## PRESS CONFERENCE

In front of Monsanto we had a protest and gave a comment to the press

It was staged so that one person pretended to support Monsanto. Mitch Cohen from New York declared that he really appreciates having fish genes inserted into tomatoes because it is the only way he can get his son to eat fish .The local media reported that one of our members appreciated Monsanto

Tuesday September 29,1998, I GAVE a press conference in the Parliamentary press Gallery, in Ottawa, I presented a formal petition calling for the Banning of Genetically Engineered Foods and Crops to the media. This petition calls upon the Federal government to do the following:

- To ban all genetically engineered foods and crops
- To require a formal survey of Canadians in which the proven and potential health and environmental hazards are disclosed and that unless there is a consensus in Canada to retain the existing foods and crops all existing genetically engineered foods to be taken off the market
- To require growers, food wholesalers and retailers to immediately and fully disclose the proven and potential health and environmental hazards of genetically engineered foods and crops currently in production and for sale, and only thereafter to obtain a formal and written consensus from their consumers as to the future presence within the main stream Canadian food supply of existing genetically engineered foods and crops.
- To require a formal across Canada survey in which the proven and potential health and environmental hazards are disclosed and that unless there is a consensus in Canada to retain the existing foods and crops all existing genetically engineered foods must be taken off the market
- To disband the human genome diversity project and put an end to the colonization of the genes of indigenous people
- To cease all involvement with "biopiracy" and misappropriation of the knowledge of indigenous peoples
- To ban "terminator" seed technology and to cease all "terminator" tests and ban its application.
- To lobby internationally for the banning of all genetically engineered foods and crops
- To discontinue all funding to universities for research into the development of genetically engineered foods and crops
- To prohibit all corporate funding for genetically engineered food and crops of universities
- To keep forests, farms and food safe, and opposing the genetic engineering of all plants and animals
- To abolish patents of genetic sequences and living organisms in the form of "intellectual property rights."
- To encourage smaller-scaled organic farming, local food systems, home-scale gardening, and ecosystem restoration, and oppose the consolidation of corporate and monocrop farming and their reliance on genetic engineering and toxic herbicides and insecticides.

The federal government and all provincial governments have been promoting and facilitating the registration of genetically engineered food and crops " euphemistically called "novel foods" in Canada.

Agriculture Canada along with other government departments has prepared an open-for-business brochure, in "Investing in Canada's Dynamic Agricultural Biotechnology Sector" including a map of Canada with Promo from each province.

In this brochure the governments boast that "Thousands of field trials of ag-biotech products are already in process more than in the entire European Union"

In this brochure the governments are offering the following enticements: • "the access to a NAFTA market worth 8.5 trillion dollars (US) in GDP ...."many international companies are locating operations in Canada because it offers secure access to the richest market in the world, North America. •"successful partnerships with universities, industry and governments; ...the agriculture sector benefits from more than 10,000 new post-secondary graduates in agricultural and biological sciences each year...and that investors in Canada's ag-biotech sector will find: a staff of approximately 30,000 including 10,000 specializing in ag-biotech"; • "comprehensive financial incentives" such as "best R& D tax credits among leading industrialized countries" "large companies can qualify for a federal tax credit of 20% on eligible R&S spending. That credit can be enough to eliminate federal income tax for some companies. It cuts taxes significantly for many others". Small Canadian-controlled companies can qualify for a federal tax credit of 35 % on their first \$2 million in R&D. That tax credit is also fully refundable".

GREEN LEADER CONFRONTS Alan Rock and David Anderson OVER GENETICALLY ALTERED FOOD

5B.2.K.VII BRAZIL: 1998

COMITÉ PERMANENT DE L'AGRICULTURE ET DE L'AGROALIMENTAIRE

**EVIDENCE**

[Recorded by Electronic Apparatus]

Tuesday, May 12, 1998

• 0904 

[English]

**The Chairman (Mr. Joe McGuire (Egmont, Lib.):** I call the meeting to order.

In our first round are participants from the Canadian Food Inspection Agency and Health Canada.

• 0905 

Today, pursuant to Standing Order 108(2), a study of biotechnology's regulatory framework, we want to try to answer the questions: How are biotechnology products currently being regulated; what measures are in place to ensure the safety of these products; how is our regulatory system perceived internationally; and how does our system measure up against other international practices for biotechnology?

Our first round will last one hour. I think there's a tentative vote scheduled for 10.30. We might get started on the second round, but we'll be going until 12 noon, hopefully.

We have a quorum. We'll begin immediately with Margaret Kenny.

**Ms. Margaret Kenny (Acting Director, Office of Biotechnology, Canadian Food Inspection Agency):** Thank you very much, Mr. Chairman.

I'll speak for the next five minutes concerning the regulation of agricultural products of biotechnology.

Canadian regulatory departments and agencies have agreed to define biotechnology as the "application of science and engineering to the direct or indirect use of living organisms, or parts or products of living organisms, in their natural or modified forms". This is the definition that is in our Canadian legislation for agricultural products and the Canadian Environmental Protection Act. Put simply, this means that biotechnology is the application of technology to biology. In this sense, biotechnology has long been practised in agriculture through things like selective breeding of plants and animals to provide improved sources of food, fibre, and fuel.

Modern biotechnologies such as genetic engineering allow for the transfer of genes from one species or one organism to another, with the purpose of further enhancing the characteristics of agriculturally important plants and animals. This means that we have what might be called a new generation of agricultural products that are reaching the marketplace. In order to meet that challenge, in 1993 the federal government announced the federal framework for the regulation of biotechnology. I'll briefly go through the key features of this framework.

The first principle was to maintain Canada's high standards for the protection of the health of workers, the general public and the environment; second, to use existing legislation and regulatory institutions, rather than create new acts and new institutions; third, to develop clear guidelines for evaluating products; fourth, to provide for a sound scientific database on which to assess risk; fifth, to ensure that the development and enforcement of Canadian regulations are open and include consultation; and sixth, to contribute to the prosperity and well-being of Canadians by fostering a favourable climate for investment, development and innovation.

The Canadian Food Inspection Agency plays a key role in the federal government in regulating agricultural products, in terms of evaluations for efficacy and environmental safety, and for implementing labeling policies.

I'll speak first concerning environmental assessment. For environmental assessments, specific regulatory amendments relating to the notification and assessment of these products were implemented in January 1997, under the Seeds, Feeds, Fertilizers, and Health of Animals Acts, which are administered by the Canadian Food Inspection Agency.

Under the Seeds Act, plants are regulated. Modern techniques of biotechnology, such as genetic engineering, provide plant and tree breeders with new means to develop new plant varieties. These varieties would include such things as new types of resistance to herbicides, insect and disease resistance, special nutritional components, and greater tolerance to environmental stresses.

The seeds regulations cover both field testing under confined conditions that would restrict the plant's ability to spread seed and pollen and, in addition, larger scale, unrestricted plantings towards commercialization. Since 1995, 33 plants with novel traits have been approved for this type of commercial planting, and in 1997 nearly 800 confined field trials were conducted in Canada.

• 0910 

The Feeds Act regulates livestock feeds. These kinds of products include: living micro-organisms to help maintain bacterial populations in an animal's stomach; fermentation products, such as vitamins; microbes for forage additives; and so on.

To date 31 new plant types have been approved for feeding to livestock in Canada. In addition, approximately 180 microbial products have been approved. Only nine of these are from genetically modified micro-organisms.

Under the Fertilizers Act, fertilizer-type products are regulated. These are developed to supply plants with nutrients, and can include micro-organisms, thus the biotechnology component. Microbial fertilizers, in fact, have been used as alternatives to chemically based products for many years.

Currently there are 80 microbe-type fertilizers registered in Canada, and there have been nearly 200 research trials authorized since 1993. Only 10 of these have involved modern techniques of biotechnology.

Veterinary biologics are regulated under the Health of Animals Act. These products are used for the prevention, treatment, and diagnosis of infectious diseases of animals, and include products such as vaccines and diagnostic kits. Presently a total of 44 biotechnology-derived veterinary biologics are licensed, and 35 of these are diagnostic kits.

Importation of plants and micro-organisms and animals is controlled by way of import permit under the Health of Animals Act and the Plant Protection Act. These permit

reviews examine the potential for a new imported organism to have an adverse effect on animals and plant health.

In terms of labeling policy, Canada certainly requires that food offered for sale to the Canadian public is safe for consumption. Accordingly, Canadian policy considers foods derived from newer techniques of biotechnology, such as novel foods. While Health Canada is responsible for assessing the safety of these foods—and my colleague, Paul Mayers, will go into more detail on that—Health Canada and the Canadian Food Inspection Agency carry responsibility for labeling policy. This is under the Food and Drugs Act.

Since 1993 the government has held three public consultations to determine Canadian views on labeling foods derived from biotechnology. I'm going to briefly describe some of our findings. I would stress that these consultations have included over 2,000 organizations, companies and individuals, so there's probably no point on which we had 100% agreement, but these points certainly represent a good general consensus.

The first point is that labels of novel foods must identify the presence of any potential health or safety risks for certain individuals or population segments. In addition, the label would have to identify any significant compositional or nutritional changes from the traditional food source. Consumer choice would be provided through an option of voluntary labeling—that is, an industry could voluntarily choose to identify that a food has or has not been developed through biotechnology. However, with the exception of the health and nutritional considerations I previously noted, a mandatory requirement, a law specifically requiring that the process of biotechnology be identified, should not be obligatory. Dietary restrictions based on religious requirement in our consultations were considered to be outside of the mandate of government to regulate.

These findings are consistent with the provisions in place under the Food and Drugs Act, and as such describe the approach Canada has used in determining whether or not new products of biotechnology that enter the Canadian market require special labeling.

I would also note that Canada is a member of Codex Alimentarius, and is working with this international standard-setting organization to arrive at a common international position.

In closing, I would like to note that the Canadian Food Inspection Agency certainly does recognize the importance of making information available to the public, and we have endeavoured to do so. For example, information concerning our legislation and the regulatory system labeling policies are available to the public. This material includes information on our regulations, on our guidelines, the consultations we've undertaken, the field trials that are carried on and the decisions we have made with regard to the regulation of these products. These pieces of information are available to the public.

• 0915 

Thank you very much, Mr. Chairman.

**The Chairman:** Thank you very much, Ms. Kenny. We'll go now to the Health Canada representative, Paul Mayers, head of the office of food biotechnology.

**Mr. Paul Mayers (Head, Office of Food Biotechnology, Health Canada):** Thank you, Mr. Chairman.

What I would like to do in five minutes or so is overview our approach regarding regulating foods in terms of the safety of those foods. Since my colleague Margaret Kenny has given an overview of the federal regulatory framework, I'll address specifically the food safety issues, but I will place the food safety consideration within the context of that federal framework.

Health Canada does have the responsibility of ensuring food safety under the Food and Drugs Act in its regulations. That is a shared responsibility with the Canadian Food Inspection Agency since the consolidation of the federal food inspection service, and Health Canada's role in that consolidated approach is in the area of standard setting and regulation with respect to food safety.

There are a number of mechanisms we have available under the Food and Drugs Act and regulations in terms of food safety control in this country. These mechanisms include pre-market notification, pre-market approval, and the provision of standards. In the case of novel foods, because of the breadth of foods that may be new to our food supply and for which it would be relevant to assess their safety, the approach that was considered appropriate was the use of pre-market notification to permit, prior to foods entering the marketplace, the opportunity for assessment while at the same time not requiring that those foods be subjected to a positive listing such as we do for food additives, which requires regulatory amendment in each case.

We hope that the approach of notification allows for appropriate assessment without the added time restriction that would impact on the industry of requiring the regulatory amendment for a positive listing, such as the case in division 16 of the food and drug regulations, where we list food additives that are permitted.

So Health Canada has proposed a new division to the food and drug regulations that defines the concept of a novel food and would require notification for such a food prior to its sale or advertising for sale in Canada. This permits the department to conduct a thorough safety assessment for each such product.

Novel foods would include but not be limited to foods derived from genetically modified organisms, and this is particularly important because our federal regulatory framework does require that we use existing legislation to regulate products of biotechnology. We recognize within the department that the issue we are dealing with is novelty to the food supply, not specifically the fact that a product may have been genetically modified. Therefore a product that is not genetically modified but new to the food supply may present similar risks for which it's as appropriate to carry out safety assessment as it would be for a product of biotechnology.

On the basis of our consultations around the regulatory proposal for novel foods, we are currently revising the proposal. We hope to return that proposal to the *Canada Gazette*, part I, for further consultation this year. In order to assist product developers, however, in bringing products forward for assessment, we have also, again as the federal regulatory framework requires, provided guidance as to how those products will be assessed. This guidance is outlined in a Health Canada publication, *Guidelines for the*

*Safety Assessment of Novel Foods.* What these guidelines do is provide an overview of the information requirements a developer would need to generate in order for a safety assessment to be carried out.

• 0920 

Given this committee's interest in how our regulatory system fits within the international framework, it's important to note that this guidance is in the context of international guidance in safety assessment of novel foods. That international guidance was first developed by an expert group within the Organization for Economic Cooperation and Development, and Canada was a part of that expert group that developed the concept of substantial equivalents, which is the premise that we use for safety assessment in biotechnology.

That approach to assessment is based on comparison of the novel product to traditional products that have an acceptable standard of safety. In other words, we compare a novel food to a food for which we have a history of safe use. This is a very valuable concept for us, because by using that comparative approach to link a new food entering the marketplace to a food with which we have a long history of familiarity, what we achieve is a mechanism by which we can then in comparison establish the safety of the food not in terms of absolute terms, because there is no such thing as zero risk or absolute safety, but instead it allows us to benefit from the history of safe use and therefore gives us a mechanism by which we can predict not only potential acute effects of a particular food but also the long-term effects of that food, based on our knowledge of the long-term effects of its traditional counterpart.

In addition, the safety assessment considers the process used to develop the food. It compares its characteristics with the traditional counterpart as noted, both in terms of its composition and its nutritional quality. An important consideration is the potential for the presence of any toxicants or anti-nutritional components that may be present.

We are already aware that the current food supply includes products that include toxicant and anti-nutritional factors, and we have in our history learned how to deal with those factors. For example, some of the anti-nutritional factors in products such as beans we know how to deal with by cooking, but that doesn't mean we prevent those products from entering the marketplace. Instead we handle those products in a similar fashion so as to deal with those anti-nutritional compounds. Similarly, a novel food would be held to a similar standard of safety, as opposed to a different standard of safety.

The final considerations in the review are the potential toxic effects or allergenic effects of the newly introduced proteins to these foods. We recognize that some proteins have toxic effects and some proteins have allergenic effects, so that is a key component of the safety assessment carried out.

Once foods are reviewed and found to be substantially equivalent to and therefore as safe and nutritious as their traditional counterpart, they can enter the marketplace in the same manner as those traditional foods. From a scientific perspective, it would be inappropriate to hold a food that is in fact as safe and nutritious as another food to a

different standard in terms of its entering the marketplace. We subject those foods to the same post-market standards that are applicable to all foods in this country.

We recognize that the safety issues related to genetically modified organisms are in fact the same as those already in the food supply: the potential for toxicity, for anti-nutritional factors, for allergenicity, the potential for those foods to be contaminated. So the fact that these products have been genetically modified has not changed the potential areas of risk that we need to assess, and therefore we do have the expertise to address the risks that are potentially associated with such products.

• 0925 

The regulatory approach proposed by the department is comprehensive, in that it allows each individual product to be subjected to assessment before it enters the marketplace. As mentioned, we provide guidance to developers so that they are aware, as they go through their development process, of what standards their products will be held to.

Within the international context, it's important to note that in addition to the Organization for Economic Cooperation and Development, the Food and Agriculture Organization and the World Health Organization of the United Nations have been active in providing guidance in this area. The guidance they provide is also based upon the concept of substantial equivalence, and the Canadian approach is consistent with that international guidance.

Further, I would note here that the Canadian approach has served as a model for several other countries developing their own regulatory system, because we were one of the first to elaborate a regulatory approach for such products. In terms of regulating such products, only the U.S. has had experience with more products than we have here in Canada. The regulatory approach in Canada has been a very important model for other countries. In fact, we routinely get requests from other countries to either visit Canada to observe our regulatory approach, or for us to visit those countries to provide an overview of the regulatory approach we use in Canada.

As noted, to date over 30 products have been reviewed and permitted for use in the Canadian marketplace. I won't spend much time in discussing the issue of labeling, since Margaret has already done that, but I would note that Health Canada too is supportive of providing consumers with information to aid them in their food choices.

To that end, we have made a commitment to providing information on the regulatory system, information on our guidelines, and information on individual product decisions available to the public. We do this mainly through a Health Canada web site. The office of food biotechnology within the department is also committed to sharing information, and we routinely respond to requests to attend meetings to provide overviews of the regulatory approach and information regarding individual product reviews, so that those who are interested in information regarding the technology and the products derived from the technology can have such information available to them.

In closing, I would note that other groups have worked in collaboration with both Health Canada and the Canadian Food Inspection Agency in also providing general

information to the public to aid their understanding of both the technology and the food safety issues associated with the technology. These are groups such as the Consumers' Association of Canada, the Food Biotechnology Communications Network, and the Dieticians' Biotechnology Network, all of which we see as key partners in sharing information with the public to aid in their understanding of both the technology and how the technology is regulated.

Thank you, Mr. Chairman.

**The Chairman:** Thank you, Mr. Mayers.

I was just wondering how you came to arrive at the term “novel” to describe genetically-altered produce. It seems to me a peculiar way to describe our efforts to double our food production over the next number of years. “We're going to do it with novel foods”—it's like describing a can of Boost or something like that. Is this an international term, or how did you come across the word “novel” for canola or things like that?

**Mr. Paul Mayers:** It's an interesting question. Internationally, there have been a couple of approaches taken. In Europe, the U.K., and Australia, they have used the term “novel foods”, as have we in Canada. Our colleagues in the U.S. don't use the term “novel foods”, although there was some consideration of that issue there. Instead, they have to date focused solely on plants. They simply describe them as “new plant varieties”.

The reason we selected the term “novel foods” in Canada is that we had serious concerns about a focus solely on foods derived through biotechnology, and therefore the potential for the terms “biotechnology foods” or “genetically engineered foods”.

• 0930 

The reason for those concerns is the fact that we recognize there are other foods that are new to the Canadian marketplace that may pose risk if they are not assessed prior to entering the marketplace. We therefore needed a category description for foods that would encompass much more than just biotechnology, but would also include new fat replacers and foods that had never been consumed as foods in Canada before. The issue of novelty was the trigger point, and therefore that's where the term “novel foods” came from.

**The Chairman:** I see. Was any consideration given to having a North American term, instead of Canada having one term and the Americans having another term for the same thing?

**Mr. Paul Mayers:** Well, because to date the U.S. has not dealt with things more broadly than genetically modified plant products, there has not been such consideration. Because their legislative approach is slightly different in how they treat foods, in the U.S. they have the concept of “generally recognized as safe” or “food additives”, and foods can only fall into those two categories.

We have a much broader set of food categories in Canada. As a result, we could not use a similar approach to the approach used in the U.S. because we have no “generally recognized as safe” or “GRAS” concept as they do, and which they use to categorize

these. Most of the novel foods in the U.S. fall into the category of food additives, and a few fall into the GRAS category. So it was not a consideration for a single North American term.

**The Chairman:** Okay.

We have 30 minutes for questions. Mr. Hoepfner.

**Mr. Jake E. Hoepfner (Portage—Lisgar, Ref.):** Thank you, Mr. Chairman.

Sorry I was late this morning to listen to your presentations, but our plane was two hours late coming in on Monday, and last night we had the opportunity to see the Senators play hockey, so, you know, you do important things first.

I was interested in the terms here—Food and Drugs Act. I just noticed that in my constituency a company working with biotechnology is trying to get a permit to grow noxious weeds. Does this line up with your type of work? Is that a food or is that a drug? Where would you designate that?

**Mr. Paul Mayers:** It would depend on the end use. If the product, whether it's a weed or not, is going to result in a component, or the entire plant is going to be used in human feeding, then yes, it would fall under the Food and Drugs Act and would be potentially subject to the novel food proposal. If that product were being grown for animal feeding, then it would not be subject to the Food and Drugs Act and regulations. Instead, it would be subject to the Feeds Act, which the Canadian Food Inspection Agency administers.

**Mr. Jake Hoepfner:** Where does cost recovery come in to this type of plan? In this biotechnology industry, which is public good and which is private good? To me, it seems there's probably a lot more private good involved in this than public good, if you look at the new seeds that are developed, the hybrids. How do you establish a guideline, or how do you set regulations to cover that?

**Ms. Margaret Kenny:** I could probably start with a response to that question. The regulation of products of biotechnology is not fundamentally different from the other kinds of products that we regulate in that regard. Essentially, under the pieces of legislation we are working with, the general cost recovery mechanism for the evaluations for approvals is worked out at about 50%.

**Mr. Paul Mayers:** In Health Canada, to date, within foods, there's only one area of the food program that is currently being subjected to cost recovery, and that's veterinary drug approvals. The remainder of the program at present is not subjected to cost recovery. What other areas of the program might be subjected to cost recovery is a consideration that's under discussion. So at present there is no cost recovery for the reviews that are undertaken for novel foods.

• 0935 

**Mr. Jake Hoepfner:** I was home last weekend and got in a couple hours on the tractor seeding canola. I was astounded at the costs for Roundup for canola. I think they were paying \$ 12 an acre just for the breeder rights or the technology of that product. Now,

you know, when you sow 1,000 acres of canola, that's a lot of bucks. Who gets that or who pays for the research on this type of project? I'm sure government does some testing and funding to make it safe to use.

**Ms. Margaret Kenny:** I guess there are probably two pieces to that. One is that companies are in the best position to explain why the price is the way it is. I expect they're recouping some of their research dollars.

Certainly there are programs, particularly in early research, before development stage projects, where the government has had a hand in developing new technologies that are then used to develop products somewhere down the line. In terms, though, of the work that is done for regulation, to meet our safety requirements this is a responsibility of the companies involved, to pay that price to carry out the testing that is required to meet our safety standards.

**Mr. Jake Hoepfner:** So the testing, as far as Agriculture Canada and food safety are concerned, is paid by the companies—or does that again translate to taxpayers picking up part of it?

**Ms. Margaret Kenny:** That bill is picked up by the companies involved, the applicants, and it may be a university in some cases. But the applicant is responsible.

**Mr. Jake Hoepfner:** Getting back to drugs and food, the nutraceutical industry, how do you distinguish it? Is it a pharmaceutical? Is it a drug? If it's a health food from natural products, where does it fit in?

**Mr. Paul Mayers:** Some nutraceutical-type products will in fact be novel foods if they have not already been used in the food supply.

There is a separate discussion also going on around the issue of the ability to make claims for food products that are nutraceuticals, and that discussion is outside of our consideration of food biotechnology per se. Instead, it is a discussion regarding the distinction between a pharmaceutical product and a food and the fact that there may be a grey area between those where you have a food that has a health benefit. The question is, what types of claims are in fact appropriate for such a food? Consultations around that issue are currently going on.

In terms of how that relates to biotechnology is the situation where the technology is used in developing such a product, and in that case, the safety of that product, based on the use of the technology, would be assessed under novel foods, and the authorization of any claims associated with that food would then follow under whatever is finally determined as appropriate in terms of permitting claims for food.

**Mr. Jake Hoepfner:** Are you saying, then, sir, that a novel food is probably a combination of a nutraceutical or a pharmaceutical and a food?

**Mr. Paul Mayers:** Some novel foods might be, but many novel foods, certainly all of the examples we have today, are nothing more than traditional products simply modified for agronomic improvements or improvements in terms of quality.

**Mr. Jake Hoepfner:** Thank you. I appreciate it.

**Mr. Paul Mayers:** You're welcome.

**The Chairman:** Madame Alarie.

[*Translation*]

**Ms. H  l  ne Alarie (Louis-H  bert, BQ):** Good morning. On looking at the labeling regulations, I am somewhat surprised to see that there is a voluntary aspect to this whole thing as far as industry compliance is concerned. The industry can choose whether or not to label a product as having been developed with the help of biotechnology.

• 0940 

I have question concerning the export trade. Even though you comply with general OECD rules when you export a product, does the comprehensive labeling requirement present a problem for you?

[*English*]

**Ms. Margaret Kenny:** I can speak to that question. The issue of labeling, particularly in the European Union, is one that is ongoing. You're certainly correct that this decision could be one that has an influence on Canadian exports. The current discussion, though, in the European Union, which is never quite stable—what it is today may not necessarily reflect where it goes tomorrow—would suggest that they would see three categories for labeling: this food comes from genetic engineering; this food does not come from genetic engineering; this food may come from genetic engineering.

In a case where there was any doubt—for example, if they're dealing with a commodity where grains that may have come from a plant derived through biotechnology are mixed with those that are not, with commingling taking place—then the labeling would simply say “may” contain. But the European Union has not yet finalized those rules, and there's certainly considerable debate going on at this time.

[*Translation*]

**Ms. H  l  ne Alarie:** I was thinking about the European Community and about the Asian market as well which is very meticulous when it comes to these kinds of things.

If I understand correctly, the labeling policy is a responsibility that is shared between the Canadian Food Inspection Agency and Health Canada. Who has primary responsibility? We have often discussed the problem of labeling and of educating the public and we don't have the impression that any one department or agency is responsible for the education component. Is this left up to consumer associations and groups? Doesn't the government feel some kind of responsibility where such matters are concerned?

[*English*]

**Ms. Margaret Kenny:** In terms of the Asian market, or even exports to the United States, I can say that our labeling policies have been consistent with those of Japan and those of the United States. We have not had issues such as you've described there.

In terms of who is the leader with regard to labeling, really, it is very much a shared responsibility between Health Canada and the Canadian Food Inspection Agency. Health Canada, in carrying out their safety review, would identify if there was a concern for a segment of the population, or if there was a significant nutritional change. At that time they would define any mandatory labeling requirement in that regard. The Canadian Food Inspection Agency's role is more on the prevention of fraud, this type of thing. Then we have a role in the development of the general labeling provisions. Certainly we work hand in hand with other federal departments in that regard.

With regard to your question concerning who is responsible for education or providing information, I would certainly suggest that is a shared responsibility between all stakeholders who deal with these new crops, new foods. That might be, for example, the companies involved in the development. They have a role to play. The grocery industry has a role to play. Certainly from a regulatory perspective we are in a position where we need to provide information on what constitutes the safety assessment, what products we have looked at, and what our policies are.

These are very much shared responsibilities. I don't believe any one group can do it all themselves or are perhaps the best to handle all situations. Again, it's an activity that requires partnerships.

• 0945 

[*Translation*]

**Ms. H  l  ne Alarie:** Information may well be available, for example on certain Web sites, but there is a world of difference between information and education. This issue has been raised by every single group that has come before the committee. Everyone has told us that we must start educating young people and the general population. Information is all well and good and I understand that people can easily access a Web site, but it goes much further than this. We need to take a proactive approach.

[*English*]

**Ms. Margaret Kenny:** I would agree. You're absolutely correct there. In our consultations with regard to the Canadian biotechnology strategy, that same point was emphasized time and again. Yes, there is a role for the provision of information and we should be doing more in that area, but also education in our schools, starting at kindergarten, with an emphasis on science is important.

**The Chairman:** Thank you very much.

Mr. Calder.

**Mr. Murray Calder (Dufferin—Peel—Wellington—Grey, Lib.):** Thank you very much, Mr. Chairman.

Margaret and Paul, I read through this and found it very interesting. You start out here with guidelines for the safety assessment of novel foods. We go along a little bit further

and see that Health Canada is very supportive of providing consumers with information. Also, you have a web site, which is obviously going to put forward that information.

But I want to take my chicken farmer hat off for a minute and put on my consumer hat. That'll make Christine very happy at the back of the room here.

Take novel foods. I like my wholewheat bread the way it was. Why do I have to eat novel wholewheat bread now? I like my shredded wheat the way it was before. Why do I have to eat genetically engineered shredded wheat now? What type of resistance from consumers are you getting for novel foods, genetically engineered food products?

My next question goes straight to the Health Canada web site. First, how well advertised is this web site? Do people know about it? Second, how user-friendly is the web site once they find out it's there? Third, what are your usage numbers with that web site?

**Mr. Paul Mayers:** To take the questions in order, in terms of consumer reaction to the products, we certainly have seen a lot of consumer interest and questions. What I can't tell you is the direct consumer reaction. The reason for this is that the developers of the products, those who market the products are the only ones who will have a true understanding of whether there is consumer resistance to the products.

The few examples of actual tests in the marketplace that have taken place have been quite positive. There was a market test of genetically modified potatoes in Atlantic Canada carried out through a supermarket chain. The response there was very positive to that product.

Now, it might be argued that in Atlantic Canada, where there is an understanding of the particular pest problem that this potato addressed, that may have been a reason why the acceptance was high. I certainly don't know if that's the reason, but indeed, in terms of that particular market test, it was very positive.

That doesn't mean we don't see questions from consumers regarding the product. That's typically the response we get. It's not typical that they just don't want this stuff, it's that they need to understand this beforehand. So we do try to address that.

In terms of the information on the web site and our publicizing it for the entire Health Canada web site as a network of health information, there's a project under way to reinforce how we promote that web site, and the food web site is included in that entire broader health network.

Also, through our partners such as the food biotechnology communication network, we try to make people aware that the network exists. But it is extremely difficult to publicize the web site.

• 0950 

In terms of user-friendliness, I certainly would not suggest that it's as user-friendly as it could be. At present, some of the documents on that web site have to be downloaded simply because of the technology used in developing them. Within the food program,

there is a commitment to focus on our web site as an information tool and to improve it to increase that user-friendliness.

What we have found is that since the web site has been put in place, its usage continues to go up. One of the very interesting things that we've seen since the web site has been in place is that the number of phone calls directed to the Office of Food Biotechnology from consumers has gone down as a result of the web site being available. That has really highlighted to us that it's very important to continue to improve that web site as an information tool.

**Mr. Murray Calder:** Good. Have you bothered to go on this track instead? I think basically what we're doing is that when we try to get too technical as to what we're doing in agriculture we scare the heck out of the consumer.

Say we turned around and maybe took the track of telling the consumer that the shredded wheat they're eating right now is already from genetically engineered grains. The grains right now in 1998 are totally different from what they were in 1970. The reason for this is that we're not making land any more, and you, as a consumer who wants a house, is paving over more agricultural land each year. There are more consumers each year. There will be nine billion by 2030. And you're paving over the land that we're already producing food on, which is putting us into a corner such that agriculture must become more intensive. The yield per acre has to go up because there are fewer acres and there are more people.

You're already eating genetically engineered food. This is just a progression that we're moving on with right now. The industry is evolving.

Have you taken that track with the consumers? They're reasonable people. They understand. Instead of scaring them with a whole bunch of scientific gobbledegook, just kind of show them that this is the progression of the industry. Have you tried that track?

**Mr. Paul Mayers:** In fact that approach is the principal communications tool. There's the fact that this technology is simply one in a progression that man has used in crop improvement since they first domesticated crops.

Absolutely, the direction you're suggesting is a key direction in creating the understanding that this is just another tool in the farmer's tool kit as opposed to something so revolutionary that it's outside of the realm of understandability.

**Mr. Murray Calder:** Is it working?

**Mr. Paul Mayers:** I believe it's working in some sectors. It's very interesting that in Canada I think there's a much greater linkage to the farming community even though that linkage in Canada is a very low percentage than that in other areas of the world. As a result, I think in Canada that message has created more understanding than in other countries.

**The Chairman:** There are only seven minutes left. We have Mr. Harvard, Mr. Steckle, and McCormick.

**Mr. John Harvard (Charleswood—Assiniboine, Lib.):** I'd like you to give me a picture of government investigation into modified foods arising from biotechnology. Would it be accurate to say, Mr. Mayers, that product development is coming at you in far greater numbers now than say that of 10 or 15 years ago?

You said that 30 products had been approved. I don't know over what period of time that was, but if 30 products were approved, out of how many? How many were rejected?

**Mr. Paul Mayers:** Well, certainly in terms of development, it has been tremendous over the last several years.

We started reviewing the first products in 1994. From then until today, the number of products that we have dealt with is more than 30. As Margaret Kenny would be able to describe, the number of products that are undergoing field trials is a magnitude greater than that. We expect that the numbers will continue to increase.

• 0955 

In terms of how we are handling it, it's my understanding that the industry did a study and was quite pleased with how the regulatory agencies are responding in terms of timeliness of response in Canada in comparison to other countries. We are operating on a time line basis. Our regulatory proposal stipulates a 90-day review period for the actual safety assessment, and in the majority of cases we can meet that time line.

**Mr. John Harvard:** But have you had cases where product has been brought to your attention, you've investigated it, and you've said to the industry or whoever brought it forward, "Sorry, it doesn't cut the mustard, it's not safe"?

**Mr. Paul Mayers:** The way the approach works is that if we have safety concerns, we relay those safety concerns to the company—

**Mr. John Harvard:** And then what happens?

**Mr. Paul Mayers:** It's up to the company then to either generate data to demonstrate that those safety concerns can be addressed or withdraw the product.

**Mr. John Harvard:** Now, if the product development is growing at a fast pace and if that pace may even be quickened in the future, what sort of pressure does that put on Health Canada or the Food Inspection Agency? Are you going to have to hire more researchers or more staff? If you don't, one would assume that would cause a slowdown in your work.

**Mr. Paul Mayers:** The growing requirements for evaluators to assess these products is part of our priority and resource allocation considerations, and we deal with that both in terms of how we reorient our priorities within the program and in terms of the potential, where it's necessary, to bring in the expertise we require to carry out those assessments.

