and firms across Canada. Business associations are promoting sustainable development through improved decision-making processes. A number of organizations, such as the Business Council on National Issues and the Canadian Institute of Chartered Accountants, have developed principles that can be used to develop environmental codes of practice, EMS's, and environmental audits.

The Canadian Chemical Producers Association, the Mining Association of Canada, the Canadian Association of Petroleum Producers, and the Aerospace Industries Association of Canada have adopted environmental policies, principles, and, in some cases, guidelines to assist member companies to integrate environmental considerations into their activities.

Challenges and Next Steps

Governments, business, and interest groups have undertaken a range of initiatives over the past five years to integrate social, environmental, and economic considerations into planning and decision making. Many of these initiatives are new and will require fine-tuning as they are implemented.

Although considerable effort has been made by all sectors of Canadian society to integrate the environment into decision making, it is sometimes difficult to ascertain the extent of real progress and the effectiveness of activities toward sustainable development. Concrete goals and targets, as well as indicators, are important elements of improved decision making. They can stimulate progress by providing an accountability framework and a clear context for planning in both the public and private sectors.

PART II, SECTION IX

INTEGRATING ENVIRONMENT AND DEVELOPMENT IN INTERNATIONAL LEGAL INSTRUMENTS AND MECHANISMS

Introduction

Chapter 39 of Agenda 21 recognizes the importance of international law in achieving the goals of UNCED. It stresses the need to integrate development and environmental concerns in existing and future agreements, especially those with an economic focus. It also emphasizes the need to assist developing countries to participate in treaty making and to improve their capacity to legislate on these issues. Another important concern is the development of means to assist with the effective implementation of international agreements and mechanisms to facilitate dispute settlement.

The Canadian Experience

Since UNCED, Canada has taken part in a series of global negotiations that have devoted particular attention to the needs and capacities of developing countries. For example, Canada has helped fund the process and the involvement of developing States in negotiating and implementing the Desertification Convention.

Canada also worked with developing countries during the United Nations Conference on Straddling Fish Stocks and Highly Migratory Fish Stocks. This conference is discussed in greater detail in the section of this report on protection of the oceans and other seas. During that process, Canada worked closely with many countries, particularly developing States, that shared similar views on the conservation and use of these fish stocks.

The Protocol amending the Canada/United States Migratory Birds Convention is an example of significant change to a long-standing agreement with environmental objectives. The convention, dating from 1916, did not permit accommodation of the traditional harvesting practices and evolving treaty rights of Aboriginal people in Canada. This limitation was one of the main reasons why the Protocol was negotiated. The participation of Aboriginal representatives on the Canadian delegation contributed to the successful conclusion of these negotiations.

The Arctic Environmental Protection Strategy is another example of an integrated approach to international environmental and economic issues. Circumpolar countries have agreed to work together for the protection, enhancement, and restoration of the Arctic environment while seeking to ensure the sustainable utilization of its natural resources by Arctic people. A significant aspect of the Strategy is recognition of the cultural needs, values, and practices of indigenous people.

The North American Agreement on Environmental Cooperation (NAAEC) is a trilateral initiative that has integrated development and environment concerns. This agreement between Canada, the United States and Mexico came into force on 1 January 1994 as a companion agreement to the North American Free Trade Agreement (NAFTA). It was discussed in the previous Canadian reports to the CSD.

The NAAEC calls for cooperation between the partner States. It also requires cooperation within States. The Canadian Intergovernmental Agreement for the implementation of the NAAEC in Canada, to which Alberta is the first provincial signatory, recognizes that the federal, provincial,

and territorial governments have distinct and complementary roles to play in achieving the goals of the NAAEC and the environmental goals of NAFTA. Another significant step forward is the NAAEC mechanism allowing individuals and organizations to make submissions alleging that a party has failed to enforce its environmental laws effectively.

Canada has a strong interest in reconciling trade and environment concerns in international legal instruments. It is participating actively in processes such as the Organization for Economic Co-operation and Development Joint Session of Trade and Environment Experts and the World Trade Organization Committee on Trade and Environment.

Challenges and Next Steps

The distribution of responsibility for sustainable development issues within Canada is complex.

This is a source of constant challenge when Canada prepares for and participates in the negotiation of international legal instruments and in the subsequent implementation of those instruments.

While the federal government conducts international treaty negotiations on behalf of Canada, responsibility for environment and sustainable development issues falls within the legislative jurisdiction of both the federal and provincial levels of government. This shared jurisdiction often requires federal and provincial governments to cooperate in order to fully implement Canada's international obligations.

Moreover, various departments within each order of government may be involved in a negotiation or implementation process. Each department can have different objectives and perspectives. The general public, nongovernmental organizations, and business also bring their interests to the process. Organizing effective consultations and cooperation among those involved, as well as coordinating their positions, is a challenging task.

Legal instruments reflect the policy decisions underlying them. The integration of environment and development in international legal instruments must therefore begin at the policy level. Legal mechanisms can play a supporting role by developing international rules to reflect that integration and the means to encourage compliance with those rules.

PART III, SECTION I

PROTECTION OF THE ATMOSPHERE

Introduction

Chapter 9 of Agenda 21 identifies four broad program areas to protect atmospheric resources. The Canadian response is built on partnerships between governments, the private sector, communities, universities, and institutions.

Improving the Scientific Basis for Decision Making Scientific research is essential for good decision making on atmospheric change issues. Examples of Canada's scientific work were discussed in detail in last year's Report of Canada to the United Nations Commission on Sustainable Development (CSD), particularly in the science for sustainable development and the conservation of biological diversity sections.

Internationally, Canada is active in the Intergovernmental Panel on Climate Change, hosting the Working Group III Technical Support Unit. The Canadian Climate Program Board oversees Canadian participation in the World Climate Programme, including the Global Climate Observing System. Canada as a member of the World Meteorological Organization is working very closely with China on technology transfer and training for their Global Atmospheric Watch Site on the Tibetan Plateau. Through the Canada/China Memorandum of Understanding on Cooperative Meteorological Matters, work on climate change and agricultural meteorology, including experiments in the South China Sea, is planned for the next two years.

Seven ecosystem management programs are under way (e.g., the Mackenzie Basin Impact Study and the Great Lakes St. Lawrence Basin Project) to provide insights into the adaptive capabilities of various ecosystems to atmospheric change and the impacts of these changes on a wide range of economic activities.

The Canadian Global Change Program of the Royal Society of Canada links international activities such as the International Geosphere /Biosphere Programme and the Human Dimensions of Global Change. Canada also contributes to the Inter-American Institute for Global Change Research, a hemispheric network of research centres. Canada is assessing the progress made under its NO_x /VOC Management Plan and on the acid deposition objectives under the U.S.A /Canada Air Quality Accord in order to examine the effectiveness of the respective control objectives. National urban air quality and wet deposition networks are augmented by provincial, municipal, and industry monitoring.

Canada intends to expand its national database to track changes to ambient air quality and atmospheric deposition more comprehensively and to estimate contributions from trans-boundary (inter-provincial and international) sources.

Canada is expanding its setting of critical loads (level of deposition causing insignificant environmental harm). These limits are established through broad consultation between federal and provincial governments, industry representatives, and public interest groups. Objectives for atmospheric pollutants are being expanded to include hazardous air pollutants. The research examines the appropriateness of setting objectives for some pollutants that have direct negative impacts on human health.

Toward Sustainable Energy Development

Canada supports environmentally safe, cost-effective energy systems. Promotion of energy efficiency and renewable energy sources minimizes the adverse effects of energy consumption and may promote opportunities for new businesses.

Canada's National Action Program on Climate Change (NAPCC) sets the course for meeting Canada's commitments under the Framework Convention on Climate Change in the areas of climate change mitigation, adaptation, research and education, and international cooperation. All provincial and territorial governments have now committed to the NAPCC and will be reporting on their initiatives to reduce the rate of increase in the emissions of greenhouse gases. Most of this activity relies on more efficient use of energy resources and substitution with renewable sources where feasible. Canada intends to stabilize its emissions of greenhouse gases at 1990 levels by the year 2000 and to develop sustainable options to achieve further progress in the reduction of emissions by 2005. Several jurisdictions are promoting efficiency based on the opportunities to reduce other environmental impacts, including deterioration of ambient air quality and acid deposition.

***CAVING-IN TO INDUSTRY** (NAPCC) DOCUMENT OF COMPROMISE AND INACTION
A MAJOR STEP NO WHERE

JOAN RUSSOW

CANADA SIGNED (JUNE 1992) AND RATIFIED (DECEMBER, 1993) THE UN
FRAMEWORK CONVENTION ON CLIMATE CHANGE (UNFCCC)

AS WE NEAR THE FIFTH ANNIVERSARY OF THE UNFCCC IN RIO +5 CONFERENCE
IN NEW YORK CANADA HAS STILL DEMONSTRATED ITS LACK OF RESOLVE TO
SERIOUSLY ADDRESS GLOBAL PROBLEMS. IT HAS BEEN OVER FIVE YEARS
SINCE CANADA SIGNED THE CLIMATE CHANGE CONVENTION (JUNE 1992) AT
THE EARTH SUMMIT; AND FOUR YEARS SINCE CANADA RATIFIED IN 1993.

ALTHOUGH CANADA PRESUMABLY IS NOT BOUND BY A CONVENTION UNTIL THE
CONVENTION COMES INTO FORCE. THE CONVENTION CAME INTO FORCE ONLY
IN MARCH, 1994, CANADA HAS BEEN, IN FACT, BOUND SINCE THE SIGNING OF
THE CONVENTION IN JUNE 1992, TO NOT DO ANYTHING IN THE INTERIM
BETWEEN THE SIGNING OF THE CONVENTION AND THE COMING INTO FORCE
OF THE CONVENTION "TO DEFEAT THE PURPOSE OF THE CONVENTION"
(ARTICLE 18, CONVENTION OF LAW OF TREATIES). CANADA'S EMISSIONS HAVE
CONTINUALLY RISEN

RATHER THAN CANADA'S TAKING A LEAD IN ADDRESSING THE PROBLEM OF
CLIMATE CHANGE, IT HAS CAVED INTO THE FOREST, FOSSIL FUEL AND
NUCLEAR INDUSTRIES".

CANADA'S NATIONAL ACTION PROGRAM ON CLIMATE CHANGE"
(NAPCC) CAREFULLY IGNORES THE IMPACT OF CURRENT FOREST PRACTICES
SUCH AS CLEAR-CUT LOGGING ON CARBON SINKS. EVEN THOUGH, UNDER THE
CLIMATE CHANGE CONVENTION, CANADA IS BOUND TO "CONSERVE AND
ENHANCE SINKS". SINCE JUNE OF 1992, NUMEROUS SINKS INCLUDING
FORESTS AND BOGS HAVE BEEN DESTROYED EVEN BEFORE THEY HAVE BEEN
PROPERLY DOCUMENTED. (ANOTHER PROVISION OF THE CLIMATE CHANGE
CONVENTION).

THE NAPCC DOCUMENT FAILS TO SERIOUSLY CALL FOR THE PHASING OUT OF
THE USE OF FOSSIL FUELS, AND THE CONVERSION OF THE INFRASTRUCTURES
THAT SUPPORT THE USE OF FOSSIL FUELS. "ALTHOUGH THERE IS A CALL IN
THE DOCUMENT FOR RENEWABLE ENERGY, THERE APPEARS TO BE LITTLE
RESOLVE TO CREATE A SITUATION, WITH HIGH MANDATORY STANDARDS AND
REGULATIONS THAT WOULD ATTRACT SERIOUS CONVERSION TO RENEWABLE
ENERGY. MOST OF THE DOCUMENT APPEARS TO RELY ON "VOLUNTARY
INITIATIVES". VOLUNTARY INITIATIVES FROM THE FOSSIL FUEL SECTOR WILL
NOT BE SUFFICIENT TO DRIVE INDUSTRY TO EMBRACE THE PRINCIPLE OF
RENEWABLE ENERGY. THERE IS A NEED FOR MANDATORY INTERNATIONAL

NORMATIVE PERFORMANCE BASED STANDARDS TO DRIVE E INDUSTRY TOWARDS BEST (BEST ENVIRONMENTALLY SOUND AND SOCIALLY EQUITABLE TRADITIONS) PRACTICES.

“THE NAPCC DOCUMENT ALSO UNDER THE EUPHEMISM OF “ELECTRICITY AND HEAT COGENERATION OPPORTUNITIES” P18, KEEPS THE DOOR OPEN FOR THE NUCLEAR ENERGY TO PREY ON THE PUBLIC CONCERN FOR CLIMATE CHANGE AND THUS SUPPORTS THE CONTINUATION OF THE FORM OF ENERGY PRODUCTION WITH THE MOST FAR REACHING ECOLOGICAL AND SOCIAL CONSEQUENCES”.

“UNTIL CANADA IS WILLING TO SUMMON UP THE POLITICAL WILL TO ENSURE THAT PRINCIPLE DRIVES INDUSTRY, INDUSTRY WILL CONTINUALLY ALTER AND COMPROMISE PRINCIPLE AND RESOLVE”, AND UNTIL CANADA IS WILLING TO FULFILL ITS INTERNATIONAL OBLIGATIONS THROUGH ENACTING THE NECESSARY LEGISLATION, LITTLE SUBSTANTIAL CHANGE WILL OCCUR.

BACKGROUND:

IN 1988, AT THE CHANGING ATMOSPHERE CONFERENCE IN 1988, THE PARTICIPANTS INCLUDING REPRESENTATIVES FROM GOVERNMENT, ACADEMIA, NGO AND INDUSTRY EXPRESSED THEIR CONCERN ABOUT CLIMATE CHANGE IN THE CONFERENCE STATEMENT:

“HUMANITY IS CONDUCTING AN UNINTENDED, UNCONTROLLED, GLOBALLY PERVASIVE EXPERIMENT WHOSE ULTIMATE CONSEQUENCE COULD BE SECOND ONLY TO A GLOBAL NUCLEAR WAR. THE EARTH’S ATMOSPHERE IS BEING CHANGED AT AN UNPRECEDENTED RATE BY POLLUTANTS RESULTING FROM HUMAN ACTIVITIES, INEFFICIENT AND WASTEFUL FOSSIL FUEL USE ... THESE CHANGES REPRESENT A MAJOR THREAT TO INTERNATIONAL SECURITY AND ARE ALREADY HAVING HARMFUL CONSEQUENCES OVER MANY PARTS OF THE GLOBE.... IT IS IMPERATIVE TO ACT NOW.

THE CONFERENCE CALLED FOR IMMEDIATE ACTION BY GOVERNMENTS, THE UNITED NATIONS...

TO REDUCE CO2 EMISSIONS BY APPROXIMATELY 20% OF 1988 LEVELS BY THE YEAR 2005 AS AN INITIAL GLOBAL GOAL. CLEARLY THE INDUSTRIALIZED NATIONS HAVE A RESPONSIBILITY TO LEAD THE WAY BOTH THROUGH THEIR NATIONAL ENERGY POLICIES AND THEIR BILATERAL MULTILATERAL ASSISTANCE ARRANGEMENT.

1994 THE PERCEPTION HAS CHANGED FROM CLIMATE CHANGE BEING “A THREAT” IN 1988 TO ITS BEING ONLY A “POTENTIAL THREAT” IN 1994 IN CANADA’S NATIONAL ACTION PLAN ON CLIMATE CHANGE.

IN THE 1997 ELECTION THE URGENCY OF ADDRESSING CLIMATE CHANGE MUST BE THE KEY ISSUE

THE NATIONAL ACTION PROGRAM ON CLIMATE CHANGE PRESENTED 5 COMPROMISING, INEFFECTIVE OPTIONS.

WHAT IS NEEDED IS A SIXTH OPTION

OPTION 6 : THE MISSING OPTION MOVE TO OVERCOMING CONSTRAINTS

ADHERENCE TO THREE KEY PRINCIPLES:

THE PRECAUTIONARY PRINCIPLE

WHERE THERE ARE THREATS OF SERIOUS OR IRREVERSIBLE DAMAGE, LACK OF FULL SCIENTIFIC CERTAINTY SHOULD NOT BE USED AS A REASON FOR POSTPONING SUCH MEASURES (CLIMATE CHANGE CONVENTION, 1992)

REVERSE ONUS PRINCIPLE

THE PROPONENT OF AN INTERVENTION IN THE ECOSYSTEM SHALL HAVE TO DEMONSTRATE SAFETY, RATHER THAN THE OPPONENT HAVING TO DEMONSTRATE HARM

FUTURE PROBLEM AVOIDANCE PRINCIPLE:

THE ADDRESSING OF ONE ENVIRONMENTAL PROBLEM SHOULD NOT ITSELF BE AN ACTION THAT COULD CAUSE IRREVERSIBLE HARM (STANDING COMMITTEE ON ENVIRONMENT “ OUT OF BALANCE; THE RISKS OF IRREVERSIBLE CLIMATE CHANGE, 1991)

ACTIONS

- 1.. PRESERVE AND ENHANCE SINKS (FORESTS AND BOGS), [AS REQUIRED IN THE UN FRAMEWORK CONVENTION ON CLIMATE CHANGE] , IN PARTICULAR PRESERVE LARGE AREAS OF ORIGINAL OLD GROWTH AND CONSERVATION CORRIDORS, AND REPORT IN DETAIL ON THE HEALTH OF THE SINKS (I.E. DEPLETION FROM FIRE CONTRIBUTES TO INCREASING HECTARES LOST
2. BAN ALL FOREST PRACTICES SUCH AS CLEAR-CUT LOGGING AND BROADCAST BURN THAT REDUCE CARBON SINKS ON CROWN AND PRIVATE LANDS
3. ENCOURAGE AFFORESTATION AND RESTORATION OF DAMAGED FOREST ECOSYSTEMS SUCH AS ON SUFFICIENTLY RESTOCKED LAND
4. . PHASE OUT THE USE OF FOSSIL FUELS AND NUCLEAR ENERGY (AS RECOMMENDED IN THE NOBEL LAUREATE DECLARATION PREPARED FOR UNCED).

5. ESTABLISH AND ENFORCE A NATIONAL DEDICATED PROGRAM FOR ENERGY CONSERVATION AND EFFICIENCY (RECOMMENDED, AT LEAST, SINCE 1975 IN KNELMAN'S "ENERGY CONSERVATION" PUBLISHED BY THE SCIENCE COUNCIL OF CANADA, BACKGROUND STUDY 44)
6. NO REPLACEMENT OF ONE TECHNOLOGY WITH ONE THAT IS EQUALLY OR POTENTIALLY MORE HARMFUL (NO REPLACEMENT OF FOSSIL FUEL TECHNOLOGY WITH NUCLEAR,)
7. ESTABLISH EXTENSIVE NETWORKS OF ALTERNATIVE ECOLOGICALLY SAFE AND SOUND MEANS OF TRANSPORTATION (AGENDA 21), AND CEASE THE CONSTRUCTION OF ALL NEW HIGHWAYS (THE GOAL OF ZERO VEHICLE EMISSIONS AND ELECTRICALLY POWERED VEHICLES SHALL NOT JUSTIFY THE INCREASED USE OF NUCLEAR POWER)
8. SYNTHESIZE THE EXISTING SCIENTIFIC INFORMATION. NO NEW STUDIES ARE REQUIRED TO DEMONSTRATE THAT IT IS NECESSARY TO REDUCE ANTHROPOGENIC EMISSIONS. "INACTION IS NEGLIGENCE" (DIGBY MCLAREN, PAST PRESIDENT OF THE ROYAL SOCIETY , GLOBAL CHANGE CONFERENCE, 1991)
9. ADAPTIVE MEASURES SHALL NOT BE USED AS A JUSTIFICATION FOR NOT ACTING TO PRESERVE EXISTING SINKS AND TO PREVENT ANTHROPOGENIC SOURCES OF GREENHOUSE GASES.
- 10 , PROHIBIT THE PROPOSALS TO SEEK FAR OFF SOUTHERN CARBON SINKS TO JUSTIFY MAINTAINING NORTHERN CONSUMPTIVE PATTERNS. (COSTA RICA SCHEME — ONTARIO HYDRO BUYING FORESTS IN COSTA RICA TO OFFSET ONTARIO HYDRO'S CO2 EMISSIONS)
- 11 AVOID CARBON EMISSIONS TRADING BECAUSE THIS PRACTICE LEGITIMIZES CONTINUED CURRENTLY HARMFUL EMISSION PRACTICES
12. TRANSFER ALL ENERGY-DIRECTED FUNDING INTO RENEWABLE ENERGIES THAT ARE ECOLOGICALLY SAFE AND SOUND
13. TRANSFER A SIGNIFICANT PROPORTION OF THE \$13 [NOW 19,916,518,000] BILLION MILITARY BUDGET TO ASSIST IN IMPLEMENTING THE ABOVE MEASURES AND IN JOB CONVERSION BY INSTITUTING A FAIR AND JUST TRANSITION FOR WORKERS AND COMMUNITIES AFFECTED NEGATIVELY BY THE TRANSITION

JOAN RUSSOW PHD

CHAIR OF THE BCEN INTERNATIONAL AFFAIRS CAUCUS

The Government of Canada recognizes that it must show leadership by putting the

federal house in order. The federal government will aim, with respect to its own operations, to surpass the goal to stabilize its greenhouse gas emissions at 1990 levels by the year 2000 and to reduce them by 20 percent by the year 2005.

The Efficiency and Alternative Energy Program consists of thirty-seven regulatory, information, and research and development initiatives. It encourages, for example, using model National Energy Codes for buildings and houses, setting voluntary energy-efficiency targets, and fostering the adoption of emerging, more energy-efficient technologies and alternative transportation fuels.

Several Canadian municipalities intend to reduce their greenhouse gas emissions by 20 percent of 1988 baseline levels by 2005. These municipalities have formed the "20% Club" to share cost-effective strategies for mitigation.

Internationally, Canada helps build capacity in developing countries so that they can begin to address the environmental consequences of energy development and use. Much of this work is accomplished through multilateral vehicles like the Global Environment Facility, where Canada is an active participant. Canada also contributes to the secretariats of various conventions (climate change and biodiversity), the United Nations Environment Programme (UNEP), and the World Bank.

The Challenge of Sustainable Transportation

Canada's transportation priorities put an emphasis on safety, resource conservation, and the prevention, reduction, or elimination of pollution. Through developing cleaner vehicles and fuels, investing in energy-efficient transportation systems, and reducing travel demand through influencing lifestyle choices and urban planning, Canada is attempting to reduce undesirable emissions of carbon dioxide, nitrogen oxides, and volatile organic compounds.

A Transportation and Climate Change Collaborative has produced recommendations on full cost transportation pricing and other related issues. These recommendations will help Canada to develop sustainable transportation systems by decreasing market distortions caused by subsidies and other externalities. The recent endorsement of the recommendations of the Task Force on Cleaner Vehicles and Fuels will result in new standards for cleaner gasoline and diesel fuel in Canada and initiate a new program for low-emission vehicles no later than 2001.

Under the NO_x /VOC Management Plan, new emission guidelines have been developed for power plants, gas turbine and compressor engines, and a range of other sources such as fuel and volatile compound storage and handling facilities.

Stricter standards for vehicles and industrial emission sources such as boilers are being developed.

The National Biomass Ethanol Program is designed to increase ethanol use. Financial support is also available for vehicle conversion to natural gas and to establish natural gas refueling stations.

The use of auto propane to provide markets for excess refinery by-products is being encouraged in Newfoundland and New Brunswick. Canadian industry, automobile manufacturers, auto-parts manufacturers, and natural gas distributors have recently formed a Natural Gas Vehicle (NGV) Alliance to increase NGVs in Canada from 38,000 to 300,000 by 2005. Natural gas buses operate in nine Canadian cities.

British Columbia's "Air Care", Canada's first in-use vehicle emissions inspection and maintenance program, has tested one million light-duty vehicles. The result is 113,000 fewer tonnes of greenhouse gas emissions and 25 million fewer litres of gasoline consumed in British Columbia's lower mainland.

The National Pollutants Release Inventory is a legislated, nationwide, publicly accessible database of pollutant releases and transfers in Canada (Web site: <http://www.doe.ca/pdb/npri.html>). It provides information on on-site releases to air, water, and land, as well as the transfer, off-site in wastes, of 176 substances. Data are collected annually from over 1800 facilities representing all major industries.

Promoting Pollution Prevention

The federal pollution prevention strategy (Pollution Prevention: A Federal Strategy for Action) encourages firms to move away from end-of-pipe solutions toward anticipating and preventing damage to the environment. The results are new products, technologies, and processes that reduce stresses on the environment.

Voluntary programs under way build on existing regulatory and economic measures. These measures include initiatives such as the Accelerated Reduction/Elimination of Toxics Program, which has been discussed in previous reports.

Raising Awareness of Conservation

Last year's CSD report noted in the sections on land use, biological diversity, and agriculture and rural development that Canadian governments have set aside protected spaces, many of which help increase greenhouse gas sinks and improve the resilience of ecosystems to climatic variations and air pollution damage. For example, Tree Plan Canada is a community tree-planting program managed by the National Community Tree Foundation. It provides Canadians with an opportunity

CANADA'S SUBMISSION

to learn about the importance of trees to our planet's life support system. To date, 42 million trees have been planted to rehabilitate urban forest ecosystems and to provide for soil conservation.

Combating Stratospheric Ozone Depletion

Canada's response to the prevention of stratospheric ozone depletion includes strong regulatory controls on use, a ban on release, certification of technicians, research, monitoring, and public information and awareness components. Canada operates the World Ozone Data Centre in Toronto.

The Atmospheric Environment Service of Environment Canada has developed the Brewer Ozone Spectrophotometer. The Brewer, now manufactured by Sci-tech Instruments of Saskatoon, is used by more than thirty countries around the world.

Canada has ratified the 1990 amendments and the 1992 Copenhagen amendments to the Montreal Protocol. Canada is implementing increasingly stringent controls beyond those agreed to in 1992 through coordinated federal and provincial regulations. Controls are in place on chlorofluorocarbons (CFCs) and halons, and the use of CFCs in aerosols, small refill cans, and plastic food packaging is banned. Supported by the International Development Research Centre (IDRC) in Ottawa, the Swiss Development Cooperative, and the United States Environmental Protection Agency, Friends of the Earth Canada is identifying potential economic and trade effects of a global phase-out of methyl bromide, a widely used pesticide and ozone-depleting substance.

Canada intends to phase out methyl bromide by 2001, except for certain agricultural uses exempted under the Montreal Protocol. We have already frozen

consumption at 1991 levels and plan on a 25 percent reduction for 1998. With this initiative, Canada has one of the most stringent methyl bromide control programs in the world. Our actions go beyond our commitments under the Montreal Protocol, which illustrates our determination to take decisive measures to reverse the destruction of the ozone layer.

Canadian researchers are focusing on ultraviolet-b (UV-B) radiation effects on humans, animals, and biota; the causes and extent of ozone layer depletion conducted, in part, through an Arctic research station at Eureka; and the monitoring of total column ozone concentration at ten stations across Canada. The UV Index, developed in 1993 to advise the population of forecast levels of sunburning UV radiation, has been adopted by several other countries.

Canada has a National Action Plan on Recovery and Recycling of CFCs. Federal and provincial governments, in cooperation with the Heating, Refrigeration and Air Conditioning Institute and municipalities, have developed a training program on the proper handling, recovery, and recycling of CFC refrigerants. More than 60,000 technicians have been trained. Most CFC uses, other than refrigeration and air conditioning, have been eliminated, and CFC-free refrigerators are being introduced.

Limiting trans-boundary Air Pollution

trans-boundary air pollution CONTINUEs to be a very important issue for Canada. With the United States, we are demonstrating that partnership efforts can successfully address the problems of acid rain through emission reduction actions, public awareness raising, and sound science. Canada and the United States are beginning to apply this proven approach to addressing their smog problem. Persistent organic pollutants (POPs) are an emerging trans-boundary air issue on the continental, hemispheric, and global scales. Transported by the atmosphere, these substances contaminate the food chains in areas as remote as Canada's Arctic region. Bilaterally, the Air Quality Agreement, signed in 1991 with the United States, committed Canada to cap national sulphur dioxide (SO₂) emissions at 3.2 million tonnes by the year 2000, and cap Eastern Canada SO₂ emissions at 2.3 million tonnes by 1994 until 2000. By 1994, Canadian industry had exceeded this target, reducing emissions to 1.7 million tonnes. The United States also committed to reducing SO₂ emissions by 40 percent from 1980 levels. Despite these successes, acid rain will CONTINUE to be a focus for action in the post-2000 era. As a result, Canada is considering further SO₂ emission reductions. The two countries have recently expanded the scope of the agreement to include trans-boundary ground-level

ozone and are currently establishing a Regional Ozone Study Area to focus on mitigation strategies between Ontario and adjacent American States.

New indicators on passenger transportation and energy consumption have been added to the suite of atmosphere-related indicators (e.g., acidic precipitation, air quality, stratospheric ozone depletion, and climate change). These provide objective, scientifically based information on environmental conditions and trends and will be available through Environment Canada's Green Lane.

The proposed Canada/U.S. Virtual Elimination Strategy calls for elimination of those persistent toxic substances that contribute significantly to pollution of the Great Lakes Basin. An investigation on the deposition of persistent organic substances into the Gulf of Maine also took place in 1994. In October 1995, Canada, the United States, and Mexico agreed to a trilateral resolution on management of persistent toxic substances under the North American Agreement on Environmental Cooperation.

Internationally, the federal government, with provincial support, is active in the United Nations Economic Commission for Europe (UN-ECE) on atmospheric issues. In 1994, Canada signed the Second UN-ECE Sulphur Dioxide Protocol, which commits Canada to cap SO₂ emissions and to work toward critical loads (the level of acidic deposition that causes insignificant environmental harm). Canada will be participating in UN-ECE negotiations on a second NO_x protocol and on protocols on POPs and heavy metals.

Implementing a commitment made at the 1994 session of the CSD, Canada, in cooperation with the Philippines, hosted 100 experts from over forty countries in Vancouver, British Columbia, for the International Experts Meeting on Persistent Organic Pollutants: Toward Global Action. In seeking a solution to the POPs problem, the experts agreed that the available evidence warranted immediate action both domestically and globally. This conclusion was transmitted to the UNEP-sponsored Intergovernmental Conference on the Global Plan of Action on Land-Based Sources of Marine Pollution, held in Washington, D.C., in November 1995. It contributed to the Washington Declaration on Protecting the Marine Environment from Land-Based Activities.

Canada tracks airborne pollutants to improve early warning on industrial accidents and natural disasters. Canada provides this capacity through the Canadian Meteorological Centre in Montreal. This centre has been designated as a Regional Specialized Meteorological Centre specializing in atmospheric transport modeling for nuclear emergency response. The Canadian Emergency Response Model and the Trajectory Model track and predict the atmospheric transport of pollutants and volcanic ash plumes globally.

Challenges and Next Steps

Current global and regional air issues are strongly interrelated. Implementation of the policies to

address air management issues falls largely on provincial governments, while much of the research takes place at the federal level. Through the National Air Issues Coordinating Committee, Canada seeks to ensure the integration of policy and science surrounding air issues, which have been developed in relative isolation in the past.

We must CONTINUE to enhance our predictive capabilities concerning climate change by increasing our understanding of the role of oceans, key land surface processes, clouds, and aerosols. The Climate Research Network, linking government and university researchers, is one tool for our assessment of climate change and variability.

Natural Resources Canada encourages Canadian fleets to reduce operating costs and environmental impacts through energy-efficient practices and the use of alternative fuels. Activities include driver-training programs, information materials, and technical demonstrations. A more comprehensive program will be launched early in 1996. To encourage fuel efficiency within its own vehicle fleet, the federal government launched the Fleet-Wise program in 1995 to assist federal government fleets to cut costs by increasing fuel efficiency in the federal fleet and to reduce the environmental impacts of the 25,000 vehicles in the federal fleet.

Prior to Canada's NAPCC, energy-related greenhouse gas emissions were forecast to rise by 13 percent over 1990 levels by the year 2000 (see figure). The challenge we face is to close this gap.

The Voluntary Challenge and Registry (VCR) Program is a key element of the NAPCC. The VCR invites Canadian companies and organizations to express their intention to participate, on a voluntary basis, and develop action plans to limit net greenhouse gas emissions. A public registry will document the commitments, action plans, progress reports, and achievements of all participants.

Our progress in meeting our climate change goals will be assessed and our program updated on a regular basis against the recommendations stemming from the first meeting of the Conference of the Parties to the Framework Convention on Climate Change. The first review of the NAPCC, expected by the end of 1996, will provide insight into the effectiveness of Canada's response and any need for additional measures.

The mechanisms involved in depletion of stratospheric ozone over the Antarctic are known sufficiently to promote confidence in the effectiveness of measures under the

Montreal Protocol and its amendments. An important current objective of the Canadian stratospheric ozone science program is to determine more exactly the mechanisms responsible for ozone depletion at mid-latitudes (e.g., over Canada) where we can explain about half the depletion that has actually occurred.

With new international programs for managing persistent organic pollutants emerging on various geographic scales ranging from bilateral with the United States to global, efforts are required to ensure consistent and complementary approaches within the various forums. These, and other issues, are being addressed through partnerships between governments, the private sector, communities, universities, and other institutions.

Indicator: Carbon dioxide emissions from fossil fuel use

Canadian Sources: Statistics Canada and Environment Canada.

Global Sources: Carbon Dioxide Information Analysis Center, Oak Ridge National Laboratory, U.S.A., and World Bank, International Monetary Fund.

Indicator prepared by: State of the Environment Directorate, Environment Canada.

Both global and Canadian emissions grew by 12 percent between 1982 and 1991.

PART III, SECTION II

PROTECTION OF THE OCEANS AND OTHER SEAS

Introduction

Chapter 17 of Agenda 21 calls for action on a range of marine and coastal area management issues.

These commitments are consistent with Canada's continuing efforts to promote the sustainability of oceans and all their resources. As a country that borders three oceans, Canada has emphasized issues such as improved fisheries management policies and practices, coastal zone management, the prevention of marine pollution from all sources, and development assistance.

In Canada, the federal government has authority over oceans. Provincial and territorial governments have jurisdiction over shorelines, some marine areas, and many land-based activities. Aboriginal people are gaining greater control over specific management issues in some regions.

Canadian governments have begun to pursue ocean-related policies that reflect a precautionary approach. These oceans policies are developed from an ecosystem basis, incorporating principles of sustainable development and integrated management.

The Oceans Act and the Oceans Management Strategy

The federal government has introduced a new Canada Oceans Act (COA), which is now before Parliament. The COA represents a significant step forward in establishing Canadian oceans jurisdiction and consolidating federal management of oceans and coasts. It establishes an ecosystem approach to their management.

The COA addresses many issues. Among the most relevant to Chapter 17 is confirmation of Canada's jurisdiction over its maritime zones (its Territorial Sea, the Contiguous Zone, and the Exclusive Economic Zone) and their resources, consistent with the United Nations Convention on the Law of the Sea, and the responsibility to manage them sustainably. The COA will also provide the foundation for the integrated management and sustainable development of Canada's ocean resources. The COA provides a legislative framework to support a domestic Oceans Management Strategy (OMS) and to establish marine protected areas and marine environmental quality guidelines. An OMS will also provide for the development and implementation of a national strategy for the management of estuarine, coastal, and marine ecosystems. It will evolve through consultation and cooperation with other governments,

Aboriginal authorities, and interested groups.

The COA will address the need for marine scientific research. It recognizes that informed decision making requires accurate data and a better understanding of oceans and their living resources and ecosystems.

Marine Environmental Protection

The health of marine environments is a growing focus of Canadian activity. Canadian scientists are learning more about these environments and related issues. For example,

oceans figure prominently in much of the climate change research described in the section of this report on protection of the atmosphere.

Canada borders three oceans and has the longest coastline (almost 250,000 km), the largest archipelago, and the second largest continental shelf (6.5 million km²) of any country in the world. Canada's oceans represent almost two thirds of its territorial land mass. The area of Canada's Exclusive Economic Zone alone covers roughly half of Canada's land mass. Approximately 6.5 million Canadians (22%) live in coastal communities.

Eighty percent of marine pollution is land-based. Maritime transport and dumping-at-sea activities contribute 10 percent each. Recent legal and policy initiatives have improved the protection of Canadian marine environments and living resources. For example, the Government of New Brunswick is beginning a process that will see planning and cleanup activities for more than 200 watersheds throughout the province. This model is currently being used to establish an overall provincial network.

The federal government has taken legislative and policy steps to address marine pollution in the Fisheries Act, the Toxic Substances Management Policy, and the Canadian Environmental Protection Act (CEPA). The federal government intends to amend CEPA to preserve the quality of coastal areas and to guide reduction of contamination from land-based sources of pollution. The proposed COA will strengthen protection of marine habitat.

In February 1995, Canada released its Aquaculture Development Strategy. The strategy meets the International Council for the Exploration of the Sea criteria. It will guide the sustainable management of Canada's aquatic resources for the production of high quality fish and seafood and will generate economic benefits for Canadians.

A Memorandum of Understanding for Sustainable Development in the Natural Resource Sectors was signed by all relevant federal government departments. Under it, working groups are addressing topics such as climate change, coastal zone management, and

metals in the environment, thus linking several of the critical factors affecting oceans today.

Canada recognizes the value of international action to protect marine environments, safeguard the use of the world's oceans, and establish global approaches to coastal zone management. It has acted on its international commitments and agreements, working through bodies such as the

International Maritime Organization.

In 1994, Canada acceded to the International Convention on Oil Pollution Preparedness, Response and Co-operation 1990, which is aimed at pollution of the sea by oil. As a result, Canada is revising its joint marine contingency plan with the United States for responding to spills in shared boundary waters. As well, ships and oil-handling facilities now must have oil pollution emergency plans.

Canada is also playing an active role in the revision of the Convention on the Prevention of Marine Pollution by the Dumping of Waste and other Matter (the London Convention 1972). This is a major international instrument that regulates disposal at sea and promotes the control of all sources of marine pollution.

Canada supports the international Convention for the Prevention of Pollution from Ships (MARPOL 73/78). The federal government established a coordinated national program of aerial surveillance that responds to the monitoring and reporting requirements of MARPOL.

Land-based sources of pollution are another focus of international efforts. In November 1995, Canada, along with the world community, endorsed the Global Programme of Action for the Protection of the Marine Environment from Land-Based Activities. The Global Programme of Action calls on countries to develop regional and national programs of action to prevent, reduce, and control land-based activities that contribute to the degradation of the marine environment.

The Arctic

The Arctic Ocean is a particularly sensitive environment. It has been the focus of many Canadian environmental initiatives. Prominent among them is the Arctic Environmental Strategy. This has expanded scientific research on contaminants, the use of traditional knowledge concerning marine living resources, the monitoring of water quality, and the cleanup of hazardous wastes in Canada's North. This is being complemented by the international Arctic Environmental Protection Strategy, which has improved circumpolar cooperation to protect the Arctic region.

Aboriginal people have an important role in oceans and coastal zone management, particularly in northern Canada. For example, fisheries and marine co-management processes are part of comprehensive land-claim agreements in the Northwest Territories. Under these agreements, Inuit have rights of involvement in the decision-making process related to marine conservation and the harvesting of marine mammals in and beyond their claim settlement areas.

Domestic Progress in Fisheries Management

A primary focus of oceans-related activity for Canada has been the sustainable management of fisheries. Stock collapses and fishery closures have encouraged Canada to pursue change in fisheries policies and management practices domestically and internationally.

The Fisheries Resource Conservation Council (FRCC) makes recommendations to the federal Minister of Fisheries and Oceans on total allowable catches and other conservation matters for Atlantic fish stocks. The FRCC is a partnership that draws on advice from scientists and the fishing industry. It is guided by the principles of sustainable development and an ecological approach to fisheries management. It works in an inclusive, open, and transparent manner.

Among many domestic policy developments has been federal initiation of a process to develop integrated fishery management plans for all harvested species or stocks by the end of 1996. This approach will integrate all elements associated with the commercial, Aboriginal, and recreational fishing sectors. It will be an effective tool in ensuring resource sustainability.

In 1995, a national policy was initiated to provide for the orderly development of under- or un-utilized stocks and species. It will also facilitate the collection of scientific data necessary to ensure sustainability of stocks.

In step with the new course being charted for Canadian fisheries is the development of a Partnerships Implementation Strategy. Partnering agreements will increase the role of stakeholders in the decision-making process. These partnering agreements with industry can play an important role in realizing Canada's goal to promote a fishing sector that is sustainable, economically viable, and self-reliant.

The federal government launched the seven-year Aboriginal Fisheries Strategy in 1992. Under this strategy, the federal government enters into agreements with Aboriginal organizations to integrate Aboriginal people into the sustainable management of the fishery, provide economic benefits, and establish and provide allocations of fish.

Provincial and territorial governments are also improving policies to strengthen fisheries management. The British Columbia government has devised a Coastal Resource Strategy framework to sustain its coastal resource base. It is incorporating a best practices approach to resource use and management. The British Columbia government has also initiated the B.C. Salmon Habitat Conservation Program. It has a strong focus on critical salmon habitats in urban areas. It involves community groups and local governments concerned with the sustainability of salmon.

Addressing fishing practices and skills has become another emphasis in Canada's domestic efforts to conserve fisheries. One of the most significant of these activities has been the Review of Groundfish Gear and Harvesting Technology. Launched in December 1992, it establishes linkages between groundfish gear and sustainable development for the future. It has the potential for a major impact on the industry.

The Canadian Program for Responsible Fishing is another important mechanism under way to achieve a sustainable fishery. Industry, with the federal government, has undertaken work to address issues such as sustainable fishing, and encourage the development of national and international codes of conduct for responsible fishing.

Fisheries Conservation in the Northwest Atlantic

Canada has been a leader in developing and promoting efforts to conserve and protect fisheries on the high seas. This has led to a number of domestic and international initiatives. In the northwest Atlantic, groundfish stocks have been severely over-fished. Four of six straddling groundfish stocks managed by quota under the Northwest Atlantic Fisheries Organization (NAFO) are currently under moratoria. Canada has taken a strong international position that all moratoria and quotas be respected to allow stocks to rebuild.

In 1994, the federal government amended the Coastal Fisheries Protection Act authorizing Canada to take enforcement measures to protect and conserve straddling stocks in areas regulated by NAFO. The goal was to ensure sustainable management of these high-seas fisheries pending the implementation of permanent international measures.

In March 1995, Canada and the European Union engaged in a dispute over turbot (Greenland halibut) fishing and other conservation issues in the northwest Atlantic. The dispute was resolved in April 1995 with an agreement that enhanced conservation and enforcement measures for straddling stocks in the NAFO Regulatory Area (NRA). This included 100 percent observer coverage on all Canadian and European Union vessels fishing in the NRA, other improved control measures, and a new sharing arrangement for the Greenland halibut stock. All NAFO parties subsequently endorsed the Canada/European Union measures and became subject to this regime starting in January 1996.

The International Development Research Centre has played a formative role in the establishment of the Strategy for International Fisheries Research (SIFR).

SIFR's objective is to improve coordination among donor agencies in their support for fisheries research and development.

The United Nations Conference on Straddling Fish Stocks and Highly Migratory Fish Stocks

Canada played a key role in the success of the United Nations Conference on Straddling Fish Stocks and Highly Migratory Fish Stocks. The agreement concluded at the conference gives the international community the means to end overfishing of straddling and highly migratory stocks on the high seas. This will close a serious gap in the international legal regime for the conservation of these stocks. Canada has signed the agreement and will ratify it shortly. It has encouraged other States to do the same.

Other International Fisheries Activities

Canada participates in all relevant international fisheries forums, including the Food and Agriculture Organization (FAO). Canada has been supportive of FAO's responsible fishing initiatives, including the operations and guidelines in the Code of Conduct for Responsible Fishing.

Canada was the first party to the FAO International Agreement to Promote Compliance with International Conservation and Management Measures for Fishing Vessels on the High Seas. The federal government passed regulations requiring domestic vessels to obtain a high-seas fishing licence from Canada when fishing outside of Canadian waters. This provision was introduced to ensure that these vessels fish consistently with international conservation regimes.

Canada is involved in other organizations. As a party to the North Pacific Anadromous Fisheries Commission, Canada is committed to the elimination of high-seas fisheries for Pacific salmon stocks.

Development Initiatives

Fisheries are an important resource for developing countries. The Canadian International Development Agency, the International Development Research Centre, and the Department of Foreign Affairs and International Trade all provide assistance to partner

countries and regional organizations in oceans management, development, and research. This assistance draws on Canadian institutional experience, capacity, and expertise.

Canada's official development assistance programs in fisheries have concentrated on fisheries development and management on a sustainable basis. Canada has also assisted developing countries with the management of Exclusive Economic Zones and in addressing issues arising from the United Nations Convention on the Law of the Sea and Agenda 21.

The Canadian International Development Agency has encouraged and fostered regional approaches for Exclusive Economic Zone and fisheries management in developing countries. In the Asia/Pacific region, efforts have focused on assisting regional organizations to resolve jurisdictional issues, examining measures to combat degradation of the marine environment, and developing resource management policies.

Challenges and Next Steps

The shift to ecosystem management is an evolving process. It requires CONTINUED work to develop oceans policies that incorporate the principles of sustainable development and integrated management. This is key to improving the management of Canada's oceans and ocean resources. The changing nature of commercial fisheries and ocean-related industries makes strong ties with stakeholders imperative. As oceans management approaches CONTINUE to move toward an ecological and sustainable approach, industry must be at the forefront of necessary adjustments. Canada will CONTINUE to pursue measures that enhance these relationships.

Internationally, Canada is responding to the critical need to protect the marine environment from damaging land- and sea-based activities and is also promoting the conservation and sustainability of fish stocks on the high seas. Canada will CONTINUE to play a lead role and will press the international community to develop and ratify agreements that ensure the sustainability of these stocks.

Science and the exchange of information on the oceans and its living resources must be a priority. International cooperation and research must CONTINUE to understand oceans better and to secure their future sustainability.

PART III, SECTION III
SUSTAINABLE DEVELOPMENT OF
SMALL ISLAND States

Introduction

Canada and small island States share a common and deep concern about the need for the conservation and sustainable use of the world's ocean resources. Canada has made significant efforts to encourage international cooperation on this important issue.

Canadian Development Assistance to Small Island States

The scope of work undertaken by Canada in support of sustainable development in small island States is illustrated by projects in two important regions: the Caribbean and the South Pacific.

Caribbean

Canada has strong historic links to the Commonwealth Caribbean. It is the second largest bilateral official development assistance donor in the region. This assistance has contributed to the region's infrastructure (school, water supply systems, bridges, energy, roads, and airports), to human resource development, and to strengthening key regional institutions.

The Canadian International Development Agency (CIDA) has recently undertaken significant sustainable development programming in Jamaica. An example of this is the Trees for Tomorrow project (\$9.5 million). It is aimed at strengthening the institutional capability of the Jamaican Forestry Department to plan and implement sustainable forest management. The recently announced ENACT project (\$21 million) is using a capacity development approach to develop Jamaica's natural resource conservation capabilities. This approach relies on the participation of local expertise and the active involvement of those individuals and groups to be affected by the project. These factors help to ensure that the approach meets local needs and is sustainable.

Air transport is very important to small island States. Assistance with transportation development has been the major focus of Canada's regional programming in the Caribbean. For example, CIDA has provided over \$90 million to the Caribbean Airports Project and Airports Technical Assistance to improve air transport in the region. These

projects focus on upgrading the operational safety and physical maintenance of Commonwealth Caribbean airports to internationally recognized standards and assisting in civil aviation management in the region.

The next most important area of region-wide spending has been human resources development and education. This has included support to scholarship programs and to the University of the West Indies.

South Pacific

Canada and the South Pacific share concerns about oceans management. There are problems of unregulated fishing, excessive fleet size, vessels re-flagging to escape controls, unreliable databases, and lack of sufficient cooperation between States. Canada has been able to develop a strong relationship with the region on these issues because it has no distant-water fishing fleet in the area. Hence, it is viewed as having common, but not vested, interests in the region.

Canada has largely directed its bilateral assistance program in the area toward regional groups involved in ocean resources management. For example, CIDA's Canada South Pacific Ocean Development Project (C-SPOD) is aimed at strengthening key regional organizations in ocean resource development and management. It provides technical advisory services, training, and institutional support to various regional organizations. Phase II of C-SPOD has recently begun. This initiative is intended to address some of the pressing environmental and resource management concerns of the small island States in the South Pacific region. The rapid economic development of Southeast Asia is placing increasing demands on the region's marine resource base. Phase II will help to strengthen the capacity of regional institutions to deal with the environmental impacts of this development.

In addition to large projects such as those identified above, CIDA allocates \$2.65 million per year to island States in the South Pacific region for small community development projects, ranging from \$20,000 to \$50,000.

PART IV

FOLLOW-UP TO 1995 CSD SECTORAL

ISSUES

Conservation of Biological Diversity

After several years of work, the federal, provincial, and territorial governments released the Canadian Biodiversity Strategy in November 1995. The strategy was discussed extensively in last year's Report of Canada to the United Nations Commission on Sustainable Development (CSD). Governments are pursuing its implementation in cooperation with stakeholders and the public. For example, the Quebec government has developed a biodiversity strategy that describes more than 200 actions to be implemented over the next four years. The British Columbia government has issued a Biodiversity Guidebook to support the biodiversity objectives of the B.C. Forest Practices Code.

On 13 November 1995, in Jakarta, Indonesia, delegates to the second meeting of the Conference of the Parties to the Convention on Biological Diversity expressed their confidence in Canada by selecting Montreal as home to the Permanent Secretariat of the United Nations Convention on Biological Diversity.

Engaging Canadians

Governments and nongovernmental organizations are addressing gaps in information and public understanding. Early in 1995, eight national conservation organizations formed the Canadian Coalition for Biodiversity. It is raising public awareness and has already produced information and education materials.

Encouraging personal action is a focus of programs such as the British Columbia government's Backyard Biodiversity Program. Organizations such as the Evergreen Foundation and the Canadian Wildlife Federation have expanded schoolyard and community naturalization and education programs.

Protecting Species at Risk

In 1995, Canadian governments agreed on the need for a strengthened, better coordinated approach to endangered species conservation. The federal government held public consultations on a national approach to this issue. The federal Environment Minister then released a "plain language" version of a possible Canadian Endangered Species Protection Act for further public comments.

Completing Canada's Networks of Protected Marine Areas

The Minister of Canadian Heritage has released a national marine conservation areas system plan. It describes Canada's twenty-nine natural marine regions and will guide efforts to establish a network of protected areas that represent these regions.

Valuing Biodiversity

One of the biggest impediments to the conservation of biodiversity and the sustainable use of biological resources has been an inability to attach economic value to nature. The federal government has developed a system for measuring the use and economic benefits of wildlife and natural areas. It has also initiated work on an Environmental Valuation Reference Inventory. This will bring together twenty years of economic valuation work on natural capital from around the world and make it available to meet the needs of other countries.

The forest industry has launched a Forest Biodiversity Program in cooperation with Wildlife Habitat Canada, a national conservation group. The Canadian Pulp and Paper Association and agricultural producers have also initiated coordinated responses to the challenges of the Biodiversity Strategy.

International Cooperation for Biodiversity

In addition to ongoing support for the Biodiversity Convention process, Canada has supported other activities. For example, Canada cosponsored a regional workshop on the economic value of biodiversity with Chile and the United Nations Environment Programme. This was designed to assist Latin American and Caribbean countries to assess the biodiversity impacts of their policies.

Integrated Approach to the Planning and Management of Land Resources

Since last year's CSD report, Canada has begun a process to define key land use issues. The Federal/Provincial Committee on Land Use sponsored the first Perspective on Land Use Issues in Canada Forum in August 1995. This is expected to lead to a focused public debate over options and actions. Questions addressed at the forum included the following:

What are the major land use issues facing the country over the next decade?

What are the broad options for resolving the issues?

What roles does and should land use planning play in the implementation of sustainable development?

According to the Federal Policy on Land Use, land is the basis of national sovereignty, a primary factor in production of food and fibre, and its use as a determinant of the quality of life for present and future generations.

The forum attracted private consultants, members of the academic community, and government personnel. They discussed four key land use categories: agriculture, forestry, shore zone/coastal zone, and urban. The following major issues were identified:

Agriculture

degradation of agri-ecological resources through agricultural practices, on- and off-farm effects,
 lack of an agricultural land policy,
 loss of agricultural land base, and
 competing uses on rural lands.

Forestry

multiple use conflicts,
 impact of forest management practices on production and the environment,
 and
 inclusion of Aboriginal needs or interests in forest management.

Shore zone/Coastal zone

impact of land sources of pollution,
 competing use of shore areas (aquaculture and recreation), and
 restriction of public access to the shore.

Urban

planning and financing of hard services and infrastructure,
 protection of water supplies, and
 impact of urban-related development in rural areas (sprawl, ribbon
 development, nodes, and single lots).

Issues Common to All Categories

present governance systems unable to identify and solve problems (or
 opportunities),
 lack of current data and measurable indicators of land use patterns and
 changes,
 inadequate valuation of common resources, and
 lack of integrated planning and communication.

This process is contributing to a discussion paper for national distribution. It will raise awareness of the sustainability of Canada's land resources in the search for workable answers. In support of this initiative, the federal government will reactivate the Interdepartmental Committee on Land. This will help harmonize land issues throughout the federal government. It also will update the Federal Policy on Land Use (1980). Similarly, First Ministers' Councils will more closely dovetail agendas to address the sustainability and integration of land resource issues.

Land Use Issues in Canada, Forum II, will be held in 1996. Issues to be discussed include multiple-use conflicts (policies and how to measure progress), governance of land, and indicators of land use change.

Combating Desertification and Drought

During the last year, Canada's primary focus has been on action related to the new United Nations Convention to Combat Desertification. Canada ratified the convention in early December 1995.

The federal government, through the Canadian International Development Agency (CIDA), is exploring various options for supporting the secretariat of the convention. This will build on the assistance provided to the interim secretariat over the last three years. In 1995/1996, Canada is providing \$200,000 to support a legal expert in the secretariat. It is also providing \$60,000 to assist representatives from developing countries to participate in the meetings that will prepare for the first meeting of the Conference of the Parties.

CIDA has established a Desertification Convention Office responsible for information regarding the convention and coordinating Canada's support for the convention's goals. This office has undertaken an information campaign to tell interested Canadians about the problem of land degradation in dry lands and about the convention.

Canada has responded to the United Nations' "Urgent Action for Africa" resolution with two key projects. In the first, it has provided the North American nongovernmental organization focus group for this issue, Solidarité-Canada-Sahel (SCS), with \$18 million over five years. SCS is carrying out a public awareness campaign. It is also cooperating with nongovernmental organizations in the Sahel to contribute to the development of National Action Programs. In the second key project, CIDA is renewing its relationship with the Inter-State Committee on Drought Control in the Sahel by providing support to a new program with two channels of intervention: support for the convention and food security.

The International Development Research Centre (IDRC) is also involved with the convention and desertification. It concentrated on three topics: knowledge brokering, which involved publishing and distributing a review of fifty-six relevant projects; capacity building, which included three workshops that examined such issues as traditional knowledge and coping strategies, land tenure, and trade and economic policies; and support for the convention process, which included convening a donors' forum to share experiences and develop some consensus on future collaboration. IDRC also supported a meeting of West African countries to develop National Action Programs.

Promoting Sustainable Agriculture and Rural Development

Since Canada's last report to the CSD, Canadian governments, farmers, and farm organizations have made additional progress toward sustainable development.

For example, the amount of summer-fallow acreage on the Canadian Prairies has CONTINUED on a downward trend. It declined 3 percent (212,000 hectares) in 1995. In Ontario, 2500 farmers have participated in environmental farm planning workshops in the past year. Quebec farmers have formed conservation clubs to share knowledge and technical expertise to enhance sustainable agricultural practices.

British Columbia producers are expanding a peer review process that helps farmers understand and address environmental concerns. Nationally, the Canadian Pork Council has drafted a code of environmentally sound practices for its industry.

The Atlantic Farmers' Council has published a booklet outlining that region's challenges for environmental sustainability. It has also initiated pilot activities aimed at convincing 75 percent of farmers in Atlantic Canada to adopt environmental farm planning processes by the year 2000.

Governments are implementing new strategies, programs, and policies. Most recently, Prince Edward Island and Quebec have introduced new strategies for their agriculture departments that highlight their commitment to sustainable agriculture. British Columbia proclaimed a new Farm Practices Protection (Right to Farm) Act that deals with urbanization pressures on rural areas.

The federal government has established a National Agriculture Environment Committee that has representation from national and regional farm organizations. This committee has a valuable role to play in addressing the environmental issues that face the agricultural sector.

Broad consultation led to the draft National Environment Strategy for Agriculture and Agri-Food. It includes an inventory of environmental challenges facing the sector. Industry, provincial governments, and the federal government will finalize and act on strategies to address these issues.

Federal/provincial programming for sustainable agriculture has contributed \$56 million over the past year to help the sector make the transition to more environmentally sustainable practices. Many activities involved education and evaluation of technologies and management practices that focused on issues such as water quality, waste management, chemical management, and soil conservation. Nationally, another \$7 million went to agricultural research related to air and climate, energy, and genetic resources.

There has been significant progress in the work under way to develop national agri-environmental indicators. A core set of six indicators are being developed. They will provide an ongoing capability for evaluating the sector's environmental performance, provide information on key trends, and aid the integration of environmental considerations into decision-making processes. Agriculture and Agri-Food Canada released its first indicator-based document, "The Health of Our Soils--Toward Sustainable Agriculture in Canada".

Forests

In last year's report to the CSD, Canada noted that it was developing domestic criteria and indicators for the sustainable management of its forests.

In October 1995, the Canadian Council of Forest Ministers released "Defining Sustainable Forest Management: A Canadian Approach to Criteria and Indicators". This framework outlines six criteria and eighty-three indicators. They reflect an approach to forest management that is based on the following:

- the need to manage forests as ecosystems to maintain their natural processes;
- the recognition that forests simultaneously provide a wide range of environmental, economic, and social benefits to Canadians;
- the view that an informed, aware, and involved public is important in promoting sustainable forest management; and
- the need for forest management to evolve to reflect the best available knowledge and information.

These criteria and indicators were developed through a comprehensive two-year consultative process. It involved a variety of forest interests, including Aboriginal peoples, nongovernmental organizations, small woodlot owners, industry, and the academic community. In addition, science and technical panels were used to ensure that the indicators are scientifically based and reflect the best knowledge available.

Current information systems offer some of the data required for national reporting on these criteria and indicators. However, the reporting on others will evolve over time. They may require new types of data, new techniques, or further research. In cases where there are no reasonable quantitative measures, descriptive indicators should help describe the status of the value being assessed or trends in its maintenance.

These criteria and indicators form the basis of a flexible framework within which to capture the diverse ecological, social, economic, and cultural conditions in Canada. They must be used in a way that adequately reflects the range of forest conditions across Canada. Some indicators need further elaboration and interpretation within the context of the different jurisdictions, legislation, and policies of the provinces and territories. Thus, implementation may vary because of differences in the availability of data, expertise, and resources. Canada expects to release its first report, using available data, at the end of 1996.

Canada's forest criteria and indicators will evolve as we learn more about forest ecosystems, including their social and economic dimensions. With the release of a scientifically based framework, Canada has taken another significant step toward fulfilling forest-related commitments made during the UNCED process.

With regard to the International Model Forest Program, also noted in last year's report, some changes have occurred. The secretariat recently moved to IDRC. The United States has also joined Canada, Mexico, Russia, and Malaysia as a partner. Discussions are continuing with several other countries interested in participating in the program.

Information for Decision Making: The Role of Indicators

Since Canada's last report to the CSD, governments and organizations have expanded the development, testing, and use of indicators to track progress toward sustainable development goals. This section summarizes some of that activity. Additional examples are mentioned in other sections of this report.

Environment Canada CONTINUEs to lead a federal effort to develop a comprehensive national set of environmental indicators. By the end of March 1996, it will have published additional bulletins on indicators of timber harvesting, urban air quality, acid rain, stratospheric ozone depletion, climate change, energy consumption, and passenger transportation. Those indicators will be available via the Internet.

Indicators will be featured prominently in Environment Canada's comprehensive state-of-the-environment report on the St. Lawrence River scheduled for publication in May 1996. Work CONTINUEs on a project to test the application of sustainability indicators in the Fraser River Basin of British Columbia. It uses future scenario modeling to help decision makers. Canada Mortgage and Housing Corporation and Environment Canada co-hosted the first national workshop on urban sustainability indicators in June 1995. The results will contribute to urban sustainability reporting for the Habitat II Conference in 1996. Health Canada is cooperating with federal and provincial partners in Ontario and Quebec to develop seven indicators of human exposure, health impacts, and perception related to environmental quality in the Great Lakes and St. Lawrence basins.

The Research Subcommittee of the Interdepartmental Committee on Rural and Remote Canada has identified a set of rural indicators for Canada. Results of this work are published in "Rural Canada: A Profile".

The State of the Environment Reporting Task Group of the Canadian Council of Ministers of the Environment has identified a core set of environmental indicators focused on hazardous waste, contaminated sites, solid waste management, air issues, and water use efficiency. Efforts to refine indicator definitions and methodologies for six provincial jurisdictions are under way.

The government of British Columbia is developing a set of approximately twenty-five environmental benchmarks and indicators to assess conditions and trends in the environment and measure progress toward provincial environmental goals.

Environment Canada and the U.S. Environmental Protection Agency used indicators in their report "State of the Great Lakes--1995" to show the degree of progress in the health of that ecosystem.

The International Institute for Sustainable Development has published a compendium of experts, initiatives, and publications entitled "Performance Measurement for Sustainable Development". The National Round Table on the Environment and the Economy has produced "Pathways to Sustainability: Measuring our Progress", which documents a colloquium on sustainable development reporting including indicators and the needs of decision makers.

Annex

This report has been prepared by the federal government in cooperation with other governments, organizations, and major groups in Canada.

These governments and organizations were either consulted during the preparation of the report to the CSD or were involved in the examples specifically mentioned in the report. However, there are numerous groups and organizations in Canada not on this list that have undertaken activities to implement the principles of sustainable development.

More complete information about particular aspects of the report can be obtained by contacting any of the following.

() THAT in 1997 in February I wrote to Lucy about my specific concerns with regards to the draft platform for the upcoming 1997 election

EXHIBIT

I would like to express some initial concerns about the current draft platform: the first concern is about the vision statement. If we are to have a real vision, we must completely move away from the compromising position suggested in the following comment:

From someone who was involved with drafting the 1997 election platform : “We are in strong agreement with Carolyn Linden who urges us ‘to ground ourselves in reality if we want to increase the number of votes we receive.’”

My response:

I am sure you are all aware of the corporate assessment of activists as being radicals, opportunists, idealists and realists. The recommended corporate strategy has been to marginalize the radicals...and turn the idealists into realists.

Perhaps, what is important, is to be comprehensive and ensure that there is a strong vision statement, with perhaps a global component; given that the Green Party of Canada is part of a larger Green Party movement.

The Green Party of Canada envisions a culture in which there is redefinition of priorities in equitable and ecological terms. A culture where the current GLOBAL military budget of 800 BILLION is reduced, and at least 50 %; at least 400 billion is immediately transferred into guaranteeing the right to basic needs including the right to safe healthy food, the right to affordable housing, the right to universal health care, the right to education, the right to a safe environment and to ecological heritage and the right to work in socially equitable and environmentally sound employment.

With the rest of the military budget being converted into programs that contribute to the setting up of alternative structures for preventing of conflict and war; through an international regime that respects the rule of international law, and through establishing an international court of compliance where citizens could take evidence of state non-compliance with international law.

The Green part envisions a culture without discrimination on the following grounds: race, sex, gender, sexual orientation, tribe, culture, colour ethnicity, national ethnicity or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, and nature of residency or other status.

The Green Party envisions a culture in which the inherent worth of nature is respected beyond human purpose, and in which the ecological footprint is reduced; the precautionary, anticipatory and reverse onus principle are applied, ETC ...A culture that moves away from over-consumptive practices, and towards socially equitable and environmentally sound development.

Perhaps, in the section about why vote for the Green Party, a comment could be made about the urgency of the global situation and the lack of political will to make the necessary changes. Perhaps, the assessment by UNCED and the current assessment (the World Watch Institute and UNEP) of the urgency.

“environmental and natural resource degradation, deriving from inter alia, unsustainable production and consumption patterns, drought, poor water quality , global warming, desertification, sea-level rise, hazardous waste, natural disasters, toxic chemicals and pesticide residues, radioactive waste, armed conflicts” (Art 246, Advance draft, Platform of Action, UN. Conference on Women, May 15)

“...the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992), and reaffirmed in Art. 37 of the Platform of Action, UN Conference on Women: Equality, Development and Peace)

World Watch Institute recently stated that \$500 billion a year is spent subsidizing the destruction of oceans, atmosphere and land; more than \$100 billion a year is spent subsidizing power stations; 300\$ billion encouraging destructive farming and overgrazing and \$50 billion encouraging overfishing (Cristopher Favin World Watch Institute, cited in the Guardian, February 2, 1997). The United Nation’s Environmental program (UNEP) recently warned that almost 3 billion people would be severely short of water within 50

years. Land covering 1.23 billion acres has severe soil erosion in Africa, most oceans were being over-fished, and more than three-quarters of the world's species have been declining or facing extinction because governments were not addressing the global environmental crisis ...The Guardian also reported that Elizabeth Dowdeswel, from UNEP, told diplomats that politicians were not grasping the seriousness of the situation. ...and lacked the necessary sense of urgency.

In Canada, deforestation, overfishing, reduction and loss of biodiversity, greenhouse gas production as well as erosion of social programs including health care, are continuing to increase.

THERE COULD BE A SECTION SUMMARIZING THE URGENCY OF THE GLOBAL, NATIONAL AND LOCAL PROBLEMS (SEE ANNEX WITH A SURVEY OF THE STATE OF URGENCY)

HERE IS AN INTEGRATION OF THE CURRENT PLATFORM WITH THE FRAMEWORK THAT I HAVE BEEN WORKING ON. I THINK WE HAVE TO SPEND MORE TIME ON THE BROAD CATEGORIES.

THE GREEN PARTY OF CANADA WOULD UNDERTAKE ACTIONS IN THE FOLLOWING BROAD CATEGORIES OF CONCERN :

(A)

SOCIAL JUSTICE, AND EQUITY AND SECURITY

(B)

FOOD SECURITY

(C)

HEALTH RIGHTS AND ETHICS

(D)

ENVIRONMENT AND HEALTH

(E)

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

POLICY ACTIONS WITHIN A PLATFORM OF CHANGE

IN ACTION IS NEGLIGENT

A MANIFESTO

(A)

SOCIAL JUSTICE, AND EQUITY AND SECURITY

“The States... recognize the right of everyone to an adequate standard of living; for himself **[herself]** and his **[her]** family, including adequate food, clothing and housing and to the continuous improvement of living conditions. The States parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect, the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)”

- ensuring the right to safe and healthy food, shelter, health care, and the provision for a guaranteed annual income, fair pension and social security
- reducing poverty through fulfilling basic needs, providing equitable distribution of resources, guaranteeing human rights, preserving and protecting the environment, and preventing war and conflict
- ensuring the right to safe drinking water with sanitation to preclude both microbial and chemical contamination;
- guaranteeing the right to universal health care provided through public funds with fair and equal access

- ensuring the right to shelter that is affordable, accessible, environmentally-sound and with tenure security
- providing socially equitable and environmentally sound employment with a shorter work week with full benefits for part time workers
- guaranteeing ecological rights to a safe environment (clean and unpolluted air, water, and land); and to an ecological heritage for future generations

(B)

FOOD SECURITY

Every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Sect.1. Universal Declaration on the Eradication of Hunger and Malnutrition, 197

- guaranteeing the right to food (the right to non genetically engineered or radiated food, nutritious organically grown)
- guaranteeing conservation of fertile areas for growing food
 - refocusing priorities to support development of self-reliant family and community farms that use ecologically sensitive methods of farming
 - promoting organic agriculture through regulations and education, and through phasing out the use of chemical pesticides
- revising the codex Alimentarius and national food guides such as the Canada food guide to present legumes, vegetables, fruits and grains (which can meet all nutritional needs, while reducing related health problems) as a complete alternative to a meat-based diet.
- banning of genetically engineered food, and irradiated food

(C)

HEALTH , RIGHTS AND ETHICS

- DEVELOPING CRITERIA FOR DETERMINING MEDICAL CHOICES
- establishing guidelines for reproductive technologies like surrogate motherhood
- ensuring the right of access to reproductive choice
- promoting the availability of generic over patented drugs
- decriminalizing doctor-assisted suicide, and euthanasia
- genetically modified organism and the patenting of human genes
- limiting and controlling biotechnology
- ensuring the ethical treatment of animals, phasing out the use of animals in research

(D)

ENVIRONMENT AND HEALTH

“the health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease”.
(93 Habitat II)

- improving people's quality of life through prevention of disease and illness
- increasing funding and promoting research into environmentally-induced diseases
- promoting research which addresses the links suppression of our immune system to ozone depletion, petrochemical pollution and bioaccumulation of persistent toxins indicates that public health is being endangered by a deteriorating environment.
- ensuring that health research and services respond to the needs of women, first nations and minorities;
- significantly increasing research funding into alternative health care methods which complement or replace more expensive conventional drugs and surgery;
- supporting initiatives to educate the public around lifestyle changes and choices that would contribute to both personal health and protection of the environment

- ensuring that health administrations accept and promote the use of naturally occurring medicines and herbs while providing a stringent review process for new and existing human-made chemicals, technologies, and electromagnetic disruption.

- eliminating, preventing and reducing of health and environment hazards
- discontinuing pharmaceutical company funding to and direction of health research in universities

(E)

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

Every form of life is unique, warranting respect, regardless of its worth to man [human] and to accord other organisms such recognition, man [must be guided by a moral code of action. (a, UN General Assembly Resolution 1982)

- respecting the inherent worth of nature beyond human purpose
- reducing the ecological footprint principle
- respecting the carrying capacity of the ecosystem (ensuring that this is not used to justify intrusion into pristine areas)
- ensuring the adherence the precautionary principle and applying it to all environmentally unsound existing practices
- ensuring the institution of the anticipatory principle, and applying it to proposed newly introduced practices
- enforcing of the prevention principle and reverse onus principle (where the proponents of an intervention into the ecosystem have to demonstrate the safety of the interventions rather than the opponents having to demonstrate harm)
- instituting legitimate and independent environmental assessment reviews; complying with the environmental assessment review principle
- ensuring that all corporations including transnational corporations comply with all national codes, social security and international law, including international environmental law (as agreed in habitat ii)

F.

CLIMATE CHANGE AND OZONE-DEPLETION PREVENTION

Stabilizing the atmospheric concentrations of CO₂ is an imperative goal. It is currently estimated to require reductions of more than 50% from present emission levels. Energy research and development budgets must be massively directed to energy options which would eliminate or greatly reduce CO₂ emissions and to studies undertaken to further refine the target reductions (CHANGING ATMOSPHERE CONFERENCE).

• c

G.

EMISSIONS PREVENTION AND ELIMINATION

“Zero use, production and release of persistent and /or bioaccumulative-toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (ZERO TOXIC ALLIANCE, 1994) “

- ENSURING ZERO EMISSIONS OF CHEMICALS THAT ARE TOXIC OR BIOACCUMULATE, INCLUDING ENDOCRINE-DISRUPTING CHEMICALS WHICH HAVE BEEN LINKED TO REPRODUCTIVE DISORDERS
- MONITORING AND MAKING PUBLIC THE EXTENT OF THE HARMFUL CHEMICAL PRODUCTION, AND OF THE HARMFUL WASTES FROM CHEMICAL PRODUCTION
- BANNING OF PERSISTENT ORGANIC POLLUTANTS
- ENDING THE PRODUCTION OF ENDOCRINE-DISRUPTING CHEMICALS
- ELIMINATING OF TOXIC, HAZARDOUS AND NUCLEAR WASTES
- INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

H.

HUMAN-INDUCED DISASTERS

“The need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence and to reduce the impacts of natural disasters and other emergencies on human settlements (Habitat II)”

- PREVENTING DISASTERS INCLUDING NATURAL AND TECHNOLOGICAL DISASTERS, INCLUDING ACTIVITIES THAT PRODUCE TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- PREVENTING THE TRANSFERENCE TO OTHER States OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION, INCLUDING TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- CONDEMNING THE CONTINUED CIRCULATION AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS, THE TESTING OF NUCLEAR WEAPONS, AND PERMITTING OF LOW-LEVEL TEST FLIGHTS
- INCLUDING INDUCING CLIMATE CHANGE AND OZONE-REDUCTION UNDER THE CATEGORY OF DISASTER

I.

CONSERVATION, BIODIVERSITY AND FORESTS

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

- GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY IN LAND, AIR AND WATER SYSTEMS
- PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS SUCH AS THE BIODIVERSITY CONVENTIONS, THE FRAMEWORK CONVENTION ON CLIMATE CHANGE, CONVENTION ON COMBATING DESERTIFICATION, THE VIENNA CONVENTION ADDRESSING OZONE DEPLETION, ENVIRONMENTAL IMPACT ASSESSMENT OF trans-boundary POLLUTION ETC.

- IDENTIFYING BIODIVERSITY AND CARRYING OUT AN ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY
- ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

ENSURING THAT THE BIODIVERSITY CONVENTION TRANSCEND JURISDICTIONAL AND PROPRIETORIAL BARRIERS

- IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS
- ENSURING PRESERVATION, PROTECTION AND CONSERVATION FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS
- BANNING clear-cutting AND OTHER ENVIRONMENTALLY UNSOUND PRACTICES THROUGH ENACTING LEGISLATION TO CONFORM WITH THE CONVENTION ON BIOLOGICAL DIVERSITY, AND WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE
- BANNING THE EXPORT OF RAW LOGS
- REGULATING MINING PRACTICES, AND PREVENTING THE TRANSFER OF SUBSTANCES OR ACTIVITIES THAT COULD CONTRIBUTE TO ENVIRONMENTAL DEGRADATION
- DISCONTINUING THE DUMPING OF ENVIRONMENTALLY UNSOUND EMISSIONS INTO LAND, AIR AND WATER SYSTEMS

J

GREEN SPACES, PARKS, PRESERVATION AND CONSERVATION

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

- PRESERVING AND PROTECTING OF GREEN SPACES

PERI-URBAN BIODIVERSITY, INCLUDING FORESTS, LOCAL HABITATS AND SPECIES BIODIVERSITY; THE PROTECTION OF BIODIVERSITY

- PROTECTING ENDANGERED SPECIES AND HABITATS THROUGH LEGISLATION THAT WOULD PROTECT HABITATS AND CONSERVATION CORRIDORS

- DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES
- PREVENTING INDUSTRIAL ACTIVITIES SUCH AS FORESTRY AND MINING IN PARKS

MARINE, AND FRESH WATER ORGANISMS

To assure the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- PROTECTING WILD FISH STOCKS
 - MAINTAINING A MORATORIUM ON ADDITIONAL SALMON FISH FARMING
- because of Risks of disease transfer from net-cage fish to wild stocks- risks of introduction of exotic diseases from the CONTINUED importation of off-site species;
- Pollution from fish sewage, contamination of shellfish, and loss of habitat
 - Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices
 - Loss of access to traditional fisheries for indigenous peoples with increased risks to their health from exposure to drug residues from food collected near net-cage operations
 - Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water
 - Decline of wild stocks Losses of wild fish, such as herring and juvenile salmon, consumed by net-cage fish
 - Endangered human health from the increased use of antibiotics and other drugs, which have already led to the spread of fish diseases which are fully resistant to three types of antibiotics
- REGULATING EXISTING MARICULTURE AND AQUACULTURE
- RATIFYING THE LAW OF THE SEAS, AND OTHER RELATED CONVENTIONS, AND ENACTING THE NECESSARY LEGISLATION FOR COMPLIANCE AND ENFORCEMENT
 - ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT

- ESTABLISHMENT OF MARINE PROTECTED AREAS FREE FROM FOSSIL FUEL AND HUMAN WASTE POLLUTION -
- REQUIRING MANDATORY WATER CONSERVATION
- PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)
- PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

L

ENVIRONMENT, TRANSPORTATION AND ENERGY

to encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (Article 104 c, Habitat II Agenda)

- DETERMINING THE FULL SUBSIDY FOR THE INFRASTRUCTURE OF THE AUTOMOBILE
- REESTABLISHING A VIABLE RAIL SYSTEM
- PROMOTING THE USE OF RAIL FOR FREIGHT AND PASSENGER TRANSPORT, AND EXTEND THE RAIL NETWORK TO SERVE ALL URBAN AND RURAL LOCATIONS CONVENIENTLY;
- ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY
- DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION
- PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -
- PROMOTING AND ENSURING ENVIRONMENTALLY SOUND TRANSPORTATION

M

ENVIRONMENTALLY SOUND ENERGY

Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy (101 d, Habitat II)

Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 ii (Habitat I, 1976)

- REQUIRING AND DEVELOPING ENVIRONMENTALLY SOUND ENERGY
- PROVIDING FOR ENVIRONMENTALLY SOUND ENERGY SOURCES BY 1999, AND CONCURRENTLY PHASING OUT ENVIRONMENTALLY UNSOUND ENERGY
- REQUIRING THE CONSERVATION OF ENERGY
- REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE
- *• MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASES INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY
- TRANSFERRING FUNDING FOR FOSSIL FUEL AND NUCLEAR INTO ENVIRONMENTALLY SOUND ENERGY
- REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY
- CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES
- INSTITUTING A MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.
- - PROMOTING RESEARCH FOR THE STORAGE AND HANDLING OF EXISTING NUCLEAR WASTE WHILE PHASING OUT CIVIL NUCLEAR ENERGY, AND THE GENERATION OF NUCLEAR WASTES

- CONDEMNING AND BAN THE PROPOSAL TO USE WEAPONS-GRADE PLUTONIUM FROM DISMANTLED RUSSIAN AND U.S. WEAPONS (IN THE FORM OF MOX) IN CANDU REACTORS.
- ELIMINATING OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY

N

ENVIRONMENTALLY SOUND PRACTICES REDUCTION OF OVERCONSUMPTION

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

- REQUIRING ENVIRONMENTAL SOUND PRACTICES DRIVEN BY FORCED COMPLIANCE WITH REGULATIONS (PRINCIPLE DRIVING INDUSTRY RATHER THAN INDUSTRY COMPROMISING PRINCIPLE)

- ENSURING BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES
- ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS
- STRENGTHENING AND PROMOTING TRADITIONAL ENVIRONMENTALLY SOUND PRACTICES
- REQUIRING MANUFACTURERS TO ASSUME THE FULL RECYCLING, COMPOSTING AND OTHER DISPOSAL COSTS OF THEIR PRODUCTS IN AN ECOLOGICALLY SOUND MANNER.
- ENACTING THE LIFE-CYCLE ANALYSIS OF EACH PRODUCT WITH POTENTIALLY HARMFUL ENVIRONMENTAL EFFECTS: THIS LIFE CYCLE ANALYSIS SHALL INCLUDE THE FULL LIFE CYCLE OF THE PRODUCT BY AN INDEPENDENT BODY
- INTRODUCING LEGISLATION TO PROMOTE THE REUSE OR REPLACEMENT OF MINERALS IN INDUSTRIAL PRODUCTION WITH RENEWABLE ALTERNATIVES.

O

EQUITABLE AND ENVIRONMENTALLY
SOUND FINANCE

United determination to work urgently for the establishment of a new international economic order based on equity...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of a New International Economic Order, 1974).

- CANCELING DEBT/DEBT FORGIVENESS AND REPARATION

- ENSURING THAT .07% OF GNP (UN UNDERTAKING) FOR FOREIGN “REPARATION”
- CONVERTING VESTED ECONOMIC INTEREST GATT TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES
- REQUIRING ADHERENCE TO THE trans-boundary PRINCIPLE BY PREVENTING ALL ENVIRONMENTALLY UNSOUND ACTIVITIES
 - REQUIRING OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE
- ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE AND DEVELOPMENT ASSISTANCE
- DISCONTINUING SUBSIDIES FOR ENVIRONMENTALLY HARMFUL ACTIVITIES
- CONDEMNING THE CONTINUED FOREIGN AID POLICY DIRECTION OF STATE AND BUSINESS SELF INTEREST COMPETITION RATHER THAN INTERNATIONAL COOPERATION AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT
- SUPPORTING LOCAL MARKETS, LAND REFORM, AND SELF-RELIANCE RATHER THAN CASH CROPS FOR EXPORT
- FORGIVING DEBT TO DEVELOPING COUNTRIES AND RESTRICTING CORPORATE PROFIT AND WEALTH TRANSFER FROM POOR TO RICH COUNTRIES
- FAIRLY COMPENSATING DEVELOPING COUNTRIES FOR THE SALE OF THEIR COMMODITIES AND FOR PREVIOUS ACTIVITIES THAT HAVE CONTRIBUTED TO ENVIRONMENTAL DEGRADATION OR THAT HAVE BEEN HARMFUL TO HUMAN HEALTH
- IMPLEMENTING OR MAINTAINING TRADE SANCTIONS ON COUNTRIES WITH HUMAN RIGHTS VIOLATIONS
- DISCONTINUING ALL FOREIGN AID ASSISTANCE TO ALL EXISTING NUCLEAR, FOSSIL FUEL AND LARGE HYDRO-ELECTRIC RELATED PROJECTS; EXCEPT TO ASSIST WITH DECOMMISSIONING OR ENVIRONMENTAL RESTORATION
- AWARDED ENERGY-RELATED FOREIGN AID TO COMMUNITY PROJECTS WHICH PROMOTE USE OF RENEWABLE ENERGY AND EFFICIENT USE OF RESOURCES.
- LIMITING FOREIGN AID TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PROJECTS

- PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN
- CREATING JOBS IN COMMUNITIES BY REINVESTING PROFITS THROUGH REVOLVING COMMUNITY LOANS AND THROUGH USE OF LOCAL RESOURCES;
- ESTABLISH A COMMUNITY INVENTORY OF PRODUCTS NEEDED THAT WOULD ENSURE EVERY CITIZEN A REASONABLE STANDARD OF LIVING AND QUALITY OF LIFE.
- ENCOURAGING CITIZEN OWNERSHIP AND CONTROL OF RESOURCES WITHIN A FRAMEWORK OF OVERARCHING EQUITABLE AND ECOLOGICALLY SOUND PRINCIPLES
- INCREASING THE AMOUNT OF PUBLIC DEBT FINANCED BY THE BANK OF CANADA AT LOW OR NO INTEREST;
- REDUCING YEARLY DEFICITS BY GETTING RID OF SUBSIDIES TO ECOLOGICALLY UNSUSTAINABLE INDUSTRIES (EG. NUCLEAR POWER, PETROCHEMICAL AND HIGH-TECH ARMS MANUFACTURERS);
- ENDING CORPORATE SUBSIDIES AND TAX DEFERRALS, EXCEPT FOR GREEN INDUSTRIES
- CREATING JOINT, CO-OPERATIVE MANAGEMENT THAT WOULD ENSURE ELIMINATION OF OVERLAP BETWEEN PROVINCIAL AND FEDERAL GOVERNMENT DEPARTMENTS IN FORESTRY, AGRICULTURE, EDUCATION, SOCIAL PROGRAMS, HEALTH AND TRANSPORTATION, ETC., WITHOUT LOWERING STANDARDS OF LIVING AND/OR QUALITY OF LIFE.
- PROMOTING A FINANCIAL TRANSACTION TAX (FTT) TREATY AND LEGISLATION WHICH COVERS ALL INTERNATIONAL INVESTMENT AND CURRENCY TRADING. SUCH A TAX COULD FUND THE VARIOUS UNITED NATIONS AND NON-GOVERNMENTAL AID AGENCIES.
- PROMOTING AN INTERNATIONAL TREATY THAT WOULD ENSURE CITIZENS AND GOVERNMENTS THE RIGHT TO KEEP NATURAL AND MONETARY CAPITAL WITHIN THEIR COUNTRIES' BORDERS;
- PROVIDING A LOW OR NO-INTEREST LOAN PROGRAM LEGISLATION. PROGRAM FUNDS WOULD BE DEPOSITED WITH THE NATIONAL BANKS BY CHARTERED BANKS, OTHER FINANCIAL INSTITUTIONS AND CORPORATIONS WITH ASSETS EXCEEDING \$100 MILLION. 5% OF THEIR CAPITAL ASSETS WOULD BE DEPOSITED TO ACT AS LIABILITY INSURANCE, SUBJECT TO LEGAL CONFISCATION AND LOSS OF CORPORATE CHARTER, IN THE EVENT THAT ANY

OF THESE CORPORATIONS CAUSE ECOSYSTEM DAMAGE AND / OR
PREVENTABLE SOCIAL DISLOCATION TO CITIZENS AND OTHER SPECIES.

P

FAIR TRADE NOT FREE TRADE ENVIRONMENT HUMAN RIGHTS AND
REGULATIONS

“to prevent the transfer to other States of any activities and substances that
cause severe environmental degradation or are found to be harmful to

THAT INTERNATIONAL LAW INCLUDING TREATIES, CONVENTIONS, COVENANTS,
GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTIONS PLANS AND
DECLARATION TAKE PRECEDENCE OVER TRADE AGREEMENTS

ABROGATING NAFTA

- LOBBYING STRONGLY FOR ALL States TO SIGN AND RATIFY INTERNATIONAL
AGREEMENTS, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE
COMPLIANCE

- COORDINATING SANCTIONS AGAINST THOSE COUNTRIES WHICH ARE NOT
COMPLYING WITH UNITED NATIONS OBLIGATIONS INCURRED FROM
CONVENTIONS, TREATIES, AND COVENANTS, AND EXPECTATIONS CREATED
THROUGH GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTION PLANS,
AND DECLARATIONS

- ESTABLISHING REGULATIONS TO ALLOW States TO PLACE TARIFFS UPON, OR
REFUSE ENTRY OF, PRODUCTS MADE WITH CHILD AND / OR SLAVE LABOUR,
OR THAT ARE ENVIRONMENTALLY UNSOUND, CULTURALLY INAPPROPRIATE OR
HARMFUL TO HEALTH

- INSISTING THAT NO HAZARDOUS OR TOXIC WASTE BE DUMPED IN THIRD
WORLD COUNTRIES AND/OR RURAL COMMUNITIES, OR ON INDIGENOUS LANDS;
(INCLUDING THE SALE OF CANDU REACTORS AND ALL NUCLEAR TECHNOLOGY)

Q

MILITARY CONVERSION AND TRANSFER FUNDS

TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (General Assembly, 1981)

- REDUCING AND TRANSFERRING THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT
- PROTECTING THE RIGHT TO DEDUCT AND PROVIDING FOR A PROPORTION OF THE TAXES COMPARABLE TO THE PERCENTAGE REPRESENTED BY THE MILITARY BUDGET TO BE PUT INTO A PEACE FUND
- PROTECTING AND PROVIDING FOR CONSCIENTIOUS OBJECTORS
- SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE
- PROMOTING CIVILIAN RULE
- PREVENTING THE CAUSES OF CONFLICT
- ELIMINATING URANIUM MINING AND THUS PREVENTING THE CONTRIBUTION TO NUCLEAR WEAPONS

R

WEAPONS, MILITARY, WEAPONS OF MASS DESTRUCTION AND CONVENTIONAL ARMS

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

- ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL

- PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS
- REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR
- ELIMINATING OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999
- PROHIBITING THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES
- ENSURING THAT THE ENVIRONMENT IS NOT ALTERED FOR MILITARY PURPOSES
- IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS
- BANNING THE TESTING OF NUCLEAR WEAPONS

- RECOGNIZING THE INEXTRICABLY FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY
- BANNING THE PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)
- PREVENTING THE TESTING OF ALL WEAPONS INCLUDING THOSE IN CANADA (NANOOSE BAY AND LOW-FLYING FLIGHTS IN INNU TERRITORY)
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS
- CONVERTING MILITARY MANUFACTURING CAPACITY TO MAKING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRODUCT
- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL
- HALTING LOW-LEVEL FLIGHT TRAINING IN LABRADOR AND END NUCLEAR SUBMARINE TESTING AT NANOOSE BAY, AND THE CIRCULATING AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS ;
- WITHDRAWING FROM MILITARY ORGANIZATIONS SUCH AS NATO, AND ALL OTHER BI- AND MULTILATERAL DEFENCE ARRANGEMENTS WITH INDIVIDUAL COUNTRIES AND REGIONS.

S

HUMAN RIGHTS AND RESPONSIBILITIES

“All human beings are born free and equal in dignity and rights. Everyone is entitled to all the rights and freedoms set forth in the Universal Declaration of Human Rights, without distinction of any kind,”

- PREVENTING GENOCIDE AND ALL ACTIONS THAT COULD POTENTIALLY RESULT IN GENOCIDE
 - PREVENTING DISCRIMINATION ON THE FOLLOWING GROUNDS: RACE, SEX, GENDER IDENTITY, SEXUAL ORIENTATION, TRIBE, CULTURE, COLOUR ETHNICITY, NATIONAL ETHNIC OR SOCIAL ORIGIN, NATIONALITY OF BIRTH, REFUGEE OR IMMIGRANT STATUS, MARITAL STATUS, DIFFERENT FORMS OF THE FAMILY, DISABILITIES, AGE, LANGUAGE, RELIGION OR CONVICTION, POLITICAL OR OTHER OPINION, NATURE OF RESIDENCY OR OTHER STATUS.
 - PREVENTING ALL FORMS OF RACIAL DISCRIMINATION
 - PROMOTING AFFIRMATIVE ACTION
 - PREVENTING ALL FORMS OF DISCRIMINATION AGAINST WOMEN
 - RESPECTING THE LIMITATIONS OF FUNDAMENTAL RELIGIOUS FREEDOMS; CONDEMNATION OF EXTREMISM
 - GUARANTEEING AND EXTENDING HUMAN RIGHTS PROTECTION
 - GUARANTEEING THE RIGHTS OF THE FAMILY AND THE ACCEPTANCE OF ALL FORMS OF THE FAMILY
 - GUARANTEEING THE RIGHTS OF THE CHILD
 - AFFIRMING AND GUARANTEEING THE RIGHTS OF PERSONS WITH DISABILITIES
 - GUARANTEEING THE RIGHTS OF INDIGENOUS PEOPLES
 - AFFIRMATION OF THE RIGHTS OF SELF-DETERMINATION
 - ∞• RESPECTING CULTURAL INTEGRITY AND CULTURAL PROPERTY, AND APPROPRIATENESS, AND RETURNING OR RESTITUTING OF CULTURAL PROPERTY TO THE COUNTRIES OF ORIGIN
 - GUARANTEEING INTELLECTUAL PROPERTY RIGHTS OF INDIGENOUS PEOPLES
- RESOLUTION DISCONTINUING THE DUMPING OF HAZARDOUS DRUGS, CHEMICALS AND CONTRACEPTIVES ON INDIGENOUS LANDS

- CONDEMNING AND HALTING COERCIVE FAMILY PLANNING SERVICES LIKE MASS STERILIZATION OF INDIGENOUS WOMEN
- BANNING OF ALL URANIUM MINING AND NUCLEAR TESTING BE STOPPED ON ALL LAND OF INDIGENOUS PEOPLES
- PLACING THE “S” BE PLACED ON THE EXPRESSION “INDIGENOUS PEOPLE” IN ALL U.N. DOCUMENTS
- ENSURING THAT ALL ACTS OF DISCRIMINATION AGAINST INDIGENOUS WOMEN BE PUNISHED AS A CRIME
- DISALLOWING THE INTELLECTUAL AND CULTURAL RIGHTS TO NOT BE THE DOMAIN OF PRIVATE INTELLECTUAL RIGHTS AND CORPORATE MONOPOLIES TO VIOLATE THESE.
- BANNING THE PATENTING OF ALL LIFE FORMS
- CONDEMNING AND STOPPING THE HUMAN GENETIC DIVERSITY PROJECT, AND THE PATENTING OF GENETIC MATERIAL FROM INDIGENOUS PEOPLES
- REDUCING THE NEED FOR IMMIGRATION BY GUARANTEEING HUMAN RIGHTS, BY PROTECTING AND PRESERVING THE ENVIRONMENT, AND BY PREVENTING CONFLICT AND WAR
- GUARANTEEING THE RIGHTS OF REFUGEES
- GUARANTEEING THE RIGHTS OF MIGRANT WORKERS
- GUARANTEEING THE RIGHTS OF FUTURE GENERATION

T

COMMUNICATION AND EDUCATION

Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. (Agenda 21, Chapter 36.5 | UNCED)

- ENSURING THE RIGHT TO AN EDUCATION WHICH IS EQUITABLE, COLLABORATIVE, AND MEANINGFUL
- STIMULATING AWARENESS OF HUMAN RIGHTS, ENVIRONMENT, AND PEACE ISSUES THROUGH EDUCATION

- STRENGTHENING THE MEDIA AS AN INSTRUMENT OF PUBLIC TRUST
- REQUIRING CORPORATIONS TO PAY INCREASED TAXES, AND REDIRECTING OF CORPORATE FUNDING FOR EDUCATIONAL MATERIALS INTO GENERAL REVENUE THROUGH TAXES
- GUARANTEEING THE RIGHT TO FREE TO EDUCATION AT ALL LEVELS, AND INCREASING RESEARCH GRANTS AT THE UNIVERSITY LEVELS
- PROVIDING FREE UNIVERSITY EDUCATION THROUGH INCOME SUPPLEMENT PLAN TO ASSIST STUDENTS
- ELIMINATING ALL CORPORATE DETERMINING OF PHILOSOPHICAL UNDERPINNINGS OF EDUCATION
- ELIMINATING OF ALL CORPORATE INVOLVEMENT IN THE DIRECTION OF UNIVERSITY
- AVOIDING COMPROMISE THROUGH PROHIBITING INDUSTRY-FUNDED UNIVERSITY RESEARCH
- REQUIRING ARMS LENGTH RESEARCH FROM INDUSTRY TO AVOID CONFLICT OF INTEREST
- REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”

U

ARTS AND CULTURE

- ENSURING AND INCREASING SUPPORT AND FUNDING FOR THE ARTS AND CULTURE THROUGH GENERAL REVENUE
- CLOSING CORPORATE TAX LOOPHOLES, TAX DEFERRALS, AND INCREASE CORPORATE TAXES TO AT LEAST OECD STANDARDS, AND TRANSFERRING FUNDS INTO GENERAL REVENUE
- ENCOURAGING ARTS ORGANIZATIONS TO NOT SEEK FUNDING FROM CORPORATIONS BUT FROM A DEDICATED FUNDING SOURCE IN GENERAL REVENUES
- PROVIDING ADDITIONAL FINANCIAL SUPPORT TO PUBLIC RADIO AND TELEVISION

V

COMPLIANCE, COMPENSATION AND IMPLEMENTATION

“ensure that corporations including transnationals, comply with national laws and codes... applicable international agreements and conventions, including those related to the environment and other relevant laws” (Art 167, UN Conference on Women).

- DISCHARGING OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS AND THROUGH CONVENTIONS, TREATIES, AND COVENANTS
- REQUIRING THE SIGNING AND RATIFYING OF EXISTING UN INSTRUMENTS AND THE ENACTING OF THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT
- FULFILLING EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND CONFERENCE ACTION PLANS, RECOGNIZING THE APPLICABILITY OF THE DOCTRINE OF LEGITIMATE EXPECTATIONS
- ENFORCING GLOBE-WIDE PREVENTION, REDUCTION AND ELIMINATION OF THE ACTIVITIES AND SUBSTANCE THAT CONTRIBUTE TO SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT
- INSTITUTING MANDATORY INTERNATIONAL STANDARDS (MINS) WITH REGULATIONS FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR
- ESTABLISHING AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE
- REQUIRING REGULATIONS AND STANDARDS: FOR GUARANTEEING HUMAN RIGHTS, FOR PROTECTING, PRESERVING AND CONSERVING THE ENVIRONMENT, AND FOR PREVENTING CONFLICT AND WAR
- ENSURING CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES, SOCIAL SECURITY LAWS AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW
- ENSURING CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH THE ENVIRONMENTAL STANDARDS OF THEIR HOME States OR INTERNATIONAL STANDARDS WHICH EVER ARE HIGHER
 - REJECTING ISO 14000 PROCESS OF CORPORATE CONFORMANCE WITH SELF-INITIATED STANDARDS
- PREVENTING THE RELAXING OF STANDARDS OR REGULATIONS TO ATTRACT INDUSTRY

- REVOKING CHARTERS OF CORPORATIONS INCLUDING TRANSNATIONALS THAT HAVE FAILED TO COMPLY WITH INTERNATIONAL LAW THROUGH THEIR VIOLATING HUMAN RIGHTS, THEIR CAUSING ENVIRONMENTAL DEGRADATION, OR THROUGH THEIR CONTRIBUTING TO CONFLICT OR WAR
- PROVIDING COMPENSATION FOR HUMAN RIGHTS VIOLATIONS AND ENVIRONMENT DEGRADATION , AND FOR DESTRUCTION FROM WAR
- ENSURING REHABILITATION AND RESTORATION OF AREAS DEGRADED BY HUMAN ACTIVITIES

W

JUDICIAL REFORM

“that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order” (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

- INSTITUTING JUDICIAL REFORM, INCLUDING THE POSSIBILITY OF DIRECTORS OF COMPANIES BEING CONVICTED FOR CAUSING ENVIRONMENTAL DEGRADATION
- GUARANTEEING, THROUGH A CONSTITUTIONAL AMENDMENT, THE RIGHT OF EVERY CITIZEN TO HOLD CORPORATE OWNERS, OFFICERS AND SHAREHOLDERS LEGALLY LIABLE FOR THEIR CORPORATION'S ENVIRONMENTAL AND SOCIAL ACTIONS
- ENSURING THAT ALL States ARE BOUND BY INTERNATIONAL INSTRUMENTS, AND IN FEDERAL States, THAT INTERNATIONAL LAW CAN BE USED IN THE LOCAL COURT SYSTEMS
- BINDING OF INTERNAL GOVERNMENTS BY INTERNATIONAL PRINCIPLES
- SEARCHING FOR JUSTICE ON REPAIRING OF SOCIAL INJURY, THE RIGHTS OF VICTIMS AND THE RESPONSIBILITIES OF THE OFFENDER TO BE ACCOUNTABLE FOR THEIR ACTIONS
- CHANNELING YOUNG OFFENDERS AND CRIMINALS INTO ALTERNATIVE PROGRAMS

- CONTROLLING AND SUPPORTING NON-VIOLENT OFFENDERS BY SENDING THEM DIRECTLY TO HALFWAY HOUSES INSTEAD OF PENITENTIARIES.
- DECRIMINALIZING THE POSSESSION OF MARIJUANA
- PROTECTING THE VICTIMS, FAMILY, NEIGHBOURS AND COMMUNITY FIRST IN THE CASE OF VIOLENT CRIME AND REHABILITATING THOSE WHO CAN BE AND PROTECTING THE COMMUNITY PERMANENTLY FROM THOSE WHO CANNOT BE REHABILITATED
- ESTABLISHING PILOT PROJECTS FOR SENTENCING CIRCLES, IN WHICH MEMBERS OF THE COMMUNITY ARE INVOLVED IN METING OUT APPROPRIATE PUNISHMENTS, AS A COMPLEMENT TO THE JUDGE AND JURY SYSTEM.
- CONDEMNING OF CRUEL AND INHUMAN PUNISHMENT SUCH AS CAPITAL PUNISHMENT
- PREVENTING OF CRIME THROUGH SOCIAL PROGRAMS AS AGREED TO IN GENERAL ASSEMBLY RESOLUTION "PREVENTION OF CRIME THROUGH SOCIAL PROGRAMS"

X

ELECTORAL REFORM: PROPORTIONAL REPRESENTATION

- ESTABLISHING PROPORTIONAL REPRESENTATION
- ENCOURAGE ACTIVE PARTICIPATION OF LOW-INCOME CITIZENS IN THE POLITICAL PROCESS BY MAKING POLITICAL TAX DONATIONS BY PEOPLE WITH NO TAXABLE INCOME ELIGIBLE FOR A TAX

Y

PRINCIPLE-BASED DECISION MAKING

- IMPLEMENTING PRINCIPLE BASED DECISION MAKING MOVING FROM VESTED INTEREST DECISION-MAKING TO PRINCIPLE-BASED DECISION-MAKING
- *• ENSURING GENUINE COMMUNITY PARTICIPATION AND INVOLVEMENT WITHIN A FRAMEWORK OF OVER-ARCHING PRINCIPLES

DRAWN FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS

Z

PUBLIC ACCESS TO INFORMATION

Providing full, timely and comprehensible information, without undue financial burden to the applicant; 133(c) UNCED

• ENDORSING AND PROVIDING FOR A FREEDOM OF INFORMATION AND ACCESS TO INFORMATION ACT

- Taking something growing on the land, for example, timber, turf or grass. This includes "taking" by animals, for example, a right to graze sheep or pasture cattle.
- The killing of wildlife living on the land (i.e. rights of hunting and fishing) and access to forests and oil fields

Much of the land is Crown Land, or privately owned land. Under the profit a prendre there is a requirement to obtain permission of the owner; whether government or private land owner.

Also, much of the land is indigenous and permission is usually given by elected bands under the Indian Act, usually with the provision of funds or partnerships, as a form of enticement.

CONCLUSION

Until the above systemic constraints that undermine progressive and traditional voices are overcome the following call in the preamble of Agenda 21 will not be fulfilled:

Preamble. 1.1. Humanity stands at a defining moment in history. We are confronted with the perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy, and the continuing deterioration of the ecosystems on which we depend for our well-being.

() THAT in 1997 on February 27

I was invited to attend a special meeting on graduate program in interdisciplinary studies at the University of Victoria. At this meeting a researcher who had a grant through the excellence program lauded her arrangement with a chemical corporation in her research on how to prevent the yellowing of paper. I rudely asked if that had been a burning academic concern of hers [I had often complained about corporate-directed academic

research, and thought that corporations should be prevented from determining the nature of university research.]

() THAT I in 1997 on February 28, I started working on different international campaigns with Francis Boyle

RESUME OF FRANCIS A. BOYLE

EDUCATION

University of Chicago, A.B. (1971) in Political Science. One of seven students elected to Phi Beta Kappa as a Junior; winner as a Junior of the Sigma Xi Certificate of Merit and Prize in Biology for The Differential Effects of Three Simulated Systems of Inbreeding on the Frequency of the t(w) Allele in Wild Populations of *Mus Musculus* on nomination of Richard C. Lewontin; graduated in three years.

Harvard Law School, J.D. Magna Cum Laude (1976). Third year paper designated "Honor Paper" by Richard R. Baxter, and deposited in H.L.S. Library. A+'s in Federal Income Taxation (Surrey), Soviet Economic Law and Law of Foreign Trade (Berman), United Nations Law (Sohn), Sociology of Law (Fuller), and Jurisprudence (Unger).

Associate, Harvard University Center for International Affairs (1976-78) (elected to the Executive Committee for 1977-78).

Harvard Graduate School of Arts and Sciences, Department of Government, A.M. (1978) and Ph.D. (1983) in Political Science. Awarded full Harvard Fellowship for all four years of residence. Offered Russian History (Keenan), Soviet Politics (Ulam), Modern Political Philosophy (Shklar), and International Relations (Hoffmann) on Ph.D. General Examination. Dissertation entitled Realism, Positivism, Functionalism and International Law under the supervision of Stanley Hoffmann.

TEACHING

Teaching Fellow, Harvard University Department of Government (1976-78).

Assistant Professor (1978-81), Associate Professor with tenure (1981-84), full Professor (from 1984), University of Illinois College of Law in Champaign Professor, U.S.S.R. Summer University for Jurists, People's Friendship

University, Moscow (August 1989) (only non-Soviet Professor).

PRACTICE

Attorney, Bingham, Dana, & Gould, in Boston (1977-78) (tax and international tax). See *Hart v. U.S.*, 585 F.2d 1025 (Ct. Cl. 1978) (en banc); *Globe v. U.S.*, 620 F.2d 841 (Ct. Cl. 1980).

Attorney for Plaintiffs, *Ali Aidi v. Yaron*, 672 F. Supp. 516 (D.D.C. 1987) (Sabra-Shatilla Massacre).

Legal Adviser to the Palestine Liberation Organization on the Creation of the State of Palestine (1987-89).

Legal Adviser to the Palestinian Delegation to the Middle East Peace Negotiations (1991-93).

Legal Adviser to the Republic of Lithuania (1991-93).

Counsel to Libya, in Cases Concerning Questions of Interpretation And Application of the 1971 Montreal Convention Arising from The Aerial Incident at Lockerbie (*Libya v. United Kingdom*) (*Libya v. United States*). See Orders of 14 April 1992, 1992 I.C.J. Rep. at 3 and 114; 31 Int'l L. Mats. 662 (1992).

General Agent for the Republic of Bosnia and Herzegovina with Extraordinary and Plenipotentiary Powers Before the International Court

of Justice by Appointment of President Alija Izetbegovic (March 19, 1993 to January 12, 1994). See Application of the Convention on the Prevention and Punishment of the Crime of Genocide (Bosnia and Herzegovina v. Yugoslavia (Serbia and Montenegro)), Order of Provisional Measures of 8 April 1993, 1993 I.C.J. Rep. at 3; and Order of Provisional Measures of 13 September 1993, 1993 I.C.J. Rep. at 325. See also Statement of Intention by the Republic of Bosnia and Herzegovina to Institute Legal Proceedings Against the United Kingdom before the International Court of Justice, 15 November 1993.

Legal Adviser to President Alija Izetbegovic, Foreign Minister Haris Silajdzik, and the Members of the Bosnian Presidency during the Owen-Stoltenberg Negotiations in Geneva (1993)

PUBLICATIONS

World Politics and International Law (Duke University Press: 1985; 2d prtg. 1987). Designated "An Outstanding Academic Book of 1985-86" in the field of Political Science by Choice Magazine, published by the Association of College and Research Libraries, American Library Association.

Defending Civil Resistance Under International Law (Transnational Publishers: 1987). The Center for Energy Research published a special paperback edition in 1988.

The Future of International Law and American Foreign Policy (Transnational Publishers: 1989). The Islamic World Studies Center in Malta published an Arabic language edition in 1993. Progress Publishers, Institute of State and Law, Moscow has translated this book into Russian for publication.

() THAT in 1997 on February 27, I attended a presentation

meeting in the chambers. I was invited to attend a special meeting on graduate program in interdisciplinary studies at the University. At this meeting a researcher who had a grant through the excellence program lauded her arrangement with a chemical corporation in her research on how to prevent the yellowing of paper. I asked if this had been a burning research issue of hers for years, and raised the issue of corporations determining the nature of university research.

MARCH MARCH 1997

() THAT in 1997, in March, I wrote and circulated NECESSARY ECOLOGICAL ,PEACEFUL SOCIO-POLITICAL CHANGE THROUGH POLITICAL WILL

EXHIBIT:

NECESSARY ECOLOGICAL ,PEACEFUL SOCIO-POLITICAL CHANGE THROUGH POLITICAL WILL

Joan Russow PhD

I am the International Affairs critic on the federal Green "shadow cabinet" and I am thinking for the leadership of the Federal Green Party. I have spent years trying to bring about change at the community level by applying international principles from international instruments agreed to by member States of the United Nations.

Corporations have been allowed steadily increasing control over our lives. This increased control is the outcome of many factors but the greatest factor is the increased influence of the corporations on the major political parties and governments throughout the "developed" world. The increased influence of corporations has grown to the point where corporations seem to be stronger than governments. In recent Canadian history, the Liberal were elected on a platform to dismantle Free Trade and the GST.

Increased corporate influence has even reached the United Nations. With the advent of the U.N. Multilateral Agreement on Investments, which will enshrine corporate rights and privileges, the international Green movement has to be more vigilant than ever and become the political voice of those that strive for the necessary ecological peaceful socio-political change.

IS THE GREEN PARTY READY TO WELCOME TRANSNATIONAL CORPORATIONS INTO ITS INNER CIRCLE?

More and more governments and public institutions are devolving themselves of their responsibilities and handing over control to the corporate sector. More and more international non-government organizations or “other groups” have become so dependent on grants from large U.S. corporate foundations that they have become little more than industry front groups. Many traditional International NGO’s have more and more industry involvement on the Boards of Directors.

If we are going to be able to make the decisions we want at the Community level, we will have to be fully aware of the implications of what is happening internationally.

URGENCY OF THE GLOBAL SITUATION

Twenty five years ago in 1972, the Science Council of Canada recognized the urgency of the Global situation in its publication “Its not too late yet”

Five years ago, Canada and other member States of the United Nations recognized the urgency of the situation; “Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

Subsequently, at the World Conference on Human Rights, global concern was expressed in the following way:

The gross and systematic violations and situations constitute serious obstacles to the full enjoyment of all human rights; CONTINUE to occur in different parts of the world. Such violations and obstacles included: (as well as torture and cruelty) inhuman and degrading treatment and punishment, summary and arbitrary executions, disappearances, arbitrary detentions, all forms of racism racial discrimination and apartheid, foreign occupation and alien domination, xenophobia, poverty, hunger and other denials of economic, social and cultural rights, religious intolerance, terrorism, discrimination against women and lack of the rule of law (C. 30 World Conference on human rights.

And in addition, the World Conference on Human Rights expressed its dismay at massive violations of human rights, especially in the form of genocide, ethnic cleansing” and

systematic rape of women in war situations, creating mass exodus of refugees and displaced persons (s. 28 World Conference on Human Rights).

CORRESPONDENCE BETWEEN GREEN PARTY POLICY AND POLICY REFLECTED IN INTERNATIONAL INSTRUMENTS

The policies and principles of the Green Party of Canada are very closely linked with significant policies that have been agreed to internationally, through the Charter, through conventions, treaties, and covenants, and through Declarations, General Assembly Resolutions, and Conference Action Plans.

For example, for over fifty years, through international agreements, the member States of the United Nations have undertaken: (i) to promote and fully guarantee respect for human rights, including the rights of women (ii) to ensure the preservation and protection of the environment (iii) to create a global structure that respects the rule of law (iv) to achieve a state of peace, justice and security and (v) to enable socially equitable and environmentally sound development.

If these years of obligations had been discharged, and if these years of expectations had been fulfilled, respect for human rights might have been guaranteed, preservation and protection of the environment might have been ensured, threats to peace might have been prevented and removed, disarmament achieved and socially equitable and environmentally sound development might have been enabled.

Through international agreements such as the legally binding International Covenant on Civil and Political Rights and the legally binding International Covenant on Economic, Social and Cultural Rights, nation States, including Canada, have undertaken:

(i) to guarantee human rights, including the right to be free from discrimination, the right to housing, the right to be free from hunger, the right to social security

(ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the Protection of Cultural and Natural Heritage, 1972) ;

(iii) to eliminate weapons of mass destruction (United Nations Conference on Humans and Environment UNCHE, 1972)

(iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the benefits of humanity, UN General Assembly Resolution, 1975);

(v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981);

- (vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981) and to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981);
- (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982);
- (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982)
- (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)
- (x) to demand that policies of States be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984)
- (xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983)
- (xii) to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992)
- (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992)
- (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration)
- xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity)
- (xvi) to preserve carbon sinks (Art. 4 1 d Framework Convention on Climate Change, 1992);
- (xvii) to ensure that corporations including transnationals comply with national codes, social security measures, and with international law including, international environmental law (Art. 148, Platform of Action, UN Conference on Women, 1995); and from the Habitat II Agenda, 1996 : (xviii) to reduce the ecological footprint (Art. 27 b)
- (xix) to protect fragile ecosystems and environmentally vulnerable areas (27e)
- xx to prevent anthropogenic disasters (27 i)

(xxi) to prevent environmental damage through knowledge of eco-cycles (Art. 135) and so forth.

SYSTEMIC CONSTRAINTS PREVENTING THE NECESSARY ECOLOGICAL, AND SOCIO- POLITICAL PEACEFUL CHANGE: TO PREVENT THE GROWTH AND CONSUMPTION MODEL OF CAPITALISM

At The United Nations Conference on Environment and Development (UNCED) there was a condemnation of the unsustainable pattern of consumption and production.

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

The perpetuation of this model of consumption based on economic growth is the fundamental systemic constraint preventing the necessary change. The lack of political will to do what is necessary. Although, in international conferences, at least since 1992, States have decried the current over-consumptive model of development. Yet, as a result of institutional collusion between governments and industry, no governments have been advocating a no-growth economic policy. In the recent B.C. voice of women publications, there was a citation from the arms industry describing Turkey as being the next growth market. Although some parties criticize corporations, they are not willing to challenge the unions that are willing to demand the continuance of jobs in the military and arms trade or in environmentally degrading activities. The unions instead should advocate the principle of fair and just transition.

Some of the systemic constraints preventing change contribute to the weakening of the resolve to demand change could be the following:

- (i) Institutional collusion between governments and the corporate sector
- (ii) wooing adversaries such as environmentalists with corporate funding
- (iii) environmental critics who participate in the round tables are often seduced by the process and agree to the decision achieved through consensus. In addition, this happens when environmentalists work too closely with industry in a partnership arrangement. Industry is only too happy to co-opt the unsuspecting.
- (iv) too many people who should be criticizing corporations are working with them and being used to justify the CONTINUED socially inequitable and environmentally unsound practices. and they back off from proposing mandatory, regulatory, measures to bring about change.
- (v) too many people rationalize self-interest

For example, unions continually misuse their legitimate right to work to justify working in the arms industry, the uranium mining industry, the toxic, hazardous, and atomic product and waste industry, the ozone depleting, forest extraction etc.

Another example comes from individuals who purport to be concerned about change but are willing to work with industry to bring about change from “within”. At a recent meeting of the World Conservation Union (IUCN), Sir Martin Holgate, the former Secretary General of this organization, was asked about his involvement with a dam project in India where hundreds of thousands of people had been displaced. There was a hush over the 2000 members in attendance waiting for denial. Rather than deny the veiled accusation he replied that surely it is better to have an environmentalist monitoring the project. Unfortunately, his working for the company engaged in the project only served to endorse the project.

(vi) too many use the slippery slope argument which argues for the impossibility to distinguish between gross differences because it is impossible to distinguish between minor differences

For example, when activists raise a concern about the need to condemn corporations for destructive practices, often, to counteract the argument, corporate supporters will use the “...are we not all part of the problem?” argument:

Food you bought at the store was driven there on a GM truck. So are you going to stop eating food bought at the store? Do you own a car? Is your house insulation rated R 2000; or even better yet is it disconnected from all power, electricity, gas, and sewer like the house Greg Allen built? Are you a vegan only? What financial institution do you deal with? If it is a bank you're indirectly investing in dictatorships somewhere. Do you ever use styrofoam? Is the coffee you drink only picked by collectives of workers in democratically elected cooperatives? Do you even know? (Jim Harris, personal communication during the 1997 leadership contest)

Taken to its ultimate conclusion, it suggests there is a difference in degree between the action of individuals who would want to find alternatives and the corporate sector that has prevented the development of alternatives.

SOLUTIONS AND MEASURES FOR BRINGING ABOUT THE NECESSARY CHANGE

The Global Community should concur with the UN Program of Action (International Conference on Population and Development) that to address the urgency “ none of the actions required -nor all of them combined - is expensive in the context of ... military expenditures. A few would require little or no additional financial resources in that they involve changes in lifestyles, social norms or government policies that can be largely brought about and sustained through greater citizen action and political leadership (Programme of Action of the United Nations International Conference on Population and Development, 1994)

FUNDING

A program of proactive and retroactive sources of funding shall be established. This would involve the immediate reduction of the military by 50%

Should focus on Canadian budget

budget from the current 800 billion to only include what would be required to clean up previous environmental degradation and to pay compensation to communities and individuals that have been impacted by military activities. For additional funding, the global community shall also seek compensation from industries, in particular transnationals for years of environmental degradation and damage from arms manufacturers and for years of human rights violations.

The international community, including multilateral financial institutions, has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical-regulations (MINS) based on principles established over the past 50 years in international instruments. In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, States undertook to ensure that all corporations, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.”. In addition the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which CONTINUE to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best Environmentally Sound Traditions, that national efforts to foster and achieve the objectives of socially equitable and environmentally sound development will be achieved.

Green Party policies are visionary ideas which, in the future, become the norms of the community.

(I wrote a statement announcing that I was thinking of running for the leadership of the federal Green Party because I was concerned about a declared leadership candidate Jim Harris' corporate sympathetic position and about the future direction of the Green Party. In addition, given that I only recently become involved with the Canadian Green Party, I felt that I was not the best person to challenge him. I did, however, really believe in the potential of the international network of Green Parties.

() THAT in 1997, on March 3, I wrote to Shelly about my concerns re Jim Harris

EXHIBIT

Hi Shelly

I enjoyed seeing you again in Toronto. I am trying to follow-up a few suggestions from the meeting in Toronto. 1. The potential discriminatory nature of the required \$1000 deposit. I have been trying to find out what the Green Party has done before on this issue. I have contacted Elections Canada and was told that there has not been an official challenge. I would like to talk to the lawyer Mechel Selkin, Miriam Hawkins friend, about this issue but I don't have his phone number or e-mail address.

2. I gave a talk at the University on Wednesday on the need to expose corporate funding at the university; at a meeting organized by the University Public Interest Research Group. When I returned home, I received an e-mail about what Jim Harris has on his website. Numerous glowing comments from his corporate contacts.

He also was involved with an organization called the Stephen Covey institute, that promoted the "seven habits" and Jim was conducting workshops at General motors on this. Check out the internet for info on this. Covey is from Utah and has been described as a religious Robbins.

I have spent so many years of my life addressing intolerance in religion (I worked with the civil liberties in 1988 to get mandatory bible reading out of the school system in B.C.).

I have also taken a strong stand against the corporate sector calling for regulations, enforcement, revoking of charters, compensation, raising taxes, eliminating tax deferrals. There are also well meaning people that work with industry condemning the activists for always being divisive (we/they format). Unfortunately those that embrace industry and work for change from within undermine the stronger command and control position of the activists.

I would appreciate your comments on these matters.

I think one criterion for running for the leadership of the Green Party should be to reveal any past or present activities that could in some way be detrimental to the party. We are required to submit a bio but bios are selective.

Joan

() THAT in 1997 on March 3, I made a presentation to the CRD on the environment principle based decision making and on habitat ii

() THAT in 1997 on march 5 I gave a presentation on climate change at Pearson College

EXHIBIT

The '97 Federal Election

THEME: "MISPLACED PRIORITIES"

- The Canadian government spends more than 10.3 billion a year on the military. The General Assembly passed a resolution in 1981 undertaking to reduce the military budget

which was then 50% of what it is now, and to transfer the savings into social programs. In Canada, five billion should be transferred immediately into transfer payments to the provinces to provide for education, health and social services and environment.

OTHER MEASURES

1. that licenses of corporations that violate human rights, that cause environmental degradation, that contribute to conflict and war, and that deny socially equitable and environmentally unsound development, shall be revoked. (see the work of Richard Grossman "Taking Care of Business").
2. that compensation and reparation be paid by corporations to countries to indigenous peoples, and to disenfranchised people whose land has been degraded, whose rights have been violated and whose lives have been destroyed through corporate support for oppressive regimes. It is not so much debt forgiveness but rather compensation and reparation for the devastation caused by the over-consumptive models of development imposed on developing countries that is necessary.
3. that corporate taxes be considerably raised and immediately transferred into social programs such as education, health and social security.
4. that all subsidies to corporate activity that perpetuate social inequity and environmentally unsound development be immediately disCONTINUED. In addition, the 10.4 billion subsidy to the military should be reduced to at least half and the savings transferred into transfer payments for health, education, social programs and environmentally sound employment generation.
5. that all deferred taxes for corporate activities that have perpetuated socially inequitable and environmentally unsound development be collected immediately.
6. that all multi-stakeholder round tables extolling a decision making process that glorifies conflict of interest be disCONTINUED. These tables, in practice, invite corporate interests to determine through consensus policies that directly affect them and must be stopped.
7. that all attempts by industry through the international standardization organization's (ISO) 14,000 to move away from "command and control" and regulations be disallowed.
8. that in order to ensure that corporations comply, State governments must undertake to sign and ratify agreements that they have not yet signed and ratified which they have earlier promised to sign and ratify and enact the legislation to ensure compliance and enforcement.
9. that all corporate intrusion into education at all levels be ended
10. that corporations no longer be allowed to donate funds or goods and services in kind to federal Canadian political parties. In addition, all corporate connections of candidates including those for the leadership of parties, be revealed.

11 that an International Court of Compliance be instituted, where citizens could take evidence of State and corporate non-compliance

() THAT in 1997, I wrote a letter to Lucy, who was the chair of the Green Party development of the platform for the 1997 election

EXHIBIT

Dear Lucy

I have just found out that the draft platform has been circulated through the newsletter. I understand your concern about the importance of circulating a draft among the members who are not on the ListServ. I think, however, that you should have sent them evidence of the debate and dialogue that was occurring on the ListServ, as well as all the material submitted. Is it fair to those not on e-mail to only receive a screened version of the internet discussion? They will have no idea the range of suggestions made and the wealth of material excluded? Is it also fair to those who participated on the ListServ that many of their ideas and concerns have been excluded?

Although there are some good points in the present draft, it is grounded in "reality", and lacks courage and vision.

Also I am sorry that my name was on the document when, by your own admission, you did not include any of the material that I sent you.

I was talking with Andy Shadrack last week about all the material that I have been working on and I told him that I would be sending him a summary for his consideration. He did not mention that the draft platform already being printed and circulated.

Joan Russow

RESPONSE TO DRAFT PLATFORM

I HAVE BEEN PREPARING A 200 PAGE CHARTER OF RESOLUTIONS WITH THE PREAMBLE FROM INTERNATIONAL INSTRUMENTS AND THE OPERATIVE CLAUSES FROM A WIDE RANGE OF NGO SOURCES. AS WELL FROM GREEN PARTY RESOLUTIONS AND STATEMENTS MADE ON THE ListServ.

AT ONE TIME I SUBMITTED A SUMMARY WITH A COMPREHENSIVE SET OF RESOLUTIONS FOR CONSIDERATION AS PART OF THE GREEN PARTY PLATFORM. Date: Mon, 17 Feb 1997 17:14:01 -0500 (EST)

From: Lucy Segatti <segatti@web.net

To: J E RUSSOW <jrussow@UVic.CA

Subject: Re: The Green book

At 12:13 PM 2/17/97 -0800, you wrote:

Dear Lucy

What do you think of calling the platform the "green book". My computer was down so David sent a rough draft of my comments to you. I thought I would send you an attachment of the document. I have made some changes and from the last one.

I would like to see about a 25 page booklet with cartoons.

I THINK THAT WE NEED AN INCLUSIVE "GREEN BOOK" OF AS MANY PAGES AS IS NECESSARY TO CONVEY THE ACTIONS THAT NEED TO BE TAKEN TO ACHIEVE A SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND SOCIETY

in this response to draft platform, I have incorporated the strengths of the draft platform document within a more comprehensive and more radical framework.

() **THAT in 1997**, I attended the Canadian Abolition 2000 meeting in Ottawa. They do not link civil nuclear energy to their proposal although they call for moving towards renewable energy.

When I was at the meeting, I suggested that civil nuclear energy should be included as well as the testing in Nanoose and the circulation and berthing of nuclear powered and nuclear arms-capable vessels.

sponsored by the Canadian Voice of Women in Toronto **Documentation:** My following Culture of Peace was printed up for circulation:

EXHIBIT

to promote the culture of peace and not the cult of war there must be the fulfillment of international precedents calling for the reduction of the global military budget; such as the following:

Throughout the years, through international agreements, member States of the United Nations have recognized that the military budget has been a waste and misuse of resources. Unfortunately, institutional memory is either short or member States ignore precedents.

In 1976, at Habitat I, member States of the United Nations affirmed the following in relation to the military budget:

"The waste and misuse of resources in war and armaments should be prevented. All countries should make a firm commitment to promote general and complete disarmament under strict and effective international control, in particular in the field of nuclear disarmament. Part of the resources thus released should be utilized so as to achieve a

better quality of life for humanity and particularly the peoples of developing countries" (II,12, Habitat 1).

In 1981, in the General Assembly resolution entitled Resolution on the reduction of the military budget, the member States

(i) reaffirmed "the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget";

(ii) recognized that "the military budget constitutes a heavy burden for the economies of all nations, and has extremely harmful consequences on international peace and security";

(iii) reiterated the appeal "to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries" (Resolution on the Reduction of Military budgets, 1981).