**Mr. John Harvard:** Does Ms. Kenny have anything to say?

**Ms. Margaret Kenny:** I would just say that within the Canadian Food Inspection Agency we have brought on a new expertise for this very reason. It certainly is a situation that

has to be monitored. The training of these people is also a very critical component of ensuring that we have solid—

**Mr. John Harvard:** I have one more thing. When it comes to vetting these products, if they've already been subjected to examination in other countries, do you accept the work of other countries or do you have to reinvent the wheel and do it over again here in Canada?

**Ms. Margaret Kenny:** We have been in a somewhat unique situation in Canada. As Paul has said, we have been the leaders, together with the United States, in having products come to us. We are working with a number of other countries. Evaluators from the Ukraine, for example, are in our offices this week, Chileans will be coming up in October, a delegation from Argentina will be here for a month later in the fall as well, so that we can share our experiences and work towards more harmonization of regulation, which I think is what you're....

**The Chairman:** Mr. Steckle, please.

**Mr. Paul Steckle (Huron—Bruce, Lib.):** I want to address my question to you, Margaret, and I want to continue on with Ms. Alarie's comments about labeling.

In your second point on page 3, you're talking about consumer choices. Given that you're saying you're providing the choice through the option of voluntary labeling to identify the food products, if the company producing and manufacturing a product chooses to not include or to include certain information in regard to its genetic origin.... Given that the label may or may not, what is the public's acceptance of labeling? Have they chosen to buy the products with the greater amount of information on the label? In some of the consultations you've done, have you been able to determine whether the public really cares what's on the label, or is it a fact that basically it's nice to have the label on there, but really people don't read it? Or do people really read it?

**Ms. Margaret Kenny:** Again, that is a very difficult piece to assess. Certainly when surveys are done asking people "If you have two apples in front of you and one has been subjected to new technology, do you want it labeled?", people generally say yes. However, in surveys where the question is "What are your food safety concerns?", biotechnology rarely makes the list.

• 1000 

If we look at the Holland experience, though, where the country did put in a requirement for mandatory labeling and then labeled what I would certainly consider very few products, something between 80 and 100, officials in that country say the controversy is no longer there. The question the public had was whether they would label. Once they were satisfied that there was labeling, the controversy in that particular country was over. That's what's being reported to us.

**Mr. Paul Steckle:** Basically, for the public to realize there is a label on there, even though they don't understand or perhaps don't even read what's on there.... We keep talking about labeling. There is a cost to that, and the consumer will bear that cost.

I believe the public should be informed, but we do all kinds of things where labeling indicates certain hazards. We can use tobacco as an example. People still buy the product, don't they? Is it then simply to deny liability to the manufacturer? Why are we doing this? I am asking these questions for a reason. I don't have the answer to it, but we keep insisting that we need more labeling. If you as a consumer, as I, don't read the labels.... I buy the corn flakes, and I don't really care. I know it's corn flakes in there, and I know when I shake it out whether it is corn flakes or not, and that's all I really care. Enough said on that for now, but we can think about that one.

I want you to tell me, Paul, in what way is the potato—we're using that product and we all understand what a potato is—used as a novel food? Give us an example of where the potato may be used as a novel food today.

**Mr. Paul Mayers:** As to our current examples of potatoes that have been through the review process, in terms of the potato that reaches the consumer table, there is no difference. It is novel only in its agronomic performance, in that it can resist the Colorado potato beetle without the application of insecticide. The potato that reaches the table is a potato, and as far as the consumer is concerned, it doesn't taste different, it doesn't look different, and it has no difference in nutritional value, because there was no intent to modify any of those considerations.

There are potatoes in development, for example, that would be higher in starch and therefore would absorb less oil during frying, which will have a significant nutritional impact in diet. That situation is very different from our current examples of potatoes.

I think that is really key to recognize, that for some novel foods the novelty relates not necessarily to the food to the consumer, but the novelty is in terms of how the product is produced. Then there will be others where the intended novelty is for direct consumer benefit.

**Mr. Paul Steckle:** In that example, would there be merit in labeling?

**Mr. Paul Mayers:** Certainly if you have a product that adds value, then there is merit in voluntarily highlighting to the consumer that if you buy this potato for frying, you are going to reduce your fat intake versus the traditional potato if you fry it. So yes, definitely.

**Mr. Paul Steckle:** Is it your view that should remain a voluntary exercise?

**Mr. Paul Mayers:** In terms of that claim, yes, voluntary.

In terms of highlighting to the consumer that this potato is different compositionally from another potato, I believe that needs to be mandatory. The consumer must know, when they select this potato, that nutritionally it is different from what they are used to.

**The Chairman:** Thank you, Paul.

To follow up on Paul's question on the potato, why would a company like Monsanto, or any other company or any individual scientist in his basement who changes one gene in a product he had nothing to do with developing in the first place, be able to patent that and charge farmers extra money for research? The Incas probably had more to do with

the potato than Monsanto. Would that stand up legally, to change one gene in the composition of the potato and the next day it's theirs?

**Mr. Paul Mayers:** It's a bit out of the realm of my competence to comment on it. Certainly from a scientific perspective it is not just the fact that there is one gene; it is the impact of that one gene that may have a profound difference. But beyond that, it's certainly outside of my competence to comment on.

• 1005 

**The Chairman:** Thank you very much, both of you, for coming here today and helping us out with our exercise this morning.

We'll begin round two and call our next group of participants to the table. In round two, pursuant to Standing Order 108(2), a study of biotechnology, we're going to look at the public perception and access to information on biotechnology, including the consumers' groups' and researchers' perspectives on the public perception of biotech and the ability to access information on biotechnology. Particular emphasis shall be placed on food biotechnology.

We'd like to welcome our witnesses to the table. We may be interrupted with a vote in a very few minutes, ladies and gentlemen, but we'll try to get started as quickly as possible by introducing our witnesses.

Edna Einsedel is from the graduate program in communications at the University of Calgary. Dr. Milly Ryan-Harshman is a consultant from the Food and Technology Centre in Oshawa. Dr. Gordon Surgeoner is the chair of the Food Biotechnology Communications Network in Guelph. Christine Mitchler is the chair of the food committee for the Consumers' Association of Canada. Nathalie St-Pierre is the general director of the National Federation of Consumers of Quebec. And Burkhard Mausberg is the executive director of the Canadian Environmental Defence Fund in Toronto.

We'll take your presentations now—short presentations, I hope—and see what happens with the vote. We will then go to questions.

Mrs. Einsedel, would you begin, please?

**Ms. Edna Einsedel (Graduate Program in Communications, University of Calgary):** I'd like to thank the committee for this opportunity to address its members today. I'm pleased to share with you some of the work that we have been doing over the last few years on public awareness and attitudes towards biotechnology, particularly food biotech.

There are three questions that I'd like to address. First of all, what do we currently know about Canadians' awareness and attitudes towards biotechnology? I'll focus on food biotech. Second, what are the implications for future efforts to communicate with Canadians? And third, how should we envision the public's role in our efforts to address the challenges in dealing with various applications of biotechnology?

I'll start by sharing some of the results with you. I have to say that there have been a large number of studies looking at public attitudes and awareness towards biotechnology. They have been conducted in Canada and the United States as well as in Europe. I'll very quickly share some of these findings with you.

The chart here shows that we presented six different applications to consumers, ranging from food biotech applications.... For example, would you buy food and beverages that have been genetically modified? Would you encourage the insertion of genes into crop plants for pest resistance? Would you accept medical products that have been genetically engineered? Would you accept the use of genetically modified animals to produce organs for human transplants? Those questions are just examples of the range of applications that have been presented to consumers. This particular set of questions was asked in Europe as well as in Canada and the United States.

• 1010 

You can see the comparisons here. We just picked the five European countries of the G-7 and Canada and the U.S. This basically shows that North Americans, overall, tend to be a bit more positive towards these various applications than Europeans.

My second slide shows another international study done by one of my American colleagues, and again, this is a comparison of 19 countries. You can't read the labels, unfortunately, but the leftmost two bars represent Canada and the United States in this chart on the willingness to buy biotechnology products that have been developed to resist insect damage. Again, overall, Canadians and Americans tend to be more positively predisposed relative to the Europeans.

Third—and I apologize for the small labels—this slide basically reflects the same set of applications, the same six applications, but now it's asking consumers to indicate whether they would encourage the application on the basis of a number of characteristics: utility, which is the first bar on the left-hand side; risk, which is the black bar; moral acceptability, which is the white bar; and the last bar on the right-hand side, overall acceptance or encouragement of the application. Again, those are the six applications.

The two black bars that are jutting downwards refer to food applications as well as zeno transplants. So it seems that in terms of a perceived risk, it is most evident, if you will, in the area of food biotechnology and zeno transplants.

Basically, what that slide is showing you is that consumers are not just making decisions on the basis of the perceived utility of the product; they are also carrying forward judgments on the basis of other values, such as what is perceived to be morally acceptable, for example.

**The Chairman:** Excuse me for a minute, please. There's going to be a 30-minute bell, so we can take 15 more minutes before we go to vote.

**Ms. Edna Einsedel:** Here we have shown examples of statements that consumers were asked to respond to by indicating whether they thought the statement was true or false. For example, they were asked:

Ordinary tomatoes do not contain genes while genetically modified tomatoes do.  
True or false?

Genetically modified animals are always bigger than ordinary ones. True or false?

It is impossible to transfer animal genes into plants. True or false?

And the last statement here is:

Yeast for brewing beer consists of living organisms. True or false?

These are just examples of beliefs, if you will, or statements. Some might consider them factual statements.

**Mr. Larry McCormick (Hastings—Frontenac—Lennox and Addington, Lib.):** Can we make a comment now on a particular slide, Mr. Chair?

**Ms. Edna Einsedel:** Sure.

**Mr. Larry McCormick:** I'm just looking at the top of the slide, regarding the tomatoes and that question, and the public understanding conflicts so much with previous slides. I realize that it all depends on what's being presented to the public. But there it's just.... I shake my head when I look at that.

**Ms. Edna Einsedel:** How do I explain that?

**Mr. Larry McCormick:** How does anybody? I'm not sure any of us can explain it, but go ahead if you wish.

**The Chairman:** Excuse me. We're going to be here an awful long time just getting through one presentation. Our practice is hear the presentations while questioners take note of what they want to ask and who they want to ask it to once everybody makes their presentations or otherwise we would never get everybody's presentations. We'd like to get your testimony first.

Just continue with your presentation. Or you can answer Larry's question—

**Ms. Edna Einsedel:** And that is a very good question to raise.

• 1015 

Looking at all the results of various studies, we do find that there are low levels of awareness, if you will, on the issue of biotechnology. That does not necessarily preclude people from having opinions—

**Mr. Larry McCormick:** It never did.

**Ms. Edna Einsedel:** —so that's the short explanation, I suppose.

The last slide shows a very broad—and very shallow, if you will—perspective on the various studies that have been done on consumers. As you can see, Canadians demonstrate relatively higher levels of support for various applications when compared to Europeans. But that does not necessarily mean that the public here has not expressed concern over these products as well. Not surprisingly, Canadians have made

distinctions among various applications, tending in general to be more supportive of medical applications over food applications.

We have also found that among Canadians two segments tend to be visible in these surveys. The first is what I will call “the technological supporters”. People in this group are more likely to buy genetically modified produce if it tastes better. They're also more likely to accept some risk in the interests of promoting economic competitiveness. These people have also been called “institutionalists”, because they tend to rely on and to trust various institutions, including government, the private sector and scientists, to do the right thing in terms of protecting public safety or providing credible information.

There's also a large group in the public which I will call “traditionalists”, who are—and I'm using this term not necessarily with negative connotations—more likely to prefer traditional methods of agriculture, are not particularly confident that current regulations are sufficient to protect people, are unwilling to purchase genetically modified food, and will insist on full information, expressed through the support of labeling initiatives.

I will also emphasize that in terms of these studies the element of trust in institutions comes out quite frequently in surveys of the public.

We also know that no technology is ever viewed in isolation. When publics are asked about biotechnologies, for example, they have drawn from a wide range of experiences with various other technologies. They extrapolate from what they see and hear about things such as mad cow disease, the blood supply and even the regulation of nuclear power. Our focus group studies and others using the same methods have found results along the same lines.

While Canadians have enjoyed the benefits of modernity in terms of the range of technological applications, what tends to be salient, at least in the focus group findings, are the technological errors or disasters. So the big challenge here is how to ensure that there is trust in the regulatory process, trust not just in terms of expertise but also in terms of the process that is involved. And I think we also know enough from various studies on technology assessment or studies that deal with risk and how risk is perceived by the public that public trust in sources is critical and will have an important affect on public acceptance.

The big challenge here, I think, just to make my story a little shorter, is that there is a role for raising public awareness and understanding, as you can see. Certainly there is a large gap in terms of public education and public understanding of certain aspects of biotechnology.

And this is where public educators, those in the communications business and those promoting various stakeholder views, can make important contributions. Many are already doing so and many will continue to do so. I would, however, caution against the belief harboured by many that the public is an empty vessel waiting to be filled by scientific words of wisdom. “Let them have information and they will come” is no longer valid or viable today.

So the question is, how do we balance these public education efforts on the public consultation side? I'd like to suggest that models of technology assessment being implemented by Europeans might be useful to look at.

• 1020 

Europeans have made use of procedures such as consensus conferences, dialogue workshops, and scenario workshops, which allow members of the lay public and not just stakeholder groups to participate in the process of having a dialogue with experts and understanding the technology better.

I think we have an opportunity today to take advantage of these experiences in Europe and to employ them here in Canada.

Thank you very much.

**The Chairman:** Thank you very much.

We'll go now to Dr. Ryan-Harshman. If you can give us a ten-minute presentation, it might be all we can get in before the vote.

**Dr. Milly Ryan-Harshman (Consultant, Food and Technology (Oshawa)):** Thank you very much for requesting that I appear before this committee. I have prepared a statement, because those who know me also know I am not good with short conversations.

Public perceptions of biotechnology are difficult to evaluate, because these perceptions may be based on religious beliefs, knowledge and attitudes toward science and technology, political or moral convictions, or even choice of reading or viewing material.

A number of surveys have been conducted to determine if patterns in consumer awareness and acceptance of biotechnology can be discerned, yet in many of these surveys, respondents were only requested to respond yes or no, or perhaps to give an indication of the strength of their conviction by responding to a Likert-type scale.

Money and patience are usually in short supply for those researchers who ask the open-ended question "Why?". Sometimes the respondents do not know why, and sometimes the researchers cannot understand why, yet if we do not know why one believes something, then we know very little.

Knowledge can be defined as familiarity gained by experience. In the absence of knowledge, perception can become unchecked reality. We only have to remember the broadcast of *War of the Worlds* and the widespread public confusion it created to understand this statement. Then, the public had no experience with outer space that allowed them to judge the circumstances reasonably. By today's standards, *War of the Worlds* isn't even good science fiction. Today's books, with their rich and somewhat reasonable scientific explanations, and today's movies, with their outstanding special effects, have even further blurred the line between perception and reality.

To regain the distinction between perception and reality, we must focus on education—specifically, education that encourages the development of good critical thinking skills. A

critical thinker is a lifelong learner who possesses such attitudes as curiosity, open-mindedness, and willingness to reconsider. It is through their examination of many points of view that critical thinkers are able to formulate their opinion. Non-critical thinkers generally conduct research to find facts that support conclusions already drawn. As a result, non-critical thinking can lead to the implementation of policies that lack vision. Such policies are not sustainable and hence will have little impact.

I can give you two examples of educational events that can encourage the development of good critical thinking skills. One is the KEY Foundation summer seminar series for teachers that covers environmental issues related to forestry, petrochemicals and packaging, agrochemicals, and biotechnology. The other is the Lay Public Consensus Conference. Such a conference was held in London, England, regarding plant biotechnology several years ago, and a similar conference will be held in Calgary in the fall.

I might add, this is the type of conference Edna Einsedel was referring to. It's been a very useful way of helping the public to understand the issues around something as complicated as food biotechnology.

Why do I bring the concept of critical thinking into this discussion? What we are faced with is not the lack of ability to access information but the lack of ability to evaluate information. For example, when one considers the number of newspaper and magazine articles, the number of web sites, or the availability of programs such as Agriculture in the Classroom, there is no shortage of information regarding farm practices. Despite the availability of information, though, many lack the ability to evaluate the information, because they have never visited a farm, and neither do they know any farmers to whom they can direct questions. Hence, their ability to examine different viewpoints is lessened.

• 1025 

Where food biotechnology is concerned, we must complete two objectives—to improve science literacy and to improve knowledge of farm practices. We can complete these objectives if we invest in educational opportunities such as demonstration programs, seminars, site visits and materials that provide accurate, balanced information. We'll certainly hear about other organizations that do that. The Food Biotechnology Communications Network is being represented here today by Dr. Surgeoner, who does an excellent job in that regard.

If we take such educational objectives one step further, to provide participants with an opportunity to evaluate information, we have achieved the ultimate goal of creating a thinking society. No other measures, particularly those that misconstrue information to mean identification such as mandatory labeling, phrases or symbols, will help us to achieve our goal.

Thank you.

**The Chairman:** Thank you very much. We still have eight minutes to go before we have to leave, so we'll go to Dr. Surgeoner.

**Dr. Gordon Surgeoner (Chair, Food Biotechnology Communications Network (Guelph)):** Thank you, Mr. Chairman.

Whenever I come to Ottawa, my name gets spelled wrong. I don't sell cars, but it gets me taxis very quickly, thank you.

I represent the Food Biotechnology Communications Network. I have provided the clerk with a pamphlet that provides background information on our organization.

The mandate of the Food Biotechnology Communications Network is to provide ready access to science-oriented, balanced and current facts about biotechnology and its impact on the agriculture and food system. We were established in the early 1990s because of a lack of access about food biotechnology and many questions that consumers and indeed farmers were asking about this new technology.

We are a not-for-profit organization. Our revenue is generated from our memberships and grants and projects that we are able to compete for, including a major grant from Agri-Food Trade 2000.

We have over 100 members, from a wide variety of clientele. We have multinationals such as Monsanto; we have the National Institute of Nutrition, Consumers' Association of Canada, and many institutions such as my own, the University of Guelph.

As an example, we do a tremendous amount of research on plant biotechnology. In my other life, I am the director of plant research at that institution. To me, it is absolutely key that we communicate with our producers, with our consumers, about the new science and the changes that are occurring in agriculture.

We have a board of directors, and by our mandate there are nine directors: three from industry, three from non-government organizations, and three from government. This year we have two honorary members as well, because we didn't get a farmer elected at our annual meeting, and we wanted to make sure we had a farmer, since they're the first users of this technology.

We have an advisory committee also that is jointly chaired by the representatives of the Canadian Food Inspection Agency and the Consumers' Association of Canada, and you'll be hearing from Christine later. On that advisory committee, we have a similar balance of industry, regulators, and non-government organizations. You're going to hear the terms "balance" and "stakeholders" in a number of my comments.

What do we do? We are an information referral centre. So when the public and farmers have questions associated with biotechnology, we will answer basic questions. We often refer to experts in particular areas of regulation, science, whatever the issue happens to be, and we encourage others to take an active role in providing information to clients, customers, and employees.

How do we go about that process? Every month we send out a fax form, which is a monthly update on information, the newest knowledge base associated with biotechnology. Through that mechanism, we update our current programs and future plans to all of our members and anyone else who is interested.

We have a web site—you were asking about web sites. Ours is [www.foodbiotech.org](http://www.foodbiotech.org), and we have done a lot of work to make sure that when you do one of the search engines, like Lycos, and so on, we will be in the top ten, so that as you search around the world you will come up with our organization. We have about 150 hits each week, and that continues to grow. We've only been on-line basically since February.

In that web site, we provide basic information on a wide range of topics, including regulatory, what kinds of products have been registered in Canada, and very importantly, links to other sites where people can get information on biotechnology. It's currently being renovated. We will be bilingual on that web site to improve our readability. We are maintaining a strong tracking mechanism to understand where our people are coming from who are asking questions, and we have special areas associated with our members to pass on information as well.

• 1030 

Another important project we were involved in was an information kit, in conjunction or partnership with the Consumers' Association of Canada. There were over 6,000 copies of that distributed. We are now in the process of revising a second consumer information kit associated with biotechnology, which should be available in early June.

We have developed a regional network of experts, because in many of the issues, what I will call local trust is very important. So we have in each province individuals, dietitians, farmers, and so on, who can answer questions associated with biotechnology and their own personal experience with that. We're heavily involved in ongoing education programs with these individuals for current science and skills training, how to work with the media, and those kinds of issues, and they provide valuable feedback of what's happening at a provincial level, because there are differences across Canada.

We are involved in issue management. Very often you will see what I call misleading information in the media. We provide, again I emphasize, science-based information in writing letters back to the editor, and those kinds of things. People will claim fish genes in tomatoes, as an example, for which there are not. So it's that kind of providing back science-based information.

We work with information multipliers, for example Loblaws, Cuisine Canada, the food writers. We're also heavily involved with educational resources, such as the KEY Foundation, Agriculture in the Classroom, and providing information for many university and college courses around Canada.

In the interest of time, I will try to summarize quickly.

We are the only organization in Canada where we allow a vast divergence of opinions. In fact, it makes for very interesting board of directors teleconferences at times. Many international audiences are looking at us, again, as a vehicle for that multi-stakeholder consensus that we can come to on issues associated with biotechnology.

We see ourselves as a resource for government, for industry, for media, and the public at large, and we believe success will be because of a strong and active partnership between the government, the industry, and non-government associations. That word

“stakeholders”, partners, and consensus information that is what I will call factually based are the principles under which we work.

Thank you.

**The Chairman:** Thank you very much.

We'll recess now, committee members, and we'll come back as soon as possible.

Excuse us for half an hour or so.

• 1032 

---

• 1110 

**The Chairman:** I'll call the meeting to order and resume our hearings on biotechnology.

Our next presenter will be Christine Mitchler, the chair of the food committee of the Consumers' Association of Canada. Christine.

**Ms. Christine Mitchler (Chair, Food Committee, Consumers' Association of Canada):** Thank you for presenting me. I didn't know you'd done that.

First of all, I want to apologize that my national president was not able to join me today. She had planned to. She is ill at home with 104 degree temperature and a terrible case of the flu, so you get me for the whole thing.

Anyway, good morning, Mr. Chairman and members of the standing committee. Thank you for inviting the Consumers' Association of Canada to speak to you about public perception and access to information on biotechnology this morning. My name is Chris Mitchler and I'm chair of CAC's national food committee.

CAC is a national volunteer-based organization founded in 1947. Our mandate is to represent the interests of consumers in the Canadian marketplace through research, education, and advocacy. Our consumer interest work focuses on the areas of food safety, health, financial services, communications, industries and marketplace issues like competition law, consumer protection and privacy.

Our national policies are developed within a framework of consumer rights and responsibilities as described in our brochure, which I've left copies of with the clerk. It identifies not only the consumer rights to information and choice but also their responsibilities that go alongside of that. It's described in our brochure, *Be a Wise Consumer*, which is available to you today.

Two consumer rights in particular are apropos of the subject of biotechnology today: the right to information and the right to choose. CAC absolutely supports the consumer's right to receive the background and the information they need to make informed choices regarding all foods and those derived from biotechnology. We have always advocated and supported the need for consumer information. However, consumer information must be accessible, must be meaningful, and must be accurate.

Many consumers are concerned about the long-term effects of products of biotechnology. As a result, consumers are insisting on the ability to choose. In order to better understand why genetically engineered foods are creating such a consumer concern, CAC's national food committee at a recent meeting discussed why and how genetically altered foods are perceived to be different from other foods.

Within the national food committee we arrived at a general consensus that these foods are perceived to be different from conventional foods by some segments of the consumer population, fueled in part by inconsistent information and misinformation.

Nonetheless, this technology is providing a vehicle for profound questions about food production and food products. These include the rapid pace of technological development and how it is used to produce and process food, mechanisms needed to evaluate social, economic, and ethical impacts of biotechnology, and what systems are in place, if any, to evaluate and monitor potential cumulative long-term impacts on human, animal, and environmental health and safety or what the trade-offs are going to be now and in the future.

Other questions are who will bear the risks and who will receive the benefits and who will decide whether consumers and their representatives will be able to provide input on whether these changes are needed or desirable and whether consumers will have the information they need in order to make informed choices on whether they want to assume the risks and the benefits of food biotechnology.

Consumer acceptance of any new food product or technology is vested in three conditions. First, that the needed information for informed choices about the food product and its production processes be accessible, understandable, relevant, transparent and accurate, and presented in a consistent manner in a variety of ways. This means avoid the one-size-fits-all approach to communication. It also requires that consumers have the ability to make informed choices as a result of this information and that perceived benefits to consumers exceed perceived risks.

- 1115 

In other words, CAC believes the information process is the means to an end, with informed consumer choices being the end objective.

One source of information that has consumed much of the discussion for consumers is the labeling of foods derived from biotechnology. CAC has always believed labeling is one way to provide consumers with information for informed choices, but labeling is by no means the only, or perhaps the best way, in all circumstances to provide consumers with information leading to informed choices.

It is of significant concern to the Consumers' Association of Canada that the biotechnology industry and our federal government have not invested as heavily in consumer education on food biotechnology as they have in marketing of food and the regulation of food products for health and safety.

While some organizations have vigorously supported mandatory labeling of genetically altered foods, CAC is not convinced of the utility of mandatory labeling for foods derived from biotechnology. Given the increasing pace of food biotechnology applications currently being commercialized in the Canadian marketplace, CAC is concerned that mandatory labeling such as "may contain" or a logo or a symbol could be on virtually every food product sold at retail within five to ten years. We question how useful and meaningful such a label will actually be for the consumer in the future.

At the same time, CAC is greatly concerned about the huge potential for market distortions that may occur with voluntary labeling. Specifically, CAC is concerned about the potential for marketing manipulation and distortion inherent in negative labeling. For example, under current federal labeling guidelines, any food company could put a label on a food claiming it is GE-free or not produced of ingredients that have been genetically modified. There is no cost-effective scientific or evidence-based way we are aware of to support or substantiate the accuracy of such a claim.

CAC has long held the position that labeling, advertising, and other promotional marketing materials for all foods, including those derived from genetic engineering, must be consistent. They must be transparent, understandable, accurate, evidence-based, and enforceable, with well-established methods of substantiation.

CAC believes the purpose of labeling for all foods is to protect health and safety while protecting consumers from economic fraud. To that end, labeling requirements, including point-of-purchase materials and advertising, must be consumer-focused and consumer friendly, well balanced with the regulatory ability to determine whether a claim is true and accurate from those that are not.

CAC therefore urges that if labeling of genetically engineered foods is to be federally legislated, then those regulations must also prohibit the use of negative labels, advertising and other promotional materials unless there is a clear ability to substantiate the claim.

CAC also recommends that federal labeling policy be reviewed within three years in order to examine whether effective consumer education has eliminated the need for a mandatory label. Regardless of the basis under which genetically modified foods will be labeled in Canada, consistent consumer information and education should remain the broader communication goal, of which labeling is but one tool in the communication tool basket.

In conclusion, consumers have a right to informed choice about whether they will buy genetically altered foods to feed their families. It is clear from the current level of concern and distrust that consumers need more information to make an informed choice about genetically altered foods and food products.

CAC urges that less time be devoted to debating the theoretical and practical pros and cons of mandatory labeling of genetically modified foods as the only option available for providing consumers with information and choices. We ask that discussion with stakeholders and the public be meaningful and focus on clearly examining a full and relevant range of potential cost-effective, relevant, and enforceable options that would provide consumers with the consistent, relevant, and accurate information they need to make informed choices about genetically engineered foods and indeed all foods in the Canadian marketplace.

Thank you.

**The Chairman:** Thank you very much.

We'll go now to Nathalie St-Pierre from the National Federation of Consumers of Quebec.

[*Translation*]

**Ms. Nathalie St-Pierre (Executive Director, National Federation of Consumers of Quebec (Montreal)):** The National Federation of Consumers of Quebec, or FNACQ, was founded 20 years ago. It has focused its attention on the agri-food sector for the past seven years and on the field of biotechnology for the past decade. I want to thank you for inviting us to take part in the committee's hearings today.

The issues that I would like to share with you were raised in a study that the Federation conducted in 1996 and 1997. This rather comprehensive study looked at some of the solutions adopted by various countries with a view to consulting with consumers and keeping them informed.

• 1120 

We have tabled a copy of this study with the committee clerk and it will be available for consultation. We have also submitted an executive summary for your perusal.

We advocate a much more practical approach to consumer information, an area that we seem to be focusing on a great deal this morning. We recommend that consumers receive general information along with information about the technical tools used and about the limitations, advantages and inconveniences of biotechnologies and their applications. Consumer groups and others should also have access to the names of individuals or certified industrial growers working in the field of genetic engineering.

Consumers need to get their information from a variety of sources, that is from the government, from interest groups, from the industry and so forth. They must have information about services, procedures and product composition and impact. Scientific data must be shared with the public and consumer groups, along with information about processing techniques, conservation and genetic modifications.

I'm not saying that each and every Canadian is about to study this data, but the fact that it is accessible would make the process more transparent and give academics, researchers and consumer groups access to credible information which could then be shared with consumers.

As I said, we seem to be focusing a great deal this morning on ways of not only informing consumers, but educating them as well. Therefore, we feel it is important for this data to be available.

We have briefly discussed the criteria for disseminating information. The information imparted to consumers must be balanced, fair and honest. As mentioned earlier, we advocate an educational rather than a marketing approach. When the task of imparting information is left to companies, they tend to adopt a business-like approach, rather than an educational one. In our opinion, this is one concern that must be addressed.

Let's talk then about the different ways of getting this information across to the public. As noted in the national strategy, we need an information source quite independent from promoters and parties with a vested interest in biotechnologies. One idea would be to establish an independent consultative body which would be responsible for getting information across to consumers.

The mandate of this organization could be broadened to make it a reliable source of information. It could operate a 1-800 number. We are talking hear about concrete ways of informing and educating consumers. This body could also issue opinions and conduct independent evaluations on biotechnology regulations. Furthermore, it could be empowered to look into complaints from members of the public. It could also have the authority to review regulations.

Risk management is another point that needs to be considered. Not a great deal has been said about this subject and it is nevertheless important to consumers. We talked about it a little this morning. Ms. Einsedel said that risk was one factor that must be taken into account. This advisory body should have the authority to assess the risk associated with new products.

This issue concerns us a great deal and it was discussed this morning. When insufficient data is available to ascertain the risk level or to determine whether criteria have been respected, the company in question is merely told to go back and do its homework. When it does supply the information requested, it is not made available to public interest or consumer groups or to scientists.

• 1125 

We have requested such documents on numerous occasions in order to verify the methods used to assess risk. Our requests have always been denied. Greater transparency is needed and a consultative body could play an active role in this area.

As for the various ways of disseminating information, mention was made this morning of the Internet. However, this is not the only solution. We have to realize that very few people have access today to the Internet and that those who do tend to be well-educated individuals who are naturally curious about things. For the vast majority of members of the public, the Internet is still not a reality of daily life.

We would like to make a number of specific recommendations. First of all, the government should levy a special tax on new and genetically engineered products, the proceeds of which would be used to fund a special initiative to be reported on by the

electronic media and in newspapers, books and magazines. A toll-free 1-800 number could be set up along with information centres. The proposed new consultative body could be responsible for overseeing these mechanisms.

In our opinion, the labeling issue has yet to be resolved. Various government departments have held consultations, but the results have not been made public. Once again, the problem is a lack of transparency. We have asked for copies of the submissions tabled, but these have not been made available to us. We feel that adequate follow-up has not been given and that greater thoroughness is needed to ensure that all parties have access to available information.

As for negative or voluntary labeling where a company can choose to indicate whether or not a product has been genetically engineered, this should not be considered a substitute for mandatory labeling because there is no way of verifying the veracity of the information provided. There is no mechanism in place to do so. If, as Christine said earlier, there is no way of checking whether a product was or was not derived from biotechnology, what is the point? This will only confuse members of the public who are going to wonder who did the checking and how it was done. In the case of biological products, efforts have been made to ensure that the certification process is credible, but this costs money. We would have to see whether certification would be relevant in this particular case.

In our opinion, it is important for consumers to make enlightened choices and to have access to a broad range of information. Labeling, whether by means of a symbol or something else, is critically important if consumers are to have real choices. Consumers are not necessarily going to reject biotechnology derived products, but at least they will be able to assess the risk associated with these products, according to their own criteria. Therefore, we advocate mandatory labeling.

I mentioned briefly consultation and cooperation mechanisms. In our view, transparency has been an ongoing problem. Our study showed that countries have taken different approaches, such as holding consensual conferences, organizing working committees and so forth. We have studied all of these mechanisms.

Specific criteria for consultation must be established. Often in the past, mandates have either not been clear or it wasn't clear that the outcome of the consultations would be taken into account. The proposed strategy calls for initial consultations with the public to establish criteria and to devise mechanisms for keeping them informed.

• 1130 

This approach requires a commitment on the part of stakeholders. The process must be fully transparent. Fairness and openness are critical. Consumer groups need access to relevant information and not merely via the Internet. Considering that we are told to consult the Internet virtually half the time we request documents, we do not find this approach very user-friendly.

Participants in the process need to be properly briefed and a cross-section of opinions needs to be represented. Since we have many years of experience with the consultation

process in the field of biotechnology and other areas, we feel that it is important to ensure that the composition of committees truly reflects all interested parties. Therefore, we recommend that company representation on committees be restricted. We occasionally found with some of the committees we worked on that fully 80 per cent of participants were industry representatives. Consequently, the findings of the committee did not necessarily reflect the public interest.