These appeals were further reinforced in a 1983 General Assembly Resolution on the Relationship between Disarmament and Development, that curbing the arms build-up would make it possible to release additional resources for use in economic and social development, particularly for the benefit of the developing countries." Also in the 1993 resolution, member States considered that "the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order."

Also in 1992, all member States recognized that "Warfare is inherently destructive of sustainable development" (Rio Declarations. Principle 24, UNCED, 1992), and in Chapter 33, of Agenda 21, member States of the United Nations made a commitment to the "the reallocation of resources presently committed to military purposes" (33.16e)

In 1994, in adopting the statement from the International Conference on Population and Development, the member States of the United Nations concurred that the attainment of quantitative and qualitative goals of the present Programme of Action clearly require additional resources, some of which could become available from a reordering of priorities at the individual, national and international levels. However, none of the actions required, nor all of them combined is expensive in the context of either current global development or military expenditures." (Article 1.19)

In 1995, similarly, States in adopting the statement from the Social Development Summit, endorsed the calling for "the reallocation of military spending to ensure a greater pocket of resources to expand public services". Again, in 1995, member States of the United

Nations reconfirmed these commitments by adopting the Platform of Action at the UN conference on Women, Equality, Development and Peace. In the Platform of Action, States have made a commitment to maintain "peace and security at the global, regional and local levels, together with the prevention of policies of aggression ... and the resolution of armed conflict" (Art. 14) and to reduce "...military expenditures" (Art. 15), States have also made a commitment to the "prevention and resolution of conflicts" (Art.15) and to "increase and hasten, ... the conversion of military resources and related industries to development and peaceful purposes" (145a).

In the 1984 General Assembly Resolution entitled the Right of Peoples to Peace, there were "Appeals to all States and international organizations to do their utmost to assist in implementing the right of peoples to peace through the adoption of ...measures at both the national and the international level." (4. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984)

It is time for the member States of the United Nations to give substance to the years of commitment to substantially reduce the military budget.

Currently, the Global Community is now spending 1 trillion per year on the military budget at a time when many basic and fundamental rights have not been fulfilled: the right to affordable and safe housing; the right to unadulterated food (pesticide-free and genetically engineered-free food); the right to safe drinking water; the right to a safe environment; the right to universally accessible, not for profit health care; and the right to free and accessible education.

COMMENT

At one point of the meeting before I gave my presentation. Two Liberal MPs spoke about how concerned they were about the culture of peace. Dorothy Goldman alluded to various practices that the Liberal government has been engaged in that have not contributed to peace. I expanded further and discussed the sale of CANDU reactors and mining of uranium. The MPs suggested there was little that they could do about it. I then said if they really were concerned about peace they should be prepared to resign. Even though the Voice of Women has been strong opponent of the sale of CANDU reactors and the mining of uranium they were uncomfortable with my challenging the MPs. Joan Grant Cummings defended me. When I spoke, I referred to a new systemic constraint? ... The excessive politesse constraint being unwilling to be forthright and challenge authority.

MARCH MARCH 1997

Canadian Government's strategy for undermining international law, environmental groups and indigenous hereditary chiefs through enticements

Canadian Government's strategy for undermining international law, environmental groups and indigenous hereditary chiefs through enticements

By Joan Russow PhD

Global Compliance Project

In 1982 an U.N. COMMUNIQUE was circulated to all member States of the United Nations. Asking States to report on the mechanism for discharging the obligation under a ratified treaty Canada responded in a misleading way;

Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted [cite references, including 1982 document circulated by External Affairs "Canadian Reply to Questionnaire on Parliaments and the Treaty-making power"[Canada, however fails to take the treaty to parliament to enact the necessary legislation to make it into statutory law]

The full context of this statement comes from the 1982 "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power". It is an External Affairs Department communiqué which was put together in 1982 to assist the External Affairs Officers in explaining the division of powers and constitutional conventions in Canada in relation to International obligations: in the event the event that there is discrepancy between statutory legislation and the convention there will be implementing legislation

Many international agreements require legislation to make them effective in Canadian domestic law. The legislation may be either federal or provincial or a combination of both in fields of shared jurisdiction. Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted but if there is a discrepancy between statutory and the convention, there will be implementing legislation.

Canada signs and ratifies many international treaties and all that is required is agreement by the Prime Minister but there is no requirement to take the treaty to parliament so that there can be statutory law to require implementation of the convention.

Conventions such as UNFCCC and CBD and the UN Convention on the Protection of Cultural and Natural Heritage have been signed and ratified, but there is no statutory because they have not been brought to parliament.

In the case of the UN Law of the Seas UNCLOS, Canada has signed but not ratified it; there have been two opposing Canadian legal opinions about ratification of UNCLOS: One by Ted McDorman, that Canada has got everything it wants under the Convention and should not ratify the convention and assume the obligation through ratification and

the other by Alan Beesly that Canada has got everything it wants so it should ratify it and accept the obligations of ratification ;Canada chose the former.

The BC government, at the cabinet level, endorsed both the UNFCCC and the CBD. (personal communication through freedom of information Act). Yet, in the court in British Columbia, the judge decided that all the international law referred in the leave to appeal case is not judicable in the courts of British Columbia (1994 Leave to appeal, case 1984} .

It should be noted that Canada has the greatest per capita contribution to green house gas emissions.

ENVIRONMENTAL NETWORKS

To get funding the environmental groups from provincial federal networks, there is a condition that that no statement can be made on behalf of the networks.

CHARITABLE STATUS

The obtaining of charitable status also has conditional funding; the condition is that they cannot be political or they will lose their status as happened to Greenpeace.

PROFIT A PRENDRE

Profit a prendre is the right to take something from another's land (the servient land) that is both:

- Capable of ownership; and
- A product of nature.

Typical profits à prendre include:

- The removal of part of the land itself; for example, soil or minerals.
- Taking something growing on the land, for example, timber, turf or grass. This includes "taking" by animals, for example, a right to graze sheep or pasture cattle.
- The killing of wildlife living on the land, for example, rights of hunting and fishing.
- Oil forest
- Much of the land is crown land , or private land under the profit a prendre there is a requirement to obtain permission of the owner
- either the government or the private land owner

Also, much of the land is also indigenous and permission is usually given by elected bands under the Indian Act usually with the provision of funds or partnerships as a form of enticement

ENVIRONMENTAL NETWORKS

To get funding the environmental groups from provincial federal networks, there is a condition that that no statement can be made on behalf of the networks

CHARITABLE STATUS

The obtaining of charitable status also has conditional funding; the condition is that they cannot be political or they will lose their status as happened to Greenpeace.

CONCLUSION

Until the above systemic constraints that undermine progressive and traditional voices, the following call in the preamble of Agenda 21 will not be fulfilled:

Preamble 1.1., Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy, and the continuing deterioration of the ecosystems on which we depend for our well-being.

-MARCH-APRIL PREP COM IN NEW YORK

() THAT in 1997 in March, I wrote:“A MODEST PROPOSAL”

EXHIBIT:

()1997, I attended NGO meetings at the Prep Com for Rio +5. I worked on a number of proposals

COMMENT

I attended the NGO meeting on Climate Change. Delong, the Chair of the Energy caucus stated that what was needed to address the issue of climate change was at least a 40% reduction of Greenhouse gas emission, and that currently in the NGO documents the NGOS were calling for a 20% reduction which was less than that called for by the low-lying States. I proposed that if that is what was needed then we should call for at least a 40% reduction. After I spoke, someone else said that we would lose credibility if we called for as much as 40%, and should maintain our position of 20%, [I found out I receives funding from BP] others said 25%, and others supported 40%. It was finally agreed that we would call for at least 25%. Several coalition members who had not spoken during the meeting, came up to me after and said that they agreed with me. I asked them why they did not speak up during the meeting. When I left the meeting, the document contained the expression at least 25%. However, when I saw the finish NGO submission 20% had been the percentage submitted.

Similarly, when we were informed about the proposed MAI, I proposed that there be a strong statement in the NGO lobbying document urging the U.N. to call upon the OECD to cease negotiations of the MAI because the trade agreement would undermine human rights including labour rights, environmental protection, and social justice. My statement was agreed to by the NGO all candidates meeting drafting group, and when I saw the final lobbying document, the MAI was not mentioned. I was, however, placed on an Anti-MAI list and invited to attend the OECD meeting along with three other NGO members from Canada: Maud Barlow, Elizabeth May, and Michell Svenchuk?

The Earth Summit Rio +5 is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

Suggested actions for Earth Summit II in June, 1997

1. (a) On June 23, 1997 at the fifth anniversary of the United Nations conference on Environment and Development, we the member States of the United Nations undertake to sign and ratify international agreements that we have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition we undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

- Establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

1(b) In addition, we reaffirm the undertaking in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

- revoke licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

1 (c) Further, we undertake to establish an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

2. (a) On June 24, 1997. we the member States of the United Nations, undertake to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement.

We undertake immediately, to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations.

Currently, the global community spends 850 billion on the military. It should be noted that in 1981, there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

3. On June 25 1997. we the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the

developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

Through international agreements nation States have undertaken (i) to guarantee human rights including the right to be free from discrimination, the right to shelter, the right to be free from hunger, the right to social security (international human rights instruments); (ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the protection of Cultural and Natural Heritage, 1972) ; (iii) to eliminate weapons of mass destruction (UNCHE, 1972); (iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution,1975); (v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981); (vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets, 1981) and to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981); (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982); (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982); (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984); (x) to demand that policies of States be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984); (xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983);(xii) to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992); (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992); (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration); (xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity); (xvi) to preserve carbon sinks (Art. 4 1 d

Framework Convention on Climate Change, 1992); and from the Habitat II Agenda: (xvii) to reduce the ecological footprint (Art. 27 b); (ix) to protect fragile ecosystems and environmentally vulnerable areas (27e); to prevent anthropogenic disasters (27 i); (xx) to prevent environmental damage through knowledge of eco-cycles (Art. 135). and so forth.

A key concept that has significant policy implications is that of international customary law. Simply put, where a principle of international law has been a long standing part of that law, it may be held to be a part of international customary law and deemed applicable as part of national law. For example, the principle of inter-generational equity (i.e. the rights of future generations to a safe environment) may be argued as falling within international customary law since it is found in a number of international documents beginning with the UN Conference on Humans and the Environment (UNCHE), 1972, including in the Convention on the Protection of Cultural and Natural Heritage (1972) through the World Charter of Nature (1982) to the various documents coming out of the United Nations Conference on the Environment (UNCED) 1992 (Agenda 21, The Convention on Biological Diversity and the Framework Convention on Climate Change).

() THAT in 1997, I updated Preventing Systemic Constraints

On June 2 1996, the Secretary General of the Habitat Conference, Dr. Wally N'Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment- ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction, and continuing human misery - many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet when called upon to seriously address the urgency by rejecting old recipes, many States lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of States to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions, Conference Action Plans and Declarations.

The failure of States to sign instruments, to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation.

The failure of States to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens, to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice; and the reluctance of States to revoke the charters of corporations for failing to adhere to these standards.

The failure on the part of States to accept the authority of international bodies reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past.

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past.

CHAPTER 2

EQUITABLE AND ENVIRONMENTALLY SOUND FINANCIAL PROVISIONS

ENVIRONMENT, TRADE HUMAN RIGHTS AND REGULATIONS

“to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992)

- ensuring that world trade agreement and NAFTA are under the control of international law, and that international law including treaties, conventions, covenants, general assembly resolutions, conference actions plans and declaration take precedence over trade agreements
- lobbying strongly for all States to sign and ratify international agreements, and to enact the necessary legislation to ensure compliance
- coordinating sanctions against those countries who are not complying with united nations obligations incurred from conventions, treaties, and covenants, and expectations created through general assembly resolutions, conference action plans, and declarations
- establishing regulations to allow States to place tariffs upon, or refuse entry of, products made with child and slave labour, or that are environmentally unsound, culturally inappropriate or harmful to health ;
- insisting that no hazardous or toxic waste be dumped in third world countries and/or rural communities, or on indigenous lands; (including the sale of CANDU reactors and all nuclear technology)
- ensuring fair trade not free trade

equitable and environmentally

sound finance

“united determination to work urgently for the establishment of a new international economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (preamble, declaration on the establishment of an new international economic order, 1974).

- instituting an economic system based on equity
- developing a comprehensive set of criteria for ethical investments
- canceling debt/debt forgiveness and reparation
- ensuring that .7% of GDP is transferred to developing countries; and increasing it to at least 1%
- forgiving debt to developing countries and restricting corporate profit and wealth transfer from poor to rich countries;
- fairly compensating developing countries for the sale of their commodities and for previous activities that have contributed to environmental degradation or that have been harmful to human health
- developing a comprehensive set of criteria for ethical investments
- converting vested economic interest GATT to socially equitable and environmentally sound agreements based on principles drawn from international instruments
- instituting an economic system based on equity and inter-dependency, common interest and cooperation which rectifies existing injustices
- requiring adherence to the trans-boundary principle by preventing the engaging in environmentally unsound activities, and the producing of environmentally unsound substances
- requiring of conditional funding based on the guaranteeing of human rights, on ensuring environmental protection and preservation, and on promotion of peace
- ending world hunger and poverty through changing priorities of international finance, commerce, and development assistance
- discontinuing subsidies for socially inequitable and environmentally harmful activities

- condemning the CONTINUED “foreign-aid” (trade) policy direction of state and business self-interest competition, and promoting international cooperation and socially equitable and environmentally sound development
- supporting local markets, land reform, and self-reliance rather than cash crops for export;
- implementing or maintaining trade sanctions on countries with human rights violations
- discontinuing all foreign aid assistance to all existing nuclear, fossil fuel and large hydro-electric related projects, except to assist with decommissioning or environmental restoration;
- awarding energy-related foreign aid to community projects which promote use of renewable energy and efficient use of resources.
- limiting foreign aid to socially equitable and environmentally sound projects
- preventing the export of products banned in the country of origin
- creating jobs in communities by reinvesting profits through revolving community loans and through use of local resources and cooperatives
- establish a community inventory of products needed that would ensure every citizen a reasonable standard of living and quality of life.
- encouraging citizen ownership and control of resources within a framework of overarching equitable and ecologically sound principles
- increasing the amount of public debt financed by the bank of Canada at low or no interest;
- reducing yearly deficits by getting rid of subsidies to ecologically unsustainable industries (e.g. nuclear power, petrochemical and high-tech arms manufacturers);
- ending corporate subsidies and tax deferrals, except for green industries
- creating joint co-operative management that would ensure elimination of overlap between provincial and federal government departments in forestry, agriculture, education, social programs, health and transportation, etc., without lowering standards of living and/or quality of life.
- promoting a financial transaction tax (FTT) treaty and legislation which covers all international investment and currency trading; such a tax could fund the various united nations and non-governmental aid agencies.
- promoting an international treaty that would ensure citizens and governments the right to keep natural and monetary capital within their countries' borders;

- providing low- or no-interest loan program legislation; program funds would be deposited with the national banks by chartered banks, other financial institutions and corporations with assets exceeding \$100 million. 5% of their capital assets would be deposited to act as liability insurance, subject to legal confiscation and loss of corporate charter, in the event that any of these corporations cause ecosystem damage and/or preventable social dislocation to citizens and other species.

Chapter 3

social justice, equity and security assurances- basic needs, food security, agriculture, health, shelter provisions

social justice, and equity and security

“The States... recognize the right of everyone to an adequate standard of living. for himself [herself] and his [her] family, including adequate food, clothing and housing and to the continuous improvement of living conditions. the States parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)”

- ensuring the right to safe and healthy food, shelter, health care, and the provision for a guaranteed annual income, fair pension and social security
- reducing poverty through fulfilling basic needs, providing equitable distribution of resources, guaranteeing human rights, preserving and protecting the environment, and preventing war and conflict
- ensuring the right to safe drinking water, and sanitation to preclude both microbial and chemical contamination;
- guaranteeing the right to universal health care provided through public funds with fair and equal access
- ensuring the right to shelter that is affordable, accessible, environmentally-sound and with tenure security
- providing socially equitable and environmentally sound employment with a shorter work week with full benefits for part time workers, and with equal pay for work of equal value

Providing Food Security

Every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of

hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Sect.1. Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- guaranteeing the right to food (the right to non genetically engineered or radiated food, nutritious organically grown food)
- guaranteeing conservation of fertile areas for growing food

refocusing priorities to support development of self-reliant family and community farms that use ecologically sensitive methods of farming.

- promoting organic agriculture through regulations and education, and through phasing out the use of chemical pesticides

- revising the codex Alimentarius and national food guides such as the Canada food guide to present legumes, vegetables, fruits and grains (which can meet all nutritional needs, while reducing related health problems) as a complete alternative to a meat-based diet.

- banning genetically engineered food, and irradiated food

HEALTH , RIGHTS AND ETHICS

FOR THE AUTOMOBILE AND ELIMINATING ALL FUTURE SUBSIDIES• developing equitable and ethical criteria for determining medical choices

- establishing guidelines for reproductive technologies like surrogate motherhood
- ensuring the right of access to reproductive choice: respecting the woman's right to chose, and acknowledging that the government has no role in this decision.
- condemning the practice of sex selection
- promoting the availability of generic over patented drugs
- decriminalizing doctor assisted suicide, and euthanasia
- banning genetically modified organism and the patenting of human genes
- limiting and controlling biotechnology
- ensuring the ethical treatment of animals, phasing out the use of animals in research
- discontinuing the practice of prescribing antibiotics for viral infections, and for non-life threatening bacterial infections
- legislating midwifery locally, nationally and internationally
- ensuring extended maternity and paternity leave.

- endorsing and supporting breast feeding as the best way to feed an infant.
- condemning the advertising and promotion of artificial infant formula to the public.
- ensuring higher safety standards in the production of medical products
- discontinuing the practice of prescribing antibiotics for viral infections, and for non-life threatening bacterial infections

Chapter 4

over-consumption reduction and equitable distribution of resources

environmentally sound practices through regulations and reduction of over-consumption

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. changing consumption patterns, agenda 21. 1992, UNCED)

- phasing out the current unsustainable pattern of consumption through regulations and education
- requiring environmental sound practices driven by forced compliance with regulations (principle driving industry rather than industry compromising principle)
- ensuring best (best environmentally sound traditions) practices
- ensuring international standards drawn from principles from international instruments (mandatory international normative standards -mins)
- strengthening and promoting traditional environmentally sound practices
- requiring manufacturers to assume the full recycling, composting and other disposal costs of their products in an ecologically sound manner.
- enacting the full life-cycle analysis of any product or activity that has potentially harmful environmental effects: this life cycle analysis shall include the full life cycle of the product by an independent body
- introducing legislation to promote the reuse or replacement of minerals in industrial production with renewable alternatives.

Chapter 5

Instituting a fair and just transition for workers and communities affected negatively by the transition
kind regards

Chapter 6

Health, Rights and Ethics Assurances -environment-induced disease prevention, and biotechnology assessment

Health and Environment

“the health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease” (93 habitat II).

- improving people's quality of life through prevention of disease and illness
- increasing funding and promoting research into environmentally-induced and poverty related diseases
- promoting research which addresses the links suppression of our immune system to ozone depletion, petrochemical pollution and bio-accumulation of persistent toxins indicates that public health is being endangered by a deteriorating environment.
- ensuring that health research and services respond to the needs of women, first nations and minorities;
- significantly increasing research funding into alternative health care methods which complement or replace more expensive conventional drugs and surgery; supporting initiatives to educate the public around lifestyle changes and choices that would contribute to both personal health and protection of the environment
- ensuring that health administrations accept and promote the use of naturally occurring medicines and herbs while providing a stringent review process for new and existing human-made chemicals, technologies, and electromagnetic disruption.
- eliminating, preventing and reducing of health and environment hazards
- discontinuing pharmaceutical company funding to and direction of health research in universities

Chapter 7

Environmentally Sound Transportation Support and Promotion

-right to shelter, and environmentally sound technology including energy, transportation and practices assurances

environment, transportation and energy

to encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (article 104 c, habitat ii agenda)

- determining and revealing the full subsidy for the infrastructure
- re-establishing a viable rail and light rapid transit systems
- promoting the use of rail for freight and passenger transport, and extend the rail network to serve all urban and rural locations conveniently;
- establishing regulations that reduce car-dependency including increased public transportation
- developing infrastructure for environmentally sound energy and transportation
- promoting pedestrian communities and rail and other environmentally sound practices
- promoting and ensuring environmentally-sound transportation

CHAPTER 8

PRINCIPLE-BASED RATHER THAN VESTED-INTERESTED DECISION MAKING

PRINCIPLE-BASED DECISION MAKING AND PUBLIC ACCESS TO INFORMATION

Providing full, timely and comprehensible information, without undue financial burden to the applicant; 133(c) UNCED

- IMPLEMENTING PRINCIPLE BASED DECISION MAKING MOVING FROM VESTED INTEREST DECISION MAKING TO PRINCIPLE-BASED DECISION MAKING
- ENSURING GENUINE COMMUNITY PARTICIPATION AND INVOLVEMENT WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES

DRAWN FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS

CHAPTER 9

ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

GREENHOUSE GAS EMISSION AND OZONE-DEPLETING SUBSTANCES REDUCTION AND ELIMINATION

ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies such as solar, wind and biomass energy (101 d, Habitat II)

Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 ii (Habitat I, 1976)

- REQUIRING AND DEVELOPING ENVIRONMENTALLY SOUND ENERGY
- PROVIDING FOR ENVIRONMENTALLY-SOUND ENERGY SOURCES BY 1999, AND CONCURRENTLY PHASING OUT ENVIRONMENTALLY-UN SOUND ENERGY
- REQUIRING THE CONSERVATION OF ENERGY
- REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE
- *• MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASED INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY
- TRANSFERRING FUNDING FOR FOSSIL FUEL AND NUCLEAR INTO ENVIRONMENTALLY SOUND ENERGY
- REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY
- CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES
- INSTITUTING A MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.
- - PROMOTING RESEARCH FOR THE STORAGE AND HANDLING OF EXISTING NUCLEAR WASTE WHILE PHASING OUT CIVIL NUCLEAR ENERGY, AND THE GENERATION OF NUCLEAR WASTES
- PHASING OUT THE USE OF CIVIL NUCLEAR ENERGY AND THE TRANSFER OF FUNDS INTO THE DEVELOPMENT OF ENVIRONMENTALLY SOUND RENEWABLE ENERGY
- CONDEMNING AND BAN THE PROPOSAL TO USE WEAPONS-GRADE PLUTONIUM FROM DISMANTLED RUSSIAN AND U.S. WEAPONS (IN THE FORM OF MOX) IN CANDU REACTORS.
- ELIMINATING OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY
- SUBJECTING ALL WEAPONS-USABLE RADIOACTIVE MATERIALS AND NUCLEAR FACILITIES IN ALL States TO INTERNATIONAL ACCOUNTING, MONITORING AND SAFEGUARDS AND ESTABLISHING A PUBLIC INTERNATIONAL REGISTRY OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)

- PROHIBITING NUCLEAR WEAPONS RESEARCH, DESIGN, DEVELOPMENT AND TESTING THROUGH LABORATORY EXPERIMENTS INCLUDING BUT NOT LIMITED TO NON-NUCLEAR HYDRODYNAMIC EXPLOSIONS AND COMPUTER SIMULATIONS, SUBJECT ALL NUCLEAR WEAPONS LABORATORIES TO INTERNATIONAL MONITORING AND CLOSING ALL NUCLEAR TEST SITES (ABOLITION 2000)

GREENHOUSE GAS EMISSIONS AND OZONE-DEPLETING SUBSTANCES REDUCTION AND ELIMINATION

Stabilizing the atmospheric concentrations of CO₂ is an imperative goal. It is currently estimated to require reductions of more than 50% from present emission levels. Energy research and development budgets must be massively directed to energy options which would eliminate or greatly reduce CO₂ emissions and to studies undertaken to further refine the target reductions (CHANGING ATMOSPHERE CONFERENCE, 1988).

- ADDRESSING CLIMATE CHANGE THROUGH REDUCING AND PHASING OUT OF GREENHOUSE GASES, PROVIDING ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION, AND MOVING AWAY FROM CAR-DEPENDENCY.
- ADDRESSING CLIMATE CHANGE: PROTECTING CARBON SINKS AND REDUCING EMISSIONS WAY BEYOND WHAT WAS REQUIRED IN THE FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992. (TO AT LEAST FULFILL THE RECOMMENDATION MADE IN 1988 “CHANGING ATMOSPHERE”)
- CONDEMNING THE MYTH THAT NUCLEAR ENERGY IS THE SOLUTION TO CLIMATE CHANGE
- ACKNOWLEDGING THE CONCERN BY INSURANCE COMPANIES OF THE IMPLICATIONS OF CLIMATE CHANGE
- ELIMINATING OF THE PRODUCTION AND CONSUMPTION OF OZONE-DEPLETING SUBSTANCES
- BANNING THE PRODUCTION, SALE, CONSUMPTION AND DISTRIBUTION OF OZONE DEPLETING CHEMICALS, SUCH AS METHYL BROMIDE, HALONS, CHLOROFLUOROCARBONS, HYDROCHLORFLUOROCARBONS, CARBON TETRACHLORIDE AND OTHER COMPOUNDS CAPABLE OF BEARING CHLORINE TO THE STRATOSPHERE.
- ENSURING THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION

CHAPTER 11, 13, 15

BIODIVERSITY, MOUNTAINS AND FOREST CONSERVATION

CONSERVATION, BIODIVERSITY AND FORESTS

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

- GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY IN LAND, AIR AND WATER SYSTEMS

- PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS SUCH AS THE BIODIVERSITY CONVENTIONS, THE FRAMEWORK CONVENTION ON CLIMATE CHANGE, CONVENTION ON COMBATING DESERTIFICATION, THE VIENNA CONVENTION ADDRESSING OZONE DEPLETION; ENVIRONMENTAL IMPACT ASSESSMENT OF trans-boundary POLLUTION ETC.

- IDENTIFYING BIODIVERSITY, AND CARRYING OUT AN ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY

- ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

ENSURING THAT THE BIODIVERSITY CONVENTION TRANSCEND JURISDICTIONAL AND PROPRIETORIAL BARRIERS

- IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

- BANNING clear-cutting AND OTHER ENVIRONMENTALLY UNSOUND PRACTICES THROUGH ENACTING LEGISLATION TO CONFORM WITH THE CONVENTION ON BIOLOGICAL DIVERSITY, AND WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE

- BANNING THE EXPORT OF RAW LOGS

- REGULATING MINING PRACTICES, AND PREVENTING THE TRANSFER OF SUBSTANCES OR ACTIVITIES THAT COULD CONTRIBUTE TO ENVIRONMENTAL DEGRADATION

- DISCONTINUING THE DUMPING OF ENVIRONMENTALLY UNSOUND EMISSIONS INTO LAND, AIR AND WATER SYSTEMS

GREEN SPACES, PARKS, PRESERVATION AND CONSERVATION

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

- PRESERVING AND PROTECTING OF GREEN SPACES
- PROMOTING THE CONSERVATION AND SUSTAINABLE USE OF URBAN AND PERI-URBAN BIODIVERSITY, INCLUDING FORESTS, LOCAL HABITATS AND SPECIES BIODIVERSITY; THE PROTECTION OF BIODIVERSITY
- PROTECTING ENDANGERED SPECIES AND HABITATS THROUGH LEGISLATION THAT WOULD PROTECT HABITATS AND CONSERVATION CORRIDORS
- DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES
- PREVENTING INDUSTRIAL ACTIVITIES SUCH AS FORESTRY AND MINING IN PARKS

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

Every form of life is unique, warranting respect regardless of its worth to man [human] , and to accord other organisms such recognition's, man [must be guided by a moral code of action. (a, UN General Assembly Resolution 1982)

- RESPECTING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE
- REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE
- RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM (ENSURING THAT THIS IS NOT USED TO JUSTIFY INTRUSION INTO PRISTINE AREAS)
- ENSURING THE ADHERENCE TO THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES
- ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES
- ENFORCING OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION INTO THE ECOSYSTEM HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)
- INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

- ENSURING THAT ALL CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW (AS AGREED IN HABITAT II)

CHAPTER 12

DESERTIFICATION AND DROUGHT PREVENTION

- CALLING UPON MEMBER States FROM THE UNITED NATIONS TO SIGN AND RATIFY THE CONVENTION ON DESERTIFICATION, AND ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT

CHAPTER 17 AND 18

MARINE, AND FRESH WATER PROTECTION AND CONSERVATION

To assure the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- PROTECTING WILD FISH STOCKS
- MAINTAINING A MORATORIUM ON ADDITIONAL SALMON FISH FARMING
because of Risks of disease transfer from net cage fish to wild stocks; Risks of introduction of exotic diseases from the CONTINUED importation of off-site species;
 - Pollution from fish sewage, contamination of shellfish, and loss of habitat
 - Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices
 - Loss of access to traditional fisheries for indigenous peoples with increased risks to their health from exposure to drug residues from food collected near net cage operations
 - Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water
 - Decline of wild stocks Losses of wild fish, such as herring and juvenile salmon, consumed by net-cage fish

- Endangered human health from the increased use of antibiotics and other drugs, which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics
- REGULATING EXISTING MARICULTURE AND AQUACULTURE
- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS THAT DONE WITH TRAWLERS AND SEINERS
- RATIFYING THE LAW OF THE SEAS, AND OTHER RELATED CONVENTIONS, AND ENACTING THE NECESSARY LEGISLATION FOR COMPLIANCE AND ENFORCEMENT
- ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT
- ESTABLISHING MARINE PROTECTED AREAS FREE FROM FOSSIL FUEL AND HUMAN WASTE POLLUTION
- ENSURING INTERCONNECTING CONSERVATION CORRIDORS AMONG MARINE PROTECTED AREAS
- REQUIRING MANDATORY WATER CONSERVATION
- PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)
- PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES
- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS TRAWLERS AND SEINERS.

CHAPTER 19, 20, 21, 22

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION

-SOLID WASTE REDUCTION AND ELIMINATION

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION

EXTRACTION REDUCTION AND CONTROL

“ Zero use, production , and release of persistent and /or bio-accumulative toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (ZERO TOXIC ALLIANCE, 1994) “

- ENSURING ZERO EMISSIONS OF CHEMICALS THAT ARE TOXIC OR BIOACCUMULATE, INCLUDING ENDOCRINE-DISRUPTING CHEMICALS WHICH HAVE BEEN LINKED TO REPRODUCTIVE DISORDERS
- MONITORING AND MAKING PUBLIC THE EXTENT OF THE HARMFUL CHEMICAL PRODUCTION, AND OF THE HARMFUL WASTES FROM CHEMICAL PRODUCTION
- BANNING OF PERSISTENT ORGANIC POLLUTANTS
- ENDING THE PRODUCTION OF ENDOCRINE-DISRUPTING CHEMICALS
- ELIMINATING OF TOXIC, HAZARDOUS AND NUCLEAR WASTES
- INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE
- CONDEMNING THE ENORMOUS ENVIRONMENTAL AND SOCIAL IMPACT CAUSED BY MINERAL AND PETROLEUM DEVELOPMENT
- SUPPORTING THE RIGHTS OF COMMUNITIES TO OPPOSE MINING OPERATIONS AND DEFINE THE USE OF THEIR RESOURCES ARE RESPECTED, AS IS RECOMMENDED IN ART 15 OF AGREEMENT 169

OF THE INTERNATIONAL LABOUR ORGANIZATION FOR INDIGENOUS COMMUNITIES.

- RESPECTING THE WATER USE RIGHTS OF COMMUNITIES ABOVE OTHER ACTIVITIES THAT LIE OUTSIDE THE PRIORITIES THAT THEY HAVE THEMSELVES DEFINED.
- STOPPING THE EXPANSION OF MINING AND PETROLEUM FRONTIERS
- INITIATING ACTIONS TOWARDS REDUCING THE CONSUMPTION OF MINERALS AT A WORLD LEVEL.
- PREVENTING THE IMPORTING, EXPORTING, AND TRANSPORTING OF TOXIC MINING WASTES UNDER ALL CONDITIONS.
- SUPPORTING THE RESTORATION OF DAMAGE CAUSED BY MINING ACTIVITY BE ASSURED WITHOUT FINANCIAL LIMIT.

HUMAN-INDUCED DISASTER PREVENTION

“The need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence and to reduce the impacts of natural disasters and other emergencies on human settlements (Habitat II)”

- PREVENTING DISASTERS INCLUDING NATURAL AND TECHNOLOGICAL DISASTERS, INCLUDING ACTIVITIES THAT PRODUCE TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTES

- PREVENTING THE TRANSFERENCE TO OTHER States OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION, INCLUDING TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- CONDEMNING THE CONTINUED CIRCULATION AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS, THE TESTING OF NUCLEAR WEAPONS, AND PERMITTING OF LOW-LEVEL TEST FLIGHTS
- INCLUDING INDUCING CLIMATE CHANGE AND OZONE-REDUCTION UNDER THE CATEGORY OF DISASTERS
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS
- REQUIRING THE REGULAR REPORTING TO THE UN REGISTER OF CONVENTIONAL WEAPONS (ADAPTED FROM PEACE CAUCUS CSD)
- RESTRAINING AND PREVENTING WEAPONS PROLIFERATION
- REQUIRING THE DAILY PUBLICATION OF THE NAMES OF THE COMPANIES AND COUNTRIES THAT PRODUCE WEAPONS, AMOUNT AND TYPE OF WEAPONS SOLD, AND THE NAMES OF THE PURCHASER AND THE NAME AND THE NATIONALITY OF THE PURCHASER AND THE PURPOSE FOR WHICH THE ARMS ARE TO BE USED
- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

BANNING IMMEDIATELY THE PRODUCTION, USE, SALE AND TRANSFER OF ANTI-PERSONNEL LAND MINES (PEACE CAUCUS)

MILITARY CONVERSION AND TRANSFER FUNDS

TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to

exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (General Assembly, 1981)

- REDUCING AND TRANSFERRING THE MILITARY BUDGET

In 1992, In the Rio Declaration all member States recognized that "Warfare is inherently destructive of sustainable development" (Rio Declarations. Principle 24, UNCED, 1992), and in Chapter 33, of Agenda 21, member States of the i Nations made a commitment to the "the reallocation of resources presently committed to military purposes" (33.18e)

TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- REDUCING AND TRANSFERRING OF THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- PROTECTING THE RIGHT TO DEDUCT AND PROVIDING FOR A PROPORTION OF THE TAXES COMPARABLE TO THE PERCENTAGE REPRESENTED BY THE MILITARY BUDGET TO BE PUT INTO A PEACE FUND

- PROTECTING AND SUPPORTING CONSCIENTIOUS OBJECTORS

- SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE

- PROMOTING CIVILIAN RULE

- PREVENTING THE CAUSES OF CONFLICT THROUGH GUARANTEEING HUMAN RIGHTS, INCLUDING ENSURING SOCIAL JUSTICE AND THE SATISFYING OF BASIC NEEDS

- ELIMINATING URANIUM MINING AND THUS PREVENTING THE CONTRIBUTION TO NUCLEAR WEAPONS

- ALLOCATING FUNDS AND TECHNOLOGY FOR REMOVAL OF THE MORE THAN 100 MILLION ANTIPERSONNEL LAND MINES ALREADY PLANTED IN 64 COUNTRIES (PEACE CAUCUS)

MILITARY, WEAPONS OF MASS DESTRUCTION AND CONVENTIONAL ARMS ELIMINATION AND REDUCTION

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

- IMPLEMENTING THE DECLARATION OF PEOPLE'S RIGHT TO PEACE

- MOVING FROM A CULTURE OF VIOLENCE TO A CULTURE OF PEACE (UNESCO)

- PROMOTING AN INTERNATIONAL VOLUNTARY MILITARY FORCE UNDER CHAPTER 7 OF THE UNITED NATIONS CHARTER TO BE USED WHEN ABSOLUTELY NECESSARY AND PROMOTING NON-VIOLENT RESOLUTION TO CONFLICT (PEACE CAUCUS)
- ENSURING EARLY INVOLVEMENT IN POTENTIALLY VIOLENT AREAS TO ALLEVIATE THE NEED FOR MILITARY SOLUTIONS AND THE RESULTING ENVIRONMENTAL DEGRADATION (ADAPTED FROM THE PEACE CAUCUS CSD)
- RESTRUCTURING ECONOMIES AWAY FROM DEPENDENCE ON THE MILITARY (PEACE CAUCUS CSD)
- CONVERTING MILITARY MANUFACTURING CAPACITY TO ENGAGING IN PRACTICES, AND GENERATING SUBSTANCES AND PRODUCTS THAT ARE SOCIALUSLY EQUITABLE AND ENVIRONMENTALLY SOUND
- SHIFTING RESEARCH AND DEVELOPMENT FROM DEFENCE-BASED INDTRIES TO EQUITABLE DEVELOPMENT AND SOCIALLY RESPONSIBLE PRODUCTION TO RECTIFY ENVIRONMENTAL DEGRADATION (PEACE CAUCUS CSD)
- DEALING WITH AND DISPOSING OF ALL TOXIC MILITARY WASTE IN THE BEST ENVIRONMENTALLY SOUND WAY RECOGNIZING THAT THERE IS NO ENVIRONMENTALLY SOUND MEANS OF DISPOSING OF MOST OF THE WASTE AND THE BEST PRACTICE IS TO PREVENT THE PRODUCTION OF MILITARY WASTES.
- ACKNOWLEDGING AND ACTING UPON THE EVIDENCE OF THE SERIOUS AND IRREVERSIBLE CONSEQUENCES OF NUCLEAR TECHNOLOGY ON HUMAN HEALTH AND ON THE ECOSYSTEM
- ACTING IMMEDIATELY ON THE JUDGMENT OF THE WORLD COURT THAT NUCLEAR WEAPONS ARE AGAINST INTERNATIONAL HUMANITARIAN LAW
- ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL
- PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS
- REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR
- MAKING AN IMMEDIATE PLEDGE NOT TO USE OR THREATEN TO USE NUCLEAR WEAPONS (ABOLITION 2000)
- DECLARING THE GLOBAL COMMONS A NUCLEAR FREE ZONE ON JUNE 21, 1997 {CREATING ADDITIONAL NUCLEAR WEAPONS FREE ZONES, SUCH AS THOSE

ESTABLISHED BY THE TREATIES OF TLATELOLCO AND RAROTONGA (ABOLITION 2000)

- ELIMINATING IMMEDIATELY ALL FURTHER PRODUCING OF NUCLEAR WEAPONS AND INITIATING IMMEDIATELY (1997) A TIME-BOUND CONVENTION FOR THE COMPLETE ELIMINATION AND DESTRUCTION OF NUCLEAR WEAPONS BY THE YEAR 2000
- [AT A MINIMUM] INITIATING AND CONCLUDING BY THE YEAR [1999] 2000 NEGOTIATIONS ON A NUCLEAR WEAPONS ABOLITION CONVENTION THAT REQUIRES THE PHASED ELIMINATION OF ALL NUCLEAR WEAPONS WITHIN A TIME BOUND FRAMEWORK WITH PROVISIONS FOR EFFECTIVE VERIFICATION AND ENFORCEMENT (ABOLITION 2000)
- ELIMINATING OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, INCLUDING NUCLEAR WEAPONS BY THE YEAR 1999
- IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS
- BANNING THE TESTING OF NUCLEAR WEAPONS
- RECOGNIZING THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY
- PROHIBITING THE MILITARY AND COMMERCIAL PRODUCTION AND REPROCESSING OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)
- PROHIBITING THE USE OF WEAPONS-GRADE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN CIVIL NUCLEAR REACTORS
- BANNING THE PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)
- PREVENTING THE TESTING OF ALL WEAPONS INCLUDING THOSE IN CANADA (NANOOSE BAY AND LOW-FLYING FLIGHTS IN INNU TERRITORY)
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- HALTING LOW-LEVEL FLIGHT TRAINING IN LABRADOR AND END NUCLEAR SUBMARINE TESTING AT NANOOSE BAY, AND THE CIRCULATING AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS ;
- WITHDRAWING FROM MILITARY ORGANIZATIONS SUCH AS NATO, AND ALL OTHER BI- AND MULTILATERAL DEFENCE ARRANGEMENTS WITH INDIVIDUAL COUNTRIES AND REGIONS. AND CALLING FOR THE DISBANDING OF NATO
- PROHIBITING THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES
- ENSURING THAT THE ENVIRONMENT IS NOT ALTERED FOR MILITARY PURPOSES
- CONVERTING MILITARY MANUFACTURING CAPACITY TO MAKING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRODUCTS
- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

In 1992, all member States recognized that "Warfare is inherently destructive of sustainable development" (Rio Declarations

Chapter 33

. Principle 24, UNCED, 1992), and in Chapter 33, of Agenda 21, member States of the i Nations made a commitment to the "the reallocation of resources presently committed to military purposes" (33.18e)

CHAPTER 34

TRANSFER OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND TECHNOLOGY

MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE INDUSTRY TO BEST PRACTICES

CHAPTER 35

SCIENCE FOR PEACE AND THE BENEFITS OF HUMANITY

CHAPTER 36

COMMUNICATION AND EDUCATION PROMOTION AND FACILITATION

ENVIRONMENTAL EDUCATION WITHOUT INDUSTRY INTRUSION

MEDIA AND SOCIAL CONSCIENCE

ARTS AND CULTURE SUPPORT AND PROMOTION 8

COMMUNICATION AND EDUCATION

Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. (Agenda 21, Chapter 36.5 | UNCED)

EDUCATION AND COMMUNICATION

- ENSURING THE RIGHT TO AN EDUCATION WHICH IS EQUITABLE, COLLABORATIVE, AND MEANINGFUL
- STIMULATING AWARENESS OF HUMAN RIGHTS, ENVIRONMENT, AND PEACE ISSUES THROUGH EDUCATION
- REQUIRING CORPORATIONS TO PAY INCREASED TAXES, AND REDIRECTING OF CORPORATE FUNDING FOR EDUCATIONAL MATERIALS INTO GENERAL REVENUE THROUGH TAXES
- GUARANTEEING THE RIGHT TO FREE EDUCATION AT ALL LEVELS, AND INCREASING RESEARCH GRANTS AT THE UNIVERSITY LEVELS
- LINKING STUDENT LOAN PAYMENT TO SALARY, AND ALLOWING FOR COMMUNITY SERVICE AS REPAYMENT
- PROMOTING AND SUPPORTING INCREASED FUNDING FOR LITERACY
- ENSURING THAT SPECIAL NEEDS CHILDREN HAVE A RANGE OF OPTIONS WITHIN THE EDUCATIONAL SYSTEM
- PROVIDING FREE UNIVERSITY EDUCATION THROUGH INCOME SUPPLEMENT PLAN TO ASSIST STUDENTS
- ELIMINATING ALL CORPORATE DETERMINING OF PHILOSOPHICAL UNDERPINNINGS OF EDUCATION
- ELIMINATING OF ALL CORPORATE INVOLVEMENT IN THE DIRECTION OF UNIVERSITY
 - AVOIDING COMPROMISE THROUGH PROHIBITING INDUSTRY-FUNDED UNIVERSITY RESEARCH

- REQUIRING ARMS LENGTH RESEARCH FROM INDUSTRY TO AVOID CONFLICT OF INTEREST
- REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”
- DENYING DEGREE-GRANTING STATUS TO NON-SECULAR SCHOOLS, COLLEGES AND UNIVERSITIES
- DISCONTINUING ALL PUBLIC FUNDING FOR ALL-NON-SECULAR PRIVATE SCHOOLS (NOT PROVIDED FOR UNDER THE CONSTITUTION)

ARTS AND CULTURE

- ENSURING AND INCREASING SUPPORT AND FUNDING FOR THE ARTS AND CULTURE THROUGH GENERAL REVENUE
- CLOSING CORPORATE TAX LOOPHOLES, TAX DEFERRALS, AND INCREASE CORPORATE TAXES TO AT LEAST OECD STANDARDS, AND TRANSFERRING FUNDS INTO GENERAL REVENUE
- ENCOURAGING ARTS ORGANIZATIONS TO NOT SEEK FUNDING FROM CORPORATIONS BUT FROM A DEDICATED FUNDING SOURCE IN GENERAL REVENUES
- PROVIDING ADDITIONAL FINANCIAL SUPPORT TO PUBLIC RADIO, SUCH AS CBC AND TELEVISION

MEDIA AND COMMUNICATION

- STRENGTHENING THE MEDIA AS AN INSTRUMENT OF PUBLIC TRUST AS HAS BEEN AGREED TO THROUGH VARIOUS MEDIA CODES

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member States of the United

Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and the fulfilling of expectations.

() THAT in 1997, on March 12 I responded to a questionnaire on the upcoming Earth Summit II from the Bahai Publication

Subject: interview on Earth Summit II

Dear friend,

I picked up some literature with your email address on it at the CSD Inter-sessional meeting last week at the UN in New York.

I am the editor of ONE COUNTRY, the newsletter of the Baha'i International Community. ONE COUNTRY, the newsletter of the Bahá'í International Community. It is published in English, French, Chinese, Russian, German and Spanish, and mailed to more than 30,000 readers in more than 170 countries.

Among other issues, we follow trends in sustainable development at the global level. And I am writing a story about the upcoming UN General Assembly Special Session (UNGASS), also known as the Earth Summit II, scheduled to take place in New York in June.

Since I wasn't able to catch up with you at the meeting, I would like to

briefly interview you about the status of the CSD negotiations and get your general thoughts on the upcoming GA special session and its importance.

If you can take a few moments, then, please briefly reply to the following questions:

First some basic biographical data:

What is your full name (first, middle, last) (also Dr. Mr. or Ms. Etc.)?

Dr. Joan Elizabeth Russow

What is your title? (Director, UN Representative? Etc.)

Coordinator,

What is the full name of your organization?

Global Compliance Research Project

Where is it based or headquartered?

Victoria, B.C. Canada

What is its purpose (in general terms).

The Global Compliance Research Project, which comprises an international advisory Committee from 70 countries, is examining obligations incurred by States through the Charter of the United Nations, Conventions, treaties, and covenants, and expectations created through General Assembly resolutions, Declarations, and conference action plans. For over fifty years through international agreements, the member States of the United Nations including Canada have undertaken (i) to promote and fully guarantee respect for human rights; (ii) to ensure the preservation and protection of the environment; (iii) to create a global structure that respects the rule of law, (iv) to achieve a state of peace; justice and security, and (v) to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; and through United Nations Declarations, Conference action plans and General Assembly Resolutions.

If these years of obligations had been discharged, and if these years of expectations had been fulfilled, respect for human rights might have been guaranteed, preservation and protection of the environment might have been ensured, threats to peace might have been prevented and removed, disarmament, achieved; and socially equitable and environmentally sound development might have been enabled.

Many of these obligations have never been discharged, States often fail to sign international legally binding treaties that they themselves have negotiated; States that sign

legally binding conventions and treaties, often fail to ratify them; and States that ratify these treaties often fail to enact the necessary legislation to ensure compliance and enforcement..

Many of the expectations have not been fulfilled. Expectations have been created through recent global Conferences and action plans. such as those from United Nations Conference on Environment and Development (UNCED); the World Conference on Human Rights; the Social Development Conference; the International Conference on Population and Development, the UN Conference on Women: Equality, Development and Peace, and Habitat II. Although the major conference action plans have been adopted by all the member States of the United Nations, the action plans are not deemed to be legally binding.

The purpose of the project is to carry out a content analysis and synthesis of strong obligations that have already been undertaken, so that States will not agree to less than they have already agreed to, and NGOs will not ask for less than States have already agreed to; it will also further strongly crafted internationally-held NGO principles and precedents, and propose these for inclusion into the 1995 Declaration.

Do you have any international affiliates? If so, about how many?

After the Beijing conference there were representatives from 70 countries that were interested in being part of the project

Now the questions:

- What is the Earth Summit II important? Or, put another way, what does it do that takes it beyond the first Earth Summit in Rio de Janeiro five years ago?

The significance of the original Earth Summit was that for the first time at a conference there was a willingness to examine the complexity and interdependence of issues. Apart from the several significant omissions such as militarism [except short statement in 33.16 e about the military budget and population, many of the issues that needed to be addressed were examined. Often what appeared to be a strong principle such as principle 15 of the Rio Declaration, "States should prevent the transfer to other States of substances and activities that cause environmental degradation or are harmful to human health" has not been implemented. States still transfer toxic, hazardous, and atomic wastes to other States; States still sell nuclear reactors, and circulate and berth nuclear powered and nuclear armed vessels. In the recent document the States have used the notion of "prior informed consent" which has become a device for avoiding extraterritoriality. What right have we to impose our high standards on developing countries they have every right to accept our toxic, hazardous and atomic wastes particularly if there is prior informed consent.

Part of the Global Compliance Research project was to reveal systemic constraints preventing change.

I think that the Earth Summit II is important primarily for citizens to reveal that years of obligations and expectations have neither been discharged or fulfilled.

-- The purpose of the Earth Summit II is to review progress made on Agenda 21. In your view, has Agenda 21 succeeded or failed. Or, rather, in what areas has it succeeded and in what areas has it failed to live up to its potential?

-- Accordingly, then, what are the most crucial issues to be decided at the Earth Summit II, in your view and/or the view of your organization?

-- What are the most contentious issues, the issues that may well not get decided on?

-- Are there any entirely new issues, which we not considered at Rio, which are coming up at the Earth Summit II?

-- What are the main North-South issues? That is, what are the disagreements between the Northern and Southern hemisphere countries with respect to the issues at the Earth Summit II?

-- In many ways, Rio kicked off a trend of greater recognition of the role of non-governmental organizations (NGOs) and civil society. That trend CONTINUED to increase at the Vienna, Cairo, Copenhagen, Beijing and Istanbul (Habitat) UN Summit meetings. Will the Earth Summit II CONTINUE this trend? What role do you see for NGOs? Alternatively, are you concerned that NGOs won't have adequate access at the meeting?

-- Do you have any further comments to add on the importance of the Earth Summit II, etc.?

Many thanks,

Brad Pokorny

Hi Jim

I enjoyed meeting you in Toronto. When I returned I read a copy that has been sent around of your website page with all the glowing comments from industry. Could you please elaborate a bit further about your approach with industry?

please send to my address at jrussow@coastnet.com

Here is an excerpt from my leadership statement. If you would like the full text let me know:

Myth: Being Good to the Environment is Bad for Business

I was working with a gas company in Calgary. To give you an idea of how much gas they ship every day, imagine a football field standing straight up on end. Now turn it onto its side and you get a square. Now square extending from Calgary to Edmonton - a 3 $\frac{1}{2}$ hour drive at 80 km/hr - to form a gigantic cube. The cube is equal to the volume of gas the company ships every day. And we all know that burning fossil fuel is causing global warming.

Employees at this company know that their product is bad for the earth and will leave their children with a worse off world to inherit. At some level they must feel uneasy.

Why do we use natural gas? To heat our homes. So what we as consumers really want is hot showers and warmth, not natural gas. We need to distinguish between form and function. Hot water and warm homes are the functions - gas is the current form we use to achieve these goals. But if a better way comes of delivering along, consumer demand will shift.

This shift is already taking place at the institutional level where Energy Service Companies, known as ESCos, are saving institutions millions of dollars. An ESCo will study energy usage in a hospital that is spending say \$300,000 a year on energy. The ESCo will document how a \$1 million retrofitting with the most energy efficient appliances lighting, windows, etc. will save say \$200,000 a year in energy. Most hospitals are capital cost constrained so the ESCo will pay for or finance the million dollars of energy efficiency improvements, and the hospital will pay the energy service company the \$300,000 for seven years. The ESCo in turn will pay the \$100,000 of energy costs and keep the \$200,000 of savings. Over seven years the savings will pay for the retrofitting and interest costs. ESCos have

been growing at a rate of 40% a year for the last five years. Does that mean that an ESCo is now a competitor of the gas companies? Absolutely because the ESCos are reducing the demand for natural gas.

I was speaking to a conference of oil and gas producers - so I challenged them to begin to retrofit their clients operations. If all a company can do is sell gas, the only way they can increase revenue is by selling more gas, which means more global warming. Why not work to change the mindset that the company sells services - such as energy efficiency and gas and that over time energy efficiency may become their core business.

Prior to everyone arriving at the meeting on Sunday you mentioned that you had not heard of any business doing anything good for the environment. Here is a case study for you. Once Nortel discovered the new process they then shared it with their competitors to eliminate CFCs through the whole semiconductor industry worldwide. This is an excerpt from the Candidate's Campaign Manual that I have drafted. If you are interested in the full text let me know:

Myth #1 Green Policies are Bad for Business

Greens policies have a tremendous amount to offer to business. We need to help business leaders see how the green message will benefit them and create a viable future for their children. Northern Telecom (Nortel) used to be one of the largest industrial users of CFCs. The Montreal Protocol created by the world's leaders called for the elimination of CFCs from industrial processes by 2003. When it was signed, Nortel could have spent millions of dollars hiring lobbyists and public relations firms to oppose it. Arguments could have been advanced that the agreement was unfair; surely thousands of people would have to be laid off as the company was

forced to shut down plants that used CFCs in the manufacturing process. Veiled threats could have been made to politicians that their parties and campaigns would no longer receive financial support. Politicians could have been told that the company would blame them, their parties, and the government when the plants in their ridings closed down.

Instead, Nortel chose to be proactive. Rather than fighting the agreement, the company decided to embrace it. And rather than wait until 2003, the company decided to do something immediately. Three task forces were struck.

The first task force asked: "How can we immediately reduce our CFC use through better conservation techniques, better CFC-recapture methods, and slight modifications to the process so that the need for CFCs is reduced?"

In the telecommunications industry, CFCs were used to "clean" circuit boards. After the boards had been soldered, CFC solvents were sprayed on the boards to dissolve the excess flux. This first task force was able to reduce CFC usage by 40 percent through simple conservation techniques and modifications to the production processes.

The second task force looked at redesigning the industrial process by asking questions such as: "Are CFCs necessary at all? Is there some other substance that can remove excess flux? Do we have to use solder at all or can we electronically join points without soldering? If we have to solder, could it be done in such a way that there is no flux left over at the end? Is there a way to solder that does not require cleaning?" Every assumption of the process was questioned.

The third task force looked at partnering, asking: "How can we partner with our customers, our suppliers, the government, and even our competitors to help us in this process?" Nortel shared its challenge with suppliers such as the solder supplier. They asked customers if they could accept greater amounts of flux left on the board as long as it did not compromise the

performance of the board. They asked competitors what solutions to this problem they had come up with.

In the end, Nortel, working with its material and equipment suppliers, developed an entirely new manufacturing method. The process uses low-solid flux, while soldering in a nitrogen atmosphere, leaving little residue on the board and therefore requires no cleaning which eliminates the need to use CFCs. In the process, Nortel has saved \$50 million a year since it no longer has to purchase or pay to dispose of CFCs. Over a decade this translates into a \$500-million saving - half a billion dollars! Rather than a threat, environmental sensitivity has been a bottom-line blessing.

There are so many additional benefits. Employees at Nortel are proud of their record and no longer feel guilty that they were destroying the planet for their children. Nortel won praise. The engineers within Nortel were excited, galvanized by the challenge. There is nothing an engineer likes more than to sink his or her teeth into a really challenging problem. The

task forces were excited by the process of questioning.

Nortel did not rest on its laurels. Once it had gone CFC-free, the company recognized its corporate responsibility to the world and immediately began transferring the technology to its competitors in North America and other parts of the world. The company set up a computer bulletin board system accessible to anyone from around the world who wants to learn the technical details of how the company redesigned its industrial process to eliminate CFCs.

So wherever I work I try to change people's mindsets.

Donald MacDonald Ross, a former member of the party questioned my professional work, saying that some of the companies I work with the Green

Party is dead set against. The following is some of my reflections with comments from Donald with one I pointed out that the Petroleum Engineers Society I had talked about

how ESCOs are going to eliminate the need for 75% of their product so that they had better begin to see their business not as supplying gas which is killing the planet but as energy efficiency and sell an lease appliances to consumers. Also I spoke to the Canadian Home Builders Association and said the same thing.

If you gave a leadership seminar to the executives of C.I.L., and included an admonition to not spill sulfur residue in the local environment while manufacturing weapons and explosives, would that make everything O.K.?

General Motors, who you list amongst your happy employers, is one of the major armaments manufacturers, let alone contributors to the "car culture". All those companies I am sure have "green" programs, but they are still not paragons of virtue. If you do become leader of the Green Party, I think there will be a perceived conflict between your career and position.

No. My career allows me the time to read, to campaign, to write. Food you bought at the store was driven there on a GM truck. So are you going to stop eating food bought at the store? Do you own a car? Is your house R2000? Or even better yet, is it disconnected from all power, electricity, gas, and sewer like the house Greg Allen built? Are you a vegan only? What financial institution do you deal with? If it is a bank you're indirectly investing in dictatorships somewhere. Do you ever use styrofoam? Is the coffee you drink only picked by collectives of workers in democratically elected cooperatives. Do you even know?

If we want to live in a perfect world we have to disengage from living in this world altogether -- and become a hermit living in constant meditation and purity of commune with God and nature. Pretty steep price to pay and a terrible strategy for building a party and the movement -- because under the perfectionist strain fully actualized individuals have to isolate (taking this strain of thought to its logical conclusion). We have to live in an imperfect world. We can't make the barriers to entry to the Green party so high that no one can attain it. We have to live with imperfection while striving for the ideal.

I would ask who needs to be worked with more than the arms manufacturers? If we don't engage them in dialogue how can we create a viable future? If all we can do is vent anger at them how much will we change them? We'll catch far more flies with honey than vinegar. We need to have love, compassion at the center of our actions. We will never change the world by being angry, judgmental and purist? We need to work with all organizations. To challenge them yes. But not to attack.

By the way, the people I was addressing were car manufacturers not arms manufacturers at GM, but I would happily have addressed the arms manufacturers if given the chance. Who better to fund Green activity?

I met a black woman at Queen's University who was on a scholarship from de Beers -- the diamond company. Some people asked her how she could accept this "Blood Money" -- I deserve it more than anyone else was her reply -- because I am black. Taking the money would not silence her criticism of apartheid, or de Beers.

I read this in an e-mail today from the us greens lists server. It catches some of what I am feeling:

DaveLillie@aol.com,Internet writes:

It is a very unfortunate by-product of the military mindset to demonize or dehumanize what they perceive as the enemy, and as a result of horrible experiences during the various wars, most of us carry echoes of this. Resist it. Respect your "enemies" and work to show them the error of their ways.

() THAT in 1997 in March at the request of Rod Dobell I submitted a compilation of all the references to 'water in the documents from UNCED

() THAT on March 17 1997 , I raised the issue of water being described as "good" in the draft of the Earth Summit II

Comment

Comment related to "water" in the draft document for Rio + 5 the document "the follow-up to the United Nations Conference on

and Development", there was a reference to water being designated as an economic good. I pointed out to the Canadian delegation the serious implications for Canada. I was assured that they would contact external affairs in Ottawa about this issue. As far as I understand if it is declared as a good it then it will come under GATT and The World trade Agreement. In NAFTA, if I remember correctly, the definition of good was linked to GATT.

I recently received the subsequent document and I noticed that the statement about water is still in.

I contacted the BC. government and they claim that there was a BC govt rep at the meeting in New York.

Walter Dorn, Ph.D.

() THAT in MARCH , 1997, I am currently working on

a Book of Resolutions

COMMENT

In 1996 as the Chair of the BCEN International Affairs Caucus I was invited by Andy Shadrack to draft a proposal for the international affairs for the Green Party 1997 election Platform so I submitted the following : which I Later described as a Green Book

(A)

SOCIAL JUSTICE, AND EQUITY AND SECURITY

“The States... recognize the right of everyone to an adequate standard of living. for himself **[herself]** and his **[her]** family, including adequate food, clothing and housing and to the continuous improvement of living conditions. The States parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)”

- ENSURING THE RIGHT TO SAFE AND HEALTHY FOOD, SHELTER, HEALTH CARE, AND THE PROVISION FOR A GUARANTEED ANNUAL INCOME, FAIR PENSION AND SOCIAL SECURITY

- REDUCING POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT

- ENSURING THE RIGHT TO SAFE DRINKING WATER, AND SANITATION TO PRECLUDE BOTH MICROBIAL AND CHEMICAL CONTAMINATION;

- GUARANTEEING THE RIGHT TO UNIVERSAL HEALTH CARE PROVIDED THROUGH PUBLIC FUNDS WITH FAIR AND EQUAL ACCESS

- ENSURING THE RIGHT TO SHELTER THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY-SOUND AND WITH TENURE SECURITY

- PROVIDING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT WITH A SHORTER WORK WEEK WITH FULL BENEFITS FOR PART TIME WORKERS

- GUARANTEEING ECOLOGICAL RIGHTS TO A SAFE ENVIRONMENT (CLEAN AND UNPOLLUTED AIR, WATER, AND LAND); AND TO AN ECOLOGICAL HERITAGE FOR FUTURE GENERATIONS

(B)

FOOD SECURITY

Every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Sect.1. Universal Declaration on the Eradication of Hunger and Malnutrition, 197

- GUARANTEEING THE RIGHT TO FOOD (THE RIGHT TO NON GENETICALLY ENGINEERED OR RADIATED FOOD, NUTRITIOUS ORGANICALLY GROWN

- GUARANTEEING CONSERVATION OF FERTILE AREAS FOR GROWING FOOD

- REFOCUSING PRIORITIES TO SUPPORT DEVELOPMENT OF SELF-RELIANT FAMILY AND COMMUNITY FARMS THAT USE ECOLOGICALLY SENSITIVE METHODS OF FARMING.

- PROMOTING ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES

- REVISING THE CODEX ALIMENTARIOUS AND NATIONAL FOOD GUIDES SUCH AS THE CANADA FOOD GUIDE TO PRESENT LEGUMES, VEGETABLES, FRUITS AND GRAINS (WHICH CAN MEET ALL NUTRITIONAL NEEDS, WHILE REDUCING RELATED HEALTH PROBLEMS) AS A COMPLETE ALTERNATIVE TO A MEAT-BASED DIET.

- BANNING OF GENETICALLY ENGINEERED FOOD, AND IRRADIATED FOOD

(C)

HEALTH , RIGHTS AND ETHICS

- DEVELOPING CRITERIA FOR DETERMINING MEDICAL CHOICES

- ESTABLISHING GUIDELINES FOR REPRODUCTIVE TECHNOLOGIES LIKE SURROGATE MOTHERHOOD
- ENSURING THE RIGHT OF ACCESS TO REPRODUCTIVE CHOICE
- PROMOTING THE AVAILABILITY OF GENERIC OVER PATENTED DRUGS
- DECRIMINALIZING DOCTOR ASSISTED SUICIDE, AND EUTHANASIA
- GENETICALLY MODIFIED ORGANISM AND THE PATENTING OF HUMAN GENES
- LIMITING AND CONTROLLING BIOTECHNOLOGY
- ENSURING THE ETHICAL TREATMENT OF ANIMALS, PHASING OUT THE USE OF ANIMAL IN RESEARCH

(D)

ENVIRONMENT AND HEALTH

“the health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease”.
(93 Habitat II)

- IMPROVING PEOPLE'S QUALITY OF LIFE THROUGH PREVENTION OF DISEASE AND ILLNESS
- INCREASING FUNDING AND PROMOTING RESEARCH INTO ENVIRONMENTALLY-INDUCED DISEASES

- PROMOTING RESEARCH WHICH ADDRESSES THE LINKS SUPPRESSION OF OUR IMMUNE SYSTEM TO OZONE DEPLETION, PETROCHEMICAL POLLUTION AND BIOACCUMULATION OF PERSISTENT TOXINS INDICATES THAT PUBLIC HEALTH IS BEING ENDANGERED BY A DETERIORATING ENVIRONMENT.

- ENSURING THAT HEALTH RESEARCH AND SERVICES RESPOND TO THE NEEDS OF WOMEN, FIRST NATIONS AND MINORITIES;

- SIGNIFICANTLY INCREASING RESEARCH FUNDING INTO ALTERNATIVE HEALTH CARE METHODS WHICH COMPLEMENT OR REPLACE MORE EXPENSIVE CONVENTIONAL DRUGS AND SURGERY;

- SUPPORTING INITIATIVES TO EDUCATE THE PUBLIC AROUND LIFESTYLE CHANGES AND CHOICES THAT WOULD CONTRIBUTE TO BOTH PERSONAL HEALTH AND PROTECTION OF THE ENVIRONMENT

- ENSURING THAT HEALTH ADMINISTRATIONS ACCEPT AND PROMOTE THE USE OF NATURALLY OCCURRING MEDICINES AND HERBS WHILE PROVIDING A STRINGENT REVIEW PROCESS FOR NEW AND EXISTING HUMAN-MADE CHEMICALS, TECHNOLOGIES, AND ELECTROMAGNETIC DISRUPTION.

- ELIMINATING, PREVENTING AND REDUCING OF HEALTH AND ENVIRONMENT HAZARDS

- DISCONTINUING PHARMACEUTICAL COMPANY FUNDING TO AND DIRECTION OF HEALTH RESEARCH IN UNIVERSITIES

(E)

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

Every form of life is unique, warranting respect regardless of its worth to man [human] , and to accord other organisms such recognition's, man [must be guided by a moral code of action. (a, UN General Assembly Resolution 1982)

- RESPECTING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

- REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

- RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM (ENSURING THAT THIS IS NOT USED TO JUSTIFY INTRUSION INTO PRISTINE AREAS)

- ENSURING THE ADHERENCE THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

- ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

- ENFORCING OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION INTO THE ECOSYSTEM HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)

- INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

- ENSURING THAT ALL CORPORATIONS INCLUDING TRANSNATIONAL CORPORATIONS COMPLY WITH ALL NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW (AS AGREED IN HABITAT II)

F.

CLIMATE CHANGE AND OZONE-DEPLETION PREVENTION

Stabilizing the atmospheric concentrations of CO₂ is an imperative goal. It is currently estimated to require reductions of more than 50% from present emission levels. Energy research and development budgets must be massively directed to energy options which would eliminate or greatly reduce CO₂ emissions and to studies undertaken to further refine the target reductions (CHANGING ATMOSPHERE CONFERENCE).

- ADDRESSING CLIMATE CHANGE THROUGH REDUCING AND PHASING OUT OF GREENHOUSE GASES, PROVIDING ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION, AND MOVING AWAY FROM CAR-DEPENDENCY.

- ADDRESSING CLIMATE CHANGE: PROTECTING CARBON SINKS AND REDUCING EMISSIONS WAY BEYOND WHAT WAS REQUIRED IN THE FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992. (TO AT LEAST FULFILL THE RECOMMENDATION MADE IN 1988 “CHANGING ATMOSPHERE”)

- CONDEMNING THE MYTH THAT NUCLEAR ENERGY IS THE SOLUTION TO CLIMATE CHANGE

- ACKNOWLEDGING THE CONCERN BY INSURANCE COMPANIES OF THE IMPLICATIONS OF CLIMATE CHANGE

- ELIMINATION OF THE PRODUCTION AND CONSUMPTION OF OZONE DEPLETING SUBSTANCES

- BANNING THE PRODUCTION, SALE, CONSUMPTION AND DISTRIBUTION OF OZONE DEPLETING CHEMICALS, SUCH AS METHYL BROMIDE, HALONS, CHLOROFLUOROCARBONS, HYDROCHLORFLUOROCARBONS, CARBON TETRACHLORIDE AND OTHER COMPOUNDS CAPABLE OF BEARING CHLORINE TO THE STRATOSPHERE.

- ENSURING THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION

G.

EMISSIONS PREVENTION AND ELIMINATION

“_Zero use, production , and release of persistent and /or bio-accumulative toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (ZERO TOXIC ALLIANCE, 1994) “

- ENSURNG ZERO EMISSIONS OF CHEMICALS THAT ARE TOXIC OR BIOACCUMULATE, INCLUDING ENDOCRINE-DISRUPTING CHEMICALS WHICH HAVE BEEN LINKED TO REPRODUCTIVE DISORDERS
- MONITORING AND MAKING PUBLIC THE EXTENT OF THE HARMFUL CHEMICAL PRODUCTION, AND OF THE HARMFUL WASTES FROM CHEMICAL PRODUCTION
- BANNING OF PERSISTENT ORGANIC POLLUTANTS
- ENDING THE PRODUCTION OF ENDOCRINE-DISRUPTING CHEMICALS
- ELIMINATING OF TOXIC, HAZARDOUS AND NUCLEAR WASTES
- INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

H.

HUMAN-INDUCED DISASTERS

“The need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence

and to reduce the impacts of natural disasters and other emergencies on human settlements (Habitat II)”

- PREVENTING DISASTERS INCLUDING NA-TECHS NATURAL AND TECHNOLOGICAL DISASTERS, INCLUDING ACTIVITIES THAT PRODUCE TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- PREVENTING THE TRANSFERENCE TO OTHER States OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION, INCLUDING TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE
- CONDEMNING THE CONTINUED CIRCULATION AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS, THE TESTING OF NUCLEAR WEAPONS, AND PERMITTING OF LOW-LEVEL TEST FLIGHTS
- INCLUDING INDUCING CLIMATE CHANGE AND OZONE-REDUCTION UNDER THE CATEGORY OF DISASTERS

I.

CONSERVATION, BIODIVERSITY AND FORESTS

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

- GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY IN LAND, AIR AND WATER SYSTEMS
- PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS SUCH AS THE BIODIVERSITY CONVENTIONS, THE FRAMEWORK CONVENTION ON CLIMATE CHANGE, CONVENTION ON COMBATING DESERTIFICATION, THE

VIENNA CONVENTION ADDRESSING OZONE DEPLETION; ENVIRONMENTAL IMPACT ASSESSMENT OF trans-boundary POLLUTION ETC.

- IDENTIFYING BIODIVERSITY, AND CARRYING OUT AN ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY

- ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

ENSURING THAT THE BIODIVERSITY CONVENTION TRANSCEND JURISDICTIONAL AND PROPRIETORIAL BARRIERS

- IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

- ENSURING PRESERVATION, PROTECTION AND CONSERVATION FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS

- BANNING clear-cutting AND OTHER ENVIRONMENTALLY UNSOUND PRACTICES THROUGH ENACTING LEGISLATION TO CONFORM WITH THE CONVENTION ON BIOLOGICAL DIVERSITY, AND WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE

- BANNING THE EXPORT OF RAW LOGS

- REGULATING MINING PRACTICES, AND PREVENTING THE TRANSFER OF SUBSTANCES OR ACTIVITIES THAT COULD CONTRIBUTE TO ENVIRONMENTAL DEGRADATION

- DISCONTINUING THE DUMPING OF ENVIRONMENTALLY UNSOUND EMISSIONS INTO LAND, AIR AND WATER SYSTEMS

J

GREEN SPACES, PARKS, PRESERVATION AND CONSERVATION

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

- PRESERVING AND PROTECTING OF GREEN SPACES
- PROMOTING THE CONSERVATION AND SUSTAINABLE USE OF URBAN AND PERI-URBAN BIODIVERSITY, INCLUDING FORESTS, LOCAL HABITATS AND SPECIES BIODIVERSITY; THE PROTECTION OF BIODIVERSITY
- PROTECTING ENDANGERED SPECIES AND HABITATS THROUGH LEGISLATION THAT WOULD PROTECT HABITATS AND CONSERVATION CORRIDORS
- DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES
- PREVENTING INDUSTRIAL ACTIVITIES SUCH AS FORESTRY AND MINING IN PARKS

K

MARINE, AND FRESH WATER ORGANISMS

To assure the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine

environment. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- PROTECTING WILD FISH STOCKS

- MAINTAINING A MORATORIUM ON ADDITIONAL SALMON FISH FARMING

because of Risks of disease transfer from netcage fish to wild stocks; Risks of introduction of exotic diseases from the CONTINUED importation of offsite species;

- Pollution from fish sewage, contamination of shellfish, and loss of habitat
- Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices
- Loss of access to traditional fisheries for indigenous peoples with increased risks to their health from exposure to drug residues from food collected near netcage operations
- Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water
- Decline of wild stocks Losses of wild fish, such as herring and juvenile salmon, consumed by netcage fish
- Endangered human health from the increased use of antibiotics and other drugs, which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics

- REGULATING EXISTING MARICULTURE AND AQUACULTURE

- RATIFYING THE LAW OF THE SEAS, AND OTHER RELATED CONVENTIONS, AND ENACTING THE NECESSARY LEGISLATION FOR COMPLIANCE AND ENFORCEMENT

- ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT

- ESTABLISHMENT OF MARINE PROTECTED AREAS FREE FROM FOSSIL FUEL AND HUMAN WASTE POLLUTION -

- REQUIRING MANDATORY WATER CONSERVATION
- PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)
- PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

L

ENVIRONMENT, TRANSPORTATION AND ENERGY

to encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (Article 104 c, Habitat II Agenda)

- DETERMINING THE FULL SUBSIDY FOR THE INFRASTRUCTURE FOR THE AUTOMOBILE
- REESTABLISHING A VIABLE RAIL SYSTEM
- PROMOTING THE USE OF RAIL FOR FREIGHT AND PASSENGER TRANSPORT, AND EXTEND THE RAIL NETWORK TO SERVE ALL URBAN AND RURAL LOCATIONS CONVENIENTLY;
- ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY
- DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION

- PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -

- PROMOTING AND ENSURING ENVIRONMENTALLY SOUND TRANSPORTATION

M

ENVIRONMENTALLY SOUND ENERGY

Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy (101 d, Habitat II)

Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 ii (Habitat I, 1976)

- REQUIRING AND DEVELOPING ENVIRONMENTALLY SOUND ENERGY

- PROVIDING FOR ENVIRONMENTALLY SOUND ENERGY SOURCES BY 1999, AND CONCURRENTLY PHASING OUT ENVIRONMENTALLY UNSOUND ENERGY

- REQUIRING THE CONSERVATION OF ENERGY

- REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE

- *• MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASES INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY

- TRANSFERRING FUNDING FOR FOSSIL FUEL AND NUCLEAR INTO ENVIRONMENTALLY SOUND ENERGY
- REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY
- CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES
- INSTITUTING A MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.
- - PROMOTING RESEARCH FOR THE STORAGE AND HANDLING OF EXISTING NUCLEAR WASTE WHILE PHASING OUT CIVIL NUCLEAR ENERGY, AND THE GENERATION OF NUCLEAR WASTES
- CONDEMNING AND BAN THE PROPOSAL TO USE WEAPONS-GRADE PLUTONIUM FROM DISMANTLED RUSSIAN AND U.S. WEAPONS (IN THE FORM OF MOX) IN CANDU REACTORS.
- ELIMINATING OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY

N

ENVIRONMENTALLY SOUND PRACTICES REDUCTION OF OVERCONSUMPTION

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

- REQUIRING ENVIRONMENTAL SOUND PRACTICES DRIVEN BY FORCED COMPLIANCE WITH REGULATIONS (PRINCIPLE DRIVING INDUSTRY RATHER THAN INDUSTRY COMPROMISING PRINCIPLE)
- ENSURING BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES
- ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS
- STRENGTHENING AND PROMOTING TRADITIONAL ENVIRONMENTALLY SOUND PRACTICES
- REQUIRING MANUFACTURERS TO ASSUME THE FULL RECYCLING, COMPOSTING AND OTHER DISPOSAL COSTS OF THEIR PRODUCTS IN AN ECOLOGICALLY SOUND MANNER.
- ENACTING THE LIFE-CYCLE ANALYSIS OF EACH PRODUCT WITH POTENTIALLY HARMFUL ENVIRONMENTAL EFFECTS: THIS LIFE CYCLE ANALYSIS SHALL INCLUDE THE FULL LIFE CYCLE OF THE PRODUCT BY AN INDEPENDENT BODY
- INTRODUCING LEGISLATION TO PROMOTE THE REUSE OR REPLACEMENT OF MINERALS IN INDUSTRIAL PRODUCTION WITH RENEWABLE ALTERNATIVES.

O

EQUITABLE AND ENVIRONMENTALLY
SOUND FINANCE

“united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble,

Declaration on the Establishment of a New International Economic Order, 1974).

- CANCELING DEBT/DEBT FORGIVENESS AND REPARATION

- ENSURING THAT .07% OF GNP (UN UNDERTAKING) FOR FOREIGN “REPARATION”

- CONVERTING VESTED ECONOMIC INTEREST INTO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES

- REQUIRING ADHERENCE TO THE trans-boundary PRINCIPLE BY PREVENTING ALL ENVIRONMENTALLY UNSOUND ACTIVITIES

- REQUIRING OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE

- ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE, AND DEVELOPMENT ASSISTANCE
- DISCONTINUING SUBSIDIES FOR ENVIRONMENTALLY HARMFUL ACTIVITIES

- CONDEMNING THE CONTINUED FOREIGN AID POLICY DIRECTION OF STATE AND BUSINESS SELF INTEREST COMPETITION RATHER THAN INTERNATIONAL COOPERATION AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- SUPPORTING LOCAL MARKETS, LAND REFORM, AND SELF-RELIANCE RATHER THAN CASH CROPS FOR EXPORT;

- FORGIVING DEBT TO DEVELOPING COUNTRIES AND RESTRICTING CORPORATE PROFIT AND WEALTH TRANSFER FROM POOR TO RICH COUNTRIES;

- FAIRLY COMPENSATING DEVELOPING COUNTRIES FOR THE SALE OF THEIR COMMODITIES AND FOR PREVIOUS ACTIVITIES THAT HAVE CONTRIBUTED TO ENVIRONMENTAL DEGRADATION OR THAT HAVE BEEN HARMFUL TO HUMAN HEALTH

- IMPLEMENTING OR MAINTAINING TRADE SANCTIONS ON COUNTRIES WITH HUMAN RIGHTS VIOLATIONS

- DISCONTINUING ALL FOREIGN AID ASSISTANCE TO ALL EXISTING NUCLEAR, FOSSIL FUEL AND LARGE HYDRO-ELECTRIC RELATED PROJECTS, EXCEPT TO ASSIST WITH DECOMMISSIONING OR ENVIRONMENTAL RESTORATION;

- AWARDING ENERGY-RELATED FOREIGN AID TO COMMUNITY PROJECTS WHICH PROMOTE USE OF RENEWABLE ENERGY AND EFFICIENT USE OF RESOURCES.

- LIMITING FOREIGN AID TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PROJECTS

- PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN

- CREATING JOBS IN COMMUNITIES BY REINVESTING PROFITS THROUGH REVOLVING COMMUNITY LOANS AND THROUGH USE OF LOCAL RESOURCES;

- ESTABLISH A COMMUNITY INVENTORY OF PRODUCTS NEEDED THAT WOULD ENSURE EVERY CITIZEN A REASONABLE STANDARD OF LIVING AND QUALITY OF LIFE.

- ENCOURAGING CITIZEN OWNERSHIP AND CONTROL OF RESOURCES WITHIN A FRAMEWORK OF OVERARCHING EQUITABLE AND ECOLOGICALLY SOUND PRINCIPLES

- INCREASING THE AMOUNT OF PUBLIC DEBT FINANCED BY THE BANK OF CANADA AT LOW OR NO INTEREST:

- REDUCING YEARLY DEFICITS BY GETTING RID OF SUBSIDIES TO ECOLOGICALLY

UNSUSTAINABLE INDUSTRIES (EG. NUCLEAR POWER, PETROCHEMICAL AND HIGH-TECH ARMS MANUFACTURERS);

- ENDING CORPORATE SUBSIDIES AND TAX DEFERRALS, EXCEPT FOR GREEN INDUSTRIES

- CREATING JOINT CO-OPERATIVE MANAGEMENT THAT WOULD ENSURE ELIMINATION OF OVERLAP BETWEEN PROVINCIAL AND FEDERAL GOVERNMENT DEPARTMENTS IN FORESTRY, AGRICULTURE, EDUCATION, SOCIAL PROGRAMS, HEALTH AND TRANSPORTATION, ETC., WITHOUT LOWERING STANDARDS OF LIVING AND/OR QUALITY OF LIFE.

- PROMOTING A FINANCIAL TRANSACTION TAX (FTT) TREATY AND LEGISLATION WHICH COVERS ALL INTERNATIONAL INVESTMENT AND CURRENCY TRADING. SUCH A TAX COULD FUND THE VARIOUS UNITED NATIONS AND NON-GOVERNMENTAL AID AGENCIES.

- PROMOTING AN INTERNATIONAL TREATY THAT WOULD ENSURE CITIZENS AND GOVERNMENTS THE RIGHT TO KEEP NATURAL AND MONETARY CAPITAL WITHIN THEIR COUNTRIES' BORDERS;

- PROVIDING LOW- OR NO-INTEREST LOAN PROGRAM LEGISLATION. PROGRAM FUNDS WOULD BE DEPOSITED WITH THE NATIONAL BANKS BY CHARTERED BANKS, OTHER FINANCIAL INSTITUTIONS AND CORPORATIONS WITH ASSETS EXCEEDING \$100 MILLION. 5% OF THEIR CAPITAL ASSETS WOULD BE DEPOSITED TO ACT AS LIABILITY INSURANCE, SUBJECT TO LEGAL

CONFISCATION AND LOSS OF CORPORATE CHARTER, IN THE EVENT THAT ANY OF THESE CORPORATIONS CAUSE ECOSYSTEM DAMAGE AND/OR PREVENTABLE SOCIAL DISLOCATION TO CITIZENS AND OTHER SPECIES.

P

TRADE ENVIRONMENT HUMAN RIGHTS AND REGULATIONS

“to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992)

- ENSURING THAT WORLD TRADE AGREEMENT AND NAFTA ARE UNDER THE CONTROL OF INTERNATIONAL LAW, AND THAT INTERNATIONAL LAW INCLUDING TREATIES, CONVENTIONS, COVENANTS, GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTIONS PLANS AND DECLARATION TAKE PRECEDENCE OVER TRADE AGREEMENTS
- LOBBYING STRONGLY FOR ALL States TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE
- COORDINATING SANCTIONS AGAINST THOSE COUNTRIES WHO ARE NOT COMPLYING WITH UNITED NATIONS OBLIGATIONS INCURRED FROM CONVENTIONS, TREATIES, AND COVENANTS, AND EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTION PLANS, AND DECLARATIONS
- ESTABLISHING REGULATIONS TO ALLOW STATES TO PLACE TARIFFS UPON, OR REFUSE ENTRY OF, PRODUCTS MADE WITH CHILD AND SLAVE LABOUR, OR THAT ARE ENVIRONMENTALLY UNSOUND, CULTURALLY INAPPROPRIATE OR HARMFUL TO HEALTH ;
- INSISTING THAT NO HAZARDOUS OR TOXIC WASTE BE DUMPED IN THIRD WORLD COUNTRIES AND/OR RURAL COMMUNITIES, OR ON INDIGENOUS LANDS;

(INCLUDING THE SALE OF CANDU REACTORS AND ALL NUCLEAR TECHNOLOGY).

Q

MILITARY CONVERSION AND TRANSFER FUNDS
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognised that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (General Assembly, 1981)

• REDUCING AND TRANSFERRING THE MILITARY BUDGET
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

• REDUCING AND TRANSFERRING OF THE MILITARY BUDGET TO SOCIALLY
EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- PROTECTING THE RIGHT TO DEDUCT AND PROVIDING FOR A PROPORTION OF THE TAXES COMPARABLE TO THE PERCENTAGE REPRESENTED BY THE MILITARY BUDGET TO BE PUT INTO A PEACE FUND

- PROTECTING AND PROVIDING FOR CONSCIENTIOUS OBJECTORS

- SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE

- PROMOTING CIVILIAN RULE

- PREVENTING THE CAUSES OF CONFLICT

- ELIMINATING URANIUM MINING AND THUS PREVENTING THE CONTRIBUTION TO NUCLEAR WEAPONS

R

WEAPONS, MILITARY, WEAPONS OF MASS DESTRUCTION AND CONVENTIONAL ARMS

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

- ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL

- PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS

- REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR
- ELIMINATING OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, ELIMINATION OF NUCLEAR WEAPONS BY THE YEAR 1999
- PROHIBITING THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES
- ENSURING THAT THE ENVIRONMENT IS NOT ALTERED FOR MILITARY PURPOSES
- IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS
- BANNING THE TESTING OF NUCLEAR WEAPONS
- RECOGNIZING THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY
- BANNING THE PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)
- PREVENTING THE TESTING OF ALL WEAPONS INCLUDING THOSE IN CANADA (NANOOSE BAY AND LOW-FLYING FLIGHTS IN INNU TERRITORY)
- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS
- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- CONVERTING MILITARY MANUFACTURING CAPACITY TO MAKING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRODUCTS

- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

- HALTING LOW-LEVEL FLIGHT TRAINING IN LABRADOR AND END NUCLEAR SUBMARINE TESTING AT NANOOSE BAY, AND THE CIRCULATING AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS ;

- WITHDRAWING FROM MILITARY ORGANIZATIONS SUCH AS NATO, AND ALL OTHER BI- AND MULTILATERAL DEFENCE ARRANGEMENTS WITH INDIVIDUAL COUNTRIES AND REGIONS.

() THAT in 1997 in March I recirculated the following:

PETITION FOR THE ESTABLISHMENT OF AN INTERNATIONAL COURT OF COMPLIANCE

By Joan Russow

RECOGNIZING that for fifty years since the formation of the United Nations, member States have undertaken obligations reflected in the Charter, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDING of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of trans-boundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations whereby if a government holds itself out to do something even if not legally required to do so, the

government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligations. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1997, States SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. States WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

I. RESOLUTION RE FOREST PROTOCOL (PROTOCOLS)

Aware of the existence of legally binding international conventions that are applicable to forests such as the Convention for the protection of Cultural and Natural Heritage, the Convention of Biological Diversity, the Framework Convention on Climate Change, Vienna Convention on Protection of Ozone, the Basel Convention on trans-boundary pollution, the Convention on Environmental Impact Assessment Review trans-boundary Activities, the Convention to Combating Desertification, the Convention Natural Disaster Reduction, Environmental Modification Convention, UN Convention on International Trade in Endangered Species of Wild Fauna and Flora, etc.

Recognizing that many States have neither signed nor ratified these conventions, many States have signed but not ratified, and many States have signed and ratified but failed to enact the necessary legislation to discharge their obligations, and finally many States have failed to enforce the legislation necessary to ensure compliance. In addition, many of the national and regional courts do not find these international instruments judicable.

Aware of the existence of many General Assembly resolutions, declaration and conference action plans that created an expectation that forests will be preserved and protected, and that logging practices will be socially equitable and environmentally sound

Be it resolved that forest protocols be linked with legally binding conventions

Be it also resolved that States sign, and ratify United Nations Conventions related to forests, and that States enact the necessary legislation to ensure compliance with these conventions, and to ensure that the international legally binding instruments can be used by citizens in the national and regional court systems.

RESOLUTION II

RE: Criteria and indicators

Aware that criteria and indicators as currently conceived are neither mandatory, normative nor performance based

Recognizing that voluntary criteria and indicators such as those developed through the ISO 14000 process only assess conformance to self initiated environmental policy

Fearing that criteria and indicators, or ISO 14000 standards will be confused with Mandatory, normative, performance based standards

Understanding that voluntary standards would be in violation of the expectation created in Article 167 of the Platform of Action, Beijing, 1995 that States should ensure that corporations including transnationals comply with all international agreements including international environmental law, and with the expectation created that this would extend to the private sector in article (Istanbul) 1996

Be it resolved that mandatory, normative international standards based on principles established through international law be established

Be it resolved that States fulfill their expectation of ensuring compliance by supporting the establishment of Mandatory International Normative standards (MINS)

Be it further resolved that no labels related to standards be permitted to be placed on forest products unless these standards are mandatory, normative, environmentally sound and performance based

RESOLUTION III

RE: Biodiversity Convention/Framework Convention on Climate Change and forests

Recognizing that under the Biodiversity Convention and the Framework Convention, States party to the Conventions have undertaken to discharge obligations and that under the Convention of the Law of Treaties, signatories of the Convention should not do anything that would defeat the purpose of the Conventions

3.1. Aware that the Convention on Biological Diversity requires the invocation of the precautionary principle, which States “where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat”,

Be it resolved that it is not necessary to establish scientific certainty that clear-cutting and other ecologically unsound practices will cause loss and reduction of biodiversity for the practice of clear-cutting and other ecologically unsound practices to be banned

3.2. Aware that the Biodiversity Convention requires that States party to the Convention identify biodiversity, and

Understanding that States by their own admission have not begun to identify vertebrates let alone invertebrates

Knowing that the original old growth forests are habitats of significant biodiversity

Be it resolved that States are in violation of the Biodiversity Convention by continuing to permit logging in areas of old growth

3.3. Aware that the Biodiversity Convention calls for an environmental impact assessment of activities that could contribute to the loss or reduction of Biodiversity

Convinced that current logging practices have been shown to contribute to a loss and reduction of biodiversity

Be it resolved that there be a full environmental impact assessment of current forest practices.

3. 4. Aware that the Framework Convention on Climate Change requires the conservation of carbon sink

Knowing that old growth forests function as significant forest sinks

Be it resolved that States conserve carbon sinks by preserving old growth forests

RESOLUTION: THE PROTECTION OF GREEN SPACES

Aware that in Habitat II, governments undertook to provide access to open and green spaces

Noting that in Habitat II governments undertook to “to promote a healthy environment that ...should:

(a) Promote the conservation and sustainable use of urban and peri-urban biodiversity, including forests, local habitats and species biodiversity; the protection of biodiversity should be included within local sustainable development planning activities

(b) Encourage, where appropriate, the establishment of... green belts around urban and rural agglomerations in order to protect their environment and contribute to the provision of food products.

Understanding that there is citizen concern about the potential leeching of chemicals as a result of raising the dam in the Greater Victoria Water District

Committed to both the anticipatory principle, as expressed in General Assembly Resolution 37/7, 1982,

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effects are not fully understood, the activities should not proceed (General Assembly Resolution, 37/7, 1982)

And to the anticipatory principle as expressed in Agenda 21

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies.

Committed also to the precautionary principle

Where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation

Call upon governments especially local and regional governments to ensure the protection of green spaces, green belts, and peri-biodiversity

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

To ensure compliance with the anticipatory and precautionary principle, States shall adopt the reverse-onus principle where the onus of proof shall shift from the opponents of an intervention having to demonstrate harm to the proponents of an intervention having to demonstrate safety.

Specific resolution

Call upon the Water District of Greater Victoria

- To preserve the catchment and non-catchment lands as proposed in the Sea to Sea submission

- To embark upon a serious water conservation program which could include environmentally sound water saving devices and a strong campaign for drought-free gardens, and phasing out of lawns

- To immediately cancel all projects related to the proposed raising of the dam in the Sooke Watershed

RESOLUTION: RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM

Sustainable human settlements development incorporates... the precautionary principle, pollution prevention, respect for the carrying capacity of ecosystems and preservation of opportunities for future generations. (16, Habitat II).

Respecting the carrying capacity of ecosystems also entails acknowledging that there are limits to growth, and respecting the inherent worth of nature, and thus does not justify increased pollution in pristine areas, or give a licence to pollute less polluted areas.

Call upon governments:

- **To respect the carrying capacity of the ecosystem**
- **To ensure that this principle is not used to justify increased pollution in pristine or less polluted areas**

RESOLUTION: REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

Concurring with Habitat II that the need for “promoting changes in unsustainable production and consumption patterns, particularly in industrialized countries...settlement

structures that are more sustainable, reduce environmental stress, promote the efficient and rational use of natural resources- including water, air, biodiversity, forests, energy sources and land - and meet basic needs thereby providing a healthy living and working environment for all and reducing the ecological footprint of human settlement”

Aware of the undertaking by members States of the United Nations in 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws”. This undertaking was reaffirmed and extended in the Habitat II Agenda to include the “private sector”.

Call upon Government

* To phase out all environmentally unsound practices, to institute regulations that will phase out and eventually ban all environmentally unsound practices that contribute to the ecological footprint

• To drive industry to BEST (Best Environmentally Sound Traditions) practices

RESOLUTION: REDUCTION OF CAR-DEPENDENCY

• To immediately

*As a consequence of the development and testing of nuclear weapons, disasters with irreversible environmental consequences have occurred and communities have been displaced, there has to be an acknowledgment that there is no acceptable remediation to these nuclear disasters. The least that can be done for those who have been affected by nuclear disasters is to ensure that there is a need for the safe resettlement of displaced populations especially those from *for* small island developing States and coastal regions. There also has to be an acknowledgment that there is no real restoration of sites that have been exposed to radiation from nuclear disasters, otherwise the perpetuation of the belief in the possibility of restoration could justify the CONTINUED nuclear associated technologies. *And the restoration of economic activity to the affected areas, especially for small island developing States and coastal regions.* Noting the*

special responsibility towards those people of the former United Nations Trust Territories who have been adversely affected as a result of the nuclear-weapons tests conducted during the period of the Trusteeship, all Governments and international organizations that have expertise in the field of cleanup and disposal of radioactive contaminants should consider giving appropriate assistance as may be required for remedial purposes in areas affected by radioactive contamination from nuclear weapons programmes.] [(Article 126 bis.) Habitat II, 1996)

RESOLUTION: REDUCTION OF ENVIRONMENTALLY HARMFUL SUBSIDIES

Aware of the obligations incurred and expectations created in relation to renewable environmentally sound energy

Concurring with the recent report from the Standing Committee on the Environment and Development, indicating that there CONTINUEs to be a substantial subsidy given to both nuclear energy and to fossil fuel energy.

We call upon Canada

- To immediately cease all subsidies to civil nuclear energy (as proposed by the Standing committee), and to the fossil fuel industry; and to begin a full subsidy program on environmentally sound energy
- to commence to phase out civil nuclear energy (as proposed in the Noble Laureate declaration to UNCED) and fossil fuel energy (As proposed in Habitat 1)

RESOLUTION: DISASTER PREVENTION

Concurring with Habitat II on the need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence and to reduce the impacts of natural disasters and other emergencies on human settlements

Concurring also with Habitat II on promoting the use of tools for disaster prevention

Noting that in Habitat II there was a call for immediate removal of anti-personnel land mines following the cessation of armed conflict”, **and concerned that this should be extended to include the immediate ban of the production and use of land mines**

Recognizing that the impact on people and human settlements of natural and human-made disasters is on the increase. Disasters are frequently caused by vulnerabilities created by human actions, **such as the consumption and production of ozone-depleting substances, of green-house gas emissions, of toxic, hazardous and atomic wastes**; such as uncontrolled or inadequately planned human settlements, lack of basic infrastructure and the occupation of disaster-prone areas, **and such as the CONTINUED production of arms and weapons of mass destruction, and the CONTINUED visits of nuclear powered vessels in urban ports.**

Convinced that since the development of nuclear technology the most significant preventable anthropogenic disaster has been the preventing of nuclear-related disasters, and convinced that the outcome of nuclear hazards, accidents or disasters, from the mining of uranium, from the use of MOX from weapons grade plutonium from dismantled nuclear reactors, from the production and testing of nuclear arms and from the use of nuclear civil nuclear power, has had irreversible consequences that cannot be considered to have been remediated from transport from acts of malice.

Aware of the undertaking by members States of the United Nations in 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws”. This undertaking was reaffirmed and extended in the Habitat II Agenda to include the “private sector”.

Mindful that at the 1972 UN Conference on Human Environment (UNCHE) held in Stockholm the States globally adopted the commitment to “eliminate the production of weapons of mass destruction” and twenty years later a Nobel Laureates Declaration called for the phasing out of civil nuclear power.

Mindful of the existence of numerous UN General Assembly resolutions as an expression of democratic international will calling for the elimination of the production and testing of nuclear weapons

Concerned that and for the time bound elimination and that whenever there has been a time-bound phasing out of nuclear arms in the General Assembly has voted with the nuclear weapons States,

Call upon Governments

- **To ensure that significant public concern about an activity or technology that could lead to preventable disaster be taken seriously and the activity or technology shall be prevented or banned**

- **To ensure that regulations that will prevent preventable anthropogenic disasters and encourage CONTINUED *domestic* and international resources for disaster reduction activities for non-preventable disasters**

- **to embark upon the prevention of preventable disaster, by preventing the mining of uranium, the CONTINUED production of nuclear arms, for the producing of nuclear arms, the testing of nuclear arms, the circulating and harbouring of nuclear-armed or nuclear-powered military vessels, the using of civil nuclear reactors, the use of MOX from weapons-grade plutonium from dismantled nuclear weapons in civil nuclear reactors**

- **To ban the further production and consumption of all ozone depleting substances, and to ensure that the recycling of these substances not be used as a justification for the CONTINUED production and consumption**

- **To immediately ban the production and use of land mines**

- **To re-submit a UN General Assembly resolution on a time-bound phasing out of nuclear arms in the General Assembly**

RESOLUTION: NON-TRANSFERENCE OF HARMFUL SUBSTANCES OR ACTIVITIES

Aware of the member States of the United Nations undertaking in the Rio Declaration that States shall prevent the transfer of substances and activities that are harmful to human health and to the environment

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration, UNCED)

Noting that the “Non-transference of Harmful substances and activities shall never be qualified by the excuse that the recipient state is willing to accept the harmful substances or activities. Also the excuse of “Extraterritoriality” shall not be used as an devise to justify the transferring these harmful substances and activities (i.e. what right do we have to impose our standards on other communities, regions or States—self-serving extraterritorialism-avoidance).

Aware also of the member States of the United Nations undertaking Habitat II

to ensure that the process of technology transfer avoids the dumping of environmentally-unsound technologies on the recipients and that the transfer of environmentally-sound technologies and corresponding know-how in particular to developing countries, is on favourable terms, as mutually agreed, taking into account the need to protect intellectual property rights

Convinced that this principle shall be extended to apply to other jurisdictions within a state, and in particular to the territories and land of the disenfranchised and marginal groups in society.

Call upon States

- **To immediately cease the transport of all toxic, hazardous, and atomic wastes within the state and to other States**

RESOLUTION: REDUCING SIGNIFICANTLY OR ELIMINATING ENVIRONMENTALLY HARMFUL SUBSIDIES INCLUDING HIDDEN SUBSIDIES

Concurring with Habitat on the need to “reduce significantly or eliminate environmentally harmful **technologies**, subsidies and other programmes, such as those which stimulate the excessive use of pesticides and chemical fertilizers, and price control or subsidy systems that perpetuate unsustainable practices and production systems in rural and agricultural economies

Noting that environmentally unsound practices require extensive monitoring to ensure compliance with regulations, and noting also that this monitoring contributes to excessive additional costs that would not be incurred if BEST Environmentally Sound Traditions practices were used

Call upon governments

- to eliminate all environmentally harmful technological subsidies and programs such as the excessive use of pesticides and chemical fertilizers, and the use of civil nuclear power, and forest practices
- To phase out and eventually ban all environmentally unsound practices
- to charge those companies that fail to engage in environmentally sound practices the monitoring costs for ensuring compliance with regulations

RESOLUTION

In seeking to prevent trans-boundary pollution and minimize its impacts on human settlements when it does occur, Governments should cooperate to develop appropriate mechanisms for assessing the environmental impact of proposed activities that are likely

to have a significant adverse impact on the environment, including an evaluation of relevant comments provided by other potentially affected countries. Governments should also cooperate to develop and implement mechanisms for prior and timely notification, exchange of information and consultation in good faith, and mitigation of the potential adverse effects regarding those activities, taking into account existing international agreements and instruments. (Article 99 bis Habitat II)

Through various international instruments States have undertaken to ban the use of production and consumption of ozone depleting substances (Vienna Convention on depletion of the ozone layer, 1985); to reduce the production of greenhouse gases and to conserve carbon sinks (Framework Convention on Climate Change, 1992); to identify biodiversity and to carry out and environmental impact assessment of activities that could contribute to the loss or reduction of biodiversity; to combat desertification (Convention on the Combating of desertification); to promote renewal energy (Chapter 9, Agenda 21) and to phase out fossil fuel (Habitat 1). To preserve cultural and natural heritage (Convention on the Protection of Cultural and Natural Heritage, 1972)

In addition States have agreed to the precautionary principle, the anticipatory principle, the internalizing of environmental costs (environmental audit). Yet few States if any have taken the necessary measures.

13.12. INVOKING THE REVERSE-ONUS PRINCIPLE

Through mandatory international standards, States shall adopt the reverse-onus principle. With the reverse onus, the onus of proof shall shift from the opponents of an intervention having to demonstrate harm to the proponents of an intervention having to demonstrate safety.

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

[NOTE THAT THE HONORABLE SHEILA COPPS, WHEN SHE WAS THE MINISTER OF ENVIRONMENT OF CANADA HAS CALLED FOR THE IMPLEMENTATION OF THE REVERSE ONUS]

RESOLUTION: RELATED TO THE PHASING OUT OF ENVIRONMENTALLY SOUND PRACTICES

RESOLUTION: RELATED TO COMPENSATION, RESTORATION, AND POLLUTER PAY AND COST RECOVERY

Concerned that throughout the member States of the United Nations corporate-sympathetic government regimes have failed in the past both to ensure corporate compliance with international obligations, and to enforce their own statutory legislation, and given that there has been resultant environmental degradation, States shall now seek environmental compensation from companies that can be shown to have contributed to environmental degradation or human rights violations. The funds from environmental compensation shall be put into a restoration fund, into developing BEST (Best Ecologically Sound techniques) and into addressing human rights violations.

Often industries that have contributed to environmental degradation seek compensation from States when areas are taken out of production for environmental reasons. Any potential compensation shall be assessed against the estimate of previous ecological consequences.

States shall ensure that the cost of potential compensation is not used as justification for not fulfilling the duty to preserve, protect, and conserve the environment

Call upon governments:

- to require the establishment of a “compensation” fund drawn from industry to retroactively pay for past environmental degradation on crown land before being granted permission to CONTINUE using any part of crown land

RESOLUTION: RELATED TO THE NEED FOR ARMS-LENGTH RESEARCH

Concerned that most of the current research that has been used to support the continuation of the current model of development has arisen from non-arms length research by vested interests and that if the urgency of the global situation is to be addressed arms-length non-vested interest research has to be relied on.

Call upon governments

- **To ensure that governments will no longer fund research from vested economic interests**
- **To ensure that governments will not longer base policy decisions on vested interest research**

RESOLUTION: REDUCTION OF THE MILITARY BUDGET

For over 50 years States since the formation of the United Nations, member States have incurred obligations through the founding Charter of the United Nations, through treaties, conventions and covenants; and member States have create expectations through declarations, conference action plans and General Assembly Resolutions. This obligations and expectations have been reflected in international instruments undertaking to guarantee the enshrining and respect of human rights; to preserve, protect and conserve the environment, to prevent conflict and war, to achieve social justice and to enable socially equitable and environmentally sound development and communities.

Through the United Nations process the course for the necessary global change has been set. At the conjunction of the decade devoted to the respect and furtherance of international law, and the Habitat Conference as the culmination of a significant series of conference is a unique opportunity for States to summon up the political will, with the assistance of civil society, to move beyond the recipes and constraints of the past.

Currently the Global Community spends \$800 billion on the military budget at a time when the right to housing, the right to food, the right to health care, the right to equality of all, the right to education, the right to safe drinking water, and the right to a safe environment have not been fulfilled.

25 years ago, in General Assembly resolution the majority of States of the world expressed deep concern about the military budget which at that time was 50% of what it is now

In 1981, in general assembly resolution entitled the reduction of the military budget, the majority of the member States reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

Also in 1981, the majority of States recognized that the military budget constituted a heavy burden for the economies of all nations, and contributed to undermining international peace and security.

In addition in 1981 the majority of States undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

In 1981 the majority of States through a general assembly resolution

Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (Resolution on the Reduction of Military budgets, 1981)

This request was further reinforced in a 1983 General Resolution on the Relationship between disarmament and development, that curbing the arms build-up would make it possible to release additional resources for use in economic and social development, particularly for the benefit of the developing countries. Also in this resolution state considered that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order.

CANCELING DEBT

The canceling of third world debt by the replacement of structural adjustment programs with programs of reparation through debt cancellation for the violation of human rights, for the causing of environmental degradation for the contributing to violence and war

MOVING FROM VESTED INTEREST DECISION MAKING

The ensuring of genuine involvement and participation of the community in decision making from the determination of the terms of reference and throughout the process

The facilitation of citizens' awareness of the causes of their problems and of their capacity to solve the problems.

SPECIFIC MEASURES RELATED TO URBANIZATION

Ensuring socially equitable and environmentally sound communities within the carrying capacity of the environment; the provision in all habitat development work for the consideration of the bio-regional, sociocultural historic and detailed ecological context and design to respect and enhance these qualities; the restoration of natural areas, preservation of significant ecosystems and the freezing of development on agricultural land; the establishment, preservation and restoration of wildlife corridors for ranging and migratory animals, and continuity of plant species; the pre-identification of the elements and internal connectivity of habitats and their biodiversity, the environmental impact assessment of activities that could contribute to loss or reduction of biodiversity, and the invocation of the precautionary principle in all developmental enterprises.

the control and regulation of space to grow, and the identification of areas designated for specific purposes such as agriculture and housing, and provision of green spaces, and green buffer zones and pathways

the design of cities for energy conservation, the phasing out of fossil fuels, and other non-renewable form of energy, and the phasing out of nuclear energy

* the prevention of the production of wastes which are harmful to human health, which cause environmental degradation or which cannot be reused as a resource

the creation of a environmental sound infrastructure that makes walking, cycling and public transportation safe, accessible and convenient, and that moves away from car-dependency. The right to public transit in contrast to the privilege of car use.

The recognition that learning by doing provides integrated understanding and long-term commitment to place: a new community-based approach to planning, and development which harnesses the skills of developers, and urban designers as community servants rather than imposers of structure.; the establishment of guidelines for mixed income communities

ensuring that community plans are binding and enforceable and that the users are involved in all stages of their development and revision the ensuring that intermittent or seasonal use of land does not interfere with the cultural patterns in the community

the preservation of village and city integration in social and functional terms

the elimination of crime through reducing mistrust, alienation and marginalization, and concurring with the General Assembly Resolution, Crime Prevention and Criminal Justice, 1981) that crime prevention and criminal justice should be considered in the context of social and cultural systems as well as in the context of the new International Economic Order

TO BE INCORPORATED

13.6 PREVENTING DISASTERS THROUGH BUILDING A CULTURE OF SAFETY

Promote and encourage all parts of society to participate in disaster preparedness planning in such areas as water and food storage, fuel and first-aid, and in disaster prevention through activities that build a culture of safety (Article * 127 (d) Habitat II, 1996).

In order to prevent technological and industrial disasters, governments at the appropriate levels, including local authorities, as appropriate, should:

(Article * 127 bis :

Pursue the objectives of preventing major technological accidents and limiting their consequences through, inter alia, land-use policies and the promotion of safe technology (Article 127 (a) Habitat II, 1996)

13.7. REMOVING IMMEDIATELY ANTI-PERSONNEL LAND MINES

13.8. PREVENTING POLLUTION AND EXPOSURE TO POLLUTION

DISCOURAGING DISPROPORTIONATE SITINGS

Prevent or minimize pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that discourage the disproportionate sitings of polluting industrial facilities in areas inhabited by people living in poverty or those belonging to vulnerable and disadvantaged groups (Article * 84 e Ter Habitat II, 1996)

13.9. PREVENTING AND MITIGATING ADVERSE ENVIRONMENTAL IMPACTS

Increasingly, cities have a network of linkages that extends far beyond their boundaries. Sustainable urban development requires consideration of the carrying capacity of the entire ecosystem supporting such development including the prevention and mitigation of adverse environmental impacts occurring outside urban areas. All trans-boundary movements of hazardous waste and substances should be carried out in accordance with relevant international agreements by parties to those agreements. Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems (Article 79 Habitat II, 1996).

CONTRIBUTING TO COMMON GOOD

Concurring with Habitat II that all people have rights and must also accept their responsibility to respect and protect the rights of others- including future generations and to contribute actively to the common good...unity.

(*) THAT on March 25, 1997, I made a submission to an Alternative economic conference which was a parallel conference to the G7 conference in Denver

EXHIBIT

To: hunt@PENDER.EE.UPENN.EDU

From: Bob Wallace <toes97@igc.apc.org>

Subject: TOES '97 Invitation

Sender: bwallace@igc.org

Thank you for letting me know about the Summit TOES. I have sent to the seminar what I describe as “A Modest Proposal” . As you know, the Earth Summit II is starting right after this conference. I think that we should lobby strongly for state and corporate compliance. I am sure at the TOES summit there will be industry lobbying for their scheme of self-initiated standards with voluntary conformance to self-imitated standards (ISO 14000). I was recently at the United Nations where States and UN institutions including UNEP were being obsequious at the foot of industry. They all claimed that it was a given that the only money was out there was corporate money.

Needless to say they regretted to note the reason for such corporate abundance: failure to revoke licenses, failure to have fair taxation, failure to demand compensation for environmental degradation, failure to institute regulations to drive industry, failure to enforce laws,

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security, and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York.

At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

“A MODEST PROPOSAL”

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

Suggested actions for Earth Summit II in June, 1997

1. (a) On June 23, 1997 at the fifth anniversary of the United Nations conference on Environment and Development, we the member States of the United Nations undertake to sign and ratify international agreements that we have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition we undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

- Establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

1(b) In addition, we reaffirm the undertaking in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

- revoke licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

1 (c) Further, we undertake to establish an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

2. (a) On June 24, 1997. we the member States of the United Nations undertake to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

We undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations.

Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

3. On June 25 1997. we the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration

exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

() **THAT** in March, 1997, the Sierra Legal Defence contacted me about the cabinet document in which the BC government had endorsed the Framework Convention on Climate Change, and the Convention on Biological Diversity. I had obtained the document through freedom of information and had urged lawyers within the Sierra Legal Defence to use this document to demonstrate that the Province of British Columbia was bound by the Conventions and could not rely on the 1937 Supreme Court Labour Convention case, and that the 1936 radio case was a relevant precedent. I had continually urged Greg McDade QC, formerly with the Sierra Legal Defence to use international law in environmental cases, but he ridiculed me and told that judges in BC do not take into consideration international law. He also discredited me for using international law and undermining issues. Another lawyer, also claimed that using international law in the Clayoquot case would muddy the waters.

() THAT in 1997 on march 8 I decided to run for the leadership of the Green Party of Canada

Hi Deborah,

I just got back to Victoria. Thank you for all the work that you have been doing in getting the material out. In the initial material I sent you I had forgotten to mention that I was bilingual (French and English) and I speak Spanish. I know it is too late for the mail-out but could you mention it on the Web site.

Thanks

Bye for now

Joan

please respond to jrussow@coastnet.com

, I returned to Victoria

() THAT in 1997 on March 10, THAT in 1997 I wrote a comment about election unfairness

RE: \$1000 fee for candidates

When I was at a Toronto meeting with Green party members, we were discussing the problem for potential federal Green party candidates of the \$1000 fee.

I proposed that we initiate a Charter challenge under section 15, the equality before the law clause.

In addition we could challenge the fee through the ombuds offices across the country as their being " administrative unfairness" and link it in with the denial of "proportional representation".

I was talking to a lawyer at the meeting and I will be in contact with him.

Before I go any further on this, could you let me know what has already been done. I'm sure that the Green party at some time has taken a stand on this issue.

Joan Russow

() THAT in 1997, on March 11, I wrote a message to some Green Party members about my possibly running for the leadership of the Federal Green Party

MARCH 11, 1997

MESSAGE TO GREEN PARTY MEMBERS

Dr. Joan Russow (leadership candidate)

One of the key roles for the Green Party will be to expose misplaced spending priorities. The Canadian government CONTINUEs to spend more than 9.6 billion a year on the military when the global community through a general assembly resolution agreed to reduce the military budget in 1981 when it was 50% of what it is now. This 50% should be immediately transferred into replenishing the reduced transfer payments to the provinces.

Another misplaced priority is institutional collusion between government and industry. Rather than governments establishing stiff regulations to drive industry, governments have allowed industry to devise a scheme of voluntary conformance to industry-initiated policy. Governments have not called for industry to pay compensation for the devastation of past practices, they have not called for the necessity of raising corporate taxes, and eliminating tax deferrals.

For the past 5 years I have been lobbying internationally, nationally and locally for compliance. I have widely circulated a document entitled “principles of compliance” through Mandatory International Normative Standards. This document was compiled to counteract what I see as a dangerous movement within primarily the polluting industries to call for voluntary conformance to self initiated standards. Though the phenomena in Canada of the “round table” process competing interests including those of the polluting industries have been at the decision making table. Often environmentalists have been seduced into this process where rather than calling for strong regulations to drive industry they have been part of a consensus process that justifies the voluntary program. So often

those who call for strong regulations to drive industry have been marginalized and considered to be “mean spirited” for not embracing industry’s new felt concern for the environment.

I have just returned from a meeting at the United Nations where governments including Canada have been professing to have seriously addressed the issues raised at the United Nations Conference on the Environment and Development (UNCED) that was held in Rio da Janeiro in 1992. A key issue that is emerging more and more at the international level and that is reflected at the national local level is that governments and institutions are devolving themselves of responsibility, and declaring that the only money that exists to bring about change is private sector money. I pointed out at numerous sessions at the UN that possibly the private sector’s wealth could most likely be because they have not had their licenses revoked for violating human rights, for causing environmental degradation, and for contributing to war and conflict. In addition, States have failed to raise corporate taxes, to disCONTINUE tax deferrals, to require payments for compensation for past performance, and to incorporate externalities such as environment in cost accounting.

One way that the private sector has been thwarting change is by undermining regulatory regimes and calling upon governments and institutions to move away from “command and control” to voluntary conformance. Voluntary conformance message has been manifested at least since 1991 through the ISO (International standardizing process whereby industry sets its own environmental policy with proposed actions to deliver its policy and then is evaluated not on any external mandatory international or national standards but on how well it have conformed its self initiated policy. I organized a meeting on Global Compliance at the United Nations where I called upon member States of the UN to sign and ratify agreements not yet signed and ratified and to enact the necessary legislation to ensure compliance and enforcement. I also called for governments to comply with the undertaking at two recent U.N. conferences to “ensure that corporations including transnational corporations comply with national codes social security and international law, including international environmental law. In addition I called for an International Court of Compliance where citizens could take evidence of state and corporate non-compliance.

The increased involvement of the corporate sector at all levels including determining the philosophical underpinnings of educational programs in the school system, and the direction of research at universities

The Green Party at this time in selecting a leader has to decide whether the party wants to move in the direction of demanding changes in industry behaviour through tough legislation, compensation and taxation, or to embrace industry’s “we may have sinned in the past but we know better now” voluntary approach.

I think that, for over fifty years, through international agreements, the member States, (including CANADA) of the United Nations have undertaken: to promote and fully

guarantee respect for human rights; to ensure the preservation and protection of the environment; to create a global structure that respects the rule of law, to achieve a state of peace; justice and security, and to participate in socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions. If these years of obligations had been discharged, and if these fifty years of expectations had been fulfilled, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In international agreements member States of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations through enacting the necessary legislation **and** through enforcing this legislation.

In the Platform of Action from the UN Conference on Women: Equality, Development and Peace(1995) and in the Habitat II Agenda from the Habitat II Conference (1996) member States have undertaken “to ensure that corporations, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements and conventions, including those related to the environment, and other relevant laws. (Article 167). In Habitat II, this undertaking was reaffirmed and then extended to include the undertaking by States to ensure that the “private sector” also comply (Article 148).

Member States that have ratified Conventions, Treaties and Covenants are held to be legally responsible for discharging all obligations under these agreements. Also, members States that have signed but not ratified agreements are required under Article 18 of the Convention on the Law of Treaties to not defeat the purpose of the convention in the interim between the signing and the coming into force of the convention. There is no provision, however, for States to be bound to appear before the International Court of Justice or to be bound by its decision. In addition, there is no provision for an international court of Compliance where citizens could take evidence of state non-compliance.

Expectations that have been created from General Assembly Resolutions, Declarations and Conference Action plans could be judiciable under the Doctrine of Legitimate Expectation. The Doctrine of Legitimate Expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

To create an expectation is an empty gesture without a promise to fulfill it.
Before creating an expectation, an organization must assure itself of its

ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

In this report principles related to environmental preservation and protection have been extracted from a synthesis of international obligations derived from the UN Charter, UN Conventions, treaties Covenants; and of expectations derived from United Nations Declarations, Conference action plans and General Assembly Resolutions. In addition, consideration has also been given to Non Governmental Organization submissions.

please respond to jrussow@coastnet.com

Joan Russow

Dear Tom.

I was really pleased to finally meet you in Toronto. I am shocked about the info you passed on to me about Jim's Web site. Why didn't you ask him a question about his corporate connections. Here I am spending my life trying to counteract the intrusion and control of industry. I am giving a talk on Wednesday on "the guise of objectivity corporate involvement in education". I know when I discuss the need for mandatory international normative standards to drive industry, I have never received enthusiastic responses. When I talked to Frank de Jong in Ottawa, he was saying how Jim was doing a great job in bringing about change through talking to companies.

I think that what you sent me should be on the Green Website so that Green party members know his background so that if they choose him there will be no surprises.

Please do not pass on my comments. I think I will try to initiate a discussion about what sort of relationship the Green party should have with industry.

Also as a result of the meeting in Toronto, I am going to find out more about challenging the \$1000 fee as being inequitable and in contravention of section 15 of the Charter. It is hard raise \$1000 for launching a campaign let alone having to pay that up front. I think so many good potential Green Party candidates will not be able to run as candidates.

() THAT in 1997 in March 12 I recirculated a comment about my concern about Globe 1996 and nuclear energy

EXHIBIT

COMMENT

Date: Wed, 12 Mar 1997 03:32:59 -0800

I co-teach a course with Dr Fred Knelman who has been a life-time opponent of civil nuclear power and its link to nuclear arms proliferation.

At Globe 96, the delegates meeting with the Canadian ambassador in Beijing, the ambassador was talking about administrative details about living in Beijing. Three members of the voice of women, including myself, raised the issue of CANDU sales to China. He was completely unprepared for this.

At Globe 96 (the Environment industry Green wash conferences) I was there as a reporter. The ambassador from China was escorted by someone from external affairs. I asked the Ambassador why they were interested in importing CANDU reactors — a technology that was being phased out in Canada. I praised him highly for the innovative technology related to non-motorized transportation, and proposed that perhaps the Chinese people could develop an environmentally sound type of energy that we could import. The representative from external affairs scurried him out.

EXHIBIT

I continually refer to the sale of CANDU reactors as being in violation of a principle agreed to at the UNCED conference where States undertook to prevent the transfer to other States of substances and activities that cause environmental degradation or that cause harm to human health.

I also link the sale with the failure of States to adhere to the “prevention of disasters”

THAT in 1997, I attended the Abolition 2000 meeting in Ottawa. They do not link civil nuclear energy to their proposal although they call for moving towards renewable energy.

() THAT in 1997, I contacted the French Canadian member on the Federal shadow cabinet. I wanted to ask him about the role of French Canadians in the party. In recent material, I am circulating I mentioned that I was trilingual (English, French and Spanish). I am part French Canadian related to Perraults (a line of architects that designed buildings in old Montréal and my great grandfather was mayor of Longueuil) and Heberts. I was brought up in the two solitudes mentality in Ottawa, and have never met any of my French relatives. I did however study art and architecture, and worked in France for three years. If I become leader, I would want to work very hard in making the Green Party a truly national party; respecting the two cultures. I would want to work closely with you to promote French Canadian involvement in the party.

(*) THAT in 1997 since 1996, I have been involved with drafting the International Affairs section of the Election Platform

() THAT in 1997 in March, I wrote: to Jim Harris who was also running for the leadership of the Green Party

EXHIBIT

Hi Jim

When I returned, I read a copy that has

been sent around of your website page with all the glowing comments from

industry. Could you please elaborate a bit further about your approach with industry?

Regards

Joan

General Motors, whom you list amongst your happy employers, is one of the major armaments manufacturers, let alone contributors to the "car culture". All those companies I am sure have "green" programs, but they are still not paragons of virtue. If you do become leader of the Green Party, I think there will be a perceived conflict between your career and Green Party position.

No. My career allows me the time to read, to campaign, to write. Food you bought at the store was driven there on a GM truck. So are you going to stop eating food bought at the store? Do you own a car? Is your house R2000? Or even better yet is it disconnected from all power, electricity, gas, and sewer like the house Greg Allen built? Are you a vegan only? What financial institution do you deal with? If it is a bank you're indirectly investing in dictatorships somewhere. Do you ever use styrofoam? Is the coffee you drink only picked by collectives of workers in democratically elected cooperatives. Do you even know?

If we want to live in a perfect world, we have to disengage from living in this world altogether -- and become a hermit living in constant meditation and purity of commune with God and nature. Pretty steep price to pay and a terrible strategy for building a party and the movement -- because under the perfectionist strain, fully actualized individuals have to isolate (taking this strain of thought to its logical conclusion). We have to live in an imperfect world. We can't make the barriers to entry to the Green Party so high that no one can attain it. We have to live with imperfection

while striving for the ideal.

I would ask who needs to be worked with more than the arms manufacturers?

If we don't engage them in dialogue how can we create a viable future? If all we can do is vent anger at them how much will we change them? We'll catch far more flies with honey than vinegar. We need to have love, compassion at the center of our actions. We will never change the world by being angry, judgmental and purist? We need to work with all Organizations; to challenge them yes, but not to attack.

By the way, the people I was addressing were car manufacturers not arms manufacturers at GM, but if I won, I would I happily have addressed the arms manufacturers if given the chance. Who better to fund Green activity?

Jim

() THAT in 1997 after I read the above , I felt that I was communicating with a corporate executive from the green-wash conference Globe1996. I became very concerned about his becoming the leader of the Green Party. He is very slick and I had mixed feelings about my running against him because I was not a strong candidate with years of experience in the Green Party ; I only joined in 1996. I also had misgivings about the Green Party but it was too late for me to back out it was a dilemma if I won would I even want to lead the Green Party that seems to be ambivalent about corporations and if I lost I would feel badly for running instead of encouraging a stronger candidate to run against Jim?

() THAT in March 1997 I wrote NECESSARY SOCIO-POLITICAL CHANGE THROUGH POLITICAL WILL

Joan Russow PhD

I am the International Affairs critic on the federal Green "shadow cabinet" and I am running for the leadership of the federal Green Party. I have spent years trying to bring about change at the community level by apply international principles from international instruments agreed to by member States of the United Nations.

Corporations have been allowed steadily increasing control over our lives. This increased control is the outcome of many factors, but the greatest factor is the increased influence of the corporations on the major political parties and governments throughout the "developed" world. The increased influence of corporations has grown to the point where corporations seem to be stronger than governments. In recent Canadian history, the Liberal were elected on a platform to dismantle Free Trade and the GST.

Increased corporate influence has even reached the United Nations. With the advent of the U.N. Multilateral Agreement on Investments which will enshrine corporate rights and privileges, the international Green movement has to be more vigilant than ever.

IS THE GREEN PARTY READY TO WELCOME TRANSNATIONAL CORPORATIONS INTO ITS INNER CIRCLE?

More and more governments and public institutions are devolving themselves of their responsibilities and handing over control to the corporate sector. More and more international non-government organizations or “other groups” have become so dependent on grants from large U.S. corporate foundations that they have become little more than industry front groups. Many traditional International NGO’s have more and more industry involvement on the Boards of Directors.

If we are going to be able to make the decisions we want at the Community level we will have to be fully aware of the implications of what is happening internationally.

URGENCY OF THE GLOBAL SITUATION

Twenty five years ago in 1972 the Science Council of Canada recognized the urgency of the Global situation in its publication “Its not too late yet”

Five years ago, Canada and other member States of the United Nations recognized the urgency of the situation; “Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

Subsequently, at the World Conference on Human Rights, global concern was expressed in the following way:

The gross and systematic violations and situations constitute serious obstacles to the full enjoyment of all human rights CONTINUE to occur in different parts of the world, such violations and obstacles included, as well as torture and cruelty, inhuman and degrading treatment and punishment, summary and arbitrary executions, disappearances, arbitrary detentions, all forms of racism racial discrimination and apartheid, foreign occupation and alien domination, xenophobia, poverty, hunger and other denials of economic, social and cultural rights,, religious intolerance, terrorism, discrimination against women and lack of the rule of law (C. 30 World Conference on human rights.

And in addition, the World Conference on Human Rights expressed its dismay at massive violations of human rights especially in the form of genocide, ethnic cleansing” and systematic rape of women in war situations, creating mass exodus of refugees and displaced persons (s. 28 World Conference on Human Rights).