Moreover, it is important to adopt the right mechanisms. I apologize for emphasizing this point, as I imagine others before me have done. Participation in the consultation process can no longer be on a strictly voluntary basis. It takes money to review documentation, make a credible presentation, gather information and support experts. The departments of Health and Agriculture give very little money to consumer and public interest groups, whereas contributing to this process is an extremely costly exercise for them. This factor must be taken into account.

In terms of educating the public, we have talked a great deal about the roles of the various stakeholders. What purpose does information serve? Consumer groups are on the front line. We constantly field calls from consumers, but we don't have the financial resources to follow up on these calls.

In terms of criteria, when consultations are held, we need to ensure that the exercise is a useful one and an effective means of attaining objectives. Often, we tend to overlook this consideration. Once a consultative process is completed, we fail to assess the results or to weigh the opinions of the various parties involved. After all, it is important to respect the views of all stakeholders.

Therefore, we should start by having a broader public debate and then focus on more specific issues during consensual conferences at which time specific questions could be identified and dealt with. A formal committee could then propose detailed solutions. This three-pronged approach would help us to move from a discussion of general topics to a discussion of specific issues.

I will conclude in the other language.

*[English]*

It's our opinion that this process of dealing with information and what kind of information we should provide to consumers is discussing first what should be discussed last. Before we discuss what information to disseminate or how, we must and should talk about safety. We feel that this issue is not adequately addressed in the consultation documents that we received.

If Canadians rely on government to protect them, whether this is good or not, then the government must do what its citizens want. Risk assessment must be revised in that light. Regulations are required to protect consumers. The safety of Canadian consumers must not be compromised in order to satisfy the desire of corporations or the desire of the government to become a world leader in the development and sale of biotechnology products and services.

• 1135 

If Canada wants to be a leader in promoting mechanisms to support health, safety, environmental, social and ethical matters, why are consumers calling us about the problems they're facing and why can't we provide the answers? Why are the studies not made available, and why is the issue of labeling not resolved?

Since time is running out, I think I'll just leave it at that. Thank you.

**The Chairman:** Thank you very much.

Last, we'll go to Burkhard Mausberg.

**Mr. Burkhard Mausberg (Executive Director, Canadian Environmental Defence Fund):** Thank you, Mr. Chair.

My name is Burkhard Mausberg. I'm the executive director of the Canadian Environmental Defence Fund. We are a national charitable environmental group concerned with environmental rights for Canadians and trying to further environmental rights both in the courts and in legislation.

I've been working on this issue of biotechnology for the last eight years, and every time I give a talk, whether in a forum such as this or when I talk to citizens on the street, I want to define what I talk about before I talk about it.

When I use the word "biotechnology", I am specifically referring to genetic engineering. So my remarks are only geared towards those sets of technologies that manipulate genetic material at the cellular level and are not dealing with those technologies that we have used since we stopped becoming hunters and gatherers and actually used the land and animals and plants for production of food.

In some ways I've had a very privileged position, because I'm in a position where I can be devil's advocate, where I can ask some tough questions without having to be in your chair, from which you have to make decisions based on those tough questions. I recognize that privileged position I'm in, in asking tough questions.

Before I ask any of those tough questions—I think they are tough questions—let me go back to a comment that Mr. Mayers made earlier this morning. He referred to biotechnology as just another tool in the toolbox. I think that is fundamentally wrong. When we look at what we are talking about, we have to provide a scientific context.

We have had four billion years of evolution—four billions years during which a cow mated with a cow to make another cow, where salmon mated with another salmon to make another salmon. Only since about the early 1970s have we had the opportunity and the technology to mix a plant with an animal, to mix a cow with a salmon, to put canola into fish. I'm not saying these particular examples currently exist. I don't want to fall into the trap of my colleague from the biotechnology information network and what he said about giving wrong examples. I'm just providing a framework.

For the last 25 or 26 years we've been able to do something that evolution previously was not able to do, and that is to mix the genetic material of totally unrelated species

and make something new. At least in my view, that's the scientific context in which we should approach the topic of biotechnology. We're doing something that is fundamentally unnatural. It doesn't occur in nature.

So it's not just another tool in the toolbox, because what we are doing is mixing genes from a variety of organisms and species, putting them in a beaker, mixing them up, and hoping something new comes out that has desirable characteristics.

In that context, then, what is the public perception of this technology? My experience has been that it's mixed. We saw a whole range of surveys today, and as all of you will know, the kind of answer you get from a survey very much depends on the kind of question you ask. So are surveys trustworthy when 33% of the Canadian public think a tomato doesn't contain genes? Are those reliable surveys? I can put up surveys from a whole range of organizations, including the Canadian Dairy Bureau, which said in its survey that two-thirds of Canadians have said that biotechnology poses some or a lot of danger to society. So surveys can be manipulated to result in what you want to hear, in many ways.

Some of the surveys provide interesting tidbits of information, though, and I'm not looking at the numerical numbers, I'm looking at the comments people make. When you look at some of the Optima surveys that were done several years ago, you find things like people thinking we're playing God or that in using genetic engineering technologies we are playing God. That's the kind of framework I think we should look at when we talk about biotech.

• 1140 

In terms of access to information, having worked on this issue for the last eight years, and having worked with colleagues from Health Canada and Agriculture and Agri-Food Canada, I found a whole bunch of interesting scenarios.

In 1991 we raised the issue first, when I was working for Pollution Probe. We produced a large full-colour map of all the field tests that were occurring at that time in Canada. When we gathered the information, Agriculture and Agri-Food refused to release the exact location of those field tests, so we did not have the opportunity to find out where those genetic tests on Canadian soil occurred.

In 1993 I wrote a chapter in a legal book called *Environment on Trial*, on the regulation of biotechnology. I requested to see some of the risk assessments that were done for the various products under development. I received those risk assessments with whole sections blacked out. So again, we were not given access to information.

In 1995, when I wrote *A Citizen's Guide to Biotechnology*, we found out just before publication that the issue of labeling had been resolved. That is, there was not going to be any labeling of genetically engineered food. That, to me, does not reflect access to information.

For me the question is this. If as a consumer I make certain choices to purchase certain products, the choices are based on a whole range of issues. I may go to a car dealership to buy a car based on a number of criteria, such as the comfort of the car,

where it was made, the gas mileage, and so on. If I go into a supermarket, I invariably make choices about nutritional value, cost, and so on.

What I find interesting in the argument that there shouldn't be labeling is that we are told the product is safe, and that therefore there should be no labeling. Well, my view is that because it's safe, that should be the criterion that allows it on the market in the first place.

At that point, should people have a choice based on their religious beliefs, based on their beliefs that this technology is indeed opposing four billion years of evolution, or based on the fact that they may be allergic to certain products? At that point, I will make a choice whether or not I purchase a genetically engineered product. So the safety issue does not neglect that choice. It's made up of many different factors.

For example, consumer boycotts have been very successful in a range of social policy questions. All day I've tried to think of the name of the young Canadian, the 12-year-old who's trying to fight child labour in various developing countries. He is trying to do a consumer boycott by having consumers not purchase those products, because he believes, in my view rightly, that children should not be working at 10 or 12 years old. They should be playing ball or hockey or whatever they like to do as children, to have a proper development. There a consumer boycott is being used, successfully or not I don't know, in order to influence consumers' decisions. How can consumers make those kinds of decisions if we do not know what product we are purchasing?

If I happen to be an intensely religious person—it doesn't matter what religion it is—and I believe that for various reasons we are put on this earth and we progress in reproduction the way we happen to, don't I have a right to exercise that religious belief? If I happen to be someone who has a preference towards organic foods—i.e., those foods that have not been produced with pesticides and herbicides and chemical input—don't I have a right to purchase those products and to be informed whether or not the product on the shelf fulfils those requirements?

I find these kinds of forums are best in a discussion, and that's why I leave my remarks short. At the end of the day what I would like to leave you with is that choice is not just a matter of one criterion—in this particular, safety. Choice is a matter of several criteria where individually we are all different. At the end of the day what it results in is freedom—freedom to choose those products that we individually believe are right for ourselves.

Thank you, Mr. Chair.

• 1145 

**The Chairman:** Thank you.

I thank everyone for their presentations.

We'll go immediately to questions, and Mr. Hoepfner.

**Mr. Jake Hoepfner:** Thank you, Mr. Chairman. An interesting morning.

I want to hit more or less three different issues. I think they were expressed in each presentation, more or less. One is misleading information, which I heard from a number of presenters; the second is the right or access to information; and the third is the labeling issue. As well, Mr. Mausberg hit on something that got me thinking: How much influence in all these issues does the media have?

I'll just throw this out as a backgrounder to you. My Liberal friends know I've been quite critical of the Canadian Wheat Board, and I have had some interesting experiences. I did a news release on one of the issues for which I had documentation, and all of a sudden a farmer from the Peace River area who had heard about it phoned me and said, "You know, Jake, we can't get our media to print your news release or do a story on it". I found that hard to believe, so I did phone some media people I knew, and I was astounded by the amount of pressure that is put on the media not to give the correct information.

When you have big organizations like Monsanto and other people, with billions of dollars at stake, how do you disseminate whether it's misleading information or correct information?

I was very interested, Dr. Surgeoner, in your statement that you could get no farmer to serve on the board. Was that because farmers weren't concerned about information or communication? Let's touch that one first.

**Dr. Gord Surgeoner:** The reason we didn't get a farmer is that we had a general meeting with an election, and unfortunately, the farmer who ran didn't win the election.

Actually, in the province of Ontario we have an organization called ABC Ontario, or Agricultural Biotechnology Coalition, which has the Ontario Federation of Agriculture, the Christian Farmers, and a whole variety of farm organizations. AGCare is another major Ontario organization.

They're very much involved, because they're seeing the leading value-added wave, if you like, associated with this technology. That's well labeled in their business, because it's where the value is occurring. A lot of it's not yet in the consumer market. So farmers are very much involved in this overall process.

To get back to your question about the media, I also have frustrations that way. The CBC did the documentary *Field of Genes*. We have quite a number of people who were more than willing to speak on the issues in a balanced format, but they wanted the extremes to create, I guess, energy around it. Balance doesn't seem to draw the big audiences.

**Mr. Jake Hoepfner:** I was wondering further, Dr. Surgeoner, how you operate. You said that you have a board with different points of view. How do you critique these different points of view—which ones are right and which ones are wrong—to promote a certain topic or a certain direction in the information?

**Dr. Gord Surgeoner:** I think I'll use my colleague Chris as an example. We very often will write and rewrite various issues over and over again until we can come to consensus statements associated with these. In our consumer kit, we in fact had many rewrites on the same issue.

So it's a lot of back and forth and providing information to each side of the equation.

**The Chairman:** Ms. St-Pierre.

**Ms. Nathalie St-Pierre:** I want to comment as well on this subject of misleading information. It's not an easy subject. It's very complex.

An example that comes to mind is when we said numerous years ago that with the green revolution and pesticides, we were going to save the world, with no more hunger and so on and so forth. We would be able to produce enough food for all.

These are the kind of...uneasy feeling about what kind of information should be out there, and not just say that biotechnology will solve world hunger again. That was used a lot, and it's used a lot that biotechnology is the technology.

• 1150 

Also, when we talk about misleading information, or balanced information, those are the statements we're saying we have to be cautious about. This is a technology that I agree is certainly not a tool. We're changing fundamentally the nature of things. So how do we deal with this? What are the pros and cons? There are some dangers. What are they? Where can you get information?

I know the FBCN exists. Of course, we were there as part of the process and all that. But consumers have never called us and said they got the information. If they want to know something about it from the consumer's perspective, they can call us. Providing balanced information is not easy. All stakeholders should sit down. Again, it comes back to the means. If the farmer maybe cannot join the association or was not elected, or if the consumer groups cannot go, maybe it's because they don't have the means to attend and to participate fully, which means you have to read; you have to keep up the expertise and everything. So this creates a difficult situation.

**Mr. Jake Hoepfner:** Seeing that we have a lot of big bucks today in communications, are we running into a problem with brainwashing more than advertising? I made a trip to the Soviet Union in 1981 and I was astounded what media can do to brainwash people.

When I looked at my own family growing up, when we got the first television in our home in 1961 my little kids, who were three or four years old, wouldn't watch the program, but, by cracky, when a commercial came on, they all gathered around the TV and it influenced them. You know they knew more about products than I did. I didn't pay much attention.

Are we in a society where this is happening to us? Because of big bucks and certain directions that multinationals want to take, information is geared in such a way as to lead us along and make them more successful than maybe the consumer or the people who use the products.

**Ms. Nathalie St-Pierre:** I think you're right. It touches upon what my colleague was saying about critical thinking. Maybe we are not educating our children to become thinkers, to be able to analyse information. You have to say, this is what I need, this is what I'm looking for, and this is what I will do with this information.

We see in the schools more and more pamphlets or brochures that are offered by banks or companies that have a product to sell instead of providing information. Certainly there should be a critical look about what's going on in the school at that level, the level of information.

**Mr. Jake Hoepfner:** Thank you.

**Ms. Hélène Alarie:** Mr. Mausberg, I think you have something to say.

**Mr. Burkhard Mausberg:** I wanted to respond to that question. Again, and I can't see the names and I apologize, but my colleague there put up a graph that showed the acceptability of biotechnology products in various countries. I'd like to make another slide and put that on top of it. That slide would show how much money has been spent in Canada and Europe on marketing and advertising biotechnology products versus those other countries. Because we've had a head start in developing these products based on our economy, which is very much based on natural resources and agriculture and forestry and so on, that's why we've seen the leadership in biotechnology products in Canada. Therefore, we've been ahead of the game. Therefore we've spent a lot more money on marketing and advertising. So I challenge my colleague from the University of Calgary.

**Mr. Jake Hoepfner:** Is that in brainwashing or marketing and advertising?

**Mr. Burkhard Mausberg:** I think that's a tricky question.

**The Chairman:** We'll go to Ms. Alarie.

[*Translation*]

**Ms. Hélène Alarie:** We are hearing some rather disturbing information about this field. Biotechnology is, in my opinion, important if we are to ensure food safety, but if we want to go further with biotechnology, we need to educate people. This is a fundamental criterion. The people who are being educated need to trust us and above all, we need to be credible and transparent from a scientific standpoint.

• 1155 

In this morning's focus groups, we heard how, on the one hand, consumers were worried about an ecological disaster, and how, on the other hand, government and other agencies currently overseeing this field were no longer trusted. Therefore, who can impart information in a credible manner so that people have confidence in what they are being told?

I believe you talked about setting up an independent body. Isn't that right?

**Ms. Nathalie St-Pierre:** The subject does indeed generate a great deal of concern, but let me say first and foremost that I believe the state, that is the government, has a role to play. We must place our trust in someone. The public needs to get their information from a trustworthy source. Consumers cannot assess every bit of information themselves. The government has a responsibility to ensure food safety.

To restore public confidence, we need to change the way we do things. The consultation process needs to be more transparent and our methods more open. I talked about this earlier and I discuss it in my summary. Criteria are needed. Once we make the effort, confidence will slowly be restored.

Then, it will be easier to educate people because they will be more trusting and thus less demanding. People are quite demanding today because their confidence has been shaken. Labelling might become less of an issue when people realize that there are no risks involved. Religious or moral issues may indeed surface, but the important thing is to restore trust.

**Ms. Hélène Alarie:** A background paper on the consultation process into renewing Canada's biotechnology strategy mentioned a vast consultation process to be undertaken. The dates suggested were March and April. Did this consultation process in fact take place? Were you satisfied with the outcome? What exactly do you mean by transparent?

**Ms. Nathalie St-Pierre:** The consultation process did indeed take place. I wouldn't say that it was broad in scope. Because meetings were being held in Montreal, we wanted to send three representatives, but that wasn't possible. Although we weren't asking for much, but we were limited to one person.

A vast consultation process isn't quite as simple as all that. A certain amount of expertise is required to understand what is being discussed, along with an awareness of the issues involved. Consultation does not imply a public debate. It implies consultation on very specific components of the Canadian strategy.

As for the meaning of transparency, it refers to the way of doing things and to the way of involving people in the process. The process cannot be not transparent when no follow-up is conducted and no documentation distributed. We have attended meetings and subsequently received no follow-up information. Getting information of any kind has not proven easy. That is what we mean by lack of transparency.

**Ms. Hélène Alarie:** Ms. Mitchler, you mentioned negative labeling. What do you mean by that?

[English]

**Ms. Christine Mitchler:** Negative labeling is when you are saying something is, for example, fat free. A fat-free product claim on a label would be an example of a negative labeling claim.

Another one would be, for example, if rBST were to be approved in this country, if I dare say the B word. It has not been, but let's just say for the sake of argument that Health Canada approves rBST. That's not to say they have. I do not have inside knowledge on that issue, but let's say they do.

• 1200 

Assuming, first of all, that Health Canada approved the product and it's deemed to be safe for animals, humans, and the environment, and so health and safety is not an issue,

I am concerned that under current labeling guidelines a milk processor could, in theory, slap a label on there that says this milk has not been treated or derived from rBST-treated cows. There's absolutely no way I'm aware of to substantiate or verify whether that claim is true at this point in time. I'm concerned about having negative labeling claims out there that there is no way to verify or substantiate. If there is a way to provide the substantiation for such labeling claims, be it for rBST, for fat free, or whatever it is, that's fine, but it has to be substantiated with very well-established and very well-supported evidence that government feels it can enforce and regulate.

**Dr. Milly Ryan-Harshman:** I wanted to comment with respect to negative labeling. Negative labeling is part of the voluntary labeling system that is currently practised by CFIA and Health Canada as partners. The purpose of that is to allow for specialty market development.

If you look at what we have currently in Canada in specialty markets, we have organic foods. Organic foods, of course, are growing in popularity, so there is a necessity to have voluntary negative labeling that says, for example, in the future this does not contain genetically engineered organisms. That's indeed what this system allows us to do. That's very important, and it is substantiated. It's very important that this message be gotten across; it can be substantiated, because through organic labeling now, whatever are the criteria to be called organic...then those can be substantiated.

The same would be true if we had voluntary negative labeling for genetically engineered food products. If one were to say there are no genetically engineered organisms present in this food, you could substantiate it in the same way organic foods are substantiated. There may not be a test to determine whether rBST is genetically engineered or otherwise, because all cows will have rBST regardless. So that's an important distinction to make there. I think voluntary negative labeling is very crucial and substantiated.

**The Chairman:** Mr. McCormick.

**Mr. Larry McCormick:** Thank you, Mr. Chair, for the opportunity, and thank you all for being here.

Perhaps I need to put something at rest in my own mind. I thought I knew where we were on labeling. If my wife were to plant more tomatoes than what she's probably going to plant, and she used an heirloom variety of tomatoes, which are very popular throughout North America, and if we wanted to sell those tomatoes on the corner market, can we label them as organic or not today? Please clarify this for me, Dr. Ryan-Harshman.

**Dr. Milly Ryan-Harshman:** I'm not certain if that decision has been made about organic.

Gord, has the final decision been made about the labeling of organic foods?

**Dr. Gord Surgeoner:** My interpretation was you were using an old variety when you said an heirloom variety, so there was no genetic engineering involved.

**Mr. Larry McCormick:** No, not at all.

**Dr. Gord Surgeoner:** In order to label it organic, you have to have it certified. So you have to have three years of a certification process showing no artificial chemicals, either pesticides or fertilizers. If you've had that certification process over three years, you could then sell that product as organic.

**Dr. Milly Ryan-Harshman:** Then, of course, it could be labeled as such.

**Dr. Gord Surgeoner:** Yes.

**Mr. Larry McCormick:** And that certification process is administered by the organic association themselves? They set the standards—

**Dr. Milly Ryan-Harshman:** Yes, they do.

**Mr. Larry McCormick:** —and they allow whatever farmer meets those standards to be able to sell under that label?

**Dr. Gord Surgeoner:** That's correct. In fact, there are several different organizations, so there isn't exactly one common standard. The U.S. is undergoing some extreme controversy right now under the terminology of what will be organic, because the initial USDA recommendation said that biotechnology could be, and there's quite a backlash against that, which I would agree with.

**Mr. Larry McCormick:** Again, just for clarification, if I obtain seeds from a source of grains from some country where there have not been any changes to that seed, can I grow that grain and can I label it that it's free of any altering of genes of any kind? Can I do that today? Who can clarify that for me? Health Canada could, I'm sure.

**Ms. Nathalie St-Pierre:** That's what I understand from the guidelines.

**Mr. Larry McCormick:** We can do that today. Okay, thank you very much.

• 1205 

Now, Doctor, from Food and Technology in Oshawa, you're a consultant. I just hope that in the answer you're going to say who your clients are and your funding.

I had a lot of people in eastern Ontario get into this rBST, and they're still watching it very closely. They have concerns. All these tests are being conducted in the United States and in some other laboratories, and it seems to be funded by the company that does have the product available, Monsanto in this case. So I'd like to get you to share your thoughts on that.

There doesn't seem to be a great concern or a great challenge when we use biotech for seeds or for grain. It's just when we get into certain cases, most certainly with milk and with animals—that's where the resistance seems to be. So much more good is going to come continually from biotech that we do have to be involved in the education. So I just want to get you on the record here.

**Dr. Milly Ryan-Harshman:** Okay.

The best way to preface the answer to your question is by saying my background is as a public health nutritionist. I left public health nutrition about two years ago to become

more involved in food and technology consulting. The reason I left is I wanted to be more involved in the breaking issues of the day, which included labeling of genetically engineered foods and that sort of thing.

What I'm most interested in is protecting the public health system we have created in Canada in terms of how we address issues—for example, risk assessment and safety concerns of genetically engineered foods. I want them to proceed in the fashion they have proceeded in in the past, which has been very good at protecting food safety. That's very important.

Certainly a number of questions come up, and almost everyone has asked me, "So who do you work for? Everyone wants to know." Well, I will tell you that I have worked for Monsanto. I have also worked for the Canadian Food Inspection Agency doing some education. I have volunteered time to Dietitians of Canada and to the Food Biotechnology Communications Network.

My practice is one of education, so even if I work for a company, my role is that of an educator, not a marketer of product. I have not marketed any product for any company, because that is the opposite of education. Advertising is not education, and I am in it for the education side.

We have a very good regulatory system. People don't have a clue what that regulatory system is all about, because it's very complicated. It takes people like me, who are willing to provide that type of education, and that's why I'm where I am.

**Mr. Larry McCormick:** Thank you.

I certainly, Mr. Chair, want to put on the record that I'm not at any time ever questioning the ethics of any doctors or scientists or whatever.

I notice that in the United States they say one-third of their vegetables and fruits are imported. Of course that's probably a trade concern, when you have a country that touches as many places on the globe as they do. But also they're very concerned because of the food safety; they've had some problems with raspberries and so on. I just wonder if there's something we might look at later.

I'm sure we'll have no concerns and it will be well looked at when we bring in biotech products, but when we put so much attention on biotech, will that leave us open for...? We'll have to watch these other products we're bringing in from other locations on the globe. I certainly trust the people there, but we have to be a watchdog sometimes with our multinationals.

Thank you, Mr. Chair.

**The Chairman:** Does anybody want to attempt that?

Ms. Mitchler.

**Ms. Christine Mitchler:** A year ago, I would say probably 60% of the presentations I was asked to give, as a CAC representative, to industry, government, and interest groups were on biotechnology or topics relating to it. Within the last year, that emphasis

has switched over from biotech to food safety. So the bulk of my time is now spent on food safety presentations.

• 1210 

I would also like to say that I have to disagree with Madame Alarie that consumers have a high level of distrust in government. I think consumers have a high degree of trust in government in terms of food safety.

I think that's true relative to the concern and perception about food safety in the U.S., certainly if the media is any indicator of that. The U.S. is getting a lot of scrutiny around food safety. Canada has been getting less of that. Part of that is because consumers do have that high level of confidence in our food safety system.

I find it interesting that we as consumers will have a high degree of confidence in the safety of our foods, but all of a sudden, with biotechnology and genetic engineering products, that confidence goes right out the window. I guess that was one of the issues that we looked at during our national food committee meeting: why is that?

I think there are fundamental questions and a sense of uneasiness raised by the vehicle of biotechnology and genetic engineering. It causes questions about how food is produced and processed in this country. Biotech just happens to be a lightning rod for that.

I just wanted to clarify that point about trust.

**The Chairman:** Thank you.

Mr. Calder.

**Mr. Murray Calder:** Thank you very much, Mr. Chairman.

Three points were raised here on biotech: awareness, implication, and the public's role. I found the charts that were shown to us to be very interesting. For instance, look at the public's perception of how yeast is used for making beer, 77% to 12%, versus how genes are used in better tomatoes, which was 15% to 33%. So right off the bat, those percentages tell me that the public knows more about making beer than about food production.

**A voice:** Priorities.

**Mr. Murray Calder:** Yes. Go figure.

Also, we got into some of the other ones here. The public seems to know more about how bacteria figures in vaccines for medicine—those percentages were the same—than what they know about how biotech is basically used in food. Is there a lack of knowledge or a resistance in the general public in dealing with biotech in food production?

I have a few more questions to go from there.

**Dr. Gord Surgeoner:** In my opinion, one of the key issues is that it has to personally affect you. Once it starts to personalize itself to you then you become interested and

you want the information. So as the second wave of biotechnology comes through with the reduced fat and that which is better for your health, those kinds of things, in my opinion, will be labeled because the consumer benefits. Then their interests will mean that they will become involved.

Right now, most of it is at the agronomic stage with farmers. The farmers are involved. They're looking at the Roundup Ready soybeans and Bt corn because the value-added component affects them. Once the value-added component starts to personalize itself with consumers, like beer, then I think they will start to spend more attention on it and pick up the information. Consumers are inundated with information, and until it starts to personally affect them, they're not going to spend a lot of time on it. That's my opinion.

**Mr. Murray Calder:** Okay, I agree. I'm going to deal with the awareness just a little bit more. As for the implication, I think you're already touching on that right now, Gord.

I can think of one of the reasons why the consumer right now is becoming more and more interested. You have to remember the demographics here. I'm a farmer in my other life, and we farmers make up 2.8% of the population, yet 100% of the population is involved in what I am producing. Therefore, they should be interested in what I'm doing.

But at the same time, the population wants its cars and houses and everything else along with that, yet every time I fly out of Pearson International Airport to come to Ottawa, I see another subdivision going on top of prime agricultural land.

I feel there has to be an education process here, because the implication—we're heading toward the public's role here—is the fact that I have less land to produce food for more people. I know the demographics right now are that, by 2030, there will be nine billion people on the face of the Earth. So you're putting me in a corner here. I have less land on which I have to produce more food. How am I going to do that?

• 1215 

**Ms. Edna Einsedel:** I see the issue of biotechnology as something that you can't keep in a vacuum. I think that as part of the educational process people do have to understand the larger context in which the technology operates, so I don't think it's just a matter of talking about the science or some of the impacts on the environmental side or the wonderful economics that the industry will reap. I think you have to look at all of these issues in total.

**Mr. Murray Calder:** Which basically brings us down to the last two points—and Mr. Mausberg will probably want to comment once I finish.

There were two comments made to the effect that we need to have labeling of a product that is GE-free. My question is, starting from when? In 1970 we were doing plant cross-breeding and were very successful, and that's why we're currently feeding six billion people. The projection then was that we were going to have five billion people by 1995. We're past that already and we're producing much more per acre now than what we

were in 1970 when we were afraid we couldn't feed 3% of the population. That's the first point.

Second, we are going to be more intensive in food production per acre, which means that if we're going to do that we're probably going to have to use more pesticides and herbicides. And it makes sense to me that.... Okay, we're changing DNA—I will give you that—instead of cross-breeding because we've had to speed up the process, but the benefit from it is going to be that we're not going to be using as much herbicide. And pesticides would be a better example, if you take a look at the potato versus the Colorado potato bug. I'd like your comments on that.

**Mr. Burkhard Mausberg:** If I may, Mr. Chairman, let me say that the argument that biotech—and particularly genetic engineering—ought to be used to feed the world is a laudable one. Nobody likes to see starving people.

But I challenge you to find out how many applications currently being pursued in Canada actually deal with an increase in food production rather than a particular application whereby somebody was ingenious enough to make more money at it.

When you look at Monsanto's applications, for example, whether it's the canola or the soya bean or the cotton, most of their applications deal with how they can sell more Roundup.

**Mr. Murray Calder:** I can give you an example right now if you want an example. I'm a chicken farmer. Twenty-five years ago it used to take me 12 weeks to produce a four-pound chicken. My feed conversion at that time was overtopped at 3:1. Now I'm producing a chicken at four pounds, a male in approximately 39 to 40 days and a female in approximately 41 to 42 days. That has been done through cross-breeding and everything, and my feed conversion is now 1.85:1. There's an example.

**Mr. Burkhard Mausberg:** But that is traditional biotech, not genetic engineering, and that's what I'm talking about. When proponents of the microtechnology—how you're mixing up genes and DNA among species—talk out, they always talk about promoting increased food, and again, it's a very laudable goal, but when you look at the actual applications being pursued in the lab, in the field, and commercially, they have nothing to do with it—or very few have anything to do with that. Most applications deal with increasing the profits of the company producing it. That's my first comment.

My other comment is that you're absolutely right with respect to something like the potato beetle: if we can engineer a potato to cut out the pesticide use in order to have a better yield for farmers in the maritimes, that may very well be a suitable application.

But then again, at the same time, look at how much we are ingraining and manifesting herbicide use with one scientist's Roundup product. There we're saying, “buy this product”, and you have to apply herbicide in order to make the value of that product worthwhile. They're not even giving you a choice to do IPM.

**The Chairman:** Thank you, Murray. The time is up. We have to go to Mr. Hoepfner.

**Mr. Jake Hoepfner:** I'll just pick up on Mr. Calder's point. It's quite interesting. As you know, in today's food basket the producer gets about 11% to 14% of the cost of that food basket.

• 1220 

I was interested in Ms. Mitchler's comment about the Competition Act. We know that with the biotechnology and all the cross-breeding and whatever, we have more breeder's rights, we have extended patent protections, we have intellectual rights. How do you get the Competition Act to work in a society that is controlled totally by different rights?

We know we have to have safe food, but we also have to have affordable food. If the safe food isn't affordable, you ain't going to eat it. You're going to go for something else. How do we as a producer and a consumer get some political or judicial clout to protect our interests, instead of protecting all the interests of the middlemen?

**Ms. Christine Mitchler:** I have two ways to respond to that. First of all, the reference to the competition issue was an example of the kinds of consumer interest issues that my association tends to get involved in. That remark was part of my introductory remarks about CAC in general.

The second part of my response is that it gets to one of the comments I made in my presentation about who bears the risks, who bears the benefits, and who gets to decide. I think that's a very complicated issue. The issue around intellectual property and patenting is a very complicated issue. I don't think it's black and white. I think there needs to be a lot more discussion and debate around that, just as there is around how to label and how to provide consumers with information.

It's always been my belief as a consumer representative that it would be very, very difficult to only do the kind of work that I do as a CAC rep and only look at what is in the consumer interest without looking at how this particular consumer interest would affect the farmer. How would it affect the processor? How would it affect the distributor and the retailer? I don't think any of this happens in isolation one unto the other. It's part of a system, and I think all the inputs provide input into the system.

If you make a change at the farm end, you're going to, by direct relationship, create a change or an input or an impact on the consumer end. It falls all the way through the chain. I think we have to consider all the impacts on everybody and all the points along the way within the food distribution system and the food chain.

I really believe that if you do something that is going to be blatantly unfair to the producer or the processor, it's going to end up being unfair to the consumer, because they're going to end up paying for the cost of it. I'm not sure if I'm answering your question.

**Mr. Jake Hoepfner:** What I'm trying to get at is that we've had different complaints about the input costs—you know, they're being regulated, there's no competition between the fuel companies or fertilizer companies, and the farmer has to pay the cost.

The farmer, however, has no mechanism of passing that cost on to the wholesaler or to the consumer.

Somewhere we have to have some kind of mechanism. We had one presenter here over a year ago from the United States tell us that if the Canadian government didn't regulate or institute some legislation that would be more stringent on the anti-combines act, that would reduce the—what do you call it?—the combines of certain conglomerates and the controlling of prices, farming would not stay viable, and it would be impossible to operate a farm.

When I look today at the average income of a farmer in Manitoba, it's \$ 8,000. You know, that's half of the poverty income. Where are we going with this whole issue?

**Ms. Christine Mitchler:** I think this is an agricultural issue in general. It certainly is outside the purview of my area of expertise as a consumer representative on food issues. I don't think I can answer that in the specific terms. I think it's an agricultural issue that is not only an issue perhaps with biotechnology, but an issue that's of concern within the agricultural industry as a whole.

**Mr. Jake Hoepfner:** Doesn't it go in to the education, the communications?

• 1225 

**Ms. Nathalie St-Pierre:** My comment on that—to respond also to what you were saying before—is that if producers are more and more hostages, basically, or becoming hostage, to the companies producing the seeds, producing the pesticides, producing the herbicides and all that, then indeed we will feel there would be less competition. As a result, I think, it's inevitable that the price of food will probably go up.

So the use of biotechnology is probably exacerbating this problem, because farmers and producers are becoming more and more dependent on these technologies, and they're supplied by very few manufacturers. It is a concern, and how to deal with that—

**Mr. Jake Hoepfner:** That's the first time I've heard somebody admit that. That's been my position all along, that the more we get into the technical field, the more we produce, the more hurt we experience.

**Ms. Nathalie St-Pierre:** And if—

**The Chairman:** We have to go on to the next questioner.

Madam Alarie.

[*Translation*]

**Ms. Hélène Alarie:** Let me set you straight, Ms. Mitchler. I was only reporting what I heard this morning. In the focus groups, we heard that there was little trust in institutions. I was only repeating what I heard.

I have a question for Dr. Surgeoner. Is the kit you talked about available to the public? Could we get one? I would be curious to see what kind of information it contains.

[English]

**Dr. Gord Surgeoner:** Chris, did you leave a copy of the kit for the committee?

**Ms. Christine Mitchler:** The revisions aren't completed yet.

**The Chairman:** Could you give it to the clerk whenever it's complete? Then we'll get it out to the various members.

**Dr. Gord Surgeoner:** Yes.

**Ms. Christine Mitchler:** It's not likely to be available until the end of May, early June. I'm still receiving comments within CAC from my people. I think we're now up to the second or third draft.

**Ms. Hélène Alarie:** Merci.

**The Chairman:** Mr. Harvard.

**Mr. John Harvard:** We've touched on a number of angles, if I can put it that way, with respect to this subject of biotechnology. I think a number of speakers have spoken to the fact that information, when it comes to biotechnology, is somewhat scarce at times, sometimes misleading, or perhaps sometimes just plain wrong.

My friend from Manitoba, Mr. Hoepfner—of course, I come from Manitoba as well—was pointing out that when his children were young, they were more apt to pay attention to the commercials on television as opposed to the program material being transmitted. I think that's a good observation, but we have to remember that resources are critical. Leading sponsors, national and international, have the wealth to spend hundreds of thousands of dollars, sometimes millions of dollars, to prepare one minute of material. One minute of commercial may cost hundreds of thousands of dollars, or millions. But the programmers, the networks, don't have any money like that to spend on their programming. So resources are critical.

It's interesting that in this country, the only network that has resources anywhere near adequate to provide information is the CBC, because it's publicly funded and it has a mandate to tell stories about Canada and what's going on here. Yet it's Mr. Hoepfner and his party who would love to destroy the CBC. Isn't that interesting.

**Mr. Jake Hoepfner:** We just want to privatize it, John.

**Mr. John Harvard:** Yes, make them just like the rest of the networks that have no resources to provide information. Isn't that interesting.

I have one question for Madam Einsedel. I think you mentioned off the top—if I heard you right—when you were alluding to the graph on the screen, that there was perhaps a link between the acceptance of technology on one side and the support of public institutions on the other.

• 1230 

I really wonder about that, because I know a lot of people in public life who are quite ready to accept technology to improve profits, to make all kinds of money, to make the

country more competitive, and yet on the other hand will slam public institutions every day. I might even get back to my friend, Mr. Hoepfner, again.

**A voice:** Leave Jake alone for a while.

**Mr. John Harvard:** Yes, we'll leave Jake alone, but when you belong to that kind of party, you're open to attack.

Anyway, do you really believe there is a linkage between those two? I have my doubts, and I guess I'm trying to be a critical thinker, as suggested by our friend here at the end of the table.

**Ms. Edna Einsedel:** There are many factors that determine acceptance of a given technology. I'm not saying trust in institutions is the only factor that helps to explain acceptance. It's quite possible that you'll have a situation where there is trust in an institution but non-acceptance of the technology. It's also quite possible that the opposite can happen. All I'm saying is there is a connection between trust in institutions and acceptance, but that is not the only factor.

**Mr. John Harvard:** I have one more question. Do you think there is something to what Mr. Mausberg said, that perhaps the reason there is a greater acceptance of biotechnology on this continent as opposed to that in Europe is because in North America we have been world leaders when it comes to biotechnology and there has been more promotion of the industry, more than what exists in Europe?

**Ms. Edna Einsedel:** There has been promotion of the industry in North America. Certainly if you look at the United States, that's certainly where a lot of the early products of biotechnology have come onto the market. That's also where some of the early consumer battles on biotechnology have occurred. I think the fact that there is a lot of promotion of these products is just one factor.

Another factor might be that North Americans certainly have been ahead in terms of the production of these products. Certainly in terms of Canada being a resource-based economy, that could also be another reason why there is some support for these products. The example of potatoes in P.E.I. was mentioned. I presume that in Saskatchewan you might have higher levels of support in terms of wheat crops, for example. That's another factor that might explain why there is some acceptance here.

A third factor might be that we don't have perhaps as much activity that's visible on the interest groups side. We don't have a Jeremy Rifkin who commands media attention. So I think it's a whole bunch of factors. In Germany, for example, you have the Green Party that's institutionalized and able to promote an agenda within the institutional setting that's not available in other settings.

**Mr. John Harvard:** And who want to increase the price of gasoline from \$ 4 a gallon to \$ 8 a gallon.

**The Chairman:** We've run out of time, but I have a small question I'd like to ask. Mrs. Ur has a small question also.

Would you like to go first, Mrs. Ur?

**Mrs. Rose-Marie Ur (Lambton—Kent—Middlesex, Lib.):** Unfortunately we've run out of time. I want to have two points on record.

Madame St-Pierre made the statement that if Canadians expect government to protect them...and I don't know if this is good or not. What did she really mean by that? Who or what has created or led to this mistrust?

The second point is, I think Dr. Surgeoner said there's enough information out there, but it only seems to get to the public when it affects them personally. I agree with you there.

Maybe we've missed the communication aspect. Biotech isn't anything new. I think consumers are seeing that as being new, and when anything is new, they are apprehensive. So in our great communication skills, why are we not explaining to them the biotech from way back when, say, insulin or whatever, and how positive it can be? We're just presenting the day-to-day things. Why don't you go back and say how wonderful it has been in the past, to kind of get them on your side?

**Dr. Gord Surgeoner:** That is a very strong method that we use. But I do agree with the comments that we are making a leap forward. We are saying we're building on past technologies. We use bread and wine, and it's in our consumer kit that we do that.

• 1235 

But Mr. Chairman, I'd like to make one comment. We hear this term “a product of biotechnology” over and over again. I want to emphasize to the committee the complexity of that.

We had a big Industry Canada debate on labeling of products of biotechnology. Somebody made the comment that McDonald's claims they don't have products of biotechnology, but here becomes the issue.

McDonald's buys beef and chicken from Canada that's probably fed with corn and soy beans that we grow in Ontario and that are products of biotechnology. So is that chicken and beef now a product of biotechnology?

All of the cheese, or at least 60% to 70% of the cheese, now has chymosin in it to create the rennet to make the cheese itself. Is your cheeseburger now a product of biotechnology?

The cooking oil to make your French fries may well have been canola oil. Let alone that we're using the P.E.I. potato, but just the cooking oil, is this a product of biotechnology?

Then when people really get upset is with your can of Coke. Our second use of corn in the province of Ontario is to create fructose. So we take that corn, we make fructose, and we put it in a can of Coke. Is that Coke a product of biotechnology?

So you suddenly see the complexity of the issue we're dealing with when you personalize it from the McDonald's standpoint, or Wendy's, or what have you.

**The Chairman:** Thank you very much.

My little question is this. I was told recently by a person from your university that in the near future nutritionists are going to be more important than doctors, because we're living longer. Every generation we add on three or four years, in spite of pesticides and chemicals, and maybe even in spite of biotechnology.

Dr. Ryan-Harshman, you are a nutritionist yourself and you have done studies for large companies and so on. Do you think this is correct, that we're going to be more into preventative medicine rather than curing disease?

**Dr. Milly Ryan-Harshman:** Absolutely. There's a definite trend, and that's part of what Paul Mayers was mentioning this morning about the whole concept of nutraceuticals and whether they would be novel foods or whether they might be considered drugs. That area is just beginning. In the next 15 to 20 years, we'll see a number of products become available. Those products could vary from drugs to foods.

I'll give you a very specific example. Lycopene in tomatoes has been heavily researched in the last couple of years because of its ability to reduce incidence of prostate cancer, for example. It is possible to produce a supplement that would be taken by people who are at risk for prostate cancer to reduce the possibility that they would get that cancer, and that may be considered by the current definitions a nutraceutical or a drug-type supplement.

However, it's also possible through biotechnology to insert the genes that code for the proteins that make the enzymes that make lycopene, which is incidentally the red pigment of tomato, so that you would get maybe broccoli that contained lycopene. Then broccoli, which already contains important phytochemicals for fighting cancer, would be even better, which would certainly benefit those who don't like tomatoes. Tomatoes are probably the primary source of lycopene for most people's diets. There are some other sources, such as watermelon, which is more of a seasonal fruit.

So absolutely, there's a lot of potential there for that to take place. It's going to demand that we have greater funding for education. As I've always said as a public health nutritionist, give me the money and I'll do it.

**The Chairman:** Okay.

**A voice:** Show me the money.

**Dr. Milly Ryan-Harshman:** That's right; show me the money.

**Voices:** Oh, oh!

**The Chairman:** Thank you all very much. It's been a very interesting morning. Thank you all for your input.

The meeting is adjourned.

Justice News

***Posted by Joan Russow***

by Joan Russow and distributed before and at the World Trade Conference in Seattle

We are now living in the wake of negligence from years of institutional collusion among governments, corporations and the military. Currently there is a concurrence of disasters: the violation of human rights, including civil and political rights, the denial of social justice, the degradation of the environment, and the escalation of war and conflict. The WTO has been instrumental in fostering this collusion to the detriment of the global community. In the year 1999, the culmination of the decade devoted to international law, rather than continue with this collusion which has jeopardized civil society

and the global ecosystem, the WTO should be dismantled and emphasis should be placed on member states living up to their international public trust commitments and obligations and adhering to the rule of law.

## DECLARATION OF ACTIONS

The Declaration of Actions was compiled from presentations, comments and proposals that were made during the plenary sessions at a recent conference

RECOGNIZING the Interdependence of Peace, Environmental Protection, Human Rights and Social Justice;

NOTING that through more than 50 years of concerted effort, the member states of the United Nations have created international Public Trust obligations, commitments and expectations:

1. to Promote and fully guarantee respect for human rights including labour rights, the right to adequate food, potable water, shelter and health care, education and social justice and the right to self determination; 2. to Enable socially equitable and environmentally sound development; 3. to Achieve a state of peace, justice and security; 4. to Create a global structure that respects the rule of law; and 5. to Ensure the preservation and protection of the environment, respect the inherent worth of nature beyond human purpose, reduce the ecological footprint and move away from the current model of over-consumption

CONCERNED that trade organizations such as the World Trade Organization (WTO) and Asia Pacific Economic Cooperation (APEC), and trade agreements such as the North American Free Trade Agreement (NAFTA) undermine the UN's work of over 50 years in creating obligations, commitments and expectations with respect to the matters set out above:

DISMAYED by the continuing global urgency resulting from the failure of member states of the United Nations to discharge their obligations arising from conventions, treaties and covenants, to act on commitments made in conference action plans, and to fulfill expectations arising from General Assembly resolutions;

RECALLING the commitment made by all the member states of the United

Nations to "ensure that corporations including transnational corporations comply with national codes, social security laws, and international law, including international environmental law" (Platform of Action at the UN Conference on Women: Equality, Development and Peace, Beijing, 1995, and also in the Habitat II Agenda, Istanbul, 1996);

We call upon all MEMBER STATES OF THE UNITED NATIONS TO TAKE THE FOLLOWING ACTIONS:

1. 1 \* TO CREATE a world based on true participatory democracy within a framework of public trust principles;  
\* TO ACCEPT the inherent limits to the Earth's resources  
\* to promote the peaceful coexistence of all nations, races, and species;  
\* TO DEVELOP a stable and peaceful international society founded on the rule of law;  
\* TO HALT the consequences of unprincipled economic growth;  
\* TO STRIVE TO REMOVE the inequitable distribution of resources \* to stabilize population and implement the commitments made through the international conference on population and development

1. 2 To discharge the obligations, act on the commitments, and fulfill the expectations arising from international Public Trust agreements, including:

(a) signing and ratifying any existing international conventions, treaties, and covenants that have not yet been signed and ratified;  
(b) enacting the domestic legislation necessary to implement them or to fulfill the legitimate expectations created by General Assembly resolutions and declarations; and (c) acting upon the commitments arising from conference action plans.

2. 1. To establish mandatory international standards and regulations (MINS), based on international principles and on the highest and strongest regulations of member states, harmonizing standards and regulations continually upward with respect to:

(a) Promoting and fully guaranteeing respect for human rights including labour rights, the right to adequate food, shelter and

health care, and social justice, and the right to self-determination;

\* the obligation undertaken by States in various multilateral treaties on human rights, that there must be no discrimination on the

( ) THAT in 1998 on January 31. I recirculated the Report **of the Royal College of Physicians and Surgeons of Canada Expert Panel on RBST** Prepared for Health Canada, January

In 1999, I received an invitation from Vandana Shiva to participate in the Biodevastation II conference in New Delhi move move move to 1999

## BIODEVASTATION II

I was representing the Green parties of America

Initially, there was the continued debate between labeling and banning The first speaker was from Consumer's International; who spoke about the funding he had received to promote labeling. I spoke next promoting banning on behalf of the Green Parties of the Americas

And Mae Won Ho supported me and made suggestions for the statement I had made, I realized that my statement was too long so this time I just drafted a short resolution. . Vandana Shiva sister supported it and the only person who would not sign it was the representative from the Consumers International but he told me: "Joan, I support banning but our campaign is for labeling" Then Vandana shiva signed it.

## BIODEVASTATION II RESOLUTION

EXHIBIT:

The undersigned participants at the Biodevastation II Conference in Delhi, India, March 11, 1999

called for

- (i) A global ban on genetically engineered foods and crops
- (ii) A global ban on the patenting of life forms
- (iii) An end to the exploitation of the knowledge of farmers, peasants and indigenous peoples

## GREEN PARTY CALLS FOR BAN ON GENETICALLY ENGINEERED FOODS AND CROPS AND SETS UP GE-FREE FUND

Dr. Joan Russow, the National leader of the Green Party of Canada has just returned from an international conference in Delhi where the participants called for a global ban on genetically engineered foods and crops. While deep concern is expressed throughout the world with GE foods and crops, the Canadian government is funding proponents traveling across the country promoting GE foods and crops., and is boasting that Canada has more trial sites of genetically engineered foods and crops than the whole of the European Union.

For too long the dialogue around genetically engineered foods and crops has been about the “right to know” not about the right to have genetically engineered-free food, and the right to have crops that do not destroy the environment. Given the unattended consequences of genetically engineered foods and crops, and the global commitment to the precautionary principle it becomes an imperative to institute a complete ban on genetically engineered foods. and crops because there is sufficient scientific evidence emerging to justify the banning and the immediate removal of the food off the shelves.

“labeling does not address the equity and the environmental issues and it does not communicate the urgency of the issue” We are living in a wake of corporate/government negligence from previous harmful substances that were once deemed safe for human health and the environment says Russow.. .

Since 1994 the Canadian government has approved genetically engineered foods such as tomatoes, corn, potatoes, squash, canola and soy; and since 1998 Canada has had about 4,400 trial sites for genetically engineered foods and crops across Canada.

A

### **2018\*\*INSTITUTIONAL COLLUSION**

**In the area of the patenting of life forms there has been institutional collusion among government, corporations, universities, some willing NGOs, consumer groups, and captive scientists. For example, National governments have been subsidizing and promoting the biotechnology industry, even through joint junkets.**

NGO and consumer critics have sometimes been “reasonable”. University research has been compromised by funding contracts from companies whereby university researchers are “encouraged” through funding to research in a specific area. Often university scientists have to run results past company scientists before publication.

### **2018\*\*UNSCRUPULOUS INTIMIDATION**

“In June, 1997 the US ambassador to India announced that ‘certain areas of research and training will be closed to cooperation’ if India fails to amend its patent laws. In April 1997 a letter was sent by the US State Department to the Royal Thai Government regarding the latter’s draft legislation allowing **Thai doctors to register traditional medicines**. It states that, “Washington believes that such a registration system could constitute a possible violation of TRIPs and hamper medical research into these compounds” (Mae-Wan Ho, *Genetic Engineering Dream or Nightmare*, 1998). Under the Canadian Criminal Code, “intimidation” is defined as “everyone who, wrongfully and without lawful authority, for the purpose of compelling another person to abstain from doing anything that he or she has a lawful right to do...”

### **2018\*\* GROSS NEGLIGENCE**

Too often substances and activities which had been introduced into the ecosystem were later found to have irreversible consequences on humans, animals, plants and the environment. Proponents of an intervention into the ecosystem have either not been required to demonstrate safety or been unable to. The precautionary principle changes this; it reads that “where there is an irreversible threat to the environment, the lack of full scientific certainty shall not be used as a reason to postpone measures to prevent the threat.” There is sufficient document evidence in the “World Scientist Statement” from February 99 to justify their call for governments to “ban patents on living organisms, cell lines and genes.” Perhaps the Canadian Criminal Code describes “negligence” as being a result of a marked departure from the standard of care that a reasonable and prudent person would use to prevent something from happening.

### **2018 \*\*DERELICTION OF DUTY**

Public monitoring agencies set up to monitor and regulate the biotechnology industries such as the Canadian Food Inspection branch or the Health Protection Branch have been derelict in the exercising of their duty. Since 1988 there have been 4500 trials in Canada of genetically engineered foods and crops, and since

**1994 “novel foods” have been approved. The failure of the monitoring and regulatory system was made evident in the “RBST” case, where it was shown that scientists’ gap analyses had been ignored.**

### **2018\*\* BLATANT MISREPRESENTATION**

**It is astounding that the federal government tells the Canadian public that, “In principle, biotechnology is a process that already occurs in nature. Farmers have traditionally used breeding methods for many years to transfer genes that code for desirable traits, such as disease and insect resistance from one variety to another. genetic modification is an improved and more efficient way of achieving the same outcome.” (The Canadian government’s response to a petition, calling for “the banning of genetically engineered foods and crops,” which was put on the floor of the House of Commons on November 30, 1998). In the World Scientists’ Statement, however, scientist affirmed that “Genetic engineering is a new departure from conventional breeding and introduces significant differences”.**

### **2018\*\* ACADEMIC COMPROMISE**

**Mae-Wan Ho in her book, *Genetic Engineering Dream or Nightmare?* noted that “public funding for scientific research since the early 1990s within most developed countries has been disproportionately biased in favor of product-oriented genetic engineering biotechnology. The pluralistic, open enquiry that has long been the ideal of science is fast becoming obsolete. Some molecular geneticists have privately expressed that they are increasingly disillusioned within a system that judges excellence on patents owned”**

### **2018\*\* ENDURING EXPLOITATION**

The exploitation of indigenous peoples and farmers as well as of their knowledge has been well documented. Numerous examples exist of what has been described as “bioprospecting”, or “biopiracy”, where “scientists” failed to obtain informed consent, while pretending to benefit indigenous peoples as part of the human genome diversity project. Numerous examples exist of patenting affecting what was previously in the public domain. A prominent example is the versatile Neem plant in India which, when patented by US company W.R Grace, became a commodity out of the reach of ordinary people.

**TIME FOR CHANGE;**

**This must be a time of precaution and prevention. civil society is not contrary to the order public or morality; this explicitly includes inventions dangerous to human, animal or plant life or health or seriously prejudicial to the environment” would be for governments to summon up the political will to initiate a global ban of future patents of life forms and to revoke existing patents on life forms.**

( ) THAT in 1998

I drafted the following petition

PETITION- PROPOSAL FOR A UN RESOLUTION TO PREVENT HARM TO HUMAN HEALTH, BIODIVERSITY AND THE ENVIRONMENT FROM GENETICALLY ENGINEERED FOODS AND CROPS

RECALLING THAT

at the United Nations Conference on Environment and Development (1992), the member states of the United Nations made a commitment to prevent the transfer to other states of substances or activities that are harmful to human health or the environment (principle 14, Rio Declaration);

RECALLING ALSO THAT

at the UN Conference on Women: Equality, Development and Peace, every member state of the United Nations made a commitment to ensure that corporations including transnational corporations comply with....international law, including international environmental law (1995)

RECOGNIZING the serious issues raised by genetic engineering in terms of health and safety, the environment, ethical considerations and social justice;

CONSIDERING the worldwide support for:

- (i) a global ban on genetically engineered processes, foods, crops and animals
- (ii) a global ban on the patenting of life forms as being contrary to the "order public" (public interest)
- (iii) criminalizing biopiracy and theft of the genetic material and knowledge of farmers, peasants, and indigenous peoples;
- (iv) promoting organic agriculture and other ecological forms of farming, coupled with a fair and just transition program for farmers and communities affected by the conversion

NOTING THAT the precautionary principle affirms that, where there is a threat to human health or to the environment, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent the threat. The precautionary principle has long been a tenet of international customary law and, as such, is required to be integrated into state law

This principle is present in documents in differing forms such as the Rio Declaration:

Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation." (Rio Declaration, 1992).

and the Convention on Biological Diversity:

Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat (Preamble, Convention on Biological Diversity, UNCED, 1992).

AWARE OF the evidence of hazards arising from genetically engineering foods and crops reported in the World Scientists Statement presented at Cartagena, Columbia, February 1999: "\* Herbicide resistant transgenes have spread to wild relatives by cross-pollination in both oilseed rape and sugar beet (Brookes, 1999) creating many species of potential superweeds. \* Herbicide-resistant transgenic plants may lead to increased use of herbicides, contrary to what is being claimed. The transgenic plants themselves are already turning up as volunteer plants after the harvest and have to be controlled by additional sprays of other herbicides. \* Bio-toxins engineered into a wide range of transgenic plants already released into the environment may build up in the soil and have devastating impacts on pollinators and other beneficial insects (Crecchi, C 1998). \* Genetic engineering of organisms is hit- or - miss and not at all precise, contrary to misleading accounts intended for the public, as it depends on the random insertion of the artificial vector carrying the foreign genes into the genome. This random insertion is well-known to have many unexpected and unintended effects, including cancer, in the case of mammalian cells (Walden R, 1991).

\* Serious doubts over the safety of transgenic foods are raised by new revelations on the results of animal feeding experiments. Potatoes engineered with snowdrop lectin fed to rats caused highly significant reduction in both dry and wet weights of many essential organs: small intestine, liver, spleen, thymus, pancreas and brain. In addition, it resulted

in impairment of immunological responsiveness and signs suggestive of viral infection (Leake, C ,1999). \* Hazards may come from new genes and gene products. New genes and gene products are introduced into food, often from bacteria and viruses and other non-food species that have never been eaten before and certainly not in the quantities produced in the genetically engineered crops, where they are typically expressed at high levels. The long term impacts of these genes and gene products on human health will be impossible to predict \* Genetically engineered agriculture not only obstructs the implementation of real solutions to the problems of food security for all, but also poses unprecedented risks to health and biodiversity. Far from feeding the world, it will intensify corporate control on food production and distribution which created poverty and hunger in the first place. It will also reinforce existing social structures and intensive agricultural practices that have led to widespread environmental destruction and falling yields since the 1980s (Brown, L R,. (1998)" {Excerpts from the World Scientists' Statement}

#### RECOGNIZING THAT

the global community has made a commitment to the international principle of customary law-the precautionary principle. This principle states that where there is a threat to human health or the environment, the lack of full scientific certainty shall not be used as a reason to postpone measures to prevent the threat. There is sufficient scientific evidence of the harmful health and environmental consequences of GE foods and crops to justify the banning of GE foods and crops, the end to export of GE foods and crops and the immediate removal of GE foods from grocery shelves in accordance with the precautionary principle.

#### RECALLING THAT

an exception to the patenting of inventions arises when the invention is contrary to "ordre public" or morality; this explicitly includes inventions dangerous to human, animal or plant life or health or seriously prejudicial to the environment and applies where the commercial exploitation of the invention must also be prevented and this prevention is necessary for the protection of order public or morality;

#### CONCURRING WITH

the World Scientists Statement that " Genetic engineering is a new departure from conventional breeding and introduces significant differences. Conventional breeding involves crossing related species, and plants with the desired characteristics selected from among the progeny for reproducing, and the selection is repeated over many generations. Genetic engineering bypasses reproduction altogether. It transfers genes

horizontally from one individual to another (as opposed to vertically from parent to offspring), often making use of infectious agents as vectors or carriers of genes so that genes can be transferred between distant species that would never interbreed in nature. For example human genes are transferred into pig, sheep, fish and bacteria. Toad genes are transferred into tomatoes. Completely new exotic genes are being introduced into food crops." (World Scientists Statement, 1999)

#### NOTING THAT

The current practices of genetic engineering are creating unpredictable and irreversible combinations of transgenic organisms with one another and with natural varieties and, as such, are defeating the purpose of the Convention on Biological Diversity;

NOTING THAT under the Vienna Law of Treaties, the signatories to the Convention must not create a situation that would make it impossible for them to discharge their obligations under the treaty and that the creation of unpredictable and irreversible combinations of transgenic organisms with one another with natural varieties would defeat the purpose of the Convention to "conserve biodiversity";

#### RECOGNIZING THAT

genetic engineering in the area of medical research raises serious questions of ethics and social justice;

MINDFUL that some member states of the United Nations have failed to sign or ratify the Convention on Biological Diversity along with other relevant treaties, covenants and conventions, and that under the Vienna Law of Treaty states are bound not to do anything in the interim between the signing and the coming into force of the treaty to defeat the purpose of the convention;

#### HAVE AGREED TO THE FOLLOWING:

\* to invoke the precautionary principle and institute an immediate ban on all genetically engineered processes, foods, crops and animals; \* to embark upon the immediate removal of GE foods from grocery shelves; \* to invoke the "ordre public" principle and ban the patenting of living organisms and their parts; \* to criminalize biopiracy and theft of genetic material and knowledge of farmers, peasants, and indigenous peoples; \* to place a moratorium on genetically engineered medical research into uses of genetic

engineering until ethical standards can be put in place; \* to urge the full ratification of the Convention on Biological Diversity and the enactment of domestic legislation to ensure compliance. \* to promote the conversion of genetically engineered farms into organic farms or other forms of ecologically sound agriculture \* to establish a fair and just transition program for farmers and communities affected by the conversion

Example of Systemic Restraints

- Critical examples of the way treaties can be derailed are the U.S. Congress's failure to ratify the Comprehensive Test Ban Treaty (CTBT) and the U.S. development of a national anti-missile defence system. The latter would be in direct violation of one of the cornerstone treaties in nuclear arms control, the Anti-Ballistic Missile (ABM) treaty, which restricts such defences to only two specific sites. In this latter case, it is the U.S. government itself that is endangering this treaty. The intent of CTBT was to halt the development of nuclear weapons by all countries. However there is evidence that the U.S. has developed "other technical means", which do not involve actual explosive tests to expand their arsenal of weapons, while also assuming the integrity of their stockpile. This would be a subtle form of abrogation. And, on the other hand, India has used the argument of the U.S.'s "other technical means" to justify its refusal to sign the CTBT, while Pakistan will not sign unless India signs. And in the case of the Middle East, with its geopolitical significance, Israel has not signed any of the major nuclear weapons treaties. And again, on the other side, Iraq and Iran appear to be attempting to develop nuclear capability. And in this latter case, Russia appears to be assisting them. In fact the U.S. national missile defence system is pushing Russia and China into hard-line opposition.*

- FURTHER NOTES

- 
- 1. Idea in Rio Agenda 21 to establish an International Court of the Environment;
- 2. The idea of people's tribunals, e.g. the one on the Chernobyl accident;
- 3. The role of the IAEA - a UN agency- must be restructured - needs the separation of control and promotion;
- 4. The idea of restructuring the UN;
- 5. We must get the names of the nations in the non-aligned movement (NAM) dedicated to the elimination of nuclear weapons;
- 6. An interesting aspect of voting behaviour is when members of a bloc/alliance vote differently on an UNGA resolution on the relevant issues (include in our analyses); possibly such a vote should be weighted, as in an abstention from a majority, i.e. -1;
- 7. I really feel strongly we should not wait until the 31st. We need determination for termination.
- 
- P.S. If you have not received this e-mail transmission, I will provide the bibliography on disk !
- 
- More Material on Possible Use (Continued)
- The conflicts between universality in the area of human rights and the cultural norms of nations creates a powerful systemic restraint in proceeding from principle to practice. This is the case in the issue of the rights of women. The status of women in Afghanistan represents a classic case. But the assertion of the supremacy of sovereignty over collectivity haunts the search for binding treaties in all these area of peace, environment and justice. Still another area of such discrepancies are labour laws in different countries. This was an issue that surfaced at the Seattle WTO meeting, both internally and externally. A subtle dynamics evolved, whereby the internal politics of the U.S. in a presidential election year led to a rift within WTO. It is our approach to this project to reveal these subtleties in the web of interactions.

Member states of the Non-Aligned Movement (NAM) have supported a resolution in the UNGA to have the years 1989-1999 declared as the UN Decade of International Law. The voting on this important resolution will be analyzed. The above resolution also called for a UN-sponsored peace conference in 1999. Again there was a split in the votes. It will also be part of our analysis to examine the Rome Statute for an International Criminal Court and its functioning to date. It will be important to access the UN web pages. Still another systemic restraint that often plagues treaties is the failure of states to implement domestic-assisting legislation. As of December 1999, ninety-one states have signed the Rome Statute, but only six have ratified it.

Cont'd....

- *A search of the literature has revealed that while certain associated concepts are dealt with it is rare, for example, to witness a departure from the phrase "sustainable development" to the more complex multi-varied concept of sustainability, particularly as conceived of in this project. An apparent exception to this is the Proceedings of the 44th Pugwash Conference on Science and World Affairs, Crete, Greece, 30 June-6 July,*

1994 (London-World Scientific), which has an entire section devoted to "Towards Sustainability: World Resources and Environmental Problems", pp.353-410. Unfortunately, none of the papers in this section attempt to define sustainability as we have in our project proposal. In one paper, "Sustainable Development", by Alfred Schmidt (pp.388-395), sustainable development is defined as "development which meets the needs of future generations without compromising the ability of present generations to meet their own needs" as originally defined in the 1987 WCED report. The entire analysis is then based on resources, energy, capital, labour and information needs. Our comprehensive definition of sustainability, which includes peace, is not dealt with at all. Other papers deal with sustainable energy supply. The minimal analysis deals with environmental security but again this is not linked to the issues of peace and justice as the three elements of sustainability. Moreover, nothing we have surveyed in the literature deals with the modes of implementation of the three elements of sustainability in an international legal context. One book we reviewed, "International Relations in the Post-Cold-War Era", Riddell, M. and E. Riddell-Dixon eds. (Toronto:Nelson), 1993, dealt with such questions as the principles and practice of international laws in "humanitarian intervention" in terms of George Bush's "new world order" and U.N. intervention. There was also a section on environmental security and sustainable development and the issue of sovereignty versus collective interests was raised. However it did not deal with sustainability/security goals in any comprehensive way. In fact, we found very little in our review of the literature that was similar to our approach. The work of Professor Roger Dittmann in voting analysis at UNGA (see bibliography) was the only relevant work. A comprehensive conceptual scheme of sustainability appears in two books by this author - "Anti-Nation: Transition to Sustainability" and "Every Life is a Story" (see bibliography). The former book contains some very limited early references to this concept.

( ) THAT in 1998 In APRIL At Health Canada's request, the Royal College of Physicians and Surgeons of Canada established an expert panel in April of 1998,

EXHIBIT

#### **Executive Summary**

At Health Canada's request, the Royal College of Physicians and Surgeons of Canada established an expert panel in April of 1998 to examine the human safety issues pertinent to the use of RBST in dairy cattle in Canada.

The panel was asked to "review international scientific reports and conclusions that have been made about RBST "and "to make observations and recommendations regarding the adequacy of the scientific data submitted by the manufacturer of Nutrilac (RBST) or (to examine scientific information) existing elsewhere to make sound scientific assessments regarding the human health risks associated with the use of Nutrilac (RBST) in Canadian dairy cattle."

The panel members were chosen for their expertise in medicine, pediatrics, oncology, nutritional science, epidemiology, pharmacology and toxicology. All are active or emeritus members of Canadian Faculties of Medicine or Health Sciences. The panel operated independently with a reporting relationship to the Royal College of Physicians and Surgeons of Canada.

The panel reviewed an extraordinary volume of scientific data and literature relevant to its task. The quality of the scientific evidence available to the Bureau of Veterinary Drugs, Human Safety Division with respect to the Nutrilac file appears to be excellent and complete as far as is possible in a field of scientific study which has evolved rapidly during the course of a review lasting more than nine years. In particular, there is a quickly expanding literature on biologic effects of insulin-like growth factor-1 (IGF-1), which is indirectly relevant to the human safety of food products from rbST-treated cattle. The panel experienced no difficulty in finding up-to-date information required for its analysis. It was apparent to the panel that scientific awareness of relevant human safety issues within Health Canada has kept pace with growth of scientific perception concerning somatotropin (ST) and IGF-1 during the 1990s.

The panel has reached a number of conclusions concerning the human safety of food products from rbST-treated cattle.

Cow's milk contains bST whether or not the cow has been treated with rbST. No increase in total bST concentration is observed in milk from rbST-treated cows and therefore no human risk related to ST consumed by this route is likely to result.

- 1 RBST given to rats in a 90-day study conducted by the manufacturer caused an antibody response in some test animals, including one that received a relatively low dose of 0.1 mg/kg/day. The antibody response in question was detected at 14 weeks. This effect, if validated, would suggest the possibility of occasional hypersensitivity reactions in those consuming food products from RBST-treated cattle. The panel recommends further discussion of the antibody results by Health Canada scientists with the manufacturer and repetition of the studies in question to clarify the risk of hypersensitivity following exposure to oral RBST at low doses.