CORRESPONDENCE BETWEEN GREEN PARTY POLICY AND POLICY REFLECTED IN INTERNATIONAL INSTRUMENTS

The policies of the Green Party of Canada are very closely linked with significant policies that have been agreed to internationally, through the Charter, through conventions, treaties, and covenants, and through Declarations, General Assembly Resolutions, and Conference Action Plans.

For example, for over fifty years through international agreements, the member States of the United Nations have undertaken: (i) to promote and fully guarantee respect for human rights; including the rights of women; (ii) to ensure the preservation and protection of the environment; (iii) to create a global structure that respects the rule of law, (iv) to achieve a state of peace; justice and security, and (v) to enable socially equitable and environmentally sound development.

If these years of obligations had been discharged, and if these years of expectations had been fulfilled, respect for human rights might have been guaranteed, preservation and protection of the environment might have been ensured, threats to peace might have been prevented and removed, disarmament, achieved; and socially equitable and environmentally sound development might have been enabled.

Through international agreements nation States, including Canada, have undertaken

(i) to guarantee human rights including the right to be free from discrimination, the right to shelter, the right to food, the right to social security (international human rights instruments);

(ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the Protection of Cultural and Natural Heritage, 1972) ;

(iii) to eliminate weapons of mass destruction (United Nations Conference on Humans and Environment UNCHE, 1972);

(iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the benefits of humanity, UN General Assembly Resolution, 1975);

(v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981);

(vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981) and to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981);

- (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982);
- (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982);
- (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984);
- (x) to demand that policies of States be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984);
- (xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983);
- (xii) to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992);
- (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992);
- (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration);
- xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity);
- (xvi) to preserve carbon sinks (Art. 4 1 d Framework Convention on Climate Change, 1992);
- (xvii) to ensure that corporations including transnationals comply with national codes, social security measures, and with international law including, international environmental law (Art. 148, Platform of Action, UN Conference on Women, 1995); and from the Habitat II Agenda, 1996 : (xviii) to reduce the ecological footprint (Art. 27 b);
- (xix) to protect fragile ecosystems and environmentally vulnerable areas (27e);
- xx to prevent anthropogenic disasters (27 i);
- (xxi) to prevent environmental damage through knowledge of eco-cycles (Art. 135). and so forth.

SYSTEMIC CONSTRAINTS PREVENTING CHANGE: THE GROWTH AND CONSUMPTION MODEL

At The United Nations Conference on Environment and Development (UNCED) there was a condemnation of the unsustainable pattern of consumption and production.

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

The perpetuation of this model of consumption based on economic growth is the fundamental systemic constraint preventing the necessary change. The lack of political will to do what is necessary. Although in international conferences at least since 1992, States have decried the current over-consumptive model of development. Yet, as a result of institutional collusion between governments and industry, no governments have been advocating a no-growth economic policy. In the recent B.C. voice of women publications, there was a citation from the arms industry describing Turkey as being the next growth market. Although some parties criticize corporations, they are not willing to challenge the unions that are willing to demand the continuance of jobs in the military and arms trade, or in environmentally degrading activities.

Some of the systemic constraints preventing change contribute to the weakening of the resolve to demand change could be the following:

(i) Institutional collusion between governments and the corporate sector

SOLUTIONS AND MEASURES FOR BRING ABOUT THE NECESSARY CHANGE

The Global Community should concur with the UN Program of Action (International Conference on Population and Development) that to address the urgency “ none of the actions required -nor all of them combined - is expensive in the context of ... military expenditures. A few would require little or no additional financial resources in that they involve changes in lifestyles, social norms or government policies that can be largely brought about and sustained through greater citizen action and political leadership (Programme of Action of the United Nations International Conference on Population and Development, 1994)

FUNDING

A program of proactive and retroactive sources of funding shall be established. This would involve the immediate reduction of the military

should focus on Canadian budget

budget from the current 800 billion to only what would be required to clean up previous environmental degradation and to pay compensation to communities and individuals that have been impacted by military activities. For additional funding the global community shall also seek compensation from industries, in particular transnationals for years of environmental degradation, and damage from arms manufacturers and for years of human rights violations.

The international community, including multilateral financial institutions, has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments. In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, States undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws". In addition, the lending institutions shall not support the "clean-up environment industries" which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which CONTINUE to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best Environmentally Sound Traditions that national efforts to foster o and achieve the objectives of socially equitable and environmentally sound development will be achieved.

Green party policies are visionary ideas which in the future become the norms of the community

Before I go any further on this, could you let me know what has already been done. I'm sure that the Green Party, at some time, has taken a stand on this issue.

DECLARATION OF CURITIBA

Affirming the Right to Life and Livelihood
of People Affected by Dams

APPROVED AT THE FIRST INTERNATIONAL MEETING OF PEOPLE AFFECTED BY DAMS

CURITIBA, BRAZIL

MARCH 14, 1997

We, the people from 20 countries gathered in Curitiba, Brazil, representing organizations of dam-affected people and of opponents of destructive dams, have shared our experiences of the losses we have suffered and the threats we face because of dams. Although our experiences reflect our diverse cultural, social, political and environmental realities, our struggles are one.

Our struggles are one because everywhere dams force people from their homes, submerge fertile farmlands, forests and sacred places, destroy fisheries and supplies of clean water, and cause the social and cultural disintegration and economic impoverishment of our communities.

Our struggles are one because everywhere there is a wide gulf between the economic and social benefits promised by dam builders and the reality of what has happened after dam construction. Dams have almost always cost more than was projected, even before including environmental and social costs. Dams have produced less electricity and irrigated less land than was promised. They have made floods even more destructive. Dams have benefited large landholders, agribusiness corporations and speculators. They have dispossessed small farmers; rural workers; fishers; tribal, indigenous and traditional communities.

Our struggles are one because we are fighting against similar powerful interests, the same international lenders, the same multilateral and bilateral aid and credit agencies, the same dam construction and equipment companies, the same engineering and environmental consultants, and the same

corporations involved in heavily subsidized energy-intensive industries.

Our struggles are one because everywhere the people who suffer most from dams are excluded from decision-making. Decisions are instead taken by technocrats, politicians and business elites who increase their own power and wealth through building dams.

Our common struggles convince us that it is both necessary and possible to bring an end to the era of destructive dams. It is also both necessary and possible to implement alternative ways of providing energy and managing our freshwaters which are equitable, sustainable and effective.

For this to happen, we demand genuine democracy which includes public participation and transparency in the development and implementation of energy and water policies, along with the decentralization of political power and empowerment of local communities. We must reduce inequality through measures including equitable access to land. We also insist on the inalienable rights of communities to control and manage their water, land, forests and other resources and the right of every person to a healthy environment.

We must advance to a society where human beings and nature are no longer reduced to the logic of the market where the only value is that of commodities and the only goal profits. We must advance to a society which respects diversity, and which is based on equitable and just relations between people, regions and nations.

Our shared experiences have led us to agree the following:

- 1) We recognize and endorse the principles of the 1992 'NGO and Social Movements Declaration of Rio de Janeiro' and the 1994 'Manibeli check check check

Declaration' on World Bank funding of large dams.

2) We will oppose the construction of any dam which has not been approved by the affected people after an informed and participative decision-making process.

3) We demand that governments, international agencies and investors implement an immediate moratorium on the building of large dams until:

a. There is a halt to all forms of violence and intimidation against people affected by dams and organizations opposing dams.

b. Reparations, including the provision of adequate land, housing and social infrastructure, be negotiated with the millions of people whose livelihoods have already suffered because of dams.

c. Actions are taken to restore environments damaged by dams - even when this requires the removal of the dams.

d. Territorial rights of indigenous, tribal, semi-tribal and Traditional populations affected by dams are fully respected through providing them with territories which allow them to regain their previous cultural and economic conditions - this again may require the removal of the dams.

e. An international independent commission is established to conduct a comprehensive review of all large dams financed or otherwise supported by international aid and credit agencies, and its policy conclusions implemented. The establishment and procedures of the review must be subject to the approval and monitoring of representatives of the international movement of people affected by dams.

f. Each national and regional agency which has financed or otherwise supported the building of large dams have commissioned independent comprehensive reviews of each large dam project they have funded and implemented the policy conclusions of the reviews. The reviews must be

carried out with the participation of representatives of the affected people's organizations.

g. Policies on energy and freshwater are implemented which encourage the use of sustainable and appropriate technologies and management practices, using the contributions of both modern science and traditional knowledge. These policies need also to discourage waste and over-consumption and guarantee equitable access to these basic needs.

4) The process of privatization which is being imposed on countries in many parts of the world by multilateral institutions is increasing social, economic and political exclusion and injustice. We do not accept the claims that this process is a solution to corruption, inefficiency and other problems in the power and water sectors where these are under the control of the state. Our priority is democratic and effective public control and regulation of entities which provide electricity and water in a way which guarantees the needs and desires of people.

5) Over the years, we have shown our growing power. We have occupied dam sites and offices, marched in our villages and cities, refused to leave our lands even though we have faced intimidation, violence and drowning. We have unmasked the corruption, lies and false promises of the dam industry. Nationally and internationally we have worked in solidarity with others fighting against destructive development projects, and together with those fighting for human rights, social justice, and an end to environmental destruction.

We are strong, diverse and united and our cause is just. We have stopped destructive dams and have forced dam builders to respect our rights. We have stopped dams in the past, and we will stop more in the future.

We commit ourselves to intensifying the fight against destructive dams.

From the villages of India, Brazil and Lesotho to the boardrooms of

Washington, Tokyo and London, we will force dam builders to accept our demands.

To reinforce our movement we will build and strengthen regional and international networks. To symbolize our growing unity, we declare that 14 March, the Brazilian Day of Struggles Against Dams, will from now on become the International Day of Action Against Dams and for Rivers, Water, and Life.

Aguas para a vida, nao para a morte!

Aguas para la vida, no para la muerte!

Water for life, not for death!

I continually refer to the sale of CANDU reactors as being in violation of a principle agreed to at the UNCED conference where States undertook to prevent the transfer to other States of substances and activities that cause environmental degradation or that cause harm to human health.

I also link the sale with the failure of States to adhere to the “prevention of disasters” principle that was agreed to at Habitat II.

THAT in 1997 (I attended the Abolition 2000 meeting in Ottawa. They do not link civil nuclear energy to their proposal although they call for moving towards renewable energy.

When I was at the meeting I suggested that civil nuclear energy should be included as well as the testing in Nanoose and the circulation and berthing of nuclear powered and nuclear armed vessels.

() THAT , in 1997, I contacted Green Party member from Quebec to find out more about the Green Party in Quebec

COMMENT

I wanted to ask you a question about the role of French Canadians in the party. In recent material I am circulating I mentioned that I was tri-lingual (English, French and Spanish). I am part French Canadian related to Perraults (a line of architects that designed buildings in old Montréal and my great grandfather was mayor of Longueuil) and to the Heberts. I was brought up in the two solitudes mentality in Ottawa, and have never met any of my French relatives. I did however study art and architecture, and work in France for three years. If I become leader I would want to work very hard in making the Green party a truly national party respecting the two cultures. I would want to work closely with you to promote French Canadian involvement in the party.

Joan

() THAT in March April 1997, I Attended NGO meetings at the Prep Com for Rio +5. I worked on a number of proposals related to education, climate change, trade, and environment

Thank you

Joan Russow

() THAT on March 18, 1997, I attended the Prep-com for Rio+5

COMMENT

I attended the NGO meeting on Climate Change. DeLong, the Chair of the Energy caucus stated that what was needed to address the issue of climate change was at least a 40% reduction of Greenhouse gas emission, and that currently in the NGO documents the NGOS were calling for a 20% reduction which was less than that called for by the low-lying States. I proposed that if that is what was needed then we should call for at least a 40% reduction. After I spoke, someone Felix Dodd said that we would lose credibility if we called for as much as 40%, and should maintain our position of 20%, [I found out he receives funding from BP] others said 25%, and others supported 40%. It was finally agreed that we would call for at least 25%. Several coalition members who had not spoken during the meeting, came up to me after and said that they agreed with me. I asked them why they did not speak up during the meeting. When I left the meeting, the document contained the expression at least 25%. However, when I saw the finish NGO submission 20% had been the percentage submitted.

Similarly, when we were informed about the proposed MAI, I proposed that there be a strong statement in the NGO lobbying document urging the UN to call upon the OECD to cease negotiations of the MAI because the trade agreement would undermine human rights including labour rights, environment protection, and social justice. My statement was agreed to by the NGO drafting group, and when I saw the final lobbying document, the MAI was not mentioned. I was however placed on an Anti-MAI list and invited to attend the OECD meeting along with three other NGO members from Canada: Maud Barlow, Elizabeth May, and Michell Svenchuk?

() THAT in 1997 on March 24, 1997 -

Steering Committee Members and CSD NGO's:

Greetings to you after a very successful Ad Hoc Inter-sessional

Working Group of the CSD meeting held on February 24, 1997 - March 7, 1997 at the United Nations. (the NGLS summary report of the meeting was sent out in hard copy - as soon as we obtain it in electronic form it will be sent to this list).

We must now utilize every day between now and the upcoming Fifth Session of the CSD in April (April 7 - 25, 1997) to build on what we have accomplished to date.

CSD/NGO Steering Committee:

As you know, the CSD/NGO Steering Committee was established in 1994 at the Fourth Session of the Commission for Sustainable Development at the United Nations. The Steering Committee's task is to facilitate the involvement of the major groups as per Agenda 21 and other NGO's related to the CSD.

Membership of the Steering Committee is determined in annual elections held at the CSD by the regions, and issue caucuses recognized by the Steering Committee.

The work of the Steering Committee includes facilitating NGO's participation on a year round basis in Working Groups, and promoting involvement of NGO's at the Commission for Sustainable Development sessions with special emphasis on NGO's from the South, Eastern and Central Europe.

The Steering Committee also arranges for and coordinates dialogue sessions between governments and NGO's during the CSD sessions.

The Strategy for maximizing participation in the next CSD meeting is as follows:

A: Distribution materials to National groups, Regional groups and Issue Caucuses for discussion and feedback. The Background Paper has been disseminated on the ListServ and is available on the web site:

Non-Governmental Organization Draft Background Paper Towards Earth

Summit II " we delivered at the Inter-sessional.

The official CSD Draft document from the Inter-sessional was also posted to the ListServ and is available online.

B: Specific written language suggestions for change in our document and change in the government document is encouraged from all NGOs around the world. If possible please get it to us by March 31, 1997, one week before the CSD official session begins.

NOTE: It will be assumed that if there is no response that your Network or group does not have anything to add or does not object to what has already been written. We will not change the existing text in our document, only make additions.

Those inputs in writing that represents new language will be organized according to category titles and then put to a vote (up or down) for acceptance on April 8, 1997. Those items accepted will then be worked into a final document.

The final document will be presented to our body of NGO's present and adopted at a meeting on April 9, 1997 at 1:00 P.M. If there are no last minute changes or corrections, the document will be issued that same day. If there are any last minute changes the document will be issued by noon the following day, April 10, 1997.

We will also compile each day in our morning sessions collective reaction to the government document.

The reactions will be in the form of specific request for language change in the government document. (not editorial or visionary comments).

NGO Steering Committee Election: (April 16, 1997)

By April 16, 1997 we will ask for the results of elections by

Regional Caucuses, and Sectoral Groups, to reaffirm or elect the new NGO Steering Committee representatives for the Commission on Sustainable Development. Please come prepared to participate in the selection of the person to represent your region in the days before April 16, 1997

Sub-Committee of Press and Communication:

We wish to bring to your attention the fact that the Steering Committee because of its commitment to facilitate communication with the people of the South, Eastern and Central Europe created a Sub-Committee of Press and Communication at the Inter-sessional meeting in February 1997.

This Sub-Committee is to facilitate international sharing of the work that the CSD NGO's are doing and to disseminate the information on the positions and proposals that come from National Networks, Regional Networks, and our Working Groups.

NGO's Activities in Preparation for CSD 5th Session:

We know that many NGO's groups around the world have local, regional or international activities going on in preparation for the CSD Session, and the General Assembly Special Session. We welcome and encourage these activities and look forward to including and acknowledging their input in our document.

We are arranging for NGO/Government Dialogue Sessions in the evenings of the CSD session date

We are also organizing a parallel NGO Forum during the June General Assembly Special Session

As indicated in the included document on support for participation of Southern and Eastern NGO's, we CONTINUE to try to get assistance from donors to facilitate the attendance by NGO's representatives selected by National Networks in an inclusive, transparent and democratic manner.

You will be hearing more from us again between now and the CSD Session through fax, the electronic mail and regular mail.

If possible, please come two days earlier for Orientation, Strategy and Negotiation Meetings (Saturday, April 5th and Sunday, April 6, 1997) from 9:30 A.M. to 4:00 P.M. both days. Church Center for the United Nations (777 U.N. Plaza)
New York, N.Y. 10017

Finally, we want to congratulate those who are working hard at Sustainable Development activities. We also want to thank you in advance for the help you will give us to make the CSD 5th Session a productive interaction between NGO's and governments at the United Nations.

Sincerely,

Esmeralda V. Brown Michael McCoy

34. RESOLUTIONS ADOPTED ON THE REPORTS OF THE SECOND COMMITTEE
191. Follow-up to and implementation of the Mar Del Plata Action Plan of the United Nations Water Conference

The General Assembly,

Recalling its resolution 32/158 of 19 December 1977, by which it adopted the report of the United Nations Water Conference [1] approved the Mar del Plata Action Plan contained therein [2] and endorsed Economic and Social Council resolutions 2115 (LXIII) and 2121 (LXIII) of 4 August 1977, concerning the implementation of the Action Plan and the report of the Conference, respectively,

Recalling that the United Nations Water Conference recommended, in paragraph 15 of the Mar del Plata Action Plan, that the decade 1981-1990 should be designated as the International Drinking Water Supply and Sanitation Decade and should be devoted to the implementation of national plans and programmes for drinking water supply and sanitation in accordance with the Plan of Action contained in resolution II of the Conference,

Recalling further Economic and Social Council resolution 1979/31 of 9 May 1979 entitled "International Drinking Water Supply and Sanitation Decade", decision 79/15 of 27 June 1979 of the Governing Council of the United Nations Development Programme on international co-operative action in support of the Mar del Plata Action Plan [3] and World Health Assembly resolution WHA 32.11 of 18 May 1979, entitled "United Nations Water Conference: follow-up to the Mar del Plata Action Plan" all of which were designed to secure the further implementation of the Decade,

Recognizing that the implementation of the Decade will require concerted action by countries, with all possible support by international organizations, as requested,

1. *Takes note* of the report of the Secretary-General on the results of the third special session of the Committee on Natural Resources ; [4]

2. *Endorses* Economic and Social Council resolutions 1979/31 of 9 May 1979 and 1979/67, 1979/68 and 1979/70 of 3 August 1979, concerning the follow-up activities for the implementation of the Mar del Plata Action Plan;

3. *Decides* to hold a special one-day meeting during its thirty-fifth session formally to launch the International Drinking Water Supply and Sanitation Decade, 1981-1990, in accordance with Economic and Social Council resolution 1979/31 and on the understanding that the requirements for documentation set out in that resolution will be reduced;

4. *Requests* the Committee on Natural Resources, at its regular biennial sessions during the 1980s, to review the progress made by Governments in the implementation of the Action Plan and to provide CONTINUED guidance and oversight to the supporting water-related activities undertaken by the organizations of the United Nations system, including the plans and programmes of the Decade.

108th plenary meeting

() **THAT in 1997** I followed up and recirculated a comment with my concern about Globe 1996 and nuclear energy

EXHIBIT

I co-teach a course with Dr Fred Knelman who has been a life-time opponent of civil nuclear power and its link to nuclear arms proliferation.

At the delegates meeting with the Canadian ambassador in Beijing, the ambassador was talking about administrative details about living in Beijing. Three members of the voice of women including myself raised the issue of CANDU sales to China. He was completely unprepared for this.

At Globe 96 (the Environment industry Green wash conferences) I was there as a reporter. The ambassador from China was escorted by someone from external affairs. I asked the Ambassador why they were interested in importing CANDU reactors — a technology that was being phased out in Canada. I praised him highly for the innovative technology related to non-motorized transportation, and proposed that perhaps the Chinese people could develop an environmentally sound type of energy that we could import. The representative from external affairs scurried him out.

I continually refer to the sale of CANDU reactors as being in violation of a principle agreed to at the UNCED conference where States undertook to prevent the transfer to other States of substances and activities that cause environmental degradation or that cause harm to human health.

I also link the sale with the failure of States to adhere to the “prevention of disasters” principle that was agreed to at Habitat II.

I attended the Abolition 2000 meeting in Ottawa. They do not link civil nuclear energy to their proposal although they call for moving towards renewable energy.

When I was at the meeting I suggested that civil nuclear energy should be included as well as the testing in Nanoose and the circulation and berthing of nuclear powered and nuclear armed vessels.

I wanted to ask you a question about the role of French Canadians in the party. In recent material I am circulating I mentioned that I was trilingual (English, French and Spanish). I am part French Canadian related to Perraults (a line of architects that designed buildings in old Montréal and my great grandfather was mayor of Longueuil) and Heberts. I was brought up in the two solitudes mentality in Ottawa, and have never met any of my French relatives. I did however study art and architecture, and work in France for three years. If I become leader I would want to work very hard in making the Green party a truly national party respecting the two cultures. I would want to work closely with you to promote French Canadian involvement in the party.

The international Affairs platform

The international affairs platform has been divided into different Chapters that correspond somewhat to the divisions of the United Nations Plan of Action. It has been divided in this way to assist Green Party candidates in the upcoming election to use this document as a lobbying document, and to be able to link the issues in with those being discussed at the Earth Summit II the lead-up to which will be getting a lot of press.

[[To ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "Other status" which indicated the intention to include other grounds as they arose. Through various human rights instruments, States have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status. In other documents "sexual orientation" has also been included, but remained bracketed. In keeping with the intention of 'other status' in the Universal Declaration of Human Rights,

the Canadian government should include this ground. in all Canadian human rights documents, and lobby for its inclusion in all international human rights documents]]

Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

Here is a revision

THE INTERNATIONAL AFFAIRS PLATFORM STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

The Green party government in Canada supports a strong United Nations, and mandatory international standards and regulations drawn from International principles; it would also advocate that these standards and regulations be harmonized continually upwards to correspond to the highest state principles, standards and regulations. .

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

The Green party of Canada supports the following proposal:

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

A Green party government in Canada would support the following actions for Earth Summit II in June, 1997 — the fifth anniversary of the United Nations conference on Environment and Development (UNCED)

1. At the Earth Summit II, the member States of the United Nations undertake to sign and ratify international agreements that they have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition, they undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

2. At the Earth Summit II, the member States of the United Nations undertake to act upon the commitment in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

To act upon this commitment, a Green party government in Canada would propose the following measures:

(i) the establishment mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

(ii) the revoking of licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

(iii) the institution of an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

3. At the Earth Summit II, member States of the United Nations undertake to act upon the Malaysian General Assembly resolution which affirmed that “the continuing existence of nuclear weapons poses a threat to all humanity and that their use would have catastrophic consequences for all life on earth (Dec,10 1996 response to the International Court of Justice decision on the use or threat to use nuclear weapons being against international humanitarian law).

To act upon the resolution member States of the United Nations will embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

In order to achieve a permanent elimination of nuclear weapons, and because of the fatal link between civil and military nuclear power, .

member States of the United Nations must also endorse an international uranium suffocation program, a moratorium on further nuclear plants, and a time-bound phase-out of existing nuclear plants

In addition, the member States of the United Nations undertake to ensure that all circulation and berthing of nuclear powered and nuclear armed vessels disCONTINUE.

4. At the Earth Summit II, the member States would undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

5. At the Earth Summit II, the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic

administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

In order to prevent further environmental degradation and human rights violation, we the member States of the United Nations will fully act upon our commitment under principle 14 of the Rio Declaration which calls for the prevention of the transfer to other States of substances or activities that cause environmental degradation or that are harmful to human health. We also acknowledge that this principle includes toxic, hazardous, and atomic substances and wastes and associated activities, and that prior informed consent by the receiving country does not absolve us from the commitment to transfer these substances. In addition we will extend this principle to include transfer within States to lands of indigenous peoples, or to communities of marginalized citizens.

6. At the Earth Summit II, the member States of the United Nations will undertake to act upon a commitment in recent UN Conferences to move away from the over-consumptive model of development and reject the notion that economic growth will solve the urgency of the global situation. To achieve the moving away from the current over-consumptive model of development the A Green Party government would propose the following measures be taken in the following areas

[[reference to the rest of the program]]

7. At the Earth Summit II, the member States of the United Nations will undertake to invoke the precautionary principle (Rio Declaration, Convention on Biological Diversity, and Framework convention on Climate Change Convention) and not wait until there is scientific certainty that environmental degradation, loss or reduction of biodiversity, or climate change will occur for current practices causing environmental degradation, loss or reduction of biodiversity, or climate change to be banned, disCONTINUED, or phased out..

In addition, member States of the United Nations will adhere to the prevention of disasters principle as enunciated in the Habitat II Agenda, and ban, disCONTINUE and phase out the use of substances and activities that could potentially cause disasters. For all future activities and substances, States will undertake to endorse the reverse onus principle which requires the proponent of an intervention into the ecosystem to have to demonstrate the safety of the intervention rather than the opponent having to demonstrate harm.

ACTION FOR COMPLIANCE

Citizens must be aware that the United Nations through years of international meetings has already drafted the blueprint for the actions that are necessary to address the urgency of the global situation. International public policy already exists in the complex of United Nations documents., and that member States of the United Nations have failed either to comply with this international public policy, or to determine what would constitute compliance. What is needed now , immediately is compliance with the existing body of obligations, expectations. and commitments

A Green party government in Canada will ensure that citizens of Canada will be aware of international instruments, and encourage the use of international instruments in Canada including ensuring that citizens receive standing in the courts of Canada to bring to the attention of the courts Canada's non-compliance with international law. In addition a Green party government in Canada will lobby internationally to ensure state and corporate compliance with international obligations, expectations and commitments.

The Green party of Canada would work continually towards the compliance with international law

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled

.repeat repeat

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

1997 MARCH

REVISITING THE EXPRESSION “SUSTAINABLE DEVELOPMENT”

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

INCREASING THE ROLE OF GOVERNMENT AND THE MINISTRY OF ENVIRONMENT IN ESTABLISHING REGULATIONS AND LOBBYING FOR MANDATORY INTERNATIONAL NORMATIVE STANDARDS BASED ON INTERNATIONAL PRINCIPLES.

- **Socially equitable and environmentally sound development”**

... None the less, the effective use of resources, knowledge and technologies is conditioned by political and economic obstacles at the national and international levels. Therefore, although ample resources have been available for some time, their use for

socially equitable and environmentally sound development has been seriously limited (Preamble 1.1. International Conference on Population and Development, 1994)

The term “socially equitable and environmentally sound development” expression was used in the 1994 UN Conference on Population and Development and will be used in this Charter to replace the expression “sustainable development”. It should be emphasized that this expression includes the commitment to inter-generational equality/equity.

A. REASON FOR CHANGING

URGENCY OF THE GLOBAL SITUATION

B. SITUATION PREVENTING CHANGE

SYSTEMIC CONSTRAINTS

C. CHANGE THROUGH REDEFINITION OF CONCEPTS AND PRIORITIES

1. REVISITING OF “SUSTAINABLE DEVELOPMENT” IN AGENDA 21

2. REDEFINITION OF SECURITY IN EQUITABLE AND ECOLOGICAL TERMS

TRANSFER MILITARY BUDGET CORPORATE TAXES

D. CHANGE THROUGH PRINCIPLES OF ACTION

3. NGOS OFFER INSIGHTS

– e policies and programs which support sustainable development; and we will give Canadians tools and information to deal with sustainable development in their daily lives.

In doing so, we will be mindful that the broad issues of governance, science and technology and *partnerships* are fundamental in the broader global context and over the longer term. This includes: the way in which we adapt and evolve our collective decision-making and direction setting; the way in which we use and promote the evolving scientific and technological capacity, especially in the information age; and our skill at building new *partnerships* within society, nationally and internationally. These will all be key to achieving our sustainable development objectives.

Integrating the principles and practices of sustainable development into our daily lives will be a continuous, dynamic process that will require patience and persistence. Environment Canada will provide leadership in building a Canada in which the economic, environmental and social signals of government point clearly in the same direction. Our mission commits us to this goal and our first Sustainable Development Strategy lays out the steps we are taking to achieve it.

CHAPTER 1. INTRODUCTION AND OVERVIEW

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT THAT RESPECTS THE RIGHTS OF PRESENT AND FUTURE GENERATIONS TO A SAFE ENVIRONMENT AND TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT

Development should meet the needs of the present without compromising the ability of future generations to meet their own needs

1.1 Introduction

This document is a draft of Environment Canada's first Sustainable Development Strategy pursuant to the 1995 Amendments to the Auditor General Act. It is being presented for review and comment prior to being finalized.

This draft

In preparing its Strategy Environment Canada has taken into close account of the government policy related to sustainable development as outlined in Directions on Greening Government Operations, A Guide to Green Government and the Act to Amend the Auditor General Act. The Strategy has also been based on the concepts and ideas presented in the department's October 1, 1996, Sustainable Development Strategy Discussion Paper.

PROBLEM: ISSUING ORDER IN COUNCIL TO BYPASS ENVIRONMENTAL ASSESSMENT REVIEW PROCESS

PROBLEM: FEDERAL/PROVINCIAL JURISDICTION.

PROBLEM: LEGALLY BINDING/ GLOBALLY ADOPTED, MAJORITY SUPPORT RESOLUTIONS

**SAME STRATEGY AS ISO. STATE POLICY
AND EVALUATE PROGRESS
WITHIN FRAMES OF REFERENCE**

This Strategy is being integrated into part of Environment Canada's integrated approach to planning for and reporting on its directions, programs, expenditures and performance. Our departmental Business Plan represents the detailed Action Plan for the delivery of this Strategy. Our annual Performance Report will include our report on progress in implementing the Strategy.

This document presents the foundation for

Environment Canada's Sustainable Development Strategy will provide the means by which we will move further to make a concept a reality. This draft Strategy presents the

through a description of the department's vision operating definition of sustainable development, a statement of the principles that are the foundation to the department's approach to its Strategy and an overview of the issues and challenges in larger context which make up the context within which the department is pursuing sustainable development.

This document also presents the department's overall strategic directions, its strategies related specifically to sustainable development and an indication of the actions that it proposes to take.

In the appendices to the Strategy, a summary of the consultations that the department has held is provided in the document along with the details on the outcome of the issue that was conducted as part of the preparation of the Strategy. There is also a more detailed presentation of the department's efforts towards greening its operations and a discussion of several cross-cutting issues which are important to considering sustainable development from a government-wide perspective.

The information in the appendices, along with the Discussion Paper prepared earlier, provide the background and foundation for this draft Strategy.

1.2 Vision of Sustainable Development

In the course of preparing its Sustainable Development Strategy, Environment Canada has chosen to work within the following attributes vision of sustainable development which describes a state of sustainability for Canada. for Canada. This vision will CONTINUE to shape and influence the department's efforts and actions in support of sustainable development:

Our Vision for Sustainable Development in Canada

i The health of Canadians and ecosystems is protected by virtually eliminating human-produced, persistent, toxic substances that build up over time in human and animal tissue; by pollution prevention; by protecting representative areas; and by reducing the impact of environmental hazards through **PREVENTION** *effective warning and response*.

DISASTER PREVENTION PRINCIPLE

i PROBLEM . FEDERAL/PROVINCIAL

CANADA IS IN NON-COMPLIANCE WITH THE BIODIVERSITY CONVENTION

MISREPRESENTATION

The global commons are protected through international cooperation and agreements. Canada plays a leadership role in meeting its international obligations, including protecting the atmosphere and oceans, and in conserving biodiversity; meeting consumer demand by providing knowledge, technical advice and clean industrial technologies to producers in Canada and other countries.

i *In their environmental policies and practices, Canadian governments promote equity by ensuring, through a mix of economic and policy instruments, a fairer distribution of costs and benefits of development as they occur in the natural environment. They will also seek a fairer distribution of the costs and benefits of sustainable development among nations of the world, among Canadians, and between generations, so that poverty and environmental degradation are diminished.*

ENVIRONMENTAL DEGRADATION WITH MULTIPLE MINING COMPANIES, SELLING NUCLEAR REACTORS

RECEIVING MOX

i The quality of life and well-being of Canadians are enhanced by fostering improved productivity through environmental awareness and efficiency, by supporting innovation toward sustainable development, and by broadening measures of progress to include non-monetary dimensions.

i *Renewable resources are replenished at a rate equal to or greater than their use in human activities, in a manner that recognizes the full range of values in the ecosystem, for production, as a habitat for wildlife and as parks and wilderness.*

DEPENDENCE ON FOSSIL FUELS, NUCLEAR ENERGY

i Non-renewable resources such as minerals, oil and gas are extracted, manufactured into products and used by Canadians with much greater efficiency than at present. They are covered by life-cycle policies and practices that support corporate and consumer responsibility.

WHAT CONSTITUTES LIFE CYCLE ANALYSIS. NUCLEAR ENERGY, CLEAR CUTTING, DUMPING RAW SEWAGE,

1.3 Principles

The department has also identified a number of principles that it believes to be fundamental to its approach to sustainable development. and to its Sustainable Development Strategy. These are:

Environment Canada's Principles for Sustainable Development

Equity: The costs and benefits of human activity, both current and intergenerational, should be distributed fairly between people.

IN CANADA THE COSTS AND BENEFITS OF HUMAN ACTIVITY ARE NOT DISTRIBUTED EQUALLY

U.S.

Cooperation: The global nature of environmental concerns calls for the widest possible cooperation, in accordance with common but differentiated responsibilities and capability.
 POLLUTERS REGULATORS THOSE WHO CAUSE THE PROBLEMS NOT DOING IT RIGHT THE FIRST TIME

Environment-economy integration: Environmental and economic signals should point the same way. Trade and environmental policies should be mutually supportive.

INTERDEPENDENCE. ENVIRONMENT IS USUALLY COMPROMISED FOR THE ECONOMY

Ecosystem approach: Policies, programs, and operations are designed in consideration of the unique and fundamental characteristics of individual ecosystems and in recognition of the interdependence of social, economic and environmental systems.

Precautionary principle: When there are threats of serious or irreversible damage, scientific uncertainty shall not be used to postpone cost-effective measures to prevent environmental degradation.

...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat” (Convention on Biological Diversity, UNCED, 1992

Polluter pays: The polluter should, in principle, bear the cost of pollution.

' Governments should include in national planning and legislation an integrated approach to environmental protection, driven by prevention and source reduction criteria, taking into account the 'polluter pays' principle, and adopt programmes for hazardous waste reduction, including targets and adequate environmental control(20.20 b Hazardous Wastes, Agenda 21)

" Governments should ...(b) apply the 'polluter pays' principle, where appropriate, by setting waste management charges at rates that reflect the costs of providing the service and ensure that those who generate the

wastes pay the full cost of disposal in an environmentally safe way (21.42 b
Solid wastes, Agenda 21)

Pollution prevention: The use of processes, practices, materials, products, or energy that avoids *or minimize* the creation of pollutants or wastes and reduce the overall risk to human health or the environment.

NUCLEAR WASTES, TOXIC WASTES

NON TRANSFER TO OTHER States

Environmental assessment:

PROJECT ASSESSMENT Social, economic and environmental factors should be systematically considered during policy, program and project development and decision-making.

ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

The essence of this principle can also be traced through the 1972 Stockholm Convention, and the UN Resolution 37/7, as well as in the UNCED documents, where it is enunciated in the following way:

ASSERTION OF THE AVOIDANCE OF ACTIVITIES PRINCIPLE

Activities which are likely to cause irreversible damage to nature shall be avoided (UN Resolution 37/7 1982)

Introduce appropriate procedures requiring environmental impact assessment of its proposed projects that are likely to have significant adverse effects on Biological diversity with a view to avoiding or minimizing

such effects, and where appropriate, allow for public participation in such procedures (Article 14, 1A, Convention on Biological Diversity)

REQUIRING A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT

Through mandatory international normative standards, States shall require a legitimate environmental assessment review of any practice, activity or substance that could have significant adverse environmental effects. An actual assessment of the short and long term potentially adverse environmental effects of existing and proposed projects and activities shall be carried out. It is understood that a review of a project or activity to assess the "environmental, economic, social, cultural, heritage, health effects of the reviewable projects" is not a legitimate environmental impact assessment.

REQUIRING COST RECOVERY FOR ENVIRONMENTAL IMPACT ASSESSMENT AND FOR MONITORING AND ENFORCING REGULATIONS

Industries that are permitted to engage in environmentally unsound practices that require regulations and enforcement shall bear the full cost of the additional charges incurring as a result of governments having to ensure compliance with regulations. In addition, for all proposals, projects, activities that intervene in an environmentally unsound way in the ecosystem, and that are deemed to require an environmental assessment review governments shall recover the full costs of the review.

Science and technology foundation: A sound scientific understanding of our environment provides the key to meeting the challenges facing Canada and will be crucial to delivering on the sustainable development agenda. Canadians should research, develop, test and implement technologies essential to further environmental quality, human health and economic growth.

• REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”

Concurring with the assessment in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, that “while scientific and technological developments provide ever-increasing opportunities to better the conditions of life of peoples and nations, in a number of instances they can give rise to social problems, as well as threaten the human rights and fundamental

freedoms of the individuals (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Concurring with the concern expressed in Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity about scientific and **technological achievements can be used to intensify the arms race production:**

“Noting with concern that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamental freedoms (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity”, 1975)

Also noting with concern that scientific and technological achievements can entail dangers for the civil and political rights of the individual or of the group and for human dignity (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Noting the urgent need to make full use of scientific and technological developments for the welfare of *man* **humanity** and to neutralize the present and possible future harmful consequences of certain scientific and technological achievements (Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

We call upon the member States of the United Nations:

- To promote international co-operation to ensure that the results of scientific and technological developments are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization human rights and freedoms in accordance with the Charter of the United Nations (Art. 1. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

- To prevent the use of scientific and technological developments, particularly by the State organs, to limit or interfere with the enjoyment of the human rights and fundamental freedoms of the individual as enshrined in the Universal Declaration of Human Rights the International Covenants on Human rights and other relevant international instruments (Art. 2. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

- To take measures to ensure that scientific and technological achievements satisfy the material and spiritual needs for all sectors of the population (Art. 3. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

- **To** refrain from any acts involving the use of scientific and technological achievements for the purposes ... waging aggressive wars, suppressing national liberation movements or pursuing a policy of racial discrimination. Such acts are not only a flagrant violation of the Charter of the United Nations and principles of international law but constitute an inadmissible distortion of the purpose that should guide scientific and technological developments for the benefit of mankind (Art. 4. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

- **To** co-operate in the establishment, strengthening and development of the scientific and technological capacity of developing countries with a view to accelerating the realization of the social and economic rights of the peoples of those countries (Art. 5. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

- **To** take the necessary measures, including legislative measures to ensure that the utilization of scientific and technological achievements promotes the fullest realization of human right sand fundamental freedoms without any discrimination; whatsoever on grounds of race, sex, language or religious beliefs (Art. 7. Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

1.16. Ensuring long-term monitoring efforts and determining environmental indicators

Long-term monitoring efforts are commonly abandoned as a result of short-term financial and administrative considerations. Irreplaceable information is also being lost because monitoring programs are not in place....[various Examples] underscore the need to select [appropriate~] indicators and begin monitoring immediately so that baselines can be established, and so that the links between natural and human impacts on the environment can be assessed (International Union of Geological Sciences, 1994).

- **To undertake research** on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable* development policies (3.31 International Conference on Population and Development).

P• To provide arms-length research

Arms-length testing, and monitoring, by the scientific community and with an analysis by a range of government and non-governmental organizations

Government leadership by example: Environment Canada will openly share its knowledge of environmental management and promote the use of sustainable development principles. We recognize the importance of getting our own house in order if we are to promote the Greening of Government Operations to others.

BEST PRACTICES PREVENTION TECHNOLOGY NOT BAT

Continuous improvement: To CONTINUE to improve policies, programs and performance, taking into account technical developments, scientific understanding, client needs and community expectations.

1.4 Mandate and Roles

Environment Canada is a science-based department with a mandate (under the Department of the Environment Act) to preserve and enhance the quality of the natural environment and its renewable resources (including migratory birds and other non-domestic flora and fauna), to carry out meteorology, to enforce the rules of the Canada-U.S. International Joint Commission, and to coordinate federal environmental policies and programs.

WHAT ABOUT INTERNATIONAL INSTRUMENTS

NAFTA CLAUSE 104

In the conduct of its mandate, the department's long-standing and complementary roles are to:

REGULATIONS

- provide leadership nationally and internationally on matters pertaining to the sustainability of the environment;
- act on behalf of all Canadians to address environmental issues of national concern and
- administer federal environmental laws and regulations;
- advocate, promote and encourage practices that lead to environmental sustainability, and to cooperate with others having similar objectives; and
- build capacity and deliver services to Canadians to enable them in their daily lives to sustain and adapt to the environment.

In all its roles, Environment Canada's science is the foundation of its policies, programs and **regulations**, and is essential to achieving results.

The context for delivering on Environment Canada's environmental mandate is sustainable development. Sustainable development is a national goal, a policy of the Government of Canada, and a shaping assumption for environmental management in Canada. Environment Canada contributes every day to sustainable development **but there is more Environment Canada could do**. It is uniquely positioned to provide leadership in building an agenda and mobilizing Canadians to make sustainable development a reality.

While Environment Canada's mandate has not changed since it was founded in 1971, the range and character of the challenges it faces have evolved considerably. Following are summaries of some of these challenges and the actions that must be undertaken to meet them.

1.5 Challenges

Challenge: Environmental, economic and social issues are becoming increasingly interconnected.

Growing consumerism in the developed world and rapid industrialization and urbanization in the developing world are beginning to test the limits of the earth's capacity to absorb waste and provide food, water and energy, as well as IT'S *our* own ability to *adapt* to naturally-occurring and TO PREVENT anthropogenic hazards.

The deeply rooted social and economic causes of this growing gap between economic demands and the Earth's carrying capacity

URGENCY

CONDEMNATION

DEVELOPMENT

are largely beyond the reach of national governments and traditional approaches.

MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE INDUSTRY

GAP BETWEEN THOSE THAT ARE CONCERNED ABOUT THE COST TO THE ENVIRONMENT; OF NOT HAVING ENVIRONMENTAL REGULATIONS AND THOSE THAT ARE CONCERNED ABOUT THE COST OF ENVIRONMENTAL REGULATIONS

EVIDENT IN OECD PUBLICATION 1971

Response:

At every level of society and across all jurisdictions, environmental, economic and social considerations need to be integrated in ways that will stimulate sustainable employment and enhance the quality of life. To do so, we must overcome the perception in some sectors that considerations of **environmental sustainability may function to limit Canada's competitiveness in the global economy.**

NEED FOR EVEN GLOBAL PLAYING FIELD THROUGH MANDATORY INTERNATIONAL ENVIRONMENTAL STANDARDS

Challenge: Environmental issues are becoming more complex and global in scale.

SUPPORT FOR MINS GLOBAL COMPLIANCE RESOLUTION

Domestically, the quality of Canada's environment has improved in a number of respects over the past 25 years. Today, however, more and more pollution to which the Canadian environment is subjected originates from beyond our borders.

COMINCO

TRANSFER TOXIC

URANIUM

Some problems are persistent even when the cause has been removed, as in the case of DDT in the Great Lakes. Some are hard to detect, such as toxic substances that accumulate below scientific detection levels before their effects become evident. There is growing potential for surprises as issues are discovered to be interacting in unforeseen ways. And, evidence is mounting that greater atmospheric variability is changing the character and scale of environmental hazards.

SUPPORT FOR PRECAUTIONARY, REVERSE ONUS ANTICIPATORY PRINCIPLES

Compounding these problems is the fact that our scientific understanding of many environmental issues is inadequate. We do not yet fully comprehend the complex linkages within ecosystems, and are only beginning to understand the interactions of various environmental stressors with each other and to trace their effects on ecosystems and the global environment. The rate at which environmental issues can be solved is also slowing. In contrast to environmental improvements achieved through regulation and the reduction of point-source emissions over the past two decades, issues like non-point-source pollution and the *long-range transport of toxics are not as easily remedied by conventional command and control approaches.* **INDUSTRY INPUT**

ISO 14000 WHY NOT

Response:

To address these challenges, Environment Canada must **CONTINUE** to develop much-needed knowledge in a timely fashion, and must learn how to build *consensus among its partners based on imperfect and inadequate information.* **Pollution must be prevented and the thresholds of ecosystem sustainability and resource use respected by**

improving and sustaining public awareness, concern and commitment over the longer term. Above all, Environment Canada must sustain a sense of purpose and progress by delivering on Canada's commitments and measuring results.

OBLIGATIONS AND EXPECTATIONS

Challenge: The focus of responsibility and capacity is shifting.

SETTING PATHWAY FOR VOLUNTARISM. MORE THAN EVER GOVERNMENT NEED TO ESTABLISH REGULATIONS BASED ON INTERNATIONAL PRINCIPLES WITH ENFORCEMENT MECHANISMS

All over the world, we are seeing increasing influence of international bodies on national policy-making. a shift in the locus of policy-making away from national governments toward international bodies. Standards for production and consumption are being harmonized internationally and are influencing international trade rules and regimes. International pressure to use economic instruments to achieve environmental and sustainable development goals is encouraging legislators to eliminate environmental barriers and disincentives.

LEGISLATORS MUST LEGISLATE

Domestically, the information age, the fiscal realities faced by all governments, and perhaps even Canada's changing demographics are combining to shift the focus of capacity and responsibility away from governments toward communities and citizens.

COMMUNITY BASED DECISION MAKING WITHIN AN OVERARCHING FRAMEWORK OF INTERNATIONAL PRINCIPLES

A positive manifestation of this shift is the increased willingness and capability of a more knowledgeable populace to contribute in innovative ways to achieving shared goals.

Response:

Internationally speaking, this shift provides Canada with opportunities to influence environmental outcomes on a global scale, and strengthen the need for a strong federal presence on the international stage **TO CALL FOR MINS AND FOR A GENERAL ASSEMBLY RESOLUTION CALLING UPON States TO SIGN AND RATIFY INTERNATIONAL INSTRUMENTS, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND TO CALL FOR AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE NON-COMPLIANCE.** To date, Canada's influence in the international environmental community has far outweighed its economic stature, largely because of the credibility it

has gained from its domestic progress on key commitments and from the strength of Environment Canada's science. This international influence must be sustained and enhanced. IF CANADA WISHES TO RECAPTURE ITS INFLUENCE IT MUST BE HONEST WITH THE REST OF THE WORLD, AND ADMIT WHAT IS HAPPENING IN CANADA - CANDU, ETC,

PROVINCES ARE BOUND BY OBLIGATIONS INCURRED BY CANADA, AND EXPECTATIONS CREATED BY CANADA

Domestically speaking, Environment Canada must also develop strategies to increase its influence at the national and community levels. This means basing activities on a broader consensus with other departments and governments, communities, industry, the private sector and non-traditional partners such as First Nations and non-environmental professional organizations. It also means building public support for the environment by leveraging Environment Canada's agenda through local leaders and building social capital at the community level. Community capacity and action should be aligned with international environmental agendas through national strategies and standards.

Challenge: Fiscal constraints are forcing all levels of government to rethink the way they do business.

CORPORATE TAXES SHOULD BE RAISED. LESS THAN MOST OECD COUNTRIES AND COMPENSATION SOUGHT FOR NON-COMPLIANCE AND PAST ENVIRONMENTAL DEVASTATION

licenses OR CHARTERS OF TRANSNATIONALS CORPORATIONS SHOULD BE REVOKED IF EVIDENCE OF HUMAN RIGHTS VIOLATION

At the same time, Canadians are demanding greater accountability for the expenditure of public funds, for results and for the quality of services delivered.

ONLY BECAUSE CORPORATIONS ARE NOT PAYING THEIR FAIR SHARE, AND THUS THE GOVERNMENT ARE FORCING CITIZENS TO PIT THE COST OF HEALTH EDUCATION AND SELF INTEREST AGAINST THE COST OF ENVIRONMENTAL PROTECTION

Response:

Environment Canada must CONTINUE to build a department that finds economical and cost-effective ways to protect human health and the environment, that delivers quality service in innovative ways, and that sustains a dedicated and professional work force appropriate to the challenges of the next century.

1.6 Consultations

6 PEOPLE OUTSIDE GOVERNMENT !!!

Many of these views were confirmed and reinforced during recent consultations on the department's Sustainable Development Strategy Discussion Paper. For example, a territorial government stressed the cultural dimension of sustainable development, and the federal role in science, such as in **defining the carrying capacity of ecosystems.** **NOTING THAT INDUSTRY OFTEN ARGUES THAT POLLUTION IS THE PERCENTAGE OF POLLUTANTS IN A RECEIVING BODY AND USE THIS TO JUSTIFY POLLUTING MORE IN PRISTINE AREAS BECAUSE THE CARRYING CAPACITY IS GREATER** Several provincial respondents recognized the implications of sustainable development on trade goals, and the need to enhance mutual efforts towards meeting those goals. Several other government departments are looking to Environment Canada for leadership on sustainable development, and some identified specific areas for improved collaboration such as increasing resource efficiency, measures of Eco-efficiency, and assessing the social and economic dimensions of sustainable development. *Stakeholder* consultations raised a number of specific issues: including the potential for risk-based decision-making, sustainable development indicators and voluntary approaches to pollution prevention. Students were particularly interested in barriers to sustainable development and how the general public, including themselves, could become more involved in implementing sustainable development principles. More details on the consultations are presented in Appendix B.

1.7 Departmental Directions

The challenges and the department's evolution to date suggest four broad directions for Environment Canada:

LOOK AT MY DEPARTMENT

SHARE HOURS WITH YOU

IN OTTAWA

SET STANDARD

Overall Directions for Environment Canada

Momentum in meeting key commitments: In order to build public support for the environment and keep it on the public agenda, and to sustain Canada's leadership and credibility internationally and domestically, Environment Canada must maintain its momentum toward meeting key commitments. **OBLIGATIONS AND EXPECTATIONS TOO BECAUSE CANADA HAS NOT AND IS THUS LOSING CREDIBILITY**

Enhance Environment Canada's contribution to sustainable development: Over and above its current activities in support of sustainable development, Environment Canada must seek to influence the environmental and socioeconomic actions of others, strengthen its internal capacity to do so by integrating social and economic factors in its own decisions, provide services which help Canadians economic interests adapt to changing environmental conditions, and lead by example in greening our government own operations.

Better manage its inter-dependencies and partnerships: In an era of globalization, information technology, changing capacities and shifting responsibilities, governments must improve their ability to manage interdependence ñ with other governments, the private sector and with citizens. They need to forge new relationships based not upon jurisdiction but upon shared concerns and mutual responsibilities -- harmonization in the broadest sense. In the environmental context, relationships based on interdependence

should ensure the highest level of environmental quality for all Canadians, promote sustainable development, and achieve greater efficiency and accountability across all jurisdictions and sectors.

CONTINUE to build a flexible and adaptive Environment Canada: In the context of fiscal restraint and the government's commitments to sustainable development and harmonization, Environment Canada's management objectives are to build a department that is effective in its leadership, accountable for results and has the skills and tools to deliver on its mandate in creative and cost-efficient ways, that is to "Get Environment Canada Right"

These overall directions also set the framework for how the department will enhance its contribution to sustainable development, through the Strategy described in this document.

CHAPTER 2. ENHANCING ENVIRONMENT CANADA'S CONTRIBUTION TO SUSTAINABLE DEVELOPMENT: STRATEGIES AND PLANNED ACTIONS

Our Strategy for Sustainable Development:

Environment Canada will seek to extend the range of its leadership and enhance the effectiveness of its influence.

Environment Canada will strengthen its internal capacity to integrate sustainable development factors into its policies and programs.

Environment Canada services will enable Canadians to adapt their economic and social decisions to changing environmental conditions.

Environment Canada will provide leadership and set an example in the "Greening" of Government Operations.

2.1 Approach

Virtually everything the department does contributes in some measure to making sustainable development a reality in Canada's sustainable development objectives. The challenge in developing this Strategy has been to identify those opportunities to enhance its contribution to sustainable development and the effectiveness of its influence over social, economic as well as environmental decision-making.

In its earlier Discussion Paper, the department identified several areas of organizational strength and capacity that it proposed to focus on in enhancing its contribution to sustainable development. In delivering its Sustainable Development Strategy, the department will focus on three core areas of capacity. These relate to "**governance**" (our capacity for appropriate policy and decision-making), "science and technology" (making best use of our expertise) and "*partnerships*" (engaging society). These areas of focus represent, to a large degree, the ways and means of pursuing a course towards sustainable development and correspond well to the department's activities and focus in pursuing its other broad directions.

2.2 Actions

The following describes these main elements and identifies the initial goals the department will pursue through its Business Plan. Together, these planned actions and results from Environment Canada's Business Plan, comprise the basis for implementation of the Sustainable Development Strategy. Performance measures will be included in the business plan and will provide the means to report annually on progress through the department's Performance Report.

2.2.1 Strategic Goal #1: To extend the range of Environment Canada's leadership and enhance the effectiveness of its influence. AND TO ENSURE THAT CORPORATIONS, INCLUDING TRANSNATIONALS, COMPLY WITH REGULATIONS...

The department will seek to work among target key decision makers beyond its traditional normal sphere, particularly in the social and *economic sectors*. Its focus will be on establishing innovative, efficient and *effective partnerships* to achieve environmental sustainability and sustainable development.

Priority will be given to: changing the processes of Governance and Decision-making; and building partnerships across social, economic and environmental sectors.

Plans and Priorities:

Enhance Environment Canada's influence with the energy sector: Environment Canada will work with other government departments and natural resource industries to develop clear policy statements related to the greening of energy. **BY CALLING FOR THE PHASING OUT OF THE USE OF CIVIL NUCLEAR ENERGY AND THE MOVING TOWARDS ENVIRONMENTALLY SOUND ENERGY.** It will **CONTINUE** to assess the economic and environmental benefits economic and environmental of renewable energy and conservation and to communicate **the findings broadly to promote the competitiveness of renewable/green energy. GOOD FUNDING**

Build partnerships for the sustainable development of the North: Canada's North is important to all Canadians because of its unique environmental, economic, social, and cultural and health dimensions. The department recognizes the significance of the North and plans to: review its management strategies for the North, including science and technology, the consideration of socioeconomic factors in the implementation of programs, and its advisory role with respect to development proposals;

INDUSTRY IN THE NORTH REVERSE ONUS PRINCIPLE

provide leadership internationally through, and expertise in, support of the Arctic Council and the Arctic Environmental Protection Strategy;

broaden the application of CEPA administrative agreements and equivalency agreements to include First Nations aboriginal governments; and

work with other federal agencies and the Department of Indian Affairs and Northern Development to DIAND in the development of a Federal Strategy for Northern Science and Technology.

INDICATORS OFTEN COUPLED WITH VOLUNTARY CONFORMANCE TO SELF INITIATED STANDARDS

Develop sustainable development indicators: The absence of effective and widely shared indicators undermines efforts to engage the public, define new policy measures, and evaluate progress.

Environment Canada will:

REDEFINITION OF DEVELOPMENT IN EQUITABLE AND ECOLOGICAL TERMS

work with other governments to develop indicators of sustainable development and to incorporate **natural capital values** into indicators of sustainability; and **GOOD**

provide tools such as the Environmental Valuation Reference Inventory to assist in determining the value of non-marketed goods by using cost-benefit and other appropriate types of analysis. ???

Better manage its inter-dependencies and partnerships: The department will contribute to achieving **federal leadership THROUGH ESTABLISHING REGULATIONS, CALLING FOR MINS AND COMPLIANCE** in integrating sustainable development into government policies and operations, partnerships to rationalize environmental policies and practices, to promoting and protecting domestic environmental security and economic interests and to fostering resolution of global commons and trade issues.

Environment Canada will:

Develop joint policy agendas with other government departments: Environment Canada will develop joint policy agendas, share science, integrate its policy development and deliver services in an increasingly horizontal manner, with other government departments,

like Natural Resources, Indian Affairs and Northern Development, Health, Agriculture and Agri-Food, Human Resources Development and Industry OGDs like NRCAN, DIAND, Health, Agriculture, HRDC, Industry Canada.

GOOD SHARING INFO AND RESOURCES

It will work with other government departments OGDs to establish federal positions for **negotiating with the provinces, territories and other countries on environment-related matters and to with the provinces/territories and other countries. ENACT THE NECESSARY LEGISLATION BEFORE ENTERING INTO AGREEMENTS.** It will work with OGDs to ensure that government policies and operations reflect the principles of sustainable development.

Build on the Canada-wide Accord on **Environmental Harmonization UPWARDS EQUAL TO OR ABOVE INTERNATIONAL STANDARDS** to strengthen Environment Canada's partnerships with the Provinces: The fact that there are thirteen different jurisdictions, each with their own environmental regulations and practices. **IT IS NOT DIFFICULT BECAUSE THE PROVINCES AND TERRITORIES ARE BOUND BY THESE CONVENTIONS . LEADERSHIP AND DIRECTION FROM THE FEDERAL GOVERNMENT TO DETERMINE WHAT WOULD CONSTITUTE COMPLIANCE.** *This makes it difficult to adequately deal with environmental problems (ground level ozone, climate change) and creates differing environmental standards among between governments.*

STOPPPPPPPPED HEREEEEEEEEEE

THE HARMONIZATION SHOULD HAVE BEEN DONE

Through the harmonization initiative, federal and provincial governments are working in partnership to achieve the highest standards of environmental quality across the country. will be coordinated. Roles will be based on what makes sense for the environment, and the use of fiscal resources will be maximized by avoiding and overlaps and duplication. avoided. Environment Canada will seek to maintain the momentum created by the Accord, to further strengthen its partnerships with the Provinces;

Focus international efforts on areas that affecting domestic interests: Environment Canada will focus its international agenda to more effectively position itself the department to influence and exploit emerging opportunities and to advance Canadian's interests across different fora and with different international partners.

It will:

promote Canada's interests in environmentally responsible hemispheric trade liberalization through cooperative initiatives to help strengthen national environmental institutions in Latin America;

promote the Commission for Environmental Cooperation as the forum of choice for resolution of North American regional environmental issues and the North American Free

Trade Agreement/North American Agreement on Environmental Cooperation
NAFTA/NAAEC approach to integrating trade and environment interests as a model for broader application;

promote and protect domestic environmental security and economic interests by building environmental advocacy and accountability into international trade and agreements on economic cooperation;

strengthen partnerships that involve scientific and commercial exchange, cooperation on environmental management and development assistance,; and

enhance Environment Canada's role as a source of information provider of knowledge on the "how to" of how to achieve sustainable development, and provide Canadian solutions, and facilitate the dissemination of practical solutions from across the globe.

Foster job creation related to pollution prevention: Environment Canada will CONTINUE to encourage private sector investment and to advance the commercialization of a broad range of environmental technologies for both the domestic and international markets through the Technology Partnerships Canada Program. It will help CONTINUE to position and improve Canadian companies to take advantage of opportunities in access both the domestic and global environmental markets through the Canadian Environmental Industry Strategy., and it will CONTINUE to foster capacity-building through the Environmental Assessment program. Specifically, In the planning horizon of the RPP, Environment Canada will:

COUPLING TECHNOLOGY

work with Canadian industry and others to prevent pollution while creating jobs by helping them identify the economic benefits of pollution prevention;

help industry address environmental and human health protection issues through improved science and technology, and improve their capacity to solve domestic problems at home and to enter foreign markets;

create the national pollution prevention clearinghouse to give Canadians access to the information and the tools necessary to implement pollution prevention; and

accelerate the commercialization of Canadian environmental technologies and processes by supporting the Canadian Environmental Technology Advancement Centers which deliver comprehensive technology transfer services to small-and-medium-sized Canadian environmental enterprises SMEs.

2.2.2 Strategic Goal #2: To strengthen Environment Canada's internal capacity related to sustainable development.

The department will change the way it conducts, employs and communicates its science, and develops policies and programs to make its activities to make the department's business more relevant.

Priority will be given to:

strengthening the linkages between Environment Canada's existing and emerging scientific and technological capacities and the federal government's environmental, social and economic policy making; and

improving the integrating of socioeconomic analysis into its own policies and programs and utilizing socioeconomic tools and strategies to accomplish its objectives.

Plans and Priorities:

In the implementation of Canadian Environmental Protection Act (CEPA), enhance Environment Canada's capacity to employ socioeconomic analysis and market-based approaches: Implementation of the renewed CEPA will require Environment Canada to strengthen its capacity to consider socioeconomic factors in controlling toxic substances and promoting pollution prevention. Environment Canada will:

develop --, together with other government departments and other stakeholders -- OGDs and other stakeholders, economic instruments and market-based approaches to prevent and contain environmental degradation and promote sustainable use of resources; and develop guidelines, programs and other measures for the implementation of these instruments and approaches.

The department will also focus on the implementation of key international commitments:

Press for progress on Climate Change: Climate change is one of our most pressing environmental issues.

STEP BACKWARDS: CANADA'S "COMPROMISE AND INACTION PROGRAM"

CANADA'S NATIONAL ACTION PROGRAM ON CLIMATE CHANGE" (NAPCC): "THE PRELIMINARY DRAFT OF REPORT ON OPTIONS"

DOCUMENT OF COMPROMISE AND INACTION A MAJOR STEP BACKWARDS:

"Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequence could be second only to a global nuclear war. The Earth's atmosphere is being changed at an unprecedented rate by pollutants resulting from human activities, inefficient and wasteful fossil fuel use ... These changes represent a major threat to international security and are already having harmful consequences over many parts of the globe.... it is imperative to act now. Climate Change in the Conference statement, Changing Atmosphere Conference in 1988

Joan Russow

International Law and Obligations Institute (ILOI)

a project of the ERA, Ecological Rights Association

The federal government has been traversing Canada "consulting" with "stakeholders" about the five options proposed in the Canadian National Action Program on Climate Change (NAPCC). All of the five options demonstrate lack of political will to seriously address the problem of climate change.

In the 1988 "Changing Atmosphere Conference" climate change was perceived as "a threat," now in the 1994 NAPCC, Climate Change is only perceived to be "a potential threat".

Canada signed (June 1992) and ratified (December, 1992) the Climate Change Convention. The Convention came into force in March, 1994. Although Canada presumably is not fully bound by the Convention until the Convention comes into force, Canada has been bound since the signing of the Convention in June 1992, to not do anything in the interim between the signing of the Convention and the coming into force of the Convention "to defeat the purpose of the Convention" (Article 18, Convention of Law of Treaties).

In the Climate Change Convention, there are provisions to "conserve and enhance sinks" and "to document sinks". NAPCC carefully ignores the impact of the failure to preserve carbon sinks such as old growth forests, and of the continuation of current forest practices such as clear-cut

logging. Since June of 1992, numerous carbon sinks including forests and bogs have been destroyed even before they have been properly documented.

The NAPCC document also fails to seriously call for the phasing out of the use of fossil fuels, and the conversion of the infrastructures that support the use of fossil fuels. Although there is a call in the document for renewable energy, there appears to be little resolve to create a situation, with high mandatory standards and regulations that would attract serious conversion to renewable energy. Most of the document appears to rely on “voluntary initiatives”. Voluntary initiatives from the fossil fuel sector will not be sufficient to drive industry to embrace the principle of renewable energy.

“The NAPCC document also under the euphemism of “Electricity and Heat Co-generation Opportunities” keeps the door open for the nuclear power industry to prey on the public concern for climate change.

In the NAPCC document, the Federal Government offers 5 options. All five of these options demonstrate that Canada has caved into the forestry, fossil fuel and nuclear industry. If Canada is to seriously address the threat of Climate Change Canada should consider a sixth option.

OPTION 6 : THE MISSING OPTION

Adherence to three key principles;

The precautionary principle

Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures (Climate Change Convention, 1992)

Reverse onus principle (proposed by Minister of Environment, the Hon. Sheila Copps, 1994)

The proponent of an intervention in the ecosystem shall have to demonstrate safety, rather than the opponent having to demonstrate harm

Future problem avoidance principle:

The addressing of one environmental problem should not itself be an action that could cause irreversible harm (Standing Committee on Environment “ Out of Balance; The Risks of Irreversible Climate Change, 1991)

Actions

- 1.. Preserve and enhance sinks (forests and bogs), [as required in the Climate Change Convention] , in particular preserve large areas of original growth and conservation corridors

2. Ban all forest practices such as clear cut logging and broadcast burn that reduce carbon sinks on crown and private lands

3. Encourage afforestation and restoration of damaged forest ecosystems such as on Not Sufficiently Restocked land

4. . Phase out the use of fossil fuels and nuclear energy (as recommended in the Nobel Laureate Declaration prepared for UNCED).

5. Establish and enforce a national dedicated program for energy conservation and efficiency

6. Establish extensive networks of alternative ecologically safe and sound means of transportation (Agenda 21), and cease the construction of all new highways

7. Synthesize the existing scientific information. No new studies are required to demonstrate that it is necessary to reduce anthropogenic emissions. “Inaction is negligence” (Digby McLaren, Past President of the Royal Society , Global Change Conference, 1991)

8. Adaptive measures shall not be used as a justification for not acting to preserve existing sinks and to prevent anthropogenic sources of greenhouse gases.

9 , Prohibit the proposals to seek far-off Southern carbon sinks to justify maintaining northern consumptive patterns. (Morris Strong's Costa Rica Scheme — Ontario Hydro buying forests in Costa Rica to offset Ontario Hydro's CO2 emissions)

10 Avoid carbon emissions trading because this practice legitimizes continuing currently harmful emission practices

11. Transfer all energy-directed funding into renewable energies that are ecologically safe and sound

12. Transfer a significant proportion of the \$11 billion military budget to assist in implementing the above measures and in job conversion

As we near the 50th Anniversary of the United Nations (October 24, 1995), Canada CONTINUES to demonstrate its lack of resolve to seriously address and discharge its international obligations, and until Canada is willing to fulfill these obligations through enacting the necessary legislation with mandatory standards and regulations, little substantial change will occur.

Although climate changes in climate are natural, their magnitude of this change is influenced by increasing concentrations of greenhouse gases in the Earth's atmosphere. Global warming is a reality and there is growing evidence that we will experience more variability and a wider range of extremes in our daily weather. Climate change will likely have major repercussions on economic and ecological systems worldwide. The federal government will CONTINUE to pursue the goal of stabilizing emissions of greenhouse gases at 1990 levels by the year 2000 in partnership with other stakeholders, through research and measures that focus on strengthening voluntary actions, involving all Canadians, and by promoting energy efficiency and renewable energy. Specifically, To do so, the department plans to:

implement the Federal Action Program on Climate Change and CONTINUE to support the implementation of the National Action Program on Climate Change;

make the issue real to Canadians, in part by publishing a Canada-wide study to improve the understanding of climate effects; and

CONTINUE our research into understand the nature of climate change, its likely impacts on Canada in particular, and how Canadians might adapt to a changing climate to take advantage of opportunities and minimize risks.

The United Nations Convention on Biological Diversity is an international agreement to protect native species and natural habitats. The implementation of the Canadian commitments under the Convention will require that attention be devoted to diverse species, habitats and ecosystems. *It will require work in close cooperation with both Canadian and international stakeholders, including the resource and economic sectors, with a focus on building consensus and partnerships among the diverse interests represented.* Key components to address this initiative will be federal research, and legislation such as the proposed Canada Endangered Species Protection Act.

IDENTIFY BIODIVERSITY, PREVENT REDUCTION AND LOSS OF BIODIVERSITY

Engage youth: Environment Canada will implement a multi-track approach to making young Canadians promoters of sustainable development that will engage youth in environmental action and policy development and involve them in the growing international environmental sector.

Increase its efforts aimed at **environmental education** and communication: Building on Environment Canada's very successful effort to engage Canadians on key environmental issues through its ecosystem initiatives and Action Agenda 21, Environment Canada will work to raise public awareness and understanding of issues such as climate change.

ROYAL SOCIETY GLOBAL CHANGE MILT MCLAREN PRINCIPLE BASED EDUCATION. It will synthesize, popularize and communicate scientific information, and It will provide information products and services that help Canadians understand the environment and to factor the environment into their decision-making. And it will use its expertise to offer a mix of products and services for the public good and, on a cost-recovered basis, for clients with special needs.

CHAPTER 36

NON CORPORATE INVOLVEMENT IN DETERMINING THE PHILOSOPHICAL UNDERPINNINGS OF EDUCATION

CHANGE THROUGH AWARENESS AND EDUCATION PRINCIPLE

Through international standards an educational program called principle-based education could be expanded. Principle-based education is based on a conceptual framework of international principles.

In chapter 36 of Agenda 21, a very important distinction is made between promoting "education," promoting "public awareness," and promoting "training." It appears to be clear in Agenda 21 that non-governmental organizations, community-based groups, women's groups and aboriginal groups are called upon to assist educational authorities in reorienting education. The role of industry is ascertained to be limited to specific areas of business and industrial and training programs.

Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. The authorities and industry should encourage business, industrial and agricultural schools to include such topics in their curricula. The corporate sector could include sustainable development in their education and training programmes.

Agenda 21, Chapter 36.5 I

In the section of Agenda 21 that addresses the "promoting of public awareness" industry is included not as the dispenser of "education" but as the recipient of needed education.

" Countries and regional organizations should be encouraged, as appropriate, to provide public environmental and development information services for raising the awareness of all groups, the private sector and particularly decision makers. (Agenda 21, section 36.10 c)

In the section of Agenda 21, that addresses the "promoting of training, an important role for industry is envisioned.

To strengthen national capacities,... in training, to enable governments, employers and workers to meet their environmental and development objectives and to facilitate the transfer and assimilation of new environmentally sound, socially acceptable and appropriate technology and know-how (Agenda 21, 36.13 c)

ensure that departmental EC's products are based on an understanding of client's capacity to receive and use information, as well as on EC's ability to deliver quality services in a timely fashion;

issue, in partnership with academia, other government departments OGDs, and other jurisdictions, a new generation of "state-of-the-environment assessments" " , that are more focused, timely, cost-effective; and increase in **cost recovery revenues** that reflect the demand for information products and services, through the provision of environmental information to clients with special needs; and

use communications technologies to facilitate the dissemination of environmental information including expanding the information products made available on the Green Lane, and using the School Net.

2.2.3 Strategic Goal #3: To enable Canadians to adapt their economic and social decisions to changing environmental conditions.

The department will extend the reach and application of its weather and environmental information services.

Priority will be given to:

providing weather and environmental warnings, forecasts and information that contribute to the competitiveness of Canadian businesses in the global market;

providing weather and environmental warnings, forecasts and information that contribute to the health and safety of Canadians; and

extending its environmental prediction capacity to longer time frames and a wider array of parameters.

Plans and Priorities:

QUESTIONABLE ROLE FOR ENVIRONMENT CANADA

PREVENTIVE TECHNOLOGY

BEST

IS THAT THE ROLE OF GOVERNMENT

Contribute to the competitiveness of Canadian business in the global market: Transportation, recreation, construction, agriculture, fisheries, forestry, energy and water use can all be more competitive, and therefore more sustainable, when decisions are made with the knowledge of expected weather conditions. Within the planning horizon, Environment Canada plans to:

develop targeted products and services that enable clients in the economic sector to understand and consider environmental matters in their decisions, adapt their economic and social decisions to changing environmental conditions, *and find economic opportunities and reduce the risk in dealing with changing environmental conditions*; and
PREVENTION

work with the insurance sector to better understand liabilities so that they can make informed choices and decisions in light of future climate change (e.g., liabilities related to severe storms, floods, rises of sea level).

Warn Canadians of environmental risks to their health and safety: Severe and extreme weather (e.g., snowstorms, tornadoes, heat waves, downpours), smog and UV radiation threaten the health and safety of Canadians. NUCLEAR ENERGY, ENVIRONMENTAL DISASTERS ANTHROPOGENIC POLLUTION CLIMATE CHANGE OZONE DEFORESTATION Canadians' personal decisions directly affect their quality of life, reduce the strain on our social structures, including the **health care system**, **RECOGNIZE ENVIRONMENTALLY INDUCED DISEASE** and contribute to their long-term sustainability. Environment Canada will introduce forecasts of air quality in partnership with other governments. An Air Quality Index will give Canadians information about expected air quality in the coming days allowing them to make choices to minimize their health risks.

Predict a wider variety of environmental parameters on various time scales: As our climate changes naturally, and under the influence of new and increased levels of atmospheric chemicals, Canadians will be subjected to a new range of weather variability. Predictions and scenarios of the probable future States of the environment give citizens, industry and governments the tools to plan their activities, infrastructures and policies in a cost-effective, sustainable manner. Environment Canada will:

NOT MITIGATION BUT PREVENTION RESEARCH ON PREVENTION NOT MITIGATION AND REPORTING ON CHANGE

-build upon its existing physical modeling capacity to develop an integrated environmental prediction capability by utilizing a multi-disciplinary approach and conducting scientific research. It will use its short- and long-term forecasts of the

-atmospheric environment over Canada as the basis for environmental predictions and to improve understanding of ecosystem processes and sensitivities;

build on its warning/response expertise and infrastructure to enhance predictive capacity for modeling future States of the environment, identifying areas of risks and transfer necessary skills to Canadians that will enable them to integrate environmental considerations into their decision-making. Such predictive capacity is based on Environment Canada's monitoring network and will require extensive partnerships with provinces, communities, industries, universities and other countries; and

combine meteorological and hydrological expertise to provide predictions for water levels in basins to minimize flood danger while maximizing the economic potential of water reservoirs.

2.2.4 Strategic Goal #4: To provide leadership and set an example in the “Greening” of Government Operations

The “greening” of government operations forms an integral part of the Sustainable Development Strategy.

Priority will be given to:

greening the department’s own operations; and

advocating for greening operations across governments, domestic and international.

Plans and Priorities:

Environment Canada is playing its advocacy role and providing leadership by example in implementing sustainable development. Environment Canada is dedicated to adopting and implementing **the pollution prevention approach** in the greening of its operations and to make this approach the basis for environmental decision-making in federal departments. The department will:

-commence implementation of an Environmental Management System (EMS) in all Regions and Services by April 1, 1997, in parallel with on-going development and improvement;

implement Federal Buildings Initiative (FBI) projects in up to 100 buildings as part of a national FBI bundle, to make the department much more energy and water efficient;

PATHETIC

purchase 15-20% of our energy from renewable sources by the year 2010 and commence green power pilot projects in fiscal year 1998-99;

by the year 2004, reduce the size of our fleet from 771 vehicles (in August 1995) to 540, and 75% of new vehicles purchased will operate on alternative fuels where economically and operationally appropriate;

using the Canadian Council of Ministers of the Environment (CCME) baseline year of 1988, by implementing waste reduction programs in our facilities, reduce and/or divert 80% of our office waste by the end of 1997;

as stated in our environmental policy, be in compliance with all federal environmental regulations and legislation;

incorporate green accommodation standards into Environment Canada facilities and into our leased facilities through our **Master Occupancy Agreement with Public Works and Government Services Canada (PWGSC);**

introduce tools for managers and employees to use to buy green and monitor the use of these tools;

advocate green operations across governments, domestic and international; and

CONTINUE to draw the federal community together to develop best practices, collective frameworks for common issues and to share information through such mechanisms as the Environmental Accountability Partnership and the Federal Committee on Environmental Management Systems.

2.3 Emerging Issues and Considerations: Future Directions

Cross-Cutting Issues:

Many of the issues that are critical to addressing sustainable development in the federal government cut across departmental mandates and interests and are “cross-cutting” in nature.

What issues

Environment Canada is particularly interested in exploring ways to deal with these issues effectively and efficiently. A discussion of several issues of this type, and how they are being addressed, is presented in Appendix F of this document.

This initial strategy begins the process to build on efforts to date to manage cross-cutting issues. The department will focus more on this issue as it implements this current strategy and begins to look towards updating the strategy in three years' time.

Encourage innovation for environmental solutions:

To narrow the gap between the Earth's carrying capacity and the rate at which we can develop solutions, we need to innovate in a number of different areas: environmental technologies, closed loop processes, etc.; new ways of sharing and disseminating information and strategies; increasing understanding and lifestyle changes; exploring new roles for governments, as catalysts and partners. Environment Canada will explore its opportunities to use its policy and program levers to influence and encourage these different kinds of innovation and the potential synergy between them.

APPENDICES TO THE STRATEGY

Appendix A: Departmental Profile

Mandate

The Department of the Environment was created in June 1971 following proclamation of the Government Organization Act in 1970. The department was created by combining various entities within the federal government responsible for the natural environment.

Environment Canada is a science-based department with a mandate, under the Department of the Environment Act that covers preservation and enhancement of the quality of the natural environment, renewable resources (including migratory birds and other non-domestic flora and fauna), meteorology, enforcement of the rules of the Canada-U.S. International Joint Commission, and coordination of federal environmental policies and programs. Environment Canada is responsible for administering the following acts:

The Canada Water Act;

The Canadian Wildlife Act;

The Canadian Environmental Assessment Act;

The Canadian Environmental Protection Act;

The Canadian Environment Week Act;

The Department of the Environment Act;

The International River Improvements Act;

The Lac Seul Conservation Act;

The Lake of the Woods Control Board Act;

The Migratory Birds Convention Act, 1994;

The National Wildlife Week Act;

The Weather Modification Information Act; and

The Wild Animal and Plant Protection and Regulations of International and Inter-provincial Trade Act.

HAS THE DEPARTMENT CRITICIZED CANDU NUCLEAR POWERED VESSELS ETC

The Department of the Environment Act recognizes that preserving and enhancing the environment is not solely the responsibility of the Minister of the Environment. **It gives the Minister broad advocacy responsibilities to promote and encourage practices**

that lead to environmental enhancement, and to cooperate with others having similar objectives. Science is the foundation of its policies, programs and regulations, and is essential to achieving every result.

In the conduct of its mandate, EC's long standing and complementary roles are to:

provide leadership nationally and internationally on matters pertaining to the sustainability of the environment;

act on behalf of all Canadians to address environmental issues of national concern; and

build capacity and deliver services to Canadians to enable them in their daily lives to sustain and adapt to the environment.

While Environment Canada's mandate has not changed since its inception, the range and character of the issues with which it must deal have evolved considerably. Environment Canada's services to Canadians have encompassed the protection, conservation and restoration of the environment; federal environmental legislation, regulations and policy making; and warnings of, and protection from environmental risks.

Increasingly, we understand that we must not focus on particular, isolated problems, but on entire ecosystems. We are also recognizing the global dimensions of environmental concerns, and we are learning that there are limits to what government can do. Fiscal pressures require an increasingly strategic approach to the expenditure of public funds. Although legislation is one of the tools which the department has traditionally used to influence behaviour, many environmental issues cannot be solved by legislation or regulation alone.

Beyond the growing knowledge of the complexity of environmental issues is the recognition that the environment and economy are inextricably interconnected. This means that the environment can only be managed effectively within the broader context of economic and social development.

In recent years, sustainable development has become a national goal, a key policy thrust of the Government of Canada, and a shaping assumption for environmental management in Canada. Environment Canada's mission is to foster a national capacity for sustainable development that will result in a safe and healthy environment and a sound and prosperous economy.

Structure

Environment Canada plans, administers accountabilities, and reports its performance through three results-focused Business Lines: A Healthy Environment, Safety from Environmental Hazards, and A Greener Society. The first two primarily address environmental issues of today, and the third focuses on building societal capacity to sustain the environment for the future. Environment Canada undertakes and promotes programs to: sustain the environment and reduce environmental risks to human health; provide weather forecasts and warnings and emergency preparedness services; and, give Canadians the tools to build a greener society. Administration provides corporate leadership, integrated systems and common services that support these lines.

A Healthy Environment: Canadians are concerned about risks to the environment from human activities and the danger that these risks pose to human health, and the sustainability of the environment. They expect that environmental risks be understood, monitored and prevented or controlled. In this Business Line, EC responds to these risks by: providing scientific knowledge and expertise; developing national strategies and standards with its partners; establishing federal environmental laws and regulations and ensuring that they are vigorously enforced.

Safety from Environmental Hazards: The lives and property of Canadians are threatened by naturally occurring and human-induced environmental hazards ranging from severe weather to oil spills and tire fires. Environment Canada provides information services to enable Canadians to minimize these risks and protect themselves from hazards by providing timely weather and environmental warnings, predictions of probable future environmental States, and services aimed at reducing the frequency and severity of environmental emergencies. **Safety from Environmental Hazards:** The lives and property of Canadians are threatened by naturally occurring and human-induced environmental hazards; these range from severe weather and airborne volcanic ash to oil spills and tire fires. In order to minimize risk, Environment Canada, through its research and related scientific activities, provides services to enable Canadians to protect themselves from hazards. It does this by providing Canadians with timely weather and environmental warnings, and services aimed at reducing the frequency and severity of environmental emergencies.

A Greener Society: Through its third business line, the department seeks to reconcile environmental and economic interests, remove barriers to environmentally responsible action, and foster the capacity of all sectors of society to act on their environmental values and responsibilities. The department provides Canadians with useful and

accessible information, readily applicable technologies and tools, and policies that integrate social, economic and environmental considerations.

Externally, Environment Canada's accountability is by its Business Lines; internally, management of resource and delivery of results is by responsibility center within existing organizational structures. The structures crosscut the business lines. Environment Canada is organized into seven headquarters services (Office of the Minister and Deputy Minister; Atmospheric Environment Service; Environmental Conservation Service; Environmental Protection Service; Corporate Services; Policy and Communications, and Human Resources Directorate) and into five integrated regions (Atlantic; Quebec; Ontario; Prairie and Northern; and Pacific and Yukon). Environment Canada has approximately 4900 employees, and a current budget of \$546 million.

Environment Canada is shifting in the way it does and how it does its business. The department's strategies and instruments are changing in rather fundamental ways. The department formerly managed a wide range of issue-driven program interventions. It is now moving towards targeted actions based on science, comprehensive monitoring, and careful assessment of relative risks, to secure high leverage and multiple benefits from its interventions.

Environment Canada provides leadership in integrating sustainable development into structures of governance at the international, national and local levels, building shared agendas with other sectors of Canadian society, and promoting and protecting Canadian interests internationally.

Partners

Strong partnerships are required to make sustainable development a practical reality. Environment Canada believes that implementing the principles of sustainable development is a responsibility shared by individuals, governments, industry, Aboriginal peoples and non-governmental organizations.

Partnerships between Environment Canada and all federal departments will be strengthened, paying particular attention to the departments with an economic focus (e.g., Finance, Industry Canada, Foreign Affairs and International Trade), a natural environment focus (e.g., Natural Resources, Agriculture Canada, Fisheries and Oceans, Indian Affairs and Northern Development and Canadian Heritage), and a social focus (e.g., Health Canada, Human Resources Development).

Provincial and territorial governments will CONTINUE to be essential partners in achieving sustainable development across Canada. Individual provinces and territories are developing regional and local examples models of sustainable development.

The harmonization initiative will also provide a solid foundation for cooperative and coordinated effort toward sustainable development. Effective partnerships have been established with municipal governments and these should be strengthened.

Business is a vital partner in ensuring that development is sustainable. Business has taken a proactive role through the World Business Council on Sustainable Development and national sector associations. There are also other national and international forums such as the National Round Table on the Environment and the Economy (NRTEE) and the International Institute for Sustainable Development (IISD) that are bringing together diverse interests in working towards sustainable development.

With the settlement of lands claims settlement and the implementation of self-government, Aboriginal peoples are taking on an increasing role in the environmental management of their lands and in ensuring that development is sustainable over the long term. Environment Canada will need to build new partnerships and strengthen linkages with Aboriginal peoples to assist them in achieving and maintaining be successful in achieving a clean, healthy and productive environment on these lands.

Non-government organizations and other community groups **contribute to the attainment of sustainable development in many ways. They offer insights into environmental issues**; they are closely linked to communities; and they can help build public awareness. It is crucial for Environment Canada to maintain the relationship with these groups because they contribute to mutual understanding of issues and shared solutions.

International cooperation to integrate considerations of the world economy and the shared environment is required to promote sustainable development on a global scale. Canada's approach has been the selective use of international institutions, international law, and bilateral and multilateral arrangements to promote Canadian interests. Environment Canada supports Canadian participation in international conventions (e.g., climate change and biodiversity), environmental, economic and financial organizations (e.g., U.N. Environment Programme (UNEP), OECD and the World Bank), and in

international scientific networks (e.g., International Geosphere-Biosphere Programme (IGBP) and International Council of Scientific Unions (ICSU) and works with other countries, such as the United States, to address shared interests and challenges.

Appendix B: Consultations Summary

Consultation is an important component in the preparation of Sustainable Development Strategies. As indicated in A Guide to Green Government, the strategies are to be prepared in an open and transparent manner. To meet this requirement, the department carried out internal and external consultations. **The intent was to receive a broad and diverse range of informed comments and views, without trying to reach consensus.** As a basis for the consultations, Environment Canada prepared a Discussion Paper which presented the department's views on what the concept of sustainable development meant, how it was being addressed in departmental programs and activities, the key issues related to sustainable development that are facing the department and the proposed priorities for further action in the context of the Sustainable Development Strategy. A second round of consultations, based on a draft of the full Sustainable Development Strategy, is also being undertaken.

Consultations with Partners, Clients and Stakeholders

Consultations were carried out with clients and stakeholders as well as with the provinces, territories and other federal departments. To get as broad a range of views as possible from interests outside government, representatives from Aboriginal peoples, business, environmental, development and social non-governmental organizations (NGOs), women's groups, labour, youth, academia were specifically invited to take part in the consultations process. The Environment Canada Sustainable Development Strategy Discussion Paper was sent to 123 individuals and organizations. A list of stakeholders is presented in Appendix C.

Environment Canada decided to offer the consultations process by electronic means. The department posted its Discussion Paper on its Internet site, the Green Lane, and created an SDS Forum to encourage dialogue. The electronic approach to consultations was perceived to have many advantages. First, it allowed broad additional access to concerned individuals and groups, to be convenient to participants as it would eliminate geographical barriers, and be more environmentally friendly and cost-effective. Although electronic consultations were encouraged, both an electronic version and a hard copy were made available to our key clients and stakeholders for those who do not have access to the new technology or who might feel uncomfortable using the Internet. The option of responding electronically or by more traditional means was therefore given to everyone.

The electronic approach was also intended to give all interested Canadians who visited the Green Lane the opportunity to access the Discussion Paper and to provide comments, with the option to take part in the SDS Forum.

Consultations were launched on October 7, 1996 and ended on December 1, 1996. All invited participants were provided with a copy of Environment Canada's Discussion Paper, "A Guide to Green Government", the department's Business Plan and related Action Plan as well as a copy of the Amendments to the Auditor General Act.

RESULTS ONLY 6 OUT 39 OUTSIDE OF GOVERNMENT

As of December 1996, a total of 39 comments were received. Out of these 39 comments, 6 were provided by groups outside government, and the remaining 33 were from provincial governments and other federal departments. A list of participants is attached in Appendix C.

Youth Consultations

Information sessions on the Sustainable Development Strategy were held in August 1996 in all EC regions in order to build interest in the project and to give the students the opportunity to take part in the consultations. Following the presentations, 85 students expressed an interest in participating in the consultations. A total of 26 responses were gathered nationally. Comments provided by students covered a wide range of issues including the *importance of education, federal role, environment-economy linkages, the format and organization of the paper. Most students agreed with the concept of sustainable development put forth in the Discussion Paper. The main concern was the lack of specifics with regards to how proposed targets were going to be met. Students also expressed the view that the Discussion Paper did not state how the general public, including themselves, could be involved in implementing sustainable development principles. Many also suggested that the strategy should identify barriers to implementing sustainable development.*

SYSTEMIC CONSTRAINTS

Joint Consultations on the North of 60° SDS

The Department of Indian Affairs and Northern Development (DIAND) invited other federal government departments to join them in a coordinated consultations approach on Sustainable Development Strategies with Aboriginal, territorial governments, and stakeholders in the North. Four departments, including EC, agreed to participate in the joint northern SDS consultations. A North of 60° Issues Paper was produced and used as the basis for consultations. The paper contained a "core" section detailing many issues facing the North, as well as individual departmental chapters that described key sustainable development activities and issues that each department wished to address.

Two workshops in the Northwest Territories (Yellowknife, Iqaluit) and one meeting in the Yukon (Whitehorse) took place in December 1996. A total of 24 organizations participated in the three meetings and are listed in Appendix C.

The consultations in the Northwest Territories produced a number of consistent themes. It was felt that the success (or failure) of the SDS in the North will depend upon coordinated communications and consultations between governments and *stakeholders*, and at the community level. Workshop participants acknowledged that the five federal departments at the table were demonstrating unprecedented cooperative consultation and were encouraged to CONTINUE this type of approach.

Aboriginal groups raised the issue of the continuing use of traditional knowledge in scientific investigations. Gender equality was expressed as an issue where the government must take steps to ensure that consultations specifically include women and women's groups since many of the impacts of sustainable development are first felt in the home and by women.

There were strong messages for the need for education and empowerment, especially for youth, so that northern Canadians can make sustainable decisions in their lives. In order to get the message of sustainable development out in a manner that is understood at the community level, governments were encouraged to have more face-to-face education and communication initiatives.

Workshop participants also felt a need to bolster northern scientific expertise and application in support of sustainable development. There were concerns that decisions on northern science were being made based on a short-sighted perspective (deficit fighting) which will result in significant loss of capacity and negative long-term impacts. **Specific issues raised included the need for regulatory reform (i.e., giving industry a clear picture of requirements in relation to sustainable development), sustainable energy sources, the importance of land claims resolution, full-cost accounting of developments (i.e., ecological limitations, more work on cumulative impact assessment), contaminants in the North, and the need for more ecosystem studies.**

Comments and Reactions

VOLUNTARY ISO 14,000

Sectors Outside Government

While there was not a lot of response to the Discussion Paper, comments received were generally supportive. Some stakeholder groups commented that the strategy would need more emphasis on risk-based decision-making, particularly Accelerated Reduction and Elimination of Toxics (ARET), and on *voluntary approaches and their success*. There was interest expressed in participating in the development of sustainable development indicators, and in conducting research in the concept of measurable parameters in the context of Eco-efficiency. There was a desire to follow-up with the department on some issues raised in the Discussion Paper, such as dioxin emissions from waste incineration that may not meet the test of “greatest risk” in the Canadian context. Suggestions were also provided for a framework within which to look at the social aspect of sustainable development.

Provincial and Territorial Governments

Response from the provincial and territorial governments were generally positive and supportive. Some provinces saw the Sustainable Development Strategy as an opportunity to work together in the context of sustainable development. Others identified the need to say more about the roles or relationship with EC’s partners in achieving sustainable development. They also expressed concerns about the implications of sustainable development on trade and Canada’s competitiveness. Comments were also provided about the social and cultural aspects of sustainable development.

Other Federal Departments and Agencies

There was general agreement that EC’s approach to developing its Sustainable Development Strategy was an appropriate one for the department, and also presented a useful example for government. There was strong support for working collaboratively on sustainable development issues. Several departments noted specific areas for collaboration including increasing resource efficiency, determining measures of Eco-efficiency and assessing social and economic dimensions of sustainable development, and ecosystem-based approaches.

Internal Departmental Arrangements

The internal consultations started early in the process of the preparation of the Sustainable Development Strategy. A senior level Steering Committee was put in place to provide overall direction. A Departmental Working Group with representation from all Services and Regions was established to provide a point of departmental coordination for the preparation of the Strategy and to ensure that policy, planning and operational perspectives were included. Every draft of the Discussion Paper was circulated regularly to the Working Group as well as to other EC employees who expressed an interest. A

notice about the Discussion Paper was sent electronically to all EC employees, with an invitation to provide comments.

The internal consultations also consisted of several workshops held in different departmental offices during autumn 1996. The workshops were designed to discuss any new or outstanding issues related to the Discussion Paper, to confirm strategic directions and objectives and to identify deliverables and related performance indicators and measures.

One of the main points raised at the workshops was the need to make the Sustainable Development Strategy meaningful to departmental employees. EC staff also mentioned the need for a “plain language” version of the strategy and more work on defining the broad sustainable development objectives and the means to achieve them. It was noted that the strategy should explicitly state upfront what are the limitations for the department, what it should expect to be able to do regarding sustainable development, who it is trying to reach/affect, and what the expectations are. The department’s Environmental Management System (EMS) was also raised as an essential component of the strategy.

Interdepartmental Arrangements

Environment Canada has taken a strong interest in encouraging and supporting interdepartmental cooperation and coordination on issues related to sustainable development. Of particular interest, is the way in which issues which are shared across departments because of departmental interests, mandates or responsibilities, will be addressed in departmental sustainable development strategies. Some of these issues are discussed in Appendix F. It will be important to promote a degree of consistency and coherence among the various departmental strategies that will be completed by December 1997.

Mechanisms that are in place to promote coordination include the Deputy Ministers’ Sustainable Development Coordinating Committee, the Environmental Accountability Partnership (which includes several working groups such as the Federal Committee on Environmental Management Systems) and the Interdepartmental Network on Sustainable Development Strategies.

Appendix D: Greening Government Operations

Environment Canada will demonstrate sustainable development leadership within the Federal government by adhering to the following Operational Environmental Guiding Principles. Senior management, along with every employee in Environment Canada, will be responsible for ensuring that these principles are fully integrated into their day-to-day activities.

Operational Environmental Guiding Principles

Pollution Prevention: We will use and develop processes, practices, materials, products or energy that avoid or minimize the creation of pollutants and waste, and reduce the overall risk to human health or the environment.

Procurement: We will purchase products and services that meet environmental specifications wherever these are available, and consider product life-cycle costs when making purchasing decisions. We will also expect high environmental standards from our suppliers.

Resource Stewardship: We will reduce our consumption, make efficient use of renewable and nonrenewable resources, and reuse and/or recycle waste materials wherever feasible.

Legal Compliance: We will ensure that:

all of our operations and facilities meet or exceed Federal environmental statutes, regulations and standards, and are compatible with Provincial, Territorial, Municipal and First Nations environmental statutes, regulations and standards for the jurisdiction in which they are located.

Assessment and Remediation: We will consider the potential environmental impacts of all new undertakings and contain, mitigate or remediate the risks from our past actions.

Employee Awareness and Training: We will integrate sustainable development principles into our existing training programs and, where necessary, develop new programs and tools to guide our sustainable development thinking.

Monitoring and Reporting: We will monitor and measure our progress towards sustainable development on a regular basis and report this information to Canadians in a timely and forthright manner.

Sharing Knowledge: We will openly share our knowledge of environmental management and promote the use of sustainable development principles.

Environmental Auditing: We will regularly conduct environmental site audits and environmental management systems audits and respond to the findings and recommendations of these audits in a timely manner.

Continuous Improvement: We will work to continuously improve our environmental performance and the integration of sustainable development principles into our planning process.

Background

The government adopted the Code of Environmental Stewardship in 1992 as a commitment to the concept of sustainable development and a pledge to integrate environmental considerations into day-to-day operations. The Greening Government Operations policy, April 1995, took the concept of environmental stewardship farther by outlining recommended best practices in various key priority areas and promoted the use of environmental management systems (EMS) as a method of ensuring that environmental objectives are properly considered and implemented.

Several months later, in June 1995, with the publication of the guidance document entitled A Guide to Green Government, federal departments were directed to take actions to 'green' their operations, policies and programs. Later in the summer of 1995, Environment Canada's Office of Federal Environmental Stewardship (OFES) published Directions on Greening Government Operations, which outlined a comprehensive approach to assist departments in planning how to achieve sustainable operations.

Environment Canada employees, have implemented internal practices to reduce waste and conserve resources in their day-to-day operations on a selective and ad-hoc basis since the formation of the department.

The Code of Environmental Stewardship noted above initiated a more formal approach to greening operations. Many regions and facilities established Green Teams to accelerate the introduction of green practices and to identify local opportunities for action. The Greening Operations Branch, formed in early 1994, has provided leadership, and coordination for greening activities, and fostered corporate, regional and facility level action.

Formalizing Environmental Management and Green Operations: Selecting an EMS Model

In 1994 the Department began to look at options for developing a comprehensive and systematic means of managing environmental obligations associated with internal operations. Based on that review, and on extensive Canadian involvement in developing standards for environmental management through the International Organization for Standardization (ISO), the Department has elected to follow the EMS model outlined in ISO 14004.

In June 1995 Environment Canada launched its EMS process. A National EMS Team was formed to design and begin implementing the department-wide environmental management system. The national team has included an EMS coordinator for each of the Department's five geographic Regions including headquarters, one EMS coordinator for each of the 3 program Services and technical support. Headquarters EMS staff have provided coordination and technical support.

Key Features of Environment Canada's Environmental Management System

As well as being based on the ISO 14004 model, a number of other important characteristics define Environment Canada's EMS.

It is:

designed collaboratively by headquarters, Regions and Services;

based on department-wide system guidelines and minimum requirements which are to be followed consistently across the department, but which provide reasonable flexibility for specific implementation mechanisms and time-lines;

operationally decentralized and modular -- the national EMS consists primarily of a coordinating framework for five Regional, one Headquarters and three Service environmental management systems which aggregate up into the national EMS;

focused on internal operations of the Department of Environment;

organized around a set of priority environmental risk areas (e.g. underground storage tanks, or ozone depleting substances) and green improvement opportunity areas (e.g. vehicle fleet, or building energy conservation) -- these 23 areas are referred to by their ISO 14004 terminology as "environmental aspects" ;

fully integrated with existing Departmental and Regional Management systems;

designed to recognize and incorporate existing greening initiatives in such areas as vehicle fleet, solid waste, and building energy;

aimed at ensuring compliance or preventing environmental risks, and at pursuing opportunities to green operations to achieve continuous improvement in environmental performance; and

structured and resourced to accommodate an initial design and development phase, and an implementation and maintenance phase.

Description and Status of Major EMS Components

Environment Canada has assigned Corporate Responsibility for developing its Environment Management System to the Assistant Deputy Minister of Corporate Services. The Environment Management Board (EMB) and Regional Management Boards (RMB's) are responsible for reviewing and approving components of the system. For example, they have approved the Department's Operational Environmental Policy and Guiding Principles on how the department will conduct its operations with regards to minimizing impact on the environment. Communication of this policy together with a clear statement of senior management commitment and expectations were important early steps in engaging all employees.

An Initial Environmental Review (IER) commenced in early 1995 . All Regional and Site components of the IER, including Initial Site Reviews of representative types of different facilities, are expected to be completed by March 1997 and documentation will be collated by headquarters staff. The information gathered has been fundamental to the design of the EMS, to the identification of both national and Regional priorities for action, as well as to the documentation of a number of sound practices already in place but not "systematically managed". Also, a review of relevant Federal Legislation and Government Policy with which Environment Canada must be in compliance was done as part of the Initial Environmental Review, and each region has responsibility for identifying provincial environmental legislation relevant to its region.

An annotated list of 23 national Environmental Aspects (priority risk and opportunity areas) has been finalized. These are: fume-hood, boiler and incinerator emissions, ozone depleting substances, waste-water discharge, solid waste management, hazardous waste generators, landfill, water and energy conservation, other hazardous substances, PCB's in use and in storage, above- ground and underground storage tanks, ground transportation, land use management, potentially contaminated sites, environmental irritants, spills, procurement, human resource management, and environmental assessment. This will help to provide focus and operational structure for the ongoing planning and implementation components of the EMS.

Aspect-specific working groups, following Environment Canada's EMS Framework and specific Guidance Documents, will complete the planning, implementation and measurement steps of sound environmental management (in short, a mini-EMS) by: developing environmental objectives and targets; and developing environmental performance indicators for the aspect; developing specific action plans or procedures to

reach those targets; and measuring and reporting on results to both operations staff and senior management using the indicators selected.

The EMS Framework Document outlines the specific responsibilities of key departmental positions, the EMB and RMBs, dedicated EMS Coordinators, and EMS teams and committees for various aspects of the EMS. These responsibilities are specified for both the initial design and development phase, and for ongoing operation and maintenance of the EMS. Aspect-specific procedures or action plans, or facility operation guidelines will detail specific environmental protection responsibilities associated with operations managers and specific employee positions.

Other key components of the EMS include CONTINUED selective use of environmental audits on large facilities, periodic department-wide environmental performance reporting, EMS operational documentation and records management, ongoing Legislative Tracking and Updating responsibilities, and procedures for Audit and Review of the EMS itself.

Greening Government Internationally

The Government of Canada began to cultivate a heightened international interest in greening government operations. At a meeting of G-7 Environment Ministers held in Hamilton in 1995, greening government was an agenda item. The OECD also created a working group related to greening government; Environment Canada has played a key role in many of the discussions and much of the work of this forum (e.g. creation of OECD green government Web site). An international workshop was held on greening government operations, co-hosted with Japan, at Globe 96 in Vancouver. Green procurement has also been the topic of various international workshops and will be the focus of an OECD conference in Geneva in the spring of 1997. Canada is clearly showing international leadership when it comes to greening government operations.

Environment Canada has been and CONTINUES to be an active participant in the development and utilization of ISO (International Organisation for Standardisation) environmental standards. These standards will help to raise the level of environmental performance for Canadian industry and will also help to minimize barriers to trade. We have also been instrumental in the design of a national certification scheme to ensure the effective use of these standards. Though these standards have not been aimed strictly at government, the Government of Canada is adopting them.

Planning for Action

As described above, many actions have already been undertaken over the years in Environment Canada. Examples of these and some targets already set follow:

Waste: The department has implemented an innovative waste reduction, which fosters behaviour change among employees. No Waste has achieved a 72% diversion rate (EC objective is 80% by the year 1997) from landfill of total waste generated at EC's office facilities in the NCR. The program has also been exported to regional offices as well as numerous OGD's. The program is also receiving increased recognition on the international scene with info kits forwarded to representatives from Japan, U.S.A, United Kingdom, France, Spain and other members of OECD countries.

Fleet: An action plan and policy for fleet management is already being applied. We are working jointly with Natural Resources Canada (NRCan) to convert many of our vehicles to alternative fuels. By March 1996, we will have converted more than 10% of these. Green Driver training has been developed and provided in all regions. The department has also disposed of many vehicles in the past several months, and will CONTINUE to do so. By the year 2004, we will have reduced the size of our fleet from 771 vehicles (in August 1995) to 540, and 75% of new vehicles will operate on alternative fuels, where economically and operationally feasible.

Energy: The first Energy Performance Contract (EPC) under the Federal Buildings Initiative (FBI) was awarded for a retrofit of the Canada Centre for Inland Waters (CCIW) in Burlington. This project, which also included the installation of an electrical co-generation unit, will provide anticipated energy savings of \$850,000 annually after a 7-year payback period.

As a tenant department in crown owned space, Environment Canada is resident in two Public Works and Government Services Canada (PWGSC) owned facilities which are currently undergoing implementation of the FBI program, the Downsview facility located at 4905 Dufferin Street and the Harry Hays Building in Calgary. Each of these projects should produce annual savings of over \$275,000. An FBI project has also been approved for Place Vincent Massey, the first such project in the federal government for a leased facility.

An opportunity analysis was carried out to determine the feasibility of conducting FBI projects to make all EC-owned facilities energy and water efficient. As a result of an Expression of Interest for a national bundle of all EC facilities which was recently issued, we will be going forward with a Request for Proposal (RFP) this winter. EC was also instrumental in bringing to fruition a PWGSC managed light replacement project for the 66,000 ballasts in Terrasses de la Chaudiere. This project is an example of a situation where a full FBI project is not cost-effective. This will save the Crown over \$200,000 per year.

Water: The FBI project at CCIW also included water efficiency measures, such as using water directly from Hamilton Harbour for landscaping, and using a reverse osmosis system to cut the amount of water required to produce distilled water for experiments by 80%. These measures also generated substantial cost savings. Other measures include using drought-resistant plants in a relatively new office in Kelowna, B.C. and water saving devices such as low-flush toilets and restrictors on shower-heads in many buildings. Similar measures are planned in all FBI projects.

Environment Canada has been a driving force in Canada for greater water use efficiency and related issues (i.e., realistic water pricing, water metering, demand management). Formed in December 1990, the Interdepartmental Advisory Group on Water Conservation at Federal Facilities (WCFF), chaired by Environment Canada, developed the Water Conservation Plan for Federal Government Facilities and the accompanying Manual for Conducting Water Audits and Developing Water Efficiency Programs at Federal Facilities. The WCFF was also instrumental in amending the plumbing fixtures section of the National Master Specifications to reflect water efficiency, and including water in the Federal Buildings Initiative program.

Procurement: A green procurement policy has been developed and issued. A departmental electronic green products directory has been implemented in the Prairie and Northern Region and an additional one is being developed and will soon be released within the National Capital Region (NCR). Green accommodation standards for the department have been produced. These standards, which have been accepted as part of our Master Occupancy Agreement with PWGSC, will also be used by them as standards across the public service. EC also chaired the Material Management National Workshop held in May 1996; Greening Government Operations was part of this event. We organized in the fall of 1996 a national green procurement workshop. This strategic event, with participation from federal, provincial and municipal jurisdictions, and suppliers will be followed by the creation of a federal-provincial green procurement panel to position greener government purchasing as a tool for achieving wider government objectives.

Compliance: Environmental audits have been conducted on all major facilities and remedial action taken in a number of cases of compliance-related issues. The department has an inventory of PCBs in use and in storage and participated in the first shipment of federally-stored PCBs for destruction. Almost all remaining PCB's in storage have been sent for destruction through this PWGSC offering. Ontario Region has developed a Management Strategy for Ozone Depleting Substances (ODS) in federal facilities. This strategy has been successfully piloted at the River Road Environmental Technology Centre and is being rolled out to other EC facilities in Environment Canada. EC has completed an inventory of its contaminated (and potentially contaminated) sites. It has also developed a framework for managing these sites over the coming years and commenced containment and remediation activities.

Labs and Institutes: The laboratory community in EC has always recognized the need to consider the environmental hazards and consequences associated with the things they do and the way they do them. There have been many efforts to green the day-to-day lab operations including the handling of lab wastes and the design and operation of lab facilities. In the case of operations, many policies with beneficial environmental impacts have been implemented. The quantities and types of chemicals used are being reduced and new technology (some of which have been patented and are now generating revenue for the department) is being used to reduce chemical and energy consumption. In waste management, a variety of means to prevent, reduce and dispose of waste is being used, including solvent recycling; on-site solvent re-purification and re-use; donating excess chemicals to other labs/institutions; among others. Maintaining and upgrading buildings has presented many opportunities for environmental stewardship. These include the use of direct groundwater heating and cooling; fume hood upgrades (significantly reducing energy and operating costs); direct digital controls on air handling systems; low-energy lighting; and, inspection, replacement and removal of underground storage tanks.

Conclusion

Environment Canada recognizes the importance of having its own house in order if we are to promote the Greening of Government Operations to others. We have and will CONTINUE to demonstrate this leadership, not by aiming to be the leader in any field but through concrete actions on many fronts. Individual leadership in other federal organizations, possible through the capacity-building of the past several years, can lead to a shared leadership across the federal family.

Background

The government adopted the Code of Environmental Stewardship in 1992 as a commitment to the concept of sustainable development and a pledge to integrate environmental considerations into day-to-day operations. The Greening Government Operations policy, April 1995, took the concept of environmental stewardship farther by outlining recommended best practices in various key priority areas and promoted the use of environmental management systems (EMS) as a method of ensuring that environmental objectives are properly considered and implemented.

Several months later, in June 1995, with the publication of the guidance document entitled A Guide to Green Government, federal departments were directed to take actions to 'green' their operations, policies and programs. Later in the summer of 1995, Environment Canada's Office of Federal Environmental Stewardship (OFES) published Directions on Greening Government Operations, which outlined a comprehensive approach to assist departments in planning how to achieve sustainable operations.

Environment Canada employees have implemented internal practices to reduce waste and conserve resources in their day-to-day operations on a selective and ad-hoc basis since the formation of the department.

The Code of Environmental Stewardship noted above, initiated a more formal approach to greening operations. Many regions and facilities established Green Teams to accelerate the introduction of green practices and to identify local opportunities for action. The Greening Operations Branch, formed in early 1994, has provided leadership, and coordination for greening activities, and fostered corporate, regional and facility level action.

Formalizing Environmental Management and Green Operations: Selecting an EMS Model

In 1994 the Department began to look at options for developing a comprehensive and systematic means of managing environmental obligations associated with internal operations. Based on that review, and on extensive Canadian involvement in developing standards for environmental management through the International Organization for Standardization (ISO), the Department has elected to follow the EMS model outlined in ISO 14004.

In June 1995 Environment Canada launched its EMS process. A National EMS Team was formed to design and begin implementing the department-wide environmental management system. The national team has included an EMS coordinator for each of the Department's five geographic Regions including headquarters, one EMS coordinator for each of the 3 program Services and technical support. Headquarters EMS staff have provided coordination and technical support.

Key Features of Environment Canada's Environmental Management System

As well as being based on the ISO 14004 model, a number of other important characteristics define Environment Canada's EMS. It is:

designed collaboratively by Headquarters, Regions and Services;

based on department-wide system guidelines and minimum requirements which are to be followed consistently across the department, but which provide reasonable flexibility for specific implementation mechanisms and time-lines;

operationally decentralized and modular -- the national EMS consists primarily of a coordinating framework for five Regional, one Headquarters and three Service environmental management systems which aggregate up into the national EMS;

focused on internal operations of the Department of Environment;

organized around a set of priority environmental risk areas (e.g. underground storage tanks, or ozone-depleting substances) and green improvement opportunity areas (e.g., vehicle fleet, or building energy conservation) -- these 23 areas are referred to by their ISO 14004 terminology as "environmental aspects";

fully integrated with existing Departmental and Regional Management systems;

designed to recognize and incorporate existing greening initiatives in such areas as vehicle fleet, solid waste, and building energy;

aimed at ensuring compliance or preventing environmental risks, and at pursuing opportunities to green operations to achieve continuous improvement in environmental performance; and

structured and resourced to accommodate an initial design and development phase, and an implementation and maintenance phase.

Description and Status of Major EMS Components

Environment Canada has assigned Corporate Responsibility for developing its Environment Management System to the Assistant Deputy Minister of Corporate Services. The Environment Management Board (EMB) and Regional Management Boards (RMBs) are responsible for reviewing and approving components of the system. For example, they have approved the Department's Operational Environmental Policy and Guiding Principles on how the department will conduct its operations with regards to minimizing impact on the environment. Communication of this policy, together with a clear statement of senior management commitment and expectations, were important early steps in engaging all employees.

An Initial Environmental Review (IER) commenced in early 1995. All Regional and Site components of the IER, including Initial Site Reviews of representative types of different facilities, are expected to be completed by March 1997 and documentation will be collated by headquarters staff. The information gathered has been fundamental to the design of the EMS, to the identification of both national and Regional priorities for action, as well as to the documentation of a number of sound practices already in place but not "systematically managed". Also, a review of relevant Federal Legislation and Government Policy with which Environment Canada must be in compliance was done as part of the Initial Environmental Review, and each Region has responsibility for identifying provincial environmental legislation relevant to its Region.

An annotated list of 23 National Environmental Aspects (priority risk and opportunity areas) has been finalized. This will help to provide focus and operational structure for the ongoing planning and implementation components of the EMS. Ozone-depleting substances, contaminated sites, hazardous materials, ground transportation and vehicle fleets are some of the key aspects that will receive priority consideration.

Aspect-specific working groups, following Environment Canada's EMS Framework and specific Guidance Documents, will complete the planning, implementation and measurement steps of sound environmental management (in short, a mini-EMS) by: developing environmental objectives and targets; and developing environmental

performance indicators for the aspect; developing specific action plans or procedures to reach those targets; and measuring and reporting on results to both operations staff and senior management using the indicators selected.

The EMS Framework Document outlines the specific responsibilities of key departmental positions, the EMB and RMBs, dedicated EMS Coordinators, and EMS teams and committees for various aspects of the EMS. These responsibilities are specified for both the initial design and development phase, and for ongoing operation and maintenance of the EMS. Aspect-specific procedures or action plans, or facility operation guidelines will detail specific environmental protection responsibilities associated with operations, managers, and specific employee positions.

Other key components of the EMS include CONTINUED selective use of full environmental audits on large facilities, annual department-wide environmental performance reporting, EMS operational documentation and records management, ongoing Legislative Tracking and Updating responsibilities, and procedures for Audit and Review of the EMS itself.

Greening Government Internationally

The Government of Canada began to cultivate a heightened international interest in greening government operations. At a meeting of G-7 Environment Ministers held in Hamilton in 1995, greening government was an agenda item. The OECD also created a working group related to greening government; Environment Canada has played a key role in many of the discussions and much of the work of this forum (e.g. creation of OECD green government Web site). An international workshop was held on greening government operations, co-hosted with Japan, at Globe 96 in Vancouver. Green procurement has also been the topic of various international workshops and will be the focus of an OECD conference in Geneva in the spring of 1997. Canada is clearly showing international leadership when it comes to greening government operations.

Planning for Action

As described above, many actions have already been undertaken over the years in Environment Canada. Examples of these and some targets already set follow:

Waste - The department has implemented an innovative waste reduction, which fosters behaviour change among employees. No Waste has achieved a 72% diversion rate (EC's objective is 80% by the year 1997) from landfill of total waste generated at EC's

office facilities in the NCR. The program has also been exported to regional offices as well as numerous OGDs. The program is also receiving increased recognition on the international scene with info kits forwarded to representatives from Japan, U.S.A, United Kingdom, France, Spain and other members of OECD countries.

Fleet - An action plan and policy for fleet management is already being applied. We are working jointly with Natural Resources Canada (NRCan) to convert many of our vehicles to alternative fuels. As of March 1996, we have converted more than 10% of these. Green Driver training has been developed and provided in all regions. The department has also disposed of many vehicles in the past several months, and will CONTINUE to do so. By the year 2004, we will have reduced the size of our fleet from 771 vehicles (in August 1995) to 540, and 75% of these will operate on alternative fuels.

Energy - The first Energy Performance Contract (EPC) under the Federal Buildings Initiative (FBI) was awarded for a retrofit of the Canada Centre for Inland Waters (CCIW) in Burlington. This project, which also included the installation of an electrical co-generation unit, will provide anticipated energy savings of \$850,000 annually after a 7-year payback period.

As a tenant department in Crown-owned space, Environment Canada is resident in two Public Works and Government Services Canada (PWGSC) owned facilities which are currently undergoing implementation of the FBI program, the Downsview facility located at 4905 Dufferin Street and the Harry Hays Building in Calgary. Each of these projects should produce annual savings of over \$275,000. An FBI project has also been approved for Place Vincent Massey (PVM), the first such project in the federal government for a leased facility.

An opportunity analysis was carried out to determine the feasibility of conducting FBI projects to make all EC-owned facilities energy and water efficient. As a result of an Expression of Interest for a national bundle of all EC facilities which was recently issued, we will be going forward with a Request for Proposal (RFP) this winter. EC was also instrumental in bringing to fruition a PWGSC-managed light replacement project for the 66,000 ballasts in Les Terrasses de la Chaudiere (TLC). This project is an example of a situation where a full FBI project is not cost-effective. This will save the Crown over \$200,000 per year.

Procurement - A green procurement policy has been developed and issued. An electronic green products directory has been implemented in the Prairie and Northern Region and an additional one is being developed and will soon be released within the

National Capital Region (NCR). Green accommodation standards for the department have been produced. These standards, which have been accepted as part of our Master Occupancy Agreement with PWGSC, will also be used by them as standards across the public service. EC also chaired the Materiel Management National Workshop held in May 1996; Greening Government Operations was part of this event. We organized in the fall of 1996 a national green procurement workshop. This strategic event, with participation from federal, provincial and municipal jurisdictions, and suppliers will be followed by the creation of a federal-provincial green procurement panel.

Compliance - Environmental audits have been conducted on all major facilities and remedial action taken in a number of cases of compliance-related issues. The department has an inventory of PCBs in use and in storage and participated in the first shipment of federally-stored PCBs to Swan Hills, Alberta for destruction. Almost all remaining PCBs in storage have been sent for destruction through this PWGSC offering. Ontario Region has developed a Management Strategy for Ozone-Depleting Substances (ODS) in federal facilities. This strategy has been successfully piloted at the River Road Environmental Technology Centre and is being rolled out to other EC facilities in Environment Canada. EC has completed an inventory of its contaminated (and potentially contaminated) sites. It has also developed a framework for managing these sites over the coming years and commenced containment and remediation activities.

Labs and Institutes - The laboratory community in EC has always recognized the need to consider the environmental hazards and consequences associated with the things they do and the way they do them. There have been many efforts to green the day-to-day lab operations including the handling of lab wastes and the design and operation of lab facilities. In the case of operations, many policies with beneficial environmental impacts have been implemented. The quantities and types of chemicals used are being reduced and new technology (some of which have been patented and are now generating revenue for the department) is being used to reduce chemical and energy consumption. In waste management, a variety of means to prevent, reduce and dispose of waste is being used, including solvent recycling; on-site solvent re purification and re-use; donating excess chemicals to other labs/institutions; among others. Maintaining and upgrading buildings has presented many opportunities for environmental stewardship. These include the use of direct groundwater heating and cooling; fume hood upgrades (significantly reducing energy and operating costs); direct digital controls on air handling systems; low-energy lighting; and, inspection, replacement and removal of underground storage tanks.

Conclusion

Environment Canada recognizes the importance of having its own house in order if we are to promote the Greening of Government Operations to others. We have and will CONTINUE to demonstrate this leadership, not by aiming to be the leader in any field but through concrete actions on many fronts. Individual leadership in other federal organizations, possibly through the capacity-building of the past several years, can lead to a shared leadership across the federal family.

Appendix E: Issue Scan Summary

An Issue Scan was undertaken as a step in the development of Environment Canada's Sustainable Development Strategy as specified in A Guide to Green Government. It is based on a review of existing domestic and international analysis and from departmental consultations. The goal of the scan was to identify the key issues affecting the department's ability to make further progress towards sustainable development.

The central premise of the scan is that the increasing scale and diversity of sources of environmental pressure (e.g., population growth, industrialization of developing world), and the increasing magnitude and complexity of environmental risks (e.g., environmental scarcity, climate change), will require a proactive role for government, for Environment Canada and for Canadians themselves in defending the public interest. The following summary presents an overview of the conclusions of the scan, according to five main questions.

Question 1: Will the quality of the Canadian environment increasingly be determined by actions beyond our borders?

For example:

long range transport of airborne pollutants such as mercury and PCBs;
 cross border air and water pollution such as SO₂, NO_X, and VOCs;
 loss of migratory species habitat in the Americas; and
 global issues such as climate change, ozone depletion and biodiversity loss.

These pressures will increase in the future as global population and as the level and distribution of manufacturing and other economic activities increases.

Environmental Assessment of policy is not an environmental impact assessment

Policy: **To approve** the continuation of visits to Canadian ports by U.S. and UK nuclear powered vessels (NPVS) and vessels capable of carrying nuclear weapons (NCVs)

2“Assurances of safety, liability and compensation given by the U.S. and UK EXTENT OF LIABILITY

6. POLICY RATIONALE AND OPTIONS

The decision of the Government of Canada to approve the continuation of visits by NPVs and NCVs is intended to safeguard the policy of permitting such visits. This policy is an essential component of Canada’s security policy. Its objectives are to contribute to the strategic deterrent and demonstrate a clear commitment to , and solidarity with our NATO allies.

7. b. A complete and detailed examination of the environmental implications of NPV.NCV visits is being undertaken in compliance with the Green Plan mechanism which directs that all federal agencies review existing policies for their environmental implications.

10 they provide further assurances that all safety measures taken in their home ports will be observed while in Canadian waters. conventional weapons are also stored in their normal safe mode.

[The Government indicated in its submission from The Department of Defence that there would be studies completed and “detailed environmental assessments)

15

Detailed inventories and descriptions of Valued Ecosystem Components (VECs) at each port are not yet available. They will be developed during the harbour and detailed environmental assessments.

ENVIRONMENTAL ASSESSMENT

16. Scoping of issues

the safety risk associated with potential nuclear accidents

17 Risk is defined as the product of the likelihood (Probability) of an event and its consequences. Two broad approaches are possible in assessing the probability of an accident. One involves the theoretical consideration of possible accidents. The other is based on examination of the historical record. In using both approaches, it is acknowledged that risk assessment of low probability events based solely on historical data does not necessarily constitute convincing evidence that such events cannot occur given more time.

[In violation of the precautionary principle]

NCV The risks associated with nuclear weapons involve three types of events:

unauthorized detonation of the nuclear weapon

accidental detonation of the nuclear weapon

and accidents involving the explosion of the conventional explosive or a fire which could result in the dispersion of the weapon's plutonium.

a0 Theoretical risks ...

Evidence

Safety record

There has never been an inadvertent U.S. nuclear detonation. It also indicates however, that as of January 1986 32 less serious accidents had occurred (31 before 1969) and the other in 1980. (accidents with weapons no longer used and in air flights)

(c) based on this knowledge and the assurances provided by the U.S. and U.K., there is a very high degree of confidence that the risks associated with visits of NCVs are not significant. Nevertheless. A further Canadian study is being undertaken to confirm this assessment.

2. NPVs The characteristics of naval nuclear power plants ...

There has never been an accident resulting in a) significant release of radioactive ...**Canadian monitoring of air, water and sediments around berthed NPVs, undertaken over the past twenty years**

(a) theoretical Risks

(b) Safety Record The record indicates that after more than 35 years a reactor needs to be replaced

1. IN order to address

(c) Based on this knowledge and the assurances provided by the U.S. and UK there is a high degree of confidence that the risks associated with visits of NPVs are not significant. Nevertheless , **further study is being undertake to determine event probabilities, calculate source terms, determine potential local air and water dispersion patterns, and determine**

the behaviour and availability of radionuclides, in order to provide a more detailed basis for this conclusion.

18 the Effects on Marine Animals of Exposure to low-level radiation

a. Normal operation of marine nuclear power plants produce low quantities of low-level radioactive waste. In the U.S. a small portion of these wastes can be released to the environment through authorized release, however, no such releases are permitted in Canadian Waters. Consequently, only accidental releases are of concern, The U.S. reports that the total amounts of radioactivity

Canadian monitoring of NPV visits ...over past twenty years, has consistentlyany increased radioactivity. From this, it is concluded that the possibility of accidental release of low-level radiation is probably very low and that the impact on marine animals is likely to be insignificant.

b. Nevertheless, further study is being undertaken to identify the probability of accidents leading to releases of environmentally significant quantities of low-level radioactivity. If required information on the potential pathways leading to effects on marine animals will be investigated to provide a more detailed basis for the assessment conclusion.

b. As was the case for effects on marine animals, further study is being undertaken to compute the probability of accidents leading to releases of environmentally significant quantities of low level radioactivity to provide a more detailed basis for the assessment conclusion.

20. The Economic Impact of the Local Procurement and Tourism/ Recreation Activities. Enjoyed by Crews of Visiting NPVs/NCVs. Visiting NPVs and NCVS will interact with the local communities in the same manner as any visiting ship. Depending on the size of the visiting vessel the positive impact on the local economies of ports can be significant. **Nevertheless, further study is being undertaken to quantify and assess this impact as well as the negative impact that would result from the absence of visits by all U.S. Navy Vessels**

21. The Social Impact of the Presence in the Community of Large Numbers of Allied Military Personnel.

Since the communities concerned have a long history of hosting such visits, and social and recreational facilities to accommodate them are well established, any impacts are likely to be insignificant. **Nevertheless, further study is being undertaken to quantify and assess the impacts (both positive and negative) of this activity.**

22. Water Quality and Waste Disposal Issues Associated with the routine Disposal of Ship Sewage, Grey Water, and Garbage. Depending on the size, visiting NPVs and NCVs can generate large amounts of all of the above waste streams. Since the impact associated with these activities is not different that associated with the presence of other ships, the incremental impact is not considered significant. **Nevertheless, further study is being undertaken to quantify and assess this impact, as well as to assess the cumulative effects.**

23. The effects of the Presence of NPVs/NCVs on Harbour Traffic and the Provision of Berthing Services. Though the effect on harbour traffic and the demand on services can be significant, harbour facilities have evolved to provide these services. Consequently, there is not likely to be significant adverse impacts from the continuation of the visits.

24. The Safety of Submerged Submarine Transits through Fishing Zones.

Doctrine of Legitimate Expectations

24. MITIGATION AND MONITORING

25 It is impossible to provide emergency response for all possible events, particularly those with very low probabilities. However there may be events for which contingency planning is warranted. For this reason, and because of the uncertain probability of some events, it is appropriate that emergency plans be in place and that they be integrated with those of civilian authority. The effective implementation of these plans has been enhanced with the recent approval to acquire approximately ...of equipment which will provide Nuclear **Emergency response teams (NERTs) with enhanced capability in this respect.**

26 Similarly, the uncertainty associated with health risks resulting from long term exposure to low-level radiation require ongoing monitoring of ambient air, water and sediment radiation levels. The requirement for radiation surveys by both Canadian forces and outside agencies remain.

27 On the basis of this assessment, it is concluded that there is sufficient confidence in the safety and high potential for insignificant adverse environmental impacts associated with visits of NCVs and NPVs to permit the visits to CONTINUE. The importance of the

visits to Canadian defence and foreign policy is such that the remaining uncertainties need not be investigated as a precondition to continuing the visits.

Environmental Impact Assessment Act Resolution

28 The Department proposes that the Government grant approval for the continuation of NPV and NCV visits, and that the following measures be implemented.

FOLLOWING MEASURES IMPLEMENTED

a. specific environmental and harbour assessments be CONTINUED to ensure all possible safety and mitigation measures are identified

b. Canadian Forces nuclear emergency response plans be reviewed and improved in accordance with the recommendations resulting from the specific environmental and harbour assessments and integrated with those of civilian authorities.

Affirming the need to ensure environmentally sound and sustainable development (Preamble, Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991

MINDFUL OF THE NEED AND IMPORTANCE TO DEVELOP ANTICIPATORY POLICIES AND OF PREVENTING ,,SIGNIFICANT ADVERSE ENVIRONMENTAL IMPACT IN GENERAL ...

(Preamble, Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991

COMMENDING THE ONGOING ACTIVITIES OF States TO ENSURE THAT , THROUGH THEIR NATIONAL LEGAL AND ADMINISTRATIVE PROVISIONS AND THEIR NATIONAL POLICIES, ENVIRONMENTAL IMPACT ASSESSMENT IS CARRIED OUT

(Preamble, Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991

CONSCIOUS of the need to give explicit consideration to environmental factors at an early stage in the decision-making process by applying environmental impact assessment, at al appropriate administrative levels, as a necessary tool to improve the

quality of information presented to decision makers so that environmental sound decisions can be made paying careful attention to minimizing significant adverse impact, particularly in a trans-boundary context,

DEFINITIONS

Affected Party means the Contracting Party or Parties to this Convention likely to be affected by the trans-boundary impact of a proposed activity;

(iv) “Concerned Parties” means the party of origin and the affected Party of an environmental impact assessment pursuant to this convention;

(v) Proposed activities means any activity or any major change to an activity subject to a decision of a competent authority in accordance with an applicable national procedure;

(vi) Environmental impact assessment means a national procedure for evaluating the likely impact of a proposed activity on the environment

(vii) “Impact” means any effect caused by a proposed activity on the environment including human health and safety, flora, fauna, soil, air, water, climate, landscape and historical monuments or other physical structures or the interaction among these factors it also includes effects on cultural heritage or socioeconomic conditions resulting from alterations to those factors.

TAKING ALL APPROPRIATE AND EFFECTIVE MEASURES TO PREVENT, REDUCE AND CONTROL SIGNIFICANT ADVERSE trans-boundary ENVIRONMENTAL IMPACT FROM PROPOSED ACTIVITIES (Art 2 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

TAKING THE NECESSARY LEGAL, ADMINISTRATIVE OR OTHER MEASURES TO IMPLEMENT THE PROVISIONS OF THIS CONVENTION

Each Party shall take the necessary legal, administrative or other measures to implement the provisions of this Convention including with respect to proposed activities listed in Appendix 1 that are likely to cause significant adverse trans-boundary impact, the establishment of an environmental impact assessment procedure that permits public participation and preparation of the environmental impact assessment documentation described in Appendix II

(Art 2 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

ENSURING THAT AN ENVIRONMENTAL IMPACT ASSESSMENT IS UNDERTAKEN PRIOR TO A DECISION TO AUTHORIZE

The Party of origin shall ensure that in accordance with the provisions of this Convention an environmental impact assessment is undertaken prior to a decision to authorize or undertake a proposed activity listed in Appendix I that is likely to cause a significant adverse trans-boundary impact. (Art. 2 3 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

Concerned parties shall, at the initiative of any such party, enter into discussions on whether one or more proposed activities not listed in appendix i is or are likely to cause a significant adverse trans-boundary impact and thus should be treated as if it or they were so listed. Where those parties so agree, the activities or activities shall be thus treated. general guidance for identifying criteria to determine significant adverse impact is set forth in appendix iii.

APPENDIX III

GENERAL CRITERIA TO ASSIST IN THE DETERMINATION OF THE ENVIRONMENTAL SIGNIFICANCE OF ACTIVITIES NOT LISTED IN APPENDIX 1

1. In considering proposed activities to which Article 2, paragraph 5 applies, the concerned Parties may consider whether the activity is likely to have a significant adverse trans-boundary impact in particular by virtue of one or more of the following criteria:

(a) Size: proposed activities which are large for the type of the activity

(b) Location: proposed activities which are located in or close to an area of special environmental sensitivity or importance (such as wetlands designated under the Ramsar Convention, national parks, nature reserves, sites of special scientific interest, or sites of archaeological, cultural or historical importance); also, proposed activities in locations where the characteristics of proposed development would be likely to have significant effect on the population;

(c) Effects: proposed activities with particularly complex and potentially adverse effects, including those giving rise to serious effects on humans or on valued species or organisms, those which threaten the existing or potential use of an affected area and those causing additional loading which cannot be sustained buy the carrying capacity of the environment.

2. The concerned Parties shall consider for this purpose proposed activities which are located close to an international frontier as well as more remote proposed activities which could give rise to significant trans-boundary effects far removed from the site of development. Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

The party of origin shall provide, in accordance with the provisions of this Convention, an opportunity to the public in the areas likely to be affected to participate in relevant environmental impact assessment procedures regarding proposed activities and shall ensure that the opportunity provided to the public of the affected party is equivalent to that provided to the public of the party of origin. (Article 2.6 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

)

Environmental impact assessments as required by this Convention shall, as a minimum requirement, be undertaken at the project level of the proposed activity. To the extent appropriate, the Parties shall endeavour to apply the principles of environmental impact assessment to policies, plans and programmes Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

3. The provisions of this Convention shall not affect the right of Parties to implement national laws, regulations, administrative provisions or accepted legal practices protecting information the supply of which would be prejudicial to industrial and commercial secrecy or national security. Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

The provisions of this Convention shall not affect the right of particular Parties to implement, by bilateral or multilateral agreement where appropriate, more stringent measures than those of this convention. (Art. 2.9. Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

NOTIFYING OF OTHER PARTY OF SIGNIFICANT ADVERSE...IMPACT NO LATER THAN WHEN INFORMING ITS OWN PUBLIC

1. For a proposed activity listed in Appendix I that is likely to cause a significant adverse trans-boundary impact, the Party of origin shall, for the purposes of ensuring adequate and effective consultations under Article 5, notify any Party which it considers may be an affected Party as early as possible and no later than when informing its own public about that proposed activity.

(Art. 3.1 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

2. This notification shall contain, inter alia:

(a) Information on the proposed activity, including any available information on its possible trans-boundary impact;

(b) The nature of the possible decision; and

(c) An indication of a reasonable time within which a response under paragraph 3 of this Article is required, taking into account the nature of the proposed activity; (Art. 3.1 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

and may include the information set out in paragraph 5 of this Article. (Art. 3.1 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

5. Upon receipt of a response from the affected Party indicating its desire to participate in the environmental impact assessment procedure, the Party of original shall, if it has not already done so, provide to the affected Party;

(a) Revolving information regarding the environmental impact assessment procedure, including an indication of the time schedule for transmittal of comments; and

(b) Relevant information on the proposed activity and its possible significant adverse trans-boundary impact (Art. 3.5 Convention on Environmental Impact Assessment in a trans-boundary Context. February, 1991)

7 When a Party considers that it would be affected by a significant adverse trans-boundary impact of a proposed activity listed in Appendix I, and when no notification has taken place in accordance with paragraph 1 of this Article, the concerned Parties shall, at the request of the affected Party, exchange sufficient information for the purposes of holding discussions on whether there is likely to be a significant adverse trans-boundary impact. If those Parties agree that there is likely to be a significant adverse trans-boundary impact, the provisions of this Convention shall apply accordingly. If those

Parties cannot agree whether there is likely to be a significant adverse trans-boundary impact, any such Party may submit that question to an inquiry commission in accordance with the provisions of Appendix IV to advise on the likelihood of significant adverse trans-boundary impact, unless they agree on another method of settling this question.

*. The concerned Parties shall ensure that the public of the affected Party in the areas likely to be affected be informed of, and be provided with possibilities for making comments or objections on, the proposed activity and for the transmittal of these comments or objections to the competent authority of the Party of origin, either directly to this authority or, where appropriate through the Party of origin.

The undersigned group is concerned about the following issues related to "B.C. Environmental Assessment Act":

Given that the stated purpose of the B.C. Environmental Assessment Act is to assess the "environmental, economic, social, cultural, heritage, health effects of the reviewable projects", and not solely to assess the potential adverse environmental effects of projects and activities, and

Given that the term environmental [impact] assessment is understood internationally as being an actual assessment of the short and long term adverse environmental effects of a project or activity, and that the present name of the Act will likely lead to misunderstanding about the nature of this Act, and

Given that a true environmental assessment is unlikely to occur under the conditions of the present Act,

BE IT RESOLVED THAT

1. the Act be renamed as the "Project and Activities Review Act",

2. the Government draft an Environmental Impact Assessment Review Act which contains the following provisions:

- **that** there is the requirement to carry out an environmental impact assessment of projects which are likely to have adverse effects on biodiversity (Article 14, Biodiversity Convention);

- **that** it is vital to anticipate, prevent and attack the causes of significant reduction of biodiversity at the sources (Biodiversity Convention);
- **that** the precautionary principle shall be invoked in situations “where there is a threat of significant reduction or loss of biodiversity”(Biodiversity Convention) or loss of carbon sinks (Framework Convention on Climate Change);
- **that** forestry licenses and practices be included in the Act;
- **that** all projects or activities producing or using toxic, or hazardous wastes undergo an environmental impact assessment regardless of "approval under another enactment";
- **that** all water diversion and export proposals be included in this act;
- **that** there be a provision to initiate an environmental impact assessment if there is significant public concern or if there is a possibility of adverse environmental effects;
- **that** the so-called Grandfather clause be eliminated, and the Environmental Assessment Review Act be retroactive to all projects and activities;
- **that** the act include provisions for a judicial review and an immediate and extensive public information campaign;
- **that** there shall be established a “project rejection category”; for example there shall be an automatic rejection of projects and activities such as (a) uranium mining and processing, (b) nuclear reactors; (c) the transfer, refinement and disposal of atomic wastes, (d) the bulk export of water;
- **that** a process whereby disinterested (non-stakeholder) individuals with no vested financial interests in the project or activity, and with varying areas of expertise and experience be constituted as the main assessment body.

GROUP

Contact: Joan Russow (ERA Ecological Rights Association) or David White (Sierra Club, Victoria Group); 502 Craigflower Rd, Victoria B.C. V9A V8S, CANADA. Tel. 604-360-2563; FAX. 604-385-0068

January 31, 1995.

Dear Environmental Assessment Caucus member,

Please find attached the "revised" special resolution which we were asked to submit at the end of the Vancouver Environmental Impact Assessment Caucus meeting. An unedited version of this resolution was circulated at the meeting of the Environmental Impact Assessment Caucus, BCEN at the January 21, 1995 meeting and was tabled with the understanding that it would be circulated to member groups for further consideration.

The concerns expressed in the resolution must be addressed if this province is to have meaningful environmental impact assessment legislation. Since our return, we have reviewed an international environmental assessment document, the Convention on Environmental Impact Assessment in a trans-boundary Context (UN., 1991), to determine if the B.C. Environmental Assessment Act reflects the international conception of an Environmental Impact Assessment. In this Convention, an environmental impact assessment is to be carried out whenever a project which may cause significant trans-boundary environmental impacts is proposed and the Convention includes among other projects to be assessed, highway expansion, and deforestation. Both of these activities have been excluded from the B.C. Act.

The Convention, like most environmental impact assessment legislation, examines the impact a proposed project will have on the environment. Although the impact of a proposed project and activity on the environment will be considered in the B.C. Act, there are provisions for trade-offs with considerations for the economic impacts of the project's or activity's not proceeding—a **fundamental difference**. For example, the Barberton Project which should be rejected because of the environmental impact on a unique sensitive ecosystem seems likely to pass an "assessment" because the government will consider primarily the economic costs of the project not going ahead.

In addition, there is no provision in the Act for an environmental impact assessment when there is evidence of significant public concern. This provision was a major part of the EARP Guidelines, and allowed for the assessment of several major projects. The Environmental "stakeholder" team assured us that under "Section 4" of the proposed Act, the Minister is given discretion to initiate a review if it "is in the public interest." However, this is not the same as "significant public concern". Also, in the document "Response to "Key Stakeholders' Report on Proposed Amendments to the EAA", it is stated that Sect. 4 will be "rarely exercised, and used as a last resort", and that "the goal is to use this power as seldom as possible."

We urge your group to express your concerns on this vital issue. Tell the government that the current Act is not acceptable as an Environmental Assessment Review Act. Please send us your comments to the Resolution, and we will distribute the results again to the Caucus.

David White,
Chair, Sierra Club Victoria

Joan Russow,
Chair, Ecological Rights Association

It should be noted that the concerns raised in this letter and resolution were essentially the same as those we raised at the time of public hearings on the proposed act and in submissions to the consultative process.

ASK NOT WHETHER BUT HOW: QUESTIONABLE ENVIRONMENTAL IMPACT ASSESSMENT OF SALMON AQUACULTURE

MEDIA RELEASE AUGUST 26

Dr. Sheila Wynn reported on the radio today that they were not asked to determine in the Salmon Aquaculture Review "whether but how". A genuine environmental impact assessment of a proposal, an activity or a project has to also determine whether the project under review should proceed.

An important distinction has to be made between a "genuine environmental impact assessment" and "a project review". A "genuine environmental impact assessment" is precautionary/harm preventive based on principles. A precautionary assessment attempts to prevent environmental degradation and to determine whether the project should be allowed to proceed; thus the outcome of a precautionary assessment could be a decision to prevent the project from proceeding. On the other hand a "project review" is harm-mitigative based on an arena of competing interests. A project review attempts to "balance" different competing interests and to mitigate environmental impacts; thus the outcome of a project review tends to be that the project will be permitted with mitigative measures to address potential environmental impacts.

Under the Convention on Biological Diversity, Canada and BC are required to carry out an environmental impact assessment of projects which are likely to have adverse effects on biodiversity (Article 14, Convention on Biological Diversity);

If the review has only examined how rather than whether Article 14 of the Convention on Biological Diversity has been contravened.

In addition Canada and BC have undertaken to invoke the precautionary principle. This principle affirms that in cases where there is sufficient scientific evidence that potential environmental degradation could occur, lack of scientific certainty shall not be used as a reason for postponing measures that would prevent the degradation.

It would appear that even though there is sufficient scientific evidence to justify not proceeding with additional salmon Aquaculture. Dr. Wynn has reversed the precautionary principle and concluded that there is always scientific uncertainty therefore we should proceed. with the project and balance the risks.

In not carrying out a genuine environmental impact assessment the BC Government has misled the public, contravened international law, and permitted further environmental degradation.

DRAFT:

RESPONSE TO THE FEARO JANUARY 20 DRAFT FOR STANDARDS FOR CIDA PROJECTS

General Comments:

Since I have not been part of the previous discussions related to the regulations, I am not aware of whether the points that I am raising have already been addressed. From the discussion paper , January 20 Draft, I sense that these issues have not yet been

addressed. In some cases I have typed up the original draft and suggested changes; in other cases I have suggested potentially applicable considerations. In general it is important to apply, in all cases, anticipatory and precautionary principles, international principles, prevention technology and public consultation with non-vested interest members of the public with a wide range of expertise and experience. It is suggested that the environmental assessment review should be carried out on existing projects, and through invoking the precautionary principle governments should not permit any projects or activities which could have potential significant adverse effects.

Bold: proposed additions

Submitted by Joan Russow

Member, IUCN Commission on Education and Communication

Chair, B.C.E.N. International Affairs Caucus

GENERAL PRINCIPLES UNDERLYING CONSIDERATIONS OF PROJECTS AND ACTIVITIES

- FULFILLMENT OF INTERNATIONAL OBLIGATIONS PRINCIPLE

Whereas Canada must be able to fulfill its international obligations in respect of the environment: (CEPA)

- RECOGNITION OF INHERENT WORTH OF NATURE PRINCIPLE

As agreed to in the World Charter of Nature,

(a) Every form of life is unique, warranting respect regardless of its worth to man [human] , and to accord other organisms such recognition's, man [must be guided by a moral code of action. (1982)

- APPLICATION OF NON-TRANSFERENCE OF HARMFUL SUBSTANCES OR ACTIVITIES PRINCIPLE

States should [Shall] *effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration)*

For years obsolete or harmful products or hazardous (including atomic) , or toxic wastes have been "dumped" in developing countries or within States on the land of indigenous populations. The granting of permission by the sovereign state shall not be a reason to justify the relaxing of standards related to the transference of harmful substances and activities.

- APPLICATION OF ANTICIPATORY AND PRECAUTIONARY PRINCIPLE

The precautionary principle was enunciated in its rudimentary form in the UN Convention on Humans and the Environment (UNCHE, 1972); reasserted in the World Charter of

Nature (1982) and reaffirmed in the UN Convention on Environment and Development (UNCED); it could be considered to have become international customary law and thus binding on the international community. It has been adopted in the Rio Declaration and Agenda 21, and in the legally binding documents such as the Convention on Biological Diversity and the Framework Convention on climate change.

A proposed definition from the B.C. documents drawn from the different versions of the precautionary principle in the UNCED documents is

Where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation (proposed wording for BC Pollution Prevention Act)

It is important to recognize that the precautionary principle is essential; unfortunately in the context of the EPA, CEPA and ARET lists the principle followed is usually "the innocent until proven guilty" or the converse of the precautionary principle: if there is not scientific certainty that harm will occur the activities will proceed. What is needed is also an anticipatory principle and a cautionary principle.

If the precautionary principle were truly applied the emphasis would be on the following:

- (1) the "exclusion" and banning of harmful substances which would be in violation of the precautionary principle, anticipatory principle and reverse onus principle, and of experimental newly introduced and potentially harmful substances, waste products and activities;
- (2) the reliance on arms-length research;
- (3) the transference of funding for research into long term ecologically safe and sound substances, technologies and activities;
- (4) the adoption of prevention technologies—doing it right the first time;
- (5) the calculation of the true environmental costs of the use of substances and the engaging in activities.
- (6) decisions about standards would not be made by an "interest-based" round table or consultative panel with industry involvement as has been done in the current process in drafting the outline, and has also been done in the development of the Arret program.
- (7) the standards developed would be mandatory not voluntary as they are in the ARET program

The emphasis must be on invoking the precautionary principle, on eliminating potentially harmful pollutants, and on funding research into ecologically safe and sound alternatives. The government must strive to ban and phase out the use of potentially harmful pollutants, and rather than spend time and money on testing of substances that could with time prove harmful, engage in funding research into ecologically safe and sound alternatives.

(8) the ecosystem shall be given primacy

CAUTIONARY OR REVERSE ONUS PRINCIPLE

Given that the Minister of the Environment, the Hon Shelia Copps has agreed that the reverse onus principle shall apply in Canada, this principle shall also apply to all CIDA supported projects. The principle could be enunciated as follows:

The proponent of an intervention in the ecosystem shall demonstrate the safety of the intervention rather than the opponent of the intervention, having to demonstrate harm.

RESPONSIBILITY OF THE CEAA

As indicated in Section 4 of CEAA, one of the purposes of the Act is to "encourage responsible authorities to take actions that promote conservation and equitable and ecologically sustainable use *sustainable Development* and thereby achieve or maintain a healthy environmental and an equitable distribution of resources. *a healthy economy.*" The interrelationship of conservation, equitable and ecological sound use *trade, economic growth and a healthy environment* is also a factor in the application of CEAA to projects and activities outside Canada. It is thus important that the POC regulation take into account the necessity of ensuring that the environment is given primacy and that projects and activities should facilitate above all humanitarian equitable and ecologically sound development and not exploitative development. Canadian industry shall not interfere with the development of local prevention technologies that do not generate wastes. *that such broad issues as the competitiveness of Canadian industry, transfer of and cooperation in science and technology, trade flows and the emergence of new international arrangements.*

Finally, it should be noted that attempts at cooperating in this area are being carried out bilaterally and in international fora such as the OECD, the World Bank, and the European Community. *With respect to the international context, special attention must be paid to existing and emerging guidelines and practices for environmental assessment of other*

countries and multilateral institutions. In short, while environmental issues are being integrated into public policy by most countries, a coherent international approach could be achieved by carrying out a synthesis of the principles that have already been agreed-to internationally (see Russow, J. Content analysis of international principles) has not yet been achieved.

It is extremely important to be aware of the international principles that have already become binding international obligations. Undoubtedly, the international standards may not be high or strict enough; it is however important to be aware of these standards and to use these standards as a minimum.

One of the reasons for establishing international principles, standards and technical regulations is to ensure either that States will not carry out activities in other States that would be unacceptable by the standards in the State where the activity originated; or where the standards are lower in the state of origin than the international. If either one of the above conditions exist, then the activities would be unacceptable to transfer to a recipient State.

International standards are especially important because the transference of ecologically unsound substances or activities to developing States will be justified on the grounds that even though the activities may not satisfy the standards of the country of origin “extraterritoriality” should not be imposed on other States. In other words, the recipient States have the sovereign right to accept what the state of origin would not accept. This approach reinforces the leaked memo of Summers from the World Bank. In this memo, Summers wrote “ between you and me, it makes good economic sense to transfer dirty industries to the least developed countries”

What might be deemed satisfactory may be ecologically sound within the Canadian context but may become part of the problem because the technology could be used to replace an existing or emerging technology in the recipient country.

[I have not had the opportunity of seeing the proposed criteria by which these projects and activities are to be judged]

Some suggested criteria:

1. No introduced project or activity should introduce technologies that would interfere with the development of prevention technologies that are endogenous to the recipient State. (This criteria was enunciated throughout the UNCED documents in the form of respect and implementation of traditional practices).

2. No introduced project or activity should introduce technologies that rectify an existing problem in a way that could promote the continuation of another ecologically unsound project or activity (For example, nuclear power introduced as a solution to “Climate Change”).

3. The onus of proof shall be on the proponent of the project to demonstrate that the project will not interfere with locally developed projects and activities or with internationally agreed to principles—Reverse Onus Principle.

4. Rather than wait until there is significant public concern that a project or activity could be harmful, it would be important to ensure that the project be put on the "exclusionary list" — the list of projects, substances and activities to be automatically excluded because these projects, substances and activities contribute to toxic, hazardous and atomic wastes.

5. The environmental assessment shall be preventive rather than mitigative: that is, there should be a determination about whether the project or activity should be embarked upon at all, rather than about how to mitigate a project or activity after it has been allowed to proceed. (For example, there has not been an

environmental assessment review carried out on forest practices to determine the impact of forest practices on the loss and reduction of biodiversity — a requirement of the Convention on Biological Diversity: yet the government of Canada, after the Earth Summit in Rio, provided \$143 million to assist “developing countries to manage their forests)

6. No project should solve one problem by creating another which could be equally or more serious. For example an extensive agroforestry project should not be used to justify the elimination of original growth

7. All projects and activities should follow the practice of co-transfer of technology (North/South and South/North) so that the notion that only the technology from the North is acceptable is discarded.

8. The presumption of "Northern wisdom" as the solution must be discouraged, and the emphasis should be on interchanging of knowledge and technology
9. All projects and activities that promote a new technology should be questioned, and examined by applying the reverse onus principle. In an environmental assessment review a full life cycle analysis should be carried out on environmental implications of introducing this new technology.
10. No technology should be introduced that alter cultural values within the recipient state
11. No project or activity shall be supported if it perpetuates the over-consumptive model of development. In Agenda 21, there was a call to move away from the current model of development. The government of Canada shall recognize that Canada CONTINUES to function within a consumptive model of development, and that significant changes must occur within Canada itself so that its contribution to other States will contribute to a global solution rather than a global problem.
12. No project or activity shall be supported that perpetuates the traditional definition of "development". The concept of development should be redefined to foster the ability to integrate with the environment with the least impact. A developed State would then be one in which the State succeeds in integrating with the environment with the least impact, and in integrating environment and equity. An underdeveloped state would be one that fails to integrate with the environment, and fails to integrate environment and equity.

Suggested criteria for redefining development in ecological and equitable terms:

- (i) The degree to which a state has been able to integrate with the ecosystem through ecological sound practices causing its human activity to have little deleterious impact on the environment

- (ii) The degree to which there is an equitable distribution of resources
- (iii) The extent to which a state respects indigenous peoples and practices
- iv) The degree of condemnation, and avoidance of over- consumption
- (v) The ability to minimize the human impact on the environment through fulfilling fundamental rights and thus reducing population
- vi) The degree of compliance with the enshrining of positive rights (right to ecologically sound work, to food, to potable water, and health care to shelter) as well as with negative rights
- (vii) The ability to live within the carrying capacity of the ecosystem and to refrain from contributing to global ecological harm
- (viii) The degree to which no or little funds are spent on the military and on arms production
- ix) The degree to which laws are enacted and enforced to protect environment, human rights, equity, justice and peace
- (x) The degree to which cooperation supersedes competition
- (xi) The degree to which support is given to alternative non-military preventive measures
- (xii) Degree to which citizens are listened to, and citizens make decisions within a framework of ecological principles
- (xiii)...

(from Russow, Redefinition of Development in equitable and ecological terms, presentation at Environmental Law Conference, University of Victoria, 1994)

12. Research and development funds shall be transferred from The Hazardous, Atomic Toxic (THAT) technologies to preventive technologies — technologies that do it right the first time

13. A significant proportion of the current Military budget shall be transferred to projects and activities that are equitable and ecologically sound U.S.

DISTINCTION BETWEEN EXEMPTION, EXCLUSION, AND POTENTIAL EXEMPTION AND INCLUSION .

If the anticipatory, and precautionary principles are to apply any project that could have a significant adverse effect should not even be considered.

If these principles are followed, a long list of projects and activities that should not even be considered could be developed; included in this list would be projects and activities for which there is already substantial evidence that harm could occur, and those for which there is the possibility of significant adverse effects.

"Exclusion" should apply to projects and activities that should be on a list of unacceptable projects and activities that should not even be acceptable; for example the assisting of developing States to "manage" their forests through ecologically unsound technology such as clear-cut logging.

If there is a possibility of significant adverse effects the project and activity should be excluded and not considered

"Exemption" should apply only to projects and activities that are deemed to be completely benign with minimum cultural impact, with prevention technology, supported by both the country of origin and the recipient country and not interfering with locally developed prevention technology;

The only projects and activities that would require an environmental assessment review would be those that have some impact but not any impact that could potentially have significant adverse effects.

"Inclusion" should be projects and activities that may have a little or no effect but that it is important to examine what the effect might be.

CRITERIA FOR EXEMPTION OF PROJECTS AND ACTIVITIES

If projects and activities that are likely to have a significant adverse effect are not excluded from consideration then:

No projects and activities shall be exempt because the substances or activities would usually be examined under another statute. For example in B.C. Forest practices are not included under the B.C. environmental Assessment Act because they are purported to be examined under the Forest Act or the forest Practice Code

To ensure that projects and activities are equitable and ecologically sound, no projects or activities that have been questioned in state of origin because of the their impact on

the environment should be permitted to be transferred to a recipient state. Although, in Canada many practices CONTINUE either without there having been an environmental assessment review or with there having been a less than adequate review. The acceptance of the projects and activities in Canada should not be sufficient to determine that these projects and activities are acceptable enough to be transferred to other States. In many cases ENGOs seriously question practices in Canada. No practices that could be banned or disCONTINUED through the invocation of the precautionary principle[should CONTINUE in Canada] shall be transferred outside of Canada. For example the precautionary principle of the Biodiversity Convention could be used to justify the banning of ecologically unsound practices such as clear-cut logging.

EXEMPTION BECAUSE OF NOTWITHSTANDING CLAUSE

Under no circumstances shall existing projects or activities, which could have significant adverse environmental effects, be exempted because of notwithstanding clauses such as section 5? of C113

No notwithstanding, clauses such as the clause in C 113 related to national security

EXEMPTION THROUGH PASSING OF ORDERS IN COUNCIL

in no case shall orders in council be issued to bypass the environmental assessment review of existing projects or activities which could have significant adverse environmental effects

EXCLUSION OF PROJECTS AND ACTIVITIES BASED ON PREVENTION PRINCIPLES

DEVELOPMENT OF EXCLUSIONARY LISTS

VI POLICY ISSUES

1. One Regulation or More?

The Canadian Environmental Assessment Act provides for a varying and exclusion regulation for two types of projects and activities outside Canada: projects and activities to be carried out outside Canada and any federal lands; and projects and activities to be carried out under international agreements or arrangements. Many, if not most, projects and activities outside Canada are those involving Official Development Assistance (ODA) funding provided by the Canadian International Development agency. Decisions about

projects and activities outside Canada are made in two different ways: by federal authorities acting alone, or in collaboration with international agencies and organizations.

Two types of international agreements are relevant for the purposes of a POC regulation:

- multilateral or bilateral agreements, involving projects and activities whose essential details are specified
- multilateral or bilateral agreements involving a financial contribution for a generally defined purpose involving projects and activities whose essential details are not specified but are to be identified later; or

A third type of international agreement involves general commitments relating to policies or programmes of the Government of Canada that do not involve projects and activities, as defined in CEAA. This type of agreement will not trigger the proposed Projects Outside Canada regulation [WHY?].

Although the Government's original intention was to develop a regulation for ODA projects and activities and then a second regulation for all other projects and activities occurring outside of Canada, given the similarity of issues involved and the desire to minimize confusion, a decision was taken to develop a single POC regulation.

This single POC regulation should also apply to Crown Corporations such as IDRC, EDC, CCC. Enough principles have been established in international documents to indicate international agreement about export support activities.

2. Interaction with other Regulations

[Exclusion or exemption ? : Are projects or activities excluded if they are deemed to be harmless or excluded from the list of projects or activities worthy of consideration because these projects or activities are already deemed to be harmful. I think the term "exempt" should be used for projects and activities that are clearly benign and the term "exclusion", for projects and activities that are clearly harmful (uranium mining, nuclear energy, use of hazardous or toxic materials)]

the regulation-making authority for a POC regulation set out in Paragraph 59 (i) subsections (ii) and (iii) of CEAA authorizes the Governor in Council to make regulations "varying or excluding , in the prescribed circumstances, any procedure of requirement of

the environmental assessment process set out in the Act or the regulations ..." Thus, the Governor in Council is empowered to vary or exclude in the prescribed circumstances Sections 14 to 45 of the Act in the POC regulation.

Once Canadian Environmental Assessment Act is proclaimed, four regulations will come into force. These are the Law List (LL), the inclusion List (IL), the Exclusion List (EL) and the Comprehensive Study List (CSL). *With the exception of the Law List, which deals exclusively* with domestic and international legislation, these regulations will apply to projects and activities outside Canada.

The entries on the Law List Regulation lists international principles from UNCED documents (Agenda 21, Rio Declaration, Convention on Biological Diversity, and the Framework Convention on Climate Change, Vienna Convention on Ozone, and Montreal, London, and Copenhagen protocols, Basel Convention, Law of the Seas, Universal Declaration of Human Rights, International Covenants of Civil and Political Rights, and the International Covenant on Social, economic and cultural Rights, START, UNCHE, World Charter of Nature; sections of statutes and regulations empowering federal departments, ministers or Cabinet to issue permits or licenses for projects and activities in Canada that could have environmental effects; such projects and activities require an environmental assessment under CEAA.

The Inclusion List Regulation includes physical activities not relating to physical works that are subject to an environmental assessment under CEAA [

The *exclusion* Exemption List Regulation consists of a list of undertakings in relation to physical works that have insignificant environmental effects and thus require no environmental assessment.

The Exclusion List Regulations consists of a list of substances and activities that would be in violation of the precautionary principle and should be excluded from consideration

The Comprehensive Study List Regulations contains a list of major categories of projects and activities likely to have significant adverse environmental effects. If triggered under CEAA, the projects and activities on the list are subject to a comprehensive study according to a process prescribed in CEAA

note: as the segment of the industry dealing with preventive and innovative environmental technology thrives on the establishment of high standards with correspondingly high technical regulations, projects that are likely to have significant adverse environmental effects should not be considered by the government of Canada. given that Canada agreed at UNCED to not transfer substances or activities that could be harmful to human health or to the environment. Canada should undertake to promote environmental technologies that do not interfere with the development of local prevention innovative technologies, Canada should contribute to the cleaning up of previously ecologically unsound practices providing the technology that is used is itself not part of the problem. in no case should an environmental technology that has been used for clean up be used to justify the continuation or the introduction of ecologically unsound or culturally inappropriate practices.

Another regulation currently under development which, once promulgated, will apply to projects and activities outside Canada relates to minimum federal involvement. Under the eventual minimum federal involvement regulation, certain projects and activities or classes of projects and activities will not be *excluded* exempted from environmental assessment where the responsible authority's involvement in the project is minimal.

Each of these regulations (i.e LL, II, EI and MFI) can be varied to reflect different situations of projects and activities outside Canada providing at all times internationally established principles will be followed as a minimum

- To ensure that exclusionary lists — lists of substances, projects or activities that shall be reduced or eliminated[in contrast from exemption lists are lists excluding certain projects and activities as being ecologically unsound and consequently not even considered as being necessary for an environmental assessment review] are :
 - not developed through consensus with vested interest involvement because vested interests will interfere with the establishment of strong recommendations
 - based on research that has been arms-length [note the results of the International Biotesting Laboratory's non-arms length scandal in the 1970's].
 - not voluntary standards but mandatory technical regulations.
 - compiled as a result of a full environmental analysis, multimedia, life cycle of all the environmental impacts (toxicity, persistence and bio-accumulation)

from the production, modification, processing, refining, and disposal had not been carried out to develop the list.

- to place projects and activities on a "need not apply list" if there is any evidence that a project or activity could potentially significant adverse effects then the project or activity shall not proceed (apply principle from World Charter of Nature)
- to not fund "sunset industries" — industries being phased out because of environmental impact. For example AECL received at least \$150 million for research related to the nuclear industry; Given the impossibility of dealing with atomic wastes, the Canadian government shall not permit the transfer of any activity that could produce atomic wastes. The government must finally be committed to funding research into ecologically safe and sound alternatives focusing on prevention technology.
- the government shall not support any projects and activities in recipient countries that perpetuate sunset industries or obsolete ecologically unsound.

EXTENT OF JURISDICTION OF STANDARDS

3. Given that Section 59 (j) of CEEA empowers Governor in council to make regulations outline environmental assessment procedures for Crown Corporations.

The Governor in Council shall make regulations consistent with the recommendations for CIDA for projects and activities that shall apply to all projects and activities of crown corporations; even those within the meaning of the Financial Administration Act such as IDRC, the export Development Corporation EDC and the Canadian Commercial Corporation (CCC0

Environmental assessment of export support activities shall be developed.

4. Given that subsection 7(2) applies to situations where a federal authority is providing funding for domestic or international projects and activities, an environmental assessment shall be required where a federal authority makes or authorizes financial assistance to a project, even where the essential details of the project are not specified before or at the time the financial assistance is provided.

Subsection 54 (2) elaborates on subsection 7: this subsection requires the federal authority responsible to ensure, to the extent practicable, that the funding agreement or arrangement will require the recipient state to assess those projects and activities which will benefit from the financial assistance once the essential details of the projects and activities have been specified.

EXTENSION OF APPLICATION OF ENVIRONMENTAL ASSESSMENT REVIEW

- projects and activities already existing shall also be subject to an environmental assessment review

GOVERNMENT AS AN INSTRUMENT OF CHANGE THROUGH ADVOCATING PREVENTION

- If the Canadian government is serious about being an instrument of environmental change; moving from a reactive to a proactive preventive stance, Canada will have to consider incorporating the following principles:

- to revisit the terms of reference for environmental assessment review

basing it on the anticipatory and precautionary principles founded on anticipation and prevention of harm, and on prevention not mitigative technologies

- to acknowledge the urgency of the current environmental situation and of the years of persistent accumulation and indeterminate interaction of pollutants. It is time to move to the anticipatory or "cautionary" principle (Reverse Onus— as recently recommended by the Federal Minister of Environment, Shelia Copps, October, 1994) where there is a shift in the onus of proof from the opponents of an intervention having to demonstrate harm to the proponents having to demonstrate safety
- to bring about change within industry by rewarding those industries that have devoted all of their time and money to the development of prevention technology [providing these prevention technologies are not used to interfere with the endogenous capacities of receiver countries]

ENVIRONMENTAL FACADE AS PUBLIC RELATIONS

- to ensure that industry does not use the government associated projects and activities to promote an environmental facade that will cover ecologically unsound practices engaged in elsewhere by the industry in other activities
- to ensure if industry is involved that the total activity of the industry is ecologically sound [so many industries have an environmental wing that allows them to be part of the decision making process, while continuing to engage in ecologically unsound projects and activities].

SOURCE OF RESEARCH

- to analyze projects and activities, the government must ensure that the source of the research is arms-length

PUBLIC INVOLVEMENT

3 Who is the "Public"

While a definition for the term "public" is not provided in CEAA, guidelines will have to be developed to determine who constitutes the "public" for purposes of projects and activities outside of Canada. In developing these guidelines, one will have to consider *consideration will have to be given to* a number of broad issue including: the sovereignty of foreign nations, the spirit and intent of CEAA, the widely differing institutional capabilities and socio-political context of recipient countries, international agreements and arrangement to which Canada is party, timeliness and cost. These suggest the need for a definition rigorous enough to reflect the principles that underline CEAA, yet sufficiently flexible to be relevant in a variety of circumstances providing that the flexibility permits the relaxing of the precautionary principle and the non-transference of harmful substances principle.

- To address the issue of "who is the 'public'", the government could bring together informed and concerned members of the public; drawing upon a wide range of expertise and experience as well as upon the local members of the community that are concerned about humanitarian development. In no way should the involvement of the public be based on the promotion of particular vested interests. A distinction could be made between vested interest for individual gain and public concern for the commons. The current round table process, which sets up an arena of competing interests through "multistakeholders", rarely brings together the people that have a larger vision of comprehensive solution for the commons.

- To ensure that the "public" is involved in establishing the terms of reference and throughout the project

ROLE OF STANDARDS AS INSTRUMENTS OF CHANGE

Given that the NAFTA indicated a distinction between 'standards' and 'technical regulations', standards are not mandatory but technical regulations are mandatory standards shall be translated into mandatory technical regulations]

Underlying principle: principles, standards and regulations must drive industry, not industry compromising principles, standards and regulations.

- principle that technical standards shall become increasingly high so as to encourage the development of environmental sound prevention technology.

- to ensure that the technical regulations are so high that no innovative prevention technology will be at a disadvantage [At Globe 94, several innovators working in prevention technology indicated that they were having difficulty promoting their products because the government regulations were not mandatory and were too low. A principle could emerge from this that no innovative prevention technology shall be discouraged because the government fails to have mandatory and high standards.]

- to ensure that those who are part of the solution do not become part of the problem, where mitigative technology is used to promote ecologically unsound technology

[Several engineering firms have come up with prevention technology — doing it right the first time; other engineering firms have come up with mitigative technology— attempting to rectify previous errors; this mitigative technology is often used to promote the continuation of the ecologically unsound technology for which the mitigative technology was devised to rectify.]

- to ensure that a full life cycle analysis of substances and activity [as required in Agenda 21] is carried out in a way that would examine the environmental consequences of introducing the activity or substance into the ecosystem; [this would be moving away from the approach in the ARRET program where only the substances and not the waste products were examined] No substances or activities that could impact on the environment shall be permitted.

- to ensure that no projects or activities that are in violation of international obligations are supported; it is not enough to just state that the projects and activities must comply with these principles; the principles need to be enunciated and the way these principles will be

fulfilled must be indicated [this would entail closely examining actual international principles and the translation of these principles into action, to determine what would constitute compliance with these principles, and to establish a list of exclusionary projects and activities based on the application of these principles]

SOVEREIGNTY AND EXTRATERRITORIALITY

- the avoidance of "Extraterritoriality"— the imposition of country of origin standards and technical regulations must not be used as a reason for supporting the transfer of activities

V. THE INTERNATIONAL CONTEXT

As noted previously, the Canadian Environmental Assessment Act provides for a varying and exclusion regulation from two types of projects and activities outside Canada: projects and activities to be carried out outside Canada and any federal lands and projects and activities to be carried out under international agreements or arrangements. When considering how to ensure that the spirit and intent of CEAA is reflected in the environmental assessment of these categories of projects and activities, both the international context and the realities of Canada's foreign policy objectives, commitments and responsibilities must be taken into account.

Respect for the sovereignty of States is a fundamental principle of international law. In developing and applying the new POC regulations, Canada must avoid any illegal extraterritorial application of its laws for precisely the same reasons that it has consistently resisted attempts of other States to exercise such extraterritorial jurisdiction in Canada. Thus, care must also be taken to avoid action which may be perceived as excessively intrusive. [Re: extraterritoriality: care must also be taken to avoid action which may be perceived as excessively intrusive]. This section must not preclude the compliance throughout the world with international principles enunciated in international obligations, as well as those with legally binding Conventions and treaties. Any state that has signed any of the legally binding Conventions such as the Biodiversity or Climate Change, is bound by Article 18 of the Vienna Convention Treaty which stipulates that if a state has signed a treaty there is an "obligation not to defeat the object and purpose of a treaty prior to the entry into force"

[Re: extraterritoriality: care must also be taken to avoid action which may be perceived as excessively intrusive] This section V in the draft document, must not

preclude the compliance throughout the world with international principles enunciated in international obligations, as well as those with legally binding Conventions and treaties. Any state that has signed any of the legally binding Conventions such as the Biodiversity or Climate Change, is bound by Article 18 of the Vienna Convention Treaty stipulates that if a state has signed a treaty there is an "obligation not to defeat the object and purpose of a treaty prior to the entry into force"

5. THE DEPARTMENT OF EXTERNAL AFFAIRS ACT

The Department of External Affairs Act assigns powers for the Conduct of Canada's external affairs. The Secretary of State for Foreign Affairs is responsible for:

- official communications with other countries and international agencies
- the conduct and management of international negotiations as they relate to Canada
- the coordination of Canada's international economic relations - fostering the expansion of Canada's international trade
- the control and supervision of CIDA - fostering the development of international law

The Minister of International Trade has a mandate to promote international trade by:

- assisting Canadian marketers
- improving Canadians' access to external markets
- promoting trade relations with other countries
- enhancing overall world trade conditions

VI CONSULTATION ON THE POC REGULATIONS

Consultation with the public on the POC regulations before it is finalized is essential. As with other regulations, the primary mechanism for consultation outside of the federal government on the first four regulations has been the Regulatory Advisory Committee (RAC). Members include representatives of industry associations, environmental groups, aboriginal organizations, and provincial governments. The RAC presented its first report on the four regulations in April 1993. From the perspective of governments and most

stakeholders, RAC has been a notable success so far. It should also be used for the POC regulation.

A subcommittee should be created under RAC and report to RAC on the POC regulation. It could include RAC members as well as other individuals who represent constituencies not on the RAC, who have the needed experience and knowledge. The sub-committee would report back to RAC which, in turn would submit its recommendations to the Environment Minister.

VII GUIDELINES FOR DRAFTING A PROJECTS OUTSIDE CANADA (POC) REGULATION

- For purposes of the POC regulation, the definitions included in Section 2 of CEAA will apply.

- A single regulation will be established that will vary or exclude in prescribed circumstances Sections 14 to 45 of CEAA for projects and activities outside of Canada.

- The POC process will apply to all projects and activities outside of Canada as triggered by CEAA.

- responsible authorities will develop and apply their own administrative procedures for conducting an environmental assessment as required by the POC regulations and CEAA

- A Users Guide explaining how the new POC process works will be prepared for general circulation within a six months of the POC regulations coming into force

- The inclusion, Exclusion and Comprehensive Study List Regulations that will come into force with the proclamation of the CEAA will apply to projects and activities outside of Canada.

- The responsible authority will decide at what point in the environmental assessment process the public will be involved.

- Responsible authorities will inform the public and make relevant information available as early as is practicable for projects and activities outside Canada which will require environmental assessment as required by Section 55 of the CEAA.

- for projects and activities outside of Canada, where the responsible authority is not the Minister for Foreign Affairs, the responsible authority will coincidentally provide the Minister of Environment, the Minister for Foreign Affairs and the Canadian Environmental Assessment Agency with the environmental assessment of projects and activities on the Comprehensive Study list or other projects and activities likely to have potentially significant environmental effects. Where the responsible authority is the Minister for Foreign Affairs, the Minister for Foreign Affairs will provide the Minister of Environment with the environmental assessment as described above. Where the results of comprehensive studies suggest that a project is not likely to cause significant environmental effects, the Minister of Environment will refer it back to the responsible authority for decision.

Where the results of a comprehensive study suggest that a project's environmental effects are 1) uncertain 2) significant even with mitigation or 3) where there are deemed to be significant public concern, the responsible authority may, in consultation with the Minister of Environment and Minister of Foreign Affairs, establish an Advisory Committee to review the project. The mandate and membership of such advisory Committees will be determined on a case-by case basis by the responsible authority, in consultation with the Minister of the Environment, and when applicable the Minister of Foreign Affairs.

In either case, the Minister of Environment's response to the comprehensive study will be public and the responsible authority will decide whether the significant adverse effects of the project that cannot be mitigated are justified in the circumstances.

A Federal responsible authority may use whatever information it deems appropriate in making its decision. Thus, they may use information generated by previous studies, by other countries or international agencies and other non-Canadian jurisdictions. In the end, the responsible authorities are responsible for their decisions to support or not support a project.

inclusion regulations

Most of my comments relate to what I perceive to be the need to have fundamental principles underlying the principles referred to as GUIDING PRINCIPLES RELATED TO the regulation for projects and activities outside Canada.

States have ...the responsibility to ensure that activities within their jurisdiction or control do not cause damage to the environment of other States or of areas beyond the limits of national jurisdiction (principle 1 Rio Declaration)

1. Projects that are conducted outside Canada which are supported financially by the Government of Canada will be subject to the Canadian Environmental Assessment Act. [this should be extended to cover projects and activities that are conducted outside of Canada and extended to companies that are registered in Canada. Too often projects and activities that are conducted by Canadian companies could be in violation of the principles enunciated by

what is needed is a charter based on ecological principles agreed to by the international community and what form the basis of all Canadian development. What is done by

Commitment to non-transference of harmful substances and activities

States should [Shall] *effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration)*

2. Environmental assessment shall *be taken into account as early as is practicable in the decision making process*; be undertaken in all CIDA projects and activities [too often a project is proposed and initiated and is too far along to ensure a preventive review; which will determine whether or not the project should proceed; the review then becomes a "mitigative" review which minimizes the impacts of the project once it has proceeded.

the assessment criteria may not include that

would be deemed ecologically inappropriate

4. Environmental assessment of projects and activities outside Canada will be conducted in accordance with generally-accepted principles of respect for the sovereignty of foreign States, international law and the international agreements and arrangement to which Canada is a part.

Unfortunately, in the name of respecting sovereignty, has been used to justify a number of government projects and activities for example for years DDT which was restricted in use in Canada was shipped to India; to be used for purposes that would not be permitted in Canada on the ground that they have the sovereign right to determine whether or not they wish to use the chemical we cannot impose our standards on them.

similarly with the

Commitment to non-transference of harmful substances and activities

States should [Shall] *effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration)*

The principle has been altered considerably in practice by the notwithstanding clause that unless 3. In the absence of equally strict or higher standards in the receiving State *or express agreement by the receiving State to the contrary, the relevant standards of the State of origin shall apply* the highest or the most strict of the following standards — international standards , state of origin standards or the receiving state standards — shall apply

the onus of proof for the ecological soundness of the project must fall on the proponent of the project.

So that not every project or activity will require an environmental assessment review process a set of exclusionary principles must be established based on prevention

No project that generates waste that are potentially toxic, hazardous (including atomic wastes) No project or activity that introduces a harmful substance should be introduced

No project that could detract from innovative endogenous technologies should be no matter how safe or ecologically sound the introduced technology might be.

1. Nothing that is proposed that should impact on the Conservation and protection of biodiversity
2. No project should contribute to Climate Change

DRAFT IDEAS RE: PROJECT INDO-CANADIAN INITIATIVES IN SUSTAINABLE DEVELOPMENT

ISSUE 1. One of the shortcomings of UNCED was that there was the perpetuation of the myth that technology transfer should come from North to South. At that time, few people sufficiently entertained the notion that the North could learn from the South and that what was necessary was the interchange or intertransfer of ecologically sound technology.

POSSIBLE RESEARCH AREAS IN INITIATIVES

PROJECT 1 A.

"PREVENTION" TECHNOLOGY AS A MEANS OF ACHIEVING EQUITABLE AND ECOLOGICALLY SOUND DEVELOPMENT. "PREVENTION TECHNOLOGY" COULD BE DESCRIBED AS PRECAUTIONARY RATHER THAN MITIGATIVE, OR AS "DOING IT RIGHT THE FIRST TIME".

- Preservation/nature involvement/ ecologically sound practices

_ Innovative initiatives Case studies:

- E.g. Innovative initiatives in a region in India that could be relevant to Canada

Such as those suggested in publications like "Down to Earth" from the Institute in New Delhi or in Chipko region

- Eg. Innovative initiatives in Vancouver Island, such as those related to forest practices by Merve Wilkinson who has been using Selection logging for 50 years

_ Sewage Treatment resource or waste)

- Eg. Innovative initiatives in a region in India and on Vancouver Island where they are working on alternative technologies so that what was formerly consider as waste is now used as a resource

Relevant International principles such as the following:

Precautionary principle

" Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation." (Rio Declaration, 1992).

Positive-long-term-research-into-biodiversity- in ecosystems principle

"Long-term research into the importance of biodiversity for the functioning of ecosystems and the role of ecosystems in producing good, environmental services and other values supporting sustainable development with particular reference to the biology and reproductive capacities of key terrestrial and aquatic species, including native, cultivated and cultured species; observation and inventory techniques; ecological conditions necessary for biodiversity conservation and CONTINUED evolution; and social behaviour and nutrition habits dependent on natural ecosystems, where women play key roles. The work should be undertaken with the widest possible participation, especially of indigenous people and their communities, including women. (Agenda 21, 15.5 f,)

Ecologically-unsound-practices-accumulation-impact principle

" Despite mounting efforts over the past 20 years, the loss of the world' biological diversity, mainly from habitat destruction, over-harvesting, pollution and the inappropriate introduction of foreign plants and animals has CONTINUED. (Agenda 21, 15.3)

CHARTER OF ECOLOGICAL PRINCIPLES

This Charter draws from international obligations that have already been agreed to internationally. The Charter draws from both obligations undertaken by States through UN resolutions such as the "World Charter of Nature", globally agreed to documents such as the United Nations Conference on Humans and the Environment (Stockholm, 1972), The Rio Declaration (UNCED, 1992) and Agenda 21 (UNCED, 1992) and the legally binding documents such as the Vienna Convention on Ozone (1986), the Montreal Protocol (1987), The Basel Convention (); Convention on Biological Diversity (UNCED, 1992, in Force, 1993) and the Convention on Climate Change (UNCED, 1992, in force 1993), and the Law of the Sea (in force 1994).

NOTE: Article 18 of the Vienna Convention Treaty stipulates that if a state has signed a treaty there is an "obligation not to defeat the object and purpose of a treaty prior to the entry into force"

The following principles have been agreed to internationally:

International obligations must be fulfilled as being not the maximum but the minimum standards to follow

Transference of agreed to principles to state practices:

The principles set forth in the present Charter shall be reflected in the law and practice of each State, as well as at the international level (World Charter of Nature)

Inherent worth of nature

ensuring that every form of life is unique, warranting respect regardless of its worth to man

[human] and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (World Charter of nature)

respect for essential processes

Nature shall be respected and its essential processes shall not be impaired.

Urgency of conserving nature

Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources and nature (World Charter of nature).

Moral code of action

ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans] , and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (World Charter of nature)

Enunciation of the primacy of the ecosystem

Ensuring that in all decisions made about the environment that the ecosystem be given primacy

Invocation of the Precautionary Principle

where there is a threat of serious or irreversible damage, , lack of full scientific certainty should shall not be used as a reason for postponing measures to avoid or minimize such a threat (from the Biodiversity Convention)

Enunciation of the principle of doubt

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should shall not proceed (World Charter of Nature)

Enunciation of the "Cautionary" Principle

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

Adoption of "prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error.

Non-introduction of hazardous products in the environment

the onus of proving the non-hazardous nature of the product will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm by non-vested interest parties]

Environmental Assessment review

Introduce appropriate procedures requiring environmental impact assessment of its proposed projects and activities that are likely to have significant adverse effects on Biological diversity with a view to avoiding or minimizing such effects, and where appropriate, allow for public participation in such procedures (Article 14, 1A, Convention on Biological Diversity)

Assertion of the avoidance of activities

Activities which are likely to cause irreversible damage to nature shall be avoided (World Charter of Nature).

Recognition of inter-connectedness with nature

Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients

Reaffirmation of inter-generational equity

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance their ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations

(World Charter of Nature)

Commitment to non-transference of harmful substances and activities

States should [Shall] *effectively cooperate to discourage or prevent* the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration)

(b) identifying, preserving and preventing the loss or reduction of Biological Diversity

[wording in part from the Convention on Biological Diversity]

(b 1) mitigating climate change by addressing anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change [wording from the Climate Change Convention]

(c) Achieving the goal of zero pollution in the Province

(d) IS MISSING

(e) applying the principles of pollution prevention as the foundation of environmental protection

[from definition of "pollution prevention"]

(a 0)_ the prevention of the use, generation and release of any substance into the environment in such a manner or quantity as to cause pollution [repeated from 41 1)

(a) the elimination of the use of polluting substances

(b 0) the substitution of polluting substance with non-polluting substances

- (b) the substitution of polluting substances with less polluting substances
 - (c) the reduction in the introduction and use of **[non-renewable]** resources and polluting substances
 - (d) the elimination and reduction in the generation of polluting substances
- [e, f, g removed because not deemed appropriate for prevention;
Discussion Environmental Group, February 19]

(f0) Confirming the responsibility of government to set up a non-vested interest board or panel with varying levels of expertise and experience to do "arms-length" research into the true environmental impacts of substances and activities by carrying out "life cycle analysis" (recommendations from various chapters of UNCED Agenda 21) (Suggested Environment meeting, February 19)

(f) Confirming the responsibility of producers for sound environmental stewardship of products through all phases of a product's life;

(g) ensuring the comprehensive and integrated consideration of environmental and socioeconomic effects in public policy-making in British Columbia [Deemed to be inconsistent with the overriding purpose of the Act]. Ensuring that in all decisions made about the environment that the ecosystem be given primacy (Suggested Environment meeting, February 19).

(h0) International obligations must be fulfilled as being not the maximum but the minimum standards to follow (proposed, Discussion, February 19).

(h) Recognizing that British Columbia residents have an interest in **and a responsibility of minimizing their impact upon** the regional, national and **global environment** and global environmental well-being **(Suggested Environment meeting, February 19).**

(i) using the knowledge and experience of British Columbia residents in the formulation of decisions affecting the environment,

(j) confirming the responsibility of polluters to pay for the costs of their actions **(also recommended in Agenda 21) but also recognizing that no pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, and reaffirming that the prevention of pollution and environmental destruction should be by using "prevention technologies"**

(k) ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

(l) ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested, February 19)

(m) promoting the research into the development and introduction of renewable, non-polluting (protection technologies)

(n) ensuring that compensation can never be used as reason for not exercising the duty under the act to protect, conserve and sustain the environment (proposed, Discussion, February 19)

(o) agreeing that any compensation given shall be assessed on the basis of past environmental performance and environmental costs and subsidies, and that any awarded money shall be (used by the compensated party to create employment within B.C.) placed in a job creation fund (Suggested, Discussion, February 20)

(p) ensuring the maintenance and enhancement of the quality of the environment (moved from section 2.a, February 20)

2. To achieve the purposes of this Act, all persons who exercise functions and powers under this Act shall have regard to the importance **of the purposes of this act** (proposed, February 20).

(a) the maintenance and enhancement of the quality of the environment

(b) the actual or potential effect of an activity or natural process on the whole of the environment, including its actual or potential effect on the health and safety, and the economic, cultural an social well-being of people and communities

(c) the potential costs and benefits of any objective, policy, or proposal to the environment

Scope

(1) For the purposes of this Act, introduction of a substance into the environment means depositing the substance on or in or allowing or causing the substance to flow or seep on or into any land or water or allowing or causing the substance to be emitted into the air and includes indirect means of introduction into the environment

(1*) For the purpose of this Act, the impact of an activity on the environment means the engaging in any activity which could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

2. Except where this Act or the regulations specifically provides to the contrary, this Act applies to the whole environment of British Columbia **(The onus of proof for exclusion from the Act must reside in the proponent for exclusion (proposed, February 20)**

3. Where there is conflict between this Act, its regulations or an authorization under this Act and any other act or regulations there under, this Act its regulations and authorizations issued or subsisting under this Act apply, **except when provisions in other Acts or regulations contribute to the fulfillment of the purposes of the Environmental Protection Act better than those contained in this Act**

(a) where this Act or its regulations provide to the contrary, or

(b) as may be prescribed by the Lieutenant Governor in Council

4. Nothing in the Soil Conservation Act shall be taken to prevent the establishment within a local authority of any facility for the disposal of waste in accordance with this Act **providing that the establishment is deemed to fulfill the purposes of the Environment Protection Act. (Proposed, February 20)**

5. The Crown is bound by this Act, except where this Act or the regulations specifically provide to the contrary

[Not yet commented on rest of section]

Part 2

Environmental Bill of Rights

Public Trust

30. (1) Every resident of British Columbia has a right to protect the environment and the public trust from any pollution, impairment or destruction

(2) The government, as trustee, has a duty to conserve and protect the environment of British Columbia

3. Citizens of British Columbia has the right to have the environment conserved and protected (Suggested Environment meeting, February 19)

4. Citizens of British Columbia have to right to expect that no person shall **use generate or release** , waste or recyclable maters, or any other substance **(including fugitive gas or leachate)** into the environment in such a manner or quantity as to cause pollution

[moved from 41 (1) (Suggested Environment meeting, February 19)

5. Citizens of British Columbia have the right to expect that the government will live up to its obligations (Doctrine of Legitimate Expectation)

6. Present and future generations of British Columbia have the right to an ecological heritage (Suggested Environment meeting, February 19)

7. ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested Environment meeting, February 19)

Right of action

31. (1) The Attorney General or any resident of British Columbia may commence an action in the Supreme Court against any person who has polluted or otherwise degraded the environment and the public trust or who is likely to do so.

2. A person may commence an action under subsection (1) without having to establish that there is, has been or is likely to be an infringement of an authorization issued under this Act or an approval, permit, licence, standard, regulation, rule or order issued by or under an Act listed in Schedule A.

3. A person who commences an action under subsection (1) shall provide notice of the proceedings to the Attorney General and the Minister.

4. This section does not abrogate those common law rights that would normally be available to a plaintiff to commence an action.

5. the need for intervener funding

Standing

32 A person may commence an action under section 31 without having to show that he or she has

(1) any greater or different right, harm or interest than any other person; or

(2) any pecuniary or proprietary right or interest in the subject matter at issue.

Burden of proof.

33.

(1 a) Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

If the proposal involves anything that could be hazardous, 0 emissions and waste must apply; if the proposal involves ..lowest achievable discharge rate should apply (February 19, discussion)

(1 b) the plaintiff shall establish a prima facie case showing that **the defendant's proposed activities is likely to pollute or degrade the environment**

(1) the plaintiff shall establish a prima facie case showing that the defendants activities has polluted or degraded the environment or is likely to do so

(1 c. In a prosecution for a contravention the burden of proving compliance is on the defendant [Section 46, ss 4]

2. Where a prima facie case under subsection (1) is established, the defendant may rebut the prima facie case by showing that there is no feasible and prudent alternative to the defendant's action

[If so there must be some criteria for determining feasible and prudent alternatives in the light of the purpose of the Act; "providing prevention, conservation and sustainability of the environment" determined by an advisory, non-vested interest board or panel with representation from varied areas of expertise and experience]

3. It is a defence to an action commenced under this Act that the defendant's action is authorized under this act or an Act listed in Schedule A, unless the plaintiff can establish, on balance of probabilities, that the standard is inadequate to protect the environment and that the defendant's action has caused, or is likely to cause, severe or irreparable contamination or degradation of the environment.

The burden of proof must be on the defendant to demonstrate that the defendant's action has not caused or is not likely to cause, severe or irreparable contamination or degradation of the environment (Discussion, February 19)

Limitation Period

34. The limitation period for an action under section 31 of this Act is postponed and time does not commence to run until the plaintiff becomes aware, or ought reasonably to have become aware, of the identity of the defendant and of the material facts surrounding the claim

Appointment of minister's environmental mediator

37 (1) Subject to section 140, the Minister may, *Where he or she deems it advisable* **where it is deemed advisable** and where the conflicting parties concur, appoint an environmental mediator acceptable to the parties to mediate between persons involved in an environmental conflict.

(2) when a mediator is appointed under subsection (1), the mediator shall, within 6 weeks after completion of the mediation, report to the results of the mediation to the Minister and the parties

38 (c) award damages to (iv) any person who has a concern for the environment

39 ...licence, standard, regulation, rule or order issued under an Act listed in Schedule A affects **the environment** and rights of a person, **any** person shall be furnished with a written statement of the decision setting out....**(c) any dissenting opinions (Discussion, February 19)**

[Further comment to come on subsequent sections]

Since the first United Nations Conference on the Environment in Stockholm in 1972, we have come to realize that the traditional patterns of development have contributed to poverty - denying more than a quarter of the worlds population adequate living conditions — to the inequitable distribution of resources to over-consumption, to the violation of human rights, and to the potentially irreversible degradation of the ecosystem.

WE DECLARE THE FOLLOWING PRINCIPLES TO GUIDE HUMANITY TO AN EQUITABLE AND ECOLOGICALLY SOUND FUTURE:

1. The ecosystem of which we are a part shall be protected and preserved, ecologically unsound patterns of development shall be condemned and the inequity of development must be addressed and rectified

2. Development activities that benefit the few while compromising the biological inheritance and quality of life of the many must be condemned as being inherently wrong

4. International ecological standards should be in place so that no short term individual pursuit of self interest, or short sighted national or international regulations (GATT) could jeopardize the environment. The purpose of these standards are to address the individual and multinational pursuit of self interest and consumptive and exploitative use of the environment and not to penalize local communities that wish to function in an interdependent way within the ecosystem. The economic development necessary to eliminate poverty shall not be a mandate to abuse the environment for either short-term gain or economic growth alone. Principle must drive industry not industry driving principle.

5. Environmental processes do no recognize national boundaries, therefore States shall not have the sovereign right to exploit resources within their territories in isolation from the global ecological needs of the Earth

6. The CONTINUED build-up of the military complex must cease, and the use of military force as a means of resolving conflict must be rejected. A radical

reduction of the military budgets of the world must occur and the funds released for ecological and humanitarian purposes. Peace is not merely the absence of war but the pursuit of environmental, social justice, economic, spiritual and cultural well-being.

7. 8. the decision making process should be clearly defined, transparent, accessible and equitable. Criteria in decision making should be revealed, and the public and affected communities should be involved at the time of the formulation of the terms of reference and through the process.

9. The international community must condemn and disallow the exporting of products deemed to be unsafe in a state where there are advance testing procedures to other States with less advanced testing procedures. Since the first United Nations Conference on the Environment in Stockholm in 1972, we have come to realize that the threats to the biosphere which sustains all life on this planet have increased in rate, magnitude and scale that inaction is negligent. The international community has enough information about the pending state of ecological irreversibility that it must act immediately (proposal for NGO Earth Charter, Rio, June, 1992)

The precautionary principle shall be extended to require those who wish to intervene in the ecological commons to have to justify their intervention and demonstrate the safety of their intervention. The full environmental costs shall be considered in any proposed development project. (NGO Earth Charter, Rio, June, 1992)

ISSUE 2 :

PROJECT 1 B..

DEVELOPMENT OF CRITERIA FOR IMPLEMENTING INTERNATIONAL LEGISLATION TO ENSURE THAT "SUBSTANCES AND ACTIVITIES" HARMFUL TO HUMAN HEALTH OR TO THE ENVIRONMENT WILL NOT BE TRANSFERRED FROM THE NORTH TO THE SOUTH OR FROM AN INDUSTRIAL AREA TO AN INDIGENOUS AREA OF A COUNTRY.

- Transfer of potentially harmful substances or activities from North to South
- Eg. examination of such transfers from Canada to India
- E.g. examination of such transfers from India to other countries

Case studies

- Eg. Transfer from Vancouver Island - British Columbian logging practices - impact on Chipko et.
- Eg. Transfer from India to other less developed countries ???

_ Transfer of potentially harmful substances or activities from industrial area to disadvantaged or indigenous area on Vancouver Island

Case studies:

- E.g. transfer within India....
- Eg. Pulp mill in Gold river adjacent and on Indian Reserve

_ Sewage Treatment (resource or waste)

- Eg. Innovative initiatives in a region in India and on Vancouver Island where they are working on alternative technologies so that what was formerly considered as waste is now used as a resource

Relevant International principles such as the following

Not-transferring-environmentally-harmful-activities or substances principle

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration)

Positive-duty-to protect principle

Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;

recommendations (Agenda 21, 16.3 ii)

Positive-duty-or-responsibility principle

the responsibility to conserve their biodiversity and use their biological resources sustainably, and to ensure that activities within their jurisdiction or control do not cause

damage to the biological diversity of other States or of areas beyond the limits of national jurisdiction. " (Agenda 21, 15.3)

ISSUE: 3 Often practices which are considered to be in violation of human rights are condoned because they are justified through religious or cultural traditions. Can or should the exploitation of women and the assigning of a lesser role to women be justified by cultural norms?

PROJECT 1. C. DEVELOPMENT OF A CONCEPTUAL FRAMEWORK FOR EXAMINING THIS ISSUE ON VANCOUVER ISLAND AND IN THE CHIPKO REGION

Relevant International principles such as the following

UN Declaration of Human Rights and discussions and contributions from the South during the Human Rights discussion in Vienna in June 1993.

Legend

Underlined: what has already been agreed to internationally

Bold: what still needs to be done

PUBLIC INVOLVEMENT

3 Who is the "Public"

While a definition for the term "public" is not provided in CEAA, guidelines will have to be developed to determine who constitutes the "public" for purposes of projects and activities outside of Canada. In developing these guidelines, consideration will have to be given to a number of broad issues including: the sovereignty of foreign nations, the spirit and intent of CEAA, the widely differing institutional capabilities and socio-political context of recipient countries, international agreements and arrangements to which Canada is party, timeliness and cost. These suggest the need for a definition rigorous enough to

reflect the principles that underline CEAA, yet sufficiently flexible to be relevant in a variety of circumstances.

- to address the issue of "who is the 'public'" the government could bring together informed and concerned members of the public, drawing upon a wide range of expertise and experience, as well as upon the local members of the community that are concerned about humanitarian development. In no way should the involvement of the public be based on the promotion of particular vested interests. A distinction could be made between vested interest for individual gain and public concern for the commons. The current round table process which sets up an arena of competing interests through "multistakeholders" rarely brings together the people that have a larger vision of comprehensive solution for the commons.
- To ensure that the "public" is involved in establishing the terms of reference and throughout the project

[all contained in UNCED documents].

in 1983 the science council of Canada made an important distinction between a "reasoned outcome" and a "negotiated outcome". the establishment of standards should not be part of a negotiated outcome.

- There must be a continuous vigil on substance; perhaps given that we do not understand the long term synergistic effects or the long term effect of combinations. Introduction of no new chemicals should become a policy. An assumption is often made that the effects are additive or independent rather than exponential or....

- The problem of limitation of knowledge must be recognized. often scientists are not capable of anticipating impacts because they don't even know what they are looking for and consequently are not able to find it. For example, CFCs were initially considered to be non-toxic, not bio-accumulative, and were hailed as the solution. No one would have anticipated the problem with the ozone.

B.C. ENVIRONMENTAL PROTECTION ACT

DECLARATION

It is hereby declared that the preservation and the protection of the environment is essential to the well-being of Canada and British Columbia (CEPA)

PREAMBLE

• Whereas the presence of *Toxic substances* contaminants in the environment is a matter of national and provincial concern.

• **Whereas the diminution of ecosystems and the release of contaminants into ecosystems has occurred**

• Whereas the presence of toxic substances, once introduced into the environment, cannot always be contained within geographic boundaries (CEPA)

• Whereas the Government of Canada, and the Government of British Columbia in demonstrating leadership should establish national and provincial environmental quality objectives, guidelines and codes of practice, and enforceable technical regulations.

Part 1.

• Whereas Canada must be able to fulfill its international obligations in respect of the environment: (CEPA)

DEFINITIONS

NOTE THAT THE DEFINITIONS IN KABEL FONT ARE FROM THE BACT DOCUMENT

Aboriginal government

Administrator means the administrator of Environmental Emergency Services Coordination Office (BCEPA)

Air means the atmosphere but does not include the atmosphere inside

(a) an underground mine, or

(b) a place or category of places exempted by order of the Lieutenant Governor in Council

Adverse effect

means any effect that causes, has caused or contributed to or is likely to cause or contribute to significant damage to [the ecosystem, or loss or reduction of biodiversity, or elimination of carbon sinks] or loss of use of the environment and includes pollution and the effects of an environmental accident (BCEPA).

(a) any significant and widespread effect which any reasonably be anticipated to impair wildlife, aquatic life, *natural resources* or environmental quality, or

b) any effect that results in or contributes damage to the environment (Arizona} BCEPA)

Ambient criteria, or environmental quality criteria

refers to levels of contaminants in the environment that must be zero use, production, and release in all cases where a toxic substance is persistent or bio-accumulative. It also applies when a substance will generate persistent or bio-accumulative toxic by-products or breakdown products during its productions, use or disposal (zero Toxics Alliance Statement of Principles) that must not be exceeded to protect the [ecosystem — water, air, sediment, soil or biota) and] the use of the air, water or soil, human health and the health of the environment. *The criteria have no legal standing for enforcement purposes.*

The Framework of mandatory standards and technical regulations will have legal standing so that the mandatory standards and technical regulations will be enforceable, and will give incentive to the development of BEST,

Air contaminant means any solid, liquid, gas or odour or combination of any of them that, if emitted into the air, would create or contribute to the creation of air pollution (CEPA)

Air contaminant means a substance that is emitted into the air and that:

(a) injures or is capable of injuring the health or safety of a person

(b) injures or is capable of injuring property or any life form

(c) interferes or is capable of interfering with visibility

(d) interferes or is capable of interfering with the normal conduct of business

(e) causes or is capable of causing material discomfort to a person, or

(f) damages or is capable of damaging the environment (CEPA)

Air pollution means a condition of the air, arising wholly or partly from the presence therein of one or more air contaminants, that:

(a) endangers the health, safety or welfare of persons

(b) interferes with normal enjoyment of life or property

(c) endangers the health of animal life, or

(d) causes damage to plant life or to property: (BCEPA)

(Ambient air or water quality)

refers to the overall or general condition of air or water in a region outside the zone of influence of discharges in contrast to local conditions which may be related to a specific source of contamination. (Water Management Division , Principles for Preparing Water Quality Objectives in B.C, 1986)

Authorization

means a permit, approval, licence, pollution prevention plan, operational certificate, order, certificate, pest management plan, certificate of compliance, conditional certificate of compliance, approval in principles (BCEPA)

Analyst means a person designated by the executive director under section (19 5) (BCEPA)

Analyst means a person or a member of a class of persons designated as an analyst under subsection 99(1)

Biological matter means anything which consists of or includes

(a) tissue or cells (including gametes or propagules) or sub-cellular entities, of any kind, capable of replication or of transferring genetic material or

b) genes or other genetic material, in any form, which are so capable, and it is immaterial, in determining if something is or is not any organism or biological matter, whether it is the product of natural or artificial processes of reproduction and, in the case of biological matter, whether it has ever been part of a whole organism (BCEPA)

Biotechnology

means the application of science and engineering in the direct or indirect use of living organisms or parts or products of living organisms in their natural or modified forms.
(CEPA)

Bio-accumulation

means the increase in levels of toxic substances in an organism over time due to CONTINUED exposure. This can only happen if the substances do not break down quickly and are essentially stored in some part of the organism. (Fox). Bio-concentration of a biologically active contaminant as it moves up the food chain should also be considered under "bio-accumulation". DDT in water could be present in PPB but as it moves up food chain in the top consumer it could appear as parts per million or even greater.

Biodiversity"

is defined as "the variability among living organisms from all sources including, *inter alia*, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems
(Convention on Biological Diversity, UNCED, 1992)

Biomedical waste means

(a) a substance that is prescribed as a biomedical waste by the Lieutenant Governor in Council, and

(b) Where the Lieutenant Governor in Council prescribes circumstances in which a substance is

Carbon sinks

can be organic as in old growth forests or inorganic as in sedimentary rock

sinks and reservoirs of greenhouse gases, including biomass, forests and oceans, as well as other terrestrial, coastal and marine ecosystems.(Framework Convention on Climate Change, 1992)

Conservation means the planning, management and implementation of an activity with the objective of protecting the essential physical, chemical and biological characteristics of the environment against degradation (BCEPA)

Consumer means a user or consumer of a product, substance, or material, but does not include the producer of the product, substance or material

Contaminant

is any solid liquid gas, odor, heat, sound, vibration radiation or combination of any of them resulting directly or indirectly from human activities that may cause an adverse effect. (draft regulation for clean Air Program , 1990)

Contaminated soil means

- (a) any soil sediment that is prescribed as a contaminated soil by the Lieutenant Governor in Council and
- (b) where the Lieutenant Governor in Council prescribes circumstances in which a soil or a sediment is a contaminated soil, a soil that is present in those circumstances (BCEPA)

Contingency plan means a plan which documents preparations and procedures for managing environmental accidents, including

- (a) a prior assessment of the potential hazard
- (b) predictions of the probable effects of an environmental accident
- (c) an assessment of the health and environmental costs of an environmental accident
- (d) measures to minimize risk
- (e) shut down procedures

- (f) communication networks to be used
- (g) notification procedures for the public and response agencies including
 - i) police departments in the vicinity
 - (ii) fire departments in the vicinity
 - (iii) emergency response teams
 - (iv) ambulance and medical services
 - (v) federal and provincial governments and local authorities
- (h) evacuation procedures for employees and the public
- (i) activities to protect human health
- (J) abatement, control and containment measures to minimize adverse effects
- (k) inventories of equipment available for spill response and cleanup
- (l) any other items prescribed by regulation (BCEPA)

Criteria means numerical limits or narrative statements approved by the executive director for application province wide and used as general guidance in setting site specific standards (BCEPA)

Criteria (objective?)

means numerical limits or narrative statements with respect to substances which provide policy direction on a provincial basis in the setting of objectives and standards. (BCEPA) [BACT document]

Decision means

- (a) the making of or refusal to make an order
- (b) an exercise of , or refusal to make a power
- (c) the issue, amendment , renewal, suspension, refusal or cancellation of an authorization, not including a regulation or a bylaw, or
- (d) the inclusion of any requirement or condition in an authorization , not including a regulation or a bylaw by manager, director or district director (BCEPA)

Director (BCEPA)

Discharge

the release into the air, land, water, soils, and sediment of substances

Ecosystem

is defined as "Ecosystem" means a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit. (Convention on Biological Diversity, UNCED, 1992)

Effluent means a substance that is discharged into water or onto land and that

- (a) injures or is capable of injuring the health or safety of a person
- (b) injures or is capable of injuring property or any life form
- (c) interferes or is capable of interfering with visibility in water
- (d) interferes or is capable of interfering with normal conduct of business
- (e) causes or is capable of causing material physical discomfort to a person or
- (f) damages or is capable of damaging the environment (BCEPA)

Environment

means the components of the earth and includes:

- (a) air, land, water, sediment, soils
- (b) all organic and inorganic matter, including living organisms such as humans and non-humans
- (c) the interacting ecological systems that include components referred to in sub-clauses (a) and (b)

Environment means the components of the Earth and includes

- (a) air, land and water
- (b) all layers of the atmosphere
- (c) all organic and inorganic matter and living organisms, and

(d) the interacting natural systems that includes components referred to in Paragraphs (a) to (c) (CEPA) also (BCEPA)

Environmental accident and Emergency Fund means

Minor amendment

means an amendment to a permit or approval for any of the following purposes:

- (a) a change of ownership or name;
- (b) a change of legal address or mailing address;

Federal lands

means

land that belong to Her Majesty in right of Canada or in respect of which Her Majesty in right of Canada has power to dispose and all waters on and air above such lands CEPA 52, a)

Those submarine areas not with in a province, adjacent to the coast of Canada and extending throughout the natural prolongation of the land territory of Canada to the outer edge of the continental margin or to a distance of two hundred nautical miles from the baselines from which the breadth of the territorial sea of Canada is measured, whichever is the greater, and the water and air above those submarine areas (CEPA 52 b)

...

h)a work or undertaking that, although wholly situate within a province, is before or after its execution declared by Parliament to be for the general advantage of Canada or for the advantage of two or more of the provinces (CEPA 52

Fuel means any form of matter that in its primary use is combusted or oxidized for the generation of energy; (CEPA)

Hazardous waste

For the purposes of subsection (43.3) and sections 44 and 45 “hazardous waste means

(a) any dangerous goods, within the meaning of the Transportation of Dangerous Goods Act, that are a waste, within the meaning of the regulations made under that Act: or

(b) any substance specified on the List of Hazardous Wastes Requiring Export or Import Notification in Part III of Schedule II (CEPA)

Major amendments

any amendment to a permit or approval which is not a minor amendment , as defined (Public Notification Regulation, May 1994)

THE CHANGES BELOW SHALL ALL BE DESIGNATED AS MAJOR AMENDMENTS;
TOO MUCH DISCRETIONARY POWER GIVEN TO MANAGER

c) a decrease in the authorized quantity of the discharge, emission, or stored material;

(d) and increase in; the authorized quantity of the discharge, emission or stored material that does not exceed 10% of the authorized quantity.

(e) a change in the authorized quality of the discharge, emission or stored material such that, in the opinion of the manager, the change has or will have less impact on the environment;

(f) a change in a monitoring program

(g) a change to the works, method of treatment or any other condition of a permit or approval such that , in the opinion of manager, the change has or will have less impact on the environment. (Public Notification Regulation, May 1994)

Minister or Ministers

“minister” refers to Minister of the Environment (CEPA)

“ministers” refers to Minister of the Environment and Minister of Health and Welfare

Nutrients

means any substance or combination of substances that, if added to any waters in sufficient quantities, provides nourishment that promotes the growth of aquatic vegetation in those waters to such densities as to

a) interfere with their use by human beings or by any animal, fish or plant that is useful to human beings or

Objective

means numerical limits or narrative statement with respect to substances which provide policy direction for application in specified regions, airshed or watersheds used in the setting of standards.

Persistent

means the property of a substance to resist degradation or decomposition in the environment (Fox)

Pollutant

includes not only chemicals but also heat, light and electro-magnetic radiation thermal discharges

Polluting substance

means any substance alone or in combination with other substances that causes or is capable of causing pollution if it were to escape into the environment

Pollution

means the presence in the environment of a substance or an activity that

(a) substantially alters the environment,

(b) impacts on the functioning of the ecosystem substantially or may impair the equitable and ecologically sound use of the environment *impairs the usefulness of the environment* or

(c) *cause a standard to be violated (BCEPA)*

or contributes to the diminution of the ecosystem by extracting substances that could cause the lessening of the functioning of the ecosystem

Pollution prevention

means to avoid the creation of polluting substances or to eliminate the release of these substances to the environment through a *hierarchy of activities including* the :

The following is a list of prevention measures that should be addressed concurrently:

1. Applying the principles of pollution prevention such as the precautionary and the anticipatory principles
2. The prevention of the use, generation and release of any substance into the environment in such a manner or quantity as to cause pollution (Pollution Protection Act)
3. The adoption of BEST — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error.
4. The adoption of the "cautionary principle," which can be expressed as follows:

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

5. the elimination of the use of polluting substances
6. The substitution of polluting substance with non-polluting substances that themselves may not become a polluting substance through concentration imbalance
7. The elimination and reduction in the generation of polluting substances
8. The elimination of, and reduction in, the generation of polluting by products;
9. the reduction and phasing out of non-renewable resources in the extraction of resources, the production of substances, and the disposal of wastes
10. exclusion of substances of acute toxicity

Pollution prevention means to avoid the creation of polluting substances or to eliminate the release of these substances to the environment through a hierarchy of activities including the :

(a) avoidance, elimination or substitution of polluting products;

(b) reduction in the use of pollution products;

(c) elimination of, and reduction in, the generation of polluting by products;

(d) reuse and recycling of polluting by-products;

(e) recovery of energy from polluting by-products; and if necessary,

(f) treatment and containment of pollution residual by-products;

(g) remediation of polluting residual by-products.

Precautionary principle

Where a substance has been specified on the Priority Substances List for a period of five years and the Ministers have not yet assessed whether the substance is toxic or capable of becoming toxic, any person may file a notice of objection with the Minister requesting that a board of review be established under section 89

capable of becoming toxic

Product stewardship

means the responsibility of producers for demonstrating that the introduction of a substance or activity will not have harmful ecological consequences *sound environmental stewardship of products* from the point of design or extraction to the point of final use and/or disposal. (Municipal Waste Reduction Branch)

Release includes discharge, spray, inject, inoculate, abandon, deposit, spill, leak, seep, pour, emit, empty, throw, dump, place and exhaust (CEPA)

significant amendment (CEPA)

Remediation means action to eliminate, limit, correct, counteract, mitigate or remove any substance or the negative effects on the environment or human health or any substance and includes, but is not limited to:

- (a) preliminary site investigations, detailed site investigations, analysis and interpretation including tests, sampling, surveys, data evaluation, risk assessment and environmental impact assessment;
- (b) evaluation of alternative methods of remediation;
- (c) preparation of a remediation plan, satisfactory to the manager, including a plan for any consequential or associated removal of soil or soil relocation from the site;
- (d) implementation of a remediation plan;
- (e) monitoring, verification and confirmation of whether the remediation complies with the remediation plan, applicable standards and requirements imposed by the manager
- (f) other actions that the Lieutenant Governor in council may prescribe (BCEPA)

see above under minor amendment)

Substance

means any product, by-product or waste

Substance means any distinguishable kind of organic or inorganic matter, whether animate or inanimate, and includes:

(a) any matter that is capable of being dispersed in the environment or of being transformed in the environment into matter that is capable of being so dispersed or that is capable of causing such transformations in the environment

(b) any element or free radical

(c) any combination of elements of a particular molecular identity that occurs in nature or as a result of a chemical reaction, and

(d) complex combinations of different molecules that originate in nature or are the result of chemical reactions but that could not practicably be formed by simply combining individual constituents,

and except for the proposed sections 25 to 32 which include:

(de) any mixture that is a combination of substances and does not itself produce a substance that is different from the substances that were combined

(f) any manufactured item that is formed into a specific physical shape or design during manufacture and has, for its final use, a function or functions dependent in whole or in part on its shape or design and

(g) any animate matter that is or any complex mixtures of different molecules that are contained in effluents, emissions or wastes that result from any work undertaking or activity; (CEPA)

Substance includes:

(a) any odour, sound vibration heat, electricity, electromagnetic radiation or form of energy and

(b) and genetically modified organism (BCEPA)

Sustainability

means the preservation/protection of nature and the equitable and ecologically sound use, *development and protection* of natural and physical resources

which enable people to meet their needs and the needs of the ecosystem without compromising the ability of future generations to meet their needs and the needs of the ecosystem, and includes the following considerations:

- (a) the maintenance and enhancement of the life-supporting capacity of the environment,
- (b) *the efficient management of natural and physical resources.*

the preservation of ecological heritage

(c) the use, development or protection of natural and physical resources in a way which provides for the social, economic and cultural needs and opportunities of present and future residents,

the preservation/protection of nature and the equitable and ecologically sound use of nature in consultation with indigenous representatives from the inherent indigenous governmental bodies in the areas

(d) where the environment could be *is* modified by human activity, and where there could be a possibility of irreversible damage, the adverse effects of irreversible change are fully recognized then the activity shall not proceed

and avoided or mitigated to the extent practicable.

(e) the use, development or protection of renewable natural and physical resources so that their ability to yield long term benefits is not endangered. (BCEPA) through ecologically unsound and unsafe practices, and through culturally inappropriate practices.

Sustainability means the use, development and protection of natural and physical resources in a way, or at a rate, which enables people to meet their needs now without compromising the ability of future generations to meet their own needs, and includes the following considerations

- (a) the efficient management of natural and physical resources
- (b) the maintenance and enhancement of the life-supporting capacity of the environment
- (c) the use, development or protection of natural and physical resources in a way which provides for the social, economic and cultural needs and opportunities of the present and future residents

(d) where the environment is modified by human activity, the adverse effects of irreversible change are fully recognized and avoided or mitigated to the extent practicable

(e) the use, development or protection of renewable natural and physical resources so that their ability to yield long term benefits is not endangered

[the above definition of 'sustainability' is derived from the NZ Resource Management Act]
BCEPA [note not derived from environmental legislation]

Toxicity

is the potential or capacity of a material of being harmful to the health of a living organism.
(Fox)

NOTE THAT TOXICITY SHALL BE THE GENERIC TERM AND WOULD INCLUDE DISCHARGES THAT WOULD NORMALLY BE ADDRESSED UNDER HAZARDOUS AND ATOMIC WASTES

Toxic [defined in article 11]

A substance is toxic if it is entering or may enter the environment in a quantity or concentration or under conditions

(a) having or that may have an immediate or long-term harmful effect on the environment

(b) constituting or that may constitute a danger to the environment on which human life depends or

(c) constituting or that may constitute a danger in Canada **to ecosystem or** to human life or health

Transition reaction intermediate

means a substance that is formed and consumed in the course of a chemical reaction
(CEPA)

Waste includes

(a) air contaminants

(b) litter,

(c) effluent,

(d) refuse,

(e) biomedical waste

(f) special wastes

(g) contaminated soil, and

(h) any other substance prescribed by the Lieutenant Governor in Council, whether or not the type of waste referred to in paragraphs (a) to (e) or prescribed under paragraph (f) has any commercial value or is capable of being used for a useful purpose BCEPA

Waste stream management license (BCEPA)

water means water as defined in the Water Act and [the Water Resource Preservation and Protection Act] includes marine waters under the jurisdiction of the province, groundwater and ice (BCEPA)

White goods means stoves, refrigerators, freezers, washers, dryers, dishwashers and similar appliance (BCEPA)

“Works” includes

(a) a drain, ditch, sewer and waste disposal system including a sewage treatment plant, pumping station and outfall

(b) a device, equipment, land and a structure that

(i) measures, handles, transports, stores, treats or destroys waste or a substance that is capable of causing pollution, or

(ii) introduces into the environment waste or a substance that is capable of causing pollution

(c) an installation, plant, machinery equipment, land or a process that causes or may cause pollution or is designed or used to measure or control the introduction of waste into the environment or to measure or control a substance that is capable of causing pollution, or

(d) an installation, plant, machinery, equipment, land or a process that monitors or cleans up pollution or waste

Zero use 1.

zero use, production, and release of persistent and /or bio-accumulativetoxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (Zero toxicity Coalition, July. 1994)

COMMENTS

Purpose of the Act

1. The purpose of this Act is to provide for the protection, conservation and sustainability of the environment by:

ensuring that the full costs of pollution as reflected in a growing body of scientific evidence documenting pervasive health and environmental impacts must be considered rather than just the cost of implementing emission reduction measures (adapted from Resolution to support the ozone transport commission petition to the U.S. EPA)

(a 0) ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (World Charter of nature)

(b) identifying, preserving and preventing the loss or reduction of Biological Diversity

[wording in part from the Convention on Biological Diversity]

(b 1) mitigating climate change by addressing anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change [wording from the Climate Change Convention]

(c) Achieving the goal of zero pollution in the Province

(d) protecting the environment by the application of the precautionary principle where there is a threat of serious or irreversible damage, **lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (from the Biodiversity Convention)**

(d 1) Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (World Charter of Nature)

(e) applying the principles of pollution prevention as the foundation of environmental protection

[from definition of "pollution prevention"]

(a 0)_ the prevention of the use, generation and release of any substance into the environment in such a manner or quantity as to cause pollution [repeated from 41 1)

(a0) the adoption of "prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error.

(a1) ..no product introduced into the environment will be hazardous; the onus of proving the non-hazardous nature of the product will be on the introducer of this new type of product

(a) the elimination of the use of polluting substances

(b 0) the substitution of polluting substance with non-polluting substances

(b) the substitution of polluting substances with less polluting substances

(c) the reduction in the introduction and use of **[non-renewable]** resources and polluting substances

(d) the elimination and reduction in the generation of polluting substances

[e, f, g removed because not deemed appropriate for prevention;
Discussion Environmental Group, February 19]

participating in the established [National/provincial] advisory committee for national action and cooperative action in matters affecting the environment for the purpose of avoiding conflict between and duplication in, federal and provincial regulatory activity (S5 CEPA)

(f0) Confirming the responsibility of government to set up a non-vested interest board or panel with varying levels of expertise and experience to do "arms-length" research into the true environmental impacts of substances and activities by carrying out "life cycle analysis" (recommendations from various chapters of UNCED Agenda 21) (Suggested Environment meeting, February 19)

(f) Confirming the responsibility of producers for sound environmental stewardship of products through all phases of a product's life;

(g) ensuring the comprehensive and integrated consideration of environmental and socioeconomic effects in public policy-making in British Columbia. [Deemed to be inconsistent with the overriding purpose of the Act] **Ensuring that in all decisions made about the environment that the ecosystem be given primacy (Suggested Environment meeting, February 19)**

(h0) International obligations must be fulfilled as being not the maximum but the minimum standards to follow (proposed, Discussion, February 19)

(h) Recognizing that British Columbia residents have an interest in **and a responsibility of minimizing their impact upon** the regional, national and **global environment** and global environmental well-being **(Suggested Environment meeting, February 19)**

(i) using the knowledge and experience of British Columbia residents in the formulation of decisions affecting the environment,

requiring to report

Where there occurs or is a reasonable likelihood of a release into the environment of a substance specified on the List of Toxic Substances (36) in Schedule 1 in contravention of a regulation made under section 34 or an order made under section 35,[[of substance in contravention of a regulation made under section 54, 57.1] any person described in subsection (2) shall, as soon as possible in the circumstances

... Report the matter to an inspector or to such person as is designated by regulation (CEPA 36.1 a)

Requirement to take emergency measures

Take all reasonable emergency measures consistent with public safety to prevent the release or, if it cannot be prevented to remedy any dangerous condition or reduce or mitigate any danger to the environment or to human life or health that results from the release of the substance or may reasonably be expected to result if the substance is released; and

Take all reasonable emergency measures consistent with public safety to prevent or eliminate any dangerous condition or reduce or mitigate any danger to the environment or to human life or health that results from the release or may reasonably be expected to result if the substance is releases; and (CEPA 57 1.b)

(c) make a reasonable effort to notify any member of the public who may be adversely affected by the release or likely release

Where any person fails to take any measures required under subsection (1) an inspector may take those measures, cause them to be taken or direct any person referred to in subsection (2) to take them (36.5)

Polluter pay

(j) confirming the responsibility of polluters to pay for the costs of their actions (also recommended in Agenda 21) but also recognizing that no pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, and reaffirming that the prevention of pollution and environmental destruction should be by using "prevention technologies"

Her Majesty in right of Canada may recover the costs and expenses of and incidental to taking any measures under subsection 36.5

from

(a) any person referred to in paragraph 36 (2) (a) and

(b) any person referred to in paragraph 36 (2) (b) to the extent of the person's negligence in causing or contributing to the release. (CEPA 39.)

Her Majesty in right of Canada may recover the costs and expenses of and incidental to taking any measures under subsection 57 (4) from

(a) any person referred to in paragraph 57 (2) (a) and

(b) any person 's negligence in causing or contributing to the release (CEPA 60 1)

the costs and expenses referred to in subsection (1) shall only be recovered to the extent that they can be established to have been reasonably incurred in the circumstances (CEPA 60 2)

A person referred to in paragraph 57 (2) (B) shall not be held liable under subsection (3) to an extent greater than the extent of the person's negligence in causing or contributing to the release. (CEPA 60.4)

57 (2) any person who a0 owns or has charge of a substance immediately before its initial release or its likely initial release into the environment; or (b) cause of contributes to the initial release or increases the likelihood of the initial release. (CEPA)

(k) ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

(l) ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested, February 19)

(m) promoting the research into the development and introduction of renewable, non-polluting (protection technologies)

(n) ensuring that compensation can never be used as reason for not exercising the duty under the act to protect, conserve and sustain the environment (proposed, Discussion, February 19)

(o) agreeing that any compensation given shall be assessed on the basis of past environmental performance and environmental costs and subsidies, and that any

awarded money shall be (used by the compensated party to create employment within B.C.) placed in a job creation fund (Suggested, Discussion, February 20)

(p) ensuring the maintenance and enhancement of the quality of the environment
(moved from section 2.a, February 20)

2. To achieve the purposes of this Act, all persons who exercise functions and powers under this Act shall have regard to the importance **of the purposes of this act**
(proposed, February 20)

(a) the maintenance and enhancement of the quality of the environment

(b) the actual or potential effect of an activity or natural process on the whole of the environment, including its actual or potential effect on the health and safety, and the economic, cultural and social well-being of people and communities

(c) the potential costs and benefits of any objective, policy, or proposal to the environment

[The above principles clause is derived from the NZ Resource Management Act]

PURPOSE:

- To establish a framework for the setting of province-wide enforceable mandatory standards and technical regulations designed to ensure the preservation and protection of the environment and the equitable and ecologically sound use of resources, for present and future generations, taking into consideration the advice of indigenous representatives from the inherent indigenous governmental bodies in the area
- to extend this framework to address not only the discharge of substances into the ecosystem but also the diminution of the ecosystem through extractive practices that could cause the reduction or loss of biodiversity or the elimination of carbon sinks. The substances discharged could be toxic or non-toxic. Toxicity has been defined as the potential or capacity of a material of being harmful to the health of a living organism (Fox) (biosphere). Non-toxic substances can through impacting on the non-living environment cause environmental degradation which subsequently causes harm to the biosphere (Agents of ecological degradation). For example, CFC's are not deemed toxic yet

through causing depletion of the ozone layer cause harm to living organism. In addition, there are substances that are themselves naturally occurring and harmless but become harmful to the environment when, through anthropogenic activity, they are increased or decreased in proportional concentration (re concentrated substance—created through imbalance in biogeochemical cycles).

- to apply principles that will enable the setting of high mandatory standards and technical regulations and that will encourage the development and implementation of prevention technology— ecologically sound technology or environmentally benign technology (Benign Ecologically Safe/Sound Technology/Techniques—BEST). BEST is based on the true invocation of International principles, such as the precautionary principle, anticipatory principle, environmental assessment principle, life cycle analysis principle, responsible care principle, cradle to grave principle, polluter pay principle, recognition of inherent worth of nature principle. BAT, in contrast to BEST, may not necessarily be benign or ecologically sound. In the event that there is no BEST which can prevent the release of persistent or bio-accumulative toxics then the extractive or productive activities which produce the product or substance process should be changed; the activities and product phased out/outlawed, or the demand for the product reduced through public education. In this case, the industry involved shall be assisted in the conversion to alternative processes or products involving BEST.

- to ensure that proposed technologies that appear to be ecologically sound, such as closed circuit technologies, are evaluated in the context of the full life cycle analysis within the environmental context. The environmental context involves examining the potential impact of supplemental industrial activities in the relevant impact area. Often a technology will be presented as being ecologically sound because it is closed circuit; However, it could be that, because of the reliance on other resources such as water, the problem could be compounded by the presence of contaminants in the water through the activities of adjacent industries. For example, in a proposed closed circuit operation, the required water is drawn from a source contaminated by the precursor elements to the formation of dioxins; the proposed closed circuit operation by using catalysts such as copper and nickel along with heat, could cause dioxins to be formed and emitted through the air. It would consequently not be enough to claim that a system is a closed system to justify as an appropriate technology if the closed system itself, is dependent upon potentially adverse transformation processes within the larger environmental context.

- to ensure that a mass balance calculation—a measurement of all of the input material/ a measurement of all the output including the finished products and emissions is carried out.

- to ensure that industry will be held responsible for past ecological harm and past health effects caused through contaminated discharge, and that when in documents there is a provision for carrying out a “clean-up of major long standing environmental and work place health problems” it will apply to past damage to the environment and to the workforce, as well as to past off-site damage to the ecosystem and to human health.
- to ensure that the setting up of Provincial Task Forces to assess past health effects of contaminated discharge does not effect citizens’ rights to sue industry for the health effects caused from the contaminated discharge and emissions.
- to ensure that obligations are undertaken in good faith, that the reduction in contaminants will be in areas where they will have impact, and to ensure the implementation of the “greatest impact reduction principle”. Often when regulations are put in place for reduction, governments follow the path of least resistance. For example in the reduction of CFC’s the regulations are applying for the reduction in production to refrigerators and car air conditioners (R12) and not applying to industrial uses(R12).
- to ensure that the public is presented with the real alternatives: the convenience product and contaminants in the ecosystem, and health impacts or less convenient product and no contaminants in the ecosystem and no health impacts.
- to ensure that compliance with high enforceable mandatory standards and technical regulations, and that adoption of BES, will not place B.C. industry at a disadvantage because of an “uneven playing field”.
- to ensure that there is a provision for the transference of funds from federal and provincial discretionary budgets, such as the federal military budget to assist industry in its compliance, and conversion to BEST.
- to undertake to assist industry in the phasing out of ecologically unsound practices and substances and in the conversion to ecologically sound practices and substances.
- to re-evaluate federal and provincial (Ministry of Employment and Investment) “commercial assistance” designed to bolster employment in ecologically unsound

industries through the purchase of “equity shares”, “fee concessions” the “job Protection Act” (1991) or “job Protection Commission” (1992). Often, government funding is designated for attempted mitigation of the adverse environmental effects rather than through the development of BEST.

- to similarly assess the value of maintaining the production of a product through an ecologically unsound process in one province when a similar product can be produced in an ecologically sound way in another province. For example, Flax stalks — ideal for the production of paper, are being burned in Saskatchewan, while B.C. CONTINUES to reduce biodiversity in the forests and to pollute the waters in the production of paper.

- to reassess current government targets in the light of recent zero emissions recommendations, and in the light of the recent EPA findings.

- to consult with non-vested interest (i.e. financial interest) members of the public with a wide range of expertise and experience during all levels of the development of the framework, including the determination of the terms of reference and thought all States and stages of the process of developing the Framework.

- to take into consideration when evaluating BEST the land base from which the resources are extracted such as the extraction of resources from indigenous territories beyond the treaty frontier.

- to ensure that the ecosystem is given primacy through ecological preservation and equitable and ecologically sound use of resources, and that indigenous representatives from the inherent indigenous governmental bodies in the area are consulted.

- to ensure that the ecological rights of present and future generations are protected

purpose

The purpose of this policy is to establish a framework for setting province-wide discharge criteria and standards designed to protect the environment, to integrate environmental, economic, social considerations and to ensure that sustainability is achieved.

SCOPE

(1) For the purposes of this Act, introduction of a substance into the environment means depositing the substance on or in or allowing or causing the substance to flow or seep on or into any land or water or allowing or causing the substance to be emitted into the air and includes indirect means of introduction into the environment

(1*) For the purpose of this Act, the impact of an activity on the environment means the engaging in any activity which could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act (proposed, February 19)

2. Except where this Act or the regulations specifically provides to the contrary, this Act applies to the whole environment of British Columbia **{The onus of proof for exclusion from the Act must reside in the proponent for exclusion (proposed, February 20)}**

3. Where there is a conflict between this Act and international obligations the higher or greater ecological principles of the two shall apply.

Where there is conflict between this Act, its regulations or an authorization under this Act and any other act or regulations there under, this Act its regulations and authorizations issued or subsisting under this Act apply, **except when provisions in other Acts or regulations contribute to the fulfillment of the purposes of the Environmental Protection Act better than those contained in this Act**

(a) where this Act or its regulations provide to the contrary, or

(b) as may be prescribed by the Lieutenant Governor in Council

4. Nothing in the Soil Conservation Act shall be taken to prevent the establishment within a local authority of any facility for the disposal of waste in accordance with this Act **providing that the establishment is deemed to fulfill the purposes of the Environment Protection Act. (Proposed, February 20)**

5. The Crown is bound by this Act, except where this Act or the regulations specifically provide to the contrary

MINISTRY OF ENVIRONMENT, LANDS AND PARKS

4. (1) There shall be a ministry of the public service of the Province called the Ministry of Environment Lands and Parks

(2) the minister shall preside over the ministry and be responsible to the lieutenant Governor in Council for the direction of the ministry

Delegating power

The minister may in writing delegate to any person representing

the government

a government agency

the government of Canada

an aboriginal government or

a local authority

any power or duty conferred or imposed on the minister under this act.

FUNCTIONS AND POWERS OF THE MINISTRY AND OF THE GOVERNOR IN COUNCIL

Administering crown lands

Shall administer the Crown land resource of the Province (BCEPA 6.2.i)

Setting up Advisory committees

5. (1) for the purpose of carrying out their duties under this Act, the Ministers or either Minister may

(a) establish advisory committees to report to the Ministers or either Minister

For the purpose of establishing a framework for national action and taking cooperative action in matters affecting the environment and for the purpose of avoiding conflict between, and duplication in , federal and provincial regulatory activity, the Minister shall,

in cooperation with the governments of the provinces, establish a federal-provincial advisory committee to advise the Minister on

(CEPA 6.1)

regulations proposed to be made under paragraph 34....(CEPA 6.1.a)

other environmental matters that are of mutual interest to the federal and provincial government and to which this Act relates (CEPA 6.1.b)

the Minister shall include in the annual report required by section 138 a report of the activities of the federal-provincial advisory committee (CEPA 2)

The minister may establish advisory committees and retain experts to report to the minister with respect to

(a) the content and administration of this Act and (BCEPA 9 la)

(b) any of the policies, programs, services or other matters under the minister's administration [from Alberta] [new] (BCEPA 9 I b)

When establishing an advisory committee under subsection (1) the minister may specify the functions that the committees and experts are to perform, and the manner and time period in which those functions are to be performed (BCEPA 9.2)

the report of a committee established or an expert retained pursuant to subsection (1) including the recommendations and reasons for them, shall be made public in a prescribed manner (BCEPA 9.3)

A person serving on a committee or an expert retained

shall, while performing his or her duties, be paid for reasonable traveling and living expenses or a reasonable allowance in respect of them as fixed by the Lieutenant Governor in Council, and

may be paid remuneration as the minister determines (

Maintaining liaisons

may as the representative of the government, maintain continuing liaisons with

(i) the Government of Canada and agencies of that government

(ii) the governments of other provinces and agencies of those governments

(iii) the government of States of the United States of America and agencies of those governments, and

(iv) local authorities in British Columbia (BCEPA 6 I)

Integrating with other Ministries

The minister shall, in recognition of the integrated relationship between human health and the natural environment, co-operate with and assist the Minister of Health in promoting human health through environmental protection [from Alberta]

For the purpose of carrying out the functions and duties of the Minister of National Health and Welfare related to preserving and improving public health under this Act, the Minister of National Health and Welfare shall formulate objectives, guidelines and codes of practice with respect to the elements of the environment that may affect the life and health of the people of Canada (CEPA 9.1)

In carrying out the responsibilities conferred by subsection (1), the Minister of National Health and Welfare may

consult with the governments of the provinces; and (CEPA 9.2.a)

Entering into agreements

the minister may on behalf of the government enter into agreements and partnerships relating to any matter pertaining to the environment with

The government of another jurisdiction or a ministry or agency thereof

An aboriginal government (BCEPA 7.a)

a local authority (BCEPA 7.b)

a government agency (BCEPA 7.c)

any person (BCEPA 7d)

[from Alberta]

the minister with the approval of the lieutenant Governor in council may enter into agreements with the federal government with respect to the administration of this Act, the Canadian Environmental Protection Act, the fisheries Act or any other federal enactment of the purpose of protection of the environment ((BCEPA 17.1)

Notwithstanding subsection (1), the minister shall not enter into an equivalency agreement under the Canadian Environmental Protection Act unless the agreement contains a declaration that the Government of Canada will require the provisions of this Act and the regulations to be complied with at all federal facilities and activities including activities undertaken on federal land owned or leased by the Crown in the right of Canada by persons other than agents of the federal government (BCEPA 17.2)

Transferring of administration

The minister may, after appropriate consultation and with the consent of a part listed in (a) to (d) transfer the administration of a provision of this Act to

another minister of the government (BCEPA 13 a)

a government agency (BCEPA 13b)

an aboriginal government (BCEPA 13 c)

a local authority (BCEPA 13d)

and may specify the terms and conditions including the collection of fees and taxes by which the transfer is made and may appoint officials to be responsible for the administration of the provision transferred.

(BCEPA 13) Adapted from Alberta draft

Designating officials

Subject to the Public service Act, the minister may designate an executive director who shall administer that Act and regulations (BCEPA 19.1)

... 19.12

Establishing guidelines

For the purposes of carrying out the Minister's duties and functions related to the quality of the environment, the Minister may, with the approval of the Governor in Council, establish guidelines for use by departments, boards and agencies of the Government of Canada and, where appropriate, by corporations named in Schedule III to the Financial Administration Act and federal regulatory bodies in the exercise of their powers and the carrying out of their duties and functions. (CEPA 53)

making regulations

The Governor in Council may, for the purposes of section 46

No person shall produce or import for use or sale in Canada or sell or offer for sale any fuel that

contains an element component or additive in a concentration or quantity that exceeds the concentration or quantity prescribed with respect to that element, component or additive in relation to the fuel; or

make regulations

Prescriptions

prescribing with respect to any fuel or fuel used for any purpose, the concentration or quantity of any element, component or additive that in the opinion of the Governor in Council, if exceeded, would, on the combustion of the fuel in ordinary circumstances, result in a significant contribution to air pollution. (CEPA 47 a) ...

Where no other Act of Parliament expressly provides for the making of regulations that result in the protection of the environment and apply to federal works or undertaking or federal lands, the governor in Council may, on the recommendation of the Minister and with the concurrence of the minister of the Crown who has the administration and control of or duties and functions in relation to those works, undertakings or lands make regulations applicable thereto for the protection of the environment (CEPA 54 1)

the Governor in Council may, on the recommendation of the Minister make regulations prescribing

limits on the release of emission and effluents ;by departments, boards and agencies of the Government of Canada and where appropriate by corporations named in Schedule III to the Financial Administration Act (CEPA 54 2 b)

Requiring analyses... relating to the environment that is or is likely to be affected by the work

the Minister may require from any person who carries on, or proposes to carry on, any federal work or undertaking or any activity on federal lands such plans, specifications, studies, procedures, schedules, analyses, samples or other information relating to the work, undertaking or activity together with such analyses, samples, evaluation, studies or other information relating to the environment that is or is likely to be affected by the work, undertaking or activity (CEPA 56)

preventing of pollution and protecting of environment

the Ministry, under the direction of the minister, is responsible for the **preservation** protection, enhancement and administration of all matters relating to the environment (BCEPA 6.1)

establish, operate and maintain a system of environmental quality monitoring stations
CEPA 1 (a)

collect, process, correlate and publish on a periodic basis data on environmental quality in Canada from environmental quality monitoring stations and from any other appropriate source CEPA 1(b)

Prohibiting export and import of toxic substances and Waste Materials

The Governor in Council may, on the recommendation of the Ministers, make an order adding to the List of Prohibited Substances in Part 1 or Schedule II any toxic substance the use of which is prohibited in Canada by or under an Act of Parliament and may, in the same manner, delete any toxic substance from that List. (41 a i)

No person shall export any toxic substance specified on the List of Prohibited Substances in Part 1 of Schedule II except *for the purpose of destroying the substance or complying with a direction under subparagraph 41 (b) (ii)*

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health.(principle 14, Rio Declaration, UNCED)

Adding to list of Toxic Substances requiring Export Notification

Adding to the List of Toxic Substances requiring Export Notification in Part II of Schedule II any toxic substance where the Governor in Council is of the opinion

that

the uses of the substance are substantially restricted by or under an Act of Parliament, and CEPA 42 (1)

The Minister shall compile a list, to be known as the List of Toxic Substances Authorities and the List shall specify each country in respect of which a notice is required under subsection (3) and the authority, body or person to whom the notice shall be given. CEPA 42 (2)

A person shall give notice of the proposed export of a substance specified on the List of Toxic Substances Requiring Export Notification in Part II of Schedule II, where the person proposes to export the substance to a country specified on the list of Toxic Substances Authorities and the export of the substance by that person is to be for the first time after (CEPA 43 3)

...

Adding to list of hazardous wastes

Adding to the List of Hazardous Wastes Requiring Export or import Notification in Part III of Schedule II any substance that , in the opinion of the Governor in Council, is a hazardous waste and may, in the same manner, delete any substance from that List. (CEPA 43

Conducting research

conduct research and studies relating to the nature, transportation, dispersion, effects, control and abatement of environmental pollution and provide advisory and technical services and information related thereto: (c)

conduct research and studies relating to environmental contamination arising from disturbances of ecosystems by human activity, and CEPA1 d (i)

changes in the normal geochemical cycling of toxic substances that are naturally present in the environment CEPA1 (d) (ii)

formulate comprehensive plans and designs for the **prevention**, control and abatement of environmental pollution and establish, operate and publicize demonstration projects and make them available for demonstration (CEPA)

may undertake, commission and coordinate environmental studies, base mapping and related photographic and survey control functions (BCEPA 6.2. e)

may compile, study and assess information related ;to the environment for the purpose of better carrying out the minister's functions and responsibilities under this or any other act with a view to providing that information to ministries of the government, government agencies and the public (BCEPA 6.2.m)

may participate in and coordinate research projects related to matters pertaining to the environment (BCEPA 6.2.n)

may maintain a library consisting of publications and other information related to matters pertaining to the environment (BCEPA 6.2o)

Remedial measures principle

Where, in respect of a substance or a product containing a substance, there is a contravention of this Part or any regulation made under this Part, the Minister may, in writing,

Requirement to give public notice

(a) direct any manufacturer, processor, importer retailer or distributor of the substance or product to take any or all of the following measures.

-give public notice in a manner directed by the Minister of any danger to the environment or to human life or health posed by the substance or product (CEPA 40 a i)

Direct any manufacturer, processor, distributor, importer or retailer of the substance or product to take any or all of the following measures:

(i) replace the substance or product with one that does not pose a danger to the environment or to human life or health (i)

Accept the return of the substance or product from the purchaser and refund the purchase price, or

(ii) any other measures for the protection of the environment or of human life or health. (CEPA 40.b iii)

Publishing information

publish or otherwise distribute or arrange for the publication or distribution of

(i) pertinent information to inform the public in respect of all aspects of the quality of the environment, including **the prevention** and the control and abatement of environmental pollution and

Report on the state of the Canadian environment to be prepared on a periodic basis

Minister may in exercising the powers conferred by paragraphs (1 B to (e) act alone or in cooperation with any government, government department or agency, institution or person and may sponsor or assist in any research, studies or planning and development by an government institution or person in relation to the quality of the environment or **the prevention** the control or abatement of environmental pollution (7.3 CEPA)

Developing and distributing educational materials

may unilaterally or in co-operation with other ministries of the government and government agencies, develop, publish and distribute educational materials with respect to the environment and shall co-ordinate, develop and deliver educational programs and services to assist British Columbians to better understand the environment and become responsibly involved in the protection and stewardship of the environment (BCEPA 6.2.p)

Organizing conferences

organize conferences of **individuals, and groups reflecting a wide range of expertise and experience**

representatives of industry and labour, provincial and municipal authorities and any interested persons described in paragraph a (CEPA 8.3.b)

individuals, and groups reflecting a wide range of expertise and experience

Formulating of objectives

Shall encourage the maintenance of an optimum quality environment through specific objectives for the management protection and conservation of land, water, air, plant life and animal life, in the Province (BCEPA 6.2.a))

For the purpose of carrying out the Minister's functions and duties related to the quality of the environment, the Minister shall formulate

(a) environmental quality objectives specifying goals or purposes toward

which an environmental **pollution prevention and control** effort is directed, including goals or purposes stated in quantitative or qualitative terms; (CEPA 8.1a.)

(b) environmental quality guidelines specifying recommendation in quantitative or qualitative terms to support and maintain particular uses of the environment (CEPA 8.1b.)

(c) release guidelines recommending limits, including limits expressed a concentrations or quantities, for the release of substances into the environment from works, undertakings or activities; and (CEPA 8.1c)

may plan, design, construct, operate and maintain works and undertakings for the management, protection or enhancement of the environment, or for any other purpose of function assigned by the Lieutenant Governor in Council, (BCEPA 6.2.h)

The minister, or a person designated by the minister, after engaging in such public consultation as the minister considers appropriate, may develop guidelines, codes, criteria, objectives and standards for emissions, discharges, storage, and ambient environmental quality in qualitative or quantitative terms for management areas in all or part of British Columbia to promote the protection and stewardship of the environment [from Alberta]

undertaking inventories

Establishing management areas

For the purposes of subsection ! the minister may establish management areas in accordance with the regulations

providing for land use (BCEPA 11.1)

may shall undertake inventories and prepare plans for the effective management, protection and conservation of the environment (BCEPA 6.2.d)

preservation of nature, conservation of natural resources and sustainable development (CEPA 8.2 d)

The minister shall give due consideration to public input that he or she has received in developing objectives and regulations policies under subsection 1 (

(BCEPA 11.3)

In carrying out the responsibilities conferred by subsection (1) the Minister may consult with the government of any province, any government department or agency or any person interested in the quality of the environment or the control or abatement of environment of environmental pollution; and (CEPA 8.3.a)

Criteria, objectives, standards and regulations developed under subsection (1) shall be made available to the public in accordance with the regulations

organize conferences of individuals, and groups reflecting a wide range of expertise and experience representatives of industry and labour, provincial and municipal authorities and any persons interested in the preservation and improvement of public health. (CEPA 9.2.b

_____)

Establishing Priority Substances List

Ministers shall compile and may amend from time to time a list, to be known as the Priority Substances List, and the List shall specify substances in respect of which the Ministers are satisfied priority should be given in assessing whether they are toxic or capable of becoming toxic (CEPA 12.1)

Ministers shall publish, in the Canada Gazette, the Priority Substances List and any amendments to the list (CEPA 12.2)

Establishment of priority list

For the purpose of establishing the Priority Substances List, the Ministers may consult the governments of the provinces **individuals, and groups reflecting a wide range of expertise and experience** members or representatives of any labour group or industrial sector, associations or persons concerned with environmental and health matters and any other persons (CEPA 12.3)

The Ministers shall consider a request filed under subsection (4) and within ninety days after the request is filed the Minister shall inform the person who filed the request of how the Minister intends to deal with the request and the reasons for dealing with it in that manner CEPA 12.5)

Determining of toxicity

For the purpose of assessing whether a substance is toxic or is capable of becoming toxic, or for the purpose of assessing the need for measures to control a substance, either Minister may

Collect data and conduct investigations respecting (a)

The nature of the substance (i)

the presence of the substance in the environment and the effect of its presence on the environment or on human life or health (ii)

the extent to which the substance can become dispersed and will persist in the environment (iii)

The ability of the substance to become incorporated or accumulate in biological tissues or to interfere with biological processes (iv)

methods of controlling the presence of the substance in the environment (v)

methods for testing the effects of the presence of the substance in the environment (vi)

development and use of alternatives to the substance (vii)

quantities uses and disposal of the substance, and (viii)

methods of reducing the amount of the substance used, produced or released into the environment (ix)

Developing economic mechanisms

may in co-operation with other ministries of the government develop and implement economic and financial instruments and market-based incentives to achieve environmental protection to achieve environmental quality goals and provide methods of financing programs for environmental purposes in a cost-effective manner, and (BCEPA 6.2 q)

the Minister may, in accordance with the regulations, establish programs and other measures for the use of economic and financial instruments and market-based approaches including, without limiting the generality of the foregoing

emission trading (BCEPA 14.1.a)

incentives (BCEPA 14.1.b)

subsidies (BCEPA 14.1.c)

deposits and refunds (BCEPA 14.1d)

taxes (BCEPA 14.1.e)

emission effluent and waste disposal fees (BCEPA 14.1.f)

differential levies (BCEPA 14.1.g)

product charts and (BCEPA 14.1.h)

grants ... and contributions (BCEPA 14.1i)

Encouraging recreation

shall encourage outdoor recreation. establish parks and conserve the natural scenic and historic features of the Province (BCEPA, 6.2.j)

Monitoring

(d) environmental codes of practice specifying procedures, practices or release limits for environmental protection, pollution prevention, control relating to works, undertakings and activities during any phase of their development and operation including the location

design, construction, start-up, closure, dismantling and clean-up phases and any subsequent monitoring activities. (CEPA 8.1d.)

shall monitor, assess and report to the Lieutenant Governor in Council on general environmental conditions in the Province (6.2.d)

the objectives, guidelines and codes of practice referred to in subsection (1) shall relate to the environment (CEPA 8.2a)

recycling, reusing, treating, storing or disposing of substances or reducing the release thereof into the environment; (CEPA 8.2 b)

works, undertakings or activities that affect or may affect the environment;

or (8.2 c)

Designating laboratories

The minister may designate laboratories as approved laboratories that may conduct laboratory analyzes for the purposes of this Act (BCEPA 15.1)

Enforcing safety standards

shall administer and enforce safety standards respecting recreational activities and services on Crown land

Ordering an inquiry

The minister may order an inquiry with respect to the environment whenever he or she considers it necessary (BCEPA 8.1.)

for the purpose of an inquiry ordered under subsection (1) the minister or a person appointed by the minister to hold the inquiry has the powers, protection and privileges of a commissioner under section 12, 15 and 16 of the Inquiry Act (BCEPA 8.2.)

A person appointed under this subsection shall conduct the inquiry in accordance with terms of reference and any procedural guidelines for the inquiry specified by the minister (BCEPA 8.3.)

An inquiry may be ordered under subsection (1) with respect to the socioeconomic considerations of an environmental issue. (BCEPA 8.4.)

An inquiry may be ordered under subsection (1) with respect to the socioeconomic considerations of an environmental issue (BCEPA 8.4.)

CHECK: THIS SECTION FOLLOWS S7 OF THE ENVIRONMENTAL MANAGEMENT ACT

planning in event of environmental accident

shall plan, coordinate, implement and manage a program to protect the welfare of the public in the event of an environmental accident or emergency (BCEPA 6.2.h)

INDIVIDUAL INITIATIVE

Any person may file in writing with the Minister a request that a substance be added to the Priority Substances List and the request shall state the reasons for adding the substances to the List. (CEPA 12.4)

Where the Ministers make an assessment referred to in subsection (1) and decide not to recommend that the substance be added to the List of Toxic Substances in Schedule 1, any person may, within sixty days after publication of the decision in the Canada Gazette file a notice of objection with the Minister requesting that a board of review be established under section 89 stating the reason for the objection. (CEPA 13.2)

Where a substance has been specified on the Priority Substances List for a period of five years and the Ministers have not yet assessed whether the substance is toxic or capable of becoming toxic, any person may file a notice of objection with the Minister requesting that a board of review be established under section 89 (CEPA 14)

Additional powers

In addition to other powers vested in the Minister, the ministry, in respect of the ministry all the powers, duties and authorities had and exercisable by the officers mentioned as the Commissioner of Lands and Surveyor General, the Chief Commissioner of Lands and Surveyor General, the Chief Commissioner of Lands and Works and Surveyor General and the Surveyor General, in an Act, ordinance or proclamation passed or made in the former Colonies of British Columbia and Vancouver Island.

(BCEPA 6.3)

NOTE, IN SOME CASES, PROVISIONS IN CEPA HAVE BEEN TAKEN OUT OF THE BCEPA DOCUMENT AND PUT INTO THE B.C. ENVIRONMENTAL BILL OF RIGHTS:

Part 2 THE UNIQUE SECTION WILL BE MARKED IN OUTLINE

Environmental Bill of Rights

Public Trust

30. (1) Every resident of British Columbia has a right to protect the environment and the public trust from any pollution, impairment or destruction

(2) The government, as trustee, has a duty to conserve and protect the environment of British Columbia

3. Citizens of British Columbia have the right to have the environment conserved and protected (Suggested Environment meeting, February 19)

4. Citizens of British Columbia have to right to expect that no person shall **use, generate or release** waste or recyclable maters, or any other substance **(including fugitive gas or leachate)** into the environment in such a manner or quantity as to cause pollution

[moved from 41 (1) (Suggested Environment meeting, February 19)

5. Citizens of British Columbia have the right to expect that the government will live up to its obligations (Doctrine of Legitimate Expectation)

6. Present and future generations of British Columbia have the right to an ecological heritage (Suggested Environment meeting, February 19)

7. ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the act (Suggested Environment meeting, February 19)

Right to request that a substance be added

Any person may file, in writing, with the Minister, a request that a substance be added to the Priority Substances List and the request shall state the reasons for adding the substances to the List. (CEPA 12.4)

Where the Ministers make an assessment referred to in subsection (1) and decide not to recommend that the substance be added to the List of Toxic Substances in Schedule 1, any person may, within sixty days after publication of the decision in the Canada Gazette file a notice of objection with the Minister requesting that a board of review be established under section 89 stating the reason for the objection. (CEPA 13.2)

Where a substance has been specified on the Priority Substances List for a period of five years and the Ministers have not yet assessed whether the substance is toxic or capable of becoming toxic, any person may file a notice of objection with the Minister requesting that a board of review be established under section 89 (CEPA 14)

Right of action

31. (1) The Attorney General or any resident of British Columbia may commence an action in the Supreme Court against any person who has polluted or otherwise degraded the environment and the public trust or who is likely to do so.

2. A person may commence an action under subsection (1) without having to establish that there is, has been or is likely to be an infringement of an authorization issued under this Act or an approval, permit, licence, standard, regulation, rule or order issued by or under an Act listed in Schedule A.

3. A person who commences an action under subsection (1) shall provide notice of the proceedings to the Attorney General and the Minister.

4. This section does not abrogate those common law rights that would normally be available to a plaintiff to commence an action.

5. the need for intervener funding

Standing

32 A person may commence an action under section 31 without having to show that he or she has

(1) any greater or different right, harm or interest than any other person; or

(2) any pecuniary or proprietary right or interest in the subject matter at issue.

Burden of proof.

33.

(1 a) Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

If the proposal involves anything that could be hazardous, 0 emissions and waste must apply; if the proposal involves ..lowest achievable discharge rate should apply (February 19, discussion)

(1 b) the plaintiff shall establish a prima facie case showing that **the defendant's proposed activities is likely to pollute or degrade the environment**

(1) the plaintiff shall establish a prima facie case showing that the defendants activities has polluted or degraded the environment or is likely to do so

(1 c. In a prosecution for a contravention, the burden of proving compliance is on the defendant [Section 46, ss 4]

2. Where a prima facie case under subsection (1) is established, the defendant may rebut the prima facie case by showing that there is no feasible and prudent alternative to the defendant's action

[If so there must be some criteria for determining feasible and prudent alternatives in the light of the purpose of the Act; "providing prevention, conservation and sustainability of the environment" determined by an advisory, non-vested interest board or panel with representation from varied areas of expertise and experience]

3. *It is a defence to an action commenced under this Act that the defendant's action is authorized under this act or an Act listed in Schedule A, unless the plaintiff can establish, on balance of probabilities, that the standard is inadequate to protect the environment and that the defendant's action has caused, or is likely to cause, severe or irreparable contamination or degradation of the environment.*

The burden of proof must be on the defendant to demonstrate that the defendant's action has not caused or is not likely to cause, severe or irreparable contamination or degradation of the environment (Discussion, February 19)

Limitation Period

34. The limitation period for an action under section 31 of this Act is postponed and time does not commence to run until the plaintiff becomes aware, or ought reasonably to have become aware, of the identity of the defendant and of the material facts surrounding the claim

Appointment of minister's environmental mediator

37 (1) Subject to section 140, the Minister may, *Where he or she deems it advisable* **where it is deemed advisable** and where the conflicting parties concur, appoint an environmental mediator acceptable to the parties to mediate between persons involved in an environmental conflict.