- 2 RbST increases the production of IGF-1 concentrations in recipient animals and IGF-1 concentrations are increased in food products from rbST-treated cattle. The increments of IGF-1 in milk and other food products represent a minor increase in exposure for human recipients when compared to endogenous (physiological) production of and exposure to IGF-1. The panel recognizes major difficulties in drawing inferences about the potential for indirect human toxicity related to the increased production of IGF-1 in recipient animals. However, there is no biologically plausible basis on which to conclude that rbST-associated changes in human exposure to IGF-1 will lead to any immune response, change in neonatal intestinal growth and development, or cancer risk in recipients of milk or food products from treated cattle.
- 3 Apart from concern, as noted above, about the antibody response observed in a single rat treated sub-chronically (90 days) with rbST at a dose of 0.1 mg/kg/day, the panel does not think that chronic toxicity or reproductive studies in laboratory animals are justified since there are no receptor-mediated rbST effects in human.
- 4 Biological study of IGF-1 will remain of exceptional interest; however, there is no evidence to suggest that oral intake of IGF-1 is carcinogenic. As an endogenous substance, IGF-1 may play a role in the pathophysiology of neoplasia; however, Health Canada would not be justified in requiring further studies of IGF-1 to be conducted by the manufacturer of Nutrilac with respect to the pathogenesis of human malignancy.
- 5 It appears that the incidence of mastitis increases in rbST-treated cows and that this condition is likely to be treated on many Canadian farms with antibiotics. The panel does not consider that these events pose a risk to human safety since Canada has an enforced testing program for all milk pooled in tank reservoirs. That program will assure that antibiotic residues are maintained within nationally accepted standards. Furthermore, the panel thinks that any increase in exposure of bacteria to antibiotics as a result of rbST-related mastitis would be of marginal importance compared to the effects of antibiotic exposure resulting from other agricultural and human antibiotic uses. It is highly unlikely that rbST use will have any impact on the important public health issue of increasing antibiotic resistance.
- 6 . Shiv Chopra, a strong and vibrant champion of science in the service of the public good. He has left behind a loving family and a legacy of committed, courageous campaigning for justice and accountability. Dr. Chopra was a

dedicated public servant who shed light on how our food is regulated in Canada and the dangerous influence that corporate power can have on government decision-making, if public servants are not willing to speak up.

- 7 Dr. Shiv Chopra was a veterinary scientist with a Ph.D. in microbiology. He was a senior scientist at Health Canada (Canada's food safety regulator) where he worked from 1969 until 2004. Dr. Chopra was one of three Health Canada veterinary scientists who spoke out in the 1990s about pressure to approve animal drugs despite their concerns about animal health and food safety. They questioned carbadox, a drug used in pigs, and Baytril, which was used to promote growth in cows and chickens. Most prominent were their concerns over Monsanto's genetically engineered veterinary drug Bovine Growth Hormone (BGH). Their public criticisms of BGH were met with gag orders from their employers at Health Canada but finally led to Senate hearings and a 1999 decision not to approve the drug. (CBAN)

( ) THAT in 1998, I participate in APRIL 19 -30 GLOBAL DAYS OF ACTION AGAINST GENETICALLY ENGINEERED FOODS AND CROPS and wrote a GLOBAL RESOLUTION CALLING FOR BANNING

EXHIBIT:

( ) A global ban on genetically engineered foods and crops

- to decide not to purchase genetically engineered foods and to communicate this decision to agencies, institutions, governments, departments, and to lobby against any wholesale or retail store that carries genetically engineered foods;
- to demand the right to know: (a) what products and substances have been approved for sale by governments, (b) what processes products and substances have undergone in production, (c) what regulations are in place, (d) what the reasons are for not have stiff regulations, or for not enforcing regulations, (e) the nature and extent of the funding in the universities of genetically engineered companies, (f) the method by which wholesale and retail stores ensure that they are not selling;
- the means to ensure that citizens are forewarned about food that has been genetically engineered;
- to expose the corruption and kickbacks in institutional programs such as the World Bank;
- to expose the level of complicity of institutions through interlocking directorships;

- to document PR statements of firms involved with genetic engineering, to counteract these statements and to disseminate the information;
- to appropriate corporate language, clarify it and counteract it;
- to clearly define the opposition;
- to participate and support a broad based principled citizens movement opposing genetically engineering ensuring the constant respect for social justice and human rights;
- to try to unfold the hidden dimension involved in any struggle; every issue has a hidden ecological, human rights, social justice labour dimension;
- to link up with other groups but not sacrifice principle;
- to retain the moral ascendancy;
- to set up community trusts where citizens can contribute to the purchase of land, to grow organic food, to support organic farmers and undertake to purchase organic produce;
- to boycott and "boycott" all companies and their affiliates that are engaged in producing or distributing genetically engineered foods;
- to participate in the Global days of Action against genetically engineered foods (October 15 and 16);

( ) THAT in 1998 on MAY 28 1998, I had input into the climate conference in buenos Aires

Dear "climate" friends,

>

>We have agreed to prepare for the climate change conference in Buenos

>Aires early November. Patrick and I have talked about it recently and he

>offers some ideas in the message enclosed. Jorge Gonzales Torres and

>I have talked about a Green preparatory meeting in Buenos Aires just

>before the conference.

>

>Please give us your reactions.

>

>All the best,

>

>

>Ralph

>

>

>From: Patrick Mazza <patmazza@teleport.com>

>To: Anne Verheyen <averheyen@europarl.eu.int>

>Date: 20 May 1998 8:47pm

>Subject: Buenos Aires Strategy

>

>Here are some opening thoughts on an international Green strategy for

>Buenos Aires:

>

>The Buenos Aires conference, by every indication, will prominently

>focus on the role of developing nations in the international response

>to climate change. It is clear that the U.S. Senate will not ratify the

>Kyoto treaty until major developing nations sign on. The Clinton

>Administration will be pressing hard to make this happen.

>

>Our Kyoto statement acknowledges that eventually developing nations

>will

>have to be part of any meaningful response, but that developed nations

>must take the first steps. I believe the key contribution Green parties

>can make to Buenos Aires is to craft a series of concrete proposals for

>a

>just and equitable way to transfer climate-friendly technologies to

>developing nations. This must be seen as more than a "market

>opportunity."

>Nations struggling to support their own people and pay off crippling  
>debts

must not be called on to bear the full costs of a major technological transition.

At the same time, a shift to climate-friendly technologies offers a significant opportunity for developing nations to leapfrog over the developed world, whose system of centralized power plants and power grids

is fundamentally a 19th century invention. Trends are toward decentralized

power sources. Two billion people in developing nations are currently without electricity, and the investment to bring electricity to most of them is beyond the capacity of most developing nations. Off-grid, village- and neighborhood-scale systems powered by sun, wind and biomass are the

quickest and most economical way to serve this one-third of the earth's population. It is hard to overstate the potential for improving the quality of life and economics of developing nations in rapid implementation of a decentralized energy system.

And for the climate, this is utterly necessary. The U.S. Department of Energy estimates that to carry the growth in power load in developing nations expected over the next 20 years, the equivalent of 5,000 large power plants will have to be built. If these are mostly coal-fired, as is anticipated, we can kiss any hope of climatic stability goodbye. And if they are financed in the conventional manner, the debt load on developing nations will only become heavier.

One proposal that may soon be floated by a group of economists and

climate-change experts is a tax on currency transactions to fund transfer of climate-friendly technologies to developing nations. A .025 percent tax would yield \$200 billion/yr. I am in touch with this group and will be passing along news of their proposals to Green parties worldwide.

So the questions from here are:

Should Greens make developing nations' role in response to climate-change, and developed nations' role in assisting that response, the centerpiece of our Buenos Aires strategy and statements?

Are there other prominent issues we need to address?

Patrick Mazza

European Federation of Green Parties

Dear "climate" friends,

We have agreed to prepare for the climate change conference in Buenos Aires early November. Patrick and I have talked about it recently and he offers some ideas in the message enclosed. Jorge Gonzales Torres and I have talked about a Green preparatory meeting in Buenos Aires just before the conference.

Please give us your reactions.

( )May 1998

26th Session held in Ottawa (Canada) 25-29 May 1 81

I had heard that Brewster Kneen would be going to both the conference in Ottawa the conference too

I wrote to him to suggest that we lobby at both conferences for banning GE food and crops

HIS RESPONSE

Brewster Kneen responded :”Why not simply call for a ban on genetic engineering, then, if what we are after is to get genetic engineering out of food (including cotton as cottonseed oil) altogether?

Morally, this has its appeal. It sounds simple and straightforward. But if one calls for a ban, who is there to listen? Who, or what agency, is going to institute or legislate a ban? Certainly not Chretien or Clinton, certainly not the Canadian Food Inspection Agency or the Food and Drug Administration in the U.S.

Apart from the political folly of calling for a ban, a call for a ban would raise a great many more issues about the use of biotechnology in drugs, medical treatment and reproductive technology - issues that may be just as important, and socially perhaps even more important, than issues raised by the genetic engineering of food crops. Strategically, it may just be wise to tackle the issues one by one. If the market for GE canola disappears, so will GE canola. This will give us an opportunity to address the other important issues: the bad science which uses the population as guinea pigs for GE products that have been subjected to no long-term testing; the dangers of environmental contamination and genetic deterioration of crop varieties; the corporate control of the whole food system; the real dangers and even the conceivable benefits of biotechnologies under public control and rigorous, transparent regulation.”.

## A REPORT TO THE CODEXALIMENTARIS

by Dr. Sri Ram Khanna, VOICE, New Delhi, India

### COMMENT

I was sorry to read that the Indian representative did not call for banning; I guess he was ignoring the concerns by the Indian farmers. Some were even committing suicide

#### Labeling of Foods Obtained through Biotechnology (Agenda Item 8)

A international standard on the labeling of genetically engineered foods came no closer at this meeting. There has been no consensus on the 'no-belling proposals advanced at the past four annual meetings, so the process has been put back to step 3 (the beginning) for the 1999 consultation.

GE food labeling was the most contentious debate during the Labeling Committee Meeting. As no other Codex (international food standard) Committees discuss the genetic engineering of food, the deep concerns of the public interest observers and the general public, all focused on this discussion.

There were three main positions on labeling GE foods:

7 countries, led by USA, Brazil, Canada, Australia and NZ, favoured minimal labeling. (NB: Australia and NZ have no official position as the draft standard proposed by the Food Authority has not been adopted by our ten Health Ministers. Our delegates told the pre-meeting briefing in Canberra that they would not be taking a position at Codex.); 10 countries led by the EU favoured moderate levels of labeling, with exceptions; and 6 countries led by Norway and India favoured comprehensive labeling.

June 6

( ) THAT in 1998, on June 5, I responded to the following article

1998 "Make environment a priority

Possibly submitted as an OpEd piece

In Dennis Bueckert's Globe article, June 5th, 1998, "Make environment a priority, global poll says" he points out that environmental concern is mounting primarily in developing countries.

During the Election the Green Party of Canada ran a strong campaign, continually pointing out that Green Party policy was in line with what governments in Canada have agreed to nationally and internationally but never implemented. When I was in Montreal during the 1997 election, I went to Jean Chretien's walkabout in a market. I introduced myself and said I would like to debate him on Canada's non-compliance with

international obligations and commitments ESPECIALLY Climate change. He ignored me and walked by. I went up to the media and asked them if they were only here to take photo-ops or were they here to challenge him and address issues such as climate change

it was reported in the Montreal Gazette that I had accosted him

During the election, Canadian governments' failure to discharge obligations

and act on Commitments was generally ignored. Yet several weeks ago Brian Emmet, Commissioner of the Environment and Sustainable Development, confirmed that "Canada has failed to live up to its promises to Canadians and to the world".

During the Climate Change discussion leading up to and during Kyoto, the Green party issued six press releases and circulated them across

Canada. Among the releases was a report card giving Canada a failing grade for its non-compliance with the Framework Convention on Climate Change (1992). The Green party particularly pointed out that Canada was remiss in not invoking the Precautionary Principle, which was an integral part of the Framework Convention on Climate Change. This principle affirms that under the threat of climate change, lack of scientific certainty should not be used to justify the postponing of measures to prevent the threat. The media in Canada during the Kyoto discussion continually interviewed Fraser Institute scientists who, when pressed, admitted that they were funded by the fossil fuel industry; these captive scientists continually cast doubt on the legitimacy of scientific concern about climate change of the Intergovernmental Panel on Climate Change.

In countries with less discriminatory electoral systems, members of the Green party are being elected and are then able to continually raise environmental issues in legislative bodies. Every party now in the Canadian Parliament functions at some level of vested economic interests detrimental to the environment, whether it be the interests of corporations or of specific unions that profit from environmentally unsound practices.

Is there any party in Parliament that will seriously address the continued mining of uranium in Saskatchewan and Canada's contribution to the nuclear arms industry? Is there any party that will seriously call for the phasing out of fossil fuel and the transfer of funds to develop environmentally sound energy systems? Is there any party in Parliament that will call for moving away from car dependency and for autoworkers to begin to design public transit systems instead of cars? Is there any party in Parliament that will demand no more cutting of old-growth forests both because of obligations to protect and conserve biodiversity under the Convention on Biological Diversity and to conserve carbon sinks under the Framework Convention on Climate change?

Neither is there is a voice in national electoral debates or in Parliament calling for the difficult measures that have to be embraced to move towards socially equitable and environmentally sound employment.

Now is the time to act on addressing public concern. Now is the time for precaution, to heed warnings, to prevent negligence, and to finally be responsible for the rights of future generations.

Joan Russow (Ph.D.)

National Leader of the Green party of Canada

1 250 598-0071

( ) THAT in 1998 on June 6, I recirculated the draft piece that I had written for the BC Environmental network

## 1. PRECEDENTS, OF THE PRECAUTIONARY PRINCIPLE

### 1.1 the international precedents of the precautionary principle

Excerpts from a presentation on Panel on the Precautionary Principle April 5, 1997 at the Greenlife International Environmental Conference in Washington DC.

The precautionary principle because of the longevity of its existence and because of the prevalence in a wide range of international documents is deemed to be a principle of international customary law and as such is automatically the law of all member states of the United Nations. Institutional memory is short and corporate sympathetic governments through years of negligence have continued to disregard the commitment made in 1972 - a commitment to embrace in essence the precautionary principle:

"A point has been reached in history when we must shape our actions throughout the world with a more prudent care for their environmental consequences. Through ignorance or indifference, we can do massive and irreversible harm to the earthly environment (Declaration of the United Nations Conference on Humans and the Environment, 1972)

This admonition was reinforced in the World Charter of Nature that was passed as a General Assembly Resolution in 1982 with only one country abstaining, the United States. Through the World Charter of Nature member states of the United Nations created an expectation that they would seriously be guided by the following dictate:

"Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effects are not fully understood, the activities should not proceed" (11b, World Charter of Nature, 1982)

Again, institutional memory was short and governments soon forgot that this expectation was created.

Ten years later at UNCED in 1992, the precautionary principle surfaced again in the Rio Declaration which was adopted by all member states of the United Nations, in the Convention on Biological Diversity which was signed and ratified by most of the member states of the United Nations; and in the Framework Convention on Climate Change which was signed and ratified by most member states of the United Nations.:

"Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation "(principle 15, Rio Declaration)

"Where there is a threat of significant reduction or loss of biological diversity, lack of full scientific certainty should not be used as a reason for postponing measures to avoid or minimize such a threat" (Convention on Biological Diversity, UNCED, 1992)

"Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures, taking into account that policies and measures to deal with climate change should be cost-effective so as to ensure global benefits at the lowest possible cost" (Article 3. Framework Convention on Climate Change)

Again after 1992 the precautionary principle was not implemented.

Institutional memory coupled with corporate sympathetic administrations, ignorant judges, short-sighted lawyers, and "the 'misplaced credibility" of activist groups are some of the systemic constraints preventing the implementation of this principle.

The precautionary principle has been extended to apply also the health issues (Russow, 1991, Wingspread Conference 1998, Peter Montague [Rachel] 1998) and has been applied to issues as widespread as genetically engineered organisms to prevention of nuclear disasters to discharge gas emissions affecting kayakers. Each case where there is the call for the implementation of the precautionary principle different precedents are cited.

To support the precautionary principles applying to Ocean shipments of radioactive materials the original enunciation of the precautionary principles was cited as the Trail Smelter case (Trail Smelter Arbitration (US v Can.) 3 R. Int'; Ar. Awards 1905 (1941). In the Trail Smelter Arbitration, the arbitrators required Canada to pay damages even though the causal link between the emissions in Canada and the damages remained somewhat uncertain. The principles enunciated in this case have subsequently been referred to as the Transboundary principle and has appeared in subsequent documents

such as the Convention on the Law of the Seas and the Basel Convention. The transboundary principle is a complementary principle to the precautionary principles and will be examined later in the section of this guide on associated and complementary principles that clarify and strengthen the precautionary principle.

#### Draft outline of references to the precautionary principle (to be completed)

Legend:

• Russow

•• Natasha Parasail GRACE

\* Jon M. van Dyzel

\*\* Kaitlin Gaffney

\*\*\* Robert J. Wilder Department of Political Science, University of Massachusetts, Dartmouth,

\*\*\*\* Boehmer Christiansen cited in Tim O'reardon

\*\*\*\* 1930 “the precautionary principle evolved out of the German socio-legal tradition, >created in the heyday of democratic socialism in the 1930s, centering on the >concept of good household management. This was regarded as a constructive partnership between the individual, the economy and the state to manage change so as to improve the lot of both society and the natural world upon which it depended for survival. This invested the precautionary principle with a managerial or programmable quality, a purposeful role in guiding

future political and regulatory action.

As Boehmer Christiansen argues, the German concept of Vorsorgeprinzip means much more than the rough English translation of foresight planning. It absorbs notions of risk prevention, cost effectiveness but in a looser economic framework, ethical responsibilities towards maintaining the integrity of natural systems, and the fallibility of human understanding. The right of nature means, in part, giving it room to accommodate to human interference, so precaution presumes that mistakes can be made. For the Germans, therefore, precaution is an interventionist measure, a justification of state involvement in the day to day lives of its land and its citizenry in the name of good government. Social planning in the economy, in technology, in morality and in social initiatives all can be justified by a loose and open-ended interpretation of precaution. As we shall see, it is precisely the unreliability that makes precaution both feared and welcomed.

• 1928 Trail Smelter case: final decision 1941

“A dispute between Canada and US arising out of damage allegedly done to the State of Washington from fumes crossing the border from the privately-owned Trail smelter. Two of the most important principles emerged from this case: that a state does not have the right to so use its territory as to damage the territory of another state; and that the offending state, Canada, was required to pay compensation and establish a remedial regime which would prevent further damage and thus apply the ‘precautionary principle’ “ (Alan Beasley, Canadian Ambassador for the marine environment and foreign ministry advisor for the environment)

[THIS WILL BE IN CHART FORM]

### 1.1. 1. UN documents

1969 in a remarkable report to the Economic and Social Council of the UN (in May 1969) U Thant, then Secretary General of the UN, portrayed the extraordinary world-wide dangers to man's environment. HE said:

It has become clear that we all live in one biosphere with which space and resources, though vast are limited. HE then proposed, and the General Assembly agreed to hold an International Conference on Human Environment, in Stockholm in June 1972. " Huntly Man's environment and the Atlantic Alliance" 1972

- 1972 the UN Conference on Humans and the Environment

- \* (1972 London Dumping Convention related to phase out all dumping of industrial wastes and prohibit dumping of low-level radioactive wastes

- \* 1973 decision of the International Whaling Commission to impose a moratorium on commercial whaling

- \* 1973 the protection of endangered species under the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITIES)

- 1982 World Charter of Nature (General Assembly resolution adopted by all member states except the US)

- 1982 Convention on the Law of the Seas

- \*\*\* 1984 North Sea pollution in Bremen

"environmental policy should be integrated fully into other policies. It should be considered as a fundamental factor when economic decisions are taken. In this context we stress the importance of sustainable development; prevention rather than cure; environmental impact assessment; setting environmental standards on the basis of best technology; and development of less polluting and more cost-effective

technologies, including those for controlling emissions at source. (5) "the Way forward Environment ministers London, 1984

"environmental policy should be integrated fully into other policies. It should be considered as a fundamental factor when economic decisions are taken. In this context we stress the importance of sustainable development; prevention rather than cure; environmental impact assessment; setting environmental standards on the basis of best technology; and development of less polluting and more cost-effective technologies, including those for controlling emissions at source. #### International Fisheries law

1995 General Principles of the Food and Agriculture Organization 1993 (FAO) International Code of Conduct for Responsible Fisheries.

- 1995 Agreement on Fish Stocks Art 5 c
- \*\* New Zealand adopted the precautionary principles as well as a requirement that fisheries management decision be based on domestic law in its 1996 Fisheries Act

- 1995 members insurance companies gathered at the UN to sign a statement of environmental commitments.
- 1996 Protocol to the London Dumping Convention art 3.1
- 1997 Convention of the protection of Marine Environment of the North-East Atlantic

#### 1.1.2. institutional documents

The precautionary principle was also referred to in various institutional documents such as the 1980 Global 2000 document:

In this document a requirement was proposed for the commitment to new initiatives and the maintaining of options (non-reduction of options)

##### 1980 The Global 2000

" if these trends are to be altered and the problems diminished, vigorous, determined new initiatives will be required worldwide to meet human needs while protecting and restoring the earth's capacity to support life. Basic natural resources — farmlands, fisheries, forests, minerals, energy, air and water — must be conserved and better managed. Changes in public policy are needed around the world before problems worsen and options for effective action are reduced. iv

In the document it was also recognized that "If decisions are delayed until the problems become worse, options for effective action will be severely reduced (5

As well there was a call for global actions

Nonetheless, given the urgency, scope, and complexity of the challenges before us, the efforts now underway around the world fall far short of what is needed. An era of unprecedented global co-operation and commitment is essential. iv)

and an analysis of long-term trends

We can avoid polluting our own environment, and we must take care that we do not degrade the global environment. Finally, to meet the challenges described in the Global 2000 Study our federal government requires a much stronger capability to project and analyse long-term trends. 1980 The Global 2000

Even the OECD, in 1981, acknowledged the systemic constraint of inertia and time lag that affects effective action

"Our Governments today face inflation, unemployment, a leveling-off in the growth of productivity and rising energy prices. At the same time, they have to respond to popular aspirations including continued pressure for an improved environment.

Governments are also faced with a lack of consensus among scientists about the nature, extent and damage of some of the phenomena. Judging from a recent OECD - IEA workshop this is true, for example, of the rate and impact of rising levels of CO<sub>2</sub> on climatic change. In the absence of scientific consensus, political consensus, especially international consensus, is hard to achieve. However, if governments wait for scientific near-certainty, it will often be too late for them to act at all either because of the inertia of the natural phenomena, or because of the time lags associated with policy development and international negotiation. "(Van Lenep, Secretary-General of the OECD "The Environment Challenges for the 80s)

OECD also recognized that the solving of the environmental problem requires the summoning up of the international political will

" I am sure it is clear to everyone that it will not be easy for our nations collectively to Marshall the political will necessary to deal with these issues.

In the absence of scientific consensus, political consensus, especially international consensus, is hard to achieve. However, if governments wait for scientific near-certainty, it will often be too late for them to act at all either because of the inertia of the natural phenomena, or because of the time lags associated with policy development and international negotiation. "(Van Lenep, Secretary-General of the OECD "The Environment Challenges for the 80s)

Similarly, in the "The Way forward: Environment ministers, 1984:

there was a recognition that the solution lies in prevention not cure or repair

"It is essential, in both developing and developed countries, to manage sustainable resources wisely, and to this end we emphasize that prevention of damage is better than repair. This principle is fully effective only in the framework of intensive international co-operation because many of these problems range far more widely than any one of our countries. (2) "the Way forward Environment ministers London, 1984

As well as the call for the implementation of the "Polluter Pay" principle:

"the "polluter pays Principe' is of key importance to ensuring that environmentally correct prices and market signals are given and should be developed and applied more widely (5) "the Way forward Environment ministers London, 1984

" we must also be more forward-looking in addressing emerging environmental issues such as possible climatic changes resulting from human activities, the need to examine alternative energy strategies, and

the environmental impact of new forms of industry including biotechnology.  
(5) "the Way forward Environment ministers London, 1984

In addition, another document such as the Bonn economic Declaration, 1985 calling for the anticipation and prevention of damage to the environment:

#### IV Environmental Policies

12. New approaches and strengthened international co-operation are essential to anticipate and prevent damage to the environment, which knows no national frontiers.... We shall also address other concerns such as climatic change, the protection of the ozone layer... 1985 Bonn economic Declaration May 4, 1985

As well as preservation of the environment:

4. Economic progress and the preservation of the natural environment are necessary and mutually supportive goals. Effective environmental protection is a central element in our national and international policies. 1985 Bonn economic Declaration May 4, 1985

13. We shall harness both the mechanisms of governmental vigilance and the disciplines of the market to solve environmental problems. We shall develop and apply the polluter pays principles more widely. Science and technology must contribute to reconciling environmental protection and economic growth. 1985 Bonn economic Declaration May 4, 1985

1.2. Some of the essential elements of the precautionary principle in a Canadian context

1.2.1. Content analysis of Canadian parliamentary Committee report "Out of Balance"

Different properties have been identified by the Canadian Government Committee as being essential components of the precautionary principle. The 1991, Canadian document from the Standing Committee of Global Warming is illustrative of policy makers' perception of the essential components of the principle.

The precautionary principle has a number of underlying implicit properties that would have to be considered in determining adherence to the precautionary principle: these properties are evident in the 1991 Canadian document.

i. the solution to the environmental problem should not itself be an activity or a substance that could potentially cause irreversible harm.

1991 There is little merit in solving one problem by creating others. The Committee has therefore endeavoured to be responsible in making recommendations that clearly have wider implications beyond the problem of global warming.

(Standing Committee on the Environment, p. 18)

ii substantial change away from "life as usual"

At the same time, however we need to insist that the character and importance of global warming will demand significant changes in the present situation. If we do not alter our "life as usual" to reduce the threat of global warming, changes of climate and rises in sea-level will force unpleasant consequences on us. . (Standing Committee on the Environment, p. 18)

- the acknowledgement that the inaction could involve risks

Title of Standing Committee report "Out of balance: the risks of irreversible climate change (Standing Committee on the Environment, 1991)

- supportable evidence not necessarily in the certainty of environmental harm but in the likelihood of harm:

" Global warming is real and serious

1.1. Our report is based on three main premises:

- global warming has been proved scientifically;
- I an inevitable and continuing consequence of past; and present patterns of human activity; and
- it represents a severe threat to both Canada and the planet as a whole

(1991, Standing Committee on the environment)

- demonstration of the credibility of those who frame the problem

As regards the reality of global warming, the international scientific community has during the last two to three years, undertaken and urgent and comprehensive review of the evidence. This inquiry by the IPCC under the auspices of the WMO and UNEP reported its findings at the Second World Climate Conference in 1990.

- requirement of an understanding of the position of experts who do not agree with the assessment of the problem, and the supplying of good arguments to justify the position to implement the precautionary principle

- commitment to the principle that even though Canada may not benefit, for the sake of the global community, we must act.

Even if global warming could be shown to benefit Canada, which is far from being the case, there is growing evidence of its potentially severe and even disastrous implications in other parts of the world, and especially in developing countries. Canada cannot adopt a laissez-faire attitude to what is happening. ...[i] 1992, the then Environment Minister muses that Canada may be able to grow pineapples

### 1.2.2. ATTEMPTS AT IMPLEMENTATION IN BRITISH COLUMBIA

Larry Volgt from the Ministry of Environment confirmed that the "Guidelines and Standards Policy (GASP) was signed off by the Deputy Minister of the environment and that it is now ministry policy. The precautionary principle as expressed in the head note of this guide is thus now ministry policy.

The author of this guide has been including the precautionary principle in briefs, submissions and publications to municipal, provincial, federal and international governments and institutions since 1991. She has also included the precautionary principle as part of the following documents and submissions:

- A proposal for an Earth Charter initiated at 1991 meeting of the Royal Society of Canada, at conference on the Path to Brazil (Feb. 1992) and at the New York Prep com (March 1992) and as submission to NGO Earth Charter Process at UNCED (June, 1992)
- A Content Analysis of UNCED documents (1992)
- A leave to appeal document submitted in an attempt to set aside the injunction in Clayoquot Sound
- 30 environmental principle in the Charter of Ecological Rights (circulated since 1992 and expanded, Charter of obligations (1995) - - 50 Principles of Compliance (1994- to present),
- in the publication the Habitat II Agenda: Moving beyond Habitat I (1996),
- A Comment to the UN Commission on Sustainable Development (1997) and in the Citizens Public Trust Treaty (circulated internationally since 1997).
- A presentation "Precautionary Principle: Principle of International Customary Law "in 1997, on a panel at the Greenlife Environmental Law conference in Washington DC

\_ Briefs on a wide range of issues from calling for the banning of clear cut logging, logging in old growth, and of logging in community; watersheds; ending the circulating and berthing of nuclear powered and nuclear capable vessels; phasing out civil nuclear energy; reducing CO2 greenhouse gas emissions to 20 % from 1990 levels by the year 2000; halting overhead flights of weapons in Innu.; preventing the "island mentality" - inappropriate development adjacent to protected areas; the stopping of overhead spraying against the gypsy moth; and the banning of genetically engineered foods and crops (Biodevastation Declaration, 1997)

In Appeal No 97 WAS [Waste ...]11 Ruth Madsen submitted that the Board should take into account the precautionary principle in rendering its decision. "We feel as Canada has recognized the Precautionary Principle that the appeal board must follow suit: which means that where a decision about public health and/or safety and /or health of ecosystems must be made without adequate support in scientific data, the action must err on the side of protection of public health/ safety and the health of the ecosystem. "in this submission the principle in the Rio Declaration was cited. The Board decided that the 10 m pesticide free zone should not be reduced.

- In Appeal No. 97 WAS 11(b) in 1996 before the Environmental Appeal Board regarding issuing of Waste Permit. Paddy Goggins used the Precautionary principle. The Appeal was allowed in part. Given that there appeared to be no discharge taking place the appeal is rescheduled [FIND FURTHER INFO ON THIS CASE]

At the Environmental appeal Board hearing (Appeal No. 98. PES-03 (b) Re: the application for Foray 48B, Keith Jobson representing the Unitarian Church of Victoria argued that the precautionary principle is now a part of customary international law and that at the very least, the precautionary principle would require CFIA and the Respondent to show that they carefully assessed the risks to health and biodiversity.

The Panel found that while the Convention provides general principles that the contracting parties should adhere to in the conservation and sustainable use of biological diversity, the consideration of the sections referred to by CFIA and Mr. Jobson and the weighing of risks and benefits is the very task the Board undertakes in determining whether there is an unreasonable adverse impact in issuing a permit. It was decided that the potential risks of using Foray 48 B did not warrant the use of the overhead spray and that an alternative ground base program should be implemented.

Unfortunately, this decision was bypassed by the government issuing an Order in Council.

Appeal No 96/30 Waste the Deputy Director of Waste Management, Dr. McTaggart-Cowan argued that "As a result of the above [information presented by Dr. Bates] I have come to the conclusion that one cannot tell whether the permit allows the release of harmful levels of pollution into the environment or not. That being the case, on the basis of the precautionary principle, and given the incidence of measured PM 10 levels..... I come to the conclusion that if only just for this one pollutant, the amended permit does allow for the release of harmful levels of pollution.

Appeal No 98-Was-29 (a) in the matter of an appeal under section 44 of the Waste Management Act, RSBC 1996, c 482

1. 3. complementary and associated principles that give additional substance to the precautionary principle

(See Annex for actual description of principles)

- THE ECOLOGICAL FOOTPRINT PRINCIPLE (27 b, Habitat II, 1996)
- LIMITS-TO GROWTH PRINCIPLE (Club of Rome, 1972)
- RESPECTING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE (World Charter of Nature, 1982)
- CARRYING CAPACITY OF ECOSYSTEM PRINCIPLE (16, Habitat II)
- ANTICIPATORY PRINCIPLE (18.45 Fresh water, Agenda 21, Convention on Environmental Impact Assessment in a Transboundary Context, 1994)
- “REVERSE ONUS “PRINCIPLE
- CRADLE TO GRAVE PRINCIPLE (20.20 e Hazardous wastes, Agenda 21).
- **CULTURE OF SAFETY PRINCIPLE** (7.60, Disasters, Agenda 21)
- RESPONSIBLE CARE PRINCIPLE (19.51 b. Toxic chemicals, Agenda 21)
- DISASTERS PREVENTION PRINCIPLE (27 i, Habitat II, 1996) (Article 75 (g) Habitat II, 1996). (Article 126, Habitat II, 1996)
- CULTURE OF SAFETY 127 (d) Habitat II, 1996)
- SAFE TECHNOLOGY PRINCIPLE Article 127 (a) Habitat II, 1996)
- PREVENTING AND MITIGATING ADVERSE ENVIRONMENTAL IMPACTS PRINCIPLE (Article \* 79 Habitat II, 1996)
- ENVIRONMENTALLY HARMFUL SUBSIDIES ELIMINATION PRINCIPLE (Article 122 (e) Habitat II)
- TRANSBOUNDARY PRINCIPLE (Art. 194. 2., Law of the Seas, 1982)
- NON-TRANSFERENCE OF HARMFUL SUBSTANCES OR ACTIVITIES PRINCIPLE (Principle 14, Rio Declaration, UNCED, 1992)
- ANTI-DUMPING ENVIRONMENTALLY UNSOUND TECHNOLOGIES PRINCIPLE (Article \*151 b Habitat II)
- **NOT RELAXING OF STANDARDS TO ATTRACT INDUSTRY PRINCIPLE** (NAFTA Article 1114 ss 2)
- **FAIR TRANSITION PROGRAM PRINCIPLE**
- SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRINCIPLE

For the description of the principles listed seen Annex A and FOR A MORE EXTENSIVE LIST OF PRINCIPLES: SEE Russow (1992- ) 50 Principles of Compliance. Available on request.