(2) when a mediator is appointed under subsection (1), the mediator shall, within 6 weeks after completion of the mediation, report to the results of the mediation to the Minister and the parties

38 (c) award damages to (iv) any person who has a concern for the environment

39 ...licence, standard, regulation, rule or order issued under an Act listed in Schedule A affects **the environment** and rights of a person, **any** person shall be furnished with a written statement of the decision setting out....**(c) any dissenting opinions should be made public (Discussion, February 19)**

Freedom of information [SHOULD BE ADDED]

under the guise of client/solicit relation or confidentially shall not prevent the revealing , disclosing information about any actions that could have [wording from purpose]

40. Whistleblower protection

(1) for the purposes of this section “employee” includes

(a) a person, including a deceased person, in receipt of or entitled to payment for labour services performed for another

(b) a person whom an employer allows, directly or indirectly, to perform work or service normally performed by an employee, and

(c) a person being trained by an employer for the purpose of the employer’s business.

Where a person has knowledge of the occurrence or reasonable likelihood of a release into the environment

of a substance specified in the List of Toxic Substances in Schedule 1, 37 [but the person is not required to report the matter under this Act, the person may report any information relating to the release or likely release to an inspector or to any person to whom a report may be made under section 36. (CEPA, 37)

of a substance in contravention of a regulation made under section 54.. (CEPA 58)

Request of confidentiality

A person may request that the person’s identity and any information that could reasonably reveal the identity not be released (CEPA37 2, and 58.2)

(

Requirement for confidentiality

Where a person makes a request under subsection (2) no person shall release or cause to be released the identity of the person making the request or any information that could be reasonably be expected to reveal the identity, unless the person making the request authorizes the release in writing (37.3)

2) For the purpose of this section, “employer” includes a person who(a) has control or direction of, or

(b) is responsible, directly or indirectly, for the employment of an employee, and includes a person who was an employer

3. No person shall dismiss, threaten to dismiss, cause to be dismissed, discipline, coerce, discriminate against, or impose any type of penalty on an employee or an authorized representative of an employee, because the employee or representative

(a) has reported or proposed to report any violation or perceived violation of this Act or an Act listed in Schedule A or

(b) refuses to carry out work that the employee reasonably believes would be or would lead to a violation of this Act or an Act listed in Schedule A

Notwithstanding any other Act of Parliament, no employee of a department, board commission or agency of the Government of Canada, or of a corporation named in Schedule III to the Financial Administration Act or of a federal regulatory body shall be disciplined, dismissed or harassed for making a report under subsection (1) (CEPA 37.1 and , 57.4

(4) Employers shall keep their employees informed of the protection available under this section

(5) a person who alleges that he or she has been treated in a manner contrary to subsection (3) may file a complaint with the board in the manner set out in the regulations.

(6) The board shall cause an investigation to be made upon the filing of a complaint, and may dismiss a complaint without a hearing where it appears to the board that

(a) the employee or representative was proceeding in bad faith or for an improper purpose [**as defined by the purpose of the act**]

7. the board may conduct a hearing into the complaint, and if the board is satisfied that the employer has contravened subsection (3) the board may make an order directing the employer to do any or all of the following:

(a) cease doing the act or acts complained of

(b) rectify the act or acts complained of

(c) reinstate the person aggrieved with compensation

(d) compensate the person aggrieved in lieu of reinstatement for the loss of earnings or other employment benefits

(e) pay general damages, special damages or pecuniary damages to the employee.

(8) the board may award either party all or a portion of the costs of the hearing as it considers appropriate.

[Further comment to come on subsequent sections]

Since the first United Nations Conference on the Environment in Stockholm in 1972, we have come to realize that the traditional patterns of development have contributed to poverty - denying more than a quarter of the worlds population adequate living conditions — to the inequitable distribution of resources to overconsumption, to the violation of human rights, and to the potentially irreversible degradation of the ecosystem.

WE DECLARE THE FOLLOWING PRINCIPLES TO GUIDE HUMANITY TO AN EQUITABLE AND ECOLOGICALLY SOUND FUTURE:

1. The ecosystem of which we are a part shall be protected and preserved, ecologically unsound patterns of development shall be condemned and the inequity of development must be addressed and rectified

2. Development activities that benefit the few while compromising the biological inheritance and quality of life of the many must be condemned as being inherently wrong

4. International ecological standards should be in place so that no short term individual pursuit of self interest, or short sighted national or international regulations (GATT) could jeopardize the environment. The purpose of these standards are to address the individual and multinational pursuit of self interest and consumptive and exploitative use of the environment and not to penalize local communities that wish to function in an interdependent way within the ecosystem. The economic development necessary to eliminate poverty shall not be a mandate to abuse the environment for either short-term gain or economic growth alone. Principle must drive industry not industry driving principle.

5. Environmental processes do no recognize national boundaries, therefore States shall not have the sovereign right to exploit resources within their territories in isolation from the global ecological needs of the Earth

6. The CONTINUED build-up of the military complex must cease, and the use of military force as a means of resolving conflict must be rejected. A radical

reduction of the military budgets of the world must occur and the funds released for ecological and humanitarian purposes. Peace is not merely the absence of war but the pursuit of environmental, social justice, economic, spiritual and cultural well-being.

7. 8. the decision making process should be clearly defined, transparent, accessible and equitable. Criteria in decision making should be revealed, and the public and affected communities should be involved at the time of the formulation of the terms of reference and through the process.

9. The international community must condemn and disallow the exporting of products deemed to be unsafe in a state where there are advance testing procedures to other States with less advanced testing procedures Since the first United Nations Conference on the Environment in Stockholm in 1972 we have come to realize that the threats to the biosphere which sustains all life on this planet have increased in rate, magnitude and scale that inaction is negligent. The international community has enough information about the pending state of ecological irreversibility that it must act immediately (proposal for NGO Earth Charter, Rio, June, 1992)

The precautionary principle shall be extended to require those who wish to intervene in the ecological commons to have to justify their intervention and demonstrate the safety of their intervention. The full environmental costs shall be considered in any proposed development project. (NGO Earth Charter, Rio, June, 1992)

REGULATIONS RELATED TO PESTICIDES

Authorized body for making regulations related to pesticides

The Lieutenant Governor in Council may make regulations (BCEPA 112.1)

Without limiting subsection (1) the Lieutenant Governor in Council may make regulations

- specifying and defining what constitutes an unreasonable adverse effect in particular or general circumstances ((BCEPA 112.2 a)

- classifying substances as pesticides and designating a pesticide as a restricted use pesticide (BCEPA 112.2)
- respecting the manner in which a pesticide is contained, transported, stored, prepared mixed, applied or sold (BCEPA 112.2c)
- prescribing the conditions for the disposal of a pesticide, pesticide container, equipment or a container used to store, prepare, mix or apply it (BCEPA 112.2d)
- prescribing the records to be maintained by a person or class of persons who stores, prepares, mixes, applies, transports, sells or disposes of a pesticide (BCEPA 112.2e)
- defining standards of competence and requirements for a person to obtain a licence, permit, certificate or pest management plan (BCEPA 112.2f)
- defining standards of competence and requirements for a person training others in the application of pesticides (BCEPA 112.2g)
- requiring that a person or class of persons referred to in paragraph (e) be bonded, subject to terms he or she considers appropriate, under the Bonding Act (BCEPA 112.2h)
- exempting a person, class of persons, body of water or land area from this Act where its application may be unnecessarily restrictive (BCEPA 112.i)
- respecting the requirement and content of pest management plans (BCEPA 112.2j)
- prescribing pesticide monitoring standards and practices (BCEPA 112.2 k)

PRINCIPLES OF COMPLIANCE: MANDATORY INTERNATIONAL NORMATIVE STANDARDS (MINS)

CRITERIA OF PUBLIC TRUST (CPT)

Socially Equitable and Environmentally Sound Development

Prepared by Dr. Joan E. Russow

Co-ordinator Global Compliance Research Project

Federal Leader of the Green Party of Canada

Member, IUCN Commission on Education and Communication

Chair, Urbanization Caucus, formed at NGO forum, Habitat II
 Former Sessional Lecturer, Global Issues, University of Victoria
 1230 St. Patrick Street, Victoria, B.C. CANADA V8S 4Y4
 Tel/FAX (604) 598-0071. e-mail jrussow@coastnet.com.

Circulated in draft form, at numerous conferences since the United Nations Conference on Environment and Development (UNCED), and on the internet

Included as part of the Charter of Obligations circulated to state delegations at the UN Conference on Women: Equality, Development and Peace, 1995

Submitted to the Working Group for Establishing Criteria for Discharge Emissions, B.C. Canada, 1996

Submitted to the Canadian Standards Association meeting of the Western Caucus March 29, 1996 and extended May 7, 1996 and distributed at May 11,12 Canadian Standards Association meeting on ISO 14000 in Toronto

Distributed to the May 24 meeting of the Western Caucus meeting of the CSA on ISO in Vancouver and presented in summary form to the Committee II partnership consultation meeting at the Habitat II Conference in Istanbul and updated with principles from Habitat for the British Columbia Ministry of Environment, CANADA

Submitted to public consultation meeting on "Cost Recovery and Process efficiency in Environmental Assessment" Canadian Environmental Assessment Agency in September 1996, and given to a representative from CIDA (Canadian International Development Agency)

Displayed at the Forest and Sustainable Ecosystems Conference in Victoria, September, 1996, and circulated in draft form for comment as the environmental section of the "Istanbul Manifesto"

Presented in part at various sessions of the IUCN World Congress of Nature, 1996. These principles have also been submitted to Andrew Speer, the Director of Environment from the World Bank and sent to Maurice Strong from the Earth Council and to Dr Wiwa from the Ogoni tribe in Nigeria

Referred to at a consultation meeting with External Affairs about submission to Commission on Sustainable Development, and presented to Ambassador John Fraser, Canadian Ambassador on the Environment to the UN Sent to Earthwatch, Maurice Strong (Earth Council), and Elizabeth Dowdeswell (UNEP)

Submitted it to Steven Rockefeller for consideration for the Earth Council's Earth Charter.

Circulated for input into the Canada report to the Commission on Sustainable Development.;

Circulated to Environment Canada for discussion about Canadian policy for Sustainable Development

Placed on Environment Canada's web site; left in disk for inclusion on UN NGO Web site.

Requested and submitted to United Nations Environment Program (UNEP) for distribution to U.S. Congress; presented to the Federation of the Green Parties of the Americas

REPORT ON PRINCIPLES OF COMPLIANCE DERIVED FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS: BASIS FOR ESTABLISHMENT OF MANDATORY INTERNATIONAL NORMATIVE STANDARDS (MINS)

LEGEND

plain: International Conventions, Treaties and Covenants; Declarations, Conference Agendas, and General Assembly Resolutions

Plain Italics: sections proposed for deletion

plain: underlined: Proposals by NGOs

Outline: sections that have been proposed in documents but may not have been agreed to

bold: categories and proposals made by Global Compliance Research Project

OVERVIEW

It is necessary for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants, and expectations created through General Assembly resolutions, and commitments made through Conference Action plans have NOT been undertaken, and that most of the obligations, expectations and commitments have neither been discharged nor fulfilled, and that it is time for compliance through action.

The year 1999 ends the decade dedicated to the respect and furtherance of international law. For over 50 years member States of the United Nations have incurred obligations through conventions, treaties, and covenants, have made commitments through globally adopted action plans and have created expectations through General Assembly Resolutions. This respect and furtherance can only be realized if member States of the United Nations discharge obligations, fulfill expectations and act on commitments through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and through the fulfilling of expectations and the acting on commitments.

For over fifty years, through international agreements, the member States of the United Nations have undertaken: to promote and fully guarantee respect for human rights; to ensure the preservation and protection of the environment; to create a global structure that respects the rule of law, to achieve a state of peace, justice and security , and to participate in socially equitable and environmentally sound development. International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; and expectations created through the United Nations Declarations, Conference action plans and General Assembly Resolutions. If these years of obligations had been discharged; if these fifty years of expectations had been fulfilled; and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In international agreements, member States of the United Nations are deemed responsible for the discharging of obligations and for the fulfilling of expectations, and of commitments through enacting the necessary legislation and through enforcing this legislation.

In the Platform of Action from the UN Conference on Women: Equality, Development and Peace(1995), and in the Agenda from the Habitat II Conference

(1996) member States have undertaken “to ensure that corporations, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements and conventions, including those related to the environment, and other relevant laws (Article 167). In Habitat II, this undertaking was reaffirmed and then extended to include the undertaking by States to ensure that the “private sector” also comply (Article 148).

Member States that have ratified Conventions, Treaties and Covenants; are held to be legally responsible for discharging all obligations under these agreements. Also, members States that have signed but not ratified agreements are required under Article 18 of the Convention on the Law of Treaties to not defeat the purpose of the convention in the interim between the signing and the coming into force of the convention. There is no provision, however, for States to be bound to appear before the International Court of Justice or to be bound by its decision. In addition there is no provision for an international court of Compliance where citizens could take evidence of state and corporate non-compliance.

Expectations that have been created from General Assembly Resolutions, Declarations, and commitments made through Conference Action plans could be judicable under the Doctrine of Legitimate Expectation. The Doctrine of Legitimate Expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

In this report, principles related to environmental preservation and protection have been extracted from a synthesis of international obligations derived from the UN Charter, UN Conventions, treaties Covenants; and of expectations derived from United Nations Declarations, Conference action plans and General Assembly Resolutions. In addition, consideration has also been given to Non Governmental Organization submissions.

As a result of the commitments made in recent United Nations Conferences including UN Conference on Women, and Habitat for States to ensure private sector, corporate including transnational compliance with international agreements; this report is advocating the establishing of Mandatory International Normative Standards (MINS) drawn from international principles. The establishment of mandatory international normative standards-and-technical

regulations (MINS) will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development. Currently, the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology”, which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry, will there be the needed shift towards a real cooperation based on the highest tenable principles. Global mandatory regulations and standards are essential to drive corporations, including transnationals, to participate in socially equitable and environmentally sound development. The international community, including multilateral financial institutions, has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments. In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, States undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” In addition, the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which CONTINUE to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound traditions that national efforts to foster and achieve the objectives of socially equitable and environmentally sound development will be achieved.

This report delineates a series of principles drawn from international agreements and couples this series with additional principles suggested by non-governmental organization. Non-Governmental Organization principles are included as a reflection of a new development in United Nations Conferences. In the Habitat II Conference, a second committee had been set up to receive input from “partners”; one of whom was the Non-Governmental Organization Community; and for the first time, a submission from the NGOs was included in the official documentation to be circulated by the United Nations.

This report is a preliminary report where the principles are enunciated, and where some of the actions that would need to be undertaken to ensure the adherence to these principles have been proposed. A second report, which will

delineate further on what would constitute compliance with the principles, is being prepared. In addition, a book entitled, “ Global Non- Compliance: Over 50 Years of Obligations Incurred and Expectations Created” linking environment, peace, human rights and social justice issues, is being proposed. This book is a follow-up to the “Charter of Obligations”— 350 pages, which was officially distributed at the UN conference on Women: Equality, Development and Peace and to the “ Comment on Habitat II Agenda: Moving Beyond Habitat I to Discharging Obligations and to Fulfilling Expectations”, which was circulated to State delegations at Habitat II.

Following a series of meetings of the Urbanization Caucus at the NGO forum at Habitat II, the members of the Caucus decided to prepare “An Istanbul Manifesto”. This Manifesto will be a 400 page book comprising a collection of resolutions with the preambles drawn from international instruments, and the operative clauses drawn from resolutions from non-governmental sources. Sections from this document will be used to evaluate State compliance with undertakings through various conferences such as UNCED, World Conference on Human Rights, and Habitat II.

PRINCIPLES REFLECTED IN INTERNATIONAL AGREEMENTS: OBLIGATIONS INCURRED AND EXPECTATIONS CREATED

GENERAL GLOBAL URGENCY RECOGNIZED IN INTERNATIONAL AGREEMENTS BY THE UNITED NATIONS AND NON-GOVERNMENTAL ORGANIZATIONS

(See Charter of Obligations, 1995 for a comprehensive list of global recognition of the urgency of the global situation)

ACKNOWLEDGING THE PERPETUATION OF INEQUALITY AND THE DETERIORATION OF THE ECOSYSTEM

1. Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Preamble, Agenda 21, UNCED U.S., 1992)

ACKNOWLEDGING THE NEGATIVE IMPACT OF UNSTAINABLE PATTERNS OF CONSUMPTION PARTICULARLY IN INDUSTRIALIZED COUNTRIES

2. We recognize that “the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

RECOGNIZING INCREASED ECOLOGICAL THREATS TO FUTURE GENERATIONS

Ecological problems, such as global climate change, largely driven by unsustainable patterns of production and consumption, are adding to the threats to the well-being of future generations. (Preamble, 1.2 International Conference on Population and Development, 1994)

PRINCIPLES

A goal could be described as the final purpose or end to which a design tends or which a person, institution or any other body aims to attain. Principles however, do not establish a goal or vision which is unattainable, and which is to be compromised through trade-offs. A principle is a foundation from which anything proceeds, a comprehensive law or doctrine from which others are derived or on which others are founded. Principles give substance to standards. A standard is that which is set up and established by authority as a rule for the measure of value or that which is established by authority, custom or general consent as an example or criterion. The principle provides the foundation for the standards.

(1)

INTERDEPENDENCE PRINCIPLE

The interdependence principle affirms the interdependence of promoting and fully guaranteeing respect for human rights; ensuring the preservation and protection of the environment; creating a global structure that respects the rule of law, achieving a state of peace, justice and security, and participating in socially equitable and environmentally sound development. These issues will be perceived to be interdependent facets of a potentially viable solution. It is no longer possible to consider in isolation: threats and impacts of war, the use of ecologically unsafe and unsound energy, the loss of ecological integrity, the disposal of toxic and hazardous wastes, including nuclear waste, the disregard for inter-generational and gender equality/equity, the ignoring of health issues related to population and environmental degradation, the perpetuation of the current model of development, the inequitable distribution of resources and the disenfranchised and the enfranchised gap etc.

1.1. RECOGNIZING THE GROWING AWARENESS OF THE INTERCONNECTION OF ISSUES

... reflects[ing] the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation (Preamble, 1.5., International Conference on Population and Development, 1994).

1.2. UNDERTAKING RESEARCH INTO LINKAGES

Research *should shall* be undertaken on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to

effective **socially equitable and environmentally-sound sustainable development** policies (3.31., International Conference on Population and Development, 1994)

1.3. RECOGNIZING DEPENDENCE ON NATURE

mankind humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (Preamble (a) UN Resolution, 37/7, World Charter of Nature, 1982)

1.4. RECOGNISING THE PRESENT AND FUTURE IMPACT OF ENVIRONMENTAL CONTAMINANTS

(a) (Article 95 bis. Many environmental contaminants, such as radioactive materials and persistent organic pollutants, work their way into the food chain and eventually into human beings, thus compromising the health of present and future generations. (Habitat II)

(2)

ECOSYSTEM PRIMACY PRINCIPLE

Through mandatory international standards, States shall undertake that, in all decisions made about interventions into the ecosystem, the ecosystem shall be given primacy. Through a 1982 General Assembly Resolution 37/7, the majority of States undertook to “Ensuring that every form of life is unique, warranting respect regardless of its worth to humans” (World Charter of Nature, 1982). Also, through General Assembly resolution 37/7, it was recognized that humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients.

“Ecosystem” is defined in the Convention on Biological Diversity as a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit (Convention on Biological Diversity, UNCED, 1992). Biodiversity is defined as “the variability among living organisms from all sources including terrestrial, marine and other aquatic ecosystems, and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems (Convention on Biological Diversity, UNCED, 1992)

Interdependence of biota and the delicate balance and interaction among various ecosystems shall be ensured as well as the integrity of the components themselves.

2.1. RESPECTING OF INHERENT WORTH OF NATURE

Every form of life is unique, warranting respect regardless of its worth to man [Humanity], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

Nature shall be respected and its essential processes shall not be impaired (Principle 1, UN Resolution, 37/7, World Charter of Nature, 1982) World Charter of Nature, 1982)

2.3. REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

Promoting changes in unsustainable production and consumption patterns, particularly in industrialized countries...settlement structures that are more sustainable, reduce environmental stress , promote the efficient and rational use of natural resources- including water, air, biodiversity, forests, energy sources and land - and meet basic needs thereby providing a healthy living and working environment for all and reducing the ecological footprint of human settlements; (27 b, Habitat II, 1996)

2.4. ACTING UPON THE ACKNOWLEDGMENT THAT THERE ARE LIMITS-TO GROWTH: LIVING WITHIN THE CARRYING CAPACITY OF THE ECOSYSTEM

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed, and failure to act upon this acknowledgment is negligence.

* [Find: Quote from Club of Rome]

2.5. RESPECTING THE CARRYING CAPACITY OF ECOSYSTEMS

Sustainable human settlements development incorporates... the precautionary principle, pollution prevention, respect for the carrying capacity of ecosystems and preservation of opportunities for future generations. (16, Habitat II). **Respecting the carrying capacity of ecosystems also entails acknowledging that there are limits to growth, and respecting the inherent worth of nature, and thus does not justify increased pollution in pristine areas, or give a licence to pollute less polluted areas.**

2.6. KNOWING ECO-CYCLES

To facilitate capacity-building and institutional development for the improvement of human settlements planning and management, governments at the appropriate levels, including local authorities and their associations, should: * be encouraged to increase their knowledge about the eco-cycles involving their cities so as to prevent environmental damage (Art. 135, Habitat II, 1996)U.S.

2.7. PROMOTING THE CONSERVATION AND STAINABLE USE OF URBAN AND PERIURBAN BIODIVERSITY

In order to promote a healthy environment that will CONTINUE to support adequate shelter for all and sustainable human settlements for current and future generations, Governments at the appropriate levels, in partnership with all relevant interested parties, should:

(a) Promote the conservation and sustainable use of urban and peri-urban biodiversity, including forests, local habitats and species biodiversity; the protection of biodiversity should be included within local sustainable development planning activities

(b) encourage, where appropriate, the establishment of productive and recreational green belts around urban and rural agglomerations in order to protect their environment and contribute to the provision of food products. (Article* 98 bis Habitat II, 1996)

2.8. ENSURING EQUAL ACCESS TO... GREEN SPACES

Formulate and implement human settlement development policies that ensure equal access to and maintenance of basic services, including those related to the provision of food security; education; employment and livelihood; primary health care [changed to basic health care, June 14] , including reproductive and sexual health care and services [deleted June 14]; safe drinking water and sanitation; adequate shelter; and access to open and green spaces; giving special priority to the needs and rights of women and children, who often bear the greatest burden of poverty (Article *87(a) Habitat)

2.9 BEING ENTITLED TO ... HEALTHY PRODUCTIVE LIFE IN HARMONY WITH NATURE

human beings are entitled to a healthy and productive life in harmony with nature (Article 23, Habitat II, 1996)

2.10. ENSURING SOCIAL PROGRESS IN HARMONY WITH THE ENVIRONMENT

Sustainable settlements development ensures economic development, employment opportunities and social progress in harmony with the environment

(3)

GLOBE-WIDE STANDARDS PRINCIPLE

3.1. ESTABLISHING GLOBE-WIDE STANDARDS

Through mandatory international normative standards (MINS), the invalid argument that, in a pristine environment that has not yet been polluted by industrial activity, emission standards shall be relaxed. A licence to pollute in an pristine area shall not be given to industry because the area has not yet officially been designated as being polluted would be discredited.

Polluting industries that have been regulated under statutory law, shall not through redefinition of practice, be excluded from the previous regulations.

States shall ensure consistency so that point source discharges, no matter where they are located will be equally affected by the standards.

Standards must ensure acceptable ambient environmental conditions globally. No particular area should be penalized due to a preexisting high quality environment.

In no way shall the requirement to ensure consistency be used as a justification for the relaxing of globe-wide standards and technical regulations.

3.2. HARMONIZING UPWARD OF THE "PLAYING FIELD"

Through mandatory international standards (MINS) States shall ensure that the regional, national, and international targets with the highest possible socially equitable and environmentally sound standards shall be drawn upon.

3.3. ENFORCING GLOBE-WIDE PREVENTION, REDUCTION AND ELIMINATION

Through mandatory international standards (MINS), States shall establish and enforce reduction and elimination targets and ensure that corporations including transnationals meet or exceed, globe-wide reduction and elimination targets, Ambient criteria, or environmental quality standards referring to levels of contaminants in the environment must be zero use, production, and release in all cases where a toxic substance is persistent or bio-accumulative, or where substance will generate persistent or bio-accumulative toxic by-products or breakdown products during its productions, use or disposal (paraphrase of Zero Toxics Alliance Statement of Principles)

Given that local and regional goals and targets may not have taken into consideration pollution prevention, the goals and targets, consequently, shall be reassessed in the light of the precautionary, anticipatory principle, and other principles such as those advocated by the Zero Toxics Alliance in their Statement of principles from July 26, 1994: .

Zero Toxics Statement of Principles from the "Zero Toxics Alliance Statement of Principles" 7/26/94

1. ... zero use, production , and release of persistent and /or bio-accumulative toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero.
2. ... elimination and reduction of the use, production , and release of other toxics substances in the environment, workplace and home.
3.the goal of zero use, production, and release applies in all cases where a toxic substances is persistent or bio-accumulative. It also applies when a substance will generate persistent or bio-accumulative toxic by-products or breakdown products during its production, use or disposal
4. ... advocat[ing] programs that achieve ...goals through reformulation of industrial processes associated with toxics use and production. Limiting discharges and shifting toxics from one environmental medium to another do not protect people or the environment

5. ...reject[ion] of risk assessments which claim that exposures to toxic substances are safe

In addition, in establishing international standards, drafters shall give serious consideration to “bio-concentration”. For example the discharge of mercury was deemed to be at an acceptable level. The mercury, however, was taken up by small organisms becoming more highly concentrated as it moved up the food chain. Biopathways must always be examined”.

3.4.. STRIVING TO ENSURE THAT THE LOCAL, REGIONAL AND NATIONAL TARGETS IN EACH STATE SHALL DRAW UPON THE HIGHEST POSSIBLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND STANDARDS

Collectively, the member States of the United Nations, are in a position to drive industry through regulations which establish the highest possible equitable and ecological standards and technical regulations and to promote the highest possible level global playing field.

3.5. ENSURING GLOBE-WIDE CONSISTENT PROTECTION OF AMBIENT AIR, WATER, AND SOIL QUALITY

Through mandatory international standards, States shall ensure consistent protection considering both variation in air water and soil conditions locally, regionally, nationally and globally and the variation in effects of different substances emitted. However, ensuring consistent protection also means that States will not transfer their pollution problems onto other jurisdictions nor will States relax or change their standards or technical regulations in order to attract industry.

regulations.

(4)

COMPLIANCE PRINCIPLE

States shall discharge obligations, and fulfill expectations, and shall enact the necessary measures to ensure the discharging of obligations and the fulfilling of expectations through mandatory international normative standards (MINS) , legislation to ensure that corporations comply .

In Art. 60 of the Convention of Treaties, States are bound to not create situations in which it would be impossible to fulfill treaty obligations; in many cases current ecologically unsound practices result in the impossibility of fulfilling treaty obligations. Also, under the Convention of the Law of Treaties, States are bound, unless specifically mentioned, not to invoke internal law to justify non performance of a treaty obligation (Art. 27).

Through mandatory international normative standards (MINS), States shall comply with all international, national, bilateral and regional agreements, protocols and conventions as a minimum. If there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail. In 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, States undertook to ensure that “all corporations, including trans-national corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws” (Section 167). This undertaking was reaffirmed and extended in the Habitat II Agenda to include the “private sector”.

A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose (Art.1.Convention on the Law of Treaties, 1968)

Rules of customary international law will CONTINUE to govern questions not regulated by the provisions of the present Convention have agreed as follows (Article 29 territorial scope of treaties, Convention on the Law of Treaties)

4.1. REFRAINING FROM ACTS THAT WOULD DEFEAT THE PURPOSE

The Law of Treaties has established that there exists an

obligation not to defeat the object and purpose of a treaty prior to its entry into force

A State is obliged to refrain from acts which would defeat the object and purpose of a treaty when:

- (i) it has signed the treaty or has exchanged instruments constituting the treaty subject to ratification, acceptance or approval, until it shall have made its intention clear not to become a party to the treaty a); or
- (ii) it has expressed its consent to be bound by the treaty, pending the entry into force of the treaty and provided that such entry into force is not unduly delayed b)

(Art. 18, Convention on the Law of Treaties, 1968)

4.2. APPLYING THE DOCTRINE OF LEGITIMATE EXPECTATIONS

The Doctrine of Legitimate Expectations has established an institutional obligation to citizens:

- (i) "To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, B.C. Ombudsman Annual Report, 1991)

and that

- (ii) If a government holds itself out to do something even if not legally required to do so, it will be expected to act carefully and appropriately without negligence, and the citizens have the legitimate expectation that the government will discharge its obligations (Ombudsman Office, Personal Communication).

(See Russow, J. (1995) Charter of Obligations for A survey of obligations compiled by the Global Compliance Research project.

4.3. ENACTING INTERNATIONAL PRINCIPLES IN STATE LAW AND PRACTICE

The obligation to enact the necessary legislation to ensure compliance has been established in international Conventions, Protocols, Declarations, Covenants, and Resolutions, and has thus become a principle of international customary law. Through international mandatory standards States shall ensure that international obligations are reflected in the law and practice of each State. This international customary law principle has been expressed in numerous international documents for over 20 years. An example of the enunciation of the principle can be found in the UN Resolution 37/7. and reads as follows:

The principles set forth in the present Charter shall be reflected in the law and practice of each State, as well as at the international level (UN Resolution 37/7)

If there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail.

4.4 ACKNOWLEDGING THE NEED FOR MORAL CODE OF ACTION IN RESPECT OF NATURE

The World Charter of Nature provided guidance for human respect for and action towards nature:

Ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans] , and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (UN Resolution 37/7), 1982)

4.5. ADOPTING PERFORMANCE STANDARDS

Join with professional societies to review and revise building codes and regulations based on current standards of engineering, building and planning practices, local conditions and ease of administration, and adopt performance standards **for all industrial activity**, as appropriate (Art. 169 n, Habitat II, 1996)

4.6. ESTABLISHING POLICIES, LAWS AND REGULATIONS

Governments at all appropriate levels, including local authorities have a responsibility to ensure access to education and to protect their population's health, safety and general welfare. This requires, as appropriate, establishing policies, laws and regulation for both public and private activities...(Article 19, Habitat II, 1996)

4.7 ESTABLISHING AND ADOPTING A REGULATORY FRAMEWORK

establish and adopt a regulatory framework, and provide institutional support for facilitating participation and partnership arrangements at all levels. (Article 50 e, Habitat II)

4.8 ESTABLISHING LEGISLATIVE AND REGULATORY FRAMEWORKS

* Establishing legislative and regulatory frameworks, institutional arrangements and consultative mechanisms for involving organizations in the design, implementation and evaluation of human settlements strategies and programmes (Art. 180 (a), Habitat II, 1996)

4.9 ENSURING OF COMPLIANCE OF PRIVATE SECTOR

Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies to ensure that the private sector, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws, and adopt policies and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on an equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children (Article 148 * e, Habitat II)

4.10 PROMOTING ...ETHICAL PRACTICES

promote transparency, accountability and ethical practices in financial transactions through support from effective legal and regulatory frameworks (Article 61* (d) Habitat II)

4.11. ESTABLISHING MONITORING AND EVALUATING COMPLIANCE WITH ENVIRONMENTAL REGULATIONS AND EFFECTIVENESS OF ENFORCEMENT AT ALL LEVELS

Establish, equip and build capacity for monitoring and evaluating compliance with environmental regulations and effectiveness of enforcement at all levels (Article 97 (c) Habitat II);

4.12. IMPLEMENTING LOCAL ENVIRONMENTAL PLANS AND LOCAL AGENDA 21

support mechanisms for consultations and partnerships among interested parties to prepare and implement local environmental plans and local Agenda 21s and specific cross-sectoral environmental health programmes (Article 97 (h)Habitat II)

4.13. PROMOTING COMPLIANCE AND ENFORCEMENT

Promote, where appropriate, compliance with and enforcement of all health and environmental laws, especially in low-income areas with vulnerable groups (Article 75 d Habitat) U.S.

(5)

REGULATOR MT NOT BE PROMOTER PRINCIPLE

This principle holds that regulators must not promote the continuance of the object or activity over which they regulate. For example, IAEA (The International Atomic Energy Association) that has the responsibility of regulating the civil nuclear industry promotes the use of nuclear energy.

(6)

STANDARDS-DRIVING INDUSTRY PRINCIPLE

Through mandatory international normative standards (MINS) , States shall ensure that standards drive industry rather than industry driving standards. States in conjunction with international standards shall establish regulations that will drive industry. The cost to the environment of CONTINUED degradation as a result of not enforcing standards and regulations rather than the cost to industry of environmental regulations shall be paramount.

Socially equitable and sound environmental performance will be determined by mandatory international normative standards (MINS) and technical regulations. These standards and technical regulations have as a foundation international principles related to promoting and fully guaranteeing respect for human rights; to ensuring of the preservation, conservation and protection of the environment; to creating a global structure that respects the rule of law, to achieving a state of peace; justice and security, and to participating in socially equitable and environmentally sound development.

There shall be continuous monitoring to ensure that corporation including transnationals, as well as small operations and the private sector generally are complying with international normative standards and technical regulations. In the event of non-compliance with MINS, the charters of all the corporations including the transnationals that contribute to conflict, to the escalation of war,

to the violation of human rights and to the degradation of the environment shall be revoked. The emphasis of the international mandatory and normative regulatory policy is to ensure that standards drive industry not industry driving standards.

To this end, all promotion shall focus on developing and implementing BEST (Best Environmentally Sound Traditions) practices. The environment and ecosystem will determine BEST practices not be “managed”

MINS establishes absolute requirements for environmental performance to satisfy socially equitable and environmentally-sound development.

“socioeconomic needs”, when referred to in international documents shall be limited to socially equitable and environmentally sound development principles, including fundamental international rights but shall not include a professed right to engage in socially inequitable and environmentally unsound practices.

All impacts of the corporation or business shall be examined even those impacts that normally would be deemed beyond objective quantification. Ignorance by corporations, including transnationals of the deleterious consequences arising from inequitable/ecologically unsound practices shall not absolve corporations from legal responsibility.

6.2 REVOCATION OF CHARTERS PRINCIPLE

In the event of non-compliance with MINS, the charters of all the corporations including the transnationals that contribute to conflict, to the escalation of war, to the violation of human rights and to the degradation of the environment shall be revoked.

(7)

NON-PROSECUTING FOR DEMONSTRATING FOR COMPLIANCE WITH STANDARDS

States shall not prosecute citizens for demonstrating to protest non-compliance with regional, national or international standards.

(8)

NON-TRANSFERENCE OF MEDIA

Through mandatory international normative standards (MINS) , States shall ensure that polluting substances are not transferred from one media to another (for example from water to air). In other words, pollution prevention is complete prevention instead of displacement of problem

(9)

INCLUSIVENESS OF ACTIVITIES AND SUBSTANCES PRINCIPLE

Through mandatory international standards (MINS) , States shall ensure that every activity or substance that could prevent the protection and, conservation of the environment will be included under regulatory schemes, regardless of whether the activity or substance is presumed to be covered under another Act For example, “atomic wastes” have not been included under the Basel Conventions dealing with hazardous wastes, and currently “forestry” is proposed for exclusion from the Biodiversity Convention rather than being a protocol linked with the Biodiversity Convention, Climate Change Convention, Convention on Desertification or other relative conventions.

(10)

PRECAUTIONARY PRINCIPLE

Through mandatory international standards, States shall invoke and ensure compliance with the precautionary principle.

The precautionary principle has been enunciated in international documents since at least the 1972 United Nations Conference on Humans and the Environment (Stockholm Convention), where it appeared in a rudimentary form; it was then reinforced in the 1982 UN Resolution 37/7, the World Charter of Nature, and then re-enunciated throughout the UNCED documents.

The precautionary principle has been enunciated ” as follows:

where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat” (Convention on Biological Diversity, UNCED, 1992)

This could be generalized into the following form:

Where there are threats of serious or irreversible damage, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent environmental degradation.

(Note: that the precautionary principle shall not be misconstrued to mean” that there is evidence but not scientific certainty, that a particular practice, substance or activity is causing harm therefore we shall CONTINUE the practice; or the precautionary principle should not be used to justify not using an environmentally sound practice because it is not scientifically based.)

The precautionary principle shall be applied to all potentially harmful emissions, contaminants, agents of pollutants, or re-concentrated substances—created through imbalance in biogeochemical cycles

(11)

ANTICIPATORY PRINCIPLE

States shall ensure that, in all their activities and in the activities of corporations, including transnational corporations, there is adherence to the anticipatory principle.

In the international documents different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

11.1. ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (General Assembly Resolution, 37/7, 1982)

11.2. ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

Undertake measures to prevent soil erosion and promote erosion-control activities in all sectors. (13.16 Fragile ecosystem, Agenda 21)

11.3. TAKING INTO ACCOUNT CRADLE-TO-GRAVE APPROACH

taking into account the cradle-to-grave approach **by phasing out and eventually eliminating the production and consumption of hazardous waste to the management of hazardous wastes, in order to identify BEST practices for phasing out and eventually eliminating options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction** (20.20 e Hazardous wastes, Agenda 21).

11.4. ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, and **through the establishment of Mandatory International Normative standards** should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits. (20.20 e Hazardous wastes)

11.5. ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products **including the phasing out and eventual elimination of toxic chemicals and the ensuring of BEST (Best Environmentally Sound Traditions) practices.** (19.15 e, Toxic Chemicals, Agenda 21)

11.6. PROMOTING A CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

11.7. ENSURING RESPONSIBLE CARE

Industry **shall be required** *should be encouraged* to (19.51 Toxic chemicals) "develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

11.8. REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

11.9. RECOGNIZING THE NEED OF ANTICIPATORY POLICIES

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a trans-boundary context (Convention on Environmental Impact Assessment in a trans-boundary context, 1994)

The anticipatory principle shall be followed as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.

(12)

PREVENTION PRINCIPLE AND “REVERSE ONUS “ PRINCIPLE

Through mandatory international normative standards (MINS), States shall ensure that in all its activities and in the activities of corporations, including transnational corporations, there is adherence to the prevention principle and “reverse onus “ principle

12.1. PREVENTION PRINCIPLE

Mandatory standards and technical regulations will be developed to prevent adverse effects of substances on the ecosystem including the adverse effects on the health of human and non-human species.

Adverse effects include, but are not limited to, toxicity, bio-accumulation, bio-concentration; persistence, destruction [depletion] of the stratospheric ozone layer, reduction of carbon sinks, increased greenhouse gases, increased human-induced climate change and global climate change, reduction or loss of biodiversity, as well as heat, light and electro-magnetic radiation, atomic radiation, thermal discharges, hormone mimicry, egg-shell thinning

Adverse effects include the above environmental effects and effect and impacts on human health.

NOTE: DEFINITION OF 'ENVIRONMENT"

Environment

means the components of the earth and includes:

- (a) air, land, water, sediment, soils
- (b) all organic and inorganic matter, including living organisms such as humans and non-humans
- (c) the interacting ecological systems that include components referred to in sub-clauses (a) and (b)

Adverse effects include the above environmental effects and effect and impacts on human health U.S.

12.2. INVOKING THE REVERSE-ON PRINCIPLE

Through mandatory international standards, States shall adopt the reverse-onus principle. With the reverse onus, the onus of proof shall shift from the opponents of an intervention having to demonstrate harm to the proponents of an intervention having to demonstrate safety.

13

DISASTER PREVENTION PRINCIPLE

13.1. ENSURING ADEQUATE REGULATORY ...MEASURES TO PREVENT DISASTERS

PREVENTION OF DISASTERS, including major technological disasters by ensuring adequate regulatory and other measures to avoid their occurrence and reducing the impacts of natural disasters and other emergencies on human settlements... (27 i, Habitat II, 1996)

13.2. PROMOTING THE USE OF TOOLS FOR DISASTER PREVENTION OF NATURAL, ANTHROPOGENIC AND INDUSTRIAL DISASTERS

Promote the use of tools for disaster prevention, mitigation, and preparedness in order to reduce the vulnerability of populations to natural, man-made and technological disasters (Article 75 (g) Habitat II, 1996) .

The impact on people and human settlements of natural and human-made disasters is on the increase. Disasters are frequently caused by vulnerabilities created by human actions, **such as the consumption and production of ozone-depleting substances, of green-house gas emissions, of toxic, hazardous and atomic wastes**; such as uncontrolled or inadequately planned human settlements, lack of basic infrastructure and the occupation of disaster-prone areas, **and such as the CONTINUED production of arms and weapons of mass destruction, and the CONTINUED visits of nuclear powered vessels in urban ports**. Armed conflicts also have consequences that affect human settlements and the country as a whole and call for specific rehabilitation and reconstruction processes that may necessitate international involvement, at the request of the Government of the concerned country. The impact of such disasters and emergencies is especially severe in countries where prevention, preparedness, mitigation and response capacities are ineffective in dealing with such situations (Article 24. Habitat II, 1996) .

13.3. IMPROVING NATURAL AND HUMAN-MADE DISASTER PREVENTION

In improving natural and human-made disaster prevention, preparedness, mitigation and response, Governments at the appropriate levels, including local authorities, and in close consultation and cooperation with such entities as insurance companies, non-governmental organizations, community-based organizations, organized communities, the academic, health and scientific communities, **shall should**: (Article 126, Habitat II, 1996)

13.4. INCLUDING PARTICIPATION IN RECOGNIZING VULNERABILITY TO HUMAN-MADE AND NATURAL DISASTERS

Ensure that serious public concern about an activity or technology that could lead to preventable disaster be taken into consideration and the activity or technology shall be prevented or banned, and ensure that the participation in preparing and planning for non-preventable disaster *planning and management* of all [stakeholders individuals and organizations of civil society with a wide range of experience and expertise, including particularly marginalized members of society such as], including women, children, the elderly, and people with disabilities, in recognition of their particular vulnerability to human-made and natural disasters (Article 126 a bis Habitat II, 1996) ;

13.5 ENSURING REGULATIONS THAT WILL PREVENT PREVENTABLE ANTHROPOGENIC DISASTERS

ensuring regulations that will prevent preventable anthropogenic disasters and encourage CONTINUED *mobilization of* domestic and international resources for disaster reduction activities for non-preventable disasters (Article 126 (b) Habitat II, 1996) ;

Given that since the development of nuclear technology the most significant preventable anthropogenic disaster has been the preventing of nuclear-related disasters, and given that the outcome of nuclear disasters, including from nuclear arms and nuclear civil reactors, has had irreversible consequences that cannot be considered to have been remediated other than by forced reallocation ; and CONTINUES to have unexpected consequences; the global community, if it is to embark upon the prevention of preventable disaster, shall prevent the CONTINUED production of nuclear arms, the mining of uranium for the producing of nuclear arms, the testing of nuclear arms, the circulating and harbouring of nuclear-armed or nuclear-powered military vessels, and the using of civil nuclear reactors. It should be noted that at the 1972 UN Conference on Human Environment (UNCHE) held in Stockholm the States globally adopted the commitment in Article 26 to ⁶⁶eliminate the production of weapons of mass destruction” and twenty years later a Nobel Laureate Declaration called for the phasing out of civil nuclear reactors, and in 1994, and 1996 resolutions from the IUCN have called for the phasing out of the use of civil nuclear reactors. As a consequence of the development and testing of nuclear weapons, disasters with irreversible environmental consequences have occurred and communities have been displaced, there has to be an acknowledgment that there is no acceptable remediation to these nuclear disasters. There is a need for the safe resettlement of displaced populations; especially those from small island developing States and coastal regions. There also has to be an acknowledgment that there is no real restoration of sites that have been exposed to radiation from nuclear disasters, otherwise the perpetuation

of the belief in the possibility of restoration could justify the CONTINUED nuclear associated technologies.

13.6 PREVENTING DISASTERS THROUGH BUILDING A CULTURE OF SAFETY

Promote and encourage all parts of society to participate in disaster preparedness planning in such areas as water and food storage, fuel and first-aid, and in disaster prevention through activities that build a culture of safety (Article * 127 (d) Habitat II, 1996)

In order to prevent technological and industrial disasters, governments at the appropriate levels, including local authorities, as appropriate, should

(Article * 127 bis :

Pursue the objectives of preventing major technological accidents and limiting their consequences through, inter alia, land-use policies and the promotion of safe technology (Article 127 (a) Habitat II, 1996)

13.7. REMOVING IMMEDIATELY ANTI-PERSONNEL LAND MINES

Support work for immediate removal of anti-personnel land mines following the cessation of armed conflict (Article 128 (i) Habitat II, 1996) ;

13.8. PREVENTING POLLUTION AND EXPOSURE TO POLLUTION

DISCOURAGING DISPROPORTIONATE SITINGS

Prevent or minimize pollution and exposure to pollution from industrial facilities, while also promoting urban planning, housing and industrial siting initiatives that discourage the disproportionate sittings of polluting industrial facilities in areas inhabited by people living in poverty or those belonging to vulnerable and disadvantaged groups (Article * 84 e Ter Habitat II, 1996)

13.9. PREVENTING AND MITIGATING ADVERSE ENVIRONMENTAL IMPACTS

Increasingly, cities have a network of linkages that extends far beyond their boundaries. Sustainable urban development requires consideration of the carrying capacity of the entire ecosystem supporting such development including the prevention and mitigation of adverse environmental impacts occurring outside urban areas. All trans-boundary

movements of hazardous waste and substances should be carried out in accordance with relevant international agreements by parties to those agreements. Rapid urbanization in coastal areas is causing the rapid deterioration of coastal and marine ecosystems (Article * 79 Habitat II, 1996) .

13.10. REDUCING SIGNIFICANTLY OR ELIMINATING ENVIRONMENTALLY HARMFUL SUBSIDIES

Reduce significantly or eliminate environmentally, harmful **technologies**, subsidies and other programmes, such as those which stimulate the excessive use of pesticides and chemical fertilizers, and price control or subsidy systems that perpetuate unsustainable practices and production systems in rural and agricultural economies. (Article 122 (e) Habitat II)

13.11. TAKING INTO ACCOUNT INTERNATIONAL AGREEMENTS AND INSTRUMENTS

In seeking to prevent trans-boundary pollution and minimize its impacts on human settlements when it does occur, governments should cooperate to develop appropriate mechanisms for assessing the environmental impact of proposed activities that are likely to have a significant adverse impact on the environment, including an evaluation of relevant comments provided by other potentially affected countries. Governments should also cooperate to develop and implement mechanisms for prior and timely notification, exchange of information and consultation in good faith, and mitigation of the potential adverse effects regarding those activities, taking into account existing international agreements and instruments. (Article 99 bis Habitat II)

Through various international instruments States have undertaken to ban the use of production and consumption of ozone depleting substances (Vienna Convention on depletion of the ozone layer, 1985); to reduce the production of greenhouse gases and to conserve carbon sinks (Framework Convention on Climate Change, 1992); to identify biodiversity and to carry out and environmental impact assessment of activities that could contribute to the loss or reduction of biodiversity; to combat desertification (Convention on the Combating of desertification); to promote renewable energy (Chapter 9, Agenda 21) and to phase out fossil fuel (Habitat 1). To preserve cultural and natural heritage (Convention on the Protection of Cultural and Natural Heritage, 1972)

In addition, States have agreed to the precautionary principle, the anticipatory principle, the internalizing of environmental costs (environmental audit). Yet few States, if any, have taken the necessary measures.

13.12. INVOKING THE REVERSE-ONUS PRINCIPLE

Through mandatory international standards, States shall adopt the reverse-onus principle. With the reverse onus, the onus of proof shall shift from the opponents of an intervention having to demonstrate harm to the proponents of an intervention having to demonstrate safety.

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

[NOTE THAT THE HONORABLE SHEILA COPPS, WHEN SHE WAS THE MINISTER OF ENVIRONMENT OF CANADA HAS CALLED FOR THE IMPLEMENTATION OF THE REVERSE ONUS.]

BUTTER FINGERS

(14)

REFUSE OR REUSE TO AVOID MISUSE AND ABUSE PRINCIPLE

Citizens should be encouraged to refuse to use products that originate from inequitable and ecologically-unsound development, and, in other cases where the products have been derived from equitable and ecologically sound development and practices, every effort shall be made to reuse the products.

(15)

NON-TRANSFERENCE OF HARMFUL SUBSTANCES OR ACTIVITIES PRINCIPLE

Through mandatory international normative standards (MINS) , States shall ensure the prevention of the transference of substances or activities, harmful to the environment or human health to other parts of the state or to other States.

15.1. PREVENTING THE TRANSFER OF SUBSTANCES AND ACTIVITIES THAT ARE HARMFUL TO HUMAN HEALTH AND THE ENVIRONMENT

This principle was globally adopted at the UNCED:

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration, UNCED)

This principle shall never be qualified by the excuse that the recipient State is willing to accept the harmful substances or activities. Also the excuse of “Extraterritoriality” shall not be used as an devise to justify the transferring these harmful substances and activities (i.e. what right do we have to impose our standards on other communities, regions or States—self-serving extraterritorialism-avoidance).

15.2. ENSURE AVOIDANCE OF DUMPING OF ENVIRONMENTALLY UNSOUND TECHNOLOGIES

Seeking to ensure that the process of technology transfer avoids the dumping of environmentally-unsound technologies on the recipients and that the transfer of environmentally-sound technologies and corresponding know-how in particular to developing countries, is on favourable terms, as mutually agreed, taking into account the need to protect intellectual property rights (Article *151 b Habitat II)

15.3. RECOGNIZING THAT THE USE AND TRANSFER OF ENVIRONMENTALLY SOUND TECHNOLOGIES IS A PREREQUISITE FOR “SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT”

The use and transfer of environmentally sound *technologies* **practices** which have a profound impact on consumption and production patterns are prerequisites for **socially equitable and environmentally sound sustainable** human settlements *development*. *Advanced BEST (Best Environmentally Sound Traditions) practices and appropriate technologies* and the knowledge-based systems which support their application offer new opportunities for more efficient use of human, financial and material resources, *more sustainable industrial practices* and new sources of **meaningful** employment. International agencies including UNCHS (Habitat) have an essential role in disseminating and facilitating access to information on **BEST practices available technologies** and options for their transfer. It is understood that the transfer of *technology BEST practices* includes assurances of adequate protection of intellectual property and mutually agreed allocation of *commercial benefits*, particularly those benefits that shall accrue to developing countries for **traditional practices including those related to biodiversity, and biotechnology**]. (Article 151. Habitat II, 1966)

the use and transfer of environmentally-sound technologies that have a profound impact

consumption and production patterns are prerequisites for sustainable human settlements development. Advanced and appropriate technologies and the knowledge-based systems that support their application offer new opportunities for more efficient use of human, financial and material resources, more sustainable industrial practices and new sources of employment. International organizations have an important role to play in disseminating and facilitating access to information on technologies available for transfer. It is understood that the transfer of technology will take into account the need to protect intellectual property rights (Article 151 *Habitat II, 1966) U.S.

(16)

NOT RELAXING STANDARDS TO ATTRACT INDUSTRY PRINCIPLE

Through mandatory international normative standards (MINS), States shall not relax or change standards and technical regulations to attract industry.

This principle was enunciated in NAFTA:

The Parties recognize that it is inappropriate to encourage investment by relaxing domestic health, safety or environmental measures. Accordingly, a Party should not waive or otherwise derogate from, or offer to waive or otherwise derogate from such measures as an encouragement for the establishment, acquisition, expansion or retention in its territory of an investment of an investor. IF a Party considers that another Party has offered such an encouragement, it may requires consultations with the other Party and the two Parties shall consult with a view to avoiding any such encouragement. (NAFTA Article 1114 ss 2)

In addition, States shall not refrain from establishing the highest standards to correspond to Mandatory International Normative Standards and Technical Regulations based on international principles, or not change existing high standards so as to attract industry

(17)

trans-boundary PRINCIPLE

Through mandatory international normative standards, States shall take all measures necessary to ensure that activities under their jurisdiction or control are so conducted as not to cause damage by pollution to other States and their environment,

and that pollution arising from incidents or activities under their jurisdiction or control does not spread beyond the areas where they exercise sovereign rights in accordance with this Convention. (Art. 194. 2., Law of the Seas, 1982)

(18)

RENEW ABILITY PRINCIPLE

All use of non-renewable resources shall be phased out, with firm time-lines. Renewable resources shall be harvested according to socially equitable and environmentally sound development principles:

(19)

BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES

ENVIRONMENTAL SOUNDNESS PRINCIPLE

Through mandatory international normative standards (MINS), States shall ensure that they use and that corporations including transnationals use BEST technology (best environmentally sound traditions)

There is no guarantee that the Best Available Technology will be ecologically sound. BAT may be the best available but it may not be good enough. It is important to support and promote the development of and the use of BEST (Best Environmentally Sound Traditions). In the event that there is no BEST practice which can prevent the release of persistent or bio-accumulative toxics then the extractive or productive activities which produce the product or substance process should be changed; the activities and product phased out / outlawed, or the demand for the product reduced through public education. In this case, the industry involved shall be assisted in the conversion to alternative processes or products involving BEST practices.

Presumably, if there is a commitment to develop alternatives, there will be a concomitant responsibility to relocate funding from the current practices of mitigating of ecologically unsound practices of the “environment industry” to the preventing of ecologically unsound practices and thus to the development of BEST practices.

19.1.SUBSTITUTING ENVIRONMENTALLY SOUND ALTERNATIVES

In the international documents there is a commitment to develop ecologically sound alternatives. In particular, in Agenda 21 (UNCED) alternative ecologically sound practices have been advocated in the following way in the following sections:

There are often alternatives to toxic chemicals currently in use. Thus risk reduction can sometimes be achieved by using other chemicals or even non-chemical technologies. The classic example of risk reduction is the substitution of harmless or less harmful substances for harmful ones. Establishment of pollution prevention procedures and setting standards for chemicals in each environmental medium, including food and water, and in consumer goods, constitute another example of risk reduction (19.45 Toxic chemicals)

Reduce over-dependence on the use of agricultural chemicals through alternative farming practices, integrated pest management and other appropriate means (19.50, Toxic chemicals)

Utilizing and producing environmentally [safe and] sound renewable energy resources, such as solar, wind, geothermal, hydropower and biomass (9.9g Atmosphere, Agenda 21)

Consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem, Agenda 21)

19.2. PROMOTING ENVIRONMENTALLY SOUND TECHNOLOGIES AND BEST PRACTICES

promoting education about, and training on, environmentally sound technologies, materials and products (Article 27 f quater, Habitat II, 1966)

Establish laws and regulations aimed at preventing discrimination and barriers and, where such laws and regulations already exist, ensure their enforcement (Article 73 *(b) Habitat II, 1966)

[Modification of principles from the ten elements of sustainability developed by the Institute for Sustainable Forestry.]

1. BEST practices will protect, maintain and/or restore fully functioning ecosystems at all scales in both the short-and long-terms

2. BEST practices will maintain and/or restore surface and groundwater quality, quantity, and timing of flow, including aquatic and riparian habitat

3. BEST practices will maintain and/or restore natural processes of soil fertility productivity and stability.

4. BEST practices will maintain and/or restore natural processes of soil fertility, productivity and stability.?????????

5. BEST practices will encourage a natural regeneration of native species to protect valuable native gene pools.

6. BEST practices will not include the use of artificial chemical fertilizers or synthetic chemical pesticides

19.3 DEVELOPING ENVIRONMENTALLY SOUND LAND-USE STRATEGIES

Develop, with the participation of all interested parties, comprehensive and environmentally sound land-use strategies at the local level. (Article*85 (d) Habitat II, 1966)

19.4 STIMULATING ...ENVIRONMENTALLY SOUND USE OF LAND

Apply transparent, comprehensive and equitable fiscal incentive mechanisms, as appropriate, to stimulate the efficient, accessible and environmentally-sound use of land, and utilize land-based and other forms of taxation in mobilizing financial resources for service provision by local authorities (Article 56 (d) Habitat II, 1966)

Land is essential for the provision of food, water and energy for many living systems, and it is critical to human activity. In rapidly growing urban areas, access to land is rendered increasingly difficult by the potentially competing demands of housing, industry, commerce, infrastructure, transport, agriculture and the need for open spaces and green areas, and the protection of fragile ecosystems. The rising costs of urban land and other factors prevent persons living in poverty and members of other *vulnerable marginalized* and disadvantaged groups from gaining access to suitable land, the location of which does not pose economic, environmental or health risks to the residents because of such

reasons as proximity to polluting industrial facilities in appropriate geographical conditions or susceptibility to natural disasters. Bringing the development of urban areas into harmony with the natural environment, **especially within the carrying capacity of the ecosystem** and the overall system of settlements is one of the basic tasks to be undertaken in achieving a **socially equitable and environmentally sound sustainable** urbanized world. The *tools means to for achieving* a physically more balanced development include not only specific urban and regional policies and legal, economic, financial, cultural and other measures, but also innovative methods of urban planning and design and of urban development, **and** revitalization *and management*. National, sub national and local policies and problems need to be integrated. **[The precautionary principle/approach and the use of environmental and social impact assessment are essential].**

(Article [82 Habitat II, 1966)

19.4. PROTECTING WATER RESOURCES FROM HARMFUL EFFECTS OF HUMAN SETTLEMENTS

Land-use is closely related to water resource management because of the critical need to protect aquifers and other fresh-water resources from the harmful effects of human settlements. Special attention should be paid to guiding potentially hazardous activities away from the fragile areas. Oceans and coastal areas should be protected from land-based sources of pollution.(Article * 82 bis Habitat II, 1966)

19.5 ENCOURAGING AND PROMOTING THE APPLICATION OF LOW-ENERGY ENVIRONMENTALLY SOUND AND SAFE TECHNOLOGIES

ENCOURAGING AND PROMOTING TECHNOLOGY WITH REGULATORY MEASURES

Encourage and promote the application of low-energy, environmentally sound and safe manufacturing technologies backed by appropriate norms and effective regulatory measures (Article 71 * (b) Habitat II, 1996)

19.6 PROMOTING ENVIRONMENTALLY SOUND TRANSPORTATION

Environmentally sound transportation systems (27 d Habitat II, 1996))

19.7.REDUCING TRANSPORT DEMAND THROUGH PROMOTING OF SPATIAL DEVELOPMENT

promotion of spatial development patterns and communications policies that reduce transport demand (27 d) Habitat II, 1996)

Transport and communication systems are the key to the movement of goods, people, information and ideas, and to access to markets, employment, schools and other facilities and land use, both within cities and between cities, and in rural and other remote areas. The transportation sector is a major consumer of non-renewable energy and of land and is a major contributor to pollution, congestion and accidents. Integrated transport and land-use policy and planning can reduce the ill effects of current transport systems. People living in poverty, women, children, youth, older persons, people with disabilities are particularly disadvantaged by the lack of accessible, affordable, safe and efficient public transport systems (Article *102 Habitat II, 1996) **U.S.**

19.8. ENCOURAGING AND RESEARCHING DEVELOPMENT AND E OF NON-MOTORIZED OR LOW-ENERGY TRANSPORT SYSTEMS

Promote through regulations use of renewable sources of energy and *Encourage and* research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy; **developed States shall not transfer non-renewable, obsolete, or unsafe sources of energy to developing States** (Article 101 (d) Habitat II, 1996).

19.9. EXCHANGING KNOWLEDGE ON ENVIRONMENTALLY SOUND SUBSTITUTE FOR LEAD GASOLINE

Encourage countries, in particular developing countries, to cooperate in exchanging knowledge, experience and know-how in the phasing out of lead gasoline, including the use of biomass ethanol as an environmentally sound substitute (Article 101 (e) Habitat II, 1996);

19.10. EDUCING NEGATIVE EFFECTS OF TRANSPORT ON THE ENVIRONMENT

REDUCING UNNECESSARY TRAVEL

DEVELOPING ALTERNATIVES OTHER THAN THE AUTOMOBILE

DEVELOPING ALTERNATIVE FUELS

Managing transport in human settlements should be done in a way that promotes good access for all to places of work, social interaction and leisure and facilitates important economic activities, including obtaining food and other necessities of life. This should be done while reducing the negative effects of transport on the environment. Transport-system priorities should be given to reducing unnecessary travel through appropriate land-use and communication policies, developing transport policies that emphasize mobility alternatives other than the automobile, developing alternative fuels and alternative fuel vehicles, improving the environmental performance of existing modes of

transport, and adopting appropriate pricing and other policies and regulations (Article 102 * Habitat II, 1996).

19.11. PROMOTING AFFORDABLE, EFFICIENT AND ENERGY-SAVING MODES OF TRANSPORT

Non-motorized transport is a major mode of mobility, particularly for low-income, vulnerable and disadvantaged groups. One structural measure to counteract the socioeconomic marginalization of these groups is to foster their mobility by promoting affordable, efficient and energy-saving modes of transport (Article *103 bis. Habitat II, 1996).

19.12. REDUCING THE NEED TO TRAVEL

Coordinate land-use and transport planning in order to encourage spatial settlement patterns that facilitate access to such basic necessities as workplaces, schools, health care, places of worship, goods and services, and leisure, thereby reducing the need to travel (Article 104 * (b) Habitat II, 1996).

19.13. PROMOTING COMMUNICATIONS AND TRANSPORT PLANNING TO REDUCE DEMAND FOR TRANSPORT

Promote the integration of land-use, communications and transport planning to encourage development patterns that reduce the demand for transport (Article *84(g) Habitat II, 1996).

Develop and implement integrated coastal zone management plans to ensure the proper development and conservation of coastal resources (Article *84 (g) bis Habitat II, 1996).

19.14. ENCOURAGING THE USE OF AN OPTIMAL COMBINATION OF MODES OF TRANSPORT

(Article 104 * (c) Encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures Habitat II, 1996).

19.15. PROMOTING AND IMPLEMENTING DISINCENTIVE MEASURES THAT DISCOURAGE THE INCREASING GROWTH OF PRIVATE MOTORIZED TRAFFIC ACKNOWLEDGING THAT CONGESTION IS DAMAGING ENVIRONMENTALLY

ENCOURAGING ALTERNATIVE TRANSPORT METHODS

Promote and implement disincentive measures that discourage the increasing growth of private motorized traffic and reduce congestion, which is damaging environmentally, economically and socially, and to human health and safety, through pricing, traffic regulations, parking and land-use planning and traffic abatement methods, and by providing or encouraging effective alternative transport methods, particularly to the most congested areas (Article 104 * (d) Habitat II, 1996).;

19.16. GIVING PRIORITY TO COLLECTIVE MEANS OF TRANSPORT WITH ADEQUATE CARRYING CAPACITY AND FREQUENCY

Provide or promote an effective, affordable, physically accessible and environmentally sound public transport and communication system, giving priority to collective means of transport with adequate carrying capacity and frequency that support basic needs and the main traffic flows (Article 104 * e Habitat II, 1996).;

19.17. PROMOTING , REGULATING AND ENFORCING QUIET USE EFFICIENT AND LOW-POLLUTING TECHNOLOGIES

Promote, regulate, and enforce BEST—Best Ecologically Sound Traditions—practices, and , during conversion, promote, regulate, and enforce quiet, use-efficient and low-polluting technologies, including fuel-efficient engine and emissions controls and fuel with a low level of polluting emissions and impact on the atmosphere and **actively fund and promote** other alternative forms of energy (Article 104 (f) Habitat II, 1996).;

19.18. PROMOTING PRACTICES AND CONSUMPTION THAT WILL CONSERVE...

Promote practices and consumption patterns that will conserve and protect freshwater and saltwater resources and top soil, as well as air and soil quality; (Article 98(a)

* brackets removed

Reduce significantly the degradation of the marine environment emanating from land-based activities, including municipal, industrial and agricultural wastes and run-off, which have a pernicious impact on the productive areas of the marine environment and coastal areas (Article *98 bis (c)Habitat II, 1996).

19.19. PROMOTING ENVIRONMENTALLY SOUND RENEWABLE ENERGY

Access to sustainable sources of energy (Article 66* (f) Habitat II)

Reducing energy consumption

Provide incentives for engineers, architects, planners and contractors and their clients to design and build accessible energy-efficient structures and facilities by using locally available resources and to reduce energy consumption in buildings in use (Article *69 (h) Habitat II, 1996).

Intensify and support research efforts to find substitutes for or optimize the use of non-renewable resources, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;] (Article * 71 [(a) Habitat II, 1996).

Encourage and promote the application of low-energy, environmentally sound and safe manufacturing technologies backed by appropriate norms and effective regulatory measures (Article 71 * (b) Habitat II, 1996).

19.20. INTENSIFYING AND SUPPORT RESEARCH INTO SUBSTITUTES

Intensify and support research efforts to find substitutes for or optimize the use of non-renewable resources, particularly fossil fuels, and to reduce their polluting effects and paying special attention to recycling, re-use of waste materials and increased reforestation;]

Reaffirm the obligation undertaken in 1981 through the General Assembly Resolution at the UN Conference on New and renewable Sources of Energy to move through “the transition form the present international economy based primarily on hydrocarbons to one based increasingly on new and renewable sources of energy. In addition establish a time-table for the phasing out of the use of fossil fuel and of civil nuclear energy as proposed in the 1992 Nobel Laureate Declaration (Article 71 [(a) Habitat II, 1996)..

19.21. PROVIDING ENVIRONMENTALLY SOUND SHELTER

adequate shelter for all ...through the development and improvement of shelter that is environmentally sound (2 bis)

integrating a gender perspective in the design and implementation of environmentally sound and sustainable resource management mechanisms, production techniques and infrastructure development in rural and urban areas (27 d)

19.22. ADVOCATING INTERTRANSFER OF BEST PRACTICES RATHER THAN NORTH-SOUTH TECHNOLOGY TRANSFER

Through mandatory international normative standards (MINS) States shall compile innovative BEST local practices that is not damaging to the environment in the way that the current over-consumptive model of consumption is. Industrialized States shall seriously explore the innovative technological developments of traditional local practices, and thus not presume that the industrialized technological fixes are the most appropriate even in industrialized state context.

(20)

TRADITIONAL PRACTICES PRINCIPLE U.S.

20.1. PROMOTING TRADITIONAL AND INDIGENO PRACTICES

Through international standards States shall refrain from imposing external devised technologies and encourage the development of BEST local and indigenous technologies:

Throughout the UNCED documents there is a call for the respect of indigenous practices, and local technologies:

"Promote development in accordance with indigenous practices and adopt technologies appropriate to local conditions (7.42 c)

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 Biodiversity)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c, Agriculture)

" Governments ...should ... Recognize and foster the traditional methods and the knowledge of indigenous people and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (15.4, g Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d Biodiversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ...(15.6 g. Biodiversity)

Governments... consistent with the requirements of international law should, as appropriate collect, assess and make available relevant and reliable information in a timely manner and in a form suitable for decision-making at all levels, with the full support and participation of local and indigenous people and their communities.

(15.6 f Biodiversity)

"promotion of collaborative research programmes... fostering of traditional methods and knowledge of such groups (local and indigenous) in connection with these activities. (16.7 b Biotechnology)

States shall cooperate with a view to the conservation of marine mammals and, in the case of cetaceans, shall in particular work through the appropriate international organizations for their conservation, management and study (17.50 Marine)

20.2. PROMOTING INDIGENOUS PLANNING AND DESIGN TECHNIQUES

Encourage and support research and studies to promote and develop indigenous planning and design techniques, norms and standards to match with the actual needs of local communities, **and as agreed in the “Establishment of a New Economic Order, to support the use of natural material, and as agreed in Habitat I to support the use of endogenous technology** (Article 69(a) Habitat II, 1996);

20.3. ENCOURAGING AND SUPPORTING THE USE OF ...LOCAL BUILDING MATERIALS

Encouraging and supporting the use of appropriate building technology and the production of local building materials, as well as supporting the development of international, sub-regional and regional networks of institutions involved in research, production, dissemination and commercialization of locally produced building materials (Article 152 * c bis merged with d bis) Habitat II, 1996);

20.4. STRENGTHENING THE INDIGENOUS BUILDING MATERIALS INDUSTRY

strengthening the indigenous building materials industry, based as far as possible on locally available resources. (51 d Habitat II, 1996))

Provide data base on adverse environmental effects of building materials (51d Habitat II, 1996))

(21)

COUPLING-AVOIDANCE PRINCIPLE

The coupling-avoidance principle involves the avoidance of coupling of a “clean-up environment” industry with a toxic, hazardous or atomic waste producer in order to justify the continuation of the production of toxic hazardous or atomic wastes.

Through mandatory international normative standards (MINS) States shall not accept the “environment-industry” being coupled with the toxic hazardous, and atomic waste production industry as a means of justifying the continuation of the toxic, hazardous and atomic waste producing activity.

(22)

SOLUTION-WORSE-THAN-PROBLEM-AVOIDANCE PRINCIPLE

This principle involves the avoidance of the advocating of a “solution” that is potentially worse than the problem to be addressed. For example, the civil nuclear power industry is promoting nuclear energy as the solution to climate change.

Through mandatory international normative standards (MINS), States shall not accept a solution that is worse than the problem.

(23)

ENVIRONMENTAL AUDITS AND ECOLOGICAL CONSEQUENCES PRINCIPLE

States shall ensure environmental audits and the taking into account of all ecological consequences

23.1. INCLUDING OF ECOLOGICAL CONSEQUENCES IN ANALYSIS OF COSTS

In international documents there is the recognition of the importance of environmental audits, and of the taking into consideration of ecological consequences:

Governments,...should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (Agenda 21, 20.20 e)

Ensure that relevant decisions are preceded by environmental impact assessments and also take into account the costs of any ecological consequences (Agenda 21, 7.42)

23.2. INCORPORATING ECOLOGICAL CONSEQUENCES AND ENVIRONMENTAL AUDITS WITHIN FULL COST METHODS.

The costs to the environment of continuing with ecologically unsound practices rather than the cost to industry of introducing ecologically sound practices shall be considered.

It is equally important to ensure that, in carrying out an environmental assessment on a particular substance or activity that could have potential adverse environmental effects, other ecologically sound alternative practices shall also be assessed. If the precautionary principle is to be applied in the assessment of costs, the full environmental costs have to be taken into consideration, as well as the full economic costs of monitoring and enforcement of legislation to regulate ecologically unsound practices, and the projected economic costs and environmental costs of accidents, and restoration if accidents occur. If the "ecological costs are horrendous" , no economic benefits will justify the costs.

23. 3. ASSESSING FULL ECONOMIC COSTS OF ECOLOGICALLY UNSOUND PRACTICES AND OF FULL ECONOMIC BENEFITS OF PREVENTION:

The introduction of ecologically unsound practices have inordinate, extensive, unexpected short-term and long term economic costs, including the following:

-the cost of monitoring, investigation, enforcement, and conviction.;

- the costs of subsidies—taking research dollars from developing ecologically sound alternatives;
- the costs of inappropriate funding for attempts to rectify previous errors;
- the costs to displaced disenfranchised indigenous peoples;
- the costs of rehabilitation of ecologically devastated sites;
- the costs of loss of biodiversity; costs of loss of resources— destruction of fish habitat;
- the costs of health impacts on employees.

• Financial benefits associated with toxics use reduction can include reduced raw material costs, reduced effluent and emissions monitoring and control costs, reduced energy use, reduced water use, reduced liability ... (from submission to Department of Ecology by Carol Dansereau, Director, Industrial Toxics Project, Washington Toxics Coalition, May 4, 1994)

• Companies may be unaware of the benefits or may opt to limit short-term investments despite longer term savings. Thus, in the absence of regulations, they might CONTINUE to avoid very reasonable available technologies that protect the environment better by preventing pollution (from submission to Department of Ecology by Carol Dansereau, Director, Industrial Toxics Project, Washington Toxics Coalition, May 4, 1994)

- It is incumbent upon society and government to strive towards high standards so that the segment of industry (prevention-technology or techniques industry—BEST industry) dedicated to developing ecologically sound alternatives will be at an economic advantage. The technique of assessing the complexity of the multiple costs must be used. This technique could be extended to reevaluate the totality of spending including the excessive costs of maintaining the global military (800 billion), when the money from the military could be transferred to assist in the conversion to an ecologically sound and equitable society.
- A full life-cycle analysis of the economic and environmental costs through time and space of each substance and activity shall be carried out.
- The independent assessment of full economic costs shall be carried out by the Auditor General's office
- The establishment of the highest possible mandatory standards, legal enforcement mechanism, and support structures for ensuring that prevention techniques are economically feasible.

23.4. ASSESSING OF FULL ENVIRONMENTAL AND HUMAN HEALTH IMPACT COSTS OF INACTION OR NON-PREVENTION

Ecological and equitable “back-casting” — “ going to the future though the present “ moving from vision to measures to implement the vision — must be supported. If the vision is to adopt a prevention and precautionary approach to interventions into the ecosystem, anything that detracts or deters from that vision should be seriously questioned, and the justification of the continuing the questionable practices should come under serious scrutiny. In other words if unacceptable present and future ecological consequences are likely to occur, the activity shall not proceed and the substance shall not be used.

- **the enunciation of an “ecological imperative” as part of a long-term complex solution**

- “The difficulty of assessing environmental impacts cannot be used as an excuse for ignoring them. (from submission to Department of Ecology by Carol Dansereau, Director, Industrial Toxics Project, Washington Toxics Coalition, May 4, 1994)

- **The presence of ecological irreversible consequences shall be deemed to be beyond an acceptable risk, and thus not subject to the usual means of quantification. In this event, the anticipatory, precautionary, and reverse onus principle shall apply, and the activity or substance shall be banned or phased out**

- **Ecological, and equitable consequences, and health impact consequences must be examined in full complexity through time and space**

- **in the event that the activity or substance has been proven to have caused environmental degradation, or to be able to cause long term ecological consequences, the activity shall cease or the use of the substance shall be banned or phased out.**

- **No economic benefit shall be used to justify the violation of ecological rights— right to a safe environment and the right to an ecological heritage, and the integrity of the ecosystem. Economic benefits must be seen in the context of ecosystem primacy; otherwise long term future ecological and humanitarian rights— right to food, safe water, health care and shelter will be compromised**

- In determining whether the [technology] emission limitation is sufficient to protect health, welfare and the environment, {governments} must consider all known and suspected impacts, including but not limited to mutagenicity, teratogenicity, neurological damage, development damage, immune suppression, organ damage, reproductive impairment, and hormone mimicry.

- **Procedures to ensure that an environmental assessment review of any practices or substances that could contribute to the loss or reduction of Biodiversity shall be in place**
- **Assessment of full costs of violating the rights of the disenfranchised shall be carried out. The groups bearing the greatest impact from ecologically unsound practices and disposal of toxic, hazardous, and atomic wastes are often the disenfranchised in society.**

24

ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

24.1.

24.2 COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

The essence of this principle can also be traced through the 1972 Stockholm Convention, and the UN Resolution 37/7, as well as in the UNCED documents, where it is enunciated in the following way:

ASSERTION OF THE AVOIDANCE OF ACTIVITIES PRINCIPLE

Activities which are likely to cause irreversible damage to nature shall be avoided (UN Resolution 37/7 1982)

Introduce appropriate procedures requiring environmental impact assessment of its proposed projects that are likely to have significant adverse effects on Biological diversity with a view to avoiding or minimizing such effects, and where appropriate, allow for public participation in such procedures (Article 14, 1A, Convention on Biological Diversity)

24.3 REQUIRING A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT

Through mandatory international normative standards, States shall require a legitimate environmental assessment review of any practice, activity or substance that could have significant adverse environmental effects. An actual assessment of the short and long term potentially adverse environmental effects of existing and proposed projects and activities shall be carried out. It is understood that a review of a project or activity to assess the "environmental, economic, social, cultural, heritage, health effects of the reviewable projects" is not a legitimate environmental impact assessment.

23.7. REQUIRING COST RECOVERY FOR ENVIRONMENTAL IMPACT ASSESSMENT AND FOR MONITORING AND ENFORCING REGULATIONS

Industries that are permitted to engage in environmentally unsound practices that require regulations and enforcement shall bear the full cost of the additional charges incurring as a result of governments having to ensure compliance with regulations. In addition, for all proposals, projects, activities that intervene in an environmentally unsound way in the ecosystem, and that are deemed to require an environmental assessment review governments shall recover the full costs of the review.

(25)

COST RECOVERY PRINCIPLE

23 bis 1. REQUIRING COST RECOVERY FOR ENVIRONMENTAL IMPACT ASSESSMENT AND FOR MONITORING AND ENFORCING REGULATIONS

Industries that are permitted to engage in environmentally unsound practices that require regulations and enforcement shall bear the full cost of the additional charges incurring as a result of governments having to ensure compliance with regulations. In addition, for all proposals, projects, activities that intervene in an environmentally unsound way in the ecosystem, and that are deemed to require an environmental assessment review governments shall recover the full costs of the review.

(26)

ENVIRONMENTALLY RESPONSIBLE INVESTMENT PRINCIPLE

24.1. ENCOURAGING SOCIALLY AND ENVIRONMENTALLY RESPONSIBLE COMMUNITY INVESTMENT

(Article * 157 e bis Encourage public-private partnerships in socially and environmentally responsible community investment and reinvestment in shelter and sustainable human settlements programmes and make publicly available and accessible the data and best practices developed through them Habitat II, 1996) ;

24.2.PROMOTING SOCIALLY AND ENVIRONMENTALLY RESPONSIBLE CORPORATE INVESTMENT (31 D)

Strengthening regulatory and legal frameworks to enable markets to work, overcome market failure and facilitate independent initiative and creativity, as well as to promote socially and environmentally responsible corporate investment....(31 d Habitat II)

(27)

POLLUTER PAY PRINCIPLE

States shall enforce the Polluter Pay Principle to ensure that those who may release polluting substances into the environment pay the full-cost of environmentally safe handling, treatment, disposal, and remediation; in addition, permits shall be suspended and canceled, if the polluter has caused serious irreversible ecological damage, and criminal charges laid. Mens rea shall not have to be proved, executives and directors of the company shall be subject to potential criminal charges, and the excuse of due diligence is no longer acceptable.

25.1.TAKING INTO ACCOUNT THE POLLUTER-PAY PRINCIPLE

In different section of Agenda 21, the polluter Pay principle is advocated:

' Governments should include in national planning and legislation an integrated approach to environmental protection, driven by prevention and source reduction criteria, taking into account the 'polluter pays' principle, and adopt programmes for hazardous waste reduction, including targets and adequate environmental control(20.20 b Hazardous Wastes, Agenda 21)

" Governments should ...(b) apply the 'polluter pays' principle, where appropriate, by setting waste management charges at rates that reflect the costs of providing the service and ensure that those who generate the wastes pay the full cost of disposal in an environmentally safe way (21.42 b Solid wastes, Agenda 21)

25.2. DEVISING ...NEW FISCAL INSTRUMENTS THAT PENALIZE ENVIRONMENTAL DAMAGE FROM BOTH PRODUCTION AND CONSUMPTION ACTIVITIES

Develop efficient, equitable and buoyant sources of national and local revenues, including taxation, user charges, tariffs and betterment **fees levies** to promote national

and local capacity for capital investment in housing, infrastructure and basic services; and devise, as appropriate, new financial instruments **which are conditional on mandatory international normative standards (MINS) including the penalizing *penalize* of environmental damage arising from both production and consumption of environmentally unsound activities (NGO Composite)**;

* (c) Develop efficient, fair, equitable and buoyant sources of national and local revenue, including taxation, user charges, tariffs and betterment levies, to promote national and local capacity for capital investment in housing, infrastructure and basic services, and devise, as appropriate, new fiscal instruments that penalize environmental damage from both production and consumption activities (140 (c) Habitat II, 1996).

(28)

COMPENSATION PRINCIPLE

Through mandatory international normative standards (MINS) , States shall require corporations including transnationals to pay compensation for environmental degradation, and for human rights violations.

Given that corporate-sympathetic government regimes have failed in the past both to ensure corporate compliance with international obligations, and to enforce their own statutory legislation, and given that there has been resultant environmental degradation and human rights violations, States shall now seek environmental compensation from companies that can be shown to have contributed to environmental degradation or human rights violations. The funds from environmental compensation shall be put into a restoration fund, into developing BEST (Best Ecologically Sound techniques) and into addressing human rights violations.

Often industries that have contributed to environmental degradation seek compensation from States when areas are taken out of production for environmental reasons. Any potential compensation shall be assessed against the estimate of previous ecological consequences.

States shall ensure that the cost of potential compensation is not used as justification for not fulfilling the duty to preserve, protect, and conserve the environment

(29)

REHABILITATION PRINCIPLE

27.1. ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

There exists a notion that environmental degradation is reversible; it can be restored, and rehabilitated. This notion shall never be used as a justification for the causing of environmental degradation

27.2. PROTECTING THE LIVING ENVIRONMENT AND RESTORING CONTAMINATED LAND

In cooperation with the international community, promote the protection of the living environment and strive to restore contaminated land, air and water to levels acceptable for **socially equitable and environmentally sound** *sustainable* human settlements (Habitat 97 (j)).

(30)

CHANGE THROUGH AWARENESS AND EDUCATION PRINCIPLE

Through international standards an educational program called principle-based education could be expanded. Principle-based education is based on a conceptual framework of international principles.

In chapter 36 of Agenda 21, a very important distinction is made between promoting "education," promoting "public awareness," and promoting "training." It appears to be clear in Agenda 21 that non-governmental organizations, community-based groups, women's groups and aboriginal groups are called upon to assist educational authorities in reorienting education. The role of industry is ascertained to be limited to specific areas of business and industrial and training programs.

Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around

elementary/secondary schools and local problems. The authorities and industry should encourage business, industrial and agricultural schools to include such topics in their curricula. The corporate sector could include sustainable development in their education and training programmes.
Agenda 21, Chapter 36.5 I

In the section of Agenda 21 that addresses the "promoting of public awareness" industry is included not as the dispenser of "education" but as the recipient of needed education.

" Countries and regional organizations should be encouraged, as appropriate, to provide public environmental and development information services for raising the awareness of all groups, the private sector and particularly decision makers. (Agenda 21, section 36.10 c)

In the section of Agenda 21, that addresses the "promoting of training, an important role for industry is envisioned.

To strengthen national capacities,... in training, to enable governments, employers and workers to meet their environmental and development objectives and to facilitate the transfer and assimilation of new environmentally sound, socially acceptable and appropriate technology and know-how (Agenda 21, 36.13 c)

(31)

ARMS LENGTH RESEARCH PRINCIPLE

This principle holds that most of the current research that has been used to support the continuation of the current model of development has arisen from non-arms length research by vested interests, and that if the urgency of the global situation is to be addressed arms-length non-vested interest research has to be relied on.

(32)

CULTURAL APPROPRIATENESS PRINCIPLE

Through mandatory international standards, States shall ensure that the rights of Indigenous peoples are guaranteed: U.S.

30.1. AFFIRMING OF POSITIVE-DUTY-TO PROTECT-INDIGENO-LANDS

the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate (16.3. ii, Agenda 21)

30.2. ACKNOWLEDGING THAT RURAL AND INDIGENOUS PEOPLES ENSURE THE...SUSTAINING SOCIAL AND ECOLOGICAL BALANCE

Rural populations, including indigenous people, play an important role in **demonstrating to urban populations practices of living within the carrying capacity of the ecosystem, in providing evidence of BEST practices**, in ensuring food security and in sustaining the social and ecological balance over large tracts of land in many nations and thus contribute significantly to the task of protecting biodiversity and fragile ecosystems and to the sustainable use of biological resources. (Art 118 Habitat II)

30.3. DEVELOPING OF POLICIES AND PROGRAMMES TO PREVENT ENVIRONMENTAL DEGRADATION OF LAND THROUGH INTEGRATING INDIGENOUS WOMEN ...

Integrate indigenous women, their perspectives and knowledge on an equal basis with men, in decision-making regarding human settlements, including sustainable resources management and the development of policies and programmes for sustainable development, including , in particular, those designed to address and prevent environmental degradation of land (Art 90, quart c Habitat II)

(33)

INTERGENERATIONAL EQUITY PRINCIPLE

31.1. RESPECTING THE RIGHTS OF FUTURE GENERATIONS

Through mandatory international standards, States shall respect inter-generational equity.

The obligation to future generation has been enunciated as a principle for over twenty years, and should be incorporated as a principle in the establishment of the international standards. This obligation to future generation can be traced in the following way:

In the United Nations Convention for the Protection of Cultural and Natural Heritage:

Each State Party to this Convention recognizes that the duty of ensuring the identification, protection, conservation, presentation and transmission to future generations of the cultural and natural heritage referred to in articles 1 and 2 and situated on its territory, belongs primarily to that State. (United Nations Convention for the Protection of Cultural and Natural Heritage, 1972)

In the Stockholm Convention of 1972, the requirement to preserve our environmental heritage and the requirement to save a representative sample of natural ecosystems for future generations were being recognized:

The natural resources of the earth including the air, water, land, flora and fauna and especially representative samples of natural ecosystems must be safeguarded for the benefit of present and future generations (Principle 2)

Man has a special responsibility to safeguard and wisely manage the heritage of wild life and its habitat which are now gravely imperiled by a combination of adverse factors (Principle 4),

In UN Resolution 37/7, 1982

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance his ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations,(UN Resolution 37/7, 1982)

In the Convention of Biological Diversity

"to conserve and sustainably use biological diversity for the benefit of present and future generations (Biodiversity Convention, UNCED, 1992)

and in the Framework Convention on Climate Change:

" to protect the climate system for present and future generations"

The principle of considering the need to preserve ecological heritage for future generations, because of its CONTINUED inclusion in international documents, has become a principle of international customary law.

CONTINUED depletion of resources upon which future generations depend are being depleted

Around the world, many of the basic resources on which future generations will depend for their survival and well-being are being depleted and environmental degradation is intensifying, driven by unsustainable patterns of production and consumption, unprecedented growth in population, widespread and persistent poverty, and social and economic inequality (Preamble, 1.2. International Conference on Population and Development, 1994)

(34)

COMMON GOOD PRINCIPLE

32.1. CONTRIBUTING TO COMMON GOOD

All people have rights and must also accept their responsibility to respect and protect the rights of others- including future generations and to contribute actively to the common good.... (Article 79 Habitat II)

(35)

EQUALITY and EQUITY PRINCIPLE

33.1. AFFIRMING FUNDAMENTAL HUMAN RIGHTS

... faith in fundamental human rights, in the dignity and worth of human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in large freedom (Preamble, Universal Declaration of Human Rights, 1948)

(36)

COMMUNITY INVOLVEMENT WITHIN A FRAMEWORK OF INTERNATIONAL PRINCIPLES

While decentralized, participatory planning are important features of a decision making process, the planning should be grounded in fundamental principles related to the enshrining and guaranteeing of human rights, the ensuring of social justice, the preserving, protecting and conserving of the environment, and the promoting of peace. It should be acknowledged that although there has been some increased participation by individuals and groups of civil society in bringing about the necessary global changes for the establishment of socially equitable and environmentally sound development of communities, there is a long way to go to achieve the necessary access to and meaningful participation and involvement of civil society.

(37)

DOCTRINE OF LEGITIMATE EXPECTATIONS

The obligations undertaken by governments in

ratifying these instruments are the standards against which they should be held accountable, both by their own citizenry and by actors in the international arena (International Human Rights Safeguards, Document for the Summit of the Americas, 1994).

The above statement alludes to two key questions that the Charter of Obligations has been devised to address. One is “what constitutes obligations?” and “what constitutes ‘civil society’? The use of the term “Obligations” in this Charter is based on a key doctrine called the Doctrine of Legitimate Expectation. This doctrine could be enunciated as follows, and contains the following elements:

- **Not breaking and undertaking as one pleases**
- **Compatibility with public duty**
- **Public interest may be better served by honouring their undertaking than by breaking it**

But that principle does not mean that a corporation can give an undertaking and break it as they please. So long as the performance of the undertaking

is compatible with their public duty, they must honour it. And I should have thought that this undertaking was so compatible....The public interest may be better served; by honouring their undertaking than by breaking it.(Lord Denning, Central London Property Trust Ltd. v High Trees House Ltd. [1947] KB 130, 594

- **Fulfilling the expectation must assist in performing rather than inhibit the performance of its statutory duties**

If I thought that the effect of granting to the applicants the relief sought was to prevent the council validly using those powers which Parliament has conferred on it, I would refuse relief but that is not the present case. It seems to me the relief claimed will in the end, as counsel for the corporation ultimately conceded assist the council to perform rather than inhibit the performance of its statutory duties” (Lord Roskill Central London Property Trust Ltd. v High Trees House Ltd. [1947] KB 130, 596)

- **Expectation must be based upon statements or undertaking on behalf of the public authority which has the duty of making the decision**

The expectation may be based upon statement or undertaking by or on behalf of the public authority which has the duty of making the decision, if the authority has through its officers, acted in a way that would make it unfair or inconsistent with good administration for him to be denied such an inquiry (Lord Fraser, [1983] 2 All. ER 350)

- **Expectation is based on an assurance given by a Minister of the Crown as to the way in which discretionary power... would be exercised.**
- **Assurance was given so as to induce this very expectation**

....it is upon an express assurance that the expectation is based: an assurance given by a Minister of the Crown as to the way in which the discretionary power conferred upon him by statute would be exercised. any fair reading... leads to the inference that assurance was given so as to induce this very expectation in the minds of...such as the Plaintiff, so that they might come forward and reveal to the authorities...(Stephen j. [1977])14 A.I.R., 1, p 34), cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good**

The powers of public authorities are...essentially different from those of private persons.... But a public authority may do neither [examples of 'unfettered discretion'] unless it acts reasonably and in good faith and upon lawful and relevant grounds of public interest. Unfettered discretion is wholly inappropriate to a public authority which possess powers solely in order that it may use them for the public good ((H.W. R. Wade's Administrative Law, referred to by Mr. Justice Cook in (1983) 1 NZL R 646 cited in Young, R. (1986). 'Legitimate Expectations'. The Advocate. 44 (6): 803-815)

- **Expectation arising from Government holding itself out to do something**

- **Legitimate expectation that Government will discharge this obligation**

If a government holds itself out to do something even if not legally required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligation

- **Expectation that when public authorities establish procedures and publish policies they are bound to follow them**

Where public authorities establish procedures and publish policies, they are bound to follow them. The concept of legitimate expectations has extended the requirements of natural justice to situations where citizens may legitimately be expected to be treated fairly (Ombudsman office, personal communication)

There does not have to be a specific legal right or interest affected for the concept to apply. "Legitimate expectation" means 'reasonable expectation' and it can be invoked where fairness and good administration justify a right to be heard or some other substantial procedural right (ombudsman office, personal communication)

- **When an expectation is created there must be the ability to fulfill the promise it implies**

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

Under this doctrine, it could be argued that the statements enunciated in international instruments — legally binding documents (conventions, Treaties, Covenants); globally adopted Convention Platforms of Action, and Action plans, and majority-passed General Assembly Resolutions and Declarations — could all reflect "promises" that create an "expectation" that citizens can demand to be fulfilled (see further section and diagram on international customary law in Chapter 4).

(38)

Common interest in the European Court of Justice. Court can impose a fine for non-compliance with Pan European environmental law. A way to use transnational rules to enforce state law. Also citizens have limited access Citizen's/citizens', transnational/transnationals' or corporation's/corporations' failure to comply with transnational rules, regulations, and standards.

(39)

PRINCIPLE OF SUBSIDIARY (TO BE EXAMINED)

(40)

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRINCIPLE

After a preliminary analysis of several key Chapters of Agenda 21, the Rio Declaration and the two Conventions a series of components of socially equitable and environmentally sound development have been discerned:

Component 1 (i). invoking of the precautionary principle and its associated measures:

The precautionary principle has been one of the key principles of sustainable development, and has been enunciated in the Convention on Biological Diversity in the following way

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

The precautionary principle has been associated with various key measures and elements of the anticipatory principle such as "Ensuring preventive measures"(18.45); Embodying environmental care (6.1); Taking into account cradle to grave approach (20.21); Taking account of "live cycles of products" (19.15e); "Promoting a culture of safety" (7.60); "Developing responsible care" (19.51,b) etc.

Component 1 (ii) Including prevention programmes rather than relying ...on remediation

Particularly relevant is the inclusion of prevention programmes rather than relying solely on remediation and treatment. Countries ought to develop plans for priority actions, drawing on the programme areas in this chapter, which are based on cooperative planning by the various levels of government, non-governmental organizations and local communities. An appropriate international organization, such as WHO, should coordinate these activities. (Article 32, Chapter 6. Promoting Human Health Conditions, Agenda 21, UNCED)

Component 2: Respecting of the rights of future generations.

Undertaking to respect the rights of future generations has been evident in previous documents such as the UN Convention for the Protection of Cultural and Natural Heritage (1972), the UN Conventions on Humans and the Environment (1972), and in the General Assembly Resolution the World Charter for Nature (37/7 1982) where it appeared in the following form:

Reaffirming that man [humans] must acquire the knowledge to maintain and enhance his ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations,(UN Resolution 37/7, 1982)

The rights of future generations is affirmed in the following way in Agenda 21 in Chapter 8

...Its goals [sustainable development strategy] should be to ensure socially responsible economic development while protecting the resource base and the environment for the benefit of future generations. It should be developed through the widest possible participation. It should be based on a thorough assessment of the current situation and initiatives (Article 7, Chapter 8. Integrating of Environment and Development, Agenda 21)

Component 3. Reducing inequalities

Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups - in particular, women, children and youth within those groups - and refugees. The groups will include poor smallholders, pastoralists, artisans, fishing communities, landless people, indigenous communities, migrants and the urban informal sector (Article 5, Chapter 3. Combating Poverty, Agenda 21 UNCED)

Component 4. Pursuing development that is socially equitable and responsible and environmentally sound

The primary need is to integrate environmental and developmental decision-making processes. To do this, Governments should conduct a national review and, where appropriate, improve the processes of decision-making so as to achieve the progressive integration of economic, social and environmental issues in the pursuit of development that is economically efficient, socially equitable and responsible and environmentally sound.(Article 4, Chapter 8. Integrating Environment and Development, Agenda 21, UNCED)

Component 5. Linking of environment and health: (Environmental health and environmental health activities).

This component is linked with shelter in Article 32 of Chapter 6, The Promotion of Human Health :

Health and development are intimately interconnected. Both insufficient development leading to poverty and inappropriate development resulting in over-consumption, coupled with an expanding world population, can result in severe environmental health problems in both developing and developed nations. (Article 32, Chapter 6. Promoting Human Health Conditions, Agenda 21, UNCED)

Component: 6. Emphasizing multiple objectives

Special emphasis should be placed on those programmes that achieve multiple objectivesFood security, access to secure tenure, basic shelter, and essential infrastructure, education, family welfare, women's reproductive health, family credit schemes, reforestation programmes, primary environmental care, women's

employment should, as appropriate, be included among other factors. (Article 46, Chapter 5 Demographic Dynamic and Sustainability. , Agenda 21, UNCED)

Component 7. Supporting community-driven approach to sustainability:

Sustainable development must be achieved at every level of society. Peoples' organizations, women's groups and non-governmental organizations are important sources of innovation and action at the local level and have a strong interest and proven ability to promote sustainable livelihoods. Governments, in cooperation with appropriate international and non-governmental organizations, should support a community-driven approach to sustainability... (Article 7, Chapter 3..Combating Poverty, , Agenda 21, UNCED).

Component 8. Establishing an effective consultative process and implements process with concerned groups of society

An effective consultative process should be established and implemented with concerned groups of society where the formulation and decision-making of all components of the programmes are based on a nationwide consultative process drawing on community meetings, regional workshops and national seminars, as appropriate. This process should ensure The poor and underprivileged should be priority groups in this process. (Article 45, Chapter 5. Demographic Dynamic and Sustainability, Agenda 21, UNCED)

Component 9. Adopting appropriate legal and regulatory instruments :

Adopting appropriate legal and regulatory instruments, including cross-subsidy arrangements, to extend the benefits of adequate and affordable environmental infrastructure to unserved population groups, especially the poor (Article 45, Chapter 7. Promoting Sustainable Human Settlements Development, ,Agenda 21 d, UNCED) .

Component 10. Developing and integrating enforceable and effective laws and regulations

While there is continuous need for law improvement in all countries, many developing countries have been affected by shortcomings of laws and regulations.

To effectively integrate environment and development in the policies and practices of each country, it is essential to develop and implement integrated, enforceable and effective laws and regulations that are based upon sound social, ecological, economic and scientific principles. It is equally critical to develop workable programmes to review and enforce compliance with the laws, regulations and standards that are adopted. (Article 14, Chapter 8 Integration Environment and Development in Decision Making, Agenda 21, UNCED)

Component 11. Basing laws, regulation and standards on sound principles:

(enforceable, effective laws, regulations and standards that are based on sound economic, social and environmental principles and appropriate risk assessment, incorporating sanctions designed to punish violations, obtain redress and deter future violations (Article 21 a, Chapter 8 Integration Environment and Development in Decision Making. Agenda 21, UNCED).

Compound 12. Ensuring environmental soundness :

Throughout Agenda 21 the term "environmentally sound" means "environmentally safe and sound", in particular when applied to the terms "energy sources", "energy supplies", "energy systems", or "technology/technologies". (Article .7., Chapter 1, Preamble, Agenda 21, UNCED)

**ADDITIONAL COMPONENTS OF SUSTAINABLE HUMAN SETTLEMENTS
DEVELOPMENT DERIVED FROM THE HABITAT II AGENDA**

(The references in this section are from the June 12 and 13 versions of the Habitat II Agenda, along with changes made on the last night of the negotiation; it was brought to my attention today, September 26, that many of the sections agreed upon during the last days have been placed in different sections.

Component 1. Ensuring compliance of corporations, transnationals and private sector to national law and codes and to international law

At the United Nations Conference on Women, and the Habitat II Conference, members States have undertaken "to ensure that corporations including transnationals, comply with national laws and codes... applicable international agreements and conventions, including those related to the environment and other relevant laws" (Art 167). In Habitat II this undertaking was reaffirmed and then extended to include the "private sector" (Article 148).

Underlying this undertaking, is the assumption that each State government would itself comply with its own national codes and would discharge its own international obligations.

Component 2. Promoting “sustainable human settlements development” through the use of BEST Practices.

In Habitat II, the promotion of BEST practices has been advocated “through exchanging of regional and international experience of best practices and facilitate[ing] the transfer of planning, design and construction techniques (69c); through setting up structures for the selection of the best practices with participation by non-governmental organizations active in the urban development field (142b); through promoting best practices for community-based land management in human settlements (84(j)); through cooperating in south-south, north-south and south-north exchanges of best practices (145); through exchanging experiences, particularly on best practices, fostering the development of technology and technical skills and to increase the efficiency of shelter and human settlements policies and management, with backing of coordinated and complimentary support from multilateral and bilateral arrangements; (152c). The component of BEST practices was most clearly articulated in Article 153

To face the challenges of the rapidly urbanizing world, there is need to ensure that international and regional networks facilitate more effectively the exchange and transfer of knowledge and experience on institutional, legal and regulatory framework, and to disseminate best practices on sustainable human settlements in rural and urban areas including inter alia, those reflected in the outcome of the Dubai International Conference on Best Practices for Improving the Living Environment, held in November 1995. the United Nations Centre for Human Settlements (Habitat) should , within its mandate, act as a catalyst in the mobilization of technical cooperation. Opportunities for improved dissemination and exchange of ideas on technical cooperation at national and regional levels could be explored.]

Component: 3. Qualifying Best practices as a component of “sustainable human settlements:

Employment opportunities and social progress in harmony with the environment (Article 16, Habitat II Agenda); establishing policies laws and regulation for both public and private activities (Article 19, Habitat II Agenda); encouraging responsible private activities in all fields (Article 19, Habitat II Agenda); promoting and attaining the goals of universal and equal access to education highest attainable standards of physical , mental and environmental health (Article 22 ter, Habitat II Agenda. June 12); making efforts to rectify inequalities (Article 22 ter, Habitat II Agenda, June 12) human health and quality of life are

at the center of the effort to develop sustainable human settlements (Article 22 ter, Habitat II Agenda, June 12); creating safe place to work and live, and to protect the environment (Article 22 ter, Habitat II Agenda, June 12); Accessing appropriate technology (Article 25 b, Habitat II Agenda); providing sustainable livelihoods (Article 27 b, Habitat II Agenda); promoting education in environmentally sound technologies (Article 27 f quart), Habitat II Agenda; adopting...performance based mechanisms (Article 1 f, Habitat II Agenda); Promoting socially and environmentally responsible corporate investment (Article 31 d., Habitat II Agenda).

Component 4. Promoting environmental measures

In the Habitat II Agenda, new environmental measures associated with sustainable human settlements development were endorsed: Preserving of peri urban and urban biodiversity (Article 98 bis a, Habitat II Agenda); Providing “green spaces (Article 27 f, Habitat II Agenda); ” Protecting Fragile ecosystems and environmentally vulnerable areas (Article 27e, Habitat II Agenda); Reducing the ecological footprint (Article 27b, Habitat II Agenda); Ensuring Green spaces (Article 83 bis, Habitat II Agenda); Knowing ecocycles (Article 134h, Habitat II Agenda) preventing environmental damage (Article 135, Habitat II Agenda); preventing anthropogenic disasters (Article 27 i., Habitat II Agenda).

Component: 5. Moving away from car-dependency, by instituting appropriate regulations and the adopting of environmentally sound transportation such as bicycle paths

Encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (Article 104 c, Habitat II Agenda)

Managing transport in human settlements should be done in a way that promotes good access for all to places of work, social interaction and leisure and facilitates important economic activities, including obtaining food and other necessities of life. This should be done while reducing the negative effects of transport on the environment. Transport-system priorities should be given to reducing unnecessary travel through appropriate land-use and communication policies, developing transport policies that emphasize mobility alternatives other than the automobile, developing alternative fuels and alternative fuel vehicles, improving the environmental performance of existing modes of transport, and adopting appropriate pricing

Component 6. Contributing to the common good

All people have rights and must accept their responsibility to respect and protect the rights of others including future generations and contribute actively to the common good (Article 19, Habitat II Agenda).

(38)

TRANSFER OF MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT PRINCIPLE

REDUCTION AND TRANSFER OF THE MILITARY BUDGET

Concerned that currently (1996) the Global Community spends \$800 billion on the military budget at a time when the right to housing, the right to food, the right to health care, the right to equality of all, the right to education, the right to safe drinking water, and the right to a safe environment have not been fulfilled.

Noting that the commitment was made to transfer a substantial proportion of the military budget to social programs (as undertaken through expectations created in general Assembly resolutions from 1981)

Noting also that in 1981, in general assembly resolution entitled the reduction of the military budget, the majority of the member States did the following:

- (i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.
- (ii) Recognized that the military budget constituted a heavy burden for the economies of all nations, and have extremely harmful consequences on international peace and security.
- (iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries

Reminded that this request for transfer of the funds from the military budget was further reinforced in a 1983 General Resolution on the Relationship between disarmament and development; that curbing the arms build-up would make it possible to release additional resources for use in economic and social development, particularly for the benefit of the developing countries. Also in this resolution state considered that the magnitude of military expenditures is now such that their various implications can no longer be ignored in the efforts pursued in the international community to secure the recovery of the world economy and the establishment of a new international economic order.

We call upon the member States of the United Nations

- to immediately reduce the military budget to 50% of what it currently is and to transfer these funds into socially equitable and environmentally sound development
- to embark on plans for military conversion with the remaining 50%, and with the setting up of alternative structures for preventing conflict and war through an international regime that respects the rule of international law, and through establishing an international court of compliance where citizens could take evidence of state non-compliance with international law

39

• REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”

Concurring with the assessment in the Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, that “while scientific and technological developments provide ever-increasing opportunities to better the conditions of life of peoples and nations, in a number of instances they can give rise to social problems, as well as threaten the human rights and fundamental freedoms of the individuals (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Concurring with the concern expressed in Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity about scientific and **technological achievements can be used to intensify the arms race production:**

“Noting with concern that scientific and technological achievements can be used to intensify the arms race, suppress national liberation movements and deprive individuals and peoples of their human rights and fundamental freedoms (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of Humanity”, 1975)

Also noting with concern, that scientific and technological achievements can entail dangers for the civil and political rights of the individual or of the group and for human dignity (Preamble, Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

Noting the urgent need to make full use of scientific and technological developments for the welfare of *man* **humanity** and to neutralize the present and possible future harmful consequences of certain scientific and technological achievements (Declaration on the Use of Scientific and Technological Progress in the Interests of Peace and for the Benefit of humanity, 1975)

POST- 50

1996 GLOBAL COMPLIANCE RESOLUTION

We prepared the following draft resolution for the “We the Peoples Conference: the Role of Civil Society in the History and Future of the United Nations”. This resolution called upon States, at the June 26, 1995 UN Affirmation Ceremony, to pledge to discharge fifty years of obligations.

This resolution was adopted by the plenary at the Conference, and the assembly agreed that the resolution should be passed on to Dr. Boutros Boutros Ghali who subsequently addressed the plenary. We recently received a letter of support from Dr. Boutros Boutros Ghali:

Thank you for sharing with me the “Global Compliance Resolution” whose spirit reaffirms the commitment of people the world over to the principles enshrined in the Charter of the United Nations (*signed, Boutros Boutros-Ghali July 5, 1995*)

Since then on September 13, a version of the Global Compliance resolution was officially distributed to all delegations of the member States at the United Nations at the United Nations Conference on Women: Equality, Development and Peace. The Global Compliance resolution was distributed again to all delegations of the member States of the United Nations on September 15, on the final day of the conference.

A proposed resolution for October 24 was sent to all the U.N. 50th Anniversary representatives. A response was received from Dr. Sohreh Tabatabai, the Coordinator, Fiftieth Anniversary Secretariat:

I regret that it is not possible for us to arrange for presentation of the Global compliance Resolution to the General Assembly. As resolutions may be introduced only by Member States ...

You may be interested to learn that the special commemorative session of the General Assembly planned for 22-24 October is expected to endorse a Declaration rededicating Member States to achieving the goals of the United Nations Charter.

States HAVE CONTINUALLY BEEN PREPARED TO DEDICATE THEMSELVES TO ACHIEVING THE GOALS OF THE UNITED NATIONS CHARTER. THEY ARE, HOWEVER, NOT PREPARED TO DISCHARGE YEARS OF OBLIGATIONS AND

EXPECTATIONS. THE GLOBAL COMPLIANCE RESOLUTION CALLS UPON States TO DISCHARGE YEARS OF OBLIGATIONS AND FULFILL YEARS OF EXPECTATIONS WHICH IF DISCHARGED AND FULFILLED WOULD DEMONSTRATE THE DEDICATION OF States TO ACHIEVING THE GOALS OF THE UNITED NATIONS.

52/1 Proclamation of the International Year of Global Compliance

The General Assembly

Whereas 1999 is the culmination of the decade devoted to the furtherance of International law

Whereas the General Assembly has decided unanimously to proclaim solemnly, on the Fifty-second Anniversary of the United Nations, 1999 to be the International Year of Global Compliance

Whereas since the formation of the United Nations, member States of the United Nations, have undertaken in U.N. system governing bodies, obligations reflected in Charters, Covenants, Conventions, Declarations; and have created expectations through General Assembly Resolutions, declarations and Conference action statements.

Whereas, if these years of obligations had been honored and acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

Whereas, fulfillment of the purpose of the United Nations would require the discharging of these year of obligations related to guaranteeing respect for human rights, preserving and protecting the environment, promoting peace, and ensuring socially equitable and environmentally sound development;

Whereas, the freeing up of money through the peace dividend would assist in the discharging of these obligations, and the fulfilling of these expectations;

Whereas, the Fifty-second Anniversary of the United Nations provides a unique opportunity to reaffirm the support for and commitment to the purposes and principles of the Charter of the United Nations, and to undertake to discharge previous obligations incurred through the Charter, Covenants, Conventions, and to fulfill previous expectations created through Declarations, General Assembly Resolutions, and Conference Action statements.

Now, therefore,

The General Assembly, and its member States

Solemnly proclaim 1999 the International Year of Global Compliance

and solemnly pledge to do the following:

- to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained;
- to discharge obligations undertaken through the Charter, Conventions, Treaties, and Covenants, and to fulfill expectations created through Declarations, General Assembly Resolutions and conference Action statements;
- to sign and ratify what they have not yet signed and ratified, to enact the necessary legislation and enforcement measures to ensure the discharging of these obligations
- to fulfill additional expectations created through globally adopted UN Conference action plans, and programs of action.

52nd plenary meeting 24, October, 1997

PETITION FOR THE ESTABLISHMENT OF AN INTERNATIONAL COURT OF COMPLIANCE

RECOGNIZING that for fifty years since the formation of the United Nations, member States have undertaken obligations reflected in the charters, treaties, conventions, and covenants; and have created expectations reflected in declarations, conference commitments and resolutions.

REMINDED of the General Assembly resolution establishing a decade of International Law from 1990 –1999.

MINDFUL of the obligation to establish conditions under which justice and respect for the obligations arising from treaties and international law can be maintained (Charter of the United Nations, 1945)

AFFIRMING that it has become a principle of international customary law that state parties to treaties and Conventions undertake to enact the necessary legislation to ensure compliance with their obligations (Art. III Convention on the Prevention and Punishment of the Crime of Genocide, 1948); International Convention on the Elimination of all Forms of Racial Discrimination (1965); International Covenant of Civil and Political Rights (1966); Convention on the Elimination of All Forms of Discrimination Against Women (1979); Convention on the Control of trans-boundary Movements of Hazardous Wastes (1992) etc.

CONVINCED of the applicability of the Doctrine of Legitimate Expectations, whereby, if a government holds itself out to do something, even if not legally required to do so, the government will be expected to act carefully and without negligence, and the citizens have a legitimate expectation that the government will discharge this obligation. Convinced also of the applicability of the Doctrine of Legitimate Expectations to declarations, conference commitments and General Assembly resolutions.

BE IT RESOLVED THAT IN 1996, States SIGN WHAT THEY HAVE NOT YET SIGNED, RATIFY WHAT THEY HAVE NOT YET RATIFIED, ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE, AND UNDERTAKE TO ENFORCE THE ACCRUED OBLIGATIONS AND EXPECTATIONS

BE IT FURTHER RESOLVED THAT IN 1996, A COURT OF GLOBAL COMPLIANCE BE INSTITUTED. THIS COURT WILL GIVE CITIZENS AN OPPORTUNITY TO PRESENT EVIDENCE OF NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND EXPECTATIONS. States WILL BE REQUIRED TO APPEAR AND TO ACT UPON THE JUDGMENT OF THE COURT.

• ADDITIONAL INTERNATIONAL PRINCIPLES

ACKNOWLEDGMENT OF URGENCY OF CONSERVING NATURE

Humans can alter nature and exhaust natural resources by their actions or the consequences and, therefore, must fully recognize the urgency of maintaining the stability and quality of nature and of conserving natural resources (World Charter of nature)

ENSURING THE INHERENT WORTH OF NATURE

ensuring that every form of life is unique, warranting respect, regardless of its worth to man [human], and to accord other organisms such recognition's (World Charter of Nature)

ACCEPTANCE OF NEED FOR MORAL CODE OF ACTION IN RESPECT OF NATURE

ensuring that every form of life is unique, warranting respect regardless of its worth to man [humans] , and to accord other organisms such recognition's, man [human] must be guided by a moral code of action (UN Resolution 37/7) World Charter of Nature)

RECOGNITION OF INTERCONNECTEDNESS WITH NATURE

Humankind is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (World Charter of Nature).

COMMITMENT TO NON-TRANSFERENCE OF HARMFUL SUBSTANCES AND ACTIVITIES

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Rio Declaration, UNCED) U.S.

AFFIRMATION OF POSITIVE-DUTY-TO PROTECT-INDIGENO-LANDS PRINCIPLE.

recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate (16.3. ii, Agenda 21)

ADDITIONAL PRINCIPLES THAT SHOULD BE INCORPORATED INTO INTERNATIONAL STANDARDS

ENUNCIATION OF THE PRIMACY OF THE ECOSYSTEM PRINCIPLE

Ensuring that in all decisions made about the environment that the ecosystem be given primacy

RECOGNITION OF LIMITS TO GROWTH PRINCIPLE

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are implications of their imminent approach

PRINCIPLE OF COOPERATION WITH AND NON-DOMINATION OVER NATURE

Humanity's role is to understand and work with the rest of nature, not control, manage, dominate or conquer it

NON-QUANTIFIABILITY OF ECOLOGICAL VALUES

Ecological values are of a class not readily quantified particularly in economic units but must be taken as a given, in that all life is dependent on sustaining the biosphere, the exclusive life-support system (Knelman)

No pecuniary payment of costs for environmental destruction can ever fully redress the loss to the environment, the prevention of pollution and environmental destruction should be reaffirmed by using "prevention technologies"

USENUNCIATION OF THE "CAUTIONARY" PRINCIPLE (REVERSE - ONUS)

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes

[NOTE THAT THE HONORABLE SHEILA COPPS, THE MINISTER OF ENVIRONMENT OF CANADA HAS CALLED FOR THE IMPLEMENTATION OF THE REVERSE ONUS.]

NON INTRODUCTION OF HAZARDOUS PRODUCTS IN THE ENVIRONMENT PRINCIPLE

the onus of proving the non-hazardous nature of the product will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm has been done by non-vested interest (i.e. financial interest) parties]

INCLUSION LEGISLATIVE PRINCIPLE

ensuring that every activity or substance that could prevent the protection, conservation and sustainability of the environment will be included under this Act, regardless of whether the activity or substance is presumed to be covered under another Act

NON-PROSECUTION FOR ADVOCATING PURPOSES OF THIS FRAMEWORK OF MANDATORY STANDARDS AND TECHNICAL REGULATIONS PRINCIPLE

ensuring that no citizen will be prosecuted for advocating or acting to promote the purposes of the framework

COMPENSATION NOT JUSTIFICATION FOR NON FULFILLING OF DUTY PRINCIPLE

ensuring that compensation can never be used as reason for not exercising the duty to protect, conserve and sustain the environment

COUPLING-AVOIDANCE PRINCIPLE

ON-ACCEPTANCE-OF-"ENVIRONMENT-INDUSTRY"-BEING-COUPLED-WITH-THE-TOXIC- WASTE-PRODUCTION-INDUSTRY-PRINCIPLE

The coupling of a “clean-up environment” industry with a toxic waste producer shall not be used to justify the continuation of the production of toxic waste

SOLUTION-WORSE-THAN-PROBLEM-AVOIDANCE PRINCIPLE

The advocating of a “solution” that is potentially worse than the problem to be addressed shall be avoided. For example, the civil nuclear power industry is promoting nuclear energy as the solution to climate change

1. 3. COMPLYING WITH PREVENTION PRINCIPLES IN NAFTA

NON-RELAXATION OF STANDARDS TO ATTRACT INVESTMENT

The Parties recognize that it is inappropriate to encourage investment by relaxing domestic health, safety or environmental measures. Accordingly, a Party should not waive or otherwise derogate from, or offer to waive or otherwise derogate from such measures as an encouragement for the establishment, acquisition, expansion or retention in its territory of an investment of an investor. IF a Party considers that another Party has offered such an encouragement, it may requires consultations with the other Party and the two Parties shall consult with a view to avoiding any such encouragement. (NAFTA Article 1114 ss 2)

1.4. COMPLYING WITH SIGNIFICANT FEDERAL PRINCIPLES

CAUTIONARY OR “REVERSE ONUS” PRINCIPLE

The proponent of an intervention into the ecosystem shall demonstrate the safety of the intervention rather than the opponent of an intervention, being required to demonstrate, harm (Proposed by The Federal Minister of Environment

Judy o Farrell 811-2828

1.1. [This principle holds that] a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their

context and in the light of its object and purpose (Art.1.Convention on the Law of Treaties, 1968)

1.2. [This principle also holds that]... that the rules of customary international law will CONTINUE to govern questions not regulated by the provisions of the present Convention have agreed as follows (Article 29 territorial scope of treaties, Convention on the Law of Treaties)

(2)

OBLIGATION PRINCIPLES

2.2. [This principle holds that there is an] Obligation not to defeat the object and purpose of a treaty prior to its entry into force

A state is obliged to refrain from acts which would defeat the object and purpose of a treaty when:

- (i) it has signed the treaty or has exchanged instruments constituting the treaty subject to ratification, acceptance or approval, until it shall have made its intention clear not to become a party to the treaty a); or
- (ii) it has expressed its consent to be bound by the treaty, pending the entry into force of the treaty and provided that such entry into force is not unduly delayed b)

(Art. 18, Convention on the Law of Treaties, 1968)

2.3. [This principle affirms the Doctrine of Legitimate Expectations which holds that]

- (i) "To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, B.C. Ombudsman Annual Report, 1991)

and that

- (ii) If a government holds itself out to do something even if not legally required to do so, it will be expected to act carefully and appropriately without negligence, and the

citizens have the legitimate expectation that the government will discharge its obligations (Ombudsman Office, Personal Communication).

2.4. This principle also entails commitment to the Public Trust Doctrine

This doctrine provides that submerged and submersible lands are preserved for public use in navigation, fishing and recreation and state, as trustee for the people, bears responsibility of preserving and protecting the right of the public to the use of the waters for those purposes.

(3)

EQUITY PRINCIPLES

[This principle holds that] equity imputes an intention to fulfill an obligation and that equity looks to the intent rather than to the form (Maxims of Equity)

- 3.1. Equity will not suffer a wrong without a remedy**
- 3.2. Equity follows the law**
- 3.3. Where there is equal equity, the law shall prevail**
- 3.4. Where the equities are equal, the first in time shall prevail**
- 3.5. He/she who seeks equity must do equity**
- 3.6. He/she who comes into equity must come with clean hands**
- 3.7. Delay defeats equity**
- 3.8. Equality is equity**
- 3.9. Equity looks to the intent rather than to the form**
- 3.10. Equity looks on that as done which ought to be done**
- 3.11. Equity imputes an intention to fulfill an obligation**
- 3.12. Equity acts in personam**

(Roscoe Pound in Cambridge Legal Essays (1926), pp259 et seq., cited from P.V. Baker and P. St Langar (1990). *Snell's Equity* London Sweet and Maxwell)

(4)

POSSIBILITY OR REVERSIBLE PRINCIPLE

4.1. [This principle holds that] Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligations under the treaty or of any other international obligation owed to any other party to the treaty (Art. 61. 2 Convention on the Law of Treaties, 1968).

SYSTEMIC CONSTRAINT:

OFTEN IT IS THOSE WHO ATTEMPT TO PREVENT IRREVERSIBILITY RATHER THAN THOSE WHO CAUSE IRREVERSIBILITY ARE THAT ARE PROSECUTED. INJUNCTIONS WHICH ARE SUPPOSED TO PREVENT IRREPARABLE HARM ARE USED AGAINST THOSE WHO ATTEMPT TO PREVENT IRREPARABLE HARM.

(5)

HIGHEST TENABILITY PRINCIPLE

INTERNATIONAL OBLIGATIONS AS A MINIMUM PRINCIPLE

5.1. This principle affirms that the need to avoid the lowest common denominator as the solution

Nothing in this Convention shall affect any provisions that are more conducive to the achievement of equality between men and women which may be contained in the legislation of a State Party or

in any other international convention, treaty or agreement in force for that State.
(Paraphrase of Article 23, Convention on the Elimination of all forms of Discrimination Against Women, 1979)

(6)

INTERDEPENDENCE PRINCIPLE

6.1. The interdependence principle affirms the interdependence of respect for human rights, of fulfillment of social justice and equity, of achieving environmental protection, preservation and conservation, and of attainment of peace. These

issues will be perceived to be interdependent facets of a potentially viable solution. It is no longer possible to consider in isolation: threats and impacts of war; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes, including nuclear waste, the disregard for inter-generational and gender equality /equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap

6.2. This Interdependence principle reflects[ing] the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation. (Preamble, 1.5., International Conference on Population and Development, 1994)

6.3. [This principle holds that] Research *should shall* be undertaken on the linkages among population, consumption and production, the environment and natural resources and human health as a guide to effective [socially equitable and environmentally-sound] *sustainable development* policies (3.31., International Conference on Population and Development, 1994)

6.4. This principle holds that *mankind humankind* is a part of nature and life depends on the uninterrupted functioning of natural systems which ensure the supply of energy and nutrients (Preamble (a)UN Resolution, 37/7, World Charter of Nature, 1982)

Reducing environmental health hazards

* 89 a ter Improve policies that **prevent**, reduce environmental health hazards and provide the informal sector and all workers with accessible information on how to enhance occupational safety and reduce health risks;

(7)

PRINCIPLE OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

7.1. This principle affirms the need for “socially equitable and environmentally-sound development” (Preamble, 1.2., International Conference on Population and Development, 1994)

7.2. This principle affirms that to achieve *sustainable development* [socially equitable and environmentally-sound] and a higher quality of life for all people, Governments *should reduce and shall* eliminate unsustainable patterns of production and consumption and promote [appropriate ~] demographic policies (3.9., International Conference on Population and Development, 1994)

(8)

PRINCIPLE OF SELF-SUFFICIENCY

8.1. This principle entails the supporting of bioregions in the development of self-sufficiency through the development of indigenous technology using ecologically sound means and only exporting when there is a surplus. Adoption of this principle would discourage export-dominant economies and the furthering of many of the aspects of the “green revolution” — which fostered the dependence on external technology.

8.2. This principle is aimed at the promotion of food security and, *where appropriate*, food self-sufficiency within the context of sustainable agriculture (3.7.I., Combating Poverty, Agenda 21, UNCED, 1992)

(9)

PRINCIPLE OF EXTRA-TERRITORIALITY

9.1. This principle entails the ensuring that States, individuals, institutions and the market shall not abuse the concept of extra-territoriality —the application of standards from exporter state- to justify the transfer of banned, restricted, obsolete or rejected technology to other States whose standards are not as high

SYSTEMIC CONSTRAINT: THE SAME STATE OR INDUSTRY THAT CONTINUES TO IMPOSE THE TRADITIONAL MODEL OF CONSUMPTION USES THE RELUCTANCE TO IMPOSE EXTERNAL REGULATIONS AS A MEANS TO JUSTIFY RELAXING REGULATIONS

(10)

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(11)

EQUALITY PRINCIPLE

11.1. [This principle entails] reaffirming of the... faith in fundamental human rights, in the dignity and worth of human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in large freedom (Preamble, Universal Declaration of Human Rights, 1948)

(12)

PRINCIPLE OF NON-PRESUMPTION

12.1. This principle entails the affirming that no presumption shall be made about capabilities or abilities on the basis of race, tribe, religion, disabilities, country of origin, sex, sexual orientation, language, family structure, or other status

(13)

LIMITS-TO GROWTH PRINCIPLE

LIVING WITHIN THE CARRYING CAPACITY OF THE ECOSYSTEM

13.1. There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

* [Find: Quote from Club of Rome]

(14)

INHERENT WORTH PRINCIPLE

14.1. Every form of life is unique, warranting respect regardless of its worth to man [Humanity], and to accord other organisms such recognition's, man [humans] must be guided by a moral code of action (Preamble, UN Resolution, 37/7, World Charter of Nature, 1982)

14.2. Nature shall be respected and its essential processes shall not be impaired (Principle 1, UN Resolution, 37/7, World Charter of Nature, 1982) World Charter of Nature, 1982)

(15)

PRECAUTIONARY PRINCIPLE

15.1. This principle holds that...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

15.2. PREVENTION PRINCIPLE And ANTICIPATORY PRINCIPLE (See, *Global compliance Research project's submission on the environment, 22.3*)

15.4. Reverse onus principle

(i) The onus of proof shall shift from the opponent of an intervention having to demonstrate harm, to the proponent of an intervention into the Ecosystem, having to demonstrate safety. Every proponent of an intervention into the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes, and be prepared to submit data for a full scale life cycle analysis, and environmental cost analysis of the product and activities.

(16)

PRINCIPLE OF NON-DISPLACEMENT

16.1. This principle acknowledges that solutions do not lie in transferring the problem to another area, or another time

(17)

PRINCIPLE OF SOLUTION BEING BETTER THAN THE PROBLEM PRINCIPLE

17.1. Ensuring that the solution offered is not worse or potentially worse than the original problem that it was intended to solve

(18)

trans-boundary PRINCIPLE

This principle holds that States shall take all measures necessary to ensure that activities under their jurisdiction or control are so conducted as not to cause damage by pollution to other States and their environment, and that pollution arising from incidents or activities under their jurisdiction or control does not spread beyond the areas where they exercise sovereign rights in accordance with this Convention. (Art. 194. 2., Law of the Seas, 1982)

(19)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(20)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and States have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature

(21)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural States where refugees, landed immigrants and citizens from former States have left their country of origin because of the violation of human rights.

(22)

ARMS LENGTH RESEARCH PRINCIPLE

This principle holds that most of the current research that has been used to support the continuation of the current model of development has arisen from non-arms length research by vested interests, and that if the urgency of the global situation is to be addressed arms-length non-vested interest research has to be relied on.

(23)

REGULATOR MUST NOT PROMOTER BE PRINCIPLE

This principle holds that regulators must not promote the continuance of the object or activity over which they regulate

(24)

PRINCIPLE OF PROPORTIONAL RESPONSE

This principle holds that the response in conflict must be proportional in kind, extent, nature to that of the original attack [Check wording in the Geneva Convention]

(25)

PRINCIPLE OF DISCRIMINATION

This principle requires the discrimination between military and not military competence and non competence [Check wording in the Geneva Convention]

PRINCIPLES OF ENVIRONMENTAL COMPLIANCE

This was prepared for submission to the B.C. Government's Working Committee on Criteria for Discharge Emissions by the ERA Ecological Rights Association. It is proposed as a set of principles appropriate for bio-regionalism

PRINCIPLE 1. ENDORSING THE INTERDEPENDENCE PRINCIPLE

The interdependence principle affirms the interdependence of respect for human rights, fulfillment of social justice and equity, achievement of environmental protection and preservation, and the attainment of peace. These components are interdependent facets of a potentially viable solutions. It no longer seems possible to consider "problems" in isolation (such as threats and impacts of war; the exponential growth of population; CONTINUED urbanization; the use of ecologically unsafe and unsound energy; the loss of ecological integrity; the disposal of toxic and hazardous wastes (including nuclear waste); the disregard for inter-generational and gender equality /equity; the ignoring of health issues related to population and environmental degradation; the perpetuation of the current model of development; the inequitable distribution of resources; the disenfranchised and the enfranchised gap, etc.)

PRINCIPLE 2 ENDORSING THE PRIMACY OF THE ECOSYSTEM

In all decisions made affecting the environment, the integrity of the ecosystem must be given primacy in conjunction with socially equitable and environmentally-sound development. NOTE: The "Ecosystem" includes both the biological and physical and chemical components (the biotic and abiotic)

PRINCIPLE 3; ENSURING CONSISTENT PROTECTION OF AMBIENT AIR AND WATER AND SOIL QUALITY

Ensuring consistent protection means ensuring both the variation in air, water, and soil conditions across a bioregion and the variation in effects of different substances emitted. All discharges, no matter where they are located in a region, will be equally affected by the criteria. Ensuring consistent protection also means that governments will not transfer its pollution problems onto other jurisdictions or bioregions, nor should governments relax

standards in order to attract industry. Criteria must ensure acceptable ambient environmental conditions all across States and bioregions.

PRINCIPLE 4: [ENABLING] SOCIALLY EQUITABLE AND ENVIRONMENTALLY-SOUND DEVELOPMENT

“socially equitable and environmentally-sound development” is a basis of bioregional planning. (Preamble, 1.2., International Conference on Population and Development, 1994)

PRINCIPLE 5: ENSURING THAT POLLUTING SUBSTANCES ARE NOT TRANSFERRED FROM ONE MEDIA TO ANOTHER

Pollution prevention is complete prevention instead of displacement of problem and not the transferring pollution from one medium to another (for example from water to air).

PRINCIPLE 6: AFFIRMING THE LIMITS OF GROWTH

There are real limits to consumption, population and pollution. Although their precise quantification is uncertain, there are serious indications that these limits have long since passed.

PRINCIPLE 7: ENDORSING THE ANTICIPATORY PRINCIPLE

The anticipatory principle is a pro-active measure to ensure that substances, processes and activities which are harmful to the environment are prevented from entering the environment, and to ensure that costly subsequent means of restoration are avoided, and that irreversible environmental degradation are avoided. Adverse effects include, but are not limited to: toxicity, bio-accumulation, bio-concentration, persistence, depletion of the stratospheric ozone layer, reduction of carbon sinks, increased greenhouse gases, increased human-induced climate change, reduction or loss of biodiversity, as well as heat, light and electro-magnetic radiation, atomic radiation, and hormone mimicry

PRINCIPLE 8: AFFIRMING THE "CAUTIONARY" PRINCIPLE

Every proponent of an intervention in the ecosystem must demonstrate that the intervention will not cause harm to the environment or will not create ecologically unsound wastes U.S.

PRINCIPLE 9: REQUIRING OF A SHIFT IN THE ON OF PROOF

the proponents of an intervention shall demonstrate the safety of the intervention rather than the opponent having to demonstrate the harm of the intervention. "Reverse-onus principle" recommended by the Canadian Minister of Environment, Sheila Copps (1994) Proof of the non-hazardous or toxic nature of the product introduced into the environment will be on the proponent of this new type of product [after a full life cycle analysis of all the potential environmental harm by non-vested interest parties]

PRINCIPLE 10: ADOPTING OF "PREVENTION" TECHNOLOGIES

Prevention technologies — technologies that emphasize "protecting, conserving and sustaining the environment from the beginning, and thus avoiding the cycle of rectification of error — will contribute to socially equitable and environmentally-sound development

PRINCIPLE 11: ENFORCING THE POLLUTION PREVENTION PRINCIPLE

Mandatory standards and technical regulations will be developed to prevent adverse effects of substances or activities on the ecosystem including the adverse effects on the health of human and non-human species within and throughout bioregions.

PRINCIPLE 12: REQUIRING THE USE OF BEST ECOLOGICALLY SOUND TECHNIQUES (BEST)

It is important to support and promote the development of and the use of BEST (Best Ecologically Sound Techniques) . In the event that there is no BEST technology which can prevent the release of persistent or bio-accumulative toxics then the extractive or productive activities which produce the product or substance process should be changed; the activities and product phased out/outlawed, or the demand for the product reduced through public education. In this case, the industry involved shall be assisted in the conversion to alternative processes or products.

PRINCIPLE 13 CREATING INDIGENOUS PLANT RESERVES AND HOME AND COMMUNITY MARKET GARDENS

Maintaining lawns requires a drain on local water supplies. Governments should pass regulations which encourage the replacement of grass lawns with indigenous plant reserves consistent with the fauna of the bioregion and home /community market gardens

PRINCIPLE 14: GENERATING BY-PRODUCTS AS A RESOURCE NOT AS WASTE

The generation of waste shall be prevented, and the emphasis shall be on the generation of by-products that can become an ecologically safe and sound resource. If waste is already in existence, waste shall be disposed of at its source in an ecologically safe and sound manner ensuring that nothing is being stored that could, if an accident occurred, cause harm to the environment. If no assurance can be given that waste will not cause potentially significant adverse effects, then the activity that is generating the wastes shall cease, or permission to undertake the project will not be granted.

PRINCIPLE: 15 GLOBAL COMPLIANCE

The most stringent environmental provisions shall be adopted complying with all international, national, bilateral and bioregional agreements, protocols and conventions as a minimum. If there is a conflict between international, national, bilateral and regional agreements, the most stringent environmental provisions shall prevail.

PRINCIPLE 16: ENSURING INCLUSIVENESS OF ACTIVITIES AND SUBSTANCES

Every activity or substance that could prevent the protection and conservation of the environment will be included in environmental legislation, regardless of whether the activity or substance is, or is presumed to be covered under another Act

PRINCIPLE 17: UNDERTAKING TO NOT RELAX STANDARDS RELATED TO SOCIALLY EQUITABLE AND ENVIRONMENTAL SOUND DEVELOPMENT

Governments shall undertake to not relax environmental standards and technical regulations, or human rights protection, or social justice and equality /equity provisions to attract short-term economic benefit.

PRINCIPLE 18: ENSURING THAT RELAXATION OF STANDARDS AND REGULATIONS SHALL NOT BE USED TO ATTRACT POLLUTING INDUSTRY

No proposal to relax standards or technical regulations shall be used to attract industry into a specific bioregion [see principle enunciated in NAFTA. (re: relaxation of standards to attract industry)]

PRINCIPLE 19: ESTABLISHING AND ENFORCING REDUCTION AND ELIMINATION TARGETS

"Ambient criteria", or "environmental quality criteria" refers to levels of contaminants in the environment that must be zero use, production, and release in all cases where a toxic

substance is persistent or bio-accumulative(e.g. chlorine). It also applies when a substance will generate persistent or bio-accumulative toxic byproducts or breakdown products during its productions, use or disposal (Zero Toxics Alliance Statement of Principles)

PRINCIPLE 20: ENSURING ENVIRONMENTAL AUDITS AND TAKING INTO ACCOUNT ALL ECOLOGICAL CONSEQUENCES PRINCIPLE

The environmental audit and ecological consequences principle is the following: to assess both the environmental costs of not converting to ecologically sound practices and the environmental costs of permitting ecologically unsound practices (including the costs to future generations of irreversible environmental degradation) and the environmental costs of potential mitigation, and restoration.

PRINCIPLE 23: ASSESSING THE FULL COSTS OF VIOLATING THE RIGHTS TO THE DISENFRANCHISED THROUGH ECOLOGICALLY UNSOUND PRACTICES

In addition, assessment of the full costs of violating the rights of the disenfranchised shall be carried out. The groups bearing the greatest impact from ecologically unsound practices are usually the disenfranchised in society—the poor and the members of minority groups

PRINCIPLE 25: REQUIRING A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT

An actual assessment of the short and long term potentially adverse environmental effects of existing and proposed projects and activities shall be carried out. So-called “Environmental Assessments” which review "environmental, economic, social, cultural, heritage, health effects of the reviewable projects" are not legitimate environmental impact assessments (Principle 25, “Environmental Compliance” Global Compliance Research Project)

PRINCIPLE 26: ENSURING AND ENFORCING THE POLLUTER PAY PRINCIPLE

The Polluter Pay Principle ensures that those who may release polluting substances into the environment pay the full-cost of environmentally safe handling, treatment, disposal, and remediation; in addition, permits shall be suspended and canceled, if the polluter has caused serious irreversible ecological damage

PRINCIPLE 27: ENFORCING ENVIRONMENTAL COMPENSATION PRINCIPLE

Given that throughout history sympathetic government regimes have failed to enforce their own statutory legislation, and given that there has been resultant environmental

degradation, current governments shall seek environmental compensation from companies that can be shown to have consistently contributed to environmental degradation. The funds from environmental compensation shall be put into developing BEST (Best Ecologically Sound techniques)

PRINCIPLE 28: ENSURING THAT COMPENSATION IS NOT USED AS JUSTIFICATION FOR NON FULFILLING OF DUTY

Compensation shall never be used as reason for not exercising the duty to preserve, protect, conserve the environment

PRINCIPLE 29: REJECTING THE NOTION THAT THE RESTORABILITY OF NATURE JUSTIFIES THE ABUSE OF NATURE

There exists a notion that environmental degradation is reversible; it can be restored, and rehabilitated. This notion shall never be used as a justification for the causing of environmental degradation

PRINCIPLE 30: EXTENDING CONCEPT OF DISASTER REDUCTION TO COVER NATURAL AND OTHER DISASTER SITUATIONS INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL DISASTERS (NA-TECHS)

Experience has demonstrated that, although not a part of the mandate of the Decade, the concept of the disaster reduction should be enlarged to cover natural and other

disaster situations including environmental and technological disasters (Na-Techs) and their interrelationship which can have a significant impact on social, economic, cultural and environmental systems, in particular in developing countries. (B i Convention on Natural Disaster, 1994)

PRINCIPLE 18: ENSURING THAT STANDARDS AND TECHNICAL REGULATION WILL NOT BE RELAXED TO ATTRACT INVESTMENT

The argument that a pristine environment that has not yet been polluted by industrial activity, shall be able to have emission standards relaxed, is inherently invalid and should be discounted. In other words, a licence to pollute could be given to industry in an pristine area because the area if is not yet officially been designated as being polluted.

PRINCIPLE 18: ENSURING THAT REDEFINITION OF PRACTICES WILL NOT ENABLE INDUSTRY TO BYPASS REGULATIONS

Polluting industries that have been regulated under statutory law, shall not, through redefinition of practice, be excluded from the previous regulations [where a plant with “industrial” air emissions is redefined as a recycling plant and thus the regulations related to “industrial....] is deemed inapplicable.

13.

ADMINISTRATIVE NOTES

GAIA-L has 3 simple rules:

PRINCIPLES OF ENVIRONMENTAL COMPLIANCE

...

PRINCIPLE 1. ENDORSING THE INTERDEPENDENCE PRINCIPLE

...

PRINCIPLE 30: EXTENDING CONCEPT OF DISASTER REDUCTION TO COVER NATURAL AND

OTHER DISASTER SITUATIONS INCLUDING ENVIRONMENTAL AND TECHNOLOGICAL DISASTERS (NA-TECHS)

...

PRINCIPLE 18: ENSURING THAT STANDARDS AND TECHNICAL REGULATION WILL NOT BE

RELAXED TO ATTRACT INVESTMENT

...

PRINCIPLE 18: ENSURING THAT REDEFINITION OF PRACTICES WILL NOT ENABLE

INDUSTRY TO BYPASS REGULATIONS

...

Dear Dave,

I like your principles, all 32 of them. I do not stress but check their numbers, please, with attention to the No. 18 used three times. But really I like this MULTI- criteria approach -- life is not easy, and more than 32-dimensional. Compare them with Rio Set, for instance, what took more pages to be published some years ago.

Will you let the Gaians know if you realized contradictory nature of these principles (goals, aims, restrictions), please? What could put them into a Harmony? What penalties you'd suggest to execute these principles, to make them work in our souls, our minds, our hands, please? What about foreseeing possible consequences? Did you ever try to model them in any way? I believe a predictive supermodel (math, not a girl, though she is welcome, of course:) might help it.

Cheers,

Seva

David and I worked on these principle. He has gone away for a week so I thought I would respond to your input into the principles. We incorporated these principles into “A Charter of Obligations”. This Charter has 350 pages of obligations that States had incurred in areas of peace, environment and human rights during the 50 years of the functioning of the United Nations. I took this Charter to the New York Prep-Com and to the Conference in Beijing. This Charter was officially distributed to the state delegations at the Beijing conference to remind States that they should agree to nothing less than they were already obliged to do.

We would appreciate any refinements, changes etc. you would suggest.

As a result of being at the New York Prep-com for Beijing and in Beijing, I have set up, as part of the Global Compliance Research Project, a network with representatives from over 60 countries including some contacts from Russia. The purpose of this project is to monitor compliance with international obligations—Often by publicly reminding States of what has been agreed to previously.

I worked on the alternative NGO Earth Charter when I was in Rio, and I found that the NGOs were often even asking for less than the governments were obliged to do in previous agreements.

I believe that it is only when citizens are aware of previously undertaken obligations; when they are willing to remind States of these obligations publicly, and when are able to present cases of non-compliance at an International Court of Environmental Law will some change occur.

I think that it would be interesting to see an innovative mathematical portrayal of a set of principles. I often draft large diagrams to communicate the complexity and interdependence of issues.

Thanks for your interest in the principles

Joan Russow PhD

Sessional Lecturer in Global Issues

Coordinator, Global Compliance research Project

- Increased loss and degradation of mountain ecosystems

Mountain ecosystems are, however, rapidly changing. They are susceptible to accelerated soil erosion, landslides and rapid loss of habitat

and genetic diversity. On the human side, there is widespread poverty among mountain inhabitants and loss of indigenous knowledge. As a result, most global mountain areas are experiencing environmental degradation.
(13.1. Fragile ecosystems)

7.2.4. MANDATE TO CHANGE CONSUMPTIVE PATTERNS OF DEVELOPMENT AND TO ADDRESS INEQUALITY

" Programs should: Contain a long-term strategy aimed at establishing the best possible conditions for sustainable local, regional and national development that would eliminate poverty and reduce the inequalities between various population groups. It should assist the most disadvantaged groups -- in particular, women, children and youth within those groups - refugees and people under occupation. The groups will include poor smallholders, pastoralists, artisans, fishing communities, landless people, indigenous communities,

" Establishing, expanding and managing, as appropriate to each national context, protected area systems, which includes systems of conservation units for their environmental, social and spiritual functions and values, including conservation of forests in representative ecological systems and landscapes, primary old-growth forests, conservation and management of wildlife, nomination of world Heritage Sites under the World Heritage Conventions, as appropriate, conservation of genetic resources, involving in situ and ex situ measures and undertaking supportive measures to ensure sustainable utilization of biological resources and conservation of biological diversity and the traditional forest habitats of indigenous people, forest dwellers and local communities; (11.15 b., Deforestation)

" to promote income-generating activities, such as sustainable tourism,... in particular to protect the livelihood of local communities and indigenous people(13.15. b, fragile ecosystems)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a Fragile ecosystem)

" Long-term research into the importance of biodiversity for the functioning of ecosystems and the role of ecosystems in producing good, environmental services and other values supporting sustainable

development with particular reference to the biology and reproductive capacities of key terrestrial and aquatic species, including native, cultivated and cultured species; ? observation and inventory techniques; ecological conditions necessary for biodiversity conservation and CONTINUED evolution; and social behaviour and nutrition habits dependent on natural ecosystems, where women play key roles. The work should be undertaken with the widest possible participation, especially of indigenous people and their communities, including women. (15.5 f, Biological diversity)

In chapter 36 of Agenda 21, a very important distinction is made between promoting "education," promoting "public awareness," and promoting "training." It appears to be clear in Agenda 21 that non-governmental organizations, community-based groups, women's groups and aboriginal groups are called upon to assist educational authorities in reorienting education. The role of industry is ascertained to be limited to specific areas of business and industrial and training programs.

" Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. The authorities and industry should encourage business, industrial and agricultural schools to include such topics in their curricula. The corporate sector could include sustainable development in their education and training programmes.
Agenda 21, Chapter 36.5 l

In the section of Agenda 21 that addresses the " promoting of public awareness " industry is included not as the dispenser of "education" but as the recipient of needed education.

" Countries and regional organizations should be encouraged, as appropriate, to provide public environmental and development information services for raising the awareness of all groups, the private sector and particularly decision makers. (Agenda 21, section 36.10 c)

In the section of Agenda 21, that addresses the "promoting of training, an important role for industry is envisioned.

To strengthen national capacities,... in training, to enable governments, employers and workers to meet their environmental and development objectives and to facilitate the transfer and assimilation of new environmentally sound, socially acceptable and appropriate technology and know-how (Agenda 21, 36.13 c)

13. RIGHTS OF INDIGENOUS PEOPLES

UNCED Documents Sections from Agenda 21

Indigenous people and their communities have a historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities. (Agenda 21, 16.1)

In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: (Agenda 21, 16.3)

- (a) Establishment of a process to empower indigenous people and their communities through measures that include:
- (i) Adoption or strengthening of appropriate policies and/or legal instruments at the national level;
 - (ii) Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;
 - (iii) Recognition of their values, traditional knowledge and resource management practices with a view to promoting environmentally sound and sustainable development;

UNCED Documents: Rio Declaration

Indigenous people and their communities, and other local communities, have a vital role in environmental management and development because of their knowledge and traditional practices. States should recognize and duly support their identity, culture and interests and enable their effective participation in the achievement of sustainable development. (Rio Declaration, Principle 22)

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health. (Rio Declaration, Principle 14)

In order to protect the environment, the precautionary approach shall be widely applied by States according to their capabilities. Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation. (Rio Declaration, Principle 15)

National authorities should endeavour to promote the internalization of environmental costs and the use of economic instruments, taking into account the approach that the polluter should, in principle, bear the cost of pollution, with due regard to the public interest and without distorting international trade and investment.(Rio Declaration, Principle 16)

14.RESPECT FOR CULTURAL INTEGRITY AND INDIGENOUS PRACTICES

13.1. RESPECT FOR CULTURAL INTEGRITY AND RIGHTS OF INDIGENOUS PEOPLE

" respecting the cultural integrity and the rights of indigenous people [PEOPLES, EDITORIAL ADDITION] and their communities (3.7. b)

14.2. RESPECTS FOR TRADITIONAL AND INDIGENOUS PRACTICES

"Promote development in accordance with indigenous practices and adopt technologies appropriate to local conditions (7.42 c)

the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 Biodiversity)

" consider undertaking pilot projects that combine environmental protection and development functions with particular emphasis on some of the traditional environmental management practices or systems that have a good impact on the environment (13.21.a, Fragile Ecosystem)

" Collect and record information on indigenous conservation and rehabilitation practices and farming systems as a basis for research and extension programmes. (14.47 c, Agriculture)

" Governmentsshould ... Recognize and foster the traditional methods and the knowledge of indigenous people and their communities, emphasizing the particular role of women, relevant to the conservation of biological diversity and the sustainable use of biological resources, and ensure the opportunity for the participation of those groups in the economic and commercial benefits derived from the use of such traditional methods and knowledge (15.4 g, Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d, Biodiversity)

" Take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems, such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity (15.5 d, Biodiversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ...(15.6 g, Biodiversity)

Governments... consistent with the requirements of international law should, as appropriate collect, assess and make available relevant and reliable information in a timely manner and in a form suitable for decision-making at all levels, with the full support and participation of local and indigenous people and their communities. (15.6 f, Biodiversity)

"promotion of collaborative research programmes... fostering of traditional methods and knowledge of such groups (local and indigenous) in connection with these activities. (16.7b, Biotechnology)

States shall cooperate with a view to the conservation of marine mammals and, in the case of cetaceans, shall in particular work through the appropriate international organizations for their conservation, management and study (17.50, Marine)

“Environmentally preferable goods.

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition encourage Governments to promote strategies to ensure that the private sector, including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws, and adopt policies and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on a equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

Fundamental principles derived from the obligations incurred in the United Nation Conventions, Treaties, Covenants and from the expectations created in the United Nations Declarations, Conference action plans and General Assembly Resolutions shall establish the basis for socially equitable and environmentally sound development. The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the establishment of mandatory international normative standards-and-technical regulations (MINS) that will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development.**

Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a

coupling “clean-up environmental technology” which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real cooperation based on the highest tenable principles. This shift from aid to trade clearly points to the need for **global mandatory regulations and standards to drive corporations including transnationals *private sector* to participate in socially equitable and environmentally sound development; *participation in the shaping of international cooperation***. The international community, including multilateral financial institutions, **has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical - regulations (MINS) based on principles established over the past 50 years in international instruments.** In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, States undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.” In addition, the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which **CONTINUE** to perpetuate the old world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development, through global mandatory standards and regulations with additional resources for **Best environmentally sound technology, that will *environmentally ensure that additional resources to reinforce* national efforts to foster *an enabling environment* and achieve the objectives of adequate shelter for all and the **socially equitable and environmentally sound *sustainable development*** of human settlements.**

...of their international obligations concerning the protection of human health and protection and preservation of the environment, and are liable in accordance with international law (Preamble Convention on the Control of trans-boundary Movements of Hazardous Wastes and their Disposal, 1992);

...shall establish the basis for socially equitable and environmentally sound development.

fundamental principles derived from:

... Art. 148 and establish mechanisms to grant contracts on a non-discriminatory basis; recruit women for leadership, decision-making and management and provide training programmes, all on a equal basis with men; and observe national labour, environment, consumer, health and safety laws, particularly those that affect women and children

The overall decline in official development assistance, however, is a serious cause for concern. This trend has also been accompanied by considerable increases in international flows of capital as well as increasing private sector involvement in infrastructure and services development and management. **This shift from aid to trade requires the ensuring of compliance of the private sector.**

148 * e Encourage the adoption of policies for the creation and development of the private sector and promote strategies for substantial and well-directed public and private investments in construction and development of shelter, infrastructure, health, education and other basic services through, inter alia, the provision of appropriate technical and financial assistance; in addition, encourage governments to promote strategies

HUMANITARIAN PRINCIPLE

10.1. This principle affirms the fundamental right of all peoples to respect, equity and equality; to food, health, shelter, and social security; to safe drinking water, clean air, safe environment; freedom from conflict and war

(23)

PRINCIPLE OF JUSTIFIABLE INTERVENTION

This principle holds that no religious, state, or cultural justification of a practice that violates fundamental human rights, can be used to prevent international condemnation through peaceful intervention.

(24)

PRINCIPLE OF MORAL IMPERATIVE

PRINCIPLE OF WARRANTED INTERVENTION

This principle holds that individuals, institutions and States have a responsibility to act to prevent any actions and practices that cause crimes against humanity and nature.

(27)

PRINCIPLE OF RIGHT TO OBJECT

This principle holds that no state shall refrain from objecting to a practice which violates human rights on the grounds that the practice belongs to a religious or cultural group predominantly beyond the state's jurisdiction. This principle is particularly important in multicultural States where refugees, landed immigrants and citizens from former States have left their country of origin because of the violation of human rights.

Reducing environmental health hazards

(Article *89 a ter Improve policies that **prevent**, reduce environmental health hazards and provide the informal sector and all workers with accessible information on how to enhance occupational safety and reduce health risks;

(12)

PRINCIPLE OF NON-PRESUMPTION

12.1. This principle entails the affirming that no presumption shall be made about capabilities or abilities on the basis of race, tribe, religion, disabilities, country of origin, sex, sexual orientation, language, family structure, or other status.

INTERNET COMMENT

In response to the following press release there has been considerable interest in the arguments presented to the court in the Leave to Appeal application in the Appeal court of British Columbia, CANADA. The leave to appeal book with references to the affidavits (but without the actual affidavits) is being circulated through internet. Any comments and responses will be sent to Mr. Justice Carothers for his deliberation and possibly to the Judicial Review Commission in Ottawa.

Note: that Mr. Justice Carothers' judgment was only four pages long. The only reference to international law was the section reproduced in the press release.

FOR IMMEDIATE RELEASE: DECEMBER 7, 1994. To Biodiversity Conference of the Parties, Bahamas.

PRINCIPLES IN BIODIVERSITY CONVENTION "NOT PERTINENT OR APPLICABLE" "WITHIN THE JUDICIAL CAPACITY AND FUNCTION OF THE COURTS OF THIS PROVINCE". DECISION IN THE APPEAL COURT OF BRITISH COLUMBIA, CANADA

ASTOUNDING ADMISSION BY COURTS IN BRITISH COLUMBIA (CANADA) OF THE INAPPLICABILITY OF INTERNATIONAL LAW IN PROVINCIAL COURTS.

In September 1993, there was an application to set aside the Clayoquot Injunction in B.C. CANADA on the grounds that there was a failure to inform the trial judge that the granting of the injunction could contravene Canada's international obligations such as the Biodiversity Convention. Mr. Justice Drake held that "international law not expressed in Canadian law is irrelevant in this inquiry". Leave to appeal this decision was sought on October 25 before Mr. Justice Carothers.

TABLE OF CONTENTS:*PART I -STATEMENT OF FACTS***PP. 5 — 8 (#1— #17). TAB 1***PART II. REASONS FOR APPEAL***PP. 9— 12 (#18 — #24). TAB 2***PART III. MEMORANDUM OF ARGUMENT:*

A. In the hearing of August 26, 1993, there was a failure to bring to the attention of the Honourable Mr. Justice Hall that the granting of the injunction could contribute to non-compliance with international obligations of Canada and its Courts and that, in the September 15, 1993, application to rescind the injunction, the Honourable Mr. Justice Drake erred in his assessment of the relevance of international law.

PP. 13 — 47 (#25 — #122). TAB 3

- Performance of the treaty in good faith by ensuring the necessary conditions are in place for its performance of the treaty (Article 31, Convention of Law of Treaties)
- International customary law affirmation of requirement to enact the necessary legislation
- Affirmation of a requirement to enact necessary legislation prior to signing
- Provisions for implementing legislation when subject under Provincial jurisdiction
- All levels of Canadian governments, whether federal or provincial, and whether legislative, executive or judicial should endeavour in good faith to comply with treaties
- Principles of guidance from relevant cases from High Court of Australia
- Applicability of section in the Convention on the Law of Treaties on not defeating purpose of treaty from moment of signing (Article 18)
- Applicability of the States being bound not to create the impossibility of performance Article 61

- Consideration of legally binding Conventions
- Failure of federal government to ensure that the treaty obligations would be
- Labour Convention case distinguished
- Evidence of consultation with Provinces
- Criteria derived from the Labour Convention Case for what would constitute "Consultation" with province
- Biodiversity and Climate Change issues considered under residuary powers
- Criteria for inclusion under section 91 residuary powers
- Canada has been obliged not to invoke internal law to justify failure to perform international obligations
- Canada has been in non-compliance since June 1992 because B.C. forest practices have been in contravention of provisions in the Conventions, and has defeated the purposes of the Conventions
- B.C. government applying for an injunction and the Courts granting this injunction which had the result of permitting the continuation of practices that are in violation of the Biodiversity and Climate Change Convention, the courts have inadvertently encouraged non-compliance with international law
- Canada is bound throughout its territory [including the provinces and territories]
- Applicability of section in the Convention on the Law of Treaties on internal law not being invoked to justify non-compliance with obligations
- Failing to identify Biodiversity, failure to carry out an environmental assessment, and failure to invoke the precautionary principles and protect carbon sinks
- Canada, through B.C., is not fulfilling its duty to identify, protect and conserve natural heritage of outstanding universal value, such as Coastal temperate rainforest areas like Clayoquot Sound
- Canada, since 1972, has failed to discharge its obligation to protect the natural heritage of outstanding universal value for future generations
- IUCN condemnation of forest practices and lack of adequate preservation of coastal temperate rainforests
- Applicability of the Common Law Doctrine of Legitimate Expectations
- Expectations related to fulfilling of obligations under globally adopted United Nations Agreements and resolutions

- Non-compliance with globally adopted agreements: Caracas Declaration and Agenda 21

B. This case also addresses the contempt for statutory law that has been demonstrated by industry, and in particular MacMillan Bloedel, in its non-compliance with statutory law, and by governments in their failure to enforce statutory law, particularly in relation to tree farm license (in the manner of a profit a prendre property right claimed by MacMillan Bloedel)

PP. 48 — 53 (#123— #136). TAB 4

- B.C. has not only used internal law — the granting of injunctions to justify non compliance to International obligations but has failed to invoke its own internal law to prevent violations of international obligations
- MacMillan Bloedel in violation of statutory law
- Evidence of violations of forest Act and failure of government and courts to enforce statutory law failure to invoke Sections of the Forest Act
- MacMillan Bloedel was aware of alternative economically viable methods of selection logging which would have enabled Mac Milan Bloedel to have fulfilled its obligations under the Forest Act and thus its obligations under the TFL which they claim bestows a property right
- MacMillan Bloedel has been convicted under section 33 of the Federal fisheries Act for depositing deleterious substances which caused destruction to fish Habitat
- Evidence of type of violations occurring throughout TFL
- Summary of the findings of the Tripp report which was entitled *The Application and Effectiveness of the Coastal Fisheries forestry guidelines in selected cut blocks on Vancouver Island*
- Evidence of violations of the Forest Act, collected by the Valhalla Wilderness Society
- Evidence through Forest Watch that MacMillan Bloedel violating Forest Act in Clayoquot
- Failure to assess the costs of past ecological damage in assessing compensation for taking areas out of TFL
- Non-fulfillment of condition of the granting of the license is that logging has to be "sustained".
- Evidence from leaked document from Inventory Branch of the Ministry of Forests demonstrating MacMillan Bloedel overestimating inventory by over 40% in Queen Charlottes cut block

- Given that MacMillan Bloedel has been in violation over the years of many sections of the Forest Act, Waste Management Act and the Fisheries Act, MacMillan Bloedel has not fulfilled the conditions of the TFL under the Forest Act, and thus, the contracting party has failed to perform its part of the contract. In this case, it would be inappropriate to recognize that MacMillan Bloedel has a property right in the nature of a "profit a Prendre". Surely the Court would recognize that a right cannot be claimed by one who has not fulfilled the responsibilities contingent upon that right.

C. The appeal will rely upon a realistic and objective evaluation of equity. In particular the use of an equitable remedy such as an injunction to justify non-performance of provincial and federal statutory law and to justify non-performance of international legal obligations, and international customary law.

PP. 54 — 58 (#136— #147). TAB 5

Evidence will be submitted that the injunction is an equitable remedy that has been misapplied in the Clayoquot case. Equity could never countenance the destruction of life rearing capacity and life forms in its trust on a massive scale with no genuine regard for future generations

- The remedy [of injunction] of course, is an equitable one. "The exercise of the equitable jurisdiction is not to be restricted by the straitjacket of rigid rules but is to be based on broad principles of justice and convenience, equity regarding the substance and not merely the facade or the shadow. It moves with time and circumstances. (Justice J.A. Norris)
- The requirement to preserve our environmental heritage and the requirement to save a representative sample of natural ecosystems for future generations have been recognized and have become part of international customary law
- An equitable remedy— an injunction, is being used to prosecute citizens of criminal contempt when the justification for the granting of this equitable remedy is still being questioned by the courts
- The "impossibility avoidance" or "the avoidance of a disappearing object principle": (not having object disappear while object is under consideration). This principle is enunciated as follows: claimant will not find at the end of a successful trial that the subject matter is gone
- Embodiment of a principle of international customary law which is eloquently stated in the Vienna Convention on the Law of Treaties (Article 18 and 61): a State is obliged to "not defeat the object and purpose of a treaty prior to the entry into force" and not to make performance of the treaty impossible
- The granting of the injunction would be in violation of the above principle because proceeding with logging when the logging could and would defeat the purpose of any treaty protecting the "ecological rights" within the public trust would defeat the purpose of the treaty

- Implications of the principle ("impossibility avoidance" or "the avoidance of a disappearing object principle") should be considered in relation to the Public Trust Doctrine (Friends Patrai Doctrine)
- Requirement to take into account the costs of any ecological consequences is a particularly relevant consideration in assessing "irreparable harm" in injunctions
- An advisory opinion from the International Court of Law is going to be sought to determine whether Canada, through the actions of B.C., has been in violation of the Biodiversity Convention since the signing of the Convention in June 1992. Until this case is heard, nothing should be done on crown lands which could diminish the value of the public trust rights
- Since MacMillan Bloedel has been in violation of statutory law as well as international law, it should not be able to benefit from the granting of an equitable remedy such as an injunction
- Violations of guarantees in the International Covenant of Civil and Political Rights have occurred in the Clayoquot injunction trials (one Judge in response to a Clayoquot Arrestee's citing of a section from the International Covenant of Civil and Political Rights was "that sounds like some international something or other")
- When all domestic remedies fail redress can be sought through the Optional Protocol of the International Covenant of Civil and Political Rights

PART 1 -STATEMENT OF FACTS

1. This is an application for Leave to Appeal Mr. Justice Drake's judgment in which he dismissed the Appellant's application to rescind the injunction that was extended by Mr. Justice Hall.
2. August 26, 1993 Mr. Justice Hall dismissed the two applications and granted the application of MacMillan Bloedel to extend the injunction.
3. September 15, 1993 Dr. Betty Kleiman and Joan Russow made an application to rescind the Clayoquot injunction.
4. September 17, 1993 Mr. Justice Drake dismissed the application.
5. October 21, 1993 Russow served a notice of leave to appeal Mr. Justice Drake's decision on MacMillan Bloedel.
6. November 8, 1993 MacMillan Bloedel filed a "Notice of appearance"
7. December 1993 Russow received correspondence from John Hunter, lawyer for Mac Millan Bloedel about participating in the Appeal that would be heard in Vancouver in late January. Russow informed MacMillan Bloedel that she was presenting a paper at the IUCN Annual General Meeting as a member of the IUCN Commission on Education and Communication, and consequently it would be impossible for her to be part of the appeal at that time.
8. Ron Adams, Clerk of the Appeal Court in Victoria, informed Joan Russow that she was under no obligation to appear at that time, and that even, if the injunction were overturned she could still appeal Judge Drake's decision.
9. Ron Adams, Clerk of the Appeal Court in Victoria also informed Joan Russow that there was no particular time limit for proceeding with the leave to appeal application, and that only if MacMillan Bloedel sought to set aside the appeal would she be required to proceed expeditiously with the leave to appeal.
10. July 21, 1994, Russow filed a praecipe for a Leave to Appeal hearing and served it on MacMillan Bloedel. The proposed date for the Chambers hearing August 16

11. July 22, 1994, John Hunter sent a FAX in which he stated that he would be away on August 16 and wished to change the date and proposed alternatives later on in August. Joan Russow phoned him and expressed concern about the possibility of MacMillan Bloedel's applying for a new order prior to hearing the arguments presented in the Leave to Appeal, and asked him when MacMillan Bloedel would be proceeding with the application to extend the order. He declined to divulge that information. Russow then suggested that someone should appear in his place. She expressed surprise that he would be contesting the Leave to Appeal application, given that in the September 15 application he had stated that the proper place for the submission to be heard was in the Court of Appeal, and given that at the September 15 application he also stated that the issue of applicability of international law had never been raised:

the central point raised by the applicants as to the international law aspects of this, and the applicants are quite correct that no point was made before Mr. Justice Hall as to the international commitments that may have been made by Canada in Rio de Janeiro, by any council.

(John Hunter, Transcripts of September 15, Application

He said that he would consult with his clients but would probably formally apply for an extension. No formal request for an extension was made.

12. August 5, 1994. MacMillan Bloedel served a Notice of Motion seeking to have the application of Appellant Joan Russow for Leave to Appeal be adjourned generally. (See response by Joan Russow in Affidavit, dated August 10, and sworn August 15, 1994)

In the Notion of Motion John Hunter stated that

The injunction as extended by Mr. Justice Hall expires on August 31, 1994. No application to extend the injunction has been filed and I do not currently have instructions to bring such an application. Such an application may be brought, and I am prepared to ensure that Ms. Russow is advised if such an application is brought. On the other hand such an application may not be brought.

13. August 7, 1994 With the above assurance, Russow canceled a trip so that she would be able to propose to John Hunter that she could accommodate John Hunter's initial request to adjourn the Leave to Appeal to a future date.

14. August 8, 1994 Given that John Hunter had written in his affidavit that he did not have "instructions to bring such an application [an application to extend the injunction], Russow contacted the office of John Hunter and proposed that if he would agree to adjourn the application to set aside the Leave to Appeal generally then she would agree to adjourn her application for a Leave to Appeal to August 23, one of the dates originally requested by John Hunter.

EXHIBIT: A Letter written by Russow to Hunter

15. August 8, 1994 Russow received correspondence from Davis & Company, the firm to which John Hunter belongs:

Mr. Hunter is away from the office until August 22, 1994 and in his absence Mr. Peter Voith is handling this matter, and Mr. Voith, however, is out of the office until August 9, 1994 at which time your fax will be brought to his attention.

EXHIBIT: B Response from Peter Voith

Russow had understood that the reason that Mr. Hunter had wanted to change the date of the hearing was that he believed:

it would be of assistance to the judge hearing this application if I were able to participate as counsel for MacMillan Bloedel to advise of any details in this course

of proceedings which may not be apparent from this Affidavit" (John Hunter, Affidavit, August 4, 1994).

16. August 9, 1994 10:15 a.m. There was no reply from Mr. Voith, and Russow CONTINUED to prepare her affidavit for the August 12th hearing of MacMillan Bloedel's application.

Russow phoned at 10: 15 on Tuesday morning and was informed by Karen, John Hunter's secretary, that Voith had been there since 9:00 but with clients. Russow received a phone call from Shirley, Mr. Voith's secretary who said that he would be responding to my request later on in the afternoon. When Russow said that it was important for her to know as soon as possible because she had to file not only the Leave to Appeal book but also an affidavit for the August 12 application (both of which Russow would have had to have ready to submit on Wednesday, August 10), Shirley stated that he would be responding within 20 minutes. When Russow repeated "within twenty minutes" Shirley countered with it is his decision and he will respond as soon as possible.

At 11:00, Russow received a FAX indicating that he would be prepared to adjourn the Application to adjourn the Leave to Appeal generally, and would proceed with Russow's Leave to Appeal on August 23, as requested.

EXHIBIT: C Letter agreeing to adjourn Leave to Appeal Application to August 23, 1994

17. August 10 1994 Dr. Betty Klieman, submitted a letter stating the reasons that she had not be able to be part of the Appeal , and expressed the wish that Merv Wilkinson serve in her place:

EXHIBIT: D Letter from Betty Klieman. Re: Appeal

PART II - REASONS FOR SEEKING LEAVE TO APPEAL

18. The issues of law that are raised in this application are of great import, and bring into question serious discrepancies between the legal obligations undertaken by Canada internationally, and the discharging of these obligations in Canada, both federally and provincially. This application also raises the issue that a positive duty is placed on States to enact the necessary legislation so as to enable the performance of treaties which have been signed by the Federal government with the endorsement of the government of British Columbia. In addition this appeal will also raise questions of legal responsibility for non-compliance with and non-enforcement of international and statutory law, and with the implications arising from the non-performance of those legal responsibilities. Serious legal issues about the direction being taken within the administration of the law of equity will also be considered on this appeal; in particular, the issue that an equitable remedy—an injunction, is being wrongfully used to prosecute citizens for criminal contempt.

19. The implications of international law were not considered by either of the applicants, namely Greenpeace Canada and Valerie Langer, who were seeking to rescind the injunction before Mr. Justice Hall, on August 26.

At the September 15 hearing, before Mr. Justice Drake in this matter, John Hunter, lawyer for MacMillan Bloedel, affirmed that Mr. Justice Hall had not considered the international commitments:

Now the last thing I wanted to say, just to address the central point raised by the applicants as to the international law aspects of this, and the applicants are quite correct that no point was made before Mr. Justice Hall as to the international commitments that may have been made by Canada in Rio de Janeiro, by any council. (Transcript of application from September 15, 1993).

20. The international law and other grounds for rescinding the injunction, presented by Dr. Betty Kleiman and Joan Russow in the September 15 submissions, were not more than cursorily considered and were not given a fair hearing.

On September 15, 1993 Dr. Betty Kleiman and Joan Russow made an application to rescind the Clayoquot injunction order dated August 26 and pronounced by Mr. Justice

Hall on the following grounds outlined in the oral submission and the exhibits submitted to Judge Drake.

1. Failure to bring to Mr. Justice' Hall's attention that the granting of the injunction could contribute to non-compliance with international obligations
2. Failure to bring to Mr. Justice Hall's attention that the Clayoquot TFL's, are rights in the light of a "profit a prendre", which is a conditional right, and entails a complementary responsibility. Non-compliance with statutory law and previous convictions by the forest company, MacMillan Bloedel, should have been taken into consideration when the equitable remedy of an injunction was granted
3. Failure to bring to the judge's attention that the injunction is an equitable remedy moving with time and circumstances.

On September 17, 1993, Mr. Justice Drake ruled :

Mr. Hunter informs that an application for leave to appeal from the order of Mr. Justice Hall is afoot and is set down for hearing in the Court of Appeal on Tuesday next... In these circumstances, there is no point in dealing with the extensive submission of the applicants, interesting as they were (From p. 2-3 transcript of judgment, September 17).

21. John Hunter also submitted to the judge a copy of an article on international law by L.C. Green in which the 1937 case, Attorney-General for Canada v Attorney-general for Ontario . Supreme Court of Canada A.C. 1937, pp. 326 -354 [Labour Convention Case] was submitted as evidence that B.C. was not bound by international law. There was no opportunity to distinguish this case from the present case because Hunter submitted the written document to the judge without orally introducing the case into his submission. In the appeal, the relationship between the Federal and Provincial governments in response to International legally binding treaties in the Labour Convention case will be distinguished from that in response to the UNCED Conventions . In addition, there was no opportunity to raise the "Franklin Dam" decision from the High Court of Australia (High Court of Australia, Australian Law Reports 1983 PP 625-831). Constitutional law [Australian conservation case] which is particularly relevant to the discussion of the relevance of international law to the "inquiry" into the justification of granting the injunction. The Franklin Dam case deals with the following issues:

Protection of natural and cultural heritage — Prohibition of dam construction authorized by Tasmania Whether with Commonwealth power External affairs power. Whether mere existence of treaty enough Whether treaty "obligation" necessary Convention for Protection of the World Cultural and Natural Heritage (UNESCO).

The Franklin Dam case will be examined in the Appeal.

22. It should be noted as a preliminary comment that in the Hunter's submission to Judge Drake there was a reference to L.C. Green:

MR. HUNTER

And it may be of assistance to your lordship to have an excerpt from Elsie[L.C.] Green's work on International Law, Canadian Perspective, and I want to read a portion of what Professor Green has to say about treaty rights and I don't think there's any suggestion there that there has been a treaty but taking its at tits extreme --

COURT: Well there has to be some statutory recognition before the court.

MR. HUNTER: that is the point. And it starts at the bottom of 288 and goes to 289, but that is the simple point, there has to be statutory recognition and there has not been statutory recognition of anything that went on at Rio. I don't know what went on at Rio, ... and in the absence of legislation international matters are not of any relevance to this application.
(Transcripts of submission from John Hunter, September, 15, 1993)

John Hunter mentioned Green and the page numbers 288-289 but did not actually cite from Green. The Judge had been subsequently given the aforementioned pages from Green by Hunter. The actual citation from Green was not in the transcripts. Green stated on pp. 288-289 that :

In Canada, treaties are not self-executing and do not constitute part of the law of the land merely by virtue of their conclusion. Treaties require implementing legislation in order to change domestic law. (Canada v. (AGO Labour Conventions Case, [1937] per Lord Atkin: "Within the British Empire there is a well-established rule that the making of a treaty is an executive act, while the performance of its obligations, if they entail alternation of the existing domestic law requires legislative action. [note this case will be examined further on pages...]

This assertion is, however, substantially altered by two significant further statements by Green:

Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted [cite references, including 1982 document circulated by External Affairs "Canadian Reply to Questionnaire on Parliaments and the Treaty-making power"]

The full context of this statement comes from the 1982 "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power". It is an External Affairs Department communiqué which was put together in 1982 to assist the External Affairs Officers in explaining the division of powers and constitutional conventions in Canada in relation to International obligations:

Many international agreements require legislation to make them effective in Canadian domestic law. The legislation may be either federal or provincial or a combination of both in fields of shared jurisdiction. Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted.

In concluding this section which was referred to by John Hunter, Green, makes a very significant remark, which suggests that Canada is bound by the treaty prior to the enactment into national law:

The fact that a treaty has been signed and ratified but not yet enacted into national law does not preclude the international liability of the signatory under the treaty.

23. It will be submitted that John Hunter, lawyer for MacMillan Bloedel, erred in stating that "nothing that happens in Rio affects the law of British Columbia until the province of British Columbia, acting through its legislature, determines that it shall affect the laws of British Columbia"(Hunter, Transcript, September 15 p. 22):

In my submission, it would have been inappropriate to make such a point because that is not a relevant consideration and the reason it is not relevant consideration is that nothing that happens in Rio affects the law of British Columbia until the province of British Columbia acting through its legislature determines that it shall affect the laws of British Columbia. And it may be of assistance to your lordship to have an excerpt from L.C. Greens work on International Law, Canadian perspective [note in this piece there was reference to the 1937 labour case (Attorney-General for Canada v Attorney-general for Ontario . Supreme Court of Canada A.C. 1937. [Labour Convention Case] pp. 326 -354 and to the External Affairs document "Canadian Reply to Questionnaire on Parliaments and the Treaty-making power"].

24. It will also be submitted that Mr. Justice Drake failed to consider the complexity inherent in the legal issues related to international obligations when he ruled. "International agreements and resolutions, these not being expressed in Canadian law, are not relevant" (Mr. Justice Drake, Transcript of Judgment, September 17, p. 3).

Mr. Justice Drake, in his judgment, made the following comment about international agreements and resolutions:

However, I will simply say, as far as their merits are concerned, that the argument relating to international agreements and resolutions, these not being expressed in Canadian law, are not relevant to this inquiry." (Mr. Justice Drake, Transcript of Judgment, September 17, p. 3).

Even though the order of Mr. Justice Hall will be expiring on August 31, 1994, it is important that this leave to appeal, his order, be granted so that the issues raised in the September 15 application to rescind this injunction, could be fairly and judiciously considered and so that the September 17 judgment by Mr. Justice Drake could be re-evaluated. If this order, and if the decision by Mr. Justice Drake is not challenged, they will be used, in subsequent similar cases, as precedents.

PART III - ARGUMENT

A. In the hearing of August 26, 1993, there was a failure to bring to the attention of the Honourable Mr. Justice Hall that the granting of the injunction could contribute to non-compliance with international obligations of Canada and its Courts, and that, in the September 15, 1993 application to rescind the injunction, the Honourable Mr. Justice Drake erred in his assessment of the relevance of international law.

25. It will be submitted that Canada, as a signatory, is bound to perform any treaty in good faith by ensuring the necessary conditions are in place for the performance of the treaty.

Under the Vienna Convention on the Law of Treaties, adopted in 1969; signed by Canada, acceded to by Canada on 1970, and in force 1980, Canada, as a signatory to this Convention, has been obliged to ensure the performance of treaties in the following ways:

(i) "to establish conditions under which justice and respect for obligations arising from treaties can be maintained" (Preamble)

(ii) to demonstrate, through the process of ratification (accession) of a Treaty, that the State has "established on the international plane its consent to be bound by a treaty" (Article 2)

(iii) to observe that "every treaty in force is binding upon the parties to it and must be performed by them in good faith. (Article 26)

(iv) to interpret a treaty by agreeing that "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose. (Article 31)

Consequently, Canada, through acceding to and ratifying treaties has undertaken to perform treaties in good faith, has established on the international plane its consent to be bound, and to establish conditions for the maintaining of justice and respect for obligations under treaties.'

26 This principle is reinforced throughout international customary law and extended to include the enacting of the legislation and laws necessary to ensure performance of treaty obligations.

The requirement to enact enabling legislation, is evident in the International Covenant of Civil and Political Rights. International customary law places a duty on States to adopt such legislative, judicial or other measures as may be necessary to give effect to international treaties.

In the International Covenant of Civil and Political Rights—adopted 1976, signed and acceded to by Canada and in force in 1976, the principle of "duty-to-adopt-legislative ...measures" is enunciated;

Where not already provided for by existing legislative or other measures, each State Party to the present Covenant undertakes to take the necessary steps in accordance with its constitutional processes and with the provisions of the present Covenant, to adopt such legislative or other measures as may be necessary to give effect to the rights recognized in the present Covenant.

The principle is then further elaborated in the UN Resolution 37/7 World Charter of Nature (1982):

The principles set forth in the present Charter shall be reflected in the law and practice of each State, as well as at that international level (Article 14).

27. This principle is further entrenched in External Affairs policy in Canada by the constitutional convention of ensuring that necessary legislation is enacted before signing international treaties.

In an External Affairs document, "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", which deals with Canada's responsibility related to international obligations, it is stated that Canada will "not normally become party to an international agreement until the necessary legislation has been enacted by the provinces".

In the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", the following references are made to international law and federal and provincial legislation:

If the existing laws of Canada (including Provincial and Federal Statutes, as well as the general rules of common law and the civil code of the Province of Quebec) do not confer upon the Government of Canada the capacity to discharge the obligations it proposes to undertake in a treaty, then it will be necessary for the appropriate legislative body, federal or provincial, to enact legislation to enable Canada to discharge its treaty obligations.

28. The "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" appeared to ensure that the treaty would be performed either by enacting the necessary legislation prior to becoming a party:

Canada will not normally become a party to an international agreement which requires implementing legislation until the necessary legislation has been enacted.

or by passing implementing legislation:

The point we wish to make here is that in Canada, implementing legislation is only necessary if the performance of treaty obligations cannot be done under existing law or thorough executive action.

In either case, it would appear that Canada has indicated in this document that the necessary legislation will be in place in order to perform the obligations under the treaty.

In an internationally legally binding document such as the Biodiversity Convention, and the Framework Convention on Climate Change, either the enabling legislation was in place prior to signing the treaties, or Canada is bound to enact legislation to enable Canada to perform its Treaty obligations in such a way as to ensure that it will not defeat the purpose of the treaty. This external affairs convention has to also be considered in conjunction with article 18 of the Vienna Convention on the Law of Treaties. Canada, it would appear, would not be able to defeat the purpose of the treaty from the moment of signing, and in order to comply with this provision Canada would have to ensure that the necessary legislation would be in place to prevent Canada from defeating the purpose.

29. In the appeal the following questions related to obligations will be examined;

i. If Canada followed the usual constitutional convention as indicated in the above provision, Canada will not normally become a party .. until the necessary legislation has been enacted. Thus, we can assume from the federal point of view, the Federal government believed that the necessary legislation to ensure that Canada would not defeat the purpose of the Convention on Biological Diversity and of the Climate Change Convention. If, prior to the moment of signing these conventions in June 1992, if the Federal government was not certain that the necessary legislation was in place to prevent the defeating of the purpose of the Conventions, then implementing legislation would have to have been in place in June 1992.

ii. In the appeal, it will be contended that the Biodiversity Convention and the Climate Change Convention are relevant to the injunctions given by Canadian courts to lumber companies. Canada, by its own conventions is liable to comply, in its judicial, executive and legislative actions.

30. The principles of ensuring legislation enacted or implementing necessary legislation for performance of treaties are further placed in a provincial context when the matters in the treaty are usually deemed to be within provincial jurisdiction.

The 1982 "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" further indicated in reference to the ratification and accession to treaties:

A multilateral treaty dealing with matters within provincial jurisdiction would be signed by Canada only after consultation with the provinces had indicated that they accepted the basic principle and objectives of the treaty. Assurances would be obtained from the provinces that they are in a position, under provincial laws and regulations, to carry out the treaty obligations dealing with matters falling within provincial competence, before action is taken by the Government of Canada to ratify or acceded to such a treaty.

Canada thus only proceeds to ratify a treaty when the provinces have been consulted and the provincial laws and regulations are in place to carry out the treaty obligations.

31. The Applicant, Joan Russow contends that all levels of Canadian governments, whether federal or provincial, and whether legislative, executive or judicial should endeavour in good faith to comply with the Biodiversity Convention, the Framework Convention on Climate Change, and the UN Convention for the Protection of Cultural and Natural Heritage. An injunction is judge-made law. Just as Canadian legislators must ensure that their statutes reflect their international treaty obligations, so must judicially made law, such as injunctions. Arguments

must be aired in the Court as to this injunction's contravention of international treaty obligations. The proof readily exists that the Biodiversity Convention and the Framework Convention on Climate Change are violated by the activities of MacMillan Bloedel in Clayoquot Sound. The threat to biodiversity from clear-cutting in Clayoquot Sound was clearly recognized and found as fact by the scientific panel appointed by the Harcourt government to review their logging plans for Clayoquot Sound. The panel also recognized that the standards of international law should serve as a minimum (First Report from the Clayoquot Sound Scientific Panel, March 1994).

No branch of government and no other law-making authority has a higher obligation than judges to apply the whole of the law and ensure that their own judge made injunctions are complying with the international obligations of Canada. This examination for compliance with international law was not conducted for the series of injunctions which have been granted to MacMillan and Bloedel in Clayoquot Sound.

32 If the provinces have followed the External Affairs convention then they would have assured the federal government that the necessary legislation either was or would be in place; to ensure not only the fulfillment of obligations under the treaty but also the prevention of activities that could defeat the purpose of the treaty. If so, it can be presumed that the provinces will be equally responsible for fulfilling the obligations. The implications of this constitutional convention will be considered further in relation to the subsequent section dealing with the Labour Convention case which examines constitution provisions and treaties.

33. With internationally legally binding document such as the Biodiversity Convention or the Framework Convention on Climate Change, it is necessary for the appropriate legislative body, federal or provincial, to enact legislation to enable Canada to discharge its treaty obligations, and in particular, from the moment of signing the Conventions in June 1992, so that nothing will defeat the purposes of the treaties.

34. It will be argued in appeal that, in Canada, the existence of a treaty obligation (under the legally binding Conventions on Biological Diversity and Climate Change), is sufficient to give rise to an "external affair". The legal issues to be addressed in this appeal have been eloquently addressed in a series of Commonwealth cases including: the cases from the High Court in Australia, where the constitutional division of powers between the Commonwealth (Federal Government) and the State (Province) were examined, and the responsibility of the Commonwealth government to ensure compliance to the international obligations was recognized. The discussion of these cases and the principles that have been used will follow; the discussion will be further extended in the Appeal if in the Leave to Appeal Application on August 23, 1994 the Chambers deems that the principles and decisions, given the similar federal structure of the Australian Constitution, from the High Court of Australia are applicable. The Labour Convention case from Canada was referred to by the dissenting judge in the following case: Commonwealth of Australia and Another v State of Tasmania and Others of (C6 of 1983) High Court of Australia, Australian Law Reports 1983 pp. 625-831 Constitutional law (Franklin Dam Case). Note that in the 1937 Labour Convention Case, the Federal government referred to the Australian Case.

It was held in the *Commonwealth of Australia and Another v State of Tasmania and Others* of (C6 of 1983) High Court of Australia, Australian Law Reports 1983 pp. 625-831 Constitutional law (Franklin Dam Case) ; Note that in the 1937 Labour Convention Case, the Federal government referred to the Australian case.

1. Existence of a treaty obligation (as there was under the Convention) was sufficient (though not necessary) to give rise to an external affair; there was no additional, independent requirement that the subject-matter of the treaty be of international concern.

Note: Article 34 UN Convention on the Preservation of Cultural and Natural Heritage the following provisions shall apply to those federal or non-unitary States

a) with regard to the provisions of this Convention, the implementation of which comes under the legal jurisdiction of the federal or central legislative power, the obligations of the federal or central government shall be the same as for those States Parties which are not federal States.

b) With regard to the provisions of this convention, the implementation of which comes under the legal jurisdiction of individual constitutional system

The following was also held in the Franklin Dam Case by Mason:

Article 34 of the convention, the Federal clause, does not relieve Australia from performance of its obligations under the convention. Para (a) of the article makes it clear that in the case of a central legislative power possessing legal jurisdiction to implement the provisions of the convention. the state party to the convention has an obligations to implement the provisions of the Convention.

35. The role of the courts to determine particular provisions was also addressed in the Franklin Dam case:

In *Airlines of NSW Pty Ltd v New South Wales (No. 2)* (1965) 113 CLR 54, Barwick CJ said (at 86) that "... where a law is to be justified under the

external affairs power by reference to the existence of a treaty or convention, the limits of the exercise of the power will be set by the terms of that treaty or convention, that is to say, the Commonwealth will be limited to making laws to perform the obligations or to secure the benefits which the treaty imposes or confers on Australia. Whilst the choice of the legislative means by which the treaty or convention shall be implemented is for the legislative authority, it is for this court to determine whether particular provisions, when challenged, are appropriate and adapted to that end."

the same view was expressed by Starke, Evatt and McTiernam JJ in *Burgess* (at 658, 688) and Menzies J in *Airlines of NSW (No2)* at 141.

Parliament's power to legislate so as to give effect to a treaty conforms to the approach which this court has adopted in deciding whether legislative controls designed to achieve an end within power are themselves within power. (p696)

36. In the *Franklin Dam* case it was held that the country has the responsibility of giving effect to the principle of international customary law:

Whether failure on the part of Australia to enact domestic legislation incorporating the rules in the convention ... the Convention did not impose an obligation in specific terms to enact domestic legislation of a particular kind. .. It may be said that the legislation was valid because it gave effect to the principles of customary international law as declared by the Convention. But if Australia became a party to a convention which enacted a new set of rules in relation to the territorial sea and the contiguous zone, but that convention did not attract sufficient support to constitute its provisions as principles of customary international law. domestic legislation giving effect to it would none the less still constitute a valid exercise of the power. [citing *new South Wales v Commonwealth (the Seas and submerged Lands case)* (1975) 135 CLR 337; 8 ALR)

37. In *Commonwealth of Australia and Another v State of Tasmania and Others* of (C6 of 1983) High Court of Australia, Australian Law Reports 1983 pp 625-831 the Court decided that all domestic law must conform to the treaty:

The law must conform to the treaty and carry its provisions into effect. The fact that the power may extend to the subject matter of the treaty before it is made or adopted by Australia, because the subject matter has become a matter of international concern to Australia, does not mean that Parliament may depart from the provisions of the treaty after it has been entered into by Australia and enact legislation which goes beyond the treaty or is inconsistent with it.

38. In the Franklin Dam case (1983), the principles established in the *Koowarta v Bjelke-Petersen* (1982) 56 ALJR 625: 39 ALR 417 (Koowarta Case), were referred to in the deciding opinion. These principles, cited below in the Australian Commonwealth case, are particularly relevant to the external affairs power of the Federal Government in relation to Provincial Governments:

39. In the Koowarta case, the following principle was upheld that becoming a party to a convention entails the undertaking of actions that would discharge obligations under the Convention:

In the *Koowarta v Bjelke-Petersen* (1982) 56 ALJR 625: 39 ALR 417, decided as to the scope of the external affairs power because the correctness of Koowarta was common ground between the parties. There the validity of ss 9 and 12 of the Racial Discrimination Act 1974 (CTH) was upheld as an exercise of the power conferred by s 51 (xxix) of the Constitution on the footing that the enactment of the two sections was a discharge of Australia's obligation under the International Convention on the Elimination of all Forms of Racial Discrimination. By becoming a party to that convention, Australia undertook to prohibit and eliminate racial discrimination in all its forms by appropriate means, including legislation. ...

Effect to an obligation imposed by international convention

section gave effect to an obligation imposed by an international convention

40. In the Koowarta case, the following principle was upheld that entering into a genuine treaty, the state assumes international obligations to enact domestic laws:

The Majority opinion was voiced by the following judges:

Stephen J. at 418.

There existed a quite precise treaty obligation on a subject of major importance in international relationships, which called for domestic implementation within Australia

Mason J. at 418

It would seem to follow inevitably from the plenary nature of the external affairs power that it would enable the parliament to legislate not only for the

ratification of a treaty but also for its implementation by carrying out any obligation to enact a law that Australia assumed by the treaty

Brennan J. at 418

If Australia, in the conduct of its relations with other nations accepted a treaty obligation with respect to an aspect of Australia's internal legal order, the subject of the obligation thereby because (if it was not previously) an external affair, and a law with respect to that subject was a law with respect to external affairs.

41. The Labour Convention case was used by the dissenting judges at 434 but was not considered to be a relevant precedent. Even one of the Judges, Wilson, who alluded to the case stated at p. 480 that "The decision in that case, though not the accuracy of the observation to which I have referred was subjected to a good deal of criticism". The Majority of the Judges in the Koowarta case followed the principles enunciated in the *R v Burgess: Ex parte Henry* (1936) 55 CLR 608.

42. In the Koowarta case the changed role of international agreements was examined. Stephen at 452 identified the changed role as being "national governments' increased concern regarding domestic observance of internationally agreed norms of conduct":

"So long as treaties departed little from their early nature as compacts between princes, having no concern with domestic affairs, the conflict was muted: but in the century international conventions have come to assume a more extensive role. They prescribe standards of conduct for both governments and individuals having wide application domestically in areas of primarily regional concern, the very areas which, in federations, have tended to be entrusted to the legislative competence of the regional units of governments. This has necessarily exacerbated the problem which federations encounter in the implementation of international treaties while emphasizing the need for regional units in federations to recognize the legitimacy of national governments' increased concern regarding domestic observance of internationally agreed norms of conduct. "

Thus, areas of what are of purely domestic concern are steadily contracting and those of international concern are ever expanding (Stephen at 453).

post war growth in consensual international law (Stephen at 454)

What has occurred is rather a growth in the content of "external affairs". This growth reflects the new global concern for human rights and the international acknowledgment of the need for universally recognized norms of conduct particularly in relation to the suppression of racial discrimination (Stephen at 454)

43. In the Koowarta case there was also the recognition of the importance and binding nature of international customary law:

Stephen at 456:

Even where Australia not a party to the Convention, this would not necessarily exclude the topic as a part of its external affairs. It was contended on behalf of the Commonwealth that, quite apart from the Convention, Australia has international obligations to suppress all forms of racial discrimination because respect for human dignity and fundamental rights and thus the norm of non-discrimination on the grounds of race, is now part of customary international law, as both created and evidenced by state practices and as expounded by jurists and eminent publicists.

44. In the Koowarta case, there was also the enunciation of the principle that if there exists a precise treaty obligation on a subject of major importance there should be domestic implementation.

Stephen at 456:

In the present cases, it is not necessary to rely upon this aspect of the external affairs power since there exists a quite precise treaty obligation on a subject of major importance in international relationships, which calls for domestic implementation within Australia.

Mason at 459:

It would seem to follow, inevitably, from the plenary nature of the power, that it would enable the parliament to legislate not only for the ratification of a treaty but also for its implementation by carrying out any obligation to enact a law that Australia assumed by the treaty.

45. In the Appeal the *R v Burgess: Ex parte Henry* case of 1936 will be examined and compared to the Canadian Labour Convention case of 1937.

Even though judges acknowledged that in Australian Law treaties were not self-executing, they acknowledged the power to the Commonwealth to enact implementing legislation:

Mason 459 recognize that it is a well settled principle of the common law that a treaty not terminating a state of war has no legal effect upon the rights and duties of Australian citizens and is not incorporated into Australian law on its ratification by Australia (Chow Hung Ching v R (1948)...not self-executing'

... to achieve this result, the provisions have to be enacted as part of our domestic law; whether by Commonwealth or State statute. Section 51 (xxix), arms the Commonwealth Parliament with a necessary power to bring this about. So much was unanimously decided by the court in R v Burgess: Ex parte Henry (1936) 55 CLR 608.

There the power enabled the Commonwealth Parliament to legislate so as to incorporate into their law the provisions of the Paris Convention for the regulation of aerial navigation.

46. The recognition of the disturbing outcome of the fragmentation of power in relation to international treaties was made in the R. v Burgess case:

Mason at 459 stated:

The consequence of the failure [of the R. v Burgess: Ex parte Henry (1936)] would have been to leave the decision on whether Australia should comply with its international obligations in the hands of the individual States as well as the Commonwealth, for the commonwealth would then lack sufficient legislative power to fully implement the treaty. The ramifications of such a fragmentation of the decision-making process, as it affects the assumption and implementation by Australia of its international obligations are altogether too disturbing to contemplate. Such a division of responsibility between the Commonwealth and each of the States would have been a certain recipe for indecision and confusion, seriously weakening Australia's stance and standing in international affairs. Fortunately, the approach in Burgess has since been confirmed by R v Poole; Ex parte Henry (no.2) 1939 61 CLR...

47. The appropriateness of ensuring that State responsibilities will be discharged. was recognized in the Koowarta Case:

Mason at 462. stated:

doubtless the framers of the Constitution did not foresee accurately the extent of the expansion in international and regional co-operation which has occurred since 1900. ...There is no reason at all for thinking that the legislative power conferred by s 51 (xxix) was intended to be less than appropriate and adequate to enable the Commonwealth to discharge Australia's responsibilities in international and regional affairs.

48. It will be contended in the appeal that, as in Australia, Canada must be able to commit the whole of Canada to giving effect to obligations:

In the Koowarta case, Mason at 463 stated:

Increasing emphasis is given in the United Nations and in regional organizations to the pursuit by international treaties of idealistic and humanitarian goals. It is important that the Commonwealth should retain its full capacity through the external affairs power to represent Australia, to commit it to participation in these developments when appropriate and to give effect to obligations thereby undertaken. `

49. In the Koowarta case, Mason at 466 and 467 recognized that Australia in common with other nations is bound to enact domestic legislation to enable the implementation of treaties:

Broadly speaking the test which they favoured was whether in substance the legislation carries out or gives effect tot the Convention. (at 466)

On the broad view which I take of the power it extends to the implementation of the International convention on the... on the Elimination of all forms of Racial Discrimination. It is an international treaty to which Australia is a party which binds Australia in common with other nations to enact domestic legislation in pursuit of the common objective of the elimination of all forms of racial discrimination.

But I would go further and say that even on the more cautious expression of the scope of the power by Dixon in Burgess, it would extend to the implementation of the convention.

50. In the Koowarta case, Mason at 468 affirmed the imposition of and obligation and the consequences of not performing the obligation:

At the level of international law, the means chosen to attain this end was the formulation of the Convention. It imposes on each of the many parties to it an obligation to eliminate racial discrimination in its territory. The failure of a party to fulfill its obligations becomes a matter of international discussion, disapproval, and perhaps action by way of enforcement.

51. In the Koowarta case Murphy at 471 discussed "the obligations to take legislative measure...

52. Murphy at 472 dissolved the distinction between internal and external affairs: .

Preservation of the world's endangered species, maintenance of universal standards of human rights.. are for Australia as well as other nations, internal as well as external affairs.

53. Murphy at 473 also affirmed the entitlement of the people to have legislation enacted that will fulfill obligations under a treaty:

The people of the States are entitled, as well as obliged, to have the legislative and executive conduct of those affairs which are part of Australia's external affairs carried out by the Parliament and executive Government of Australia.

54. A country could be in breach of an obligation imposed on it, if it failed to enact law. In the Franklin Dam, in 1983, issues were raised related to external affairs power. In the appeal, these issues will be discussed in relation to the Canadian /B.C / international legal obligations context:

55. In the Vienna Convention on the Law of Treaties which Canada adopted in 1969 there was the affirmation that, in addition to the duty to ensure that the necessary legislation has been enacted prior to signing a treaty, there is an obligation not to defeat the purpose of treaties.

Under Article 18 of the Vienna Convention on the Law of Treaties, Canada is obliged to not defeat purpose and object of international conventions from the moment of signing the treaty or convention.

Canada signed (June 5,1992) and ratified (December, 1992) two legally binding Conventions: the Convention on Biological Diversity and the Framework Convention on Climate Change. Under Article 18 of the Vienna Convention on the Law of Treaties (1969), Canada is obliged to "not defeat the object and purpose of a treaty prior to the entry into force". This provision in the Vienna Convention on the Law of Treaties, would indicate that as of June 1992, Canada was bound not to defeat the purpose and object of both the Convention on Biological Diversity and the Framework Convention on Climate Change.

56. States are also bound not to create a situation which would make it impossible to fulfill the obligations under a treaty.

Canada is bound not to create a situation such as the reduction and the loss of biodiversity in the coastal temperate rain forest ecosystems, the disappearance of significant carbon sinks or the fragmentation of sites of outstanding universal value. All these situations would make it impossible to fulfill its obligations under the conventions.

Article 61

Supervening impossibility of performance, a party may invoke the impossibility of performing a treaty as a ground for terminating or withdrawing from it if the impossibility results from the permanent

disappearance or destruction of an object indispensable for the execution of the treaty". ...

2. Impossibility of performance may not be invoked by a party as a ground for terminating, withdrawing from or suspending the operation of a treaty if the impossibility is the result of a breach by that party either of an obligations under the treaty or of any other international obligation owed to any other party to the treaty.

Canada, by not ensuring that the necessary legislation and enforceable law were in place to prevent activities that could defeat the purpose of the Conventions, could permanently "destroy ... an object indispensable ..." such as the biodiversity in significant old growth stands or the carbon sinks of the old growth forest. The reduction and loss of biodiversity, as well as the elimination of carbon sinks of old growth forest could be contributing to a situation that would make it impossible for Canada to fulfill its obligations under the Conventions. By continuing with clear-cut logging and fragmenting currently unfragmented areas, Canada, through B.C.'s practices of fragmenting old growth forests, may be creating a situation where the object (the pristine old growth forest of outstanding universal value) could fail to fulfill the criteria for being identified as World Heritage Site under the UN Convention for the Protection of Cultural and Natural Heritage (1972).

57. In the appeal the acceptability of Canada's current policy of preserving 12% of the land as parks will be questioned.

Evidence will be submitted that internationally, at meetings such as the IUCN Annual General Meeting, the representatives from Parks Canada, including the Assistant Deputy Minister, did not admit that the 12% solution was Canadian Policy.

When it was mentioned in a contact group meeting — a meeting to discuss resolutions, that if we commend B.C., in the resolution, for its current conservation proposals and for the CORE process, that we would be endorsing the "12 % solution". Biologist, Elliot Norse, laughed and stated "Surely no country is still linking conservation to percentages". The representatives from the Canadian government were not prepared to admit at that meeting that the "12 % solution" is Canadian and B.C. government policy.

Also evidence will be submitted that will demonstrate that the current position of the IUCN on percentages and conservation, is that the linking should be avoided because it has no basis in biology or ecology, and that governments will use it as a minimum, and will justify preserving what has been referred to as "rock and ice" in lieu of significant ecosystems that are under demand from resources. (Comments made from the floor of

the Annual General Meeting when a resolution linking percentages and conservation was being discussed.)

The reason that the position of the IUCN is significant is that the IUCN was the international organization that first linked the two in 1982, and CONTINUED to do this even at the Earth Summit. It has only been since the Earth Summit, that the IUCN has recognized the way the percentage figures have been used. Groups like "Share B.C" have been using the linking of percentages to conservation to support the claim that "12% and no more". The notion of 12% can be used to legitimize the reduction of significant areas of biodiversity, such as the Clayoquot, and thus contribute to the defeating of the purpose of the Biodiversity Convention.

58. In the appeal, the degree of consultation and the nature of the subject matter of the Attorney-General for Canada v Attorney-general for Ontario Supreme Court of Canada A.C. 1937 (Hereafter referred to as the Labour Convention Case), will be distinguished from the degree of consultation and the nature of the subject matter current matter to be dealt with in the appeal. This Labour Convention case has been purported to be the precedent to support the claim, by provinces, that they are not bound by international Conventions signed by Canada.

It would appear that the Labour Convention case turned on two legal points:

(i) the fact that the provinces on the matter in that case were not consulted prior to Canada's undertaking obligations under international law; criteria were established for consultation.

(ii) the designation of "labour" issues as not fulfilling the criteria for invoking Article 91 Constitutional powers

In the Biodiversity Convention and the Framework Convention on Climate Change both sets of criteria were adhered to in a way that would make the decision in the Labour Convention case no longer applicable.

59. It will be submitted that the degree of consultation surrounding the "International Labour Convention" — the subject matter in the Labour Convention case can be distinguished from the degree of consultation surrounding the Biodiversity and Climate Change Conventions and

UNCED adopted documents. In the latter, there is evidence that B.C. was consulted prior to both the signing and the ratifying of the Biodiversity and Climate Change Conventions, as well as prior to the adoption of Agenda 21.

In the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" there is reference to a constitutional convention to consult provinces prior to signing and ratifying Treaties and Conventions. It would appear that the Labour Convention case could be distinguished on the grounds that there was not consultation with the provinces during the negotiation process of the International Labour Convention. Unlike the Labour Convention, the negotiations surrounding the UNCED conventions took place in Canada with the full consultation of the provinces. The provinces were fully consulted before the signing and ratifying of the Biodiversity and Climate Change Conventions. This commitment to consult is expressed as follows in the Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", 1982:

The practice of the Canadian Government, in cases where the subject matter of an international agreement falls either wholly or partly within provincial jurisdiction, is to consult each of the provincial governments. The process of consultation is informal and is usually conducted by letters exchanged between the federal and provincial governments.

A multilateral treaty dealing with matters within provincial jurisdiction would be signed by Canada only after consultation with the provinces had indicated that they accepted the basic principle and objectives of the treaty. Assurances would be obtained from the provinces that they are in a position, under provincial laws and regulations, to carry out the treaty obligations dealing with matters falling within provincial competence, before action is taken by the Government of Canada to ratify or acceded to such a treaty. (Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power", 1982).

60. It should be noted that there appears to be a serious inconsistency within the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" document. On the one hand, the document calls for consultation with the provinces prior to signing, along with the assurances that the necessary legislation has already been enacted, and yet the document still considers the applicability of the Labour Convention case which the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" claims has never been overturned.

In the "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power" the following references were made to the Labour case:

The federal government is not entitled, merely because it has entered into a treaty, to legislate on matters that fall within the competence of the provinces. This is the effect of the Labour Conventions case. *Attorney-General of Canada v. Attorney-General of Ontario (labour Conventions)* (1937) A.C.

Although it has been argued that legislation to implement a treaty is within the federal power over the peace, order and good government of Canada, and that Section 132 should be interpreted in the light of changing circumstances, the Supreme Court of Canada has yet to rule on this question, which would involve a reconsideration of the reasoning in the Labour Conventions case. (Parliaments and the Treaty-making power — "Canadian Reply to Questionnaire on Parliaments and the Treaty-making Power")

61. In the Labour Convention case, criteria for being part of the decision making process were proposed.

Several of the Counsels objected to the imposition of federal legislation to comply with international obligations because the provinces were not part of the decision. They cited the following aspects of being part of the decision: "cooperation", "obtaining advice", "obtaining consent" or "asking for approval":

- *Cooperation* (at 327)

...from her new international status, Canada incurred obligations, they must, so far as legislation was concerned, when they dealt with Provincial classes of subjects, be dealt with by the totality of powers — by co-operation between the Dominion and the Provinces.

- *Obtaining advice* (at 340)

said that in treaties affecting subject-matters within the legislative competence of the Provincial Legislatures and bring into operation the provisions of s 132 of the BNA act, the King should have his assent on the advice of his Provincial advisers as distinct from his dominion advisers.

- *Obtaining consent* (at 339)

The dominion has not brought the draft Conventions before the authority or authorities ' within whose competence the matter lies' and has not obtained the consent of those authorities as required by art 405., paras 5 and 7.

- *Asking for approval* (at 331)

It is ordinary constitution practice to ask the approval of the body which will, in the event of the engagement being entered into, have the power to enact the legislation.

62. In the Appeal, it will be shown that B.C., through consultations with the Federal Government at the ministerial level prior to the signing and the ratifying of the treaties, B.C., was consulted through the Federal governments engaging in "cooperation", "obtaining advice", "obtaining consent" or "asking for approval":

On August 8, 1994, the Strategic Planning Committee of the Council of Ministers of the Environment was contacted by Appellant and asked to forward a chronology of the Federal /Provincial Consultation process that occurred leading up to the Earth Summit and the signing of the UNCED Conventions (June, 1992), and leading up to the ratification of the UNCED Conventions (December, 1992).

63. It is expected that this chronology from their Strategic Planning Committee will have been made available in time to present it at the Leave to Appeal hearing. This evidence, which will be submitted, will demonstrate that, in reference to the Biodiversity Convention and the Framework Convention on Climate Change, the provinces were consulted prior to the signing of the Convention (at numerous Ministerial meetings at the Prep Coms leading up to June, 1992) and prior to ratification (November 23, 1992 meeting prior to the ratification of the document in December of 1992).

64. It would appear that prior to signing and ratifying the Convention, the federal government consulted with the provinces and if the federal government followed the External Affairs principle of ensuring that the necessary legislation was in place to enable performance of the treaty obligations under the Convention, there had been opportunities during the consultation meetings to ensure that the necessary legislation was in place.

65. It would appear that B.C. played a significant role in the provincial endorsement of the UNCED Conventions by moving the endorsement at the November, 1992 Ministerial meeting, and by obtaining Cabinet support:

Jaime Alley, former representative for Corporate Affairs in the Ministry of the Environment said:

"...that the provincial governments insisted on not being just another stakeholder in the consultation process but on having government to government consultation"

..."The Province endorsed the ratification. We agreed with Canada to ratify it. There was provincial endorsement. The move to endorse the Conventions was made by John Cashore, the then B.C. Minister of Environment". Cashore then went to Cabinet, sought their support and endorsement of the ratification and then stated that the Cabinet had approved the Conventions to the CCME meeting.

"Barbara MacDougal wrote to all provincial constitutional ministers seeking their advice prior to ratification, "there was continuous consultation; you need to contact the CCME for details"

(Personal Communication, August, 1994)

66. In a document obtained through the Freedom of information Act, there was evidence of the Provincial cabinet endorsement for the ratification of the Biodiversity and Climate Change Conventions:

EXHIBIT: E "UNCED follow-up: Endorsement of International Convention on Climate change and Biological diversity" November 4, 1992.

67. Through the "UNCED follow-up: Endorsement of International Convention on Climate change and Biological diversity" November 4, 1992, there has been the B.C. Provincial cabinet endorsement of the Biodiversity and Climate Change Conventions.

68. In the Appeal, it will be contended that B.C., through a letter prior to August 1992, the then Constitutional Minister of B.C., the Hon Moe Sihota, conveyed by letter to the Hon. Barbara McDougall, Secretary for External Affairs, B.C.'s support for the Biodiversity and Climate Change Conventions.

On August 29, the Hon Barbara McDougall, Minister of State for External Affairs, wrote to the Hon Moe Sihota, Minister responsible for Constitutional Affairs, to acknowledge B.C's support and to indicate that Canada plans to complete the ratification process by the end of 1992 (P. 05 of FAX of Exhibit E)

[The Appellant has made an application (July 17, 1994) through the Freedom of Information Act for a copy of this correspondence.

69. In this Cabinet submission, dated November 4, 1992, the B.C. Government affirmed that it was bound by the Biodiversity Convention and the Framework Convention on Climate Change:

Canada signed binding International Conventions on climate Change and Biodiversity

..and indicated its support for ...a "Global Green Plan" for sustainable development, entitled Agenda 21.

70. In the event that the Appeal Court will not concur that the Labour Convention case can be distinguished on the basis of the argument that there was sufficient consultation prior to the signing and the ratification of the Convention on Biological Diversity and the Framework Convention on Climate Change, then a subsequent argument will be presented that the subject matter "Biodiversity " and "Climate Change" could come under the residuary powers of Section 91 of the Constitution. At the appeal, the Labour Convention case will also be distinguished on the ground that the decision in that case followed the Supreme Court case "In the Matter of Legislative Jurisdiction over Hours of Labour, [1925] Can. S.C. R. 505, where the Judge stated without discussion, that "labour" issues" could come under the head of #13— "Property and civil Rights" or under # 16 "Local and Private Matters Within the Provinces". Thus, labour issues were not perceived to fulfill the categories outlined for justifying the invoking of residuary powers under Section 91. It will be submitted that the "International Labour Convention" — the subject matter in the Labour Convention case can be distinguished from the "Biodiversity" and "Climate Change" — the subject matter United Nations Convention on Environment and Development (UNCED).

71. In the Labour Convention case, properties were set out for the designation of matters that could be deemed to come under residuary powers.

It would appear that "labour" issues' not warranting the invoking of residuary powers, could be distinguished from "biodiversity" and "climate change issues because both the latter issues fulfilled most of the criteria or properties set down by the judges for determining inclusion in section 91. The subjects of "Biodiversity" and "Climate change" could be justifiably a subject that would not come under Section 92, and thus would fall to federal residuary powers. "Biodiversity" and "Climate Change" could be distinguished from labour on a number of grounds:

In the Labour Convention case, Mr. Justice Atkin summarized the distinction between S 91 and S. 92 of the BNA act as follows:

section 91 under the general powers, sometimes called the residuary powers, given by s. 91 to the dominion parliament to make laws for the peace, order and good government of Canada in relation to all matters not coming within the classes of subjects by this act assigned exclusively to the legislatures of the provinces, p. 342 Atkin's judgment

In the Labour Convention case the criteria for determining whether the subject fell under section 92 were the following:

If the new functions affected the classes of subjects enumerated in s. 92 legislation to support the new functions was within the competence of the provincial legislatures only. If they did not the competence of the Dominion Legislature was declared by s 91 and existed ab origine.

It was decided, in this case, that Labour relations would quite legitimately be placed under the subjects in section 92. "Property and civil rights in the Province" which was assigned exclusively to the legislature of the Provinces by head 13 of s92 of the BNA Act.

It was noted in the Labour case at 328, that there must be some grounds for taking the subjects out [of 13 of s 92). The Court was not satisfied that the federal government had established sufficiently the grounds for taking the subject of "labour issues" out of the subject area in section 92, as noted above in the 1925, Supreme Court case.

72. In the Labour Convention case, Counsels for the Attorney General of Canada and for the Attorney Generals for the provinces referred to a number of properties of a subject which would enable the subject to be designated as a new function and then come under the residuary

powers of section 91. It was decided that "labour relations" did not fit into this category. In the appeal, an attempt will be made to demonstrate that "biodiversity" and "Climate Change" are categories of subjects that could be deemed to invoke the residuary powers because these subjects would fulfill the properties advocated in the Labour Convention case, as well as in re: Regulation and Control of Radio Communication in Canada (Radio Case) (1932] A.C., p. 304 and in Re: The Regulation and Control of Aeronautics in Canada (Aeronautics Case) [1931] A.C. 1932, p. 54.

- *New subject:*

Counsel acting for the Attorney General of New Brunswick distinguished the Radio case on the ground that the subject matter in the radio case, in contrast to that of the Labour Convention Case, was a "new subject not embraced within the enumerated heads of s.92.(338.). It is quite likely that "biodiversity" and "climate change" would fall into this category. Biodiversity, and climate change are issues that transcend national, provincial and state boundaries are certainly new subjects that were not deemed to be limited to regional control.

73. It will be contended in the Appeal that Biodiversity and Climate Change because of the responsibility to not have activities under one jurisdiction impact on other jurisdiction would surely be considered to be activities that would come under "new subjects" and thus come under residuary powers of the federal government. If these two issues would be deemed as new subjects, then the federal government would be obliged to invoke its residuary powers and ensure that as of June 1992, no activities in Canada would defeat the purpose of these treaties. Consequently federal government would be both entitled and bound to enact legislation that could override provincial legislation in the event that the provincial legislation would not be able to prevent the defeating of the purposes of the Conventions.

- *Matter of "such general importance"*

Further, the present legislation was not concerned with matters of such general importance as to justify the overriding of the normal distinction of powers in SS 91 and 92 (head note of Labour Convention case)

- *"Exceptional Circumstances"* Mr. Justice Atkin at 353

EXHIBIT F: AFFIDAVIT: Affirmation of the urgency of the global situation

EXHIBIT F* Exhibit submitted in the September 15 Application and presented in transcripts Statements from Royal Society, Science Council, presented before Mr. Justice Drake.

74. From the B.C. government's own "State of the Environment Reporting" document , 1993, the "importance" and "exceptional conditions" of biodiversity are stressed:

Biodiversity is the variety of life on the planet. It is important for a number of reasons. First, we have an ethical stewardship responsibility for other living things with which we share the planet. Second, high species diversity contributes to ecosystem stability. Third, biodiversity has immeasurable aesthetic value; provides food medicine and other products of enormous economic value; and generates critical ecosystem services essential to all life:

"

Standard of necessity" Mr. Justice Atkin at 353

75. From the B.C. government's own "State of the Environment Reporting" document the essence and necessity of Biodiversity is affirmed because of its links to other cycles

Biodiversity is essential to maintain ecosystem processes that support all life. These include; Maintaining the gaseous compositions of the atmosphere, climate control, regulating the hydrological cycle, generating and maintaining soils, cycling nutrients necessary for the growth of living things, and decomposing waste materials.

76 From the B.C. government's own "State of the Environment Reporting" document the B.C. government also recognized the importance of identifying species and its inability to assess the current state in B.C:

Genetic diversity enables species to adapt to changes in their environment over time. It is difficult and costly to measure genetic diversity and therefore difficult to assess its current state in B.C.

77. From the B.C. government's own "State of the Environment Reporting" document the importance of the biodiversity of coastal temperate rainforests is acknowledged

Trees in coastal temperate rain forests grow to very large sizes and exceptionally old ages. Such ecosystems have the highest standing biomass of any ecosystem on earth and provide for tremendous biodiversity. Coastal temperate rain forests occur in a few scattered spots around the world, and are considered rare on a global scale. North America has the largest continuous tract of coastal temperate rain forests on earth, approximately half of which is in B.C.

- *Matters of national importance* at 335

Matters of national importance, of such wide import as to affect the body politic of the dominion in the overriding way that was found in *Russell v the Queen.*, if they were taken out of the specific heads of s. 92, then Ontario is satisfied to see this legislation supported. (at 335 Labour Convention case)

In the press release issued at the time of ratifying the Biodiversity Convention, Prime Minister Brian Mulroney indicated Canada's commitment:

to [fulfill] Canada's commitment to ratify the Convention before the end of 1992. Canada is the first industrialize country to ratify both agreements. The Convention which emerged from last June's Earth Summit in Brazil, exemplified a global commitment to the principles of sustainable development ...as embodied in Agenda 21 and agreed to at the Earth Summit.

the Convention on Biological Diversity provides a framework for conserving the planet's animal and plant life and maintaining their habitats.

WHAT IS CANADA'S POSITION ON THE BIODIVERSITY CONVENTION

Canada supports the international effort to conserve biodiversity. Canadian representatives participated fully in negotiations of the Convention and the federal, provincial and territorial governments all believe that the Convention is a good basis for tackling this international problem.

- "*Extraordinary peril to the National life of Canada*", Mr. Justice Atkin at 353

The federal government, in its backgrounder to this press release, at the time of ratification of the Biodiversity Convention on December 4, 1992, also affirmed that without Biodiversity, "humanity's ability to survive is threatened".

What is biodiversity? ". ..Biodiversity provides the very foundation for human life and life support systems. Without healthy and stable biological resources, humanity's ability to survive is threatened.

(Press Release on Ratification of the Biodiversity Convention, Dec. 4, 1992)

- Canada is continuing to play an active international role in discussion about the Convention. It has been actively involved in preparing for the implementation of the Convention by participating in all the UN meeting on biodiversity since the Earth Summit.
- The federal, provincial and territorial governments in Canada are proud of Canada's leadership on the issue of biodiversity conservation. As one of the first countries to sign the Convention and being the first industrialized country to ratify it. Canada has demonstrated its commitment and leadership to the world. We must, of course, CONTINUE to ensure that our performance at home lives up [to] that commitment.

From these statements, both by the provincial government and by the federal government, it would appear that "biodiversity" is of "general importance".

- *Not foreseen matters*

Robertson, KC indicated p.340 (arguing the federal position]

One of the things upon which the parties were able to agree at confederation, in respect of matters not provided for not foreseen, was that they were to go to the Dominion. One of the outstanding dangers at the time of confederation and to-day, is that of sectional interests and prejudices and private interests interfering with the good government of Canada as a whole. Reliance is placed on the residuary powers as conferring the performance of treaty obligations: ... Radio case (1932] A.C. 304, 311, 313.

Residual powers for environmental issues which are all pervasive, a similar argument could be made for climate change. The principle that could apply is the consequences cannot be controlled by a particular jurisdiction within Canada, let alone even within Canada. The impact of anthropogenic actions on biodiversity and climate change are not "restrictable" to traditional jurisdictional boundaries. Presumably the largest unit of jurisdictional power should be in control of the fulfillment of obligations under the Convention.

- *Importance which outweighs the civil right of the individual*

Robertson K.C. supporting the federal position indicated:

When a matter has attained an importance which outweighs the civil right of the individual; once it has reached that stage, then the civil right is lost sight of and the matter from an international aspect outshines it, and is the one to which attention should be directed. Here, an international obligation has arisen and it is the duty of Canada to see that obligation is performed. Canada alone can perform it and Canada, therefore, in these particular circumstances and while the obligation endures, is the body to legislate because it is an international obligation. Is not the proper view that once Canada has properly created international obligation that it is necessary for the peace, order and good government of the Dominion, that Canada should perform them? p. 341

Note: the references to the aeronautics case were not in the original submission. They were, however, referred to in the oral submission. The following references and a subsequent page of documentation was written into the leave to the appellant's appeal book but not fully referred in the court submission:

Note: Applicability of Aeronautics case at 71, AC 1931

cites propositions from Attorney General of Can. V Attorney General of B.C., AC 1930

1. the legislation of the parliament of the Dominion, so long as it strictly relates to subjects of legislation expressly enumerated in s91, is of paramount authority

at 71

2. the general power of legislation conferred upon the subjects, expressly enumerated, must be strictly confined to such matters as are unquestionably of national interest and importance. And must not trench on any of the subjects enumerated in s92, as within the scope of provincial legislation, unless these matters have attained such dimensions as to affect the body politic of the Dominion.

4. There can be a domain in which Provincial and Dominion legislation may overlap, in which case neither legislation will be ultra virus if the field is clear but if the field is not clear and the two legislations meet the Dominion legislation must prevail.

at 73

it is obvious, therefore, that there may be cases of emergency where the Dominion is empowered to act as a whole" also by reason of the plain terms of s132

78. In the Appeal, the relevance of Section 132 of the B.N.A. Act, will be reconsidered in the light of the fact that it is the only section that does refer explicitly to obligations under treaties.

The Parliament and Government of Canada shall have all powers necessary or proper for performing the obligations of Canada or of any

Province thereof, as part of the British Empire, towards foreign countries arising under treaties between the Empire and such foreign countries.
(Section 132, B.N.A.)

In the "Aeronautics case" s. 132 was still deemed to be relevant.

At 73, Mr. Justice Swanky held that:

by reason of the plain terms of s 132, where Canada, as a whole having undertaken an obligation, is given the power necessary and proper for performing that obligation

at 70 also held:

The underlying objective of the BNA Act was to establish a system... the real object of the Act was to give the central Government those functions and almost sovereign powers by which uniformity of legislation might be secured on all questions which were of common concern to all provinces as members of a constituent whole

at 73 he stated:

...there may be cases where the dominion is entitled to speak for the whole...by reason of plain terms of S 132, where Canada as a whole having undertaken an obligation, is given the power necessary and proper for performing that obligation.

In the 1992 United Nations Convention on Environment and Development (UNCED) Action plan, Agenda 21, in the Biodiversity Chapter 15, — a positive duty is assumed by governments adopting Agenda 21:

" At the same time, it is particularly important, in this context, to stress that States have the sovereign right to exploit their own biological resources pursuant to their environmental policies as well as the responsibility to conserve their biodiversity and use their biological resource sustainably, and to ensure that activities within their jurisdiction or control do not cause damage to the biological diversity of other States or of areas beyond the limits of national jurisdiction. " (15.3. Agenda 21).

It would appear that it would be possible, in the light of "changing circumstances", that a convention such as the Biodiversity Convention which deals with a phenomena that does not respect proprietary divisions; that subject areas such as biodiversity and climate change would come under federal purview. In this context, it could be argued that biodiversity, because of the responsibility to not have activities under jurisdiction impact on other jurisdiction, that biodiversity would come under section 132 which bestows upon the federal government overriding powers, in the light of changing circumstances — which, in this case, would be the pervasiveness of biodiversity. In 1867, no one was thinking of incurring environmental obligations.

79. At the Appeal, evidence will be presented to indicate the assessment of Canada's responsibility to other States for B.C.'s practices:

At the IUCN (World Heritage Union) 1994 Annual General meeting of the IUCN Commission on Environmental Law, the question of federalism and international law was raised. In particular, the Appellant raised the question about the responsibility under a treaty of the federal state when there is non-compliance within the sub-unit. As a specific example, Canada's responsibility for B.C.'s actions was raised. Several of the lawyers, some of whom had served as advisers to the International Court of Law or to the United Nations, concurred that Canada could be held responsible under the Conventions, to other countries, if, through B.C.'s actions, Canada was in non-compliance with international legal obligations under the two Conventions signed at UNCED.

80. In the Appeal, it will be noted that under the Convention of Law of Treaties, Canada has been obliged not to invoke internal law to justify failure to perform international obligations.

Under Article 27 of the Vienna Convention on the Law of Treaties, Canada is bound to not invoke Internal law to justify failure to perform a treaty:

A party may not invoke the provisions of its internal law as justification for failure to perform a treaty.

Neither the internal law of the B.C. Government's land use decision regarding Clayoquot Sound, nor the internal law of judicial injunctions, justifies failure to meet the provisions within the Conventions.

81. In the Appeal, it will be argued that, as a result of MacMillan Bloedel's applying for an injunction and the Court's granting this injunction, the Courts have permitted the continuation of practices that are in violation of the Biodiversity and Climate Change Conventions. The Courts have inadvertently encouraged non-compliance with international law.

In addition, Canada, if not having notified otherwise, is bound by what occurs in B.C.

Under Article 29 of the Convention of Law of Treaties, "territorial scope of treaties", Canada is bound throughout its territory including all provinces and territories:

Unless a different intention appears for the treaty or is otherwise established, a treaty is binding upon each party in respect of its entire territory.

If Canada has expressed a different intention, then it is important that the other States of the world know that when Canada signs an international agreement in areas over which provinces have jurisdiction, the provinces are not bound. Citizens from countries that have endorsed the self-executing principle related to international law, presume that if Canada signs and ratifies a treaty, that the treaty obligations are binding on all the parts of the country including provinces and territories

EXHIBIT: G Affidavit from a citizen from the U.S. — a country that has endorsed the self-executing principle.

82. It will be contended that Canada has been in non-compliance since June 1992 (UNCED) because B.C. forest practices have been in contravention of provisions in the Conventions, and Canada has thus defeated the purposes of the Conventions.

83. It will be submitted in the Appeal, that it can be demonstrated not only that Canada, through the practices of B.C., has been defeating the purpose of the Conventions signed in June, 1992 at UNCED but also that Canada has been defeating the purpose of another Convention that is particularly relevant to Clayoquot and the injunction granted to MacMillan Bloedel: the UN Convention for the Protection of Cultural and Natural Heritage (1972).

The UN Convention for the Protection of Cultural and Natural Heritage was signed in 1972. Canada has been obligated to identify and nominate sites as being sites of "outstanding

universal value". Canada and B.C. have been remiss in not identifying and nominating an extensive network of ancient coastal temperate rainforests, including Clayoquot Sound as being a natural heritage of "outstanding universal value".

84. From the B.C. government's own "State of the Environment Reporting" document, the importance of the biodiversity of coastal temperate rainforests is acknowledged:

Trees in coastal temperate rain forests grow to very large sizes and exceptionally old ages. Such ecosystems have the highest standing biomass of any ecosystem on earth and provide for tremendous biodiversity. Coastal temperate rain forest occur in a few scattered spots around the world, and are considered rare on a global scale. North America has the largest continuous tract of coastal temperate rain forest on earth, approximately half of which is in B.C.

85. Canada has failed to comply with the Biodiversity Convention and the Climate Change Convention because B.C. since the moment of signing the Biodiversity and Climate Change Conventions has CONTINUED to log in an ecologically unsound way, such as clear-cutting primary growth coastal temperate rain forests.

86. Canada has contravened the Convention because, B.C. since June 1992 has defeated the purpose of Biodiversity Convention by having failed to identify biodiversity

Under the Convention the parties are required "to identify biodiversity"

At the ratification of the Biodiversity Convention in the December 4, 1992, speech by Prime Minister Mulroney, he informed the public of about the state of identification of species in Canada and admitted that there were an equally large number not reported:

Canada is one of the largest countries in the world and is home to about 70,000 known species and many different habitats. However, many of Canada's ecosystems are threatened.

Biodiversity the web of life (environment Canada publication)

A total of just over 70,000 species of animals, plants and micro-organisms have been described or reported to occur in Canada. The same number remain not described or unreported by science. If viruses are added, the total is doubled to 290,000

Canada may claim to be complying with the Biodiversity Convention by indicating that they are developing a "Canadian Biodiversity Strategy"(see draft document June, 1994); however, even by its own admission:

the Status of Biodiversity is also not fully understood. As many as half of the estimated 140,000 species in Canada have not yet been identified.... and that only vertebrates and vascular plants are being evaluated..... The status of most of Canada's species such as fungi, bacteria and invertebrates -- all of while play crucial roles in ecosystem function — is not known.

Yet Canada, through ecologically unsound practices in B.C., CONTINUES to log primary forest ecosystems that contain the biodiversity that will be lost before it is identified.

87 From the B.C. Government's own "State of the Environment Reporting" document, the B.C. government also recognized the importance of identifying species and its inability to assess the current state in B.C:

Genetic diversity enables species to adapt to changes in their environment over time. It is difficult and costly to measure genetic diversity and therefore difficult to assess its current state in B.C.

British Columbia had not sufficiently identified biodiversity at the time of signing the Convention, and British Columbia has CONTINUED to permit practices that contribute to the loss of biodiversity. In the event of the government's own admission that it is virtually impossible to identify species; it should not defeat the purpose of the Biodiversity Convention by ensuring that the storehouses of biodiversity not be logged.

88. Canada since June 1992 has defeated the purpose of Biodiversity Convention through B.C.'s having failed to carry out an environmental assessment review of anything that could contribute to a reduction or loss of biodiversity,

The former Canadian Ambassador for the Environment to the United Nations, Arthur Campeau, who was the head of the Canadian Delegation at UNCED concurred that Canada had been in non-compliance with the Convention because of Canada's failure to carry out an environmental assessment review of anything that could contribute to a reduction or loss of biodiversity [such as clear cut logging and other ecologically unsound practices]. (Personal communication, March 1994)

In jurisdictions where an environmental impact assessment has been carried out, practices, typical of those carried out currently in BC forests, have been assessed as being destructive of biodiversity. For example, a German biologist, Dr. Schutt, specializing in biodiversity indicated the following about "clear-cutting":

The practice of clear-cutting, followed by artificial reforestation has undoubtedly many technical and organizational advantages. In the course of time, however, soil scientists and ecologists found out that the practice of clear-cutting automatically leads to considerable drawbacks:

- wounding of the soil surface through logging operations.

- Risk of erosion -High irradiation and higher climatic extremes alter the microclimate, the flora and the microflora and deteriorate the growing conditions for a number of valuable tree species. -

- Soil compression and a reduction of species richness

- An accelerated decomposition of organic matter occurs, combined with a wash out of nutrients, and the eutrophication of ground water, rivers and lakes occur

(Dr. Schutt, Biological Department, University of Munich, Environmental Ethics Conference, 1992, Vancouver)

89. Canada since June 1992 has defeated the purpose of Biodiversity Convention through B.C. government's and its courts' having failed to avoid or minimize the threat of significant reduction or loss of biological diversity through their not invoking the precautionary principle which reads as follows: .

..where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

As of June 1992, Canada undertook the obligation under the Biodiversity Convention to invoke the precautionary principle.

At the ratification of the Biodiversity Convention in the December 4, 1992, speech by Prime Minister Mulroney indicated his awareness of the loss of biodiversity and in particular the impact of modern forestry practices:

Biodiversity is being threatened directly and indirectly by human activity such as

(i) Destruction of wildlife habitat

the conversion of natural areas, on land and at sea, to other uses destroys disrupt animal and plant habitat. Such loss of habitat leads directly to the loss of species. ...

(ii) Over-exploitation of animal and plant species

(iii) Disturbances of natural ecosystems

Each of the world' ecosystems consists of a community of animals, plants and micro-organisms and the sunlight, water, soil and minerals they need to survive. These ecosystems exist in a delicate balance, with each piece of the puzzle playing a specialized role. Any disruption of the balance can cause a ripple effect of disruptions, threatening the entire ecosystem and individual parts of it...

(1v) Modern agricultural and forestry practices

...similarly, modern forestry often replants a single high-yielding tree species after logging a diverse forest ecosystem

Any human activity that has a negative effect on the environment has a negative effect on biodiversity.

Undoubtedly the "modern forestry practices" he was referring to were the silviculture regimes of clear-cutting and replanting.

90. It will be brought to the attention of the judges in the Appeal that experts throughout the world recognize that the practice of clear-cut logging destroys biodiversity, and that if Canada were to invoke the precautionary principle, clear-cut logging and other ecologically unsound selective logging practices would be disCONTINUED.

There is sufficient evidence that clear-cut logging destroys biodiversity as defined under the convention. Dr. Richard Mittermeir, President of Conservation International, has correctly, stated that the precautionary principle, if invoked, would justify the banning of clear-cut logging (Personal Communication, IUCN Annual General Meeting, 1994)

91. Canada, since June 1992, is in non-compliance with the Framework Convention on Climate Change through B.C.'s failure to conserve carbon sinks, and through B.C.'s destruction of sinks, Canada has defeated the purpose of the Convention.

B.C. since June 1992 has defeated the purpose of Climate Change Convention by having failed to protect carbon sinks; it has CONTINUED to permit the harvesting in significant carbon sinks like primary coastal temperate rainforest such as those of Clayoquot Sound.

Under the Framework Convention on Climate Change Canada is required to protect and enhance Green house gas sinks and reservoirs:

Each of these Parties shall adopt national policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas sinks and reservoirs.

92. Canada, through B.C.'s not fulfilling its duty to identify, protect and conserve natural heritage of outstanding universal value, such as Coastal temperate rainforest areas like Clayoquot Sound, has since 1972, when it signed the UN Convention for the Protection of Cultural and Natural Heritage, failed to discharge its obligation to protect the natural heritage of outstanding universal value for future generations under the United Nations Convention for the Protection of Cultural and Natural Heritage:

Each State Party to this Convention recognizes that the duty of ensuring the identification, protection, conservation, presentation and transmission to future generations of the cultural and natural heritage referred to in articles 1 and 2 and situated on its territory, belongs primarily to that State. (United Nations Convention for the Protection of Cultural and Natural Heritage, 1972)

In the UN Conference on Humans and Environment of 1972, the requirement to preserve our environmental heritage and the requirement to save a representative sample of natural ecosystems for future generations were being recognized:

The natural resources of the earth including the air, water, land, flora and fauna and especially representative samples of natural ecosystems must be safeguarded for the benefit of present and future generations (Principle 2)

Man has a special responsibility to safeguard and wisely manage the heritage of wild life and its habitat which are now gravely imperiled by a combination of adverse factors (Principle 4),

This international obligation was reaffirmed in the UN Resolution 37/7 (1982):

Reaffirming that man must acquire the knowledge to maintain and enhance his ability to use natural resources in a manner which ensures the preservation of the species and ecosystems for the benefit of present and future generations, (UN Resolution 37/7, 1982)

In 1988 the trend gravity of the situation for "generations to come" was recognized by the Science Council of Canada

THE ECOLOGICAL CRISIS

The continuing and accelerating deterioration of the planet's ecological base poses a significant threat to the long-term viability of our world. Evidence concerning global warming, ozone depletion, species depletion and elimination, the spread of the deserts, forest destruction, soil degradation, acidified lakes, rivers and streams, and groundwater pollution exists in abundance in the scientific literature. (1988, Science council of Canada)

Much of the evidence is subject to many qualifications and even scientific debate, but the overall trend and its gravity for our planet, to its multitude of species and to the generations to come, are beyond question. (11)

This Commitment to future generations was restated in the Caracas Declaration in February 1992:

To support the development of national protected area policies which are sensitive to customs and traditions, safeguard the interest of indigenous people, take full account of the roles and interests of both men and women, and respect the interests of children of this and future generations (Caracas Declaration in February 1992, p.3)

It will be noted that throughout the UNCED documents, there was expressed the responsibility to future generations.

The Principle of considering the need to preserve ecological heritage for future generations, because of its CONTINUED inclusion in international documents, has become a principle of international customary law.

Not only has Canada been remiss in not ensuring compliance to this principle of international customary law but also, since June 1992, Canada is in non-compliance with both the Biodiversity Convention and the Climate Change Convention for failing to conserve and sustainably use biological diversity for future generations. Under the Biodiversity Convention, Canada has indicated its determination to do the following:

“to conserve and sustainably use biological diversity for the benefit of present and future generations (Biodiversity Convention, UNCED, 1992)

In the appeal there will be an affidavit indicating the impact on the youth of governments undertaking obligations and not fulfilling them

EXHIBIT: H Affidavit by Christopher Scott along with affidavits from representatives of future generations

In the appeal, there will be an affidavit indicating the impact on the youth of governments undertaking obligations and not fulfilling them

EXHIBIT: I Affidavit by Susan Gage

Since 1972, Canada has been remiss in not fulfilling its duty under the UN Convention for the Protection of Cultural and Natural Heritage (1972)

In 1972, through this Convention, Canada, along with the other States that are parties to this Convention, recognized the urgent need to address the disappearance of natural heritage and acknowledged the global responsibility to preserve natural heritage:

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that, in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

Under Article 4 of this Convention, Canada undertook a positive duty of ensuring the identification of natural heritage:

Each State Party to this Convention recognizes that the duty of ensuring the identification, protection, conservation, presentation and transmission to future generations of the cultural and natural heritage referred to in articles 1 and 2 and situated on its territory, belongs primarily to that State. It will do all it can to this end to the utmost of Its own resources and where appropriate with any international assistance and co-operation ...

and under article 5 d, the appropriate legal measures must be taken to ensure identification:

- To take the appropriate legal, scientific, technical, administrative and financial measures necessary for the identification, protection, conservation, presentation and rehabilitation of this heritage. (Article 5d)

Canada and B.C. have failed to fulfill their duties by not identifying a network of coastal temperate rainforests, including Clayoquot Sound, and nominating this network as a World Heritage Site. In 1981, Australia, nominated a large area of its temperate rainforest and in 1993, nominated an additional network of temperate rain forests. With the CONTINUED fragmentation of the forests in B.C., if we do not act immediately, it will be too late to nominate a network of temperate rainforests and conservation corridors because the forested areas in B.C. will no longer be able to fulfill the criteria for being designated as a World Heritage site.

94. In the Appeal, the Franklin Dam case will be examined in relation to the UN Convention for the Protection of Cultural and Natural Heritage

In the Franklin Dam case, the area under dispute — a network of temperate old growth forest had already been proposed in 1981 by the state and confederation governments as a World Heritage Site. The network was inspected by the IUCN, the World Conservation Union, which is the body responsible for determining if a proposed site fulfills the criteria for protection as a World Heritage Site.

Although Clayoquot Sound has not yet been nominated by B.C and Canada as a World Heritage site, it was part of a proposal contained in a resolution passed at the 1994 Annual General Meeting of the IUCN. The proposed network was deemed to fulfill the criteria for nomination, even though B.C. and Canada have not undertaken to nominate a network of old growth temperate rainforest as a World Heritage Site.

A network of temperate rainforests, including Clayoquot Sound, would fulfill the criteria for nomination as a world heritage site.

95. A network of old growth temperate rainforests , including Clayoquot Sound, would fulfill the following criteria for inclusion in the World Heritage list:

(ii) be outstanding examples representing significant ongoing geological processes... biological evolution and man [human] interaction with his [its] natural environment; as distinct from the periods of the Earth's development, this focuses upon ongoing processes in the development of communities of plants and animals, land-forms and marine areas and fresh water bodies;

(iii) contain superlative natural phenomena formations or features for ... outstanding examples of the most important ecosystems, areas of exceptional natural beauty or exceptional combinations of natural and cultural elements;

(iv) containing the most important and significant natural habitats where threatened species of animals or plants of outstanding universal value from the point of view of science or conservation still survive

96. The IUCN (the World Conservation Union) the organization that has been given the responsibility under the UN Convention for the Protection of Cultural and Natural Heritage, passed a resolution at the January 1994 Annual General Meeting. This resolution called upon B.C. to preserve and nominate a network of temperate coastal rainforests, taking into consideration the proposals by the Western Canada Wilderness Committee (whose proposal included Clayoquot Sound).

97. A resolution on North American Coastal Temperate Forests "19.72REV2 North American Coastal Temperate Forests") was passed by the IUCN General Assembly meeting at Buenos Aires, Tuesday, January 25, 1994. The IUCN is an international organization of State, professional and non-governmental representation from over 125 countries. In order to pass, the resolution has to pass the two houses: the State house, composed of State representation from 125 countries and the NGO house with representation from the same countries. This resolution was passed with only one country abstaining - Canada.

This resolution recognized the uniqueness of the area:

UNDERSTANDING that many endemic and unusual plants and animals occur only in these forests; and that in biomass productivity, the old growth forests (ancient forests) of this biome are unequaled anywhere:

This resolution also acknowledged that on Vancouver Island forest practices have been the cause of the disappearance of these forests:

MINDFUL of the fact that such ancient forests on Vancouver Island and on the mid-coast of British Columbia are disappearing at a rapid rate as a result of practices that have, to date, not been ecologically sustainable;

This Resolution also called upon the governments of Canada and B.C. to consult with groups like the Western Canada Wilderness Committee (WCWC) about networks of protected areas. The network proposed by WCWC does include Clayoquot Sound

UNDERSTANDING that the Raincoast Conservation Society, the Sierra Club, and the Western Canada Wilderness Committee have proposed a large network of protected areas, including conservation corridors, in areas of such ancient forests on Vancouver Island and the mid-coast of British Columbia;

IUCN

2. CALLS UPON the Governments of Canada and British Columbia to substantially expand the amount of land in networks of protected areas with conservation corridors, on Vancouver Island and the mid-coast of British Columbia, taking into consideration the recommendations of environmental groups active in the regions such as the Raincoast Conservation Society, the Sierra Club and the Western Canada Wilderness Committee;

EXHIBIT: J 19.72 REV2 North American Coastal Temperate Forests

98. In the Appeal, it will be pointed out that the Western Canada Wilderness Committee proposal for a network does include Clayoquot Sound.

EXHIBIT: K Information to be submitted by the Western Canada Wilderness Committee. Copy of vision of Vancouver Island.

99. This appeal will also refer, as was done in the original September 15 submission to Mr. Justice Drake, to the Common Law Doctrine of Legitimate Expectations. If this doctrine were applied it could be argued that citizens of Canada have a legitimate expectation that Canada will fulfill its international legal obligations.

100. Citizens of B.C. have the right to expect that B.C., as part of Canada, will fulfill international obligations undertaken by Canada after consultation with B.C.:

In Re: Canada Assistance plan (Canada) 1991 (2SCR at 525), the B.C. government recognized the importance of using the Doctrine of Legitimate Expectation in a dispute with the Federal Government. Even though at the Supreme Court of Canada, the B.C. argument was dismissed, the case supports the contention that the Government of British Columbia, including the Attorney General's office endorsed the doctrine.

Canada has continually conveyed its professed concern for the environment in a way that should entitled Canadians to expect actions that reflect this concern. For example, in the preface of Canada's National Report, which was submitted to the Earth Summit in Rio, the Canadian Government gave the impression that Canadians were "stewards" observing their "environmental responsibility":

as stewards of a vast and beautiful land and as a people intimately connected to the environment, Canadians are aware of their environmental responsibilities. (Canada's National Report, Preface)

And further in the section on the "quality of life", the Canadian government stated:

As a small population with a large land mass, Canadians have access to relatively unspoiled wilderness areas rich in wildlife ... Canada has an international reputation as a beautiful, safe and mostly unspoiled country. (Canada's National Report, p.49)

If the Government of Canada CONTINUEs to convey the impression to the global community, through official Internationally circulated documents, that Canadians are concerned about being "stewards" of a "relatively unspoiled wilderness", then the citizens of Canada should legitimately expect that Canada will fulfill this obligation.

There is a maxim of equity which States that "Equity imputes an intention to fulfill an obligation."

This maxim was reaffirmed by the former Ombudsman of British Columbia, Steven Owen: "To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, 1991)

101 Citizens of Canada can justifiably expect that Canada will adhere to international principles that are part of international agreements signed by Canada, and citizens of Canada can justifiably expect that the courts of Canada will abide by international commitments undertaken by Canada.

102. The Prime Minister, Brian Mulroney, in his address to the General Assembly at the Earth Summit in Rio de Janeiro, 12, June, 1992, indicated the following commitment to the international community:

Our generation has seen our planet from space. We know its beauty and we understand our fragility. We know that nature is part of us as we are a part of nature.

Canada's national soul breathes its life from or forests and plains and mountains and lakes. Our native peoples depend on the environment for their spiritual sustenance and material well-being. Canadians are the stewards of 10 per cent of the world's forests. ...

For Canada, sustainable development is not a slogan; it is a prerequisite of our prosperity and a safeguard of our identity. It is also the standard of our responsibility. ...

We are the leaders. We must assume our responsibilities to our own peoples, to each other and to history. We are here to commit our governments to action. The prevention of global climate change and the preservation of the world's animal and plant species is on the top of our agenda.

Countries have a right to manage their forest resources, and humanity has a right to expect that those management decisions will be ecologically wise. Canada wants clear guidelines, on which we all can agree, and a binding international convention which codifies our rights as well as our responsibilities.

... the agreements on climate change and biodiversity require urgent and constructive follow-up...

As political leaders, our job is to force the pace and stretch out the limits of international cooperation. The nations gathered here today have the human genius to create a world free from deprivation and secure from degradation. What remains is for governments to provide the leadership the world so desperately needs.

Let us find that will and marshal it to the task at hand on behalf of the five billion people we represent.

Our children, the Rio generation, will be our judges and our beneficiaries.

103. In the press release issued at the time of ratifying the Biodiversity Convention in December, 1992, Prime Minister Brian Mulroney conveyed Canada's recognition of the importance of the Convention:

The Convention which emerged from last June's Earth Summit in Brazil, exemplify a global commitment to the principles ... as embodied in Agenda 21 and agreed to at the Earth Summit.

the Convention on Biological Diversity provides a framework for conserving the planet's animal and plant life and maintaining their habitats.

104. Not only has the previous Conservative government conveyed to the global community its commitment to "provide the leadership the world so desperately needs" but also the current Liberal Government conveyed the impression to the citizens of Canada that it would demonstrate leadership by ensuring that international obligations under the UNCED Conventions would be adhered to in the case of Clayoquot.

[The Liberal Party, in its pre-election promises, affirmed that it would preserve Clayoquot Sound by making it part of Pacific Rim national Park.]

105. The Appeal will not only address the obligations under legally binding documents but also those under globally adopted documents. The fulfillment of these obligations also draws upon the Common law Doctrine of Legitimate Expectations.

Not only was there evidence of Canada's and B.C.'s agreement at the UN Conference on the Environment and Development (UNCED) to the legally binding documents but also to the globally adopted document such as Agenda 21.

106. In the appeal, evidence will be supplied that the representatives from the B.C. Government, the Assistant Deputy Minister of Forests, Wes Cheston, and from the Commission on Resources and Environment, Commissioner Steven Owen indicated B.C.'s commitment to fulfill the obligations under all the UNCED documents, the legally binding as well as the globally adopted. This evidence was referred to in a report on an inquiry requested by the appellant into how B.C. was going to be complying with UNCED obligations. Scotty Gardiner, the Senior Investigator in Resource Issues in the Ombudsman's office, stated that he would not release the information, that the information cannot be requested through the Freedom of Information Act, and that the ombudsman's office and officers are not "compelled" to appear in court to testify.

107. In the Ombudsman's Report from Senior Investigator of Resource Issues, (Russow/Gage Complaint and Inquiry, File No. 91 06247) April 1993, to a request for an inquiry into how the B.C. Government was going to fulfill its obligations under UNCED, the Senior investigator from the Ombudsman's office, in his report on the inquiry, responded indicating that he had received confirmation of the government's commitment to comply with International agreements from UNCED:.

Compliance with International Agreements.

Direct personal discussions were held with Mr. Cheston, Assistant Deputy Minister of Operations Division, Ministry of Forests, and Mr. Owen, Commissioner on Resources and Environment. Both Mr. Cheston's and Mr. Owen's responsibilities reflect the government's priority for those issues of concern to you...

From these meetings, as well as from additional discussions with senior staff from the Ministry of Forests and the Ministry of Environment, Lands and Parks, we have determined that BC intends to comply with the agreements signed at the UNCED in June 1992.

He does not specify that the government will comply with only the legally binding Conventions; it would thus appear from his statement, that the government will be complying with other globally adopted documents such as Agenda 21. Through this statement, the Provincial Government has demonstrated its intention to adhere to principles from Agenda 21, the Rio Declaration and the Biodiversity Convention.

When asked whether a copy of these expressed commitments could be made available for the Leave to Appeal hearing, the Senior Investigator responded that he would not release the information. A request to proceed, through the Freedom of Information Act, was denied and the senior investigator indicated that only the documents submitted to the office by the complainant are accessible to the complainant and that none of the other documents could be released. The Ombudsman's office is beyond the Freedom of information Act. It is thus difficult to confirm part of the commitment because Cheston was recently released from his position. Steven Owen has been contacted. His response will be included in the Appeal.

108. Agenda 21 is a comprehensive plan of action which was adopted by the members of the United Nations participating in UNCED. There are numerous principles that form an intrinsic part of this document.

There is, throughout the document, a consistent recognition of the urgency of the global situation.

Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy, and the continuing deterioration of the ecosystems on which we depend for our well-being. ... (1.1 Preamble, Agenda 21)

109. An essential principle from the UNCED documents is the requirement to carry out environmental audits, or full environmental accounting; and to take into account the costs of ecological consequences.

A principle that was affirmed at UNCED and agreed to by Canada, was the need to carry out a full life cycle analysis of activities that could have significantly adverse effects. This principle, if complied with, in the forest industry would entail an examination of the environmental impacts of each stage of current forest practices — impact of the disruption and sudden elimination of a significant portion of an ecosystem through clear cutting; impact of broadcast burns; impact of treatment by pesticides; impact of off-site planting; impact of replacing a forest with a tree farm; impact of planting monocultures; impact of denying species succession; impact of creating increased susceptibility to forest fires; impact of loss of ecologically sound forest associated employment etc. At UNCED, there was also a call for "environmental audits", and "full environmental accounting and "taking into account ecological consequences" of aspects related to life cycles of ...resources", and "for taking into account the costs of any ecological consequences".

Ensure that relevant decisions are preceded by environmental impact assessments and also take into account the costs of any ecological consequences (7.42)

A full environmental audit of current forest practices has not been undertaken in B.C. The Auditor General has not been requested by government to carry out a full scale audit of the true costs of the current logging practices, and to compare these costs to those incurred by alternative forestry practices such as Eco-forestry. When the Assistant Auditor General was asked by the Appellant if the Office was going to undertake such an inquiry, which undeniably

would be within its mandate, he responded that it would be an almost impossible task and not economically feasible (Personal Communication, 1993).

110. The requirement to take into account the costs of any ecological consequences is a particularly relevant consideration in assessing "irreparable harm" [see other grounds section B, and the MacMillan Bloedel v Mullin case]

Ensure that relevant decisions are preceded by environmental impact assessments and also take into account the costs of any ecological consequences (7.42)

111. Another principle that came out of UNCED and was agreed to by Canada is the positive-duty-to-protect-indigenous-lands principle. This principle reads as follows:

recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate (Agenda 21, 16.3. ii)

EXHIBIT: K Affidavit Saul Arbess (to be submitted for the Appeal)

112. Similarly at the Provincial level if the provincial government imputes that it intends to fulfill an obligation, the citizens should be justified in requiring the government to have the obligation fulfilled.

In a letter dated March, 1992, from both the Provincial Ministry of Forests and the Provincial Ministry of Environment (sent to members of the public presumably from a government mail-out list), the following intention is imputed:

As we, in BC Parks and BC Forest Service begin to work on implementing our components of B.C.'s protected areas under the aegis of the Commission on Resources and Environment, we will be mindful of this Declaration [Parks Protected Areas and the Human Future: the Caracas Declaration] and its implications. Our objective will be to have a system of protected areas which we are proud to present to the world.

Through this intention to be "mindful of this Declaration" the Provincial Government of B.C. through its Ministries of Environment and Forests has recognized the Caracas Declaration and the UN Resolution 37/7 (1982) World Charter for Nature.

EXHIBIT: L Letter from Ministries making commitments to the Caracas Declaration.

B.C. has failed to fulfill a commitment made through B.C.'s endorsement of the Caracas Convention (Parks Protected Areas and the Human Future: the Caracas Declaration, February 1992) and in its participation in the Caracas Congress to "move from logging old growth to second growth" (Report on implementation requirements of the Caracas Declaration, Mar. 1992)

113. It will be contended in the Appeal that not only has B.C. not complied with commitments made to the international conference on Parks at Caracas, but also B.C., through its actions in Clayoquot Sound, has failed to adhere to recommendations by the Caracas Congress on means to fulfill the Caracas Declaration

114. Obligations under the "Parks, Protected Areas and the Human Future: The Caracas Declaration" (February, 1992), and under recommendations by the Caracas Congress (CHECK Ref.).

The Caracas Declaration was adopted by over fifteen hundred leaders and participants at the Fourth World Congress on national parks and Protected Areas. (Feb. 1992).