#### 1.4. precautionary principle being deemed to be a principle of international customary law

The criteria for becoming a principle of international Customary law rest on longevity, constancy and iniquitousness. The precautionary principle has been present as an obligation in conventions, treaties and covenants, as a commitment in UN Conference and action plans, and as an expectation in General Assembly resolutions. It has been established in state, and regional statutes and legislation and cited by recognized legal experts. Alan Beasley, former Canadian ambassador to the Law of the Sea Convention, noted that one could argue that the Trail Smelter case in the 1940s laid the foundation for the precautionary principle becoming a principle of customary law. (Alan Beasley, personal communication, 1999). Daniel Bodansky, notes in: *New Developments in International Environmental Law*, 85 AM. Soc'y Int'l L. Proc. 401, 413 (1991) 9 "Indeed, so frequent is its invocation that some commentators are even beginning to suggest the precautionary principle is ripening into a norm of customary international law". Jon M. Van Dykel, William S. Richardson School of Law University of Hawaii at Manoa Honolulu, Hawaii concurs "the principle has been so universally included in recent treaties that it appears now to have that status [principle of international customary law]. Van Dike in *Applying the Precautionary Principle* 1999 stated

"the precautionary principle has been explicitly included in numerous recent treaties, has been invoked repeatedly as an authoritative norm, and is now seen as a central guiding principle of environmental decision making. it requires states and others whose actions may cause significant disruption to the marine environment to take a series of steps. ...

" Similarly, at a Panel discussion on the precautionary principle organized by the Greenlife Law Society in Washington DC, there was concurrence that the precautionary principle had definitely arrived as a principle of international customary law (Russow, 1997). Once so designated as a principle of international customary law, it becomes the law of the land.

#### 1.5 extension of precautionary principle to be more proactive as well as retroactive

Two key elements of the precautionary principle -the relaxing of the requirement of "scientific certainty" and the anticipation of harm, to human health or to the environment. It is clearly possible, given the body of evidence on climate change and ozone depletion that in these cases there is sufficient scientific evidence to justify the invocation of the precautionary principle. The difficulty arises when substances or activities are

introduced into the ecosystem and there is no existing scientific evidence in place prior to the introduction of these substances and activities because this evidence will only arise as a result of the cumulative impact on the ecosystem and on human health, or there is emerging scientific evidence indicating harm. In many cases corporations will fund proponent friendly research not opponent friendly research. What criteria can be in place to prevent the continued syndrome of introduction of substances and activities which only later are found to cause harm.

The precautionary principle must be a fundamental principle in policy with an enforceable regulatory regime.

One of the systemic constraints that has prevented the implementation of the anticipatory aspect of the principle is the combination of non-arm's length research, institutional 'collusion' devolution of the government's regulatory role to the corporations and dereliction of duty.

## PROACTIVE

In this guide a few criteria are proposed for the early proactive implementation of the precautionary principle

### 1. SUFFICIENT EVIDENCE OF HARM

Anticipation of harm

What criteria should be used to determine if there is sufficient evidence of harm. Underlying all assessment of sufficiency must be the recognition that the current model of development precludes the funding of science opposing the intervention.

#### IMPORTANT CONSIDERATIONS:

- SATURATION OF HARM AND URGENCY

In 1999 we have arrived at a saturation point where so many substances and activities THAT have been introduced INTO THE ECOSYSTEM have now been found to be harmful to human health THAT EXTREME CAUTION HAS TO BE TAKEN

- SUBSIDY SHIFT PLUS REGULATION/BAN REGIME

government subsidy should only go to BEST practices. A proposed

list of substances that must be banned or phased out is included in the Annex. A strong regulatory/ban regime will serve to drive BEST practices.

#### IMMEDIATE MORATORIUM FOR SUBSTANCES AND ACTIVITIES THAT COULD BE POTENTIALLY HARMFUL TO HUMAN HEALTH AND THE ENVIRONMENT

Given that we have reached a saturation point there has to be an immediate moratorium on the introduction of all new potentially harmful substances and activities, and a

comprehensive review of accumulative effects, synergistic health and environmental effects be undertaken.

#### “PRESUMPTION OF HARM

This criterion would require an exhaustive research of past activities that have been undertaken by the company and of past substances that have been introduced by the company. This criterion should have been used to prevent Monsanto from introducing genetically modified foods and crops.

#### RETROACTIVE IMPLEMENTATION:

The licenses and charters of corporations that have violated the precautionary principle should be revoked and a lien placed on their assets for compensation for damage to the environment and harm to human health.

(vi) the systemic constraints preventing the implementation of the precautionary principle. (Series of papers available on request)

(MISAPPROPRIATION OF PRECAUTIONARY PRINCIPLE. Examples from INCO and Canadian Pulp and Paper workers. (Available on request)

## 2.

### THE SYSTEMIC CONSTRAINTS PREVENTING THE IMPLEMENTATION OF THE PRECAUTIONARY PRINCIPLE.

Systemic constraints by government, industry, institutions and NGOs have prevented the implementation of the precautionary principle (a summary of a longer paper, available on request)

- COMPLEXITY AVOIDANCE TO IGNORE ESSENTIAL LINKS
- DISREGARDING COMPLEXITY TO AVOID MAKING ESSENTIAL LINKS

#### • INCREMENTALISM DIVERSION

justification) (growth medicine)

- BENEFITING FROM THE VERY ACTION THAT THEY PRETEND TO ABHOR

- URGENCY DENIAL SYNDROME

URGENCY AVOIDANCE INACTION IN THE FACE OF URGENCY

URGENCY DENIAL RUSE

- OXYMORON DIVERGENCE

- CRAFTING OXYMORONS TO CONVEY THE DELUSION OF CHANGE

- OXYMORON CRAFTSMANSHIP

- (environmentally sound management of hazardous waste)

- HYPOCRISY TOLERANCE

- 

- ENGAGING IN OBSTRUCTIONISM BY FAILING TO IMPLEMENT AND ENFORCE AGREEMENTS

- MISPLACED PRIORITIES

- (Food not bombs)

- MISCONSTRUED CONSENSUS

- COMPROMISE THROUGH CONSENSUS

- (harmonization downwards)

- HOLIER THAN THOU SYNDROME

- (Demanding human rights in south Africa ignoring first nations in Canada)

- Do we really need this land)?

- NON-ARMS LENGTH INDUSTRY GUIDED RESEARCH

- RECTIFICATION OF ERROR CYCLE

- PERMITTING ENVIRONMENTALLY DESTRUCTIVE PRACTICES THUS CREATING A GROWTH INDUSTRY OF CLEAN-UP TECHNOLOGIES

- TECHNOLOGICAL FIX CULT

## THE OOPS FACTOR

### VESTED INTEREST RESOLVE MINIMIZATION

(rush to establish vested interests so resolve for precautionary principle adherence will be diminished)

### FEIGNED ALTRUISM

-USING THE GENUINE CONCERNS OF OTHERS TO JUSTIFY SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND PRACTICES

- ECONOMIC GROWTH PARADIGM DEVOTION

### TRICKLE DOWN MANIA

- PROMOTING ECONOMIC GROWTH AT ANY COST
- PERPETUATING THE MYTH OF ECONOMIC GROWTH AT ANY COST IS THE SOLUTION

### FOX IN COOP REGULATION DEVICE

### WHIMSICAL COMPLIANCE

- SLAVISHLY ADHERING TO obligations under trade agreements ignoring public trust obligations)

- ILL-INFORMED JUDGES

IN 1993, AN APPLICATION WAS MADE TO THE B.C. COURTS TO SET ASIDE THE INJUNCTION IN CLAYOQUOT SOUND ON THE GROUNDS THAT THERE HAD BEEN A FAILURE TO INFORM THE JUDGE THAT THE GRANTING OF THE INJUNCTION COULD CONTRIBUTE TO NON-COMPLIANCE WITH INTERNATIONAL OBLIGATIONS AND COMMITMENTS. THE JUDGE RULED THAT INTERNATIONAL LAW IN THIS MATTER WAS IRRELEVANT

- JUDICIAL RELUCTANCE

IN 1994, LEAVE TO APPEAL THIS DECISION RESULTED IN A RULING THAT "ALL THE INTERNATIONAL LAW INCLUDING THE PRECAUTIONARY PRINCIPLE

REFERRED TO IN THE SUBMISSION WAS NOT APPLICABLE IN THE COURTS OF B.C. (SEE RUSLOW VS. MACMILLAN BLOEDEL)

- SHORTSIGHTED LAWYERS

LAWYERS REFUSED TO USE INTERNATIONAL LAW INCLUDING THE PRECAUTIONARY PRINCIPLE BECAUSE AS ONE LAWYER SAID "THE JUDGES WILL NOT CONSIDER INTERNATIONAL LAW" AND AS ANOTHER SAID "INTERNATIONAL LAW WOULD JUST MUDDY THE WATERS".

- DISINTERESTED PROVINCIALISM OF ACTIVIST GROUPS

TOO MANY ACTIVIST GROUPS HAVE A GREAT AVERSION TO USING INTERNATIONAL AGREEMENTS AND PRINCIPLES, INCLUDING THE PRECAUTIONARY PRINCIPLE. THEY BELIEVE THAT SOLUTIONS MUST BE LOCALLY COMMUNITY BASED WITHOUT OVERARCHING INTERNATIONAL PRINCIPLES.

- MISCONSTRUED NOTION OF CREDIBILITY

REDEFINING CREDIBILITY BY NGOS TO ENDORSE THE REASONABLE  
REDEFINING CREDIBILITY TO UNDERMINE PRINCIPLE

-ADVOCACY GROUPS HAVE BEEN OPPONENTS TO INTERVENTIONS --- BEING RELUCTANT TO CALL FOR STRONG MEASURES BECAUSE OF FEAR OF LOSING THEIR 'CREDIBILITY'. CREDIBILITY IS ADHERING NOT COMPROMISING PRINCIPLES

- FUNDED-DIRECTED POSTURES

NGOS BEING RELUCTANT TO JEOPARDIZE THEIR GOVERNMENT FUNDING

- STRATEGIC COOPTION

- WORKING [NGOS] WITH GOVERNMENT, BESTOWING HIGH PERFORMANCE RATING ON GOVERNMENT, UNDERMINING OTHER NGOS

- TERRITORIALISM

- BEING SEDUCED BY INCLUSION IN GOVERNMENT ROUND TABLE CONSULTATION PROCESS, FAILING TO REPORT BACK TO CONSTITUENCY, AND OPTING FOR COMPLIANT WEAK CAMPAIGN

- TIMIDNESS THROUGH BOLDNESS AVOIDANCE

(redefining credibility to endorse the reasonable

- CORPORATE SUPPORTED POLITICS

- ACCEPTING POLITICAL DONATIONS FROM CORPORATIONS THAT VIOLATE THE PRECAUTIONARY PRINCIPLE

- MISPLACE INVESTMENT

- ENDORSING OR ACQUIESCING TO PENSION, UNION, RRSPS FUNDS BEING PLACED IN SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND CORPORATION

### 3.

#### OVERCOMING SYSTEMIC CONSTRAINTS TO IMPLEMENT THE PRECAUTIONARY PRINCIPLE: INTERNATIONAL LAW AS AN INSTRUMENT OF CHANGE

As a result of these systemic constraints and similar constraints by governments, industry, NGOs and citizens throughout the world substantive environmental degradation has occurred the failure to implement the precautionary principles and other principles that governments have agreed to through the UN system have given rise to a call for an International Court of Compliance where citizens can take evidence of state non-compliance.

In 1999, as the culmination of the decade devoted to international law, every effort must be made to inform citizens about the precautionary principle as a principle of international customary law and about its wide range of applicability. It is time to ensure that the precautionary principle to be fully implement in the international, national and regional legal system.

As previously noted, the year 1999 ends the decade dedicated to the respect and furtherance of international law. For over 50 years member states of the United Nations have incurred obligations through conventions, treaties, and covenants; have made commitments through globally adopted action plans and have created expectations through General Assembly Resolutions This respect and furtherance can only be realized if member states of the United Nations discharge obligations, fulfill expectations and act on commitments through signing and ratifying what they have not yet signed and ratified; and through enacting the necessary legislation to ensure the discharging of obligations; and through the fulfilling of expectations and the acting on commitments.

In the Platform of Action from the UN Conference on Women: Equality, Development and Peace (1995) and in the Habitat II Agenda from the Habitat II Conference (1996) member states have undertaken "to ensure that corporations, including transnational corporations, comply with national laws and codes, social

security regulations, applicable international agreements and conventions, including those related to the environment, and other relevant laws. (Article 167). In Habitat II this undertaking was reaffirmed and then extended to include the undertaking by states to ensure that the “private sector” also comply (Article 148).

Member states that have ratified Conventions, Treaties and Covenants are held to be legally responsible for discharging all obligations under these agreements. Also, members state that have signed but not ratified agreements are required under Article 18 of the Convention on the Law of Treaties to not defeat the purpose of the convention in the interim between the signing and the coming into force of the convention. There is no provision, however, for states to be bound to appear before the International Court of Justice or to be bound by its decision. In addition, there is no provision for an international court of Compliance where citizens could take evidence of state and corporate non-compliance.

Expectations that have been created from General Assembly Resolutions, Declarations, and commitments made through Conference Action plans could be judicable under the Doctrine of Legitimate Expectation. The Doctrine of Legitimate Expectation justifies the considering of what is usually deemed to be only of moral suasion in a legal context. The Doctrine of Legitimate Expectation has been recognized in Common Law and has been described in the following way:

To create an expectation is an empty gesture without a promise to fulfill it. Before creating an expectation, an organization must assure itself of its ability to fulfill the promise it implies" (Introduction, Ombudsman Annual Report, British Columbia, Canada, 1991)

As a result of the commitments made in recent United Nations Conferences including UN Conference on Women, and Habitat for states to ensure private sector, corporate including transnational compliance with international agreements, this report is advocating the establishing of Mandatory International Normative Standards (MINS) drawn from international principles. The establishment of mandatory international normative standards-and-technical regulations (MINS) will drive the corporations, including transnationals, and funding agencies such as the development banks to ensure socially equitable and environmentally sound development. Currently the concept of sustainable development appears to justify the continuation of the currently over-consumptive model of development with a coupling “clean-up environmental technology” which is moving the global community away from adopting BEST (Best Environmentally Sound Traditions) practices from the outset. Only when there is the global political will to agree to high global mandatory regulations and standards, and only when these regulations and standards are in place to drive industry will there be the needed shift towards a real cooperation based on the highest tenable principles. Global mandatory regulations and standards are essential to drive corporations including transnationals to participate in socially equitable and environmentally sound development. The international community, including multilateral financial institutions,

has an important role to play in providing funding that is conditional on the adherence to high mandatory international normative standards-and-technical -regulations (MINS) based on principles established over the past 50 years in international instruments. In section 167 of the Platform of Action of the United Nations Conference on Women: Equality, Development and Peace, states undertook to ensure that all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws.”. In addition, the lending institutions shall not support the “clean-up environment industries” which thrive on the relaxing of regulations related to toxic, hazardous and atomic wastes, and which continue to perpetuate the old-world order of over-consumption, inequity and environmental destruction, and intrastate and interstate conflict. It is only through promoting socially equitable and environmentally sound development through global mandatory standards and regulations with additional resources for Best environmentally sound traditions that national efforts to foster and achieve the objectives of socially equitable and environmentally sound development will be achieved.

It is necessary for citizens to reveal that years of obligations incurred through the Charter of the United Nations, conventions, treaties and covenants, and expectations created through General Assembly resolutions, and commitments made through Conference Action plans have NOT been undertaken, and that most of the obligations, expectations and commitments have neither been discharged nor fulfilled, and that it is time for compliance through action. The rhetoric of the precautionary principle and associated complementary principles must become action. It will only happen if governments, institutions, corporations, NGOss and citizens remove all existing systemic constraints, and together demand the political will to change.

## PRECAUTIONARY PRINCIPLE BAD LIST

(TO BE ADDED TO)

### ACTIVITIES THAT SHOULD BE DISCONTINUED IF PRECAUTIONARY PRINCIPLE IS INVOKED

- Phasing out of uranium mining
- Banning land mines
- Eliminating weapons of mass destruction (nuclear, chemical, and biological)
- Phasing out civil nuclear reactors
- Banning the testing of nuclear weapons
- Discontinuing circulating and berthing of nuclear-armed or powered vessels

- Ceasing all low-level flight training
  - Preventing the transfer to other states, to lands of indigenous peoples, or to areas of the disenfranchised, of substances and activities that cause environmental degradation or that are harmful to human health
  - Phasing out the use of fossil fuels, fertilizers, etc. that contribute to climate change, and phasing out the practices that would contribute to the reduction of carbon sinks
  - Discarding the over-consumptive model of development, and the myth of solutions being through economic growth
  - Discontinuing mechanized practices and the forcing of developing countries through structural adjustment programs to grow cash crops for export
  - Abandoning the notion of the Gross National Product
  - Preventing environmentally-induced diseases, and cosmetic surgery injuries
  - Ceasing the production and consumption of ozone depleting substances
  - Redirecting the need for mining activities to the use of alternative substances and activities that would not contribute to socially inequitable and environmentally unsound activities.
  - Banning clear-cutting and other ecologically unsound logging practices
  - Preventing the destruction of urban and periurban biodiversity
  - Canceling fish farming licence
  - Ensuring mandatory water conservation, drought free gardens, and indigenous plants
  - Moving away from logging old growth forests to logging second growth
  - Ban the use of all chemical pesticides
  - Banning genetically engineered food, and the human genome project
  - Preventing the control of pharmaceutical companies in the drafting of the Codex Alimentarius
  - Banning growth hormone and antibiotics
  - Cloning of sheep and other animals including humans
  - Addiction to the automobile
- etc.

In 1994, twenty species have been added this year to Canada's endangered list. The list now contains 258 plant and animal species in danger. The species added in Ontario were: birds - the king rail, Acadian flycatcher, yellow-breasted chat, hooded warbler, northern bobwhite, short-eared owl; fish - the warmouth, eastern sand darter, rosy face shiner, and lake chubsucker, plants; blunt-lobed woodsia, deer berry, round-leaved greenbrier.

Therefore we recommend

1: The provincial government should enact legislation requiring habitat protection and restoration for endangered species. None of the 258 species on the endangered list receives any mandatory protection from the law. Unlike the U.S., Canada does not have an endangered species law. Neither federal nor provincial wildlife laws require a response when a species becomes endangered. Such legislation would in some cases mean an absolute prohibition on human activity that threatens a sensitive habitat. In others, it would mean that environmental assessments of projects would be required to take into the account the status of pressured species. The law would give the public the right to seek a court injunction when human activity threatens the existence of a species.

2: Ontario should develop a wilderness-based conservation strategy. (Canada is losing at least one square kilometer of wilderness every hour according to the World Wildlife Fund. Only 4.6% of Canada's land and waters have been set aside as wilderness.) A wilderness-based conservation strategy would set aside large tracts of Ontario - as much as 50% of each of Ontario's

53 ecological zones - aside as wilderness. These areas should be interconnected with wildlife corridors, surrounded by buffer zones, free from permanent human habitation, resource exploitation, and contain no roads and railways. (GREEN PARTY OF ONTARIO, 1994)

- Whereas Canada is home to an estimated 300,000 species, yet we have only identified 72,000; and

- whereas we are losing species at 100 to 1,000 times the natural rate of extinction; and

- Whereas over 80% of species at risk in Canada are in trouble because of assaults on their habitat; and

- Whereas the Canadian Endangered Species Act covers only species in national parks, 4% of Canada's land mass; and

- Whereas the act does not cover habitat loss of endangered species in these parks; and

- Whereas in Canada there are no laws at the national level that make it illegal to destroy the habitat of an endangered species or to prevent its demise through over-hunting or through toxic contamination; and

- Whereas federal wildlife laws do not require a response when a species becomes endangered.

Resolved that the Green Party of Canada continue to work for legislation that will protect all endangered species, provide mandatory protection for any critical habitat, prohibit killing or harming of endangered species across Canada, require advance review of projects that affect endangered species or their habitats and provide a national safety net to ensure that species do not become extinct as a result of provincial inaction (GPC, 1996)

- \* TO CONDEMN the western cultural world view, all components of non human nature are considered valuable only insofar as they represent resources to the human population; and (B.C. POLICY CONVENTION, 1987)

- \* TO CONDEMN this resource-ist world view has rationalized the exploitation of a multitude of life forms and natural processes for which any human use has been found; and B.C. POLICY CONVENTION, 1987

\* TO DEPLORE THAT exploitation has resulted in an accelerating domination and pre-emption of the earth's ecosystems by the human population; and B.C. POLICY CONVENTION, 1987

\* TO ACKNOWLEDGE THAT pre-emption for human use has resulted in a calamitous decline and outright extinction of many species once part of those ecosystems; and B.C. POLICY CONVENTION, 1987

\* TO CONDEMN THE BELIEF THE CONVICTION THAT non resource components of nature are treated as valueless, or as competitors which must be eliminated; and B.C. POLICY CONVENTION, 1987

A Green Party government would undertake:

\* to provide preventive and restorative solutions to problems of environmental and social instability thus moving government and society away from the current "clean up after-the-fact" approach.

\* to address the fact that we are among the 20% of the world's population who consume 80% of the world's resources, and thus reduce the Canadian ecological footprint.

\* to promote an amendment to the Charter of Rights and Freedoms to ensure the right to an ecological heritage and to a clean and safe environment, and to require political decisions to be made on the basis of ecological integrity.

\* to restructure the current environmental assessment review process so that it becomes a legitimate environmental assessment and less a project review mechanism.

• TO REQUIRE EIAs for all large projects, projects in particularly sensitive areas, projects that involve unproven technologies and any projects which generate significant public concern. EIAs are part of the cost of doing business and will be paid for by the project proponents. Provision will be made for dividing the cost of EIAs among groups of similar projects. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO require the EIAs be all encompassing in terms of the environment and the people affected by each project and include the cumulative effect of related projects. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO require that EIA review panels be elected by the citizens of Alberta, have local representation and have the power to approve, change, or halt any project they review. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO ESTABLISH PROCEDURES TO ENSURE THAT AN ENVIRONMENTAL ASSESSMENT REVIEW OF ANY PRACTICES OR SUBSTANCES THAT COULD

CONTRIBUTE TO THE LOSS OR REDUCTION OF BIODIVERSITY SHALL BE IN PLACE (1998)

- TO ASSESS THE FULL COSTS OF VIOLATING THE RIGHTS OF THE DISENFRANCHISED SHALL BE CARRIED OUT. THE GROUPS BEARING THE GREATEST IMPACT FROM ECOLOGICALLY UNSOUND PRACTICES AND DISPOSAL OF TOXIC, HAZARDOUS, AND ATOMIC WASTES ARE OFTEN THE DISENFRANCHISED IN SOCIETY. (1998)

- TO ENSURE A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT THROUGH MANDATORY INTERNATIONAL NORMATIVE STANDARDS, STATES SHALL REQUIRE A LEGITIMATE ENVIRONMENTAL ASSESSMENT REVIEW OF ANY PRACTICE, ACTIVITY OR SUBSTANCE THAT COULD HAVE SIGNIFICANT ADVERSE ENVIRONMENTAL EFFECTS. AN ACTUAL ASSESSMENT OF THE SHORT AND LONG TERM POTENTIALLY ADVERSE ENVIRONMENTAL EFFECTS OF EXISTING AND PROPOSED PROJECTS AND ACTIVITIES SHALL BE CARRIED OUT. IT IS UNDERSTOOD THAT A REVIEW OF A PROJECT OR ACTIVITY TO ASSESS THE "ENVIRONMENTAL, ECONOMIC, SOCIAL, CULTURAL, HERITAGE, HEALTH EFFECTS OF THE REVIEWABLE PROJECTS" IS NOT A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT. (1998)

- TO REQUIRE COST RECOVERY FOR ENVIRONMENTAL IMPACT ASSESSMENT AND FOR MONITORING AND ENFORCING REGULATIONS

INDUSTRIES THAT ARE PERMITTED TO ENGAGE IN ENVIRONMENTALLY UNSOUND PRACTICES THAT REQUIRE REGULATIONS AND ENFORCEMENT SHALL BEAR THE FULL COST OF THE ADDITIONAL CHARGES INCURRING AS A RESULT OF GOVERNMENTS HAVING TO ENSURE COMPLIANCE WITH REGULATIONS. IN ADDITION, FOR ALL PROPOSALS, PROJECTS, ACTIVITIES THAT INTERVENE IN AN ENVIRONMENTALLY UNSOUND WAY IN THE ECOSYSTEM, AND THAT ARE DEEMED TO REQUIRE AN ENVIRONMENTAL ASSESSMENT REVIEW GOVERNMENTS SHALL RECOVER THE FULL COSTS OF THE REVIEW. (1998)

- \* to ensure that Canada implements all international environmental agreements by enacting the necessary legislation for compliance and enforcement, and enforces all federal and provincial environmental acts and statutes.

- \* to strengthen the current Canadian Environmental Protection Act., and to incorporate into the Act an Environmental Bill of Rights.

\* to phase out the production and consumption of ozone-depleting substances.

\* to strengthen the resolve to reduce greenhouse gas emissions with time-bound and enforced reduction targets.

• TO propose and support initiative which will end production of all ozone-depleting chemicals. (ALBERTA GREEN POLICIES, ALBERTA 1997)

TO HALT immediately All production of all [Ozone Layer] damaging chemicals be immediately; and (B.C. ANNUAL GENERAL MEETING, 1989 B.C. POLICY CONVENTION, 1993)

\* to introduce legislation to promote the reuse or replacement of minerals in industrial production

\* to ban the use of cyanide leaching process for mineral extraction.

\* to require the double hulling of all vessels carrying petroleum products in Canadian waters.

\* to discourage the continued production and consumption of substances and continued activities that are harmful to human health and to the environment. The environmental and health impacts of the continued production and use of toxic, and hazardous (including nuclear substances) wastes are becoming more and more evident.

• TO impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to phase out of all substances and processes which have been clearly shown to be hazardous or deleterious to human health or to the environment, including genetically engineered foods.

\* to require the "Reverse Onus Principle" where the proponent of an intervention that could be harmful to human health or the environment shall have to demonstrate the safety of the intervention rather than the opponent of the intervention having to demonstrate the harm.

\* to allocate significant research funding into preventing environmentally-induced diseases.

\* to establish a policy across Canada to prevent pharmaceutical companies, along with other corporations involved with biotechnology, and with environmentally unsound practices from sponsoring and influencing the direction of research

\* to increase support for research into ecological interrelationships,

social structures and their reciprocal effects one another by independent scientific bodies.

\* to encourage efforts and initiatives which promote free political and scientific activity in universities and a science in the service of humanity

\* TO ENACT PRODUCT STEWARDSHIP LEGISLATION THAT WOULD REQUIRE PRODUCERS TO INCREASE THE LIFE-SPAN OF THEIR PRODUCTS AND TO ASSUME THE FULL RECYCLING AND LIFE CYCLE ANALYSIS (deferred resolution)

- to fund municipalities for the reduction of collection at the source, and the large-scale reduction, of garbage.
- to support local recycling efforts. (B.C. POLICY CONVENTION, 1986)

## PRODUCT RESPONSIBILITY

During the last 50 years humans have developed thousands of products for which there is no environmentally sound method of disposal. To set acceptable limits on the damage this has done government developed a system of risk assessment. Risk assessment fails because

1: It is focused on damage to the most exposed individual

2: We will forever lack key information needed to make accurate risk assessments.

3: Science can never provide the needed analytic techniques to test for the health effects of the synergistic effect of different chemicals

For this reason, the Green Party recommends we turn our attention to the way things are made. There are 3 categories of Products

1: Consumption Products: These items are purchased then converted by chemical reaction into energy or by products. Examples would be soap or food. They are normally used once then released into the environment. They must be biodegradable, they must not bio

accumulate, be toxic or cause cancer or birth defects.

2: Service Products: These goods provide services. Examples would be Automobiles or Televisions. Consumers should not own these products but lease them from manufacturers who remain responsible for their ultimate destiny. An alternative would be purchase with a refundable deposit. After it has served its function it is returned to the manufacturer where it is renewed or disassembled and recycled at the expense of the manufacturer.

3: Unmarketable products: These items cannot be consumed or used in an environmentally friendly way. An example is the waste from the production of aluminum. These are products for which no recycling technology exists. These products must be banned until zero discharge production is achieved. Toxic wastes already created must be stored in interim above ground retrievable storage bunkers. This suggestion only works if the entire product

## ZERO DISCHARGE

The most important news of 1992 went largely unreported in Ontario. At a Ministerial meeting September 21-23 in Paris, 13 European Nations agreed in principle to eliminate all discharges and emissions of chemicals that are toxic, persistent, and likely to bio accumulate. These nations made a binding commitment to achieve "Zero Discharge". For the first a significant portion of the industrialized world (Belgium, Denmark, Finland, France, Germany, Iceland, Ireland, the Netherlands, Norway, Portugal, Spain, Sweden, and the United Kingdom) rejected the old philosophy of "prove harm" as a basis for pollution control. A new era of environmental protection has begun and The Green Party of Ontario

is committed to having Ontario meet the same levels of environmental protection as our competitors.

Conventional Chemical Engineering and risk assessment has long been based on three key assumption.

Assumption 1: Humans can manage the environment by deciding how much of any material the Earth can safely absorb. Scientists call this the assimilative capacity approach. According to this approach scientists can reliably decide how much of any material the earth can assimilate without causing harm. This is what a risk assessment claims to do.

Assumption 2: Once the assimilative capacity for a particular chemical is reached we see to it that no more of that chemical is released into the environment. We will set limits, river by river, chemical by chemical, everywhere on the planet, so that the total cumulative releases do not exceed the assimilative capacity of the Earth.

Assumption 3: We know what is harmful and what is not, and in the case of those substance that we do not know for certain we will be warned of possible dangers by traumatic but sub lethal shocks that will alert of us to the danger before it is too late.

**ALL THREE ASSUMPTION ARE DEAD WRONG**

As a result, the well-being of the planet is in serious danger. The depletion of the ozone hole, global warming, acid rain, lead poisoning in our children, mercury in fish, PCB's in the ocean, rising cancer rates, increases in immune system disorders like asthma, rising rates of nervous system disorders like Parkinson's disease and Lou Gehrig's Disease are the result of this presumptuousness and ignorance of the scientific community.

The approach adopted at the Paris meeting and the approach advocated by the Green Party of Ontario is " We do not know and most likely we will never know how much toxic material the environment can stand, so we won't chance it. Therefore, we will contain everything and discharge nothing. In sum, Zero discharge.

## Zoning

- 1: Allow and encourage the zoning of current single-family homes into multiple family units.
- 2: Encourage infilling and intensification of our cities; discourage urban sprawl with Greenbelts around all urban centers in Ontario.
- 3: Encourage the establishment of home-based business, with the only zoning requirement being the approval of your immediate neighbours (GREEN PARTY OF ONTARIO, 1994)

## RESPONSIBILITY concept

is accepted otherwise the amount of waste would be unmanageable.

Criteria for safe storage includes, no spontaneous combustion, no release of gas, no release of liquids. To simplify retrieval different kinds of waste and substances would be stored separately.

The user of the building must prove every 5 years that no method of treatment exists. Ownership of the building remains in public control and the owner of the waste remains responsible for the waste and rental of the building.

Advantages of the Above ground bunker include:

- 1: It enforces the polluter pay principle
- 2: Encourages the development of alternative technologies for

specific waste problems' and discourages waste exporting

3: Avoids over capacity of waste facilities.

4: Promotes the rethinking of products that produce waste.

5: Puts the market to work minimizing unmanageable waste.

6: Encourages reuse because wastes are not mixed together

8: Environmentally sound management the responsibility of the producer.

9: Guarantees zero discharge technology \*GREEN PARTY OF ONTARIO, 1994)

\* TO adopt the following definition as the fundamental guiding principles of wilderness protection: B.C. POLICY CONVENTION, 1988

wilderness / wilderness / n. (ME., fr. wildern wild, fr. OE. wilddeoren of wild beasts) (1.3c)

1 a (1): a tract or region uncultivated and uninhabited by human beings (2): an area essentially undisturbed by human activity together with its naturally developed life community b: an empty or pathless area or region c: wild or uncultivated state

wilderness area: an often-large tract (such as at least 5000 hectares) of public land retained essentially in its natural state and protected against introduction of intrusive artifacts (as roads and buildings and motorized travel) where government has the authority to regulate access on a case-by-case basis

\* TO identify and establish a series of wilderness preserves in which there would be little or no human impact. POLICY CONVENTION, 1986.