3.2. Conserving Biodiversity

The congress urgently requested that all countries urgently undertake surveys to identify additional sites of critical importance for conservation of biological diversity, and wherever possible, accord total protection to them. Harvesting should be relocated from primary to secondary forests and tree plantations in previously deforested areas; or - where this is not possible sustainable forest harvesting systems which favour natural species diversity should be developed and introduced. p 8

3.3. Conservation on a regional scale

Protected areas have sometimes been seen as islands of nature and tranquility, surrounded by incompatible land uses. But the congress made it clear that such an "island mentality" is fatal in the long run. The congress recognized that it is unlikely that protected areas will be able to conserve biodiversity if they are surrounded by degraded habitats that limit gene-flow alter nutrient and water cycles and produce regional and global climate change that may lead to the final disappearance of these "island parks". Protected areas, therefore need to be part of broader regional approaches to land management. The term bioregion was used to describe extensive areas of land and water which include protected areas and surrounding lands, preferably including complete watersheds, where all agencies and interested parties have agreed to collaborative management.

recommendation 3

Global efforts to conserve biological diversity.

"the loss of biodiversity has reached crisis proportion and if present trends CONTINUE up to 25 % of the world's species may be sentenced to extinction or suffer severe genetic depletion in the next several decades, accompanied by equally significant and alarming degradation of habitats and ecosystems. This loss of biological diversity is impoverishing the world of its genetic resources, its species, habitats and ecosystems.

All species deserve respect, regardless of their usefulness to humanity. This Principle was endorsed by the UN Assembly when it adopted the World Charter for nature in 1982. The loss of the living richness of the planet is dangerous, because of the environmental systems of the world support all life, and we do not know which are the key components in maintaining their essential functions.

the IVth World Congress on national Parks and Protected Areas recommends that:

- a) governments make the protection of biological diversity, including species and habitat richness, representativeness and scarcity a fundamental principle for the identification, establishment, management and public enjoyment of national parks and other protected areas;
- b) all countries urgently undertake surveys to identify additional sites of critical importance for conservation of biological diversity and wherever possible, accord total protection to them. Harvesting should be relocated from primary to secondary forests and tree plantations in previously deforested areas; or — where this is not possible — sustainable forest harvesting systems which favour natural species diversity should be developed and introduced: p. 30

Recommendation 4:

entitled legal regimes for protected areas.

Protected areas require a mutually reinforcing system of international and national environmental law for their establishment, maintenance and management. International treaties establish a harmonized set of obligations with regard to areas within national jurisdictions and activities having effect beyond national jurisdictional boundaries. These obligations

must be reflected in national legislation; other wise, the treaties cannot be implemented. In turn, innovative national legislation provides a basis and impetus for further international law. The dynamic interaction between the two levels is thus conducive to further progress. p. 31

The Caracas Congress which is responsible for interpreting the Declaration made the following recommendations that have been ignored by B.C.:

115. B.C. has failed to move from harvesting primary to secondary forests as recommended by the Caracas Congress

The congress urgently requested that all countries urgently undertake surveys to identify additional sites of critical importance for conservation of biological diversity, and wherever possible, accord total protection to them. Harvesting should be relocated from primary to secondary forests p 8

116. B.C. has failed to ensure sustainable forest harvesting systems which favour natural species diversity should be developed and introduced: p. 30

117. B.C. has failed to prevent incompatible land use; as recommended by the Caracas Congress

Protected areas have sometimes been seen as islands of nature and tranquility, surrounded by incompatible land uses. But the congress made it clear that such an "island mentality" is fatal in the long run. The congress recognized that it is unlikely that protected areas will be able to conserve biodiversity if they are surrounded by degraded habitats that limit gene-flow alter nutrient and water cycles and produce regional and global climate change that may lead to the final disappearance of these "island parks".

118. The Congress also addressed the urgency and the need for global efforts to conserve biological diversity.

"the loss of biodiversity has reached crisis proportion and if present trends CONTINUE up to 25 % of the world's species may be sentenced to extinction or suffer sever genetic depletion in the next several decades, accompanied by equally significant and alarming

degradation of habitats and ecosystems. This loss of biological diversity is impoverishing the world of its genetic resources, its species, habitats and ecosystems.

All species deserve respect, regardless of their usefulness to humanity. This Principle was endorsed by the UN Assembly when it adopted the UN Resolution 37/7 (1982) World Charter of Nature. The loss of the living richness of the planet is dangerous because of the environmental systems of the world support all life, and we do not know which are the key components in maintaining their essential functions.

119. It will be shown that it is not only the levels of government that have failed to live up to their stated intentions to fulfill obligations but resource ministries, institutions, organizations and industry have also "imputed an intention to fulfill an obligation". Through the Forest Accord, a document which has been signed by Canadian Pulp and Paper Industry, the Council of Forest Industry, Wildlife habitat, Canadian Nature Federation, National Aboriginal Forestry Association, Minister of Forestry, Lands and Wildlife, Alberta, Minister of Natural resources Manitoba, Minister of Forests, B.C. Minister of Parks and Renewable Resources Saskatchewan, Minister of Natural Resources and Energy, New Brunswick, Minister of Natural Resources, Minister of Forestry Canada, Minister of Natural resources Ontario, the following concern and intention was expressed:

- Our forest heritage is part of our past, our present and our future identity as a nation. It is important to maintain a rich tapestry of forests across the Canadian landscape that sustains a diversity of wildlife:
- The spiritual qualities and the inherent beauty of our forests are essential to our physical and our mental well-being
- We will fulfill our global responsibilities in the care and use of forests, maintaining their importance of the environment and the well-being of all living things.]

March, 2, 1992

120. It will be shown that international customary law places a positive duty to act :

Considering that,, in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value, by the granting of collective assistance which, although not taking the place of action by the State concerned, will serve as an effective complement thereto," (26.1 Convention for the Protection ...of Natural Heritage, 1972).

121. In not agreeing to preserve Clayoquot Sound and in permitting ecologically unsound practices in Clayoquot, Canada and B.C. have failed to comply with legally binding conventions such as the Biodiversity Convention, the Climate Change Convention and the UN Convention on the Protection of Cultural and Natural heritage, and also have failed to comply with obligations undertaken through globally adopted commitments, such as the Caracas Declaration and Agenda 21. Citizens of Canada should be able to justifiably expect that Canada will adhere to international principles that are part of international agreements signed by Canada. The citizens of Canada also should be able to justifiably expect that the courts of Canada will abide by international commitments made by Canada.

B. This case also addresses the contempt for statutory law that has been demonstrated by industry, and in particular MacMillan Bloedel, in its non-compliance with statutory law, and by governments in their failure to enforce statutory law, particularly in relation to tree farm license (in the manner of a profit a prendre property right claimed by MacMillan Bloedel)

122. Evidence will be submitted, that B.C. has not only used internal law — the granting of injunctions to justify non compliance to International obligations but has failed to invoke its own internal law to prevent violations of international obligations.

B.C. has failed to even invoke its own provincial legislation to ensure that it is not in violation with international obligations. The B.C. Ministry of forests has not invoked section 60 of the Forest Act; a section which has given the government discretionary powers to suspend Tree Farm Licenses indefinitely if there is evidence of damage to the natural environment through non-compliance with the Act. There is evidence that the Federal Government and Provincial Government have failed to enforce their own legislation. Although, there have been some convictions against MacMillan Bloedel, the legislation has not been sufficiently enforced, and as a result of non-enforcement international obligations have not been fulfilled.

This section has been enforced by the Ministry of Forests not in a punitive way but in a mitigative way, and consequently, no licenses have been suspended for forest practices that have caused serious damage to the natural environment or canceled under section 61 (cancellation of licenses). If the Ministry of Forests had voluntarily enforced its own legislation, or if there had been a writ of mandamus from the courts to require the Ministry to enforce the Forest Act, then the "serious damage to the natural environment" which has occurred, would have been minimized. The demonstrations in the forests in the little remaining old growth forests could be attributed in part to the years of the Forest Industries non compliance to the Forest Act and to the years of reluctance on the part of government and the courts to enforce the Forest Act.

123. In the Appeal, affidavit evidence will be submitted, that not only has the Ministry of Forests been not enforcing its own legislation but that it has also contributed to the violation of the silviculture sections of the Forest Act.

There has been evidence for years that the forest industry has failed to fulfill its obligations related to silviculture and that the government of B.C. has failed to enforce sections in the Forest Act, which require adequate silviculture.

Evidence will also be submitted that the Inventory Branch of the Ministry of Forests became aware of a serious discrepancy between the original estimation of inventory in a block currently being logged by MacMillan Bloedel. It was found through a research study, Omule A.Y., and K.D. Tudor. Report, "Ratio Sampling Analysis" by A.Y. Statistical Decision Support, Forest Inventory Branch, B.C. Ministry of Forests. (March 11), 1993) by inventory specialists, that the inventory in Block 6 in the TFL 39 in the Queen Charlottes had been overestimated by over 40 percent. Rather than releasing this document to the public or calling for suspension of licenses under section 59, the Inventory Branch of the Ministry of Forests asked McMillan Bloedel to check the findings with their own data. The Appellant and David White became aware of the document and obtained the document through the Freedom of Information Act. It was only at that time, that the Ministry of Forests released the information.

EXHIBIT: M. Affidavit from David White, former president of Greenpeaks, a silviculture contracting firm, and researcher responsible for uncovering the Inventory document.

124. In the Appeal, affidavit evidence will be submitted that MacMillan Bloedel was aware of alternative economically viable methods of selection logging which would have enabled Mac Milan Bloedel to have fulfilled its obligations under the Forest Act and thus its obligations under the TFL which they claim bestows a property right.

EXHIBIT: N Affidavit from Merv Wilkinson, Forester and internationally recognized specialists in selection logging

125. MacMillan Bloedel has not fulfilled its responsibility to protect fisheries, and in fact MacMillan Bloedel has been convicted under section 33 of the Federal fisheries Act, for depositing deleterious substances which caused destruction to fish Habitat.

EXHIBIT: O Convictions under the Fisheries Act

Request through Freedom of Information Act for Charges.

126. Evidence was compiled by John Stephen from the Department of Fisheries on non-compliance with Ministry of Forest's TFL Engineering Specifications.

In this document, Stephen examined sections in the Engineering Specifications and submitted photographs demonstrating Non-compliance of the Forest Company with the Engineering Specifications. He describes the photographs as being random samples illustrating the ineffectiveness to date of environmental protection regulations attached to the TFL 46 document and its cutting Permits. These photographs are specific to the Loop Creek site in TFL 46, and referred to non-compliance of a company that is not MacMillan Bloedel. However, this type of evidence has been commonplace throughout the forest industry in British Columbia.

EXHIBIT: P John Stephen: M.O.F. 's TFL Engineering Specifications (1991)

127. Recently, there has been further evidence of MacMillan Bloedel's non fulfillment of responsibility under the Forest Act. The following is a summary of the findings of the Tripp report which was entitled *The Application and Effectiveness of the Coastal Fisheries forestry guidelines in selected cut blocks on Vancouver Island*:

(D. Tripp, April, 1992)

Abstract

The Coastal Fisheries Forestry Guidelines, alone or in combination with site specific prescriptions, can effectively reduce the number and severity of the impacts experienced on streams in recently logged areas. Compliance with the guidelines and many prescription, however, was generally poor, regardless of location or the type of forest license involved. These were the findings of a recent survey of 21 logged cut blocks on Vancouver Island.

There was, on average, one major or moderate impact on one stream for every cut block inspected. Half of these impacts involved a Class 1 or 11 stream. The other half involved Class III or IV streams that were likely to have a negative effect in the near future on more valuable habitat downstream. Since most of the impacts were the result of debris torrents, large build-ups of sediment and debris were the main types of major impacts recorded in all stream classes. ..

Approximately 60% of the major problems observed were attributed to excess debris loads in steep gully systems, and a failure to appreciate the transport capabilities of such streams during heavy rains. Other contributing factors were failures to fall and yard away from the streams and failures to clean out the excess debris where cross stream yarding was permitted. Poor drainage controls on roads, and spur roads in particular, were

responsible for approximately another 25% of the most significant problems, while a combination of land slides and a poorly located gravel pit accounted for the rest of the problems. Some questionable harvest practices in Streamside Management Zones, accounted for six minor or moderate problems but the long term implication of the problems was beyond the scope of the present survey.

128. In the appeal evidence of violations of the Forest Act, collected by the Valhalla Wilderness Society, will be submitted.

EXHIBIT: Documentation of over 150 violations of statutory law prepared by the Valhalla Wilderness Society for a previous court case (to be submitted for the Appeal)

129 There has also been a failure on the part of the Ministry of forests to use its discretionary powers to suspend licenses under the Forest Act to address "serious damage to the natural environment"

The government, in its response to Steven Owen June 2, 1993, indicated that "the government intends to firmly enforce standards." The government then indicated that, "imminent environmental damage could result in the immediate suspension of operations under Section 60 of the Forest Act" (p.15).

Section 60 of the Forest Act, reads as follow:

Suspension of rights

the regional manager, a district manager or a forest officer authorized by either of them may, by written order and without notice, suspend in whole or part the rights under an agreement where he believes on reasonable and probable grounds that its holder has failed to perform an obligation to be performed by him under the agreement or has failed to comply with this Act or the regulations, and that the failure of performance or compliance is causing or may imminently cause serious damage to the natural environment. 1978.

Since 1978 this section has been in place, and since 1978 "serious damage to the natural environment has occurred. (see EXHIBIT, as an example of this damage).

This section has neither been enforced by the Ministry of Forests in a punitive way, nor been requested to be enforced by the Ministry of the Environment. When the Appellant contacted an enforcement officer who had been with the Ministry of Environment for 20 years, and asked him "how often the Ministry of Environment had called upon the Forest Ministry to invoke sections 59,60, and 61 of the Forest Act, his response was that he was unaware of these sections.

Sections 59 and 60 have been enforced by the Ministry of Forests not in a punitive way but in a mitigative way, and consequently no licenses were suspended for forest practices that had caused serious damage to the natural environment, and canceled under section 61 (cancellation of licenses). If the Ministry of Forests had voluntarily enforced its own legislation or if there had been a writ of mandamus from the courts to require the Ministry to enforce the Forest Act then the "serious damage to the natural environment" which has occurred would have been minimized. The demonstrations in the little remaining old growth forests on Vancouver Island could be attributed in part to the years of the Forest Industries' non compliance to the Forest Act and to the years of reluctance on the part of government and the courts to enforce the Forest Act.

130. The Government claims that the Forest Practice Code will have a strong enforcement component. On the one hand it is reassuring that the government is finally willing to enforce its legislation but on the other hand, it is not reassuring that for years environmental harm has occurred because past governments, as well as the current government, have not been willing to enforce sections 59, 60 and 61 of the Forest Act. For years, environmental groups have brought to the attention of the government that the Forest Act was not being complied with and as a result of non-compliance environmental harm has occurred. For years there has been contempt of the law by both industry and government.

131. In the Appeal it will be noted that a strong enforcement policy — enforcing "kinder and gentler" destructive forest practices such as clear-cut logging will not suffice to enable governments to fulfill international obligations under the Biodiversity Convention.

132. It would appear that the government, in making its decision to log Clayoquot Sound, took into consideration the possible cost of compensation to MacMillan Bloedel that would have resulted from setting aside Clayoquot Sound.

Often intact ecosystems that have been deserving of preservation have been irreversibly destroyed because it was deemed necessary, if these ecosystems were to be withdrawn from an existing tree farm license, for governments to pay compensation. In the past, compensation has been assessed purely on an economic basis without taking into consideration the true environmental costs. In order to assess the environmental costs of the destruction of significant ecosystems, one may need to examine if damage to the natural environment within a significant ecosystem has occurred. Section 60 of the Forest Act does permit the suspension of licenses if environmental damage to the natural environment has occurred as a result of non-compliance with the Forest Act. The potential environmental costs of destroying significant ecosystems as a result of the Ministry of Forests not suspending tree farm licenses when there was evidence of destruction to the natural environment is necessary to include in the assessment of compensation. (Complaint submitted to the Ombudsman's office for investigation by appellant and Andrew Gage, 1991-1993)

133. Not only has the government been notified about non-enforcement of Section 60 of the Forest Act, but also the ombudsman's office has been notified about this non-enforcement (even at the time that Steven Owen was the Ombudsman). To investigate the lack of enforcement of section 60 of the forests act appears to be certainly within the mandate of Ombudsman's office.

It would appear then that the forest industry has, when causing environmental harm been outside the law, because neither the Government, the Ministry of Forest, the Ministry of Environment or the Ombudsman's office, has demanded that section 60 be enforced and licenses be suspended, and that licenses be canceled under section 61. If licenses had been suspended under section 60 and canceled under section 61 because of the harm caused to the natural environment (section 60), the environmental harm such as the harm reported in the TRIPP report would not have occurred.

EXHIBIT: Q Affidavit re: data on MacMillan Bloedel's current forest practices in Clayoquot Sound submitted by representative from "Forest Watch".

134. In section 28 of the Forest Act, there is an indication that one condition of the granting of the license is that logging has to be "sustained". Environmental researcher, Jack Etkin expressed the following concern about non compliance with the responsibilities under the Act.

MacMillan Bloedel States in their management and working plans that in TFL 44 they will be able to cut about 2.4. million cubic metres of wood a year for the next 200 years. Because they say that 2.4. million is "sustained". ...we asked the company how they knew that they could cut 2.4. million cubic metres of wood sustainably for the next 200 years....they assured us that they have proof that their tree farms will grow sustainably.

(press release, 1993)

In a follow-up letter received by Etkin from MacMillan Bloedel , the company stated

"In conclusion, there is no hard, scientific proof that third and fourth generation forests are viable [not viable is defined as being able to survive and grow]. On the other hand, what evidence there is overwhelmingly positive (July 6, 1990).

Etkin (1993) in the Bridge newspaper indicated the following:

"The most frequently cited piece of evidence was FORCYTE, a computer simulation model out of UBC. According to the Director General of Forestry Canada, models like FORCYTE provide "Perhaps the strongest scientific evidence that B.C. forests can be sustainably managed..."

But here is what the developers of FORCYTE have to say about their model. "The model predictions should be viewed with caution...The model has not been validated against any long term experimental data. Hence the precision and accuracy of the results are unknown'

EXHIBIT: R Letter received by Jack Etkin from MacMillan Bloedel (1990)

This suggests that MacMillan Bloedel cannot claim to be fulfilling section 28 of the Forest Act and consequently, one of the conditions that would limit its "right to profit a prendre" has not been fulfilled.

135 Given that MacMillan Bloedel has been in violation over the years of many sections of the Forest Act, Waste Management Act and the Fisheries Act, MacMillan Bloedel has not fulfilled the conditions of the TFL under the Forest Act, and thus the contracting party has failed to perform its part of the contract. In this case, it would be inappropriate to recognize that MacMillan Bloedel has a property right in the nature of a "profit a 'Prendre". Surely the Court would recognize that a right cannot be claimed by one who has not fulfilled the responsibilities contingent upon that right.

C. The appeal will rely upon a realistic and objective evaluation of equity. In particular, the use of an equitable remedy such as an injunction to justify non-performance of provincial and federal statutory law and to justify non-performance of international legal obligations, and international customary law.

136. Evidence will be submitted that the injunction is an equitable remedy that has been misapplied in the Clayoquot case. Equity could never countenance the destruction of life rearing capacity and life forms in it trust on a massive scale with no genuine regard for future generations.

In the BC Litigation publication, Justice J.A. Norris described the nature of the injunctive remedy in British Columbia Law in the following way:

The remedy [of injunction] of course, is an equitable one. ' The exercise of the equitable jurisdiction is not to be restricted by the straitjacket of rigid rules but is to be based on broad principles of justice and convenience, equity regarding the substance and not merely the facade or the shadow. It moves with time and circumstances. (Justice J.A. Norris)

Although there is a beginning of the recognition of ecological rights in *McMillan Bloedel vs. Mullin* [1985, BCD Civ 1892-08] there does not yet appear to be a recognition in B.C. courts of the rights of the public to ecological preservation. In *McMillan Bloedel vs. Mullin* it was decided that

The claim by an Indian band for 'aboriginal " title to land cannot be 'rejected summarily' and certainly not at the early stages of litigation. Nor must the right to log crown land given by license to a logging Company be ignored. However, in light of the fact that unless the issue of title to the subject land is settled before logging occurs, if successful, the Indians will be deprived of valuable ecological rights and in further light of the fact that irreparable harm will not result to the logging company if timber harvest is delayed pending an expedited adjudication of issue of title, the principles applicable to the issue of interlocutory injunctions will militate that the status quo. be maintained.

Although the above decision does recognize the concept of ecological rights when there is a dispute over ownership of property, it does not go far enough to accommodate the current and emerging evidence of time and circumstances. The international law and treaties and the public, including scientists and all reasonable persons who seriously consider the impact of our actions on future generations, are now demanding preservation of unfragmented areas of biological complexity. In the UN Conference on Humans and the Environment 1972, the requirement to preserve our environmental heritage and the requirement to save a representative sample of natural ecosystems for future generations were being recognized:

The natural resources of the earth including the air, water, land, flora and fauna and especially representative samples of natural ecosystems must be safeguarded for the benefit of present and future generations (Principle 2)

Man has a special responsibility to safeguard and wisely manage the heritage of wild life and its habitat which are now gravely imperiled by a combination of adverse factors (Principle 4),

In issues of preservation of ecosystems and ecological rights, perhaps the courts should look to international researchers for guidance and to international documents for substance of moral suasion. Research from the international community and international documents could reflect a more accurate estimate of "the time and circumstance" in the domain of forestry issues than affidavits from forestry companies that seek to perpetuate what is perceived by a substantial sector of the international community as contributing to environmental degradation, soil depletion, loss of biodiversity, loss of genetic diversity and even loss of productivity in their own industry.

The issue that an equitable remedy— an injunction is being used to prosecute citizens of criminal contempt when the justification for granting of this equitable remedy is still being questioned by the courts, will be examined. Reference will be made to the fundamental principle that it appears to be ethically questionable to CONTINUE to convict people under an equitable remedy where the legitimacy of the remedy was still under question in the courts.

137. There is the recognition in the MacMillan Bloedel vs. Mullin case of what could be called the "impossibility avoidance" or "the avoidance of a disappearing object principle": This principle is enunciated as follows:

Seaton, who delivered the judgment in the *MacMillan v Mullin* case, at 151 stated

The proposal is to clear-cut the area. Almost nothing will be left. I cannot think of any native right that could be exercised on lands that have recently been logged. It follows that rights far short of outright ownership might well warrant retaining the area until after a trial.

Seaton affirmed at 151:

I am firmly of the view that the claim to Indian title cannot be rejected at this stage of litigation. The questions raised by the claim are not the type of questions that should be decided on an interlocutory application. A great amount of factual evidence will have to be heard and considered, opinion evidence of those knowledgeable in these matters, will have to be assembled and related to the factual evidence, there will have to be a meticulous study of the law.

Seaton , (at p. 157), stated:

Each of the decisions {[from cases such as *Amer. Cyanamid Co. v Ethicon Ltd.*, [1975] A.C. 396, to *Siebart Rustproofing Ltd. v. Ottawa Rustproofing Ont.* H.C. 8th February 1978 (unreported)}, represents an attempt on the part of the court to see that justice is done. Often it is an attempt to preserve property so that a claimant will not find at the end of a successful trial that the subject matter is gone, and always there is an attempt not to impede others unnecessarily.

Seaton at 157 cited Cotton L.J in *Preston v Luck* (1884) 27 Ch. D 497 (at 505) referred to an interlocutory injunction:

...The object of which is to keep things in status quo, so that if, at the hearing, the Plaintiffs obtain a judgment in their favour, the Defendants will have been prevented from dealing, in the meantime, with the property in such a way as to make that judgment ineffectual

Seaton at 157 further cited Spry in the Principles of Equitable Remedies, 2nd ed. (1980) after quoting the above, said at p. 423:

A need for protection of this kind most commonly arises where property as to which there is a dispute between the parties is threatened with damage, destruction or removal or where the value of other rights of the plaintiff may be diminished.

Seaton at 157 further referred to this principle as enunciated in *Preston v Luck* (1884) 27 Ch. D. 497 at 505, referred to an interlocutory injunction:

...the object of which is to keep things in status quo, so that at the hearing the plaintiffs obtain a judgment in their favour, the Defendants will have been prevented from dealing in the meantime with the property in such a way as to make that judgment ineffectual.

Spry in the Principles of Equitable Remedies, 2nd ed. (1980) after quoting the above, said at p. 423

A need for protection of this kind most commonly arises where property as to which there is a dispute between the parties is threatened with damage, destruction or removal or where the value of other rights of the plaintiff may be diminished.

Even MacDonald who dissented in part stated at 168:

"In order to prevent the alleged illegal activity pending trial, an interlocutory injunction is sought. That is so that the question of a permanent injunction after trial will not be rendered academic."

MacDonald stated at 169:

And the clear message from this court to judges hearing those applications will be that the existing situation should be present while the litigation CONTINUEs. "

138. This principle enunciated above is, to a certain extent, an embodiment of a principle of international customary law which is eloquently stated in the Vienna Convention on the Law of Treaties: Under Article 18, a state is obliged to "not defeat the object and purpose of a treaty prior to the entry into force".

139. In the September 15, 1993, before Mr. Justice Drake, application to rescind the injunction the court was asked to consider the requirement of international obligations related to both the legally binding Conventions from UNCED, signed in 1992, and the globally adopted agreements from UNCED 1992. It was argued that the granting of the injunction would be in violation of the above principle because proceeding with logging when the logging could and would defeat the purpose of any treaty protecting the "ecological rights" within the public trust.

140 The implications of the principle ("impossibility avoidance" or "the avoidance of a disappearing object principle") enunciated in the MacMillan Bloedel v Mullin case, as well as in Article 18 and 61 of the Vienna Convention on the Law of Treaties, should be considered in relation to the Public Trust Doctrine (Friends Patrai Doctrine). It would appear that if there is a question raised about the legitimacy of eliminating ecological rights within areas coming under the public trust, that full consideration should be given that prior to the discussion and resolution of the question, nothing in the interim should be permitted that would eliminate the ecological rights contained therein. The affirmation of ecological principles contained in the UNCED document; such as the principle of an environmental assessment of any activities that could contribute to a reduction or loss of biodiversity or the principle that would require environmental audits or taking into account ecological consequences or accounting would mean that when considering the irreparable harm and thus the balance of convenience, ecological rights in areas under the public trust doctrine (Friends Patrai Doctrine) should and would have to be taken into consideration.

141. The requirement to take into account the costs of any ecological consequences is a particularly relevant consideration in assessing "irreparable harm" in injunctions. In

Agenda 21, the globally agreed to UNCED Action Plan the affirmation of the need to ensure that the costs of any ecological consequences was taken into consideration:

Ensure that relevant decisions are preceded by environmental impact assessments and also take into account the costs of any ecological consequences (7.42 Agenda 21, UNCED. 1992)

142. In *MacMillan Bloedel vs. Mullin*, it was decided (at p. 146) that "Monetary damages would not be adequate compensation for the potential injury to Indian culture and social structure.

143. In the BC Litigation publication, Justice J.A. Norris described the nature of the injunctive remedy in British Columbia Law in the following way:

The remedy [of injunction] of course, is an equitable one. ' The exercise of the equitable jurisdiction is not to be restricted by the straitjacket of rigid rules but is to be based on broad principles of justice and convenience, equity regarding the substance and not merely the facade or the shadow. It moves with time and circumstances. (Justice J.A. Norris, B.C. Litigation, 1991)

144. As stated in *MacMillan Bloedel vs Mullin* by Seaton at 157 there is an affirmation of the essence of injunctive law (interlocutory injunctions) related to attempting on the part of the court to see that justice is done:

Each of the decisions represents an attempt on the part of the court to see that justice is done. Often it is an attempt to preserve property so that a claimant will not find at the end of a successful trial that the subject matter is gone, and always there is an attempt not to impede others unnecessarily.

145 A case is being researched and will be initiated to determine whether Canada, through the actions of B.C. has been in violation of the Biodiversity Convention since the signing of the Convention in June 1992. Until this case is heard, nothing should be done on crown lands which could diminish the value of the public trust rights.

146. The equitable principle of "he who comes to equity must come with clean hands" is a well established principle of equity.

This principle as stated above should have been applied and if a company like MacMillan Bloedel has been in violation of statutory law as well as international law it should not be able to benefit from the granting of an equitable remedy such as an injunction. There is also evidence that the injunction is an equitable remedy that has been misapplied in the Clayoquot case, and the injunction should be rescinded, and Mr. Justice Drake's decision related to the applicability of International agreements should be overturned.

There is also evidence that the injunction is an equitable remedy that has been misapplied in the Clayoquot case.

147. In addition, in the Clayoquot trials, the court has condoned not only violations of guarantees in the Canadian Charter of Rights and Freedoms but also, violations of guarantees in the International Covenant of Civil and Political Rights, such as the following:

In the determination of any criminal charge against him, everyone shall be entitled to the following minimum guarantees, in full equality:

To examine, or have examined, the witnesses against him and to obtain the attendance and examination of witnesses on his behalf under the same conditions as witnesses against him {Article 14 3 (e)}.

[NOTE THAT IN THE CLAYOQUOT TRIALS IN VICTORIA FEW WITNESSES HAVE BEEN PERMITTED TO APPEAR FOR THE DEFENCE]

EXHIBITS: S Affidavits. Ann and Merv Wilkinson

There appears to be little recourse for the Clayoquot Protectors than to eventually seek redress through the Optional Protocol International Covenant of Civil and Political Rights which provides the following remedy:

Subject to the provisions of article 1, individuals who claim that any of their rights enumerated in the Covenant have been violated and who have exhausted all available domestic remedies may submit a written communication to the committee for consideration. (Article 2)

19.72REV2 North American Coastal Temperate Forests

(retyped with January 25 Amendments from the floor)

RECOGNISING that temperate coniferous forests, and especially rain forests, constitute a very rare type of ecosystem in the world, originally covering less than one-fifth of one percent of the earth's land surface, and that one half of the earth's original forest of this type occurs along the pacific Coast of North America from northwestern California to southeastern Alaska;

UNDERSTANDING that many endemic and unusual plants and animals occur only in these forests; and that in biomass productivity, the old growth forests (ancient forests) of this biome are unequaled anywhere;

AWARE that more than one half of the Earth's original coastal coniferous forests (ancient forests) have been logged, including more than 40 % of the ancient forests of this type on North America, and that few large unfragmented examples of this type of forest, other than in protected areas, exist outside of British Columbia and Alaska;

MINDFUL of the fact that such ancient forests on Vancouver Island and on the mid-coast of British Columbia are disappearing at a rapid rate as a result of practices that have, to date, not been ecologically sustainable;

ALSO MINDFUL that past management practices have been controversial, while the U.S. government has enacted legislation to ensure sustainable management of all forests, questions CONTINUE to arise;

UNDERSTANDING that the Raincoast Conservation Society, the Sierra Club, and the Western Canada Wilderness Committee have proposed a large network of protected areas, including conservation corridors, in areas of such ancient forests on Vancouver Island and the mid-coast of British Columbia;

AWARE of the fact that none of the protected areas that Canada maintains in forest areas along the Pacific Coast have been designated as World Heritage sites under the provisions of the World Heritage Convention[s] and that these ancient forests may be of outstanding universal value;

The General Assembly of IUCN — the World Conservation Union, at its 19th Session in Buenos Aires, Argentina, 17-26 January 1994:

1. URGES the Government of Canada and the United States to properly manage the temperate coastal coniferous forests of the Pacific Coast of North America by establishing appropriate protected areas and by adopting ecologically oriented systems of forest management which can be permanently sustained and which protect biodiversity;
2. CALLS UPON the governments of Canada and British Columbia to substantially expand the amount of land in networks of protected areas, with conservation corridors, on Vancouver Island and the mid-coast of British Columbia, taking into consideration the recommendations of environmental groups active in the regions such as the Raincoast Conservation Society, the Sierra Club and the Western Canada Wilderness Committee;
3. URGES the Government of Canada to consider nominating sites or combinations of sites (such as networks), in these forests as World Heritage sites under the World Heritage Convention[s];
4. RECOMMENDS that special efforts be made by these parties and their citizens to restore degraded parts of these forests and to secure the overall integrity of the biome by linking now separate forest stands

Resolution proposed by Michael McCloskey, Sierra Club U.S.A, in collaboration with Joan Russow (B.C. Canada) member of the IUCN Commission on Education and Communication

27. The dissenting judges had attempted to apply the 1937 Labour Convention case see **EXHIBIT**

27. The 1937 case was distinguished by Brennan J. at 482

Lord Atkin in delivering the reasons for judgment....distinguished between the formation and the performance of treaty obligations. The making of a treaty is a function of the executive but legislation to implement a treaty is a matter for the legislature. He said in reference to the Canadian constitution (at 348): The obligations imposed by treaty may have to be performed, if at all, by several legislatures and the executive have the task of obtaining the legislative assent not of the one parliament to whom they may be responsible, but possibly of several Parliaments to whom they stand in no direct relation. The question is not how is the obligation formed, that is the function of the executive but how is the obligation to be performed, and that depends upon the authority of the competent legislature or legislatures. "

Brennan at 485

When the subject matter of a law is the subject of a treaty obligation and is 'indisputably international in character', para (xxix) is available to support the law, the present questions whether a law which creates or affects rights, duties powers or privileges regulating a field of activity which is the subject of a treaty obligation is a law with respect to an external affair or whether some additional quality "indisputably international", must be found in the subject of the treaty obligations. ...in Burgess..." at 30: "The external affairs power authorizes the parliament to make a law for the purpose of carrying out or giving effect to a treaty, at least if the treaty is in reference to some matter indisputably international in character." and Mason J said (at 470/91): "There is abundant authority for the proposition that the subject matter extends to Australia's relationships with other countries and in particular to carrying into effect treaties and conventions entered into with other countries and in particular to carrying into effect treaties and conventions entered into with other countries provided at any rate that they are truly international in character.

Brennan at 487

Where a particular aspect of the internal legal order of a nation is made the subject of a treaty obligation, there is a powerful indication that subject does affect the parties to the treaty and their relations one with another. They

select that aspect as an element of their relationship, the obligee nations expecting and being entitled in international law to action by the obligor nation in performance of the treaty. And therefore to subject an aspect of the internal legal order to treaty obligations stamps the subject of the obligation with the character of an external affair. This is consistent with the view of the majority of the court in *R v Burgess*... at 644 said: "The Commonwealth Parliament was given power to legislate to give effect to international obligations binding the Commonwealth or to protect national rights internationally obtained by the commonwealth whenever legislation was necessary or deemed to be desirable for this purpose." Starke J (at 657) said: The constitution, in the legislative power to make laws with respect to external affairs, recognizes that the Commonwealth will have political relations with other Powers and States, and legislative power is conferred upon it in comprehensive terms, so that it may control those foreign or external relations and implement obligations that may have been assumed in the course of those relations. And Evatt and McTiernan JJ said (at 681): " in truth, the King's power to enter into international conventions cannot be limited in advance of the international situations which may from time to time arise. And in our view the fact of an international convention having been duly made about a subject brings that subject within the field of international relations so far as such subject is dealt with by the agreement."

27. Brennan at 487 affirmed that the mere acceptance of a treaty obligation related to an internal matter, makes the matter an external affairs matter

These views were adhered to in *R v Poole; Ex parte Henry (no.2)* and they were repeated in *Airlines of NSW (No 2)* by Windeyer J (at 152): "A law necessary to give effect to a particular treaty obligation of the Commonwealth is a law with respect to external affairs." If Australia, in the conduct of its relations with other nations, accepts a treaty obligation with respect to an aspect to Australia's internal legal order, the subject of the obligation thereby becomes (if it was not previously) an external affair, and a law with respect to that subject is a law with respect to external affairs.

27. Brennan at 487 proposed a criterion for assessing the external affairs nature

I would agree, however, that a law with respect to a particular subject would not necessarily attract the support of para (xxix) if a treaty obligation had

been accepted with respect to that subject merely as a means of conferring legislative power upon the Commonwealth Parliament. 26. The power to effect the obligation imposed by a convention lies on the Confederation (federal)

In *RV Burgess: Ex parte Henry* (1936) 55 (at 645/453) the judgment of Stephen J...

His Honour stated (at 646/454) that the content of the external affairs power must be determined by what is generally regarded at any particular time as part of the external affairs of the nation, describing that as "a concept the content of which lies very much in the hands of the community of nations of which Australia forms a part" ... (p. 689)

Case is authority for the proposition that the power authorizes a law which gives effect to an obligation imposed on Australia by a bona fide international convention or treaty to which Australia is a party (689)

EXHIBIT

Stephen J. at 445

The constitution confers upon the Parliament of the commonwealth power to make laws for the peace, order and good government of the Commonwealth with respect to "...

It should be made clear that no question arises as to the power of Australia to enter into the convention. The Governor-General exercising the prerogative over of the Crown can make treaties on subjects which are not within the legislative power of the Commonwealth. However, the treaties when made, are not self-executing: they do not give rights to or impose duties on members of the Australian community unless their provisions are given effect by statute. The power of the parliament to carry treaties into effect, is not necessarily as wide as the executive power to make them. This was made clear by the Judicial Committee in *Attorney-General for Canada v Attorney-General for Ontario* [1937] AC 326 at 348, where their lordships said: "... in a federal State where legislative authority is limited by a constitutional document or is divided up between different legislatures in accordance with the classes of subject-matter submitted for legislation, the problem is complex. The obligations imposed by treaty may have to be performed, if at all, by several legislatures; and the executives have the task of obtaining the legislative assent not of the one Parliament to whom they may be responsible but possibly of several Parliaments to which they stand in no direct relation. The question is not how is the obligation formed, that is the function of the executive, but how is the obligation to be performed, and that depends upon the authority of the competent legislature or legislatures."

... and at 435 ..in the Labour Convention 1937 case at 353-4 their lordships pointed out that their decision in that case that legislation of the Dominion of Canada giving effect to certain conventions was ultra vires did not have the result that Canada was incompetent to legislate in performance of treaty obligations. They said (at 354): in totality of legislative powers, Dominion and Provincial together, she is fully equipped. But the legislative powers remain distributed, and if in the exercise of her new functions derived from her new international status, Canada incurs obligations they must, so far as legislation be concerned, when they deal with Provincial classes of subjects, be dealt with by the totality of powers, in other words by co-operation between the Dominion and the Provinces."

Koowarta v Bjelke-Petersen and others Queensland v Commonwealth of Australia

2-4 March, 11 May 1982 High Court of Australia, Aust. Law Reports. Constitutional law — Commonwealth — Legislative Powers — act implementing an international treaty

it was held Sections 9 and 12 were valid laws with respect to external affairs within s 51 (xxix) of the Constitution,

Per Stephen J. at 418. There existed a quite precise treaty obligation on a subject of major importance in international relationships, which called for domestic implementation within Australia

Per Mason J. at 418 It would seem to follow inevitably from the plenary nature of the external affairs power that it would enable the parliament to legislate not only for the ratification of a treaty but also for its implementation by carrying out any obligation to enact a law that Australia assumed by the treaty

Brennan J. at 418 If Australia in the conduct of its relations with other nations accepted a treaty obligation with respect to an aspect of Australia's internal legal order, the subject of the obligation thereby because (if it was not previously) an external affair, and a law with respect tot hat subject was a law with respect to external affairs.

Wilson at 480 state" the task of ensuring the co-operation of the States may present a political challenge, although the developing practices of including State representation in commonwealth delegations to international conferences on subjects which may call for implementation by State legislatures augurs well for future co-operation in the pursuit of an effective foreign policy and the maintenance of good international relations:

Wilson at 480 [dissenting] raised the Judicial Committee in *Attorney-General for Canada v Attorney-General for Ontario* [1937]

Where their Lordships expressed the view that in the totality of Dominion and Provincial legislative powers, Canada was fully equipped to implement any international obligations

that might be incurred. The decision in that case, though not the accuracy of the observation to which I have referred, was subjected to a good deal of criticism.

However, a recent assessment appears in an article by Edward McWhinney in the Canadian Yearbook of International law (1969) vol. 7 p3 wherein (at 4-5) the author wrote: 'Not merely has the Labour Convention decision not rendered impossible the conduct of a national Canadian foreign policy. In fact, no single example has ever been cited, in the years since 1937...where its rationale has presented any practical difficulties, or even mild inconvenience, in the conduct of Canada's foreign relations. At the concrete, empirical level, it has in fact proved easily possible for Canadians to live with the decision...'`

The 1937 Canadian Labour case was used by the dissenting judge at 434

It should be made clear that no question arises as to the power of Australia to enter into the convention. The Governor-General, exercising the prerogative over of the Crown, can make treaties on subjects which are not within the legislative power of the Commonwealth. However, the treaties, when made, are not self-executing: they do not give rights to or impose duties on members of the Australian community unless their provisions are given effect by statute. The power of the parliament to carry treaties into effect is not necessarily as wide as the executive power to make them. This was made clear by the Judicial Committee in *Attorney-General for Canada v Attorney-General for Ontario* [1937] AC 326 at 348, where their lordships said: "... in a federal State where legislative authority is limited by a constitutional document, or is divided up between different legislatures in accordance with the classes of subject-matter submitted for legislation, the problem is complex. The obligations imposed by treaty may have to be performed, if at all, by several legislatures; and the executive have the task of obtaining the legislative assent not of the one Parliament to whom they may be responsible, but possibly of several Parliaments to work they stand in no direct relation. The question is not how is the obligation formed, that is the function of the executive, but how is the obligation to be performed, and that depends upon the authority of the competent legislature or legislatures."

... and at 435 ..in the Labour Convention 1937 case at 353-4 their lordships pointed out that their decision in that case that legislation of the Dominion of Canada giving effect to certain conventions was ultra vires did not have the result that Canada was incompetent to legislate in performance of treaty obligations. They said (at 354): in totality of legislative powers, Dominion and Provincial together, she is fully equipped. But the legislative powers remain distributed, and if in the exercise of her new functions derived from her new international status, Canada incurs obligations they must, so far as legislation be concerned, when they deal with Provincial classes of subjects, be dealt with by the totality of powers, in other words by co-operation between the Dominion and the Provinces."

Stephen J. at 445

The constitution confers upon the Parliament of the commonwealth power to make laws for the peace, order and good government of the Commonwealth with respect to "...

[In the Australian Act , the Racial Discrimination Act" there is the following statement:

" to make provision for giving effect tot he Convention

Stephen at 452

"So long as treaties departed little from their early nature as compacts between princes, having no concern with domestic affairs, the conflict was muted: but in the century international conventions have come to assume a more extensive role. They prescribe standards of conduct for both governments and individuals having wide application domestically in areas of primarily regional concern, the very areas which, in federations, have tended to be entrusted to the legislative competence of the regional units of governments. This has necessarily exacerbated the problem which federations encounter in the implementation of international treaties while emphasizing the need for regional units in federations to recognize the legitimacy of national governments' increased concern regarding domestic observance of internationally agreed norms of conduct. "

Stephen at 453 Thus areas of what are of purely domestic concern are steadily contracting and those of international concern are ever expanding.

Stephen at 454 post war growth in consensual international law.

Stephen at 454 What has occurred is rather a growth in the content of "external affairs". This growth reflects the new global concern for human rights and the international acknowledgment of the need for universally recognized norms of conduct particularly in relation to the suppression of racial discrimination.

Stephen at 456

Even were Australia not a party to the Convention, this would not necessarily exclude the topic as a part of its external affairs. It was contended on behalf of the Commonwealth that, quite apart from the Convention, Australia has an international obligations to suppress all forms of racial discrimination because respect for human dignity and fundamental rights and thus the norm of non-discrimination on the grounds of race, is now part of customary international law, as both created and evidenced by state practices and as expounded by jurists and eminent publicists.

Stephen at 456. In the present cases it is not necessary to rely upon this aspect of the external affairs power since there exists a quite precise treaty obligation on a subject of major importance in international relationships, which calls for domestic implementation within Australia.

Mason at 459 It would seem to follow inevitably from the plenary nature of the power that it would enable the parliament to legislate not only for the ratification of a treaty but also for its implementation by carrying out any obligation to enact a law that Australia assumed by the treaty.

Mason 459 recognize that It is a well settled principle of the common law that a treaty not terminating a state of war has no legal effect upon the rights and duties of Australian citizens and is not incorporated into Australian law on its ratification by Australia (Chow Hung Ching v R (1948)...not self-executing'

... to achieve this result the provisions have to be enacted as part of our domestic law, whether by Commonwealth or State statute. Section 51 (xxix, arms the Commonwealth Parliament with a necessary power to bring this about. So much was unanimously decided by the court in R v Burgess: Ex parte Henry (1936) 55 CLR 608. There the power enabled the Commonwealth Parliament to legislate so as to incorporate into our law the provisions of the Paris Convention for the regulation of aerial navigation.

Mason at 459 ... the consequence of the failure [of the R. v Burgess: Ex parte Henry (1936)] would have been to leave the decision on whether Australia should comply with its international obligations in the hands of the individual States as well as the Commonwealth, for the commonwealth would then lack sufficient legislative power to fully implement the treaty. The ramifications of such a fragmentation of the decision-making process as it affects the assumption and implementation by Australia of its international obligations are altogether too disturbing to contemplate. Such a division of responsibility between the Commonwealth and each of the States would have been a certain recipe for indecision and confusion, seriously weakening Australia's stance and standing in international affairs. Fortunately, the approach in Burgess has since been confirmed by R v Poole; Ex parte Henry (no.2) 1939 61 CLR...

Mason at 462. doubtless the framers of the Constitution did not foresee accurately the extent of the expansion in international and regional co-operation which has occurred since 1900. ...There is no reason at all for thinking that the legislative power conferred by s 51 (xxix) was intended to be less than appropriate and adequate to enable the

Commonwealth to discharge Australia's responsibilities in international and regional affairs.

Mason at 463 Increasing emphasis is given in the United Nations and in regional organizations to the pursuit by international treaties of idealistic and humanitarian goals. It is important that the Commonwealth should retain its full capacity through the external affairs power to represent Australia, to commit it to participation in these developments when appropriate and to give effect to obligations thereby undertaken.

Mason 466 Broadly speaking the test which they favoured was whether in substance the legislation carries out or gives effect to the Convention.

Mason at 467 "On the broad view which I take of the power it extends to the implementation of the International convention on the... on the Elimination of all forms of Racial Discrimination. It is an international treaty to which Australia is a party which binds Australia in common with other nations to enact domestic legislation in pursuit of the common objective of the elimination of all forms of racial discrimination.

But I would go further and say that even on the more cautious expression of the scope of the power by Dixon in *Burgess*, it would extend to the implementation of the convention.

Mason at 468 At the level of international law the means chosen to attain this end was the formulation of the Convention. It imposes on each of the many parties to it an obligation to eliminate racial discrimination in its territory. The failure of a party to fulfill its obligations becomes a matter of international discussion, disapproval, and perhaps action by way of enforcement.

Murphy at 471 discussed "the obligations to take legislative measure...

Murphy at 472 Preservation of the world's endangered species, maintenance of universal standards of human rights.. are for Australia as well as other nations, internal as well as external affairs.

Murphy at 473 The people of the States are entitled as well as obliged to have the legislative and executive conduct of those affairs which are part of Australia's external affairs carried out by the Parliament and executive Government of Australia.

Wilson at 480 State" the task of ensuring the co-operation of the States may present a political challenge, although the developing practices of including State representation in commonwealth delegations to international conferences on subjects which may call for

implementation by State legislatures augurs well for future co-operation in the pursuit of an effective foreign policy and the maintenance of good international relations:

Wilson at 480 [dissenting] raised the Judicial Committee in *Attorney-General for Canada v Attorney-General for Ontario* [1937]

Where their Lordships expressed the view that in the totality of Dominion and Provincial legislative powers, Canada was fully equipped to implement any international obligations that might be incurred. The decision in that case, though not the accuracy of the observation to which I have referred was subjected to a good deal of criticism.

However, a recent assessment appears in an article by Edward McWhinney in the *Canadian Yearbook of International Law* (1969) vol. 7 p3 wherein (at 4-5) the author wrote: 'Not merely has the Labour Convention decision not rendered impossible the conduct of a national Canadian foreign policy. In fact, no single example has ever been cited, in the years since 1937...where its rationale has presented any practical difficulties, or even mild inconvenience, in the conduct of Canada's foreign relations. At the concrete, empirical level, it has in fact proved easily possible for Canadians to live with the decision...'`

Brennan J. at 482 also referred to *Labour Convention Case*... Lord Atkin in delivering the reasons for judgment....distinguished between the formation and the performance of treaty obligations. The making of a treaty is a function of the executive, but legislation to implement a treaty is a matter for the legislature. he said in reference to the Canadian constitution (at 348): The obligations imposed by treaty may have to be performed, if at all, by several legislatures and the executive have the task of obtaining the legislative assent not of the one parliament to whom they may be responsible, but possibly of several Parliaments to whom they stand in no direct relation. The question is not how is the obligation formed, that is the function of the executive: but how is the obligation to be performed, and that depends upon the authority of the competent legislature or legislatures. "

Brennan at 485 when the subject matter of a law is the subject of a treaty obligation and is 'indisputably international in character', para (xxix) is available to support the law . the present questions whether a law which creates or affects rights, duties powers or privileges regulating a field of activity which is the subject of a treaty obligation is a law with respect to an external affair, or whether some additional quality, "indisputably international" must be found in the subject of the treaty obligations. ...in *Burgess*..." at 30: "The external affairs power authorizes the parliament to make a law for the purpose of carrying out or giving effect to a treaty, at least if the treaty is in reference to some matter indisputably international in character." and Mason J said (at 470/91): " There is

abundant authority for the proposition that the subject matter extends to Australia's relationships with other countries and in particular to carrying into effect treaties and conventions entered into with other countries and in particular to carrying into effect treaties and conventions entered into with other countries provided at any rate that they are truly international in character.

Brennan at 487 Where a particular aspect of the internal legal order of a nation is made the subject of a treaty obligation, there is a powerful indication that subject does affect the parties to the treaty and their relations one with another. They select that aspect as an element of their relationship, the obligee nations expecting and being entitled in international law to action by the obligor nation in performance of the treaty. And therefore to subject an aspect of the internal legal order to treaty obligations stamps the subject of the obligation with the character of an external affair. This is consistent with the view of the majority of the court in *R v Burgess*... at 644 said: "The Commonwealth Parliament was given power to legislate to give effect to international obligations binding the Commonwealth or to protect national rights internationally obtained by the commonwealth whenever legislation was necessary or deemed to be desirable for this purpose." Starke J (at 657) said: The constitution, in the legislative power to make laws with respect to external affairs, recognizes that the Commonwealth will have political relations with other Powers and States, and legislative power is conferred upon it in comprehensive terms, so that it may control those foreign or external relations and implement obligations that may have been assumed in the course of those relations. And Evatt and McTiernan JJ said (at 681): "in truth, the King's power to enter into international conventions cannot be limited in advance of the international situations which may from time to time arise. And in our view the fact of an international convention having been duly made about a subject brings that subject within the field of international relations so far as such subject is dealt with by the agreement."

Brennan at 487 "These views were adhered to in *R v Poole; Ex parte Henry (no.2)* and They were repeated in *Airlines of NSW (No 2)* by Windeyer J (at 152): A law necessary to give effect to a particular treaty obligation of the Commonwealth is a law with respect to external affairs." If Australia, in the conduct of its relations with other nations, accepts a treaty obligation with respect to an aspect to Australia's internal legal order, the subject of the obligation thereby becomes (if it was not previously) an external affair, and a law with respect to that subject is a law with respect to external affairs.

Brennan at 487 I would agree, however, that a law, with respect to a particular subject, would not necessarily attract the support of para (xxix) if a treaty obligation had been accepted with respect to that subject merely as a means of conferring legislative power upon the Commonwealth Parliament. 26. The power to effect the obligation imposed by a convention lies on the Confederation (federal)

In *RV Burgess: Ex parte Henry* (1936) 55 (at 645/453) the judgment of Stephen J...

His Honour stated (at 646/454) that the content of the external affairs power must be determined by what is generally regarded at any particular time as part of the external affairs of the nation, describing that as "a concept the content of which lies very much in the hands of the community of nations of which Australia forms a part" ... (p. 689)

Case is authority for the proposition that the power authorizes a law which gives effect to an obligation imposed on Australia by a bona fide international convention or treaty to which Australia is a party (689)

EXHIBIT: EXCERPTS FROM THE FRANKLIN DAM CASE

1. does the enactment of the law constitute an implementation by Australia of an obligation imposed on it by the Convention? Conversely, would Australia be in breach of an obligation imposed on it by the Convention if it failed to enact the law or some law substantially to the same effect?
2. Does the subject-matter of the Convention to which the law gives effect in the manner in which it is treated, involve in some way a relationship with other countries or with persons or things outside Australia?
3. Is the subject-matter of the convention to which the law gives effect, something which, although it relates to domestic activity, affects relations between Australia and another or other countries?

The first of the three tests seeks to express the idea that it is the implementation of an obligation imposed on Australia by a treaty that attracts the external affairs power, that it is the treaty obligation and its implementation that constitutes the relevant subject or matter of external affairs. .. As I pointed out in *Koowarta* (at 648-50/457-62), the treaty itself is a matter of external affairs, as is its implementation by domestic legislation. The insistence in *Burgess* of the legislation to carry into effect provisions of the convention in accordance with the obligations which that Convention imposed on Australia is not inconsistent with what I have said, though it does raise a question as to the scope of the legislative power in this application to a treaty, ...

At this point, it is sufficient to say that there is no persuasive reason for thinking that the international character of the subject matter or the existence of international concern is confined to that part of a treaty which imposes an obligation on Australia. A provision in a treaty which is

designed to secure to Australia; a benefit may be just as much a matter of international concern, possessing an international character, with a potential to affect Australia's relationships with other countries, as a provision in a treaty which imposes an obligation upon Australia.

... But when we have regard to international affairs as they are conducted today, when the nations of the world are accustomed to discuss, negotiate, co-operate and agree on an ever widening range of topics, it is impossible to enunciate a criterion by which potential for international action can be identified from topics which lack this quality.

... p691

It is suggested that if a topic becomes the subject of international cooperation or an international convention it is necessarily international in character —

...

The fact of entry into and of ratification of, an international convention, evidences the judgment of the Executive and of Parliament that the subject matter of the convention is of international character and concern and that its implementation will be a benefit to Australia. ...

...the court should accept and act upon the decision of the Executive government and upon the expression of the will of Parliament in giving legislative ratification to the treaty or convention. (p. 692)

... Koowarta makes the point that the content of the external affairs power has expanded greatly in recent times along with the increase in the number of international conventions and the extended range of matters with which they deal (ALJR) at 645-6, 650; (ALR) at 453-4, 462-3

Section 51(xxix)

"There is no reason at all for thinking that the legislative power conferred by s51(xxix) was intended to be less than appropriate and adequate to enable the Commonwealth to discharge Australia's responsibilities in international and regional affairs... As the object of conferring the power was to equip the Commonwealth with comprehensive capacity to legislate with respect to external affairs, it is not to the point to say that such is the scope of external affairs in today's world that the content of the power even to the Commonwealth is greater than it was thought to be in 1900."

Accordingly, it conforms to established principle to say that s51 (xxix) was framed as an enduring power in broad and general terms enabling the Parliament to legislate with respect to all aspects of Australia's participation in international affairs and of its relationship with other countries in a changing and developing world and in circumstances and situations that could not be easily foreseen in 1900 (p693). This circumstance is often overlooked by those who are preoccupied with the impact that the exercise of the power may have in areas of legislation traditionally regarded by the States as their own. The consequences to Australia resulting from an inadequate Commonwealth legislative power with respect to external affairs — which represents the price to be paid for the preservation to the States of these areas of legislation — were emphasized in *Koowara* (ALJR) at 650-1, 656; (ALR)

... it must always be remembered that we are interpreting a Constitution broad and general in its terms, intended to apply to the varying conditions which the development of our community must involve."

Despite Norris' assessment of the "equitable remedy of the injunction" in most injunctive cases, the condition for granting an injunction appears to be restricted to a "balance of convenience" (the term "convenience" appears to be interpreted as meaning suitability; and the term "just" appears to be absent indicating perhaps that the courts do not believe that there is a significant distinction between "suitability" and "just".) It is understandable that the courts, in deciding between two competing economic claims, would approach the claims as being a balance of convenience. Not all conflicts however, can always be justly resolved by balancing conveniences. Further, cases between short term economic claims and long term ecological concerns of potential irreversible destruction surely must not be resolved by misconstruing an ecological right as being one of convenience, and an economic privilege as being one of irreparable harm as had been done in *Wiigyet vs District Manager*. ∞ FULL

In judicial decisions related to conflicts between short term economic interests and long term ecological concerns the courts in using equitable remedies must reexamine fundamental principles of justice and equity, so as to ensure that the legal system fosters not inhibits justice and equity. It may also be necessary to accept a limitation on freedoms: i.e. that which was considered to be a right may now only be deemed to be a privilege, and in being a privilege it should receive different and more intense scrutiny.

The global system is presently attaining or approaching an ecological state of irreversibility or privation. The time has past for the perpetuation of precedence reflecting the exclusive reliance on narrowly defined "convenience" and "balance of convenience" or conflict between "convenience and irreparable damages or harm", and reliance on Forest Company affidavits as a basis for granting injunctions. There appears to be a serious discrepancy or lack of correspondence between the criteria for making injunctive decisions and the current recognition of time and circumstance as reflected by concerns in the international scientific and academic community and by proclamations in international documents.

The need to redefine irreparable damage is made evident in the previously mentioned *Wiigyet vs. District Manager* case. International and national documents could assist the court in defining irreparable damage so that the court could "move with time and circumstance" (Norris).

A F I D A V I T

I, Joan Russow, of 1230 St. Patrick St. of the city of Victoria, Province of British Columbia
MAKE OATH AND SAY AS FOLLOWS:

1. THAT I am a Sessional lecturer in Global Issues in the Environmental Studies Program at the University of Victoria; the Chair of the International Affairs Caucus of the British Columbia Network (BCEN); a member of an International Commission-the IUCN (World Conservation Union) Commission on Education and Communication, and founder of the International Law and Obligations Institute (ILOI) — an institute established to monitor compliance to International obligations.

2. THAT I attended the New York Prep Com (March 1992), the UNCED Earth Summit and Global Forum (June, 1992), the meeting of the World Heritage Committee, and the Annual General Meeting of the IUCN.

3. THAT I am a researcher in an international Harvard -based project, which examines climate change, ozone depletion and acid rain documentation and implementation of policy in eight different countries; and that I am involved in coordinating a "Global Compliance Project" for the 1995 UN Conference in Beijing.

4. THAT I have extensive experience in analyzing and categorizing research data and in carrying out content analysis in different disciplines.

Since 1985, I have been doing a content analysis of international documents. I have analyzed statements in the following International legal instruments and UN resolutions:

Universal Declaration of Human Rights, 1948; Stockholm Conference on the Human Environment, 1972; UN Conservation of Natural Heritage, 1972; UN Convention on International Trade in Endangered Species of Wild Fauna and Flora, 1973; International Covenant of Social, Cultural Rights; International Covenant of Civil and Political Rights, 1976; the Vienna Convention of Treaties, 1978; the World Charter of Nature, 1982; Non-proliferation of Nuclear weapons; Vienna Convention for the Protection of Ozone, 1985; Montreal Protocol on Substances that Deplete the Ozone Layer, 1987 (and London and Copenhagen Protocols); UN Convention on the Rights of the Child, 1989; Convention for the Control of trans-boundary Movements of Hazardous Wastes (Basel Convention 1989); Environmental Assessment Review of trans-boundary Projects; 1991

ASEAN; Jakarta Declaration. the Caracas Declaration, 1992; Rio Declaration and Agenda 21, 1992, Convention on Biological Diversity, 1992; UN Framework Convention on Climate Change, 1992.

In particular, I have done a content analysis of the UNCED documents, and extracted over 200 principles enunciated in those documents. In October, 1993, at the University of Victoria, I also organized a panel discussion on "International Law and Obligations: Implications for the Clayoquot" .

5. THAT I am currently involved in a university project examining B.C. and Canadian environmental legislation

6. THAT I have had input into the drafting of several international documents: a proposed Earth Charter for UNCED; the NGO Earth Charter at the UNCED Global Forum; and the IUCN "Covenant" prepared by the IUCN Commission on Environmental Law.

7. THAT I have reviewed international documents such as the UNCED Forest Principles document, and indicated its inconsistency with other international documents; I have reviewed federal documents such as the proposed Charlottetown Accord, and the CIDA guidelines for international projects, and indicated the inconsistency of these documents with other international and federal documents. I have reviewed provincial documents such as CORE Charter, B.C. Environmental Bill of Rights, the B.C. Prevention Act, the Forest Practices Code; B.C. Standards for Pollution Prevention, and indicated the inconsistency of these documents with other Federal and international documents.

8 THAT I will submit evidence about the following:

6.1. THAT there is a strong indication from statements from international documents, and from experts that there is an urgency to address the global environmental situation, and that "inaction is negligence" (Digby McLaren, Past President of the Royal Society of Canada, Keynote address, Global Issues Conference, 1991).

EXHIBIT A: Evidence of statements about urgency by Science Council of Canada; by the Royal Society of Canada; by the Concerned Scientists, Warning to Humanity; and by the international community in international documents.

6.2. THAT there is a duty expressed in international documents to act to address this urgency, and through international customary law as expressed in the International Covenant on Civil and Political Rights, and in UN Resolution 37/82, a duty has been placed on States to adopt such legislative or ... measures as may be necessary to give effect ... to international documents, and BC has undertaken this duty as a result of this international customary law.

EXHIBIT B: Evidence of statements of duty expressed internationally, nationally and provincially.

6.3. THAT Canada as well as B.C. has failed in many cases to exercise this duty and comply with its obligations. In particular, Canada has failed to comply with the Convention on Biological Diversity which Canada signed (June, 1992) and ratified (December, 1992); and which has been in force since December 1993; and that Canada under Article 18 of the Convention of Treaties, must not "defeat the purpose of the Treaty in the interim between the signing of the treaty and the coming into force of the treaty".

EXHIBIT C: Evidence that Canada has defeated the purpose of the Treaty since June 1992 by failing to conserve biodiversity, by failing to identify biodiversity, by failing to invoke the precautionary principle to justify the banning of ecologically unsound practices, and by failing to carry out an environmental assessment review of anything that could contribute to the loss or reduction of biodiversity.

6.4. THAT Canada has invoked internal law to justify not complying with these obligations (through claiming that B.C. is not bound by these documents and thus not required to comply. Under Article 27 of the Vienna Convention of Treaties, Canada is bound not to invoke internal law to justify non-compliance to international treaties.

EXHIBIT D1: Evidence that Canada under the Convention of Treaties has undertaken not to invoke internal law to justify not fulfilling international treaty obligations.

EXHIBIT D2: Evidence that indicates that B.C. as well as Canada is bound by these international obligations whether through legally binding documents such as the Biodiversity Convention and the Climate Change Convention, or through international customary law including the Common Law Doctrine of Legitimate Expectation, and evidence that the 1937 International Labour Supreme Court Decision can be distinguished in the case of the Convention on Biological Diversity.

6.5. THAT Canada has invoked internal law to justify not complying with these obligations through granting injunctions that prevent the fulfilling of these obligations. Under Article 27 of the Vienna Convention of Treaties, Canada is bound not to invoke internal law to justify non-compliance to international treaties.

EXHIBIT E : Evidence that B.C. has not only used internal law — the granting of injunctions to justify non compliance to International obligations but has failed to invoke its own internal law to prevent violations of international obligations.

6.6. THAT many of the Clayoquot Protectors were informed through circulated material and proclamations that there were international obligations undertaken by Canada and B.C., and that these obligations were being violated in the Clayoquot.

EXHIBIT F: Evidence of examples of documents about B.C. 's non-compliance to international obligations circulated to Clayoquot protectors.

6.7. THAT there has been international condemnation of British Columbia through a resolution from IUCN, an international organization with representation from 125 countries, including representation from governments and non-governmental organizations. I am a member of the Commission on Education and Communication of the IUCN (the World Conservation Union) —an organization that has both non-governmental and governmental representation, and academic and professional representation from 125 countries. I was instrumental in January 1994, in assisting in the drafting of the "North American Temperate Rainforest" Resolution which passed with only one state abstaining, Canada. The IUCN undertakes to circulate any resolution passed at the Annual General Meeting to all States in the United Nations, and it is the responsibility of the proposer of a resolution to monitor the fulfillment of IUCN resolutions, and to submit documentation about the fulfillment of the resolutions for distribution at the next IUCN Annual General Meeting.

EXHIBIT G: Evidence of International condemnation of forest practices in British Columbia, and of international call for the protection of a large network of original temperate rainforests as recommended by the Western Canada Wilderness Committee whose proposal for a network includes Clayoquot Sound.

6.8. THAT it may not be equitable to prosecute citizens through the use of an equitable remedy— an injunction- when the granting of the equitable remedy is still under question in the courts, and when the equitable remedy is being used against those who call for the adherence to international obligations. I also propose that the issuance of equitable remedy such as an injunction which has usually been issued to prevent irreparable harm, has in this case of Clayoquot sound been issued against those who strive to prevent irreparable harm and call for the adherence to international obligations. [Note: that there have been several attempts to set aside the injunction, the last one being heard in January with no decision yet being handed down in June, and citizens are still being tried as criminals for contempt of court for their not complying with the injunction]

EXHIBIT H: Evidence that the injunction is an equitable remedy that has been misapplied in the Clayoquot case.

In the BC Litigation publication, Justice J.A. Norris described the nature of the injunctive remedy in British Columbia Law in the following way:

The remedy [of injunction] of course, is an equitable one. The exercise of the equitable jurisdiction is not to be restricted by the straitjacket of rigid rules but is to be based on broad principles of justice and convenience, equity regarding the substance and not merely the facade or the shadow. It moves with time and circumstances. (Justice J.A. Norris)

6.9 . THAT there is a positive duty upon citizens to ensure that a state adheres to its international obligations.

EXHIBIT I : Evidence to support the proposal that it is the responsibility and duty of individuals to act to ensure compliance with international obligations

6.10 .THAT in cases of potential irreversibility there may not be time for citizens to wait to exhaust all domestic measures before bringing their concerns to the international forum; and

THAT the exercising of this positive duty as was done in Clayoquot Sound by peacefully assembly to protest the non-compliance with international obligations should not be considered to be a demonstration of criminal contempt of court. When established members of the community, such as representatives of government at international

conferences, senior scientists from national institutions indicate the gravity and urgency of the global situation, including deforestation, it is inequitable for the courts to impose injunctions that were traditionally an equitable remedy to prevent irreparable harm on those who try to prevent irreparable harm. It is equally inequitable to charge those who call upon governments to live up to their commitments as criminals while those who do not adhere to international commitments, federal laws and provincial statutes are fined occasionally for their "transgressions".

Since Canada has made these commitments outlined in the above exhibits, and because these commitments are inconsistent with the continuing to log in significant stands of unfragmented watersheds the injunction should have been rescinded because the injunction is contributing the non-fulfillment of international, national and provincial obligations.

In my opinion the court has violated principles of equitable law, such as the principle that "he who comes to equity must come with clean hands," by granting an equitable remedy to a party, MacMillan Bloedel, that itself has been in violation of international, federal and provincial law. When the ignoring of this equitable principle was brought to the attention of Judge Drake, he ruled that, in equity, "equity follows the law". If that were the case, and if international laws, such as the UN Resolution 37/7 (1982), federal laws, such as the Fisheries Act, and provincial laws, such as the Forest Act had been applied years ago, tree Farm licenses would have been suspended and canceled, and forest practices changed. In the absence of the court's willingness to enforce international law and federal and provincial statutory law, "equity has not followed the law".

In the Clayoquot, the court failed to invoke the law, and instead has demonstrated contempt for its own laws, by misconstruing the purpose of the equitable remedy of an injunction, which is to prevent irreparable harm. In circumstances where the state has failed to exercise its duty to act, and the court has failed to enforce the law, it is the state and the court that has demonstrated contempt for the law. This contempt has been shown at all three levels: international, federal and provincial.

In addition, in the Clayoquot trials, the court has condoned not only violations of guarantees in the Canadian Charter of Rights and Freedoms, but also violations of guarantees in the International Covenant of Civil and Political Rights, such as the following:

In the determination of any criminal charge against him, everyone shall be entitled to the following minimum guarantees, in full equality:

To examine, or have examined, the witnesses against him and to obtain the attendance and examination of witnesses on his behalf under the same conditions as witnesses against him {Article 14 3 (e)}.

[NOTE THAT IN THE CLAYOQUOT TRIALS IN VICTORIA FEW WITNESSES HAVE BEEN PERMITTED TO APPEAR FOR THE DEFENCE]

It is institutions not individuals that have demonstrated contempt for law and justice.

There appears to be little recourse for the Clayoquot Protectors than to eventually seek redress through the Optional Protocol International Convention of Civil and Political Rights which provides the following remedy:

Subject to the provisions of article 1 individuals who claim that any of their rights enumerated in the Covenant have been violated and who have exhausted all available domestic remedies may submit a written communication to the committee for consideration. (Article 2)

Ombudsman

In a letter from the Ombudsman's office indicating the findings of the Ombudsman's office (1993) related to the Russow/Gage inquiry into the way the B.C. government will be fulfilling international commitments: the senior investigator for the Ombudsman's office conveyed the commitment of B.C. to the UNCED obligations:

Compliance with International Agreements.

Direct personal discussions were held with Mr. Cheston, Assistant Deputy Minister of Operations Division, Ministry of Forests, and Mr. Owen, Commissioner on Resources and Environment. Both Mr. Cheston's and Mr Owen's responsibilities reflect the government's priority for those issues of concern to you...

From these meetings, as well as from additional discussions with senior staff from the Ministry of Forests and the Ministry of Environment, Lands and Parks, we have

determined that BC intends to comply with the agreements signed at the UNCED in June 1992.

Canada and B.C. is also bound by the UN convention on Cultural and natural Heritage

Not to do anything that could

not to invoke internal law to justify the performance of a treaty

no through it s

JEN.

Here are two letters that I wrote in relation to the designation of a network of forests being designated as international heritage sites.

1. letter to Arthur Campeau ; I think this letter got lost in the government shift. Usually Campeau is good at responding to letters. Unfortunately I did not follow up with another letter. A redraft of the letter could be resubmitted to John Fraser's office. Perhaps signed by the Friends and the Ecological Rights Association.

2. letter to President of World Heritage Committee. I did receive a response from the president of the World Heritage Committee

He did not agree with my interpretation of the "heritage in peril clause". He contends that this designation only applies to sites that have already been nominated by the state, approved by the IUCN, and accepted by the World Heritage Committee to be placed on the heritage list. Once a site has been placed on a world heritage list, and the state does not protect it then the site can be placed on the heritage in danger list. I think that we can argue that the intention of the Convention was expressed in the Preamble (the duty placed on the international community to identify sites of outstanding universal value), and that the drafters of the Convention did not envision that States would not be interested in preserving these sites.

CANADA FAILS TO FULFILL ITS INTERNATIONAL DUTY TO DESIGNATE OLD
 GROWTH SITE AS BEING ONE OF OUTSTANDING INTERNATIONAL WORTH

When I was in Paris in June, I attended the meeting of the Heritage Committee, of the Convention of the Preservation of Cultural and Natural Heritage. (1972)

For some time I have been concerned with the way Canada, especially B.C., has been remiss in not fulfilling its duty under the Convention for the Preservation for Cultural and Natural Heritage, to identify sites of potential international worth. At the meeting of the Heritage Committee, I raised the question of the apparent discrepancy between the strong preservation intention expressed in the preamble:

"Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

and article 11 which places the obligation to identify significant sites on the State. I also mentioned that I believed that the Convention appeared to have presumed that States would have wanted to have sites designated as being of outstanding universal value; the drafters of the Convention did not envision the case that is occurring in Canada where the state, for essentially commercial reasons, fails to fulfill its duty to identify sites of potential universal value.

At that meeting of the Heritage Committee, it was indicated that States had been requested to submit a list of potential future sites to the Committee. I asked the official Canadian Observer, to let me see the list of sites proposed by Canada. I noticed that there was no significant network of temperate rainforests proposed for preservation.

The omission of a significant network of preserved temperate rainforests was particularly disturbing in the light of the fact that the Observer from Australia had a forty

page document supporting a request from the Australian government to preserve a network of temperate rainforests in Australia.

It would appear that International intervention without the consent of the state is permitted, however, in cases of World Heritage Sites in Danger when the state fails to protect sites that have already been designated. In Article 11.4 of the United Nations Convention for Protection of the World Cultural and Natural Heritage, there is, however, a specific intervention which enables the committee to carry out the following action:

The committee may at any time, in case of urgent need, make a new entry in the list of World Heritage in Danger and publicize such entry immediately (United Nations Convention for the Preservation of Cultural and Natural Heritage, article 11, 4)

This clause appears to be ambiguous, and given the statement referred to above from the preamble, could be interpreted as meaning without the permission of the State.

Enclosed please find a copy of the proposal that I submitted to the President of the Heritage Committee.

Dr Bernd von Droste
Director of the World Heritage Centre
UNESCO
7 place de Fontenoy
75352, Paris 07 SP, France

July 13, 1993

Dear Dr. Von Droste

I would like to apologize for my unofficial intrusion at the meeting of the World Heritage Committee.

I would, however, like to raise a series of points related to the United Nations Convention of World Cultural and Natural Heritage, and then make a resolution. Some of these points arose because of a rereading of the Convention, the criteria for nomination and the regulations for operation.

The points are outlined in the enclosed proclamation which has been prepared for signatures, and then submission to the provincial and federal governments.

Yours sincerely,

Joan Russow

ERA Ecological Rights Association

The "unofficial Canadian observer" at the June World Heritage Committee meeting in June.

PROCLAMATION SENT TO THE PRESIDENT OF THE WORLD HERITAGE
COMMITTEE

UNESCO

"Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value...
(Convention for the Protection of the World cultural and Natural Heritage, preamble, **1972**)

WE REQUEST

THAT THE WORLD HERITAGE COMMITTEE COMPLY WITH THE URGENT NEED TO MAKE A NEW ENTRY IN THE LIST OF WORLD HERITAGE IN DANGER (ARTICLE 11, 4):

THE PRESERVATION ON VANCOUVER ISLAND, BRITISH COLUMBIA OF

A WORLD COMPOSITE NATURAL AND CULTURAL HERITAGE SITE

CONTAINING THE FOLLOWING COMPONENT SITES:

1. CLAYOQUOT SOUND,
2. INTACT WATERSHEDS CONTAINING SIGNIFICANT STANDS OF UNFRAGMENTED OLD GROWTH (SUCH AS THE WALBRAN, THE UPPER CARMANAH),
3. ASSOCIATED CULTURAL HERITAGE OF INDIGENOUS PEOPLES

AND THE FOLLOWING PATHWAYS

1. NATURAL CONSERVATION CORRIDORS
2. CULTURAL PATHWAYS OF INDIGENOUS PEOPLES

REASONS FOR PROPOSED INCLUSION

1. FULFILLMENT OF WORLD HERITAGE CRITERIA

GIVEN THAT this composite natural and cultural site fulfills criteria for both natural and cultural heritage

Natural heritage criteria (ii), (iii) and (iv) of the criteria for inclusion in the World Heritage list.

(ii) be outstanding examples representing significant ongoing geological processes... biological evolution and man [human] interaction with his [its] natural environment; as distinct from the periods of the Earth's development, this focuses upon ongoing processes in the development of communities of plants and animals, land-forms and marine areas and fresh water bodies;

(iii) contain superlative natural phenomena formations or features for ... outstanding examples of the most important ecosystems, areas of exceptional natural beauty or exceptional combinations of natural and cultural elements;

(iv) containing the most important and significant natural habitats where threatened species of animals or plants of outstanding universal value from the point of view of science or conservation still survive

and criteria (i), (ii) (v) and (vi) for the inclusion in cultural property

(i) represent a unique artistic achievement, a masterpiece of the creative genius;

(ii) have exerted great influence, over a span of time or within a cultural area of the world, on developments in architecture, monumental arts or town planning and landscaping;

(v) an outstanding example of a traditional human settlement which is representative of a culture and which has become vulnerable under the impact of irreversible change;

(vi) be directly or tangibly associated with events or with ideas or beliefs of outstanding universal significance

2. FULFILLMENT OF CRITERIA OF URGENCY TO BE INCLUDED AS A NEW WORLD HERITAGE ENTRY

Given In Article 11.4 of the United Nations Convention for Protection of the World Cultural and Natural Heritage, there is a specific intervention which enables the committee to carry out the following action:

The committee may at any time, in case of urgent need, make a new entry in the list of World Heritage in Danger and publicize such entry immediately (United Nations Convention for the Preservation of Cultural and Natural Heritage, article 11, 4)

3 FULFILMENT OF GOAL OF CONVENTION TO BRING TOGETHER NATURAL AND CULTURAL HERITAGE

Given, the in its publication Nature and Resources UNESCO has recognized the significance of linking natural and cultural heritage in the recent formation of the World Heritage Centre

Establishment of World Heritage Centre in 1992, to bring together what had been separate secretariats for natural and cultural heritage. .. to provide new impetus to heritage conservation at the interface of culture and nature .

() THAT IN 1997, I DRAFTED AND CIRCULATED A RESOLUTION ON INDIGENOUS ISSUES

COMMENT

When I returned from UNCED I brought back a hard copy of Agenda 21 the over 400 page document aAgenda 21, Agenda 21 was a document adopted by all States. While Agenda 21 is not deemed legally binding it does reflect a reflection of international comment. I wrote a summary in which I extracted the strongest commitments I could find in agenda 21

Exhibit of the Resolution I drafted on indigenous issues including chapter 26 which was devoted to indigenous issues; along with references in other chapters where there were reference to indigenous issued Resolution

4. FULFILLMENT OF NATURAL AND CULTURAL COMMITMENTS IN UNCED

Given that the global community has made commitment to preserving natural and cultural heritage through various documents from UNCED

4.1. AGENDA 21: BIODIVERSITY CHAPTER (CHAPTER 15)

the responsibility to conserve their biodiversity and use their biological resources sustainably, and to ensure that activities within their jurisdiction or control do not cause damage to the biological diversity of other States or of areas beyond the limits of national jurisdiction. " (15.3 Biodiversity)

" Despite mounting efforts over the past 20 years, the loss of the world' biological diversity, mainly from habitat destruction, over-harvesting, pollution and the inappropriate introduction of foreign plants and animals has CONTINUED. 15.3 Biodiversity

use of biological resources. (15.8 e. biodiversity)

Strengthen support for international and regional instruments, programmes and action plans concerned with the conservation of biological diversity and the sustainable use of biological resources. (15.8 f Biodiversity)

" take effective economic, social and other appropriate incentive measures to encourage the conservation of biological diversity and the sustainable use of biological resources, including the promotion of sustainable production systems such as traditional methods of agriculture, agroforestry, forestry, range and wildlife management, which use, maintain or increase biodiversity 15.5 Biodiversity

" Long-term research into the importance of biodiversity for the functioning of ecosystems and the role of ecosystems in producing good, environmental services and other values supporting sustainable development with particular reference to the biology and reproductive capacities of key terrestrial and aquatic species, including native, cultivated and cultured species; ? observation and inventory techniques; ecological conditions necessary for biodiversity conservation and CONTINUED

evolution; and social behaviour and nutrition habits dependent on natural ecosystems, where women play key roles. The work should be undertaken with the widest possible participation, especially of indigenous people and their communities, including women. (15.5 f, Biological diversity)

" Take action where necessary for the conservation of biological diversity through the in situ conservation of ecosystems and natural habitats, as well as primitive cultivars and their wild relatives, and the maintenance and recover of viable populations of species in their natural surrounding ...(15.6 g. Biodiversity)

Governments... consistent with the requirements of international law should, as appropriate collect, assess and make available relevant and reliable information in a timely manner and in a form suitable for decision-making at all levels, with the full support and participation of local and indigenous people and their communities. (15.6 f Biodiversity)

" Introduce appropriate environmental impact assessment procedures for proposed projects likely to have significant impacts upon biological diversity... and encourage the assessment of the impacts of relevant policies and programmes on biological diversity (Agenda 21, 15.5 k)

4.2. CHAPTER 26, AGENDA 21 COMMITMENTS TO INDIGENOUS PEOPLE

Indigenous people and their communities have an historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical

well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities. (Agenda 21, 26.1)

In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: (Agenda 21, 16.3)

(a) Establishment of a process to empower indigenous people and their communities through measures that include:

(ii) Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;

) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992);

5. FULFILLMENT OF SIGNIFICANT INTERFACE CULTURE AND NATURE THROUGH ETHNOBOTANY

Aboriginal people of the region are closely tied to the ecosystems of the coast and the forest, of and their knowledge of ecosystems is very detailed and profound. Without the preservation of the life forms their knowledge will be lost (Dr. N. Turner, Ethnobotanist)

Indigenous people and their communities have an historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities. (Agenda 21, 16.1)

In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: (Agenda 21, 16.3)

- (a) Establishment of a process to empower indigenous people and their communities through measures that include:
 - (ii) Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially and culturally inappropriate;

In the UNESCO publication, *Nature & Resources*, it is indicated that international designation without prior state designation is within the intention of the original Convention:

Among other steps, the World Heritage Committee intends to amend its Operational Guidelines to allow a site to be included on the List of World Heritage in Danger without a preliminary request from the State concerned, a possibility that is not ruled out by the Convention and was actually envisaged by its authors. (3)

This statement is ambiguous because it does not say whether the "site" must or must not already be on the List of World heritage sites.

It would appear that this prerogative of the committee falls outside the Guidelines for inclusion (i) the property under consideration is on the World Heritage List. (operational Guidelines for the United Nations Convention for Protection of the World Cultural and Natural Heritage, March 17, 1992)

For years Canada has signed international agreements and undertaken obligations, and for years Canada has deluded the global community about its concern for the environment.

Canada has made international commitments, and the public can impute an intention to fulfill these obligations, and before making these commitments Canada should have been able to ensure the international community that it had the ability to comply with its obligations.

Chapter 26

Agenda 21 – Chapter 26 RECOGNIZING AND STRENGTHENING THE ROLE OF INDIGENOUS PEOPLE AND THEIR COMMUNITIES PROGRAMME AREA Basis for action 26.1. Indigenous people and their communities have an historical relationship with their lands and are generally descendants of the original inhabitants of such lands. In the context of this chapter the term "lands" is understood to include the environment of the areas which the people concerned traditionally occupy. Indigenous people and their communities represent a significant percentage of the global population. They have developed over many generations a holistic traditional scientific knowledge of their lands, natural resources and environment. Indigenous people and their communities shall enjoy the full measure of human rights and fundamental freedoms without hindrance or discrimination. Their ability to participate fully in sustainable development practices on their lands has tended to be limited as a result of factors of an economic, social and historical nature. In view of the interrelationship between the natural environment and its sustainable development and the cultural, social, economic and physical well-being of indigenous people, national and international efforts to implement environmentally sound and sustainable development should recognize, accommodate, promote and strengthen the role of indigenous people and their communities

26.2. Some of the goals inherent in the objectives and activities of this programme area are already contained in such international legal instruments as the ILO Indigenous and Tribal Peoples Convention (No. 169) and are being incorporated into the draft universal declaration on indigenous rights, being prepared by the United Nations working group on indigenous populations. The International Year for the World's Indigenous People (1993), proclaimed by the General Assembly in its resolution 45/164 of 18 December 1990, presents a timely opportunity to mobilize further international technical and financial cooperation. Objectives

26.3. In full partnership with indigenous people and their communities, Governments and, where appropriate, intergovernmental organizations should aim at fulfilling the following objectives: a. Establishment of a process to empower indigenous people and their communities through measures that include: i. Adoption or strengthening of appropriate policies and/or legal instruments at the national level; ii. Recognition that the lands of indigenous people and their communities should be protected from activities that are environmentally unsound or that the indigenous people concerned consider to be socially

and culturally inappropriate; iii. Recognition of their values, traditional knowledge and resource management practices with a view to promoting environmentally sound and sustainable development; iv. Recognition that traditional and direct dependence on renewable resources and ecosystems, including sustainable harvesting, CONTINUE to be essential to the cultural, economic and physical well-being of indigenous people and their communities; v. Development and strengthening of national dispute-resolution arrangements in relation to settlement of land and resource-management concerns; vi. Support for alternative environmentally sound means of production to ensure a range of choices on how to improve their quality of life so that they effectively participate in sustainable development; vii. Enhancement of capacity-building for indigenous communities, based on the adaptation and exchange of traditional experience, knowledge and resource-management practices, to ensure their sustainable development; b. Establishment, where appropriate, of arrangements to strengthen the active participation of indigenous people and their communities in the national formulation of policies, laws and programmes relating to resource management and other development processes that may affect them, and their initiation of proposals for such policies and programmes; c. Involvement of indigenous people and their communities at the national and local levels in resource management and conservation strategies and other relevant programmes established to support and review sustainable development strategies, such as those suggested in other programme areas of Agenda 21. Activities

26.4. Some indigenous people and their communities may require, in accordance with national legislation, greater control over their lands, self-management of their resources, participation in development decisions affecting them, including, where appropriate, participation in the establishment or management of protected areas. The following are some of the specific measures which Governments could take: a. Consider the ratification and application of existing international conventions relevant to indigenous people and their communities (where not yet done) and provide support for the adoption by the General Assembly of a declaration on indigenous rights; b. Adopt or strengthen appropriate policies and/or legal instruments that will protect indigenous intellectual and cultural property and the right to preserve customary and administrative systems and practices.

26.5. United Nations organizations and other international development and finance organizations and Governments should, drawing on the active participation of indigenous people and their communities, as appropriate, take the following measures, inter alia, to incorporate their values, views and knowledge, including the unique contribution of indigenous women, in resource management and other policies and programmes that may affect them: a. Appoint a special focal point within each international organization, and organize annual inter-organizational coordination meetings in consultation with Governments and indigenous organizations, as appropriate, and develop a procedure within and between operational agencies for assisting Governments in ensuring the coherent and coordinated incorporation of the views of indigenous people in the design and implementation of policies and programmes. Under this procedure, indigenous people and their communities should be informed and consulted and allowed to participate in national decision-making, in particular regarding regional and international cooperative efforts. In addition, these policies and programmes should take fully into

account strategies based on local indigenous initiatives; b. Provide technical and financial assistance for capacity-building programmes to support the sustainable self-development of indigenous people and their communities; c. Strengthen research and education programmes aimed at: i. Achieving a better understanding of indigenous people's knowledge and management experience related to the environment, and applying this to contemporary development challenges; ii. Increasing the efficiency of indigenous people's resource management systems, for example, by promoting the adaptation and dissemination of suitable technological innovations; d. Contribute to the endeavours of indigenous people and their communities in resource management and conservation strategies (such as those that may be developed under appropriate projects funded through the Global Environment Facility and the Tropical Forestry Action Plan) and other programme areas of Agenda 21, including programmes to collect, analyse and use data and other information in support of sustainable development projects.

26.6. Governments, in full partnership with indigenous people and their communities should, where appropriate: a. Develop or strengthen national arrangements to consult with indigenous people and their communities with a view to reflecting their needs and incorporating their values and traditional and other knowledge and practices in national policies and programmes in the field of natural resource management and conservation and other development programmes affecting them; b. Cooperate at the regional level, where appropriate, to address common indigenous issues with a view to recognizing and strengthening their participation in sustainable development. Means of implementation (a) Financing and cost evaluation

26.7. The Conference secretariat has estimated the average total annual cost (1993-2000) of implementing the activities of this programme to be about \$3 million on grant or concessional terms. These are indicative and order-of-magnitude estimates only and have not been reviewed by Governments. Actual costs and financial terms, including any that are non-concessional, will depend upon, inter alia, the specific strategies and programmes Governments decide upon for implementation. (b) Legal and administrative frameworks

26.8. Governments should incorporate, in collaboration with the indigenous people affected, the rights and responsibilities of indigenous people and their communities in the legislation of each country, suitable to the country's specific situation. Developing countries may require technical assistance to implement these activities. (c) Human resource development

26.9. International development agencies and Governments should commit financial and other resources to education and training for indigenous people and their communities to develop their capacities to achieve their sustainable self-development, and to contribute to and participate in sustainable and equitable development at the national level. Particular attention should be given to strengthening the role of indigenous women.

C. GLOBALLY ADOPTED OBLIGATIONS

1. FAILURE TO ABIDE BY RECOMMENDATIONS FROM CARACAS CONGRESS

D. INTERNATIONAL OBLIGATIONS AND THE CLAYOQUOT INJUNCTION

In September I tried to set aside the injunction because I thought that the granting of the injunction was a flagrant abuse of the justice system. here, those who were calling for Canada to enforce its own statutory laws and abide by its international obligations were been condemned as criminals.

In the application to grant the injunction and to extend the injunction, there was a failure to inform the Judge that Canada has not lived up to its international commitment to preserve a significant area of international worth: a network of intact old growth watershed, conservation corridors including Clayoquot sound (this type of extensive preservation has currently been carried out in Australia, and Australia has applied to have this network of temperate rainforests designated as an international heritage site at the recent meeting in 1993 of the World Heritage Committee at UNESCO)

1. Under the Convention of Treaties Canada is also bound to not invoke internal law to justify non performance of treaty obligations

B.C. has invoked internal law by granting an injunction that could contribute to the non performance of international obligations. It is for this reason that the court should seriously reconsider the justifiability of issuing an injunction to permit activities that could be in contravention of international obligations. We bring this request to rescind the injunction primarily because we are concerned that contempt for international, national and provincial environmental law reflected in years of non compliance by industry, and non-enforcement by government, has resulted in environmental degradation of the forest ecosystems.

()that In 1997 I drafted the following report card on Compliance with international obligations: prepared by the International Law and Obligations Institute (ILOI) for circulation. The ILOI is preparing a series of reports related to different international obligations

RECALLING THAT

THE IUCN PASSED THE FOLLOWING RESOLUTION

Resolution passed by the IUCN General Assembly meeting at Buenos Aires, Tuesday, January 25, 1994

19.72REV2 North American Coastal Temperate Forests

(Retyped with January 25 Amendments from the floor)

RECOGNISING that temperate coniferous forests, and especially rain forests, constitute a very rare type of ecosystem in the world, originally covering less than one-fifth of one percent of the earth's land surface, and that one half of the earth's original forest of this type occurs along the pacific Coast of North America from northwestern California to southeastern Alaska;

UNDERSTANDING that many endemic and unusual plants and animals occur only in these forests; and that in biomass productivity, the old growth forests (ancient forests) of this biome are unequaled anywhere;

AWARE that more than one half of the Earth's original coastal coniferous forests (ancient forests) have been logged, including more than 40 % of the ancient forests of this type on North America, and that few large unfragmented examples of this type of forest, other than in protected areas, exist outside of British Columbia and Alaska;

MINDFUL of the fact that such ancient forests on Vancouver Island and on the mid-coast of British Columbia are disappearing at a rapid rate as a result of practices that have, to date, not been ecologically sustainable;

ALSO, MINDFUL that past management practices have been controversial, while the US government has enacted legislation to ensure sustainable management of all forests, questions continue to arise;

UNDERSTANDING that the Raincoast Conservation Society, the Sierra Club, and the Western Canada Wilderness Committee have proposed a large network of protected areas, including conservation corridors, in areas of such ancient forests on Vancouver Island and the midcoastal of British Columbia;

AWARE of the fact that none of the protected areas that Canada maintains in forest areas along the Pacific Coast have been designated as World Heritage sites under the

provisions of the World Heritage Convention[s] and that these ancient forests may be of outstanding universal value;

The General Assembly of IUCN — the World Conservation Union, at its 19th Session in Buenos Aires, Argentina, 17-26 January 1994:

1. URGES the Government of Canada and the United States to properly manage the temperate coastal coniferous forests of the Pacific Coast of North America by establishing appropriate protected areas and by adopting ecologically oriented systems of forest management which can be permanently sustained and which protect biodiversity;
2. CALLS UPON the Governments of Canada and British Columbia to substantially expand the amount of land in networks of protected areas, with conservation corridors, on Vancouver Island and the midcoast of British Columbia, taking into consideration the recommendations of environmental groups active in the regions such as the Raincoast Conservation Society, the Sierra Club and the Western Canada Wilderness Committee;
3. URGES the Government of Canada to consider nominating sites or combinations of sites (such as networks), in these forests as World Heritage sites under the World Heritage Convention[s];
4. RECOMMENDS that special efforts be made by these parties and their citizens to restore degraded parts of these forests and to secure the overall integrity of the biome by linking now separate forest stands

Moved by Michael McClosky International Sierra Club and Joan Russow member of the IUCN Commission on Education and communication 1994

While in 1997 the B.C. government has initiated a series of processes which have been purported to bring about compliance with international obligations. However, while deliberation proceeds under these processes, activities which are in violation of international obligations, also proceed. International obligations are either not being fulfilled, or if fulfilled, only minimally. This is a report card which evaluates the B.C. government's compliance with its international obligations under the Convention on Biological Diversity which was signed (June 13, 1992) and ratified (December 4, 1992) by Canada, and which is now in force (December, 29, 1993).

Report card: on B.C. compliance to the Convention on Biological Diversity:

1. Demonstration of the importance of Biological

Diversity through actions

D

the importance of biological diversity for evolution and for maintaining life sustaining systems of the biosphere, (Preamble of the Convention on Biological Diversity)

the conservation of biological diversity is a common concern of humankind,

The B.C. government in many of its publications suggests that it 'recognizes' the importance of biodiversity, and it "affirms that Biological diversity is a common concern of humankind." Yet, through the government's CONTINUED condoning of ecologically unsound practices, the government has not demonstrated its real commitment to biological diversity.

2. Invoking of "the precautionary principle"

F

...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity, Preamble)

The B.C. government does not have to wait until there is "scientific certainty" that clear-cut logging and other ecologically unsound practices "contribute to the reduction and loss of biodiversity." In this province the government should have acted to "avoid and minimize such as threat" by banning clear-cut logging.

3. Application of the "environmental impact assessment" principle

F

Environmental Impact Assessment of projects that are likely to have significant adverse effects on Biological Diversity. (Convention on Biological Diversity Article 14a)

The B.C. government has failed to carry out an environmental impact assessment of projects such as "timber extraction" licensing, which undoubtedly have significant adverse effect on biological diversity. In the Biodiversity Chapter of Agenda 21, the global community recognized "the loss of the world biological diversity, mainly from habitat destruction, over-harvesting, pollution ... ". The B.C. Government avoided calling for an environmental impact assessment on the Kemano Completion Project, which is arguably the most significant industrial development in B.C. during the past 30 years.

4. Identification of processes and categories of significant adverse impacts

F

Identify processes and categories of activities which have or are likely to have significant adverse impacts on the conservation and sustainable use of biological diversity ... (7 c)

B.C. government has failed to carry out independent arms length research to identify processes that could have significant adverse impacts on conservation . The provincial government has undertaken a massive highways project without concern for the project's impacts on biodiversity. If the processes had been identified, it is unlikely that clear-cut logging, the Alcan Completion Project, or the highways project would have been approved.

5. Sufficient identification of components of biodiversity

F

Identify components of biological diversity important for its conservation and sustainable use 7 (a)

The B.C. government failed, prior to signing the Convention on Biological Diversity, to sufficiently identify components of biological diversity, and in the interim between the signing and coming into force has permitted projects such as timber extraction to occur in areas of potentially significant biological diversity

7. recognition that there is an urgent need for scientific information about Biodiversity

C

Aware of the general lack of information and knowledge regarding biological diversity and of the urgent need to develop scientific, technical and institutional capacities to provide the basic understanding upon which to plan and implement appropriate measures,

for setting up scientific panel on biodiversity A

for limiting scientific panel to single regionD

for continuing to permit the loss of biodiversity before it has been identified
and studied F

8 Failure to adhere to the objective of the
convention: "the conservation of biological diversity .. F
" (Article 1)

failure to anticipate, prevent and attack the causes of significant reduction or loss
of biological diversity by preventing ecologically unsound timber extraction practices.....**D**

9. Failure to act with foresight for the benefit of future generations F

Determined to conserve and sustainably use biological diversity for the benefit
of present and future generations, .(Preamble Convention on Biological Diversity)

10. failure to establish a system of protected areas D
Establish a system of protected areas or areas where special
measures need to be taken to conserve biological diversity; (8a)

to protect ecosystems (8d) D
to promote the protection of natural habitats (8d) D
to promote the maintenance of viable populations (8d) D

11. Failure to promote environmentally sound and sustainable D
development

environmentally sound and sustainable development in areas adjacent to protected areas
with a view to furthering protection of these areas; (8e)

In the Carmanah Valley, the B.C. government has protected the lower part , but it may permit the logging of the upper part in a way that may jeopardize the protection of the lower park. This approach seems to be the government's 'balanced' approach to biodiversity.

12. Failure to rehabilitate and restore degraded ecosystems and promote the recovery of threatened species

Failure to rehabilitate and restore degraded ecosystems and promote the recovery of threatened species, *inter alia*, through the development and implementation of plans or other management strategies; 8f

tree farm "restoration"	F
some restoration work promising	C

13. Failure to develop or maintain necessary legislation and/or other regulatory provisions for the protection of threatened species and populations 8

F

1. B.C. since June 1992 has defeated the purpose of Biodiversity Convention by failing to have carried out an environmental assessment review of anything that could contribute to a reduction or loss of biodiversity

The former Canadian Ambassador for the Environment to the United Nations, Arthur Campeau, and the head of the Canadian Delegation at UNCED indicated that Canada was in non compliance with the Convention because of its failure to carry out an environmental assessment review. (Personal communication, March 1994)

In jurisdictions where an environmental impact assessment has been carried out, practices, typical of those carried out currently in BC forests, have been assessed as being destructive of biodiversity. For example, a German biologist specializing in biodiversity indicated that:

The practice of clear-cutting, followed by artificial reforestation has undoubtedly many technical and organizational advantages. In the course of time, however, soil scientists and

ecologists found out that the practice of clear-cutting automatically leads to considerable drawbacks:

- wounding of the soil surface through logging operations.
- Risk of erosion -High irradiation and higher climatic extremes alter the microclimate, the flora and the microflora and deteriorate the growing conditions for a number of valuable tree species. -
- Soil compression and a reduction of species richness
- An accelerated decomposition of organic matter occurs, combined with a wash out of nutrients, and the eutrophication of ground water, rivers and lakes occur

(Dr Schutt, Biological Department, University of Munich, Environmental Ethics Conference, 1992, Vancouver)

2. B.C. since June 1992 has defeated the purpose of Biodiversity Convention by failing to avoid or minimize threat of significant reduction or loss of biological diversity through invoking the precautionary principle

As of June 1992, Canada undertook the obligations under the Biodiversity Convention to invoke the precautionary principle which reads as follows:

..where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

- 'Biodiversity is defined in the Convention as

the variability among living organisms from all sources...and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems".

- 'Ecosystem' is defined as

a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit.

- There is sufficient evidence that clear-cut logging destroys biodiversity as defined above,

Dr. Richard Mittermeier, President of Conservation International, has stated that the precautionary principle, if invoked, could justify the banning of clear cut logging which contribute to loss and reduction of biodiversity (Personal Communication, IUCN Annual General Meeting, 1994)

3. B.C. since June 1992 has defeated the purpose of Biodiversity Convention through failing to have identified biodiversity

- Under the Convention the parties are required "to identify biodiversity"
- British Columbia had not sufficiently identified biodiversity at the time of signing the Convention, and British Columbia has CONTINUED to permit practices that contribute to the loss of biodiversity

Purpose to monitor, through sampling and other techniques, the components of biological diversity ... paying particular attention to those requiring urgent conservation measures ... (Article 7)

Purpose: to Identify processes and categories of activities which have or are likely to have significant adverse impacts on the conservation and sustainable use of biological diversity (Article 7c)

Purpose to identify a system of protected areas or areas where special measures need to be taken to conserve biological diversity (Article 8. In-situ conservation)

Purpose to protect ecosystems natural habitats and the maintenance of viable populations of species in natural surroundings (8c)

Purpose to promote environmentally sound and sustainable development in areas adjacent to protected areas with a view to furthering protecting of these areas; (8E)

purpose to provide the conditions needed for compatibility between present uses and the conservation of biological diversity and the sustainable use of these components. (* i)

Purpose to develop or maintain necessary legislation and/ or other regulatory provisions for the protection of threatened species and populations (8k)

Purpose *. l

Purpose to adopt measures relating to the use of biological resources to avoid or minimize adverse impacts on biological diversity (10b)

Purpose to protect and encourage customary use of biological resources in accordance with traditional cultural practices that are compatible with conservation of sustainable use requirements. `

27B Submission of the dispute to the International Court of Justice

1. ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD HAVE A SIGNIFICANT ADVERSE EFFECT ON BIODIVERSITY

B.C. has failed to carry out an environmental impact assessment of proposed projects that are likely to have significant adverse effects

- Since the signing of the Convention, B.C. has refused to carry out an environmental impact assessment of forest practices that could have impact on biodiversity. In the Convention B.C. was required to do the following:

Introduce appropriate procedures requiring environmental impact assessment of its proposed projects that are likely to have significant adverse effects on biological diversity with a view to avoiding or minimizing such effects and, where appropriate, allow for public participation in such procedures; (Article 14 a)

2. INVOKING THE PRECAUTIONARY PRINCIPLE TO JUSTIFY THE BANNING OF CLEAR CUT LOGGING

B.C. has failed to invoke the precautionary principle and call for the banning of clear-cut logging and other ecologically unsound practices that destroy biodiversity

- Canada has undertaken international obligations related to biodiversity; and
- 'Biodiversity is defined in the Convention as

the variability among living organisms from all sources...and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems".

- 'Ecosystem' is defined as

a dynamic complex of plant, animal and micro-organism communities and their non-living environment interacting as a functional unit.

- There is sufficient evidence that clear-cut logging destroys biodiversity as defined above,
- The practice of clear-cut logging destroys the prospect of forest regeneration and promotes erosion and permanent loss of forest and habitat

- One of the obligations of the Convention on Biological Diversity is to invoke the Precautionary Principle related to biodiversity:

...where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Convention on Biological Diversity)

B.C. does not have to wait until there is "scientific certainty" that clear-cut logging and other ecologically unsound practices "contribute to the reduction and loss of biodiversity for British Columbia to "avoid and minimize such as threat" by banning clear-cut logging.

3. PROTECTION AND IDENTIFICATION OF BIODIVERSITY

British Columbia had not sufficiently identified biodiversity at the time of signing the Convention, and British Columbia has CONTINUED to permit practices that contribute to the loss of biodiversity

- Under the Convention the parties are required "to identify biodiversity"

Identify components of biological diversity important for its conservation ...(Article 7, a)

4 PROTECTION OF CARBON SINKS

British Columbia under the Framework Convention on Climate Change is required to protect and enhance Green house gas sinks and reservoirs.

- Each of these Parties shall adopt national policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas sinks and reservoirs.

Clear Cutting down old growth forests that have acted as carbon sinks for centuries would lead to non-compliance with the requirement to protect carbon sinks.

Major international organization condemns forest practices in B.C. calling for " ecologically oriented systems of forest management which protect biodiversity.

Canada has undertaken under the UN Convention for the Protection of Cultural and Natural Heritage to identify sites of "outstanding universal worth". The IUCN the organization given the responsibility of recommending whether nominated sites should be so designated by the World Heritage Committee is an organization composed of representatives of 125 countries from both government and non-government organizations. At the 1994 Annual General Meeting of the IUCN, a resolution was passed linking the destruction of the coastal rain to current forest practices in B.C., and calling upon the governments of Canada and B.C. to substantially expand the amount of land in networks of protected areas, taking into consideration the recommendations of environmental groups active in the region such as ...the Western Wilderness. [Note that in the Western Wilderness proposal Clayoquot Sound was included]. and that Canada consider nominating sites or combination of sites (such as networks), in these forests as World Heritage sites under the UN Convention for the Protection of Cultural and Natural Heritage". This resolution passed unanimously with one country abstaining, Canada.

On July 19, 1994, Russow is filing documents seeking leave to appeal Drake's decision " that international law, not expressed in Canadian law, is irrelevant in the inquiry into the legitimacy of granting the injunction.

In the Convention for the Protection of Cultural and Natural Heritage the urgency of the global situation is noted:

Noting that the cultural heritage and the natural heritage are increasingly threatened with destruction not only by the traditional causes of decay, but also by changing social and economic conditions which aggravate the situation with even more formidable phenomena of damage or destruction (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

Considering that deterioration or disappearance of any item of the cultural or natural heritage constitutes a harmful impoverishment of the heritage of all the nations of the world (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

Considering that the existing international conventions, recommendations and resolutions concerning cultural and natural property demonstrate the importance, for all the peoples of the world, of safeguarding this unique and irreplaceable property, to whatever people it may belong (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

Considering that in view of the magnitude and gravity of the new dangers threatening them, it is incumbent on the international community as a whole to participate in the protection of the cultural and natural heritage of outstanding universal value... (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972)

THE ROLE OF THE UNITED NATIONS TODAY AND TOMORROW

DRAFT ABSTRACT:

UNITED NATIONS AFFIRMING ITS MANDATE THROUGH INTERNATIONAL STANDARDS DERIVED FROM INTERNATIONAL INSTRUMENTS

For fifty two years through international instruments, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

At a recent Intercession meeting of the Commission on Sustainable Development in March, member States of the United Nations, and UN institutions appeared to be devolving themselves of power and responsibility, and advocating the transferring of this power more and more to the corporate sector. Even at a time where at two recent conferences, the UN Conference on Women: Equality, Development and Peace, and the Habitat II conference members state of the United Nations undertook: “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

For the United Nations to strengthen its role internationally it must build on the over 50 years of obligations incurred, expectations created and commitments made through international instruments. The elements of a blueprint for change already exists scattered throughout international instruments; what is essential is a further synthesis of the principles crafted through the years of operation of the United Nations. Principles drawn from these instruments could form a new protocol linked with the Charter of the United Nations; this protocol could establish a comprehensive body of International standards and regulations that would contribute to the “Evolution into a world order that is

built on a foundation for Peace". An example of significant principles from a United Nations instrument is contained in the "Declaration on the Use of Scientific Technology for Peace and for the Benefit of Humanity". Another significant undertaking was through a 1981 General Assembly resolution to reduce the military budget and transfer it into social programs. (In 1981, the Global military budget was less than 50% of what it is now).

To achieve the "world order building on a foundation for Peace", the global community should move to a time where obligations are discharged, expectations fulfilled and commitments acted upon. The United Nations has laid the elements of the blueprint, it is time that United Nations fully establish this blueprint, and that the member States summon up the political will to move from years of rhetoric to action.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. This meeting will present an opportunity for the Toronto conference to circulate resolutions coming out of the conference deliberations.

Proposed by Joan E. Russow Ph.D

Joan E. Russow Ph.D

Background

Masters degree in education developing a method of teaching human rights linked to peace and environment within a context of international instruments.

Ph.D. in Interdisciplinary Studies.

Attended the United Nations Conference on Environment and Development (UNCED) as a member of an accredited organization, and worked on the alternative Earth Charter. Since 1992, sessional lecturer in Global Issues, Environmental Studies Program, University of Victoria

Co-ordinator, Global Compliance Research project. Received a Canadian International Development Association (CIDA) grant to carry out a content analysis of UN instruments of statements related to peace, human rights, environment and social justice; the research was compiled in a 350 page book entitled "the Charter of Obligations"; this book was sanctioned as a research document and circulated to every state delegation at the UN Conference on Women: Equality, Development and Peace. A subsequent version was prepared and circulated at the Habitat II Conference; in this version the proposed articles in the Habitat II were placed in the context of commitments from Habitat I and in the context of previous obligations incurred through international instruments. Currently circulating internationally a 50 page document containing significant environmental principles drawn from international instruments. I attended the recent Intercession meeting of the Commission on Sustainable Development, and have submitted a critique of the current government follow-up document.

Group affiliation:

Director, Vancouver Island Peace Society

Director, Council of Canadians (Victoria Branch)

Representative for the Canadian Voice of Women on the Abolition 2000 committee

Founder of the Global Compliance Research Project, and the ERA Ecological Rights Assoc.

Member of the World Conservation Union (IUCN) Commission on Education and Communication

Co-founder, Vancouver Island Human Rights Coalition

Member of the United Nations Assoc. (Victoria Branch). Attended recent Intercession meeting in New York under the auspices of the United Nations Association.

“A MODEST PROPOSAL”

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

Suggested actions for Earth Summit II in June, 1997

1. (a) On June 23, 1997 at the fifth anniversary of the United Nations conference on Environment and Development, we the member States of the United Nations undertake to sign and ratify international agreements that we have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition we undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

- Establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member

States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

1(b) In addition, we reaffirm the undertaking in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda

- revoke licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

1 (c) Further, we undertake to establish an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

2. (a) On June 24, 1997, we the member States of the United Nations undertake to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

We undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations.

Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

3. On June 25 1997. we the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

COMMENT ABOUT JIM hARRIS

hilton

Corporations need to be

treated like machines, robots, not persons.]

Corporations have been governments? Do you mean they have placed their friends into political leadership positions through money and other methods of influence - see ****On the Take: The Mulroney Years**** by Cameron, for example. This is an important point that connects well in relationship to Jim Harris with his cozy relationship with certain segments of the corporate world. How come he only surfaces into Green politics when there is a leadership contest? Prior to the 1995 Ontario election, Jim ran for leader of the GPO. He lost to incumbent Frank de Jong. Then Jim disappeared into his corporate workshop world. Now, just before the next Federal election, he reappears again. If he isn't elected leader is he going to disappear once again? And what compromising opportunities are we in store for if he is elected leader?]

MORE ON CHARTER CHALLENGE

even habits" and Jim was conducting workshops at General motors on this. Check out the internet for info on this. Covey is from Utah and has been described as a religious Robbins.

I have spent so many years of my life addressing intolerance in religion (I worked with the civil liberties in 1988 to get mandatory bible reading out of the school system in B.C.).

I have also taken a strong stand against the corporate sector by calling for regulations, enforcement, revoking of charters, compensation, raising taxes, eliminating tax deferrals. There are also well meaning people that work with industry condemning the activists for always being divisive (we/they format). Unfortunately those that embrace industry and work for change from within undermine the stronger command and control position of the activists.

I would appreciate your comments on these matters.

I think one criterion for running for the leadership of the Green party should be to reveal any past or present activities that could in some way be detrimental to the party. We are required to submit a bio but bios are selective.

Joan

>section 81 j the amount of 1000 must be deposited with the returning officer at the same time as the nomination papers and 1/2 of the deposit shall be returned to the candidate on satisfaction of the conditions set out in para 84/3/a

3. the amount deposited by a candidate pursuant to section 81 shall be dealt with in the following way

a. where the candidate's return referred to in section 228 has been transmitted within the time provided therefore and the candidate has complied, to the satisfaction of the CEO Chief election officer with ss 219-2. 50% of the deposit shall be returned to the candidates official agent other wise, that amount belongs to her majesty in right of Canada

while the other half shall be returned on satisfaction of the conditions set out in para 84/3 b

b. where the candidate receives at least 15% of the votes cast in an election in the electoral district in which the candidate is nominated pursuant to this act 50% of the deposit shall be returned to the candidates official agent.

Political party deposit

registration of a political party 50 candidates

even if they differentiate between no deposit require however, there is requirement for party logo, records

MORE ON JIM HARRIS [Might this have something to do with Jim? Please be bold!

Move from the general to the specific. Not necessarily at this point, but sooner or

later I want to see you say exactly what you mean. Is Harris a spy? A

plant for the big corporations? An innocent dupe? A simple puppet? What

is he doing in the Green Party? Why doesn't he have Dalton McGuinty's job

(the new leader of the Liberal Party of Ontario)? Richard Thomas tried

for it before and did rather well, coming in third after David Peterson

and Shiela Copps. Are we better off having him with his corporate ties close

to us or not?]

JOAN JOAN

FEIGNED CORPORATE CONCERN FOR THE ENVIRONMENT

The corporate approach to the environment was revealed early in 1971

prior to the Stockholm United Nations Conference on Humans and the Environment (UNCHE). The Organization for Economic Cooperation and Development (OECD), representing the most developed nations,

expressed concern about not the environmental costs resulting from increased regulation but the economic costs of new environmental regulations.

This corporate approach has been carried through until in 1991 when [the] International Standardization Organization (ISO) repositioned itself as a "standard setting body". The ISO supported by the major international polluters set up a whole new scheme for deregulation through self- initiated standards. Through this mechanism, corporations would state their own environmental policy and then be assessed on how well they conformed with this self initiated policy. They have convinced governments and international institutions that they are enlightened and capable and willing to go way beyond current external standards.through this voluntary process.

Part of this approach is a strong public relations program dedicated to persuading government and citizens of their concern for the environment. Their newly expressed concern is reflected in the advocating of a shift in response to the corporate sector from no longer being the enemy but to being a “partner” in this monumental task of redressing the ills of the past.

The partnership role has been reinforced by many “environmentalists” who are willing to work with industry on incremental changes like retrofitting and “Eco-efficiency”.

=====

[[m

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

Some of the systemic constraints preventing change contribute to the weakening of the resolve to demand change could be the following:

- (i) Institutional collusion between governments and the corporate sector
- (ii) wooing adversaries such as environmentalists with corporate funding
- (iii) environmental critics who participate in the round tables are often seduced by the process and agree to the decision achieved through consensus. In addition, this happens when environmentalists work too closely with industry in a partnership arrangement. Industry is only too happy to coopt the unsuspecting.

(iv) too many people who should be criticizing

corporations are working with them and being used to justify the CONTINUED socially inequitable and environmentally unsound practices; and they back off from proposing mandatory, regulatory, measures to bring about change.

(v) too many people rationalize self interest

For example, unions continually misuse their legitimate right to work to justify working in the arms industry, the uranium mining industry, the toxic, hazardous, and atomic product and waste industry, the ozone depleting, forest extraction etc.

Another example comes from individuals who purport to be concerned about change but are willing to work with industry to bring about change from “within”. At a recent meeting of the the World Conservation Union (IUCN) , Sir Martin Holgate, the former Secretary General of this organization was asked about his involvement with a dam project in India where hundreds of thousands of people had been displaced. There was a hush over the 2000 members in attendance waiting for denial. Rather than deny the veiled accusation, he replied that surely it is better to have an environmentalist monitoring the project. Unfortunately, his working for the company engaged in the project only served to endorse the project.

PROPOSALS FOR CHANGE

I have been reviewing international documents. I've found governments in recent UN conferences have undertaken "to "ensure that corporations including transnationals comply with national codes, social security, and international law, including environmental law.

It is time for governments to not just say that they will ensure compliance but act through regulations to ensure compliance. for too long States have been devolving themselves of responsibilities and not exercising power over the corporate sector.

In many ways the situation is worsening because civil society and governments are not prepared to stand up to the corporations.

The corporate sector has been violating human rights, degrading the environment, contributing to war and conflict, and denying socially equitable and environmentally sound development for too long!

We need to demand a number of measures. As leader of the Green Party of Canada I would ensure the following demands get heard:

1. that licenses of corporations that violate human rights, that cause
 - > environmental degradation, that contribute to conflict and war, and that deny socially equitable and environmentally unsound development shall be revoked. (see the work of Richard Grossman "Taking Care of Business").

2. that compensation and reparation be paid by corporations to countries to indigenous peoples, and to disenfranchised people whose land has been degraded, whose rights have been violated and whose lives have been destroyed through corporate support for oppressive regimes. It is not so much debt forgiveness but compensation and reparation for the devastation caused by the over-consumptive models of development imposed on developing countries that is necessary.

3. that corporate taxes be considerably raised and immediately transferred into social programs such as education, health and social security.

4. that all subsidies to corporate activity that perpetuate social inequity and environmentally unsound development be immediately disCONTINUED. in addition the 10.4 billion subsidy to the military should be reduced to at least half and the savings transferred into transfer payments for health, education, social programs and environmentally sound employment generation.

5. that all deferred taxes for corporate activities that have perpetuated socially inequitable and environmentally unsound development be collected immediately.
6. that all multi-stakeholder round tables extoling a decision making process that glorifies conflict of interest be disCONTINUED. These tables in practice invite corporate interests to determine through consensus policies that directly affect them and must be stopped.
7. that all attempts by industry through the international standardization organization's (is0) 14,000 to move away from "command and control" and regulations be disallowed.
8. that to ensure that corporations comply, state governments must undertake to sign and ratify agreements that they have not yet signed and ratified which they have earlier promised to sign and ratify and enact the legislation to ensure compliance and enforcement.
9. that all corporate intrusion into education at all levels be ended
10. that corporations no longer be allowed to donate funds or goods and services in kind to federal Canadian political parties. In addition all corporate connections of candidates including those for the leadership of parties be revealed.
- 11 that an International Court of Compliance be instituted where citizens could take evidence of state and corporate non-compliance.

ENEMIES OR PARTNERS

An e-mail from the U.S. Greens lists server was brought to my attention yesterday.

davelillie@aol.com,internet writes:

It is a very unfortunate byproduct of the military mindset to demonize or dehumanize what they perceive as the enemy, and as a result of horrible experiences during the various wars, most of us carry echoes of this.

Resist it. Respect your "enemies" and work to show them the error of their ways".

I believe that this type of statement epitomizes the problem. Apart from the famous recognition that "we have found the enemy and it is we [us]" we know who the enemy is.

IN HIS RESPONSE JIM HARRIS CITED A SIMILAR QUESTION THAT SOMEONE MUST HAVE POSED:

General Motors, which you list amongst your happy employers, is one of the >major armaments manufacturers, let alone contributors to the "car >culture". All those companies I am sure have "green" programs, but they

>are still not paragons of virtue. If you do become leader of the Green
>Party, I think there will be a perceived conflict between your career and
>position.

HE THEN DEFENDED HIS POSITION BY STATING THE FOLLOWING

“No. My career allows me the time to read, to campaign, to write. Food you bought at the store was driven there on a GM truck. So are you going to stop eating food bought at the store? Do you own a car? Is your house R2000? Or even better yet is it disconnected from all power, electricity, gas, and sewer like the house Greg Allen built? Are you a vegan only? What financial institution do you deal with? If it is a bank you're indirectly investing in dictatorships somewhere. Do you ever use Styrofoam? Is the coffee you drink only picked by collectives of workers in democratically elected cooperatives. Do you even know? “

AT A RECENT MEETING AT THE UNIVERSITY WHERE I WAS CRITICIZING CORPORATE INTRUSION INTO EDUCATION, AN ECONOMIST RAISED THE SAME SLIPPERY SLOPE ARGUMENT, WHICH HAS BEEN ETERNALLY POPULAR WITH THE POLLUTING AND MILITARY INDUSTRIES. I FEEL THIS ARGUMENT IS SYMPTOMATIC OF THE UNWILLINGNESS OF MEMBERS OF THE COMMUNITY TO TAKE A STRONG STAND AGAINST CORPORATIONS OR TO DEMAND OF GOVERNMENTS TO TAKE A STRONG STAND AGAINST THE CORPORATE SECTOR.

THE CORPORATE CONCERN ABOUT THE ENVIRONMENT WAS EXPRESSED EARLY IN 1971 PRIOR TO THE STOCKHOLM CONFERENCE ON THE ENVIRONMENT WHERE OECD EXPRESSED CONCERN ABOUT THE COST OF ENVIRONMENTAL MEASURES TO PROTECT THE ENVIRONMENT RATHER THAN BEING CONCERNED ABOUT THE COST OF NOT HAVING ENVIRONMENTAL MEASURES.

THIS CORPORATE THEME HAS BEEN CARRIED THROUGH UNTIL IN 1991 ISO (INTERNATIONAL STANDARDIZATION ORGANIZATION) SET UP A WHOLE NEW SCHEME FOR DEREGULATION, SELF- INITIATED STANDARDS WITH CONFORMANCE ASSESSMENT.

AS EARLY AS 1972, AT THE STOCKHOLM CONFERENCE ON HUMANS AND THE ENVIRONMENT, GOVERNMENTS UNDERTOOK MEASURES SUCH AS ELIMINATING WEAPONS OF MASS DESTRUCTION.

IN 1974 GOVERNMENTS AGREED THAT SCIENCE AND TECHNOLOGY SHOULD BE USED FOR PEACE AND FOR THE BENEFIT OF HUMANITY

IN 1976, AT HABITAT 1 GOVERNMENTS UNDERTOOK TO MOVE TOWARDS RENEWABLE ENERGY

IN 1981 IN A GENERAL ASSEMBLY RESOLUTION GOVERNMENTS UNDERTOOK TO REDUCE THE MILITARY BUDGET AND TRANSFER IT INTO SOCIAL PROGRAMS (AT THAT TIME THE BUDGET WAS 50% OF WHAT IT IS NOW)

IN 1982, IN THE WORLD CHARTER OF NATURE, GOVERNMENTS AGREED TO RESPECT THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE.

WE ARE MOVING BACKWARDS. ONE OF THE REASONS IS THE SHREWDNESS OF THE CORPORATIONS. THEY HAVE BEEN COLLUDING WITH GOVERNMENTS (OR HAVE BEEN GOVERNMENTS) AND WOOING ADVERSARIES SUCH AS ENVIRONMENTALISTS WITH MONEY. SHELL HAS HAD ITS LUCRATIVE ENVIRONMENTAL FUND FOR YEARS. ACCEPTANCE OF FUNDING FROM THIS TYPE OF CORPORATE SPONSOR CONTRIBUTES TO THE WEAKENING OF THE RESOLVE TO DEMAND CHANGE. ENVIRONMENTAL CRITICS WHO PARTICIPATE IN THE ROUND TABLES ARE OFTEN SEDUCED BY THE PROCESS AND AGREE TO THE DECISION ACHIEVED THROUGH CONSENSUS. TOO MANY PEOPLE WHO SHOULD BE CRITICIZING CORPORATIONS ARE WORKING WITH THEM AND BEING USED TO JUSTIFY THE CONTINUED SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND PRACTICES. UNIONS CONTINUALLY MISUSE THEIR LEGITIMATE RIGHT TO WORK TO JUSTIFY WORKING IN THE ARMS INDUSTRY, THE URANIUM MINING INDUSTRY, THE TOXIC, HAZARDOUS, AND ATOMIC PRODUCT AND WASTE INDUSTRY, THE OZONE DEPLETING, FOREST DEVASTATION, AND THEY BACK OFF ON SERIOUS RECOMMENDATIONS TO ADDRESS CLIMATE CHANGE.

AT A RECENT MEETING OF THE IUCN, THE WORLD CONSERVATION UNION, SIR MARTIN HOLGATE, THE FORMER SECRETARY GENERAL OF THIS ORGANIZATION WAS ASKED ABOUT HIS INVOLVEMENT WITH A DAM PROJECT IN INDIA. THERE WAS A HUSH OVER THE 2000 MEMBERS IN ATTENDANCE WAITING FOR DENIAL. BUT HE SAID ISN'T BETTER TO HAVE AN ENVIRONMENTALIST MONITORING THE PROJECT. UNFORTUNATELY, HIS PRESENCE WORKING FOR THE COMPANY ENGAGED IN THE PROJECT WOULD ONLY SERVE TO ENDORSE THE PROJECT.

EVERY OTHER PARTY RUNNING IN THE ELECTION IS EITHER SUPPORTED BY THE CORPORATE SECTOR OR BY ALL UNIONS INCLUDING THOSE THAT ENGAGE IN DESTRUCTIVE PRACTICES.

THE GREEN PARTY SHOULD STAND UP TO THE CORPORATIONS AND TO UNIONS THAT ASSERT THEIR RIGHT TO WORK IN DESTRUCTIVE PRACTICES.

I HAVE BEEN REVIEWING INTERNATIONAL DOCUMENTS AND GOVERNMENTS IN RECENT UN CONFERENCES HAVE UNDERTAKEN TO “ENSURE THAT CORPORATIONS INCLUDING TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, INTERNATIONAL LAW, INCLUDING ENVIRONMENTAL LAW. FOR TOO LONG States HAVE BEEN DEVOLVING THEMSELVES OF RESPONSIBILITIES AND NOT EXERCISING POWER OVER THE CORPORATE SECTOR.

THE CORPORATE SECTOR HAS BEEN VIOLATING HUMAN RIGHTS, DEGRADING THE ENVIRONMENT, CONTRIBUTING TO WAR AND CONFLICT, AND DENYING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT FOR TOO LONG.

WE NEED TO DEMAND A NUMBER OF MEASURES:

1. THAT licenses OF CORPORATIONS THAT VIOLATE HUMAN RIGHTS, CAUSE ENVIRONMENTAL DEGRADATION, CONTRIBUTE TO CONFLICT AND WAR, AND DENY SOCIALLY EQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT SHALL BE REVOKED (SEE THE WORK OF RICHARD GROSSMAN “TAKING CARE OF BUSINESS”)
2. THAT COMPENSATION AND REPARATION BE PAID BY CORPORATIONS TO COUNTRIES AND INDIGENOUS PEOPLES, AND DISENFRANCHISED PEOPLE WHOSE LAND HAS BEEN DEGRADED, WHOSE RIGHTS HAVE BEEN VIOLATED AND WHOSE LIVES HAVE BEEN DESTROYED THROUGH CORPORATE SUPPORT FOR OPPRESSIVE REGIMES
3. THAT CORPORATE TAXES BE CONSIDERABLY RAISED AND IMMEDIATELY TRANSFERRED INTO SOCIAL PROGRAMS SUCH AS EDUCATION, HEALTH AND SOCIAL SECURITY
4. THAT ALL SUBSIDIES TO CORPORATE ACTIVITY THAT PERPETUATES SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT BE IMMEDIATELY DISCONTINUED
5. THAT ALL DEFERRED TAXES FOR CORPORATE ACTIVITIES THAT HAS PERPETUATED SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT
6. THAT ALL MULTI-STAKEHOLDER ROUND TABLES THAT EXTOL A DECISION MAKING PROCESS THAT GLORIFIES CONFLICT OF INTEREST BE DISCONTINUED. THESE TABLES IN PRACTICE INVITE CORPORATE INTERESTS TO DETERMINE THROUGH CONSENSUS POLICIES THAT DIRECTLY AFFECT THEM
7. THAT ALL ATTEMPTS BY INDUSTRY THROUGH ISO 14,000 TO MOVE FROM “COMMAND AND CONTROL” AND REGULATIONS WITH EXTERNAL STANDARDS

TO VOLUNTARY CONFORMANCE TO SELF-INITIATED STANDARDS BE
DISALLOWED.

8. THAT TO ENSURE THAT CORPORATIONS COMPLY, STATE GOVERNMENTS
MUST UNDERTAKE TO SIGN AND RATIFY AGREEMENTS THAT THEY HAVE
NOT YET SIGNED AND RATIFIED, AND ENACT THE LEGISLATION TO ENSURE
COMPLIANCE AND ENFORCEMENT.

RE RIO + 5 REPORT FROM THE UN

Dear Committee working on the platform

As you know, I have been circulating a rather lengthy document related to platform and policy. I think it is absolutely essential to be as inclusive as possible and we should certainly think seriously about preparing at least about a 25 page document with issues and actions.

I just came back from the Inter-sessional meeting —an update to United Nations Conference on Environment and Development (UNCED), in New York where governments are discussing the best way of preparing a document for the upcoming Earth Summit II in June in New York.

The meeting in New York was a replay of our discussion. The Non governmental organization (NGO) document was not inclusive and did not follow the original set up of Agenda 21—the 700 page action document coming from the Earth Summit in 1992. When I was there I went through the document that I had prepared for circulation to the Green Party — the seven part document that was circulated, and I placed all the sections into the different chapters of Agenda 21.

I also added a few new chapters related to democracy and proportional representation.

The Chair of the Government meeting had also prepared a working document based on submissions by the different governments. This document was also short and did not address all the issues that were noted as urgent in Rio.

I PRESENTED THE GREEN PARTY/UNCED DOCUMENT TO THE CHAIR OF THE GOVERNMENT MEETING. JUST AFTER I PRESENTED THE DOCUMENT TO THE CHAIR, THE HEAD OF THE G77 AND CHINA—REPRESENTING MOST OF THE “DEVELOPING” COUNTRIES REPORTED FROM A MEETING THE PREVIOUS DAY WHERE THEY HAD CALLED FOR THE TYPE OF DOCUMENT THAT I HAD SUBMITTED TO THE CHAIR. IN ADDITION THE DELEGATE FROM COLUMBIA STATED THAT UNLESS WE ARE INCLUSIVE WE WILL be ignoring key concerns of the members

Canada and New Zealand on the other hand advocated the selection of a few key issues.

I have not yet seen what the governments have decided on.

I think in many ways it takes longer to agree on a reduced document that excludes issues than one that is inclusive.

I was wondering if it might be strategic to reconsider the new document that I have prepared because of the linking with Agenda 21; it needs a tremendous amount of work but it is quite inclusive. The Rio process will be continually in the News, and if we can say that we have linked out platform to the UNCED as well as going beyond UNCED by including principles from subsequent conferences, we would be able to demonstrate additional international support for our policies.

CHARTER CHALLENGE

RE: \$1000 fee for candidates

When I was at a Toronto meeting with Green party members, we were discussing the problem for potential federal Green party candidates of the \$1000 fee.

I proposed that we initiate a Charter challenge under section 15, the equality before the law clause.

In addition we could challenge the fee through the ombuds offices across the country as being "administrative unfairness" and link it in with the denial of "proportional representation".

I was talking to a lawyer at the meeting and I will be in contact with him.

Before I go any further on this, could you let me know what has already been done. I'm sure that the Green party at some time has taken a stand on this issue.

Joan Russow

() THAT in 1997 on March 25,-2 I sent out e-mails to some Green Party members about my concerns about Jim Harris and about his support for corporations and I reported back about rio+5

() THAT in 1997 I received a response from: cpb@gatewest.net (Chris Paul Billows)

To: jrussow@coastnet.com (Joan Russow)

Subject: Re: To do away with a regressive elections act...

Date: Tue, 25 Mar 1997 04:19:46 GMT

Organization: Canadians for Proportional Representation

To Chris

Thank you for your response

It is amazing that the government could pass so regressive a message "The other part of the unfairness is that achieving 15% of the vote results

>in a public grant of 50% of the cost of the election. For major party
>candidates, this grant often has a value that exceeds \$20,000."bill.

I am

dismayed that the minor parties did not work more closely together.

I hope that will be one thing that will happen in the future, something I personally will work towards. The minor parties have to unite if they wish to change our electoral system.

Perhaps following the GPC Leader election, a committee dedicated to this goal should be struck?!

I mentioned this idea at the Green Party meeting to a couple of the members when I was in Toronto.

Joan

() in 1997 on March 21, with Stuart Parker, I sent out a press release

EXHIBIT

() THAT in 1997, on March 27, I submitted the draft international affairs platform

>() THAT in 1997 I submitted Original Written by: IN:segatti@web.net.

EXHIBIT

>=====

>The international Affairs platform

The international affairs platform has been divided into different Chapters that correspond somewhat to the divisions of the United Nations Plan of Action. It has been divided in this way to assist Green Party candidates in the upcoming election to use this document as a lobbying document, and to be able to link the issues in with those being discussed at the Earth Summit II the lead-up to which will be getting a lot of press.

[[To ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "Other status" which indicated the intention to include

other grounds as they arose. Through various human rights instruments, States have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status. In other documents "sexual orientation" has also been included, but remained bracketed. In keeping with the intention of 'other status' in the Universal Declaration of Human Rights, the Canadian government should include this ground. in all Canadian human rights documents, and lobby for its inclusion in all international human rights documents]]

Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

Here is a revision

THE INTERNATIONAL AFFAIRS PLATFORM STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

The Green party government in Canada supports a strong United Nations, and mandatory international standards and regulations drawn from International principles; it would also advocate that these standards and regulations be harmonized continually upwards to correspond to the highest state principles, standards and regulations. .

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security, and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

The Green party of Canada could support the following proposal:

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

A Green party government in Canada could support the following actions for Earth Summit II in June, 1997 — the fifth anniversary of the United Nations conference on Environment and Development (UNCED)

1. At the Earth Summit II, the member States of the United Nations undertake to sign and ratify international agreements that they have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition they undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

2. At the Earth Summit II, the member States of the United Nations undertake to act upon the commitment in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

To act upon this commitment, a Green party government in Canada would propose the following measures:

(i) the establishment mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

(ii) the revoking of licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

(iii) the institution of an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

3. At the Earth Summit II, member States of the United Nations undertake to act upon the Malaysian General Assembly resolution which affirmed that “the continuing existence of nuclear weapons poses a threat to all humanity and that their use would have catastrophic consequences for all life on earth (Dec,10 1996 response to the International Court of Justice decision on the use or threat to use nuclear weapons being against international humanitarian law).

To act upon the resolution member States of the United Nations will embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

In order to achieve a permanent elimination of nuclear weapons, and because of the fatal link between civil and military nuclear power, .

member States of the United Nations must also endorse an international uranium suffocation program, a moratorium on further nuclear plants, and a time-bound phase-out of existing nuclear plants

In addition, the member States of the United Nations undertake to ensure that all circulation and berthing of nuclear powered and nuclear armed vessels disCONTINUE.

4. At the Earth Summit II, the member States would undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to

reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

5. At the Earth Summit II, the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

In order to prevent further environmental degradation and human rights violation, we the member States of the United Nations will fully act upon our commitment under principle 14 of the Rio Declaration which calls for the prevention of the transfer to other States of substances or activities that cause environmental degradation or that are harmful to human health. We also acknowledge that this principle includes toxic, hazardous, and atomic substances and wastes and associated activities, and that prior informed consent by the receiving country does not absolve us from the commitment to transfer these substances. In addition we will extend this principle to include transfer within States to lands of indigenous peoples, or to communities of marginalized citizens.

6. At the Earth Summit II, the member States of the United Nations will undertake to act upon a commitment in recent UN Conferences to move away from the overconsumptive model of development and reject the notion that economic growth will solve the urgency of the global situation. To achieve the moving away from the current overconsumptive model of development the A Green party government would propose the following measures be taken in the following areas

[[reference to the rest of the program]]

-
-

7. At the Earth Summit II, the member States of the United Nations will undertake to invoke the precautionary principle (Rio Declaration, Convention on Biological Diversity,

and Framework convention on Climate Change Convention) and not wait until there is scientific certainty that environmental degradation, loss or reduction of biodiversity, or climate change will occur for current practices causing environmental degradation, loss or reduction of biodiversity, or climate change to be banned, disCONTINUED, or phased out..

In addition, member States of the United Nations will adhere to the prevention of disasters principle as enunciated in the Habitat II Agenda, and ban, disCONTINUE and phase out the use of substances and activities that could potentially cause disasters. For all future activities and substances. States will undertake to endorse the reverse onus principle which requires the proponent of an intervention into the ecosystem to have to demonstrate the safety of the intervention rather than the opponent having to demonstrate harm.

ACTION FOR COMPLIANCE

Citizens must be aware that the United Nations through years of international meetings has already drafted the blueprint for the actions that are necessary to address the urgency of the global situation. International public policy already exists in the complex of United Nations documents., and that member States of the United Nations have failed either to comply with this international public policy, or to determine what would constitute compliance. What is needed now , immediately is compliance with the existing body of obligations, expectations. and commitments

A Green party government in Canada could ensure that citizens of Canada will be aware of international instruments, and encourage the use of international instruments in Canada including ensuring that citizens receive standing in the courts of Canada to bring to the attention of the courts Canada's non-compliance with international law. In addition a Green party government in Canada could lobby internationally to ensure state and corporate compliance with international obligations, expectations and commitments.

EXHIBIT

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.

For fifty two years through international agreements, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations, and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. At this meeting, they will be endorsing a document related to the follow-up to the United Nations Conference on the Environment and Development (UNCED),

“A MODEST PROPOSAL”

The Earth Summit II is important primarily for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants; of expectations created through General Assembly resolutions, and of commitments made through conference action plans have not been undertaken, and that most of the obligations, expectations and commitments have neither been discharged, fulfilled, nor acted upon, and that it is time for compliance through action.

Suggested actions for Earth Summit II in June, 1997

1. (a) On June 23, 1997 at the fifth anniversary of the United Nations conference on Environment and Development, we the member States of the United Nations undertake to sign and ratify international agreements that we have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement. In addition, we undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

- Establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member States harmonized continually upwards. MINS will then drive industry to BEST (best equitable/environmentally sound traditions) practices.

1(b) In addition, we reaffirm the undertaking in the Platform of Action in the UN Conference on Women: Equality, Development and Peace and in the Habitat II Agenda “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

- revoke licenses and charters of corporations including transnationals if the corporations have violated human rights, caused environmental degradation, or contributed to conflict and war.

1 (c) Further, we undertake to establish an International Court of Compliance where citizens can take evidence of state and corporate non-compliance.

2. (a) On June 24, 1997. we the member States of the United Nations undertake to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

We undertake immediately to reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into socially equitable and environmentally sound work, and (iii) into strengthening the United Nations.

Currently the global community spends 850 billion on the military. It should be noted that in 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs particularly in the developing countries. In 1981 the military budget was less than 50% of what it is now.

3. On June 25 1997. we the member States of the United Nations will demand and ensure compensation and reparation will be sought from corporations and sympathetic administrations for the environmental degradation and human rights violation in

developing countries, on lands of indigenous peoples and in the communities of the marginalized citizens in both developing and developed countries. The so-called debt of the developing countries is not a debt to be forgiven but rather an obligation of the developed States to redress, compensate and restore. Debt implies benefit and little benefit was derived from the years of corporate, along with sympathetic administration exploitation of developing countries, indigenous peoples, and marginalized citizens. It is a time for redress, compensation and restoration.

() THAT in 1997, I wrote an outline of what governments have agreed to do

EXHABIT

Through international agreements nation States have undertaken

- (i) to guarantee human rights including the right to be free from discrimination, the right to shelter, the right to food, the right to social security (international human rights instruments);
- (ii) to protect the cultural and natural heritage for future generations (Article 4 Convention on the protection of Cultural and Natural Heritage, 1972) ;
- (iii) to eliminate weapons of mass destruction (UNCHE, 1972);
- (iv) to promote international co-operation to ensure that the results of scientific and technological development are used in the interests of strengthening international peace and security, freedom and independence and also for the purpose of the economic and social development of peoples and the realization of human rights and freedoms in accordance with the Charter of the United Nations (Art. 2., Declaration on the Use of Scientific and Technological Progress in the Interests of Peace, UN General Assembly Resolution, 1975);
- (v) to declare that the use of nuclear weapons would be a violation of the Charter of the United Nations and a crime against humanity (Resolutions 1961, 1978, 1979, 1980, 1981);
- (vi) to reduce the military budgets, with a view to reaching international agreements to freeze, reduce or otherwise restrain military expenditures (A. 1 Resolution 36/82 1981, Reduction of Military Budgets. 1981) and to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (A 2. Resolution 36/82 1981, Reduction of Military Budgets. 1981);
- (vii) to respect the inherent worth of nature (Preamble, World Charter of Nature, 1982);
- (viii) to secure nature from degradation caused by warfare or other hostilities (Art. 5 UN Resolution, 37/7, World Charter of Nature, 1982);
- (ix) to declare that the preservation of the right of peoples to peace is a fundamental obligation of each state (2. Declaration on the Right of Peoples to Peace approved by General Assembly resolution 39/11 of 12 November 1984);
- (x) to demand that policies of States be directed towards elimination of the threat of war, particularly nuclear war (3. Declaration on the Right of Peoples to Peace; approved by General Assembly resolution 39/11 of 12 November 1984);

- (xi) xi) to commence negotiations, as a matter of priority, in order to achieve agreement on an international convention prohibiting the use or threat of use of nuclear weapons under any circumstances, taking as a basis the annexed draft (Art. 1. Convention on the Prohibition of the Use of Nuclear Weapons, 1983
- (xii) xii) to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992);
- (xiii) (xiii) to do nothing on indigenous lands that would cause environmental degradation or be culturally inappropriate (Art. 26.3.a.ii, Agenda 21, UNCED, 1992);
- (xiv) (xiv) to invoke the precautionary principle which affirms that, in the case of potential environmental damage, it is not necessary to wait for scientific certainty to act to prevent the damage (Principle 15 Rio Declaration);
- (xv) (xv) to carry out an environmental assessment review of anything that could contribute to loss or reduction of Biodiversity (Conventions on Biological diversity);
- (xvi) (xvi) to preserve carbon sinks (Art. 4 1 d Framework Convention on Climate Change, 1992); and from the Habitat II Agenda:
- (xvii) (xvii) to reduce the ecological footprint (Art. 27 b)
- (xviii) xviii) to protect fragile ecosystems and environmentally vulnerable areas (27e);
- (xix) to prevent anthropogenic disasters (27 i);
- (xx)
- (xxi) (xx) to prevent environmental damage through knowledge of eco-cycles (Art. 135). and so forth.

A key concept that has significant policy implications is that of international customary law. Simply put, where a principle of international law has been a long standing part of that law, it may be held to be a part of international customary law and deemed applicable as part of national law. For example, the principle of intergenerational equity i.e. the rights of future generations to a safe environment may be argued as falling within international customary law since it is found in a number of international documents beginning with the UN Conference on Humans and the Environment (UNCHE), 1972, including in the Convention on the Protection of Cultural and Natural Heritage (1972) through the World Charter of Nature (1982) to the various documents coming out of the United Nations Conference on the Environment (UNCED) 1992 (Agenda 21, The Convention on Biological Diversity and the Framework Convention on Climate Change).

SYSTEMIC CONSTRAINTS PREVENTING CHANGE

On June 2, the Secretary General of the Habitat Conference, Dr. Wally N'Dow stated that solutions do not lie in the recipes of the past.

The urgency of the global situation has been acknowledged throughout the United Nations documents: the continuing violation of human rights, the continuing destruction of the environment- ozone depletion, climate change, desertification, species extinction, deforestation, toxic hazardous, atomic waste production, the continuing escalation of war and conflict, and production of arms including weapons of mass destruction , and

continuing human misery - many dwellers live in absolute poverty, lacking adequate access to housing, to potable water and sanitation in overcrowded cities.

Yet when called upon to seriously address the urgency by rejecting old recipes, many States lack the necessary resolve.

Systemic Constraints Preventing Change

The lack of the necessary resolve is reflected in the perpetuation of the following systemic constraints:

The lack of political will of States to discharge obligations incurred through treaties, conventions, and covenants, and the lack of political will to fulfill expectations created through General Assembly resolutions, Conference Action Plans and Declarations.

The failure of States to sign instruments, to sign instruments without ratifying them, to ratify instruments without enacting the necessary legislation to ensure compliance, or to enact the necessary legislation without enforcing the legislation.

The failure of States to establish mandatory international standards based on long-standing principles established by the UN to guarantee human rights of citizens, to preserve, protect and conserve the environment, to prevent war and conflict and to enable social equity, equality and justice; and the reluctance of States to revoke the charters of corporations for failing to adhere to these standards.

The failure on the part of States to accept the authority of international bodies reflected particularly in the lack of willingness to appear before the International Court of Justice and being willing to disregard the rulings of the International Court of Justice.

The lack of vision to go beyond existing obligations and expectations, and to undertake new commitments that will fundamentally change the recipes of the past.

The final systemic constraint is that those who are in a power to bring about change are those that benefit most from the perpetuation of the recipes of the past.

CHAPTER 2

EQUITABLE AND ENVIRONMENTALLY SOUND FINANCIAL PROVISIONS

ENVIRONMENT, TRADE HUMAN RIGHTS AND REGULATIONS

“to prevent the transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health (Principle 14, Rio Declaration, UNCED, 1992)

- ENSURING THAT WORLD TRADE AGREEMENT AND NAFTA ARE UNDER THE CONTROL OF INTERNATIONAL LAW, AND THAT INTERNATIONAL LAW INCLUDING TREATIES, CONVENTIONS, COVENANTS, GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTIONS PLANS AND DECLARATION TAKE PRECEDENCE OVER TRADE AGREEMENTS

- LOBBYING STRONGLY FOR ALL States TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE

- COORDINATING SANCTIONS AGAINST THOSE COUNTRIES WHO ARE NOT COMPLYING WITH UNITED NATIONS OBLIGATIONS INCURRED FROM CONVENTIONS, TREATIES, AND COVENANTS, AND EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, CONFERENCE ACTION PLANS, AND DECLARATIONS

- ESTABLISHING REGULATIONS TO ALLOW States TO PLACE TARIFFS UPON, OR REFUSE ENTRY OF, PRODUCTS MADE WITH CHILD AND SLAVE LABOUR, OR THAT ARE ENVIRONMENTALLY UNSOUND, CULTURALLY INAPPROPRIATE OR HARMFUL TO HEALTH ;

- INSISTING THAT NO HAZARDOUS OR TOXIC WASTE BE DUMPED IN THIRD WORLD COUNTRIES AND/OR RURAL COMMUNITIES, OR ON INDIGENOUS LANDS; (INCLUDING THE SALE OF CANDU REACTORS AND ALL NUCLEAR TECHNOLOGY).

- ENSURING FAIR TRADE NOT FREE TRADE

EQUITABLE AND ENVIRONMENTALLY
SOUND FINANCE

“united determination to work urgently for the establishment of a new international Economic order based on equity,...interdependence, common interest and cooperation with systems which shall correct inequalities and address existing injustices... and to ensure steadily social development and peace and justice for present and future generations (Preamble, Declaration on the Establishment of an New International Economic Order, 1974).

- INSTITUTING AN ECONOMIC SYSTEM BASED ON EQUITY
- DEVELOPING A COMPREHENSIVE SET OF CRITERIA FOR ETHICAL INVESTMENTS
- CANCELING DEBT/DEBT FORGIVENESS AND REPARATION
- ENSURING THAT .7% OF GNP IS TRANSFERRED TO DEVELOPING COUNTRIES;
AND INCREASING IT TO AT LEAST 1%
- FORGIVING DEBT TO DEVELOPING COUNTRIES AND RESTRICTING CORPORATE PROFIT AND WEALTH TRANSFER FROM POOR TO RICH COUNTRIES;
- FAIRLY COMPENSATING DEVELOPING COUNTRIES FOR THE SALE OF THEIR COMMODITIES AND FOR PREVIOUS ACTIVITIES THAT HAVE CONTRIBUTED TO ENVIRONMENTAL DEGRADATION OR THAT HAVE BEEN HARMFUL TO HUMAN HEALTH
- DEVELOPING A COMPREHENSIVE SET OF CRITERIA FOR ETHICAL INVESTMENTS

- CONVERTING VESTED ECONOMIC INTEREST GATT TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND AGREEMENTS BASED ON PRINCIPLES DRAWN FROM INTERNATIONAL INSTRUMENTS

- INSTITUTING AN ECONOMIC SYSTEM BASED ON EQUITY AND INTERDEPENDENCY, COMMON INTEREST AND COOPERATION WHICH RECTIFIES EXISTING INJUSTICES

- REQUIRING ADHERENCE TO THE trans-boundary PRINCIPLE BY PREVENTING THE ENGAGING IN ENVIRONMENTALLY UNSOUND ACTIVITIES, AND THE PRODUCING OF ENVIRONMENTALLY UNSOUND SUBSTANCES

- REQUIRING OF CONDITIONAL FUNDING BASED ON THE GUARANTEEING OF HUMAN RIGHTS, ON ENSURING ENVIRONMENTAL PROTECTION AND PRESERVATION, AND ON PROMOTION OF PEACE

- ENDING WORLD HUNGER AND POVERTY THROUGH CHANGING PRIORITIES OF INTERNATIONAL FINANCE, COMMERCE, AND DEVELOPMENT ASSISTANCE

- DISCONTINUING SUBSIDIES FOR SOCIALLY INEQUITABLE AND ENVIRONMENTALLY HARMFUL ACTIVITIES

- CONDEMNING THE CONTINUED “FOREIGN-AID” (TRADE) POLICY DIRECTION OF STATE AND BUSINESS SELF-INTEREST COMPETITION, AND PROMOTING INTERNATIONAL COOPERATION AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- SUPPORTING LOCAL MARKETS, LAND REFORM, AND SELF-RELIANCE RATHER THAN CASH CROPS FOR EXPORT;

- IMPLEMENTING OR MAINTAINING TRADE SANCTIONS ON COUNTRIES WITH HUMAN RIGHTS VIOLATIONS

- DISCONTINUING ALL FOREIGN AID ASSISTANCE TO ALL EXISTING NUCLEAR, FOSSIL FUEL AND LARGE HYDRO-ELECTRIC RELATED PROJECTS, EXCEPT TO ASSIST WITH DECOMMISSIONING OR ENVIRONMENTAL RESTORATION;

- AWARDING ENERGY-RELATED FOREIGN AID TO COMMUNITY PROJECTS WHICH PROMOTE USE OF RENEWABLE ENERGY AND EFFICIENT USE OF RESOURCES.

- LIMITING FOREIGN AID TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PROJECTS

- PREVENTING THE EXPORT OF PRODUCTS BANNED IN THE COUNTRY OF ORIGIN

- CREATING JOBS IN COMMUNITIES BY REINVESTING PROFITS THROUGH REVOLVING COMMUNITY LOANS AND THROUGH USE OF LOCAL RESOURCES;

- ESTABLISH A COMMUNITY INVENTORY OF PRODUCTS NEEDED THAT WOULD ENSURE EVERY CITIZEN A REASONABLE STANDARD OF LIVING AND QUALITY OF LIFE.

- ENCOURAGING CITIZEN OWNERSHIP AND CONTROL OF RESOURCES WITHIN A FRAMEWORK OF OVERARCHING EQUITABLE AND ECOLOGICALLY SOUND PRINCIPLES

- INCREASING THE AMOUNT OF PUBLIC DEBT FINANCED BY THE BANK OF CANADA AT LOW OR NO INTEREST;

- REDUCING YEARLY DEFICITS BY GETTING RID OF SUBSIDIES TO ECOLOGICALLY

UNSUSTAINABLE INDUSTRIES (EG. NUCLEAR POWER, PETROCHEMICAL AND HIGH-TECH ARMS MANUFACTURERS);

- ENDING CORPORATE SUBSIDIES AND TAX DEFERRALS, EXCEPT FOR GREEN INDUSTRIES

- CREATING JOINT CO-OPERATIVE MANAGEMENT THAT WOULD ENSURE ELIMINATION OF OVERLAP BETWEEN PROVINCIAL AND FEDERAL GOVERNMENT DEPARTMENTS IN FORESTRY, AGRICULTURE, EDUCATION, SOCIAL PROGRAMS, HEALTH AND TRANSPORTATION, ETC., WITHOUT LOWERING STANDARDS OF LIVING AND/OR QUALITY OF LIFE.

- PROMOTING A FINANCIAL TRANSACTION TAX (FTT) TREATY AND LEGISLATION WHICH COVERS ALL INTERNATIONAL INVESTMENT AND CURRENCY TRADING. SUCH A TAX COULD FUND THE VARIOUS UNITED NATIONS AND NON-GOVERNMENTAL AID AGENCIES.

- PROMOTING AN INTERNATIONAL TREATY THAT WOULD ENSURE CITIZENS AND GOVERNMENTS THE RIGHT TO KEEP NATURAL AND MONETARY CAPITAL WITHIN THEIR COUNTRIES' BORDERS;

- >

- PROVIDING LOW- OR NO-INTEREST LOAN PROGRAM LEGISLATION. PROGRAM FUNDS WOULD BE DEPOSITED WITH THE NATIONAL BANKS BY CHARTERED BANKS, OTHER FINANCIAL INSTITUTIONS AND CORPORATIONS WITH ASSETS EXCEEDING \$100 MILLION. 5% OF THEIR CAPITAL ASSETS WOULD BE DEPOSITED TO ACT AS LIABILITY INSURANCE, SUBJECT TO LEGAL CONFISCATION AND LOSS OF CORPORATE CHARTER, IN THE EVENT THAT ANY OF THESE CORPORATIONS CAUSE ECOSYSTEM DAMAGE AND/OR PREVENTABLE SOCIAL DISLOCATION TO CITIZENS AND OTHER SPECIES.

CHAPTER 3

SOCIAL JUSTICE, EQUITY AND SECURITY ASSURANCES- BASIC NEEDS, FOOD SECURITY, AGRICULTURE, HEALTH, SHELTER PROVISIONS

SOCIAL JUSTICE, AND EQUITY AND SECURITY

“The States... recognize the right of everyone to an adequate standard of living. for himself [herself] and his [her] family, including adequate food, clothing and housing and to the continuous improvement of living conditions. the States parties will take [appropriate~] steps to ensure the realization of this right recognizing to this effect the essential importance of international co-operation based on free consent (Art.11.1, International Covenant on Economic, Social and Cultural Rights, 1966)”

- ENSURING THE RIGHT TO SAFE AND HEALTHY FOOD, SHELTER, HEALTH CARE, AND THE PROVISION FOR A GUARANTEED ANNUAL INCOME, FAIR PENSION AND SOCIAL SECURITY

- REDUCING POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT

- ENSURING THE RIGHT TO SAFE DRINKING WATER, AND SANITATION TO PRECLUDE BOTH MICROBIAL AND CHEMICAL CONTAMINATION;

- GUARANTEEING THE RIGHT TO UNIVERSAL HEALTH CARE PROVIDED THROUGH PUBLIC FUNDS WITH FAIR AND EQUAL ACCESS

- ENSURING THE RIGHT TO SHELTER THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY-SOUND AND WITH TENURE SECURITY

- PROVIDING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT WITH A SHORTER WORK WEEK WITH FULL BENEFITS FOR PART TIME WORKERS, AND WITH EQUAL PAY FOR WORK OF EQUAL VALUE

- GUARANTEEING ECOLOGICAL RIGHTS TO A SAFE ENVIRONMENT (CLEAN AND UNPOLLUTED AIR, WATER, AND LAND); AND TO AN ECOLOGICAL HERITAGE FOR FUTURE GENERATIONS

FOOD SECURITY

Every man, woman and child has the inalienable right to be free from hunger and malnutrition in order to develop fully and maintain their physical and mental faculties. Society today already possess sufficient resources, organizational ability and technology and hence the competence to achieve this objective. Accordingly, the eradication of hunger is a common objective of all the countries of the international community, especially of the developed countries and others in a position to help. (Sect.1. Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- GUARANTEEING THE RIGHT TO FOOD (THE RIGHT TO NON GENETICALLY ENGINEERED OR RADIATED FOOD, NUTRITIOUS ORGANICALLY GROWN FOOD)

- GUARANTEEING CONSERVATION OF FERTILE AREAS FOR GROWING FOOD

- REFOCUSING PRIORITIES TO SUPPORT DEVELOPMENT OF SELF-RELIANT FAMILY AND COMMUNITY FARMS THAT USE ECOLOGICALLY SENSITIVE METHODS OF FARMING.

- PROMOTING ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES

- REVISING THE CODEX ALIMENTARIOUS AND NATIONAL FOOD GUIDES SUCH AS THE CANADA FOOD GUIDE TO PRESENT LEGUMES, VEGETABLES, FRUITS AND GRAINS (WHICH CAN MEET ALL NUTRITIONAL NEEDS, WHILE REDUCING RELATED HEALTH PROBLEMS) AS A COMPLETE ALTERNATIVE TO A MEAT-BASED DIET.

- BANNING GENETICALLY ENGINEERED FOOD, AND IRRADIATED FOOD

HEALTH , RIGHTS AND ETHICS

- DEVELOPING EQUITABLE AND ETHICAL CRITERIA FOR DETERMINING MEDICAL CHOICES
- ESTABLISHING GUIDELINES FOR REPRODUCTIVE TECHNOLOGIES LIKE SURROGATE MOTHERHOOD
- ENSURING THE RIGHT OF ACCESS TO REPRODUCTIVE CHOICE: RESPECTING THE WOMAN'S RIGHT TO CHOSE, AND ACKNOWLEDGING THAT THE GOVERNMENT HAS NO ROLE IN THIS DECISION.
- CONDEMNING THE PRACTICE OF SEX SELECTION
- PROMOTING THE AVAILABILITY OF GENERIC OVER PATENTED DRUGS
- DECRIMINALIZING DOCTOR ASSISTED SUICIDE, AND EUTHANASIA
- BANNING GENETICALLY MODIFIED ORGANISM AND THE PATENTING OF HUMAN GENES
- LIMITING AND CONTROLLING BIOTECHNOLOGY
- ENSURING THE ETHICAL TREATMENT OF ANIMALS, PHASING OUT THE USE OF ANIMALS IN RESEARCH
- DISCONTINUING THE PRACTICE OF PRESCRIBING ANTIBIOTICS FOR VIRAL INFECTIONS, AND FOR NON-LIFE THREATENING BACTERIAL INFECTIONS
- LEGISLATING MIDWIFERY LOCALLY, NATIONALLY AND INTERNATIONALLY

- ENSURING EXTENDED MATERNITY AND PATERNITY LEAVE.
- >
- ENDORSING AND SUPPORTING BREAST FEEDING AS THE BEST WAY TO FEED AN INFANT.
 - CONDEMNING THE ADVERTISING AND PROMOTION OF ARTIFICIAL INFANT FORMULA TO THE PUBLIC.
 - ENSURING HIGHER SAFETY STANDARDS IN THE PRODUCTION OF MEDICAL PRODUCTS
 - DISCONTINUING THE PRACTICE OF PRESCRIBING ANTIBIOTICS FOR VIRAL INFECTIONS, AND FOR NON-LIFE THREATENING BACTERIAL INFECTIONS

CHAPTER 4

OVERCONSUMPTION REDUCTION AND EQUITABLE DISTRIBUTION OF RESOURCES

ENVIRONMENTALLY SOUND PRACTICES THROUGH REGULATIONS AND REDUCTION OF OVERCONSUMPTION

“the major cause of the CONTINUED deterioration of the global environment is the unsustainable pattern of consumption and production, particularly in industrialized countries, which is a matter of grave concern, aggravating poverty and imbalances. (4.3. Changing Consumption Patterns, Agenda 21. 1992, UNCED)

- PHASING OUT THE CURRENT UNSUSTAINABLE PATTERN OF CONSUMPTION THROUGH REGULATIONS AND EDUCATION
- REQUIRING ENVIRONMENTAL SOUND PRACTICES DRIVEN BY FORCED COMPLIANCE WITH REGULATIONS (PRINCIPLE DRIVING INDUSTRY RATHER THAN INDUSTRY COMPROMISING PRINCIPLE)

- ENSURING BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES
- ENSURING INTERNATIONAL STANDARDS DRAWN FROM PRINCIPLES FROM INTERNATIONAL INSTRUMENTS (MANDATORY INTERNATIONAL NORMATIVE STANDARDS -MINS)
- STRENGTHENING AND PROMOTING TRADITIONAL ENVIRONMENTALLY SOUND PRACTICES
- REQUIRING MANUFACTURERS TO ASSUME THE FULL RECYCLING, COMPOSTING AND OTHER DISPOSAL COSTS OF THEIR PRODUCTS IN AN ECOLOGICALLY SOUND MANNER.
- ENACTING THE FULL LIFE-CYCLE ANALYSIS OF ANY PRODUCT OR ACTIVITY THAT HAS POTENTIALLY HARMFUL ENVIRONMENTAL EFFECTS: THIS LIFE CYCLE ANALYSIS SHALL INCLUDE THE FULL LIFE CYCLE OF THE PRODUCT BY AN INDEPENDENT BODY
- INTRODUCING LEGISLATION TO PROMOTE THE REUSE OR REPLACEMENT OF MINERALS IN INDUSTRIAL PRODUCTION WITH RENEWABLE ALTERNATIVES.

CHAPTER 5

CHAPTER 6

HEALTH, RIGHTS AND ETHICS ASSURANCES

ENVIRONMENT-INDUCED DISEASE PREVENTION, AND BIOTECHNOLOGY ASSESSMENT

HEALTH AND ENVIRONMENT

“the health of the population depends at least as much on the control of environmental causes of poor health as on clinical responses to disease”. (93 Habitat II)

- IMPROVING PEOPLE'S QUALITY OF LIFE THROUGH PREVENTION OF DISEASE AND ILLNESS

- INCREASING FUNDING AND PROMOTING RESEARCH INTO ENVIRONMENTALLY-INDUCED DISEASES

- PROMOTING RESEARCH WHICH ADDRESSES THE LINKS SUPPRESSION OF OUR IMMUNE SYSTEM TO OZONE DEPLETION, PETROCHEMICAL POLLUTION AND BIOACCUMULATION OF PERSISTENT TOXINS INDICATES THAT PUBLIC HEALTH IS BEING ENDANGERED BY A DETERIORATING ENVIRONMENT.

- ENSURING THAT HEALTH RESEARCH AND SERVICES RESPOND TO THE NEEDS OF WOMEN, FIRST NATIONS AND MINORITIES;

- SIGNIFICANTLY INCREASING RESEARCH FUNDING INTO ALTERNATIVE HEALTH CARE METHODS WHICH COMPLEMENT OR REPLACE MORE EXPENSIVE CONVENTIONAL DRUGS AND SURGERY;

- SUPPORTING INITIATIVES TO EDUCATE THE PUBLIC AROUND LIFESTYLE CHANGES AND CHOICES THAT WOULD CONTRIBUTE TO BOTH PERSONAL HEALTH AND PROTECTION OF THE ENVIRONMENT

- ENSURING THAT HEALTH ADMINISTRATIONS ACCEPT AND PROMOTE THE USE OF NATURALLY OCCURRING MEDICINES AND HERBS WHILE PROVIDING A STRINGENT REVIEW PROCESS FOR NEW AND EXISTING HUMAN-MADE CHEMICALS, TECHNOLOGIES, AND ELECTROMAGNETIC DISRUPTION.

- ELIMINATING, PREVENTING AND REDUCING OF HEALTH AND ENVIRONMENT HAZARDS

- DISCONTINUING PHARMACEUTICAL COMPANY FUNDING TO AND DIRECTION OF HEALTH RESEARCH IN UNIVERSITIES

CHAPTER 7

ENVIRONMENTALLY SOUND TRANSPORTATION SUPPORT AND PROMOTION

-RIGHT TO SHELTER, AND ENVIRONMENTALLY SOUND TECHNOLOGY INCLUDING ENERGY, TRANSPORTATION AND PRACTICES ASSURANCES

ENVIRONMENT, TRANSPORTATION AND ENERGY

to encourage the use of an optimal combination of modes of transport, including walking, cycling and private and public means of transportation, through appropriate pricing, spatial settlement policies and regulatory measures (Article 104 c, Habitat II Agenda)

- DETERMINING AND REVEALING THE FULL SUBSIDY FOR THE INFRASTRUCTURE FOR THE AUTOMOBILE AND ELIMINATING ALL FUTURE SUBSIDIES
- REESTABLISHING A VIABLE RAIL AND LIGHT RAPID TRANSIT SYSTEMS
- PROMOTING THE USE OF RAIL FOR FREIGHT AND PASSENGER TRANSPORT, AND EXTEND THE RAIL NETWORK TO SERVE ALL URBAN AND RURAL LOCATIONS CONVENIENTLY;
- ESTABLISHING REGULATIONS THAT REDUCE CAR-DEPENDENCY
- DEVELOPING INFRASTRUCTURE FOR ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION

- PROMOTING PEDESTRIAN COMMUNITIES AND RAIL AND OTHER ENVIRONMENTALLY SOUND PRACTICES -

- PROMOTING AND ENSURING ENVIRONMENTALLY-SOUND TRANSPORTATION

CHAPTER 8

PRINCIPLE-BASED RATHER THAN VESTED-INTERESTED DECISION MAKING

PRINCIPLE-BASED DECISION MAKING AND

PUBLIC ACCESS TO INFORMATION

Providing full, timely and comprehensible information, without undue financial burden to the applicant; 133(c) UNCED

- IMPLEMENTING PRINCIPLE BASED DECISION MAKING MOVING FROM VESTED INTEREST DECISION MAKING TO PRINCIPLE-BASED DECISION MAKING

- ENSURING GENUINE COMMUNITY PARTICIPATION AND INVOLVEMENT WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES

DRAWN FROM INTERNATIONAL OBLIGATIONS AND EXPECTATIONS

CHAPTER 9

ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

GREENHOUSE GAS EMISSION AND OZONE-DEPLETING SUBSTANCES
REDUCTION AND ELIMINATION

ENVIRONMENTALLY SOUND RENEWABLE ENERGY SUPPORT AND PROMOTION

Encourage and research, development and use of non-motorized or low-energy transport systems and the use of renewable energy sources and technologies, such as solar, wind and biomass energy (101 d, Habitat II)

Identifying and developing new sources of energy and promoting more efficient use of energy resources, for example through innovative approaches in design ... and although financial and other incentives for energy conservation and through disincentives for wasteful consumption (Recommendation C. 5 ii (Habitat I, 1976)

- REQUIRING AND DEVELOPING ENVIRONMENTALLY SOUND ENERGY
- PROVIDING FOR ENVIRONMENTALLY-SOUND ENERGY SOURCES BY 1999, AND CONCURRENTLY PHASING OUT ENVIRONMENTALLY-UN SOUND ENERGY
- REQUIRING THE CONSERVATION OF ENERGY
- REQUIRING ALL ENERGY SOURCES TO BE USED IN WAYS THAT RESPECT THE ATMOSPHERE, HUMAN HEALTH AND THE ENVIRONMENT AS A WHOLE
- *• MOVING THROUGH THE TRANSITION FROM THE PRESENT INTERNATIONAL ECONOMY BASED PRIMARILY ON HYDROCARBONS TO ONE BASED INCREASINGLY ON NEW AND RENEWABLE SOURCES OF ENERGY
- TRANSFERRING FUNDING FOR FOSSIL FUEL AND NUCLEAR INTO ENVIRONMENTALLY SOUND ENERGY
- REQUIRING DEVELOPMENT OF NEW AND RENEWABLE SOURCES OF ENERGY
- CEASING ENVIRONMENTALLY DEGRADING AND WASTEFUL USE OF NON-RENEWABLE ENERGY RESOURCES
- INSTITUTING A MORATORIUM ON THE MANUFACTURE AND SALE OF ALL NUCLEAR REACTORS AND THE RAPID PHASE-OUT OF EXISTING PLANTS.

- - PROMOTING RESEARCH FOR THE STORAGE AND HANDLING OF EXISTING NUCLEAR WASTE WHILE PHASING OUT CIVIL NUCLEAR ENERGY, AND THE GENERATION OF NUCLEAR WASTES

- PHASING OUT THE USE OF CIVIL NUCLEAR ENERGY AND THE TRANSFER OF FUNDS INTO THE DEVELOPMENT OF ENVIRONMENTALLY SOUND RENEWABLE ENERGY

- CONDEMNING AND BAN THE PROPOSAL TO USE WEAPONS-GRADE PLUTONIUM FROM DISMANTLED RUSSIAN AND U.S. WEAPONS (IN THE FORM OF MOX) IN CANDU REACTORS.

- ELIMINATING OF SUBSIDIES FOR NUCLEAR ENERGY AND PHASING OUT OF NUCLEAR ENERGY

- SUBJECTING ALL WEAPONS-USABLE RADIOACTIVE MATERIALS AND NUCLEAR FACILITIES IN ALL States TO INTERNATIONAL ACCOUNTING, MONITORING AND SAFEGUARDS AND ESTABLISHING A PUBLIC INTERNATIONAL REGISTRY OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)

- PROHIBITING NUCLEAR WEAPONS RESEARCH, DESIGN, DEVELOPMENT AND TESTING THROUGH LABORATORY EXPERIMENTS INCLUDING BUT NOT LIMITED TO NON-NUCLEAR HYDRODYNAMIC EXPLOSIONS AND COMPUTER SIMULATIONS, SUBJECT ALL NUCLEAR WEAPONS LABORATORIES TO INTERNATIONAL MONITORING AND CLOSING ALL NUCLEAR TEST SITES (ABOLITION 2000)

GREENHOUSE GAS EMISSIONS AND OZONE-DEPLETING SUBSTANCES
REDUCTION AND ELIMINATION

Stabilizing the atmospheric concentrations of CO₂ is an imperative goal. It is currently estimated to require reductions of more than 50% from present emission levels. Energy research and development budgets must be massively directed to energy options which

would eliminate or greatly reduce CO₂ emissions and to studies undertaken to further refine the target reductions (CHANGING ATMOSPHERE CONFERENCE, 1988).

- ADDRESSING CLIMATE CHANGE THROUGH REDUCING AND PHASING OUT OF GREENHOUSE GASES, PROVIDING ENVIRONMENTALLY SOUND ENERGY AND TRANSPORTATION, AND MOVING AWAY FROM CAR-DEPENDENCY.

- ADDRESSING CLIMATE CHANGE: PROTECTING CARBON SINKS AND REDUCING EMISSIONS WAY BEYOND WHAT WAS REQUIRED IN THE FRAMEWORK CONVENTION ON CLIMATE CHANGE 1992. (TO AT LEAST FULFILL THE RECOMMENDATION MADE IN 1988 “CHANGING ATMOSPHERE”)

- CONDEMNING THE MYTH THAT NUCLEAR ENERGY IS THE SOLUTION TO CLIMATE CHANGE

- ACKNOWLEDGING THE CONCERN BY INSURANCE COMPANIES OF THE IMPLICATIONS OF CLIMATE CHANGE

- ELIMINATING OF THE PRODUCTION AND CONSUMPTION OF OZONE-DEPLETING SUBSTANCES

- BANNING THE PRODUCTION, SALE, CONSUMPTION AND DISTRIBUTION OF OZONE DEPLETING CHEMICALS, SUCH AS METHYL BROMIDE, HALONS, CHLOROFLUOROCARBONS, HYDROCHLORFLUOROCARBONS, CARBON TETRACHLORIDE AND OTHER COMPOUNDS CAPABLE OF BEARING CHLORINE TO THE STRATOSPHERE.

- ENSURING THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION

CHAPTER 11, 13, 15

BIODIVERSITY, MOUNTAINS AND FOREST CONSERVATION

CONSERVATION, BIODIVERSITY AND FORESTS

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

- GUARANTEEING THE PRESERVATION, CONSERVATION AND PROTECTION OF BIODIVERSITY IN LAND, AIR AND WATER SYSTEMS

- PRESERVING, PROTECTING AND CONSERVING BIODIVERSITY IN FORESTS THROUGH FOREST PROTOCOLS LINKED WITH EXISTING CONVENTIONS SUCH AS THE BIODIVERSITY CONVENTIONS, THE FRAMEWORK CONVENTION ON CLIMATE CHANGE, CONVENTION ON COMBATING DESERTIFICATION, THE VIENNA CONVENTION ADDRESSING OZONE DEPLETION; ENVIRONMENTAL IMPACT ASSESSMENT OF trans-boundary POLLUTION ETC.

- IDENTIFYING BIODIVERSITY, AND CARRYING OUT AN ENVIRONMENTAL ASSESSMENT OF ACTIVITIES THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY

- ENSURING THAT ALL BIOSPHERE RESERVES HAVE AN EXTENDED CORE AREA WITH CONSERVATION CORRIDORS WHERE NO COMMERCIAL INTRUSION CAN TAKE PLACE, AND HAVE ALL PRACTICES IN BUFFER AND TRANSITION ZONES LINKED TO THE CONVENTION ON BIOLOGICAL DIVERSITY

ENSURING THAT THE BIODIVERSITY CONVENTION TRANSCENDS JURISDICTIONAL AND PROPRIETORIAL BARRIERS

- IDENTIFYING AND CONSERVING BIODIVERSITY THROUGH PRESERVING REMAINING OLD GROWTH FORESTS

- BANNING clear-cutting AND OTHER ENVIRONMENTALLY UNSOUND PRACTICES THROUGH ENACTING LEGISLATION TO CONFORM WITH THE CONVENTION ON

BIOLOGICAL DIVERSITY, AND WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE

- BANNING THE EXPORT OF RAW LOGS

- REGULATING MINING PRACTICES, AND PREVENTING THE TRANSFER OF SUBSTANCES OR ACTIVITIES THAT COULD CONTRIBUTE TO ENVIRONMENTAL DEGRADATION

- DISCONTINUING THE DUMPING OF ENVIRONMENTALLY UNSOUND EMISSIONS INTO LAND, AIR AND WATER SYSTEMS

GREEN SPACES, PARKS, PRESERVATION AND CONSERVATION

Considering that parts of the cultural or natural heritage are of outstanding interest and therefore need to be preserved as part of the world heritage of [humankind] as a whole (Convention for the Protection of the World cultural and Natural Heritage, preamble, 1972).

- PRESERVING AND PROTECTING OF GREEN SPACES

- PROMOTING THE CONSERVATION AND SUSTAINABLE USE OF URBAN AND PERI-URBAN BIODIVERSITY, INCLUDING FORESTS, LOCAL HABITATS AND SPECIES BIODIVERSITY; THE PROTECTION OF BIODIVERSITY

- PROTECTING ENDANGERED SPECIES AND HABITATS THROUGH LEGISLATION THAT WOULD PROTECT HABITATS AND CONSERVATION CORRIDORS

- DISCONTINUING THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES

>• PREVENTING INDUSTRIAL ACTIVITIES SUCH AS FORESTRY AND MINING IN PARKS

NATURE, ENVIRONMENT AND SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

Every form of life is unique, warranting respect regardless of its worth to man [human] , and to accord other organisms such recognition's, man [must be guided by a moral code of action. (a, UN General Assembly Resolution 1982)

- RESPECTING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

- REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

- RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM (ENSURING THAT THIS IS NOT USED TO JUSTIFY INTRUSION INTO PRISTINE AREAS)

- ENSURING THE ADHERENCE TO THE PRECAUTIONARY PRINCIPLE , AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

- ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

- ENFORCING OF THE PREVENTION PRINCIPLE AND REVERSE ONUS PRINCIPLE (WHERE THE PROPONENTS OF AN INTERVENTION INTO THE ECOSYSTEM HAVE TO DEMONSTRATE THE SAFETY OF THE INTERVENTIONS RATHER THAN THE OPPONENTS HAVING TO DEMONSTRATE HARM)

- INSTITUTING LEGITIMATE AND INDEPENDENT ENVIRONMENTAL ASSESSMENT REVIEWS : COMPLYING WITH THE ENVIRONMENTAL ASSESSMENT REVIEW PRINCIPLE

- ENSURING THAT ALL CORPORATIONS, INCLUDING TRANSNATIONAL CORPORATIONS, COMPLY WITH ALL NATIONAL CODES, SOCIAL SECURITY AND INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW (AS AGREED IN HABITAT II)

CHAPTER 12

DESERTIFICATION AND DROUGHT PREVENTION

- CALLING UPON MEMBER STATES FROM THE UNITED NATIONS, TO SIGN AND RATIFY THE CONVENTION ON DESERTIFICATION, AND ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT

CHAPTER 17 AND 18

MARINE, AND FRESH WATER PROTECTION AND CONSERVATION

To assure the proper conservation of natural resources being utilized or which might be utilized for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974)

- PROTECTING WILD FISH STOCKS
- MAINTAINING A MORATORIUM ON ADDITIONAL SALMON FISH FARMING
because of risks of disease transfer from net-cage fish to wild stocks; risks of introduction of exotic diseases from the CONTINUED importation of off-site species;
 - Pollution from fish sewage, contamination of shellfish, and loss of habitat
 - Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices
 - Loss of access to traditional fisheries for indigenous peoples with increased risks to their health from exposure to drug residues from food collected near net-cage operations
 - Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water
 - Decline of wild stocks; losses of wild fish such as herring and juvenile salmon, consumed by net-cage fish

- Endangered human health from the increased use of antibiotics and other drugs which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics
- REGULATING EXISTING MARICULTURE AND AQUACULTURE

- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS THAT DONE WITH TRAWLERS AND SEINERS

- RATIFYING THE LAW OF THE SEAS, AND OTHER RELATED CONVENTIONS, AND ENACTING THE NECESSARY LEGISLATION FOR COMPLIANCE AND ENFORCEMENT

- ENFORCING MEASURES IN LEGISLATION RELATED TO THE DEPOSIT OF DELETERIOUS SUBSTANCES THAT COULD DESTROY FISH HABITAT

- ESTABLISHING MARINE PROTECTED AREAS FREE FROM FOSSIL FUEL AND HUMAN WASTE POLLUTION

- ENSURING INTERCONNECTING CONSERVATION CORRIDORS AMONG MARINE PROTECTED AREAS

- REQUIRING MANDATORY WATER CONSERVATION

- PREVENTING trans-boundary POLLUTION (ENFORCING WHILE MOVING BEYOND BASEL CONVENTION)

- PREVENTING ENVIRONMENTALLY UNSOUND DISCHARGES INTO WATER BODIES

- PHASING OUT LARGE SCALE INDUSTRIAL FISHING SUCH AS TRAWLERS AND SEINERS.

CHAPTER 19, 20, 21, 22

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION

-SOLID WASTE REDUCTION AND ELIMINATION

TOXIC, HAZARDOUS, AND RADIOACTIVE EMISSIONS AND WASTE PREVENTION AND ELIMINATION, EXTRACTION, REDUCTION AND CONTROL

“ Zero use, production and release of persistent and /or bio-accumulative toxic substances in the environment, workplace and home. Zero does not mean below some arbitrary level, or even beneath the level of detection. Zero means Zero. (ZERO TOXIC ALLIANCE, 1994) “

- ENSURING ZERO EMISSIONS OF CHEMICALS THAT ARE TOXIC OR BIOACCUMULATE, INCLUDING ENDOCRINE-DISRUPTING CHEMICALS WHICH HAVE BEEN LINKED TO REPRODUCTIVE DISORDERS

- MONITORING AND MAKING PUBLIC, THE EXTENT OF THE HARMFUL CHEMICAL PRODUCTION, AND OF THE HARMFUL WASTES FROM CHEMICAL PRODUCTION

- BANNING OF PERSISTENT ORGANIC POLLUTANTS

- ENDING THE PRODUCTION OF ENDOCRINE-DISRUPTING CHEMICALS

- ELIMINATING OF TOXIC, HAZARDOUS AND NUCLEAR WASTES

- INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

- CONDEMNING THE ENORMOUS ENVIRONMENTAL AND SOCIAL IMPACT CAUSED BY MINERAL AND PETROLEUM DEVELOPMENT

- SUPPORTING THE RIGHTS OF COMMUNITIES TO OPPOSE MINING OPERATIONS AND DEFINE THE USE OF THEIR RESOURCES ARE RESPECTED, AS IS RECOMMENDED IN ART.15 OF AGREEMENT 169 OF THE INTERNATIONAL LABOUR ORGANIZATION FOR INDIGENOUS COMMUNITIES.
- RESPECTING THE WATER USE RIGHTS OF COMMUNITIES ABOVE OTHER ACTIVITIES THAT LIE OUTSIDE THE PRIORITIES THAT THEY HAVE THEMSELVES DEFINED.
- STOPPING THE EXPANSION OF MINING AND PETROLEUM FRONTIERS
- INITIATING ACTIONS TOWARDS REDUCING THE CONSUMPTION OF MINERALS AT A WORLD LEVEL.
- PREVENTING THE IMPORTING, EXPORTING, AND TRANSPORTING OF TOXIC MINING WASTES UNDER ALL CONDITIONS.
- SUPPORTING THE RESTORATION OF DAMAGE CAUSED BY MINING ACTIVITY BE ASSURED WITHOUT FINANCIAL LIMIT.

HUMAN-INDUCED DISASTER PREVENTION

“The need for ensuring adequate regulatory and other measures to prevent disasters including technological disasters, and to avoid their occurrence and to reduce the impacts of natural disasters and other emergencies on human settlements (Habitat II)”

- PREVENTING DISASTERS INCLUDING NA-TECHS NATURAL AND TECHNOLOGICAL DISASTERS, AND ACTIVITIES THAT PRODUCE TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTES

- PREVENTING THE TRANSFERENCE, TO OTHER States, OF SUBSTANCES OR ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION, INCLUDING TOXIC, HAZARDOUS AND ATOMIC PRODUCTS AND WASTE

- CONDEMNING THE CONTINUED CIRCULATION AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS, THE TESTING OF NUCLEAR WEAPONS, AND PERMITTING OF LOW-LEVEL TEST FLIGHTS

- INCLUDING INDUCING CLIMATE CHANGE AND OZONE-REDUCTION UNDER THE CATEGORY OF DISASTERS

- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS

- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- REQUIRING THE REGULAR REPORTING TO THE UN REGISTER OF CONVENTIONAL WEAPONS (ADAPTED FROM PEACE CAUCUS CSD)

- RESTRAINING AND PREVENTING WEAPONS PROLIFERATION

- REQUIRING THE DAILY PUBLICATION OF THE NAMES OF THE COMPANIES AND COUNTRIES THAT PRODUCE WEAPONS, AMOUNT AND TYPE OF WEAPONS SOLD, AND THE NAMES OF THE PURCHASER AND THE NAME AND THE NATIONALITY OF THE PURCHASER AND THE PURPOSE FOR WHICH THE ARMS ARE TO BE USED

- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

- BANNING IMMEDIATELY THE PRODUCTION, USE, SALE AND TRANSFER OF ANITPERSONNEL LAND MINES (PEACE CAUCUS)

MILITARY CONVERSION AND TRANSFER FUNDS

(i) reaffirmed the urgent need to reduce the military budget, and agreed to freeze and reduce the military budget.

(ii) Recognized that the military budget constituted a heavy burden for the economies of
TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

all nations, and have extremely harmful consequences on international peace and security.

(iii) undertook to make a collective effort aimed at strengthening peace and international security by eliminating the threat of war.

(iv) Reiterated the appeal to all States, in particular the most heavily armed States, pending the conclusion of agreements on the reduction of military expenditures, to exercise self-restraint in their military expenditures with a view to reallocating the funds thus saved to economic and social development, particularly for the benefit of developing countries (General Assembly, 1981)

- REDUCING AND TRANSFERRING THE MILITARY BUDGET

TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- REDUCING AND TRANSFERRING OF THE MILITARY BUDGET TO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

- PROTECTING THE RIGHT TO DEDUCT AND PROVIDING FOR A PROPORTION OF THE TAXES COMPARABLE TO THE PERCENTAGE REPRESENTED BY THE MILITARY BUDGET TO BE PUT INTO A PEACE FUND

- PROTECTING AND SUPPORTING CONSCIENTIOUS OBJECTORS

- SUPPORTING NON-MILITARY SOLUTIONS MOVING TOWARDS PEACE WITH JUSTICE

- PROMOTING CIVILIAN RULE

- PREVENTING THE CAUSES OF CONFLICT THROUGH GUARANTEEING HUMAN RIGHTS, INCLUDING ENSURING SOCIAL JUSTICE AND THE SATISFYING OF BASIC NEEDS

- ELIMINATING URANIUM MINING AND THUS PREVENTING THE CONTRIBUTION TO NUCLEAR WEAPONS

- ALLOCATING FUNDS AND TECHNOLOGY FOR REMOVAL OF THE MORE THAN 100 MILLION ANTIPERSONNEL LAND MINES ALREADY PLANTED IN 64 COUNTRIES (PEACE CAUCUS)

MILITARY, WEAPONS OF MASS DESTRUCTION AND CONVENTIONAL ARMS ELIMINATION AND REDUCTION

Drawing the attention of all States and peoples to the conclusions arrived at by the most eminent scientists and military and civilian experts to the effect that it is impossible to limit the deadly consequences of nuclear war if it is ever begun and that in a nuclear war there can be no victors, (Condemnation of Nuclear War General Assembly Resolution A/RES/38/75, 1983)

- IMPLEMENTING THE DECLARATION OF PEOPLE'S RIGHT TO PEACE

- MOVING FROM A CULTURE OF VIOLENCE TO A CULTURE OF PEACE (UNESCO)

- PROMOTING AN INTERNATIONAL VOLUNTARY MILITARY FORCE UNDER CHAPTER 7 OF THE UNITED NATIONS CHARTER TO BE USED WHEN

ABSOLUTELY NECESSARY AND PROMOTING NON-VIOLENT RESOLUTION TO CONFLICT (PEACE CAUCUS)

- ENSURING EARLY INVOLVEMENT IN POTENTIALLY VIOLENT AREAS TO ALLEVIATE THE NEED FOR MILITARY SOLUTIONS AND THE RESULTING ENVIRONMENTAL DEGRADATION (ADAPTED FROM THE PEACE CAUCUS CSD)
- RESTRUCTURING ECONOMIES AWAY FROM DEPENDENCE ON THE MILITARY (PEACE CAUCUS CSD)
- CONVERTING MILITARY MANUFACTURING CAPACITY TO ENGAGING IN PRACTICES, AND GENERATING SUBSTANCES AND PRODUCTS THAT ARE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND
- SHIFTING RESEARCH AND DEVELOPMENT FROM DEFENCE-BASED INDUSTRIES TO EQUITABLE DEVELOPMENT AND SOCIALLY RESPONSIBLE PRODUCTION TO RECTIFY ENVIRONMENTAL DEGRADATION (PEACE CAUCUS CSD)
- DEALING WITH AND DISPOSING OF ALL TOXIC MILITARY WASTE IN THE BEST ENVIRONMENTALLY SOUND WAY RECOGNIZING THAT THERE IS NO ENVIRONMENTALLY SOUND MEANS OF DISPOSING OF MOST OF THE WASTE AND THE BEST PRACTICE IS TO PREVENT THE PRODUCTION OF MILITARY WASTES.
- ACKNOWLEDGING AND ACTING UPON THE EVIDENCE OF THE SERIOUS AND IRREVERSIBLE CONSEQUENCES OF NUCLEAR TECHNOLOGY ON HUMAN HEALTH AND ON THE ECOSYSTEM
- ACTING IMMEDIATELY ON THE JUDGMENT OF THE WORLD COURT THAT NUCLEAR WEAPONS ARE AGAINST INTERNATIONAL HUMANITARIAN LAW
- ELIMINATING THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION INCLUDING NUCLEAR, CHEMICAL AND BIOLOGICAL

- PREVENTING NUCLEAR CATASTROPHE THROUGH THE ELIMINATION OF NUCLEAR WEAPONS

- REMOVING THE THREAT OF NUCLEAR WAR AND CONDEMNING NUCLEAR WAR

- MAKING AN IMMEDIATE PLEDGE NOT TO USE OR THREATEN TO USE NUCLEAR WEAPONS (ABOLITION 2000)

- DECLARING THE GLOBAL COMMONS A NUCLEAR FREE ZONE ON JUNE 21, 1997 {CREATING ADDITIONAL NUCLEAR WEAPONS FREE ZONES, SUCH AS THOSE ESTABLISHED BY THE TREATIES OF TLATELOLCO AND RAROTONGA (ABOLITION 2000)}

- ELIMINATING IMMEDIATELY ALL FURTHER PRODUCING OF NUCLEAR WEAPONS AND INITIATING IMMEDIATELY (1997) A TIME-BOUND CONVENTION FOR THE COMPLETE ELIMINATION AND DESTRUCTION OF NUCLEAR WEAPONS BY THE YEAR 2000

- [AT A MINIMUM] INITIATING AND CONCLUDING BY THE YEAR [1999] 2000 NEGOTIATIONS ON A NUCLEAR WEAPONS ABOLITION CONVENTION THAT REQUIRES THE PHASED ELIMINATION OF ALL NUCLEAR WEAPONS WITHIN A TIME BOUND FRAMEWORK WITH PROVISIONS FOR EFFECTIVE VERIFICATION AND ENFORCEMENT (ABOLITION 2000)

- ELIMINATING OF THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION, INCLUDING NUCLEAR WEAPONS BY THE YEAR 1999

- IMPLEMENTING THE WORLD COURT DECISION ON THE ILLEGALITY OF THE USE OR THREAT OF USE OF NUCLEAR WEAPONS

- BANNING THE TESTING OF NUCLEAR WEAPONS

- RECOGNIZING THE FATAL LINK BETWEEN CIVIL AND MILITARY NUCLEAR TECHNOLOGY

- PROHIBITING THE MILITARY AND COMMERCIAL PRODUCTION AND REPROCESSING OF ALL WEAPONS-USABLE RADIOACTIVE MATERIALS (ABOLITION 2000)

- PROHIBITING THE USE OF WEAPONS-GRADE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN CIVIL NUCLEAR REACTORS

- BANNING THE PRODUCTION, MOVEMENT AND BERTHING OF NUCLEAR ARMED, AND NUCLEAR-POWERED VESSELS (SEE RESOLUTION RELATED TO DISASTERS)

- PREVENTING THE TESTING OF ALL WEAPONS INCLUDING THOSE IN CANADA (NANOOSE BAY AND LOW-FLYING FLIGHTS IN INNU TERRITORY)

- PROHIBITING THE PRODUCTION OF ALL CHEMICAL AND BACTERIOLOGICAL WEAPONS

- REDUCING AND CONTROLLING THE PRODUCTION OF CONVENTIONAL WEAPONS

- HALTING LOW-LEVEL FLIGHT TRAINING IN LABRADOR AND END NUCLEAR SUBMARINE TESTING AT NANOOSE BAY, AND THE CIRCULATING AND BERTHING OF NUCLEAR POWERED OR NUCLEAR ARMED VESSELS ;

- WITHDRAWING FROM MILITARY ORGANIZATIONS SUCH AS NATO, AND ALL OTHER BI- AND MULTILATERAL DEFENCE ARRANGEMENTS WITH INDIVIDUAL COUNTRIES AND REGIONS.

- PROHIBITING THE DISPLAY, SUBSIDY, USE OF SPECIFIC MILITARY WEAPONS AND DEVICES

- ENSURING THAT THE ENVIRONMENT IS NOT ALTERED FOR MILITARY PURPOSES
- CONVERTING MILITARY MANUFACTURING CAPACITY TO MAKING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRODUCTS
- INSTITUTING REGULATIONS FOR REDUCTION OF THE PRODUCTION OF GUNS AND FOR GUN CONTROL

CHAPTER 34

TRANSFER OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND TECHNOLOGY

MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE INDUSTRY TO BEST PRACTICES

CHAPTER 35

SCIENCE FOR PEACE AND THE BENEFITS OF HUMANITY

CHAPTER 36

COMMUNICATION AND EDUCATION PROMOTION AND FACILITATION

ENVIRONMENTAL EDUCATION WITHOUT INDUSTRY INTRUSION

MEDIA AND SOCIAL CONSCIENCE

ARTS AND CULTURE SUPPORT AND PROMOTION 8

COMMUNICATION AND EDUCATION

Educational authorities, with appropriate assistance of non-governmental organizations, including women's and indigenous peoples' organizations should promote all kinds of adult education programmes for continuing education in environment and development, basing activities around elementary/secondary schools and local problems. (Agenda 21, Chapter 36.5 | UNCED)

EDUCATION AND COMMUNICATION

- ENSURING THE RIGHT TO AN EDUCATION WHICH IS EQUITABLE, COLLABORATIVE, AND MEANINGFUL

- STIMULATING AWARENESS OF HUMAN RIGHTS, ENVIRONMENT, AND PEACE ISSUES THROUGH EDUCATION

- REQUIRING CORPORATIONS TO PAY INCREASED TAXES, AND REDIRECTING OF CORPORATE FUNDING FOR EDUCATIONAL MATERIALS INTO GENERAL REVENUE THROUGH TAXES

- GUARANTEEING THE RIGHT TO FREE EDUCATION AT ALL LEVELS, AND INCREASING RESEARCH GRANTS AT THE UNIVERSITY LEVELS

- LINKING STUDENT LOAN PAYMENT TO SALARY, AND ALLOWING FOR COMMUNITY SERVICE AS REPAYMENT

- PROMOTING AND SUPPORTING INCREASED FUNDING FOR LITERACY

- ENSURING THAT SPECIAL NEEDS CHILDREN HAVE A RANGE OF OPTIONS WITHIN THE EDUCATIONAL SYSTEM

- PROVIDING FREE UNIVERSITY EDUCATION THROUGH INCOME SUPPLEMENT PLAN TO ASSIST STUDENTS

- ELIMINATING ALL CORPORATE DETERMINING OF PHILOSOPHICAL UNDERPINNINGS OF EDUCATION

- AVOIDING COMPROMISE THROUGH PROHIBITING INDUSTRY-FUNDED UNIVERSITY RESEARCH

- REQUIRING ARMS LENGTH RESEARCH FROM INDUSTRY TO AVOID CONFLICT OF INTEREST
- REQUIRING SCIENTISTS TO ABIDE BY THE “DECLARATION ON THE USE OF SCIENTIFIC AND TECHNOLOGICAL PROGRESS IN THE INTERESTS OF PEACE AND FOR THE BENEFIT OF HUMANITY”
- DENYING DEGREE-GRANTING STATUS TO NON-SECULAR SCHOOLS, COLLEGES AND UNIVERSITIES
- DISCONTINUING ALL PUBLIC FUNDING FOR ALL-NON-SECULAR PRIVATE SCHOOLS (NOT PROVIDED FOR UNDER THE CONSTITUTION)

ARTS AND CULTURE

- ENSURING AND INCREASING SUPPORT AND FUNDING FOR THE ARTS AND CULTURE THROUGH GENERAL REVENUE
- CLOSING CORPORATE TAX LOOPHOLES, TAX DEFERRALS, AND INCREASE CORPORATE TAXES TO AT LEAST OECD STANDARDS, AND TRANSFERRING FUNDS INTO GENERAL REVENUE
- ENCOURAGING ARTS ORGANIZATIONS TO NOT SEEK FUNDING FROM CORPORATIONS BUT FROM A DEDICATED FUNDING SOURCE IN GENERAL REVENUES
- PROVIDING ADDITIONAL FINANCIAL SUPPORT TO PUBLIC RADIO, SUCH AS CBC, AND TELEVISION

MEDIA AND COMMUNICATION

- STRENGTHENING THE MEDIA AS AN INSTRUMENT OF PUBLIC TRUST AS HAS BEEN AGREED TO THROUGH VARIOUS MEDIA CODES

The year 1999 ends the decade dedicated to the respect and furtherance of international law. This respect and furtherance can only be realized if member States of the United Nations discharge obligations and fulfill expectations through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and the fulfilling of expectations.

(*) THAT on March 27, I made a proposal for the World order Conference at Ryerson in Toronto

EXHIBIT

1997 March 26

ATTENTION: DR WALTER DORN, AND DR. HELMUT BURKHARDT

THE ROLE OF THE UNITED NATIONS TODAY AND TOMORROW

DRAFT ABSTRACT:

UNITED NATIONS AFFIRMING ITS MANDATE THROUGH
INTERNATIONAL STANDARDS DERIVED FROM INTERNATIONAL INSTRUMENTS

For fifty- two years, through international instruments, the member States of the United Nations have undertaken:

- (i) to promote and fully guarantee respect for human rights;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security , and
- (v) to enable socially equitable and environmentally sound development.

International agreements include both obligations incurred through the United Nations Charter, the United Nations Conventions, Treaties, and Covenants; expectations created through the United Nations Declarations and General Assembly Resolutions; and commitments made through UN Conference Action Plans.

If these years of obligations had been discharged, if these fifty years of expectations had been fulfilled, and if years of commitments had been acted upon, respect for human rights could have been guaranteed, preservation and protection of the environment could have been ensured, threats to peace prevented and removed, disarmament achieved, and socially equitable and environmentally sound development could have been enabled.

At a recent inter-session meeting of the Commission on Sustainable Development in March, member States of the United Nations, and UN institutions appeared to be devolving themselves of power and responsibility, and advocating the transferring of this power more and more to the corporate sector. Even at a time where, at two recent

conferences, the UN Conference on Women: Equality, Development and Peace, and the Habitat II conference members state of the United Nations undertook: “to ensure that corporations including transnationals comply with national codes, social security laws, international laws, including international environmental law”.

For the United Nations to strengthen its role internationally it must build on the over 50 years of obligations incurred, expectations created and commitments made through international instruments. The elements of a blueprint for change already exists scattered throughout international instruments; what is essential is a further synthesis of the principles crafted through the years of operation of the United Nations. Principles drawn from these instruments could form a new protocol linked with the Charter of the United Nations; this protocol could establish a comprehensive body of International standards and regulations that would contribute to the “Evolution into a world order that is built on a foundation for Peace”. An example of significant principles from a United Nations instrument is contained in the “Declaration on the Use of Scientific Technology for Peace and for the Benefit of Humanity”. Another significant undertaking was through a 1981 General Assembly resolution to reduce the military budget and transfer it into social programs (In 1981, the Global military budget was less than 50% of what it is now).

To achieve the “world order building on a foundation for peace”, the global community should move to a time where obligations are discharged, expectations fulfilled and commitments acted upon. The United Nations has laid the elements of the blueprint, it is time that United Nations fully establish this blueprint, and that the member States summon up the political will to move from years of rhetoric to action.

In June 1997, the Earth Summit II meeting of government leaders will take place in New York. This meeting will present an opportunity for the Toronto conference to circulate resolutions coming out of the conference deliberations.

NOTE THAT COMMENTS BY RUSSOW ARE IN CAPITAL LETTERS.

NOTING STILL THAT THE URGENCY REMAINS

Humanity stands at a defining moment in history. We are confronted with perpetuation of disparities between nations, and a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Agenda 21, UNCED, 1992).

THIS IS THE TIME TO ENSURE THAT THE DOCUMENTS FROM UNCED WHICH ATTEMPTED TO BE ALL-EMBRACING FULLY INCORPORATE THE ADVANCES MADE IN OTHER CONFERENCES. OTHERWISE THE WHOLE REVIEW PROCESS OF UNCED WILL BE RETROGRESSIVE. IN ADDITION TO INTEGRATING RECOMMENDATIONS FROM RECENT CONFERENCES INCLUDING HABITAT II, THE UN SHOULD MOVE BEYOND UNCED BY INTEGRATING THE OBLIGATIONS INCURRED THROUGH THE

CHARTER OF THE UNITED NATIONS, CONVENTIONS, TREATIES AND COVENANTS; THE EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, AND DECLARATIONS, AND THE COMMITMENTS MADE THROUGH CONFERENCE ACTION

PLANS.

AS IT IS THE DOCUMENT THAT RECENTLY EMERGED HAS REGRESSED FROM THE DOCUMENTS

DRAFT REPORT OF THE AD HOC INTERSESSIONAL WORKING GROUP

OF THE COMMISSION ON SUSTAINABLE DEVELOPMENT

(New York 24 February - 7 March 1997)

INTRODUCTION

In accordance with the mandate given by the United Nations General Assembly and reconfirmed by the Fourth session of the CSD, the goal of the meeting of the Ad Hoc InterSessional Working Group was to assist the Fifth session of the CSD in the preparations for the Nineteenth Special Session of the Assembly to be held in accordance with its resolutions 50/113 and 51/181 in June 1997 for the purpose of an overall review and appraisal of the implementation of Agenda 21.

The document entitled "Proposed outcome of the Special Session" contained in this report is a compilation of the main proposals made and concerns expressed during the meeting by the participants regarding the key issues that should be addressed in the context of further preparatory work for the Special Session. It was prepared by the Co-Chairmen of the Working Group on the basis of detailed discussions held during the meeting. It is not a negotiated text.

It was agreed that the document would be further studied by all delegations and groups, including in their capitals, during the period between the Ad-hoc Working Group and the Fifth Session of the CSD and would serve as the starting point for further discussion at the High-Level Segment of the CSD.

Proposed Outcome of the Special Session.

IT SHOULD BE RECOGNIZED INITIALLY THAT STATES HAVE INCURRED

OBLIGATIONS FROM CONVENTIONS, TREATIES, AND COVENANTS THAT SHOULD FORM THE BASIS OF THE REASSESSMENT. IN ADDITION, STATES HAVE CREATED EXPECTATIONS THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND MADE COMMITMENTS FROM CONFERENCE ACTION PLANS

NOTING THAT THE YEARS OF ACCRUED STATE OBLIGATIONS TO IMPROVE THE QUALITY OF LIFE THROUGH RECOGNIZING THE RIGHT TO SHELTER, THE RIGHT TO SOCIAL SECURITY, THE RIGHT TO EQUALITY, THE

RIGHT TO PEACE AND THE RIGHT TO A SAFE ENVIRONMENT HAVE NOT YET BEEN DISCHARGED. IN 1974 THROUGH GENERAL ASSEMBLY RESOLUTIONS WERE COGNIZED "UNITED DETERMINATION TO WORK URGENTLY FOR THE ESTABLISHMENT OF A NEW INTERNATIONAL ECONOMIC ORDER BASED ON EQUITY, INTERDEPENDENCE, COMMON INTEREST AND COOPERATION WITH SYSTEMS WHICH SHALL CORRECT INEQUALITIES AND ADDRESS EXISTING INJUSTICES... AND TO ENSURE STEADILY SOCIAL DEVELOPMENT AND PEACE AND JUSTICE FOR PRESENT AND FUTURE GENERATIONS (PREAMBLE,

DECLARATION ON THE ESTABLISHMENT OF AN NEW INTERNATIONAL ECONOMIC ORDER, 1974).

I. Statement of commitment

1. This could be either a Preamble to a "consolidated text" or a self-standing concise declaration to which other part(s) could be annexed or cross-referred to. The statement inter alia should:

- be politically attractive, forward looking and provide a clear focus,
- reaffirm the final documents of Rio as the foundation and long-term policy framework for sustainable development,
- highlight the main achievements since UNCED at international, national and institutional level, and the

significant contribution made by the major groups;

- address the vicious circle of poverty, lack of capacity and resources in developing countries and the importance of global partnership and international cooperation to support their efforts to achieve sustainable development;
- reiterate the need for changing consumption and production patterns;

RESOLUTION: CONDEMNATION OF THE UNSUSTAINABLE PATTERN OF CONSUMPTION, AND PROVIDING FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

RECOGNIZING THE CONCERN EXPRESSED IN HABITAT I ABOUT EXCESSIVE CONSUMPTION "HUMAN SETTLEMENT POLICIES AND PROGRAMMES SHOULD DEFINE AND STRIVE FOR PROGRESSIVE MINIMUM STANDARDS FOR AN ACCEPTABLE QUALITY OF LIFE. THESE STANDARDS WILL VARY WITHIN AND BETWEEN

COUNTRIES, AS WELL AS OVER PERIODS OF TIME, AND THEREFORE MUST BE SUBJECT TO CHANGE IN ACCORDANCE WITH CONDITIONS AND POSSIBILITIES. SOME STANDARDS ARE MOST APPROPRIATELY DEFINED IN QUANTITATIVE TERMS, THUS PROVIDING PRECISELY DEFINED TARGETS AT THE LOCAL AND NATIONAL LEVELS. OTHERS MUST BE QUALITATIVE, WITH THEIR ACHIEVEMENTS SUBJECT TO FELT NEED. AT THE SAME TIME, SOCIAL JUSTICE AND A FAIR SHARING OF RESOURCES DEMAND THE DISCOURAGEMENT OF EXCESSIVE CONSUMPTION (III 16 HABITAT I, 1976)

CONCURRING WITH THE PLATFORM OF ACTION ABOUT THE CONTINUED IMPACT ON ENVIRONMENTAL DEGRADATION ARISING FROM UNSUSTAINABLE PRODUCTION AND CONSUMPTION PATTERNS: "ENVIRONMENTAL AND NATURAL RESOURCE DEGRADATION, DERIVING FROM, INTER ALIA, UNSUSTAINABLE PRODUCTION AND CONSUMPTION PATTERNS, DROUGHT, POOR QUALITY

WATER, GLOBAL WARMING, DESERTIFICATION, SEA-LEVEL RISE, HAZARDOUS WASTE, NATURAL

DISASTERS, TOXIC CHEMICALS AND PESTICIDE RESIDUES, RADIOACTIVEMATERIALS, ARMED CONFLICTS" (ART 246, ADVANCE DRAFT, PLATFORM OF ACTION, UN. CONFERENCE ON WOMEN, MAY 15)

CONCURRING WITH AGENDA 21, UNCED, THAT "THE MAJOR CAUSE OF THE CONTINUED DETERIORATION OF THE GLOBAL ENVIRONMENT IS THE UNSUSTAINABLE PATTERN OF CONSUMPTION AND PRODUCTION, PARTICULARLY IN INDUSTRIALIZED COUNTRIES, WHICH IS A MATTER OF GRAVE CONCERN, AGGRAVATING POVERTY AND IMBALANCES. (4.3. CHANGING CONSUMPTION PATTERNS, AGENDA 21. 1992, UNCED)

CONCURRING ALSO WITH AGENDA 21, UNCED, THE GROWTH OF WORLD POPULATION AND PRODUCTION COMBINED WITH UNSUSTAINABLE CONSUMPTION PATTERNS PLACES INCREASINGLY SEVERE STRESS ON THE LIFE-SUPPORTING CAPACITIES OF OUR PLANET. THESE INTERACTIVE PROCESSES AFFECT THE USE OF LAND, WATER, AIR, ENERGY AND OTHER RESOURCES. RAPIDLY GROWING CITIES, UNLESS WELL-MANAGED, FACE MAJOR ENVIRONMENTAL PROBLEMS. THE INCREASE IN BOTH THE NUMBER AND SIZE OF CITIES CALLS FOR GREATER ATTENTION TO ISSUES OF LOCAL GOVERNMENT AND MUNICIPAL MANAGEMENT. THE HUMAN DIMENSIONS ARE KEY ELEMENTS TO CONSIDER IN THIS INTRICATE SET OF RELATIONSHIPS AND THEY SHOULD BE ADEQUATELY

TAKEN INTO CONSIDERATION IN COMPREHENSIVE POLICIES FOR SUSTAINABLE DEVELOPMENT. SUCH POLICIES SHOULD ADDRESS THE LINKAGES OF DEMOGRAPHIC TRENDS AND FACTORS, RESOURCE USE, APPROPRIATE TECHNOLOGY DISSEMINATION, AND DEVELOPMENT. POPULATION POLICY SHOULD

ALSO RECOGNIZE THE ROLE PLAYED BY HUMAN BEINGS IN ENVIRONMENTAL AND

DEVELOPMENT CONCERNS. THERE IS A NEED TO INCREASE AWARENESS OF THIS ISSUE AMONG DECISION MAKERS AT ALL LEVELS AND TO PROVIDE BOTH BETTER INFORMATION ON WHICH TO BASE NATIONAL AND INTERNATIONAL POLICIES AND A FRAMEWORK AGAINST WHICH TO INTERPRET THIS

INFORMATION (5.3. DEMOGRAPHIC DYNAMICS AND SUSTAINABILITY, AGENDA 21, UNCED, 1992)

CONCURRING ALSO WITH THE SUBSEQUENT REAFFIRMATION IN THE PLATFORM OF ACTION, UN CONFERENCE ON...THE MAJOR CAUSE OF THE CONTINUED DETERIORATION OF THE GLOBAL ENVIRONMENT IS THE UNSUSTAINABLE PATTERN OF CONSUMPTION AND PRODUCTION, PARTICULARLY IN INDUSTRIALIZED COUNTRIES, WHICH IS A

MATTER OF GRAVE CONCERN, AGGRAVATING POVERTY AND IMBALANCES. (4.3.) CHANGING CONSUMPTION PATTERNS, AGENDA 21. 1992), AND REAFFIRMED IN ART. 37 OF THE PLATFORM OF ACTION, UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE)

NOTING IN HABITAT II THAT MEMBER STATES OF THE UNITED NATIONS UNDERTOOK TO REDUCE THE ECOLOGICAL FOOTPRINT

RECOGNIZING THE FAILURE OF CORPORATE VOLUNTARY PROGRAMS WHICH HAVE TOO OFTEN BEEN REPLACED THE GOVERNMENT REGULATORY ROLE. THROUGH THE CANADIAN STANDARDS ASSOCIATION SUPPORT FOR ISO 14000 THE GOVERNMENT

IS MOVING AWAY FROM WHAT IS DESCRIBED BY INDUSTRY AS "COMMAND ANDCONTROL". FOR YEARS THROUGH SYMPATHETIC ADMINISTRATIONS, CORPORATIONS HAVE BEEN ABLE TO CONTROL THE MODEL OF CONSUMPTION. ISO 14000 REFLECTS THE RELEGATION OF GOVERNMENT RESPONSIBILITY. ISO 14,000 IS NON-MANDATORY NON-NORMATIVE AND NON-PERFORMANCE BASED (IN CONTRAST TO THE EMAS). IN ESSENCE WITH THE ISO 14000 INDUSTRY ESTABLISHES ITS OWN ENVIRONMENTAL POLICY AND THEN IS ASSESSED BY "ENVIRONMENTAL AUDITORS" ON HOW WELL THE INDUSTRY CONFORMS TO ITS SELF INITIATED STANDARDS.

NOTING THAT IN THE PLATFORM OF ACTION FROM THE UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE (1995) AND IN THE HABITAT II AGENDA FROM THE HABITAT II CONFERENCE (1996) MEMBER STATES HAVE UNDERTAKEN "TO ENSURE THAT CORPORATIONS, INCLUDING TRANSNATIONAL

CORPORATIONS, COMPLY WITH NATIONAL LAWS AND CODES, SOCIAL SECURITY

REGULATIONS, APPLICABLE INTERNATIONAL AGREEMENTS AND CONVENTIONS, INCLUDING THOSE RELATED TO THE ENVIRONMENT, AND OTHER RELEVANT LAWS. (ARTICLE 167). IN HABITAT II THIS UNDERTAKING WAS REAFFIRMED AND THEN EXTENDED TO INCLUDE THE UNDERTAKING BY STATES TO ENSURE THAT THE "PRIVATE SECTOR" ALSO COMPLY (ARTICLE 148).

WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS, PARTICULARLY THOSE IN THE DEVELOPED COUNTRIES, TO REDUCE THE ECOLOGICAL FOOTPRINT BY CHANGING THE CURRENT MODEL OF CONSUMPTION

THE SIGNIFICANCE OF THE ORIGINAL EARTH SUMMIT WAS THAT FOR THE FIRST TIME AT A CONFERENCE THERE WAS A WILLINGNESS TO EXAMINE THE COMPLEXITY AND INTERDEPENDENCE OF ISSUES, BUT THE LACK OF POLITICAL WILL TO ADDRESS THE MILITARY CONTRIBUTION TO THE UNDERMINING OF THE WHOLE ENDEAVOUR.. ALTHOUGH MANY OF THE ISSUES THAT NEEDED TO BE ADDRESSED WERE EXAMINED, THE RESOLVE TO ACT TO BRING ABOUT CHANGE APPEARED TO BE LESS IN MANY CASES THAN WHAT HAD BEEN EXPRESSED IN OTHER PREVIOUS UN INSTRUMENTS.

LESS WE FORGET

CHAPTER 33. ARTICLE 16e TO ARTICLE -ARTICLE 18 of AGENDA 21

THE REALLOCATION OF RESOURCES AT PRESENT COMMITTED TO MILITARY PURPOSES.

A SUPPORTIVE INTERNATIONAL AND DOMESTIC ECONOMIC CLIMATE CONDUCIVE TO SUSTAINED ECONOMIC GROWTH AND DEVELOPMENT IS IMPORTANT, PARTICULARLY FOR DEVELOPING COUNTRIES, IN ORDER TO ACHIEVE SUSTAINABILITY.

THE SECRETARIAT OF THE CONFERENCE HAS ESTIMATED THE AVERAGE ANNUAL COSTS (1993-2000) OF IMPLEMENTING IN DEVELOPING COUNTRIES THE ACTIVITIES IN AGENDA 21 TO BE OVER \$600 BILLION, CHAPTER 33 AGENDA IN 1997 THE WORLD MILITARY BUDGET WAS 736 BILLION

IN THE FIRST SUMMIT AS HAS BEEN THROUGHOUT THE UNITED NATIONS, DOCUMENTS EMERGE AS WELL-CRAFTED STATEMENTS AND PRINCIPLES WITH

AN ABUNDANCE OF "NOTWITHSTANDING" AND "AS APPROPRIATE" CLAUSES". UNFORTUNATELY, MANY OF THE STRONG PRINCIPLES HAVE BEEN PERCEIVED MORE AS GUIDELINES OR GOALS AND NOT AS OPERATIVE PRINCIPLES OF ACTION. OFTEN THESE PRINCIPLES ARE ENUNCIATED BUT WHAT WOULD CONSTITUTE COMPLIANCE WITH THE PRINCIPLE IS NOT CLEARLY DETERMINED.

CORPORATIONS INCLUDING TRANSNATIONALS WITH THE SUPPORT OF SYMPATHETIC ADMINISTRATIONS HAVE CONTINUED TO DISREGARD PRINCIPLES. WHAT IS NEEDED NOW IS COMPLIANCE WITH PRINCIPLES REFLECTED IN

Precedence: bulk

PREVIOUS OBLIGATIONS, EXPECTATIONS AND COMMITMENTS. FOR EXAMPLE, A STRONG PRINCIPLE SUCH AS PRINCIPLE 14 OF THE RIO DECLARATION, THAT "STATES SHOULD PREVENT THE TRANSFER TO OTHER STATES OF SUBSTANCES AND ACTIVITIES THAT CAUSE ENVIRONMENTAL DEGRADATION OR ARE HARMFUL TO HUMAN HEALTH" HAS NOT BEEN IMPLEMENTED AND COMPLIED WITH. STATES

HAVE NOT PREVENTED THE TRANSFER OF TOXIC, HAZARDOUS, AND ATOMIC WASTES TO OTHER STATES; STATES STILL SELL NUCLEAR REACTORS, AND CIRCULATE AND BERTH NUCLEAR POWERED AND NUCLEAR ARMED VESSELS. IN THE RECENT COMMISSION ON SUSTAINABLE DEVELOPMENT (CSD) DOCUMENT THE STATES HAVE USED THE NOTION OF "PRIOR INFORMED CONSENT" WHICH HAS

BECOME A DEVICE FOR AVOIDING EXTRATERRITORIALITY. (WHAT RIGHT HAVE WE TO IMPOSE OUR HIGH STANDARDS ON DEVELOPING COUNTRIES THEY

HAVE EVERY RIGHT TO ACCEPT OUR TOXIC, HAZARDOUS AND ATOMIC WASTES PARTICULARLY IF THERE IS PRIOR INFORMED CONSENT)

IF THE EARTH SUMMIT II IS TO BE IMPORTANT IT MUST BE A TIME OF COMPLIANCE, AND TIME OF DISCHARGING OBLIGATIONS, FULFILLING EXPECTATIONS, AND ACTING ON COMMITMENTS.

STATE AND CORPORATE COMPLIANCE WITH OBLIGATIONS, EXPECTATIONS AND COMMITMENTS.FOR FIFTY-TWO YEARS THROUGH INTERNATIONAL AGREEMENTS, THE MEMBER STATES OF THE UNITED NATIONS HAVE UNDERTAKEN:

- (I) TO PROMOTE AND FULLY GUARANTEE RESPECT FOR HUMAN RIGHTS;
- (II) TO ENSURE THE PRESERVATION AND PROTECTION OF THE ENVIRONMENT;
- (III) TO CREATE A GLOBAL STRUCTURE THAT RESPECTS THE RULE OF LAW;
- (IV) TO ACHIEVE A STATE OF PEACE; JUSTICE AND SECURITY, AND
- (V) TO ENABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

INTERNATIONAL AGREEMENTS INCLUDE BOTH OBLIGATIONS INCURRED THROUGH THE UNITED NATIONS CHARTER, THE UNITED NATIONS CONVENTIONS, TREATIES, AND COVENANTS; EXPECTATIONS CREATED THROUGH THE UNITEDNATIONS DECLARATIONS, AND GENERAL ASSEMBLY RESOLUTIONS; AND COMMITMENTS MADE THROUGH UN CONFERENCE ACTION PLANS.

IF THESE YEARS OF OBLIGATIONS HAD BEEN DISCHARGED, IF THESE FIFTYYEARS OF EXPECTATIONS HAD BEEN FULFILLED, AND IF YEARS OF COMMITMENTS HAD BEEN ACTED UPON, RESPECT FOR HUMAN RIGHTS COULDHAVE BEEN GUARANTEED, PRESERVATION AND PROTECTION OF THEENVIRONMENT COULD HAVE BEEN ENSURED, THREATS TO PEACE PREVENTED ANDREMOVED, DISARMAMENT ACHIEVED, AND SOCIALLY

EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT COULD HAVE BEEN ENABLED.

IN JUNE 1997, THE EARTH SUMMIT II MEETING OF GOVERNMENT LEADERS WILL TAKE PLACE IN NEW YORK. AT THIS MEETING THEY WILL BE ENDORSING A DOCUMENT RELATED TO THE FOLLOW-UP TO THE UNITED NATIONS CONFERENCE ON THE ENVIRONMENT AND DEVELOPMENT (UNCED),

"A MODEST PROPOSAL"

THE EARTH SUMMIT II IS IMPORTANT PRIMARILY FOR CITIZENS TO REVEAL THAT YEARS OF OBLIGATIONS INCURRED THROUGH THE CHARTER OF THE UNITED NATIONS, CONVENTIONS, TREATIES AND COVENANTS; OF EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS, AND OF COMMITMENTS MADE THROUGH CONFERENCE ACTION PLANS HAVE NOT BEEN UNDERTAKEN, AND THAT

COMMITMENTS HAVE NEITHER BEEN DISCHARGED, FULFILLED, NOR ACTED UPON, AND THAT IT IS TIME FOR COMPLIANCE THROUGH ACTION.

SUGGESTED ACTIONS FOR EARTH SUMMIT II IN JUNE, 1997

1. (A) **ON JUNE 23, 1997** AT THE FIFTH ANNIVERSARY OF THE UNITED NATIONS CONFERENCE ON ENVIRONMENT AND DEVELOPMENT, WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE TO SIGN AND RATIFY INTERNATIONAL AGREEMENTS THAT WE HAVE NOT YET SIGNED AND RATIFIED, AND TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT. IN ADDITION, WE UNDERTAKE TO FULFILL EXPECTATIONS CREATED THROUGH GENERAL ASSEMBLY RESOLUTIONS AND DECLARATIONS, AND TO ACT UPON COMMITMENTS ARISING FROM CONFERENCE ACTION PLANS.

fi ESTABLISH MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS (MINS) DRAWN FROM INTERNATIONAL PRINCIPLES AND FROM THE HIGHEST AND STRONGEST REGULATIONS FROM MEMBER STATES HARMONIZED CONTINUALLY UPWARDS. MINS WILL THEN DRIVE INDUSTRY TO BEST (BEST EQUITABLE/ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES.

1(B) IN ADDITION, WE REAFFIRM THE UNDERTAKING IN THE PLATFORM OF ACTION IN THE UN CONFERENCE ON WOMEN: EQUALITY, DEVELOPMENT AND PEACE AND IN THE HABITAT II AGENDA "TO ENSURE THAT CORPORATIONS INCLUDING TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY LAWS, INTERNATIONAL LAWS, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW".

TO REVOKE LICENCES AND CHARTERS OF CORPORATIONS INCLUDING TRANSNATIONALS IF THE CORPORATIONS HAVE VIOLATED HUMAN RIGHTS, CAUSED ENVIRONMENTAL DEGRADATION, OR CONTRIBUTED TO CONFLICT AND WAR.

1 (C) FURTHER, WE UNDERTAKE TO ESTABLISH AN INTERNATIONAL COURT OF COMPLIANCE WHERE CITIZENS CAN TAKE EVIDENCE OF STATE AND CORPORATE NON-COMPLIANCE.

2. (A) ON JUNE 24, 1997. WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE TO EMBARK IMMEDIATELY AND CONCLUDE BEFORE THE YEAR 2000 NEGOTIATIONS ON A NUCLEAR WEAPONS ABOLITION CONVENTION THAT REQUIRES THE PHASED ELIMINATION OF ALL NUCLEAR WEAPONS WITHIN A TIME BOUND FRAMEWORK WITH PROVISIONS FOR EFFECTIVE VERIFICATION AND ENFORCEMENT

WE UNDERTAKE IMMEDIATELY TO REDUCE THE MILITARY BUDGET BY 50% AND TRANSFER THE SAVINGS

(I) INTO GUARANTEEING THE RIGHT TO FOOD, THE RIGHT TO SAFE AND AFFORDABLE HOUSING, THE RIGHT TO UNIVERSAL HEALTH CARE, THE RIGHT TO SAFE DRINKING WATER, THE RIGHT TO A SAFE ENVIRONMENT, THE RIGHT TO EDUCATION AND THE RIGHT TO PEACE, INTO SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK, AND

(II) INTO STRENGTHENING THE UNITED NATIONS. CURRENTLY THE GLOBAL COMMUNITY SPENDS 850 BILLION ON THE MILITARY. IT SHOULD BE NOTED THAT IN 1981 THERE WAS A GENERAL ASSEMBLY RESOLUTION TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING

COUNTRIES. IN 1981 THE MILITARY BUDGET WAS LESS THAN 50% OF WHAT IT IS NOW.

3. ON JUNE 25 1997. WE THE MEMBER STATES OF THE UNITED NATIONS WILL DEMAND AND ENSURE COMPENSATION AND REPARATION WILL BE SOUGHT FROM CORPORATIONS AND SYMPATHETIC ADMINISTRATIONS FOR THE

ENVIRONMENTAL DEGRADATION AND HUMAN RIGHTS VIOLATION IN DEVELOPING COUNTRIES, ON LANDS OF INDIGENOUS PEOPLES AND IN THE COMMUNITIES OF THE MARGINALIZED CITIZENS IN BOTH DEVELOPING AND DEVELOPED COUNTRIES. THE SO-CALLED DEBT OF THE DEVELOPING COUNTRIES IS NOT A DEBT TO BE FORGIVEN BUT RATHER AN OBLIGATION OF THE DEVELOPED STATES TO REDRESS, COMPENSATE AND RESTORE. DEBT IMPLIES BENEFIT AND LITTLE BENEFIT WAS DERIVED FROM THE YEARS OF CORPORATE, ALONG

WITH SYMPATHETIC ADMINISTRATION EXPLOITATION OF DEVELOPING COUNTRIES, INDIGENOUS PEOPLES, AND MARGINALIZED CITIZENS. IT IS A TIME FOR REDRESS, COMPENSATION AND RESTORATION.

TEL/FAX. 250- 598-0071

- focus strongly on implementation and commitments.

II. Assessment of progress reached after Rio.

2. The five years since Rio have been characterized by accelerated "globalization" of interaction of countries in world trade, foreign direct investment and capital markets. Some developing countries have been able to take advantage of these trends, have attracted large inflows of external private capital and experienced significant export-led growth and acceleration of growth in per capita GDP. OFTEN WITH SERIOUS ENVIRONMENTAL AND SOCIAL CONSEQUENCES. Many other countries, however, were not able to do so. As a result, they have generally experienced stagnating or falling per capita GDP through 1995. While continuing their efforts to achieve sustainable development and to attract new investments, these countries continue to be heavily dependent on a declining volume of official development assistance for the capacity-building and infrastructure development required for provision of basic needs and more effective participation in a globalizing world economy. ONE OF THE REASONS THAT THERE HAS BEEN A DECLINE IN OFFICIAL DEVELOPMENT ASSISTANCE IS THAT GLOBAL INSTITUTIONS, AND STATES HAVE BEEN DEVOLVING THEMSELVES FROM THE RESPONSIBILITY OF DIRECTION AND GOVERNANCE. THESE INSTITUTIONS, AND STATES HAVE BEEN PLACED IN A POSITION OF OBSEQUIOUSNESS IN THE FACE OF THE CONTINUED RISE OF CORPORATE POWER. NOW IS CERTAINLY A "DEFINING MOMENT" AND IF THE UNITED NATIONS ALONG WITH THE MEMBER STATES OF THE UNITED NATIONS, AND THE UN INSTITUTIONS DO NOT MOVE TO A STRONG REGIME OF MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS BASED ON EXISTING PRINCIPLES IN INTERNATIONAL INSTRUMENTS, AND DRAWN FROM THE HIGHEST STATE PRACTICES WITH UPWARD HARMONIZATION, THE UN WILL NO LONGER BE EFFECTIVE OR ABLE TO FUNCTION.

3. While economic growth, reinforced by globalization, has allowed some countries to reduce the proportion of people in poverty, marginalization has increased for others; too many countries have seen economic conditions worsen, and the total number of people in the world living in poverty has increased. Income inequality has increased both among and within countries, unemployment has worsened in many countries, and the gap between the least developed countries and other countries has grown rapidly in recent years. More positively, population growth rates have been declining globally, largely as a result of expanded basic education and health care. This trend is expected to lead to a stable world population in the middle of the next century. There has also been progress in social services, with expanding access to education, declining infant mortality, and increasing life expectancy in most countries. However, many people, particularly in the least developed countries, still do not have access to basic social services or to clean water and sanitation. Reducing current inequities in the distribution of wealth and access to resources, both within and among countries, is among the most serious challenges facing humankind.

CURRENTLY THE GLOBAL COMMUNITY SPENDS 850 BILLION ON THE MILITARY. IT SHOULD BE NOTED THAT IN 1981 THERE WAS A GENERAL ASSEMBLY RESOLUTION TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIAL PROGRAMS PARTICULARLY IN THE DEVELOPING COUNTRIES. IN 1981 THE MILITARY BUDGET WAS LESS THAN 50% OF WHAT IT IS NOW. TO ADDRESS THE INEQUALITY, THERE SHOULD BE AN IMMEDIATE REDUCTION OF THE MILITARY BUDGET BY 50% AND THE TRANSFER OF THE SAVINGS INTO SOCIAL PROGRAMS AND EDUCATION AND INTO CREATING SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK. IN ADDITION, A PORTION OF THIS BUDGET SHOULD BE TRANSFERRED INTO THE UNITED NATIONS AND ITS PROGRAMS SO THAT THE INTERNATIONAL BODY CAN PROPERLY FUNCTION TO

BRING ABOUT THE NEEDED CHANGE. THE MEMBER STATES OF THE UNITED NATIONS HAVE FOR OVER 50 YEARS THROUGH THE UN PROCESS UNDERTAKEN TO GUARANTEE HUMAN RIGHTS, TO PROTECT THE ENVIRONMENT, TO PREVENT WAR AND CONFLICT, TO ENABLE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND EMPLOYMENT AND TO ENSURE THE RESPECT FOR INTERNATIONAL LAW.

4. Five years after UNCED, the global environment has continued to deteriorate, as UNEP's Global Environment Outlook makes clear, and significant environmental problems remain deeply embedded in the socio-economic fabric of nations in all regions. Progress has been made in terms of institutional development, international consensus building, public participation and private sector actions and, as a result, some countries have succeeded in curbing pollution and slowing the rate of resource degradation. IT

IS QUESTIONABLE IF PROGRESS HAS REALLY BEEN MADE IN THESE AREAS.THERE HAVE BEEN MANY PUBLIC PROCESSES IN NAME ONLY.CITIZENS CANEXPRESS THEIR CONCERNS BUT THEIR CONCERNS ARE NOT ADDRESSED. THEPRIVATE SECTOR HAS BEEN PROMOTING VOLUNTARY CONFORMANCE THROUGH SELF-INITIATED NON-NORMATIVE ENVIRONMENTAL POLICIES THROUGH ISO

14000. WHAT IS NEEDED IS MANDATORY INTERNATIONAL NORMATIVE

STANDARDS/REGULATIONS (MINS) DRAWN FROM THE HIGHEST TENABLEPRINCIPLES FROM STATES SO THAT THERE IS ALSO HARMONIZING UPWARDS.STATES MUST TAKE BACK CONTROL OF INDUSTRY AND IMPLEMENT THEUNDERTAKING IN RECENT CONFERENCES TO ENSURE THAT CORPORATIONS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, AND INTERNATIONAL LAW

INCLUDING INTERNATIONAL ENVIRONMENTAL LAW. STATES SHOULD BE PREPARED TO DEMAND COMPENSATION AND REVOKE LICENCES AND CHARTERS OFCORPORATIONS THAT HAVE VIOLATED HUMAN RIGHTS, CAUSED ENVIRONMENTALDEGRADATION, AND CONTRIBUTED TO CONFLICT AND WAR.

Overall, however, trends are worsening. Many polluting emissions, notably toxic substances, greenhouse gases and waste

volumes, continue to rise in the industrialized countries, and their wasteful production and consumption patterns remain fundamentally unchanged. TO LIVE CONTENT WITH SMALL MEANS; TO SEEK ELEGANCE RATHER THAN LUXURY, AND REFINEMENT RATHER THAN FASHION; TO BE WORTHY, NOT RESPECTABLE (WILLIAM HENRY CHANDLER)

Many countries undergoing rapid economic growth and urbanization are experiencing increasing levels of air and water pollution, with rising impacts on human health. Acid rain and transboundary air pollution, once considered a problem only in the industrialized world, are increasingly apparent in many developing regions. In many poorer regions of the world, persistent poverty contributes to accelerating degradation of productive natural resources, and desertification has spread. Inadequate and unsafe water supplies are affecting an increasing number of people worldwide, aggravating problems of ill health and food insecurity among the poor. Natural areas and fragile ecosystems are still deteriorating in all regions of the world with attendant reductions in biological diversity. At the global level, renewable resources, notably fresh water, forests, topsoil and marine fish stocks, continue to be used at rates beyond their natural rates of regeneration, a situation which is clearly unsustainable.

5. Trends in consumption and production patterns continue to deplete non-renewable resources despite some improvement in material and energy efficiency. Associated pollution emissions threaten to exceed the capacity of the global environment to absorb them, potentially increasing the obstacles to economic and social development in developing countries.

6. Since UNCED, extensive efforts have been made by Governments to integrate environment and development concerns into decision-making by elaborating new policies and strategies for sustainable development or by adapting existing policies and plans. As many as 150 countries have established national level commissions or coordinating mechanisms designed to develop an integrated

approach to sustainable development. HOWEVER, THESE EFFORTS HAVE NOT SUCCEEDED EITHER BECAUSE GOVERNMENTS ARE COERCED OR ARE IN COLLUSION WITH THE POLLUTING INDUSTRIES, AND GOVERNMENTS HAVE BEEN PERSUADED TO OPT FOR VOLUNTARY CONFORMANCE BY INDUSTRY.

7. Major groups have demonstrated what can be achieved through committed action, sharing of resources and building consensus.

These have been grass-roots expressions of concern and involvement. The efforts of Local Authorities are making Agenda 21 a reality at the local level through the implementation of Local Agenda 21 programmes. Educational institutions and the media have increased public awareness and discussion of the relations between environment and development in all countries.

SINCE UNCED, CHAPTER 36 HAS BEEN MISCONSTRUED AS JUSTIFYING CORPORATE INTRUSION INTO THE EDUCATIONAL SYSTEM WHERE THERE HAS BEEN CORPORATE INVOLVEMENT IN DETERMINING THE PHILOSOPHICAL UNDERPINNING OF EDUCATION, IN PARTICULAR ENVIRONMENTAL EDUCATION.

FOR EXAMPLE, IT IS NOT UNUSUAL TO HAVE EDUCATIONAL PROGRAMS SUCH AS LEARNING FOR SUSTAINABILITY WITH CORPORATE BOARD MEMBERS, OR NETWORK ORGANIZATIONS OF ENVIRONMENTAL EDUCATORS WITH REPRESENTATION ON THE STEERING COMMITTEE FROM THE MINING, THE FORESTRY AND THE OIL INDUSTRIES.

UNFORTUNATELY, MANY OF THE EDUCATIONAL INSTITUTIONS SUCH AS UNIVERSITIES ARE RECEIVING MORE AND MORE FUNDING FROM THE CORPORATE SECTOR, AND RESEARCH IS BEING CONTROLLED AND DIRECTED

BY THE CORPORATE SECTOR. INSTITUTES OF SUSTAINABILITY, OF GLOBAL STUDIES OR SUSTAINABLE DEVELOPMENT, AND CENTRES OF EXCELLENCE HAVE BEEN SET UP AND ARE GENERALLY SUBSTANTIALLY FUNDED BY INDUSTRY. CONFLICT

OF INTEREST WHICH WAS ONCE CONDEMNED IS NOT ONLY CONDONED BUT GLORIFIED.

Hundreds of small and large businesses have made "green business"

a new operating mode. Workers and trade unions have established

partnerships with employers and communities to encourage

sustainable development in the workplace. THERE IS A LOT OF TALK

ABOUT SUSTAINABLE DEVELOPMENT. UNFORTUNATELY, IT HAS USUALLY COME TO MEAN BUSINESS AS USUAL, VOLUNTARY CONFORMANCE TO SELF-INITIATED STANDARDS REPLACING REGULATIONS WITH A LITTLE CLEAN-UP TECHNOLOGY

THRIVING ON DEREGULATION.

Indigenous peoples have

played an increasing role in addressing issues affecting their

interests. USUALLY THEY ARE IGNORED, OR PRESSURED INTO ACCEPTING HARM THROUGH THE NOTION OF INFORMED PRIOR CONSENT. FOR EXAMPLE, NATIVE LEADERS IN MEADOW LAKE CANADA HAVE BEEN PERSUADED TO ACCEPT RADIOACTIVE WASTES FROM DISMANTLED MILITARY SITES IN THE UNITED STATES. ACTIVITIES THAT CAUSE ENVIRONMENTAL DESTRUCTION AND ARE

CULTURAL INAPPROPRIATE ARE CONTINUED ON INDIGENOUS LAND (CHAPTER 26, AGENDA 21) IN AREAS UNDER DISPUTE FOR LAND RIGHTS, NO INTERIM MEASURES ARE IN PLACE AND THE LAND IS DESTROYED PRIOR TO THE NEGOTIATIONS BEING COMPLETED.

Young people and women around the world have played a prominent

role in galvanizing communities to recognize their responsibilities

to future generations THEY HAVE PARTICIPATED AND THEY HAVE BEEN

ARRESTED OFTEN FOR CALLING FOR LITTLE MORE THAN FOR STATES TO UNDERTAKE TO PROTECT BIODIVERSITY IN OLD GROWTH FORESTS.

8. Among the achievements after UNCED were the entry in force of the United Nation Framework Convention on Climate Change, ENTERING INTO FORCE IS IMPORTANT BUT FEW STATES HAVE REALLY DETERMINED WHAT WOULD CONSTITUTE COMPLIANCE WITH THIS CONVENTION. STATES ARE STILL AS CAR-DEPENDENT AS EVER IF NOT MORE SO, AND CARBON SINKS IN THE FORM OF OLD GROWTH FORESTS ARE BEING RAPIDLY DESTROYED.

the Convention on Biological Diversity WITH ITS IMPORTANT PROVISIONS FOR IDENTIFYING BIODIVERSITY, INVOKING THE PRECAUTIONARY PRINCIPLE, AND FOR CARRYING OUT AN ENVIRONMENTAL ASSESSMENT REVIEW OF ACTIONS THAT COULD CONTRIBUTE TO LOSS OR REDUCTION OF BIODIVERSITY HAVE BEEN IGNORED. INDUSTRY WITH THE HELP OF FOREST RESOURCE COUNTRIES LIKE CANADA ARE PUSHING FOR A FOREST CONVENTION SO THAT THE PROVISIONS IN THE BIODIVERSITY CONVENTIONS WILL NOT APPLY TO FORESTS., the Convention to Combat

Desertification; reaching Agreement on Straddling and Migratory Fish Stocks; adoption of the Global Programme of Action on Sustainable Development of Small Island Developing States and elaboration of the Global Programme of Action for the Protection of the Marine Environment from Land-Based Activities.

AGAIN, AND AGAIN GOVERNMENTS NEGOTIATE THESE AGREEMENTS AND THEN FAIL TO SIGN, FAIL TO RATIFY, OF FAIL TO ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE AND ENFORCEMENT. IT IS ONLY WHEN THERE IS A GLOBAL UNDERTAKING TO DISCHARGE THESE OBLIGATIONS THAT CHANGE WILL BEGIN TO OCCUR.

Implementation of these important commitments at the global level, together with those adopted before UNCED, however, still remains to be carried through, and in many cases, further strengthening of their provisions is required. TO ADDRESS THE FAILURE TO IMPLEMENT WE HAVE ORGANIZED ON JUNE 23, 1997, AN OFFICIAL SIGNING AND RATIFYING CEREMONY IN NEW YORK. The establishment, funding and replenishment of GEF were a major achievement, but

funding is still not sufficient to fully meet its objectives. THE

GEF BY ESTABLISHING CONDITIONAL FUNDING NEEDS TO STRENGTHEN ITS STANDARDS, AND HAVE A COMPLEMENTARY PROGRAM WHERE CORPORATIONS THAT HAVE CAUSED ENVIRONMENTAL DEGRADATION, OR THAT HAVE VIOLATED HUMAN RIGHTS WILL BE REQUIRED TO PAY COMPENSATION AND REPARATION. SOME OF THIS ADDITIONAL FUNDING ALONG WITH THE GLOBAL INCREASE OF CORPORATE

TAXES COULD SERVE TO REPLENISH THE GEF FUND. IN A RECENT

PRESENTATION AT THE IUCN A REPRESENTATIVE FROM THE WORLD BANK STATED THAT THE BEST ENVIRONMENTAL PROTECTION IS WHERE THERE ARE STRICT REGULATIONS. THIS OBSERVATION SHOULD SERVE TO JUSTIFY THE STRENGTHENING OF STANDARDS FOR CONDITIONAL FUNDING.

9. Progress has been made in incorporating the Rio Principles,

including that of common but differentiated responsibilities, in

a variety of international and national legal instruments. THIS

PRINCIPLE OF FLEXIBILITY OF INTERNATIONAL AND NATIONAL LEGAL

INSTRUMENTS APPEAR TO CONFLICT WITH STATE UNDERTAKINGS IN TWO RECENT CONFERENCES (THE UN CONFERENCE ON WOMEN AND HABITAT II) WHERE STATES UNDERTOOK TO ENSURE THAT CORPORATIONS INCLUDING TRANSNATIONALS COMPLY WITH NATIONAL CODES, SOCIAL SECURITY, WITH INTERNATIONAL LAW, INCLUDING INTERNATIONAL ENVIRONMENTAL LAW.

IT SHOULD BE NOTED THAT THE PRECAUTIONARY PRINCIPLE IS RARELY

FOLLOWED AND OFTEN IT HAS BEEN MISCONSTRUED BY INDUSTRY TO MEAN THAT THERE IS NO SCIENTIFIC CERTAINTY THAT CURRENT PRACTICES WILL CONTRIBUTE TO ENVIRONMENTAL DEGRADATION THEREFORE WE WILL CONTINUE THE PRACTICES.

PRINCIPLE 15 CALLING UPON STATES TO PREVENT THE TRANSFER TO OTHER STATES OF SUBSTANCES AND ACTIVITIES THAT COULD CAUSE ENVIRONMENTAL DEGRADATION OR THAT COULD BE HARMFUL TO HUMAN HEALTH HAVE BEEN COMPLETELY IGNORED. STATES HAVE BEEN PRESSURED TO ACCEPT TOXIC, HAZARDOUS INCLUDING ATOMIC OR RADIOACTIVE WASTES, AND THEN IT IS ASSERTED THAT THERE IS INFORMED PRIOR CONSENT. INDUSTRIALIZED STATES ARE PROMOTING THE CONTINUED SALE OF NUCLEAR REACTORS SUCH AS

THE CANDU REACTOR.

10. A number of recent United Nations conferences have advanced international commitment to the social and economic aspects of sustainable development, such as the eradication of poverty, social integration, population and gender issues, education, trade, growth and development, human settlements and food security, among others, thus contributing to the achievement of the long-term goals and objectives of sustainability.

POVERTY WILL NOT BE ERADICATED UNTIL WE ARE SERIOUS ABOUT OUR PRIORITIES. THERE ARE GLOBAL MISPLACED PRIORITIES WITH 850 BILLION BEING SPENT ON THE MILITARY AND CORPORATE TAXES UNFAIRLY LOW, AND MISGUIDED ASSUMPTION THAT "QUASI UNBRIDLED ECONOMIC GROWTH WILL SUFFICE TO ERADICATE POVERTY.

11. The Commission on Sustainable Development, which was established to review progress achieved in the implementation of Agenda 21, forward global dialogue and foster partnerships A EUPHEMISM FOR INDUSTRY-DIRECTED POLICY for sustainable development, has catalyzed new action and commitments among a wide variety of partners within and outside the UN system. Its Ad Hoc Intergovernmental Panel on Forests made a significant contribution to the advancement of the world forest agenda. IN THE DIRECTION THAT WAS WANTED BY THE FORESTRY COMPANIES AND FORESTRY DEPENDENT STATES.

12. However, much remains to be done to activate the means of implementation set out in Agenda 21, in particular, in the areas of finance and technology transfer. IN PARTICULAR IN THE AREAS OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT.

TECHNOLOGY TRANSFER HAS OCCURRED SUCH AS THE SALE OF CANDU REACTORS, AND CLEAN-UP TECHNOLOGY THAT JUSTIFIES DEREGULATION OF TOXIC, HAZARDOUS INCLUDING ATOMIC WASTES ETC.

13. Most developed countries have still not reached the UN target, reaffirmed at UNCED, of committing 0.7 percent of their GNP to ODA, nor the agreed UN target of committing 0.15 per cent of GNP as ODA to the least developed countries. On average, ODA as a percentage of GNP declined in the post-Rio period, from 0.34 per cent in 1992 to 0.27 per cent in 1995.

IN 1981 THROUGH GENERAL ASSEMBLY RESOLUTIONS, STATES UNDERTOOK TO REDUCE THE MILITARY BUDGET AND TRANSFER THE SAVINGS INTO SOCIALPROGRAMS PARTICULARLY IN THE DEVELOPING COUNTRIES. AT THAT TIME THE MILITARY BUDGET WAS 50% OF WHAT IT IS NOW. 0.7 PERCENT IS FAR TOO LOW. THE CURRENT GLOBAL MILITARY BUDGET IS ESTIMATED AT 850 BILLION ANNUALLY. UNFORTUNATELY, THE UNITED NATIONS HAS BEEN FACED WITH A DAUNTING TASK OF ADDRESSING THE MISPLACED PRIORITIES OF ITSMEMBER STATES. 425 BILLION SHOULD BE TRANSFERRED TO SOCIALLYEQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT PRIMARILY IN THESOUTH BUT ALSO IN THE NORTH, AS WELL AS TO STRENGTHEN THE ROLE OFTHE UNITED NATIONS.

14. In many developing countries, the debt situation remains a major constraint on sustainable development. While the debt situation of many middle-income countries has improved, enabling them to re-enter international capital markets, many heavily-indebted poor countries (HIPCs) continue to face unsustainable external debt burdens. The recent World Bank/IMF HIPC Initiative could help to address this issue with the cooperation of creditor countries. Further efforts by the international community will also be necessary to reduce debt as an impediment to sustainable

development. THE WHOLE NOTION OF DEBT SHOULD BE REEXAMINED. MOST OF THE DEBT-RIDDEN COUNTRIES DID NOT BENEFIT FROM THE DEBT. PERHAPSWHAT SHOULD BE DONE IS THAT THE DEBT SHOULD BE REPHRASED IN TERMS OF COMPENSATION AND REPARATION THAT WOULD BE OWED TO THE DEBT

RIDDEN STATES. THE MEMBER STATES OF THE UNITED NATIONS SHOULD DEMAND AND ENSURE COMPENSATION AND REPARATION WILL BE SOUGHT FROMCORPORATIONS AND SYMPATHETIC ADMINISTRATIONS FOR THE ENVIRONMENTAL DEGRADATION AND HUMAN RIGHTS VIOLATION IN DEVELOPING COUNTRIES, ON

LANDS OF INDIGENOUS PEOPLES AND IN THE COMMUNITIES OF THE MARGINALIZED CITIZENS IN BOTH DEVELOPING AND DEVELOPED COUNTRIES. THE SO-CALLED DEBT OF THE DEVELOPING COUNTRIES IS NOT A DEBT TO BE FORGIVEN BUT RATHER AN OBLIGATION OF THE DEVELOPED STATES TO REDRESS, COMPENSATE AND RESTORE. DEBT IMPLIES BENEFIT AND LITTLE BENEFIT WAS DERIVED FROM THE YEARS OF CORPORATE, ALONG WITH SYMPATHETIC ADMINISTRATION EXPLOITATION OF DEVELOPING COUNTRIES, INDIGENOUS PEOPLES, AND MARGINALIZED CITIZENS. IT IS A TIME FOR REDRESS, COMPENSATION AND RESTORATION.

15. Similarly, the level of technology transfer and technology-related investment from public and private sources in developed countries directed to developing countries has not been realized

as foreseen in Agenda 21. WHY IS THERE A PRESUMPTION THAT

TECHNOLOGICAL CHANGE IS THE BEST WAY OF FULFILLING COMMITMENTS UNDER AGENDA 21. AND OTHER INSTRUMENTS THAT CAME OUT OF UNCED? WILL TECHNOLOGICAL CHANGE HELP STATES COMPLY WITH THE FRAMEWORK CONVENTION ON CLIMATE CHANGE OR WITH THE CONVENTION ON BIOLOGICAL DIVERSITY? THE BEST WAY TO BRING ABOUT THE NEEDED CHANGE IS FOR THE NORTH TO DRASTICALLY REDUCE ITS TECHNOLOGICAL DEPENDENCE, TRANSFER

FUNDS TO THE SOUTH FOR SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT, AND ENGAGE IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT ITSELF. THE NEEDED CHANGE WILL ONLY BE BROUGHT ABOUT IF THERE ARE MANDATORY INTERNATIONAL NORMATIVE STANDARDS/REGULATIONS (MINS) DRAWN FROM INTERNATIONAL

PRINCIPLES AND FROM THE HIGHEST AND STRONGEST REGULATIONS FROM MEMBER STATES

HARMONIZED CONTINUALLY UPWARDS. MINS WILL THEN DRIVE INDUSTRY TO BEST (BEST EQUITABLE/ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES.

Increased private flows have led to investments in industry and technology in some developing countries and economies in transition. However, many developing countries have been left behind, slowing the process of technological change in these countries and limiting their ability to meet their commitments under Agenda 21 and other international agreements. The commitment made by developed countries to foster the transfer of technology has not been realized as agreed in Agenda 21.

III. Implementation in Areas Requiring Urgent Action

16. Agenda 21 and the Rio Principles established a comprehensive global approach to the achievement of sustainable development, recognizing the principle of common but differentiated responsibilities and the importance of international cooperation. This approach is as relevant, and as urgently needed, as ever. The preceding assessment shows that, while progress has been made in some areas, a major new effort will be required to achieve the goals established at Rio. The following proposals set out strategies to accelerate progress towards sustainable development. Sections A, B and C are equally important and must be seen and implemented in a balanced and integrated way.

TWO VERY IMPORTANT PRINCIPLES FROM UNCED HAVE BEEN COMPLETELY IGNORED OR MISINTERPRETED. PRINCIPLE 14. ON THE TRANSFER OF SUBSTANCES AND ACTIVITIES, AND PRINCIPLE 15 THE PRECAUTIONARY

PRINCIPLE. IN REFERENCE TO PRINCIPLE 14, DEVELOPED STATES ARE STILL TRANSFERRING SUBSTANCES AND ACTIVITIES THAT COULD BE HARMFUL TO HUMAN HEALTH AND THAT COULD CAUSE ENVIRONMENTAL DEGRADATION. THE DEVELOPED STATES HOWEVER HAVE USED THE NOTION OF "INFORMED PRIOR

CONSENT" TO JUSTIFY CONTINUING TO TRANSFER SUBSTANCES AND

ACTIVITIES. I THINK ENSHRINING THE RIGHT TO BE HARMED APPEARS LESS THAN PRUDENT. IN REFERENCE TO PRINCIPLE 15 I HAVE HEARD INDUSTRY IN CONJUNCTION WITH SYMPATHETIC ADMINISTRATIONS CLAIMING THAT THERE IS NOT SCIENTIFIC EVIDENCE THAT HARM HAS OCCURRED FROM THE EXISTING PRACTICE THEREFORE THE PRACTICE SHOULD CONTINUE. THIS MISCONSTRUING OF THE PRINCIPLE WAS USED TO JUSTIFY LOGGING IN A COMMUNITY WATERSHED.

A. Integration of Economic, Social and Environmental

Objectives

17. Economic growth is an essential precondition of sustainable development, especially in developing countries.

SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT NOTECONOMIC GROWTH IS AN ESSENTIAL PRECONDITION. POVERTY IS NOT NECESSARILY ERADICATED THROUGH ECONOMIC GROWTH; IN MANY CASES AS RECOGNIZED EARLIER IN SECTION 3. ECONOMIC GROWTH IN THE WAY THAT IT HAS BEEN OCCURRING CONTRIBUTES MORE TO INEQUALITY. AND INEQUITY.

Sustainable development cannot be achieved without greater integration at policy-making and operational level. THE PRECONDITION FOR ALL THESE SECTORS IS THAT THEY ARE ENVIRONMENTALLY SOUND. FACTORING IN THE ENVIRONMENTAL COSTS IS ESSENTIAL BUT PREVENTION THROUGH ENGAGING IN ENVIRONMENTALLY SOUND PRACTICES MAKES BOTH ENVIRONMENTAL AND ECONOMIC SENSE. THE NOTION OF TRADING PERMITS IS INEQUITABLE AND APPEARS TO SANCTION ENVIRONMENTALLY UNSOUND PRACTICES. Economic sectors such as industry, agriculture, energy, transport and tourism must take responsibility for the impacts of their activities on human well-being and the physical environment NOT ONLY FOR FUTURE BUT