• TO DISCONTINUE THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES

NOTING THAT CONCERN WAS RAISED AT THE IUCN MEETING OF THE COMMISSION ON PARKS AND CONSERVATION ABOUT THE PRACTICE OF PRIVATIZING PARKS SERVICES (1998)

• TO PROHIBITING MINING AND OTHER INDUSTRIAL ACTIVITY IN PARKS (1998)

• TO ENSURING ADEQUATE SIZE OF PARKS INCLUDING CONSERVATION CORRIDORS TO PROTECT BIODIVERSITY (1998)

• TO PREVENT THE "ISLAND MENTALITY" OF A PARK SURROUNDED BY INCOMPATIBLE DEVELOPMENT (1998)

- To establish the Park system to protect and preserve outstanding natural scenic and historical features for present and future generations; and (B.C. POLICY CONVENTION, 1987)
- TO [PREVENT] the eroding the integrity of Class A provincial parks to cater to commercial and industrial interests such as mining exploration, timber harvest, and concessions to mechanized recreation and access (B.C. POLICY CONVENTION, 1987)
- to protect parks from intrusive and industrial activities. (B.C. POLICY CONVENTION, 1987)
- \* TO ENSURE that Crown Land be open to public access [BUT NOT TO ILLEGAL ENVIRONMENTALLY DESTRUCTIVE OR INAPPROPRIATE USES].  
(B.C. ANNUAL GENERAL MEETING 1993)
- \* TO advocate an ecologically grounded and comprehensive preservation strategy for all the ecosystems of the province, to be undertaken by the Ministries of Environment and Culture, Parks and Recreation B.C. POLICY CONVENTION, 1987
- \* to educate sport hunters and other outdoor recreationists to the values of low population (but many species) undisturbed environments; that is, quality over quantity, and diversity over monoculture. POLICY CONVENTION, 1987
- \* TO IMMEDIATELY CEASE ALL predator control measures for such species as wolf, grizzly and cougar, for the enhancement of game species. POLICY CONVENTION, 1987
- \* TO IMMEDIATELY CEASE ALL predator control measures for the support of grazing operations and commercial fisheries also be ceased immediately B.C. POLICY CONVENTION, 1987
- \* TO institute programs which will eliminate activities such as the use of all terrain vehicles, fly in hunting camps for non resident hunters, etc., in de facto wilderness, which shift predator populations towards inhabited areas. B.C. POLICY CONVENTION, 1987
- TO ELIMINATE NON-FOOD TROPHY HUNTING; (1998)
- TO BAN ON LEG-HOLD TRAPS, AS SUGGESTED BY THE EUROPEAN PARLIAMENT AND THE CREE, THE LARGEST GROUP OF NATIVE TRAPPERS; (1998)
- \* TO IMMEDIATELY halt to these predator control activities [ WOLF KILL- WHICH USES POISONED BAIT IN RANCHING AND FARMING AREAS (B.C. POLICY CONVENTION, 1988

\* TO undertake research and implementation of (preferably non-lethal) ways of reducing livestock losses from predators and find ways of compensating farmers and ranchers for their losses.

- TO ELIMINATE GROWTH STIMULANTS AND ANTIBIOTICS IN THE PRODUCTION OF MEAT [AND OTHER ANIMAL FOOD PRODUCTS], REQUIRE IMMEDIATE LABELLING DURING PHASE OUT PERIOD, AND EDUCATION OF THE PUBLIC AS TO AVAILABLE ALTERNATIVE FOOD SOURCES; (1998)

- TO LEGISLATE AN END TO COSMETIC AND HOUSEHOLD PRODUCTS TESTING AND TO PHASE OUT PSYCHOLOGICAL AND MEDICAL RESEARCH WHICH USES ANIMALS; (1998)

- TO BAN THE IMPORTATION OF PRODUCTS PRODUCED IN A FASHION WHICH WOULD NOT COMPLY WITH HUMAN ANIMAL TREATMENT LEGISLATION; ((1998)

- TO BAN IMPORTATION OF ANIMALS FOR ZOOS EXCEPT WHERE THIS IS RELATED TO PROJECTS TO SAVE THREATENED SPECIES; ((1998)

\* TO encourage research and development into:

- 1) Safe methods for the conversion of residuum into useful products; and
- 2) New products and/or [the] redesign [of] old products in order to minimize [the use of] materials and energy in their manufacture; and
- 3) Ways to educate citizens to distinguish between the concept of waste and the concept of residuum; and
- 4) Ways to develop an awareness within the minds of our political, industrial, academic, and civic leaders of the ecological and economic advantages of managing wastes through pollution prevention approaches; and
- 5) Non polluting products to produce fewer pollutants (e.g. substituting water-based adhesives for solvent-based adhesives); and
- 6) Modification of industrial processes; and
- 7) Redesign of equipment used in the manufacturing process; and

8) Recycling or recovery for reuse or resale.

(B.C. POLICY CONVENTION, 1987)

commercial use of chemicals

\* TO advocate the expansion and upgrading of environmental monitoring of chemicals in our environment, WORK PLACE, HOME B.C. POLICY CONVENTION, 1987

• TO PHASE-OUT THE CHEMICALS AMONG THE OVER 100,000 CHEMICAL SUBSTANCES IN COMMERCIAL THT HAVE BEEN LINKED cancer, respiratory, cardiovascular, neurological and behaviour disorders and detrimental effects on immune systems and the physiology of reproduction. POLICY CONVENTION, 1987

\* TO request that the Ministries of Health, Environment and Agriculture coordinate their roles in this monitoring in a more rigorous and comprehensive manner than at present. B.C. POLICY CONVENTION, 1987

Acid Rain, Pesticides and Herbicides

## PESTICIDES

Since the second world war, chemical agriculture with has been promoted as the technological fix-all for soil nutrition and the management of plants, insects and disease.

After 50 years of chemical warfare with the planet it is now clear that the promise of chemical pesticides was never realized. Efforts to control crop damage with pesticides have failed and insect borne diseases remain as serious a threat as ever. In 1940 annual crop damage was 7%, after 50 years of chemical warfare it is at 13%. The fact is that pests develop resistance to pesticides.

According to the United States department of Agriculture between 97% and 99% of pesticides do not reach their target. But

those pesticides go somewhere and they are toxic. There have been hundreds of studies that link pesticides to adverse health effects. These include but are not limited to disrupting every major organ system in the human body, altered immune system functions, mutagenic, teratogenic responses, embryo toxicity, reproductive failure, and an array of neurological effects.

Despite the hard-scientific proof that we would be better off without pesticides in 1988 more than one billion pounds of pesticides, 660 million pounds of herbicides, and 400 million pounds of fungicides and insecticides were spread onto our food producing land and around our homes in North America.

Of the 34 Chemicals commonly used to kill dandelions 62% are toxic to fish and the nervous system of humans, 35% cause birth defects in humans and are toxic to bees and birds, 29% cause cancer and kidney damage, and 85% are sensitizers, that means they cause people to develop allergic type reactions to the chemical.

Ontario soils have lost as much as 50% of their organic content since cultivation began. This has led soils to be highly susceptible to erosion and compaction. A fundamental component of soil degradation is the suppression of biological activity. Healthy soil is teeming with life, from earthworms to microorganisms. The situation is approaching critical as local instances of soil burnout is occurring. If conventional agriculture is continued Ontario's agricultural soils will reach a threshold beyond which productivity cannot be easily restored.

To this end we recommend:

1: A total ban on the use of pesticides and herbicides for private lawn care purposes.

- 2: A total ban of the pesticide 2,4-D.
- 3: Require the labeling of all pesticides used in the production of a food product sold in Ontario stores.
- 4: Adopt a target for the implementing sustainable agriculture in 100% of Ontario's cropland by the year 2000
- 5: Support the organic food industry in establishing a province wide system of organic certification
- 6: End the P.S.T. free status of pesticides for farmers.
- 5: Provide financial support in the transition period for farmers willing to make the conversion to organic agriculture.

- 6: Redirect agricultural education, extension services and research to address sustainable methods. GP Ontario)
- 7: Establish targets for Ontario food self sufficiency.

• TO BAN PESTICIDES FOR THE FOLLOWING REASONS: HAZARDS TO HUMAN OR ENVIRONMENTAL HEALTH, EVIDENCE OF WIDESPREAD USE AND RESULTING HARM, BANS IN EXPORTING COUNTRIES, ... PESTICIDE DEPENDENCIES.... [MANY] PESTICIDES ARE BANNED OR UNREGISTERED IN MANY COUNTRIES BECAUSE OF THEIR KNOWN HAZARDS. YET MANY ARE STILL WIDELY PROMOTED AND USED, ESPECIALLY IN DEVELOPING COUNTRIES, WHERE WEAK CONTROLS AND DANGEROUS WORKING CONDITIONS MAKE THEIR IMPACT EVEN MORE DEVASTATION" (FROM PESTICIDE ACTION NETWORK (PAN, 1995) (1998)

• TO RECOGNIZE THAT THE GREEN REVOLUTION HAS FAILED BECAUSE IT COULD NOT ENSURE GLOBAL FOOD SECURITY AND TO A HIGH EXTENT HAS CAUSED AND PROMOTED THE ACCELERATED DEGRADATION OF THE EARTH'S NATURAL ECOSYSTEMS. MORE THAN EVEN BEFORE, THE HARMONIZATION OF HUMAN ACTIVITY AND ITS NATURAL ENVIRONMENT ...IS THE KEY TO THE SURVIVAL OF MANY LIVING COMMUNITIES, INCLUDING HUMAN KIND. IFOAM (INTERNATIONAL FEDERATION OF ORGANIC AGRICULTURE MOVEMENTS) PROMOTES THE CONSTRUCTIVE INTEGRATION OF ORGANIC AGRICULTURE AND NATURE CONSERVATION. (1998)

- TO END THE USE OF PESTICIDES WHOSE SAFETY CANNOT BE ASSURED;
- TO ENSURE THAT HUMAN AND ENVIRONMENTAL HEALTH ARE CONSIDERED FOREMOST IN ALL •
- TO ELIMINATE THE DOUBLE STANDARDS IN GLOBAL PESTICIDE TRADE
- TO GENERATE SUPPORT FOR RESEARCH AND IMPLEMENTATION OF SUSTAINABLE PEST CONTROL METHODS (RECOMMENDATIONS BY PESTICIDE ACTION NETWORK —PAN, 1995).

• TO ENSURE THE “DEMISE OF THE DIRTY DOZEN CHART HIGHLIGHTS BANS AND SEVERE RESTRICTIONS ON THE DIRTY DOZEN’S CAMPAIGN TO TARGET A LIST OF PARTICULARLY HAZARDOUS PESTICIDES FOR STRICT CONTROLS, BANS, AND ULTIMATELY ELIMINATION” (5/93 FOR PAN INTERNATIONAL BY PAN NORTH AMERICA REGIONAL CENTER, 1995). (1998)

\* TO TAKE / support taking/ immediate steps to stop acid rain; B.C. POLICY CONVENTION, 1986

\* TO support research and implementation of alternatives to pesticides and herbicides, such as biological controls. B.C. POLICY CONVENTION, 1986

\* TO ADOPT Ecological Pest Management- deploys a wide range of pest control techniques based on taking advantage of the natural enemies of pests in an ecosystem, and de-emphasizing the widespread use of pesticides; as an adjunct to, and eventual replacement of, pesticide - BECAUSE pest damage to crops has increased due to pesticide induced pest resistance, the triggering of new pest outbreaks via species eliminations and species distributional changes in the pesticide disturbed ecosystem, and removal of predator and parasite species that are the natural enemies of pests B.C. POLICY CONVENTION, 1986

• To BAN PERSISTENT ORGANIC POLLUTANTS

Aware of the mounting evidence that reveals the global scale and severity of toxic persistent organic pollutant (POP) contamination of all life forms and ecosystems, in all regions of the planet;

Further aware that fish, reptiles, birds and mammals, including humans are all affected by POPs via a growing list of actual and suspected effects that include cancer, damage to immune and reproductive systems and developmental problems.

Appreciative of the special attention that the United Nations Environment Programme (UNEP) has given to POPs, in The context (a) of its May 1995 Governing Council Decision 18/32 that established an expedited assessment process for prioritized list of POPs, and (b) the Washington Conference on Protection of the Marine Environment from Land Based Activities, which agreed, among other things that “international action is needed to develop a global legally binding instrument, among other international and national actions, for the reduction and/or elimination of emissions and discharges, whether intentional or not, and where appropriate, the elimination of the manufacture and use of, and illegal traffic in “priority toxic persistent organic pollutants;

Appreciative also of the Fourth Session (1996) of the Commission on Sustainable Development’s endorsement of the Washington conference’s global Programme of Action, including recognition of the intention of governments to take action to develop a global, legally binding instrument to regulate POPs, with special consideration for countries in need of assistance;

Call on the member states of the United Nations

to support the establishment of an Intergovernmental Negotiating Committee (INC) with a mandate to meet several times during 1997, and beyond as a matter of high priority, and

(b) support in the INC for the negotiation of a legally binding, comprehensive POPs instrument that:

(i) has as its overall goal the elimination of the POPs listed as priorities in Decision 18/32 with implementation measures that are rapid, equitable and enforceable;

(ii) includes mechanisms for adding other POPs beyond the original, prioritized ones, based on scientific, social, economic and moral considerations;

(iii) includes, as a matter of priority mechanisms for special financing, technology transfer and capacity building for the benefit of countries in need of assistance; and

(iv) promotes information exchange, transparency and effective civil society participation in decision making.

(from original resolution by Friends of the Earth International, and Greenpeace Australia proposed for consideration at the IUCN World Conservation Union meeting in Montreal 1996.

## CHLORINE PHASE

### OUT

The Chlorine bleaching of paper in North America gives rise to over 150,000 tons of persistent toxic pollutants each year, including substantial quantities of dioxin. For this reason, the Green Party insists on a phase out of Chlorine.

Chlorine is highly reactive chemical which makes it an excellent disinfectant. However, chlorine reacts with organic substances found naturally in drinking water and causes the formation of a class of chemicals called the trihalomethanes. Some commonly known trihalomehtanes are chloroform, benzene, carbon tetrachloride and toluene, all of which are known carcinogens. Between 1974 and 1988 there have been 18 conclusive studies linking carcinogens in drinking water to human cancers.

Chlorine must be phase out for the following reasons

1: Chlorinated organic chemicals including PCB's pesticides, dibenzodioxins and dibenzofurans and many other products or byproducts of the chlorine based industrial process are the primary cause of stratospheric ozone depletion. Ozone depletion is expected to cause millions of additional cases of cataracts, skin cancers, immune suppression, as well as major effects on aquatic and terrestrial food chains.

2: All chlorinated organic compounds that have been studied exhibit at least one of a wide range of serious toxic effects such as

endocrine dysfunction, developmental impairment, birth defects, reproductive dysfunction infertility, immunosuppression, and cancer, often at extremely low doses.

3: Many chlorinated compounds such as methylene chloride and trichloroethylene are recognized as significant workplace hazards.

4: In the Great lakes, reproductive, developmental, and behavioral dysfunction has been reported in 14 species at the top of the food chain including humans.

5: The Green Party of Ontario concurs with the binational Science advisory board of the International Joint Commission on the Great Lakes in recommending that the weight of scientific evidence suggests that exposure to organochlorides should be presumed to pose a health problem and that policies to protect public health should be directed towards eventually having no exposure to chlorinated organic chemicals as a class rather than continuing to focus on a series of isolated, individual chemicals

6: Chlorinating our drinking solves some problems but it creates others. We should switch to ozone treatment, abandoning treatment.

The Green Party recognizes that:

1: The implementation of specific deadlines for phase out in specific industries would be made after investigation into the feasibility in each industrial category.

2: That some uses have no alternative, such as in specific pharmaceutical applications.

3: There has been considerable job losses in the last 2 years because of the phase out of ozone depleting feed stock to 5 closed chlorine plants.

4: The workers in this industry must not bear the brunt of

societies need to phase out the industry and we must implement retraining and assistance programs for displaced workers. (GREEN PARTY OF ONTARIO, 1994)

### Aerial Spraying

\* TO legislate ban on the spraying [of] pesticides from the air.

B.C. POLICY CONVENTION, 1987.

### Pesticides reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987

\* TO democratize the pesticide appeal process by inclusion of pertinent medical and ecological data in its terms of reference. B.C. POLICY CONVENTION, 1987

### Styrofoam

\* TO ban the use of CFC-producing Styrofoam containers for food service, egg sales, and packaging material B.C. POLICY CONVENTION, 1988

\* TO INSTITUTE regulations requiring all restaurants and food outlets (including [the] BC Ferry Corporation) to use permanent wares except for biodegradable containers for take-out orders | B.C. POLICY CONVENTION, 1988

### Waste Management & Disposal Tax

\* TO INTERNALIZE the disposal or (preferably) recycling cost of a product in the price of [the] product by an appropriate level of taxation at the source and manufacturing level. Taxation would be applied in a manner which encourages manufacturers to innovate to reduce the environmental and social costs of their products. B.C. POLICY CONVENTION, 1988

• To [IMPLEMENT] /We will consider the implementation of/ a variable environmental impact charge on goods and services to fund waste elimination and public awareness programs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Recycling

### Municipal Recycling

\* TO ENCOURAGE AND REQUIRE ALL municipalities to supply curb side pick-up, resource recovery, sorting, and marketing of all municipal garbage, with relocation/retraining of displaced waste disposal personnel. B.C. POLICY CONVENTION, 1986

## ENVIRONMENTAL PROTECTION

### Private Prosecution of Environmental Offenders

\* TO stand in contradiction and protest any provincial law which in any way encumbers private prosecution of environmental offenders ANNUAL GENERAL MEETING, 1991.

### Garbage Disposal

### Pesticides reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987

\* TO oppose shipping garbage from major metropolitan areas to other bioregions and call upon the regional districts to immediately begin recycling, coupled with consumer education on the need to reduce waste. B.C. POLICY CONVENTION, 1987

3. [PREVENTION OF ENVIRONMENTAL DESTRUCTION] The restoration of the Environment the environment lies almost completely within the jurisdiction of the provinces, and the state of Alberta's environment is critical. The last of our wilderness is being consumed by developments. Biodiversity is diminishing, chemicals threaten human health and carbon dioxide from fossil fuel energy is damaging the atmosphere.

The Green Party is committed to turning back this tide of destruction, not by technological tinkering but by giving nature the time and space with which to heal itself.

#### 4. The Creation of a sustainable Economy (Restoration of the Environment GREEN' ELECTION PLATFORM Alberta, 1997)

The future of all life on the planet is endangered by our disregard for the health of the environment. All the Earth's systems are interconnected and all species, of animals and plants must co-exist. We must preserve the Earth's ecosystems to sustain our will being. We must begin to Rethink, Refuse, Reduce, Reuse and Recycle. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Water

\* to ensure that water is not declared to be an "economic good"

V We will oppose any plan to divert water to the United States. (ALBERTA GREEN POLICIES, ALBERTA 1997)

III We will encourage water conservation by placing an appropriate value on water taken from lakes or rivers for agricultural, industrial or domestic purposes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO REQUIRE MANDATORY WATER CONSERVATION RELATED TO NEEDS NOT WANTS (PROPOSED RESOLUTION, 1998)

III We will encourage water conservation by placing an appropriate value on water taken from lakes or rivers for agricultural, industrial or domestic purposes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### WATER QUALITY

The Green Party sees three key areas of concern.

- 1: The restoration of water related ecosystems.
- 2: The establishment of a Safe Drinking Water Act.
- 3: Phasing out chlorine use in Ontario.

#### Restoration of Water Ecosystems

We support current efforts to maintain Ontario's wetlands.

#### Recommendations:

- 1: 50-meter buffer zones to protect streams and creeks.

- 2: Strengthen current wetland conservation legislation.
- 3: Ecosystem based watershed management.
- 4: Re establishment of flood control basins.
- 5: Withdraw provincial funding for research into or support for Water Diversion Projects. Current plans for James Bay directly affect 22,000 treaty Indians in Northern Ontario.

#### Safe Drinking Water Act

Much of the drinking water in urban Ontario is laced with dioxins, pesticide residue and heavy metal contamination. A recent study in Eastern Ontario found that 75% of well water was contaminated with pesticides. The full implications of pesticides, chlorine compounds, municipal dumps, old oil gasification plants and the synergistic effects of all these chemicals in our water supply is not fully understood.

- The residents of Ontario are entitled to clean drinking water. The Green Party advocates a Safe Drinking Water Act. It would
- 1: Set legally enforceable standards for zero discharge of toxic elements into the environment. (Refer to Zero Discharge policy)
  - 2: Establish a monitoring program for water contaminants which includes full public disclosure of all test results.
  - 3: Support the rights of citizens groups to sue water polluters for losses as well as establishing protection for whistle blowers.
  - 4: Provide the right to seek judicial review of the Minister of the Environment for failure to perform his/her duties.
  - 5: Chlorine phase out in Ontario. Refer to section on Chlorine.
  - 6: Enact a provincial Water Self-Sufficiency Act requiring municipalities to:
    - A: develop and assist the installation of domestic rain water

collection and purification technologies eliminating the cost of urban large water purification plants and rural wells.

B: treat storm water and sewage on site using UV light and in local constructed wetlands and greenhouses eliminating the need for sewers and centralized sewage treatment plants.

C: accommodate on site storm water percolation eliminating the need for storm sewers.

D: encourage the installation of water conservation measures like low-flush toilets, shower heads, and Grey water recycling systems.

(GREEN PARTY OF ONTARIO, 1994)

Every municipality should be required to treat waste, at least primarily. (GREEN PARTY OF NEWFOUNDLAND).

#### RESOLUTION: REQUIRING MANDATORY WATER CONSERVATION

Aware that, at least since 1992, at UNCED the member states of the United Nations have undertaken through adopting Agenda 21, UNCED to implement water conservation measures; measures that, if instituted, would offset the need to increase water supply

Rational water utilization schemes for the development of surface and underground water-supply sources and other potential sources have to be supported by concurrent water conservation and wastage minimization measures. Priority, however, must be accorded to flood prevention and control measures, as well as sedimentation control, where required. (Art. 18.3 UNCED)

Concurring with UNCED on the importance of promoting water conservation

Promotion of water conservation through improved water-use efficiency and wastage minimization schemes for all users, including the development of water-saving devices; (18.12 I, UNCED, 1992)

Concurring with UNCED on the need for demand management, water conservation, reuse...;(18.17, UNCED, 1992) and regulatory measures (18.12 e)

Mindful of the recommendation from UNCED to protect water resources and conservation of water (18.40 a, UNCED, 1992):

;  
;

Noting also the recommendation from UNCED about the use of the precautionary approach in water- quality

Introduction of the precautionary approach in water-quality management, where appropriate, with a focus on pollution minimization and prevention through use of new technologies (18.40 b iv, UNCED, 1992):

Concurring with UNCED that environmental and social impact assessment of potential flood occurrences must be carried out along with drought management. (18.12 f, UNCED, 1992)

Understanding that the member states of the United Nations have reaffirmed this undertaking of water conservation at Habitat II:

... ensure that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds (98 a bis, Habitat II);

Understanding that other provincial jurisdictions have legislated measures for water conservation

Realizing that if water conservation measures had been duly legislated and undertaken 1992, that water consumption would have decreased

I

Noting the applicability of the precautionary principle that society does not have to wait for scientific certainty that environmental degradation will occur to act to prevent the potential degradation

Realizing that there is an increased need for water to service the essential needs of the community farms, and that this increased need could be addressed through conservation and conversion of water use from non-necessity use to necessity use

Call upon member states to institute mandatory water conservation measures

\* to prevent any privatization of community water systems.

\* to revise the tax treatment of renewable energy and energy efficiency investments immediately to make them more attractive to investors than investments in conventional energy sources such as oil and gas.

#### Energy Conservation

• To take the lead in encouraging all energy producers to see the long term need to conserve energy and to set realistic prices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

E. we will require that building and land use planning codes have high standards of energy conservation, including the energy used in making components and transporting them to a building site. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO encourage the construction of small decentralized power plants; [PROVIDING THAT THERE ARE OVERARCHING PRINCIPLES RELATED TO EQUITY AND ECOLOGY] B.C. POLICY CONVENTION, 1986

\* TO DIRECT government and research aid to support alternate/appropriate energy sources B.C. POLICY CONVENTION, 1986

\* TO support a change/raise in energy prices to true replacement costs for all users B.C. POLICY CONVENTION, 1986

\* TO support a change in rate structures to encourage conservation B.C. POLICY CONVENTION, 1986

\* TO support local recycling efforts. B.C. POLICY CONVENTION, 1986

#### Conservation Society

\* TO support the creation of regional soft energy supply councils to advise all levels of government on soft energy issues, with representatives from government, small soft energy companies, and interested groups and citizens; and B.C. POLICY CONVENTION, 1986

\* TO REPLACE coal-fired thermal generating plants as soon as possible and oppose the construction of any new coal-fired facilities B.C. POLICY CONVENTION, 1986

\* TO [INCREASE FUNDING support increased funding to study soft energy production B.C. POLICY CONVENTION, 1986

\* TO support transitional financing to municipalities instituting biomass conversion [of non-toxic organic wastes including sewage solids]; B.C. POLICY CONVENTION, 1986

\* TO support the creation of, and already existing, areas in "soft energy" and conservation B.C. POLICY CONVENTION, 1986 B.C. POLICY CONVENTION, 1986

\* [TO FUND] municipalities for the reduction of collection at the source, and the large-scale reduction, of garbage.

#### Power Export

• To oppose the export of electric power from the province B.C. POLICY CONVENTION, 1986

- To oppose the export of water from the province.

B.C. POLICY CONVENTION, 1986

### 10.5.1 Energy Export and Site C Dam

\* TO oppose power exportation from the province and the construction of the Site C dam and other hydroelectric projects planned for this purpose B.C. POLICY CONVENTION, 1987.

### Oil Transport

\* TO ENSURE THE FOLLOWING:

- 1) All tanker traffic stays outside the 200-mile limit; and
- 2) Fossil fuels must be phased out as an energy source and safe, renewable alternatives be developed and used; and
- 3) The Canadian Navy and Coast Guard shall witness against violation of the 200-mile limit on all tanker traffic; and
- 4) The Armed Forces be [directed] to help in the cleanup process. (B.C. ANNUAL GENERAL MEETING, 1989)

### 10.8.1 BC Energy Strategy

\* TO DEVELOP a comprehensive energy-use strategy with the long-term goal of making BC energy-use sustainable. Sustainable energy use means energy which is renewable, relying on the interest generated by natural capital rather than the capital

itself, and which does not threaten the viability of ecological systems (B.C. B.C. POLICY CONVENTION 1993)

\* TO ENSURE that this strategy should have at least four objectives: reduction of greenhouse gas emissions, reduction of energy use through conservation and greater efficiency, integration of energy-related environmental impacts into all resource and economic development decisions, and the minimization of environmental and resource impacts of energy development. (B.C. B.C. POLICY CONVENTION 1993)

### Building Demolition

\* TO ENSURE that demolition of structures not be undertaken unless said structures are unsafe and their repair would consume more resources than a new structure would B.C. POLICY CONVENTION 1993.

### PACKAGING

\* TO [DRAFT] a Product Packaging Act for the province which, through regulation and encouragement, will serve to standardize packaging wherever possible (i.e.: jars, bottles, containers, shipping boxes, etc.), reduce unnecessary packaging, and restrict the use of plastic containers and bags in favour of biodegradable industry standardized materials and encourage the refilling and other forms of recycling of reusable containers. (B.C. B.C. POLICY CONVENTION, 1987)

### Atmosphere

#### Earth's Ozone Layer

- to halt All production of all [Ozone Layer] damaging chemicals immediately because ANNUAL GENERAL MEETING, 1989

B.C. POLICY CONVENTION, 1993

- to propose and support initiative which will end production of all ozone-depleting chemicals. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- to towards preventing what has already been produced from entering the atmosphere (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To address the issues of [Ozone Layer] depletion and global warming as a central component in every aspect of its policy (ALBERTA GREEN POLICIES, ALBERTA 1997)

- to support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO<sub>2</sub> by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### CARBON TAXES

- to support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO<sub>2</sub> by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

4) To address the problem, Canadians must pool all their resources, share the losses, and find new social, political, and economic relationships with each other.

- To ensure that there be laws, incentives and community empowerment programs to require the immediate cessation of production and emission depleting compounds.

B.C. POLICY CONVENTION, 1993• to [ensure] that economic and social impacts be dealt with after the cessation of production of target compounds. B.C. POLICY CONVENTION, 1993

#### Global Warming Gases

##### B.C. POLICY CONVENTION 1993

Whereas current government goals of a 50% decrease in global warming gas emissions perpetuate wealth inequities between north and south;

- to reduce human caused emissions of global warming gases to 20% of 1987 BC levels in developed nations such as Canada. B.C. POLICY CONVENTION 1993

#### Changing Atmosphere

- To accept the goal of moving closer to the atmospheric composition of pre-industrial times; and to recognize that it is essential that this process be implemented globally, immediately. B.C. POLICY CONVENTION, 1990

- To look for ways to improve indoor air quality standards and ensure that health is not compromised by the use of energy efficient but harmful materials. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Water

### Watershed Conservation

- to ensure that maintaining the integrity, quality, quantity, and timing of flow of watersheds should be given priority over any other resource use because all life and well-being of human habitation depends upon sufficient supply of quality water. B.C. POLICY CONVENTION, 1986

### Water Safety

- To support using enterococci testing of marine waters on a trial basis, paralleled with current standards, to determine if water safety can be more accurately determined; and B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994
- To investigate alternate ways of sewage treatment and adopt the policy of source control and responsibility for all kinds of wastes and strictly enforce the law; and B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994
- To make public via the media recreational water quality counts for each sampling point (in lieu of geometric means,) ongoing year round, at the frequency that they are sampled, with a clear explanation as to what is considered safe and in a form that is easy to understand, in the same way that the daily air quality levels are currently published; and

B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994

- to impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To adopt a policy of sampling sites that are not posted for all water activities where people would enter that water; and B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

- To adopt a policy of arranging sample sites to test waters that would be most affected by faulty storm drains and industrial outfalls; and

- To adopt the policy of full spectrum testing so that toxic and harmful substance levels are also checked in addition to indicator bacteria, for all water quality tests, including drinking water. B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

- To ensure that any laws and regulations that require the use of chlorine in water purification and treatment, and promote the use of safe alternatives. B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

#### Water exports

- To oppose any plan to divert water to the United States. (ALBERTA GREEN POLICIES, ALBERTA 1997)

NOTE PAPER REVIEWED BY CABINET ON THE BANNING OF WATER SALES (1998)

- To advance laws, regulations, incentives and community empowerment to:
  - 1) Emphasize small-scale as opposed to large-scale hydro-electric development.
  - 2) Set minimum water quality standards pursuant to federal health law. B.C. POLICY CONVENTION 1993

#### Water Treatment/Quality

- To ensure that all new provincial, regional and local government water purification systems in British Columbia utilize rapid sand filtration, ozonation and/or ultraviolet treatment as an alternative to chlorination and chloramination; B.C. POLICY CONVENTION, 1996

- To establish timetable for existing provincial, regional and municipal systems to phase out chlorine use in favour of rapid sand filtration, ozonation and/or ultraviolet treatment; B.C. POLICY CONVENTION, 1996

• To prohibit by law all logging, gravel pits and other ecologically interruptive activities in consumptive watersheds by law with penalties including fines and custodial terms for violation B.C. POLICY CONVENTION, 1996

• To work to make the issue of water quality a key issue in the next provincial general election. B.C. POLICY CONVENTION, 1996

## DEPARTMENT OF FINANCE

**FINANCE (63,718,189.000) Surplus transfer 12 billion?**

**Auditor General should be elected by an all-Party Committee. Apart from the Commission on Sustainable Development, there should be a position to determine the comparative legitimacy of the nature and type of expenditures and not just the auditing appropriateness. Examine COMER's banking reforms.**

- Promote the development of self-sufficiency for bioregions
- Promote community resistance to the destruction of its economic bioregion
- Support legislation that promotes sustainable economic activity and legislation that restricts non-sustainable activity
- Promote the development of community exchange system such as LETS (Local Exchange Trading System) and barter
- Promote the development of local and/or regional legal tender
- Promote local economic activity based on voluntary reciprocity
- Educate and raise consciousness about sustainable consumer and producer practices
- Support environmentally benign product

## A STEADY STATE BANKING SYSTEM

The Federal Government, through its agency the central bank, must be the sole authority for manufacture and redemption of all forms of money. It is vital that the central bank's activities be controlled non-politically. The controlling body for the central bank would be an elected commission whose mandate was to provide enough currency for the economy without creating inflation. All banks will be required to hold 100% reserves of central bank notes or currency against their depositors' balances. Banks will then make loans only from their holdings or central bank money. The key effect of this will be to enable the central bank to control money supply and thus control recessions and inflation directly. This will be done by varying the supply of money rather than through the manipulation of interest rates. The national debt would be refinanced at the central bank at no interest. Interest rates will be restored to their legitimate function of compensating a lender for depriving himself or herself of the use of the money while it is lent to a borrower. Interest rates will return to levels that existed before the current high interest rate dogma became fashionable with the financial establishment.

All public capital projects would be funded by central bank credits provided interest free. The principle of these loans will be repaid over the useful lifetime of the project. The central bank will allocate funds at a rate that will be guided by its money supply management policy of inflation / recession control.

## Background

Too much money in circulation results in inflation, too little causes recession. A proper balance ensures stability. Yet we suffer from both in the present system. The reason for this phenomenon is that the Bank of Canada issues and redeems only about 5 percent of Canadian money. The other 95 percent is issued and redeemed by chartered banks under the fractional reserve banking system in which they are required to hold; in cash or central bank credits a reserve of only five percent against their deposit liabilities.

Chartered banks do not lend their depositor's money. When a loan is taken at a chartered bank new money is created. As a result of this system 95 percent of the money in circulation in Canada has been issued and remains in circulation only as long as someone has taken out a loan at a bank. The quantity of money in circulation is equal to the total loans outstanding. This has little to do with the correct amount of money in circulation that would provide reasonable stability for economic activity without excessive inflation or recession.

The Bank of Canada attempts to influence the quantity of money in circulation by influencing the quantity of loans by manipulating interest rates. Higher rates discourage borrowing, while lower rates encourage it. This is an undesirable method because:

- (1) Chartered banks are able to circumvent Bank of Canada measures when it is in their interest to do so.
- (2) The range of interest rates is restricted by the perceived need to "protect the dollar". A "flight of capital" is considered a disastrous scenario and the to be results are a high value Canadian dollar, high interest rates, and a severe recession.

Canada does not need foreign capital or speculative investments that are attracted by interest rates. We advocate that the Bank of Canada provide the money the economy needs. Our money is just as valid as those currently provided by foreign banks to foreign investors or speculators. Canada possesses abundant resources and a well-educated work force capable of producing almost all of our needs for a high standard of living using sustainable economic principles.

The Provincial and national debt, the chronic inability of governments in Canada to avoid deficits and higher taxes, may be traced to the existence of the fractional reserve banking system.

The Bank of Canada currently provides five percent of government loan requirements interest free. This is restricted to five percent of government loan requirements because the Bank of Canada credit forms the reserves of chartered banks. If it were to expand so would the reserves of the Banks. This would greatly expand the money supply and cause inflation. The solution is to raise chartered bank reserves to 100% of loans. This would limit the threat of inflation.

The result of the current system is that one-third of all of your tax dollars go to pay interest to privately owned banks who have been granted the ability to issue money to the Federal reserve and charge you interest for the service. Government overspending will not be reduced by restructuring transfer payments or cutting spending on Social services but rather by raising chartered bank reserves to 100% of loans and financing governments monetary requirements at no interest. This presupposes that the government will run a balanced budget but that would be possible because the

largest expenditure of the Federal government, interest at 35% of total expenses have been reduced to zero. Inflation would be avoided because the government is not "Printing money" nor is it allowing the banks to print money.

All yearly federal government loan requirements could be financed at no interest at the Bank of Canada, all of the provincial and national debt would be refinanced there too.

Under the current system the debt-interest dilemma remains totally unsolvable. The current social system must collapse and the current recession must continue and the debt load will continue to grow or inflation must be allowed to devalue the debt.

Important issues

The transition to a steady state poses many practical problems such as international trade adjustments and legitimate third world needs for further growth up to sufficient levels. But in a sense, they are not relevant as this policy is to establish that the growth economy is unworkable and SSE in broad outline is feasible and desirable.

The Keynesian revolution did not occur because Keynes arguments were lucid and unanswerable. It was the Great Depression that convinced people that something was wrong with an economic system that denied employment to so many. Likewise, it will probably take a great ecological spasm to convince people that something is wrong with economic theory that denies the possibility of an economic system exceeding its optimum scale. But even in that unhappy event it is necessary to have an alternative vision ready to present when crisis conditions provide a receptive public. (GREEN PARTY OF ONTARIO, 1994)

Our economy is based on the concept of unlimited growth and relentless competition. Non-renewable resources are liquidated at the fastest rate possible for maximum profit. The power of our government is subordinate to the power of transnational corporations. Wealth is concentrating in the hands of fewer and fewer individuals. This is a recipe for disaster. The Green Party recognizes that a sustainable economy must be constrained by the limits of the natural world. We must strive for stability rather than growth, and an equitable distribution of wealth. We must measure progress in terms of improving our quality of life rather than raising our standards of living. (Creation of a sustainable economy GREEN' ELECTION PLATFORM Alberta, 1997)

## 6. GREEN ECONOMIC CONCERNS AND SOLUTIONS (carried as is)

Given that:

- \* blind pursuit of Gross Domestic Product is leading us toward environmental and social disasters.
- \* there are good and emerging indicators of 'genuine progress' which can correct our measure of well-being and alert us to problems so that we can steer away from them.
- \* promoting a new measure of progress is Green Party Policy
- \* the economic and social fall-out from pursuing the misguided measure of progress is affecting vast numbers of people and as such provides a funnel for introducing more people to the Green option. (ONTARIO POLICY KINGSTON, 1997)

Be it Resolved that:

Economic Concerns and Solutions be formally adopted as a Green Party campaign. This resolution seeks cooperation in making the connections between emerging problems, the mistaken goal of GDP and the Green Party's interest in tuning society's measure of well-being so that it does in fact indicate progress toward or deviation away from long-term well-being. While Party approval is said to be unnecessary to pursue such a program, formal approval

will help bring it to the attention of Greens across Ontario and around the world. This introduction is critical as many of the solutions to economic problems are such that countries adopting them unilaterally would assume a serious competitive disadvantage in the global economy. A broadly-based international approach is the only realistic hope for overcoming the vicious "race to the bottom" nurtured by the present trade regime. The GPO can provide the necessary introduction by formally adopting the Economic Concerns and Solutions campaign. (ONTARIO POLICY KINGSTON, 1997)

\* TO INCLUDE "work" in the home and volunteer "work" in the community be included in the GPI.) (Deferred Rowena Eloise)

\*TO SUPPLEMENT THE GPI WITH THE U.N. HUMAN DEVELOPMENT INDEX (1996 LATEST EDITION) DEALING WITH QUALITY OF LIFE INDICATORS. THIS HDI INDICATOR WOULD SUPPLEMENT THE DATA IN THE GPI. (deferred resolution, Harry Garfinkle)

\* to support the LETS or similar community-based programs INCLUDING BARTER BUCKS (added to include program developed in the Kootenays, B.C.).

\* to enact legislation that would ensure that corporate owners and officers be held legally liable, in criminal and civil court, for any environmental and social harm they cause.

\* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to replace the Gross National Product with the Genuine Progress Indicator (GPI). The GNP excludes social and environmental costs in its accounting, thus facilitating the illusion that community breakdown, crime, the loss of farmland and biodiversity, and unemployment have no economic significance.

\* to institute an average four-day/32-hour work week which would mean that existing jobs could be shared with those now unemployed.

OTHER BENEFITS OF A 32-HOUR WORK WEEK WOULD INCLUDE

A) REDUCED HEALTH COSTS

## B) REDUCED EDUCATION COSTS

- AS GOVERNMENT COSTS ARE LOWERED, INCOME AND PAYROLL TAXES COULD ALSO BE REDUCED. CONSEQUENTLY, A REDUCED WORK WEEK WOULD NOT RESULT IN A SIGNIFICANT PAY REDUCTION

(PROPOSED BY SHADOW CABINET IN 1997)

INTRODUCTION OF A FOUR DAY/32 HOUR WORK WEEK, WITH THE LEGAL RIGHT OF INDIVIDUALS AND UNION CONTRACTS TO REFUSE OVERTIME  
(deferred resolution)

- to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND)

- We measure economic progress in terms of improvements in the quality of life rather than [in] the acquisition of consumer goods. (GUIDING PRINCIPLES Alberta, 1997)

- \* TO USE INDEX OF SUSTAINABLE ECONOMIC WELFARE (ISEW) AND ANOTHER MEASURE OF ECONOMIC WELLNESS (SOURCE: DALY AND COBB'S FOR THE COMMON GOOD). (deferred resolution Jim Bohlen) (BC):

- \* to institute along with the GPI the Criteria of Public Trust (GPT) (includes criteria related to peace, human rights, social justice, environmental protection and preservation (circulated at the tabling of the budget February 1998)

- To work for legislation to replace the Gross National Product with the Genuine Progress Indicator (GPC, 1996)

- \* TO NOT USE economic growth oriented economic indicators as indicators of the health of an economy [because these indicators undervalue human and planetary health preamble] (B.C. B.C. POLICY CONVENTION 1993)

- \* TO ADOPT economic indicators which quantitatively represent changes in environmental, ecological PEACE, and social well-being, such as those suggested by Hazel Henderson, Herman Daly and the World Watch Institute [AMONG OTHERS], (B.C. B.C. POLICY CONVENTION 1993)

## Economic Manifesto

\* TO EXPOSE THAT exponential growth is gobbling up non-renewable resources, polluting and depleting air, water, and soil and is threatening the survival of all Canadians: (B.C. B.C. POLICY CONVENTION 1993)

\* TO IMMEDIATELY IMPOSE regulations [ENSURING] promoting:

- 1) Conservation of forests, rivers, soils, and air.
- 2) Development of value-added small-scale agricultural and resource industries to supply local and regional requirements.
  - To strive to reduce the export of raw materials and increase the production of value-added goods. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- 3) Use of regionally produced and processed food and manufactured goods before importation of food and manufactured goods from outside the region.
- 4) Adopt a GND (gross national destruction) or similar measure to monitor and control industrial depletion of air, water, and soil.

(B.C. B.C. POLICY CONVENTION 1993)

## Local Economies

\* TO support and encourage the development of democratic control of local economies [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES] (B.C. B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

\* TO encourage local economies to be adapted to their own bioregions, thereby reducing their dependency on the ecologically destructive and socially exploitative aspects of the world market system. (B.C. B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

\* TO oppose government purchase of shares in transregional corporations POLICY (B.C. B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

\* TO [ENSURE THAT] / to be committed/ to everyone having the right to the basic necessities of life and to a reasonable quality of living; and (B.C. B.C. POLICY CONVENTION, 1987)

\* TO support the principle of human scale and appropriate technological economic activity, and that resources should be used according to this principle.

based Health care

Indians or Inuit for cost of construction and  
extension or renovation hospitals

## 9. GREEN PARTY HEALTH POLICY (carried with amendments)

The Green Party believes that the best way to create a healthy  
society is through a healthy lifestyle. This would include a

good diet (pesticide-free, non-irradiated food and less animal products), exercise, stress reduction techniques and avoidance of tobacco, abuse of alcohol and illicit drugs, and misuse of prescription and over the counter drugs. This philosophy of health maintenance would reduce the need for treating preventable diseases, which is presently very costly. Also, by making our environment and communities' healthier places in which to live and work, we will see a reduction in many diseases.

The Green Party Health Care Policy would include:

- \* educating the public on lifestyle changes and choices that contribute to disease prevention, beginning in school
- \* ensuring access to pesticide-free, non-irradiated food, non-genetically engineered food, clean air, water and land for present and future generations
- \* funding research into causes of illness, and into techniques that complement drugs and surgery, funding through OHIP those therapies that prove worthwhile
- \* shifting treatment to the home wherever possible with adequate support of health care professionals
- \* funding small community-based hospitals that emphasize and promote health maintenance
- \* providing accurate information on the advantages of breast feeding and providing adequate post-natal support
- \* giving doctors the choice of being paid salaries as opposed to the current fee-for-service system, in order to allow them to spend more time with patients and to encourage them to work in rural areas

- \* making available and covering the cost of those drugs of all kinds including alternative medicine and alternative treatments that prove effective
- \* taxing goods that cause poor health such as tobacco and alcohol
- \* including dentistry under OHIP
- \* offering nicotine replacement products such as patches, gum, nasal sprays and inhalers so smokers avoid the adverse cardiovascular and carcinogenic effects of smoking
  
- \* improving education concerning prenatal care
- \* educating the public with regards to environmentally induced diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

## HEALTH CARE

## FOOD POLICY

Greens believe that sufficient nutritious food is a basic human right for all. We recognize that at present we are poorly nourished and overfed. The vitamins and micro nutrients content of food has decreased dramatically in the last few decades. Pesticide residues in food are a constant fear. The Present food system encourages mono-cropping, chemical farming, centralization, over processing, long distance transportation. and the substitution of chemicals for all manner of ingredients in our food.

Greens would therefore

-Reward farmers for converting from chemical to ecological methods of farming

\* improving education concerning prenatal care

\* educating the public with regards to environmentally induced

diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

-Encourage the education of the public and especially the children about the 8 food groups, what nutritious food is, how it depends on rich soil, micro organisms, clean water, and good farming methods.

There must be strong education to counter advertising aimed at children that does not encourage good food habits. (Green Party of Ontario, 1994)

-Encourage the consumption of locally grown food

-Encourage appropriate social networks so that children have a nutritious diet.

-Encourage the consumption of food in its natural state with little processing, no irradiation and no artificial additives or substitutes.

-Discourage research into gene splicing technology that is used to create new life forms

-Discourage the use of food irradiation.

-Require labeling of all foods that have been irradiated

-When dealing with new chemicals that are to be added to our food supply the Green Party of Ontario recommends the following.

1: Regard Chemicals as harmful until proven there is conclusive scientific proof declaring them safe.

2: Do not try to control chemicals one by one, using risk assessment. Instead we recommend avoiding irreversible harm by

taking precautions action to ban or phase out whole classes of chemicals as soon as there is evidence of harm, not waiting for conclusive scientific proof.

(GREEN PARTY OF ONTARIO, 1994)

#### Health Care: Health Maintenance

Our current health care system concentrates on treatment, rather than prevention, of disease. This approach allows unnecessary suffering to occur. Treatments often only partially alleviate suffering, and often cause harm themselves. One disease is treated at a time, and little is done to improve the overall health of the body. Health care is focused on expensive high-technology machines rather than on people.

There are opportunities for tremendous reduction in disease rates by preventive measures. This approach will both improve the quality of life of the average resident of Ontario and conserve health care tax dollars.

Educational campaigns and incentives will make it easier for individuals to take charge of their own health through better nutrition, exercise, avoidance of drugs, and techniques such as stress management.

(1) A basis of lifelong good health is proper infant nutrition.

Women will be encouraged to breast feed by the providing all prospective parents with accurate information on the risks of artificial feeding and on the advantages of breast feeding.

A woman's right to breast feed in public will be protected.

The World Health Organization's Code of Marketing of Breast milk Substitutes will be enacted as legislation in Ontario to

protect women and their babies from advertising which misleadingly suggests that artificial substitutes are an acceptable substitute for nature's food for babies. Hospitals and birthing centres will be required to satisfy the "baby-friendly hospital" guidelines of the World Health Organization and UNICEF. These measures, by increasing the rate and duration of breast feeding, will greatly reduce the incidence of childhood illness; and since some of the health giving benefits of breast feeding continue long after weaning, the incidence of adult illness will also eventually decrease. It will also help prevent breast cancer for the mothers.

- (2) Students in primary and secondary schools and, via the media, the adult population, will be educated to promote the philosophy that we are responsible for our own health. The program will emphasize nutrition, especially organically grown whole foods, and exercise. In addition, relaxation, stress management, drug avoidance, and the use of nutritional supplements will be taught. This program will result in a healthier population, and reduce the amount of money that needs to be spent on disease treatment.
- (3) The use of therapeutic drugs (except when absolutely necessary) and recreational drugs will be discouraged. Programs to stop smoking, drinking alcohol, or using other addictive drugs will be fully funded by O.H.I.P. provided they are reasonably cost-effective in comparison to similar programs. Taxes on cigarettes and alcohol will be further increased.
- (4) Exercise will be encouraged by a transportation policy that

makes it easy, safe, pleasant, and cheap to walk or cycle for most trips. (See transportation policy.)

- (5) A junk food tax will be introduced on highly refined and processed foods, to encourage better nutrition and help fund some of the other health care programs.
- (6) Research and application of ergonomics will be encouraged to reduce the incidence of injury in the workplace and the home.

#### Health Care: Treatment

Hospitals currently are focused around expensive equipment and tend to be large, impersonal and understaffed. Allopathic medicine, which dominates the health care system, tends to treat diseases with drugs and surgery. These methods focus on eliminating a single disease while doing little to improve overall health. In fact, drugs, surgery and irradiation always cause some harm to the body. Often alternative treatments exist which eliminate the disease effectively while avoiding harm and improving overall health.

The function of health care practitioners should be to help us heal ourselves. Professions which take this approach include chiropractic, naturopathy, acupuncture, midwifery, lactation consulting and homeopathy. These professions deserve greater status in the health care plan.

Ontario Greens' health care policy focuses on providing greater access to alternative health care systems, and on providing treatment facilities that are human-scale, community-centred places of healing.

- (1) Dental care and chiropractic care will be fully covered by O.H.I.P. Lactation consulting will become a regulated

profession Naturopathy will be reinstated as a regulated profession, both will be fully funded by O.H.I.P.

- (2) Research will be funded into the efficacy of non-allopathic treatments for both disease treatment and prevention. O.H.I.P coverage will be extended to cover proven techniques. Research will also be done into the efficacy of allopathic techniques, and O.H.I.P. coverage withdrawn for treatments proven to be largely ineffective. Where possible, consumers will have a choice of allopathic and non-allopathic treatments, all covered by O.H.I.P.; but if one treatment is much safer, more effective and cheaper than another, the less effective one will not be funded. Thus, health care focused on health maintenance and safe, low-technology treatments will be emphasized.
- (3) When feasible, treatments will be shifted to the home rather than hospitals. New hospitals will be small and community-based. The emphasis on hospital funding will be on staffing, improving the quality of hospital food and providing counselling on health maintenance for hospital patients, rather than on expensive technology. Home-like birth centres, with midwives in attendance, will be opened. Community health centres, featuring a variety of health care practitioners, will be established to assist and encourage people to take charge of their own health. These measures will save money by reducing the use of large, high-technology hospitals.
- (4) Treatments allowed to be performed by nurses and paramedics will be increased. A limit to liability for health care practitioners will be set

- To Phase OUT, Eliminate, PREVENT AND Reduce HEALTH AND ENVIRONMENT HAZARDS (1998)

- to recognize the right of everyone to the highest attainable standards of physical and mental health

The States Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standard of physical and mental health (Article 12 International Covenant Economic, Social & Cultural Covenant, 1966)

to endorse...attainment of world-wide social goal of health for all by the year 2000

Endorses the Global Strategy for Health for All by the

Year 2000 1995 [Global Compliance Research Project] as a major contribution of Member States to the attainment of the world-wide social goal of health for all by the year 2000 and to the fulfillment of the International Development Strategy for the Third United Nations Development Decade (Art. UN General Assembly Resolution 36/43, 1981)

- to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. . Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

- to implement programs to establish and strength preventive and curative health

- to implement programs to establish and strengthen women centred health care

- “Health is a fundamental human right. we must uphold this right we must fight for it. Health is inseparable from individual rights and freedoms and from the rights to development (Hiroshima, WHO, cited in Women’s Health in Women’s hands). There needs to be a clear understanding that the human rights norms should be used in a proactive manner to promote health policies and practices that validate all people and enhance the health of all (Women’s Health in Women’s hands, 1995)

It is essential that all /Albertans/[Canadians] have equal access to health care services. A health care program that advocates prevention of illness and personal responsibility for well-being will be more efficient and cost effective than a system which emphasizes illness and technological intervention. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will develop a decentralized model for health care service delivery, assuring local accountability and community participation. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will encourage dialogue among health care consumers and providers about the allocation of health care resources. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. We will give a higher priority to investment in appropriate low-technology interventions that serve large numbers of people rather than expensive, high-risk, high-technology methods which benefit few. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A Green Party government would undertake:

- \* to build on the strong foundation of the Canada Health Act by providing research funding for healing techniques that complement drugs and surgery, and by including reportedly effective techniques from world medicine and traditional practices.

- \* to establish channels to align Canada's research excellence more closely with effective techniques from world medicine and traditional practices.

- \* to ensure an admonitory labeling strategy for all non-nutritive substances and processes affecting food (e.g. genetic engineering).

- TO INVOKE THE DISASTER PREVENTION, THE ENVIRONMENTAL ASSESSMENT, THE PRECAUTIONARY AND REVERSE ONUS PRINCIPLES

- TO BAN GENETICALLY ENGINEERED FOODS

- TO CURTAIL IMMEDIATELY GENETICALLY ENGINEERED VIRUSES (1998)

\* to address the concern that the health of Canadians is currently under threat from decisions that are made both inside and outside Canada. Governments have cut health care spending and have contemplated privatization or a two-tier system.

\* to allocate significant research funding to healing techniques that complement drugs and surgery

\* to initiate an effective program of public education about the health benefits of uncontaminated food, water and air (Alberta, 1997)

\* to establish environmental standards to protect health rather than just promote trade

\* to include the health status of the human population and the ecosystem as criteria in any scale or method for assessing prosperity

\* to encourage research that factors in all the determinants of health (the medical equivalent of "full cost accounting).

F We will introduce a system of full cost accounting for project evaluation and eliminate long-term subsidies, both explicitly and hidden. The price of a product should clearly represent its cost in terms of resource consumption, environmental impact, waste disposal and social services.

E. We will promote the elimination of pollutants from the environment as a positive instrument of health care. (ALBERTA GREEN POLICIES, ALBERTA 1997)

(ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to ensure that doctors and hospitals continue to serve their valuable role in our communities while also engaging resources for the health promotion and disease prevention.

A. We will encourage health care practitioners to emphasize wellness, self reliance and conservation through preventive approaches to the practice of medicine. (ALBERTA GREEN POLICIES, ALBERTA 1997)

we will access hospital service requirements throughout the province. Small under-utilized hospitals could be converted to wellness centres serving local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to work cooperatively to address First Nations' health concerns.

\* to include health research and health services responsive to women's needs and reflective of the diversity of women's life stages.

TO FUND RESEARCH INTO ENVIRONMENTALLY INDUCED DISEASES (1998)

\* to endorse a program of reproductive health.

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- \* to initiate an effective program of public education about the health

benefits of uncontaminated food, water and air (Alberta, 1997)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and

practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## ABORTION

The Green Party of Ontario supports the right of women to decide whether or not to have an abortion. (GREEN PARTY OF ONTARIO, 1994)

- to LIMIT, REGULATE AND MONITOR REPRODUCTIVE TECHNOLOGIES (1998)

\* to respect the wishes of patients who are of sound mind as to the manner and duration of their treatments.

\* to reorient the priorities of the Health Protection Branch to provide a more stringent and holistic review process for new and existing human-made chemicals, technologies, genetic manipulation and electromagnetic disruption.

• TO REQUIRE THE STANDARD OF EXPOSURE AT LEAST 1/2 OF THE EXPOSURE LEVEL THAT HAS BEEN SHOWN TO CREATE A RISK OF LEUKEMIA. (1998)

\* to take a friendlier approach to the views of herbalists and citizens who use time-tested, naturally occurring substances in health care.

\* to evaluate policies by considering the well-being of future generations rather than relying only on short term indicators of progress.

\* to ensure the availability of less expensive generic prescription drugs

\* to replace the current Canada Food Guide with a New Canada Food Guide based on the recommendations of the Physicians Committee for Responsible Medicine (P.C.R.M.) as a model. A New Canada Food Guide will recommend the New Four Food Groups which the P.C.R.M. recommends, i.e. (1) fruits, (2) vegetables, (3) grains, and (4) legumes, with other items mentioned as foods that people may choose to eat, but not recommended as ideal or necessary for health.

\* TO PROVIDE EDUCATIONAL MATERIAL EMPHASIZING

FOOD COMBINATIONS THAT STRESS COMPLETE PROTEINS (DEFERRED RESOLUTION ROWENA ELOISE).

\* TO ESTABLISH "Help Centres" be established (Drug and Alcohol Abuse Centres, education and social upgrading) (DEFERRED RESOLUTION ROWENA ELOISE).

• to end Canadian participation

in the federal and international trade of endocrine disrupting chemicals, especially where they are sold to, or produced and used in, third-world countries that lack the resources or

technology to properly monitor and control exposure levels; (are we suggesting that Canada has the resources to monitor these levels, and are we suggesting that Canada is not a third world country?) (Green Party of Canada)

- To fund research to examine diverse wildlife species at all levels of biological organization in order to better understand and eliminate chemical endocrine disruption at the molecular, cellular, individual, population, and ecosystem levels; (Green Party of Canada)
  
- To introduce labeling legislation that requires manufacturers to release the names of all chemicals used in their products and their potential as developmental health hazards; (Green Party of Canada)
  
- To require mandatory permanent liability insurance of those producing and developing new synthetic chemical products; (Green Party of Canada)
  
- To require more stringent safety standards for new chemicals to assure product safety beyond a reasonable doubt; (Green Party of Canada)
  
- To educate family physicians and other health practitioners and administrators on the possible occupational and environmental hazards which synthetic chemical agents play in underlying or constituting risk factors for "primary" human diseases; (Green Party of Canada)
  
- to require adequate medical school training for physicians on the often-latent affects of pollutants on human development and health; (Green Party of Canada)
  
- to establish a coordinated speakers bureau and on-line systems such as a site on the World Wide Web for endocrine-disruptors. (Green Party of Canada)

## 76.0 HEALTH

### 76.1.1 Tobacco Advertising

\* TO ban on all advertising and promotion of tobacco and allied products; and B.C. POLICY CONVENTION, 1988

\* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to nicotine addiction. B.C. POLICY CONVENTION, 1988

### 76.2.1 Alcohol Advertising

B.C. POLICY CONVENTION, 1988

\* TO support a ban on all advertising and promotion of alcoholic products and B.C. POLICY CONVENTION, 1988

\* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to alcohol addiction.

encourage the health care practitioners to emphasize wellness through holistic and /preventative/ [PREVENTIVE] approaches to the practice of medicine.

### 76.4.1 Hospital Boards

\* TO [ENSURE THAT] /advocate/ that hospital boards should be elected by the citizens of the province in the same manner and time as the municipal elections in the province. B.C. POLICY CONVENTION, 1987

(SO THAT thus control of public money is done by privately elected hospital boards'

### 76.5.1 Health Care System

(B.C. POLICY CONVENTION, 1988)

\* TO ENSURE THAT THERE IS a health care system where the inability to pay must not be an impediment to health care services. (B.C. POLICY CONVENTION, 1988)

#### 77.2.1 Lifestyle Counselling

77.2.1 Resolved that Greens request that the ministry of health reinstate lifestyle counselling as part of the BC Medical [Services] Plan. [BECAUSE PREVENTION HAS TO BECOME AN ESTABLISHED PRINCIPLE AND PRACTICE OF MODERN MEDICINE] B.C. POLICY CONVENTION, 1987

### 72.0 WOMEN'S ISSUES

#### 72.1.1 Abortion Funding

B.C. POLICY CONVENTION, 1988

72.1.1.a Whereas the Supreme Court of Canada has declared that the provisions of the Criminal Code dealing with abortion were not in accordance with the Charter of Rights; and

72.1.1.b Whereas the BC Government has stated it will not pay for abortions through the provincial medical plan except in life threatening situations; and

72.1.1.c Whereas all provinces receive funds from the Government of Canada in order that a common health care standard exists throughout the country; and

72.1.1.d Whereas other provinces do fund such operations through their health care systems;

\* TO [ENSURE] support payment by [the] province of BC [ALL PROVINCES] from the provincial health plan for abortions performed by qualified medical personnel.

#### 72.2.1 Choice on Abortion

72.2.1.a Whereas a woman's right to choose abortion is a human right; and

72.2.1.b Whereas this right is supported by the Green principles of feminism and self-determination;

\* TO recognize that choice on abortion is solely the province of the woman seeking the abortion. B.C. ANNUAL GENERAL MEETING, 1994

72.3.1 Birth Control

\* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

\* [TO ESTABLISH] / endorse establishment of/ a support system for women who do not choose abortion. B.C. POLICY CONVENTION, 1988

## **DEPARTMENT OF FOREIGN AFFAIRS AND INTERNATIONAL TRADE**

### **DEPARTMENT OF INTERNATIONAL COOPERATION**

388,000,000 should be relocated to the Department of Canadian Culture for the promotion of "Safe Anti-racism Sites" and implementation of the International Convention for the Elimination of All Forms of Racial Discrimination. Funds should be redirected from subsidizing international vested economic agreements to implementing international public trust agreements. Rather than acknowledging obligations, commitments and expectations under International public trust agreements, the Canadian government only appears to adhere to perceived privileges and demands under international vested interest agreements or institutions such as WTO, NAFTA, GATT, APEC, NATO. The Canadian government has failed to sign and ratify significant conventions such as the Law of the Sea and the Convention on the Rights of Migrant Workers and Their Families. When Canada does sign and ratify international public trust agreements, it often has failed to implement the necessary legislation to ensure compliance. Canada has also made commitments through UN Conference Action plans. The funds in Foreign Affairs must be relocated to and redirected towards the promotion of and compliance with the public trust international law. The Canadian government should support the call for the dismantling of NATO for violation of international law, and should work towards the Dismantling of the WTO and APEC and other vested economic interest international agreements for contravening international Public Trust law. Funds in CIDA must be redirected away from subsidizing the vested economic interests of Canadian industries to supporting the public trust While continued levels of funding for CIDA should be at current rates, funding to support Canadian corporations in developing countries should be terminated immediately and redirected to projects that are socially equitable and environmentally sound and that have been conceived in

consultation with marginalized citizens of partner countries. The funding for IDRC should be maintained but its mandate revised to include the examination of the failure of international agreements to be implemented in Canada.

### **UN Organization**

A Green party government would call upon the member states of the United Nations:

\* to sign and ratify international agreements that they have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement.

\* to undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

\* to ensure that corporations including transnationals comply with national codes, social security... international laws, including international environmental law.

\* to establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member states harmonized continually upwards.

\* to recommend to the OECD to cease deliberations on the Multilateral Agreement on Investments (MAI) which if implemented would undermine the United Nations, and the ability of nation states to harmonize social and environmental standards upwards.

\* to revoke charters of corporations that violate human rights, cause environmental degradation, or contribute to conflict or war

\* TO REVOKE CORPORATE CHARTERS WHERE QUALITY OF LIFE  
LEGISLATION IS VIOLATED (deferred resolution)

\* to revoke the licenses and charters of corporations, including transnational corporations, if those corporations have persistently:

(a) violated human rights or denied social justice

(b) caused environmental degradation,

(c) disregarded labour rights, or

(d) contributed to conflict and war, or if they fail to pay compensation for past non-compliance with international agreements; (statement in proposed Treaty circulated by Green Party of Canada)

12. CORPORATE CHARTERS (carried with amendments)

The topic section on Corporate Charters to be completely removed and replaced with the following (with thanks to the BC Greens).

New topic title would now be REGIONAL BUSINESS. Local and regional business is an important component of Green economy.

Local and regional businesses generate employment, community accountability and local ownership. A Green Party government

would work to shift business taxes, employment taxes and property taxes away from local and regional independent businesses and onto large national and multi-national corporations. A Green Party government would also end many of the hidden subsidies to big corporations that disadvantage local and regional business competitors. Businesses that apply for government contracts would be expected to practice high labour and environmental standards in Canada and abroad. (ONTARIO POLICY KINGSTON, 1997)

## CORPORATE CHARTERS

Corporations are artificial creatures that exist because of provincial legislation. They are not loyal to individuals or communities. Creating a sustainable future will depend on restructuring this key institution.

The Green Party suggests the following conditions before a Corporate Charter is granted to a limited company.

- 1: Corporate owners and officers must be legally liable, criminally and in civil court for the harm they cause.
- 2: Corporations that do not enhance the quality of life of the community must have their charters revoked. This is not merely a deterrent to corporate abuse but a critical element of an ecological society because it creates feedback loops that prompt accountability, citizen involvement, and learning.
- 3: Corporations should be encouraged through the tax system to be cooperatively owned by the employees of the company. (Green party of ONTARIO, 1994)

TO ENSURE THAT COMPENSATION AND REPARATION BE PAID BY CORPORATIONS TO COUNTRIES TO INDIGENOUS PEOPLES, AND TO DISENFRANCHISED PEOPLE WHOSE LAND HAS BEEN

DEGRADED, WHOSE RIGHTS HAVE BEEN VIOLATED AND WHOSE LIVES HAVE BEEN DESTROYED THROUGH CORPORATE SUPPORT FOR OPPRESSIVE REGIMES. IT IS NOT SO MUCH DEBT FORGIVENESS BUT COMPENSATION AND REPARATION FOR THE DEVASTATION CAUSED BY THE OVERCONSUMPTIVE MODELS OF DEVELOPMENT IMPOSED ON DEVELOPING COUNTRIES THAT IS NECESSARY (1998).

- TO DISALLOW ALL ATTEMPTS BY INDUSTRY THROUGH THE INTERNATIONAL STANDARDIZATION ORGANIZATION'S (ISO) 14,000 TO MOVE AWAY FROM "COMMAND AND CONTROL" AND REGULATIONS (1998)

- \* TO PROMOTE THE RIGHT OF FIRST REFUSAL BY EMPLOYEES AND/OR LOCAL CITIZENS

OF CORPORATE SHARES, WITH A MINIMAL REQUIREMENT OF 50% IN REGION OWNERSHIP WHERE THE CORPORATION IS OUT OF THE BIOREGION; (deferred resolution)

- \* TO WORK for LEGISLATION ON THE FOLLOWING THE RIGHT OF CITIZENS TO SUE CORPORATE OWNERS AND OFFICERS, IN CRIMINAL AND CIVIL COURT, FOR ANY LEGAL (deferred resolution) VIOLATION OF HUMAN RIGHTS, INCLUDING LABOUR RIGHTS, DENYING SOCIAL JUSTICE, FOR DESTROYING THE ENVIRONMENT, FOR CAUSING SERIOUS HARM TO HUMAN HEALTH, AND FOR CONTRIBUTING TO DEVASTATION THROUGH ARMS TRADE

(included in the Treaty circulated by the Green Party of Canada)

- TO PREVENT POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT (1998)

- TO ACT ON THE COMMITMENT MADE TO ERADICATE HUNGER UNDER THE UNIVERSAL DECLARATION ON THE ERADICATION OF HUNGER (1998)

\* to act upon the Malaysian General Assembly resolution which affirmed that "the continuing existence of nuclear weapons poses a threat to all humanity".

\* to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

\* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

\* to immediately reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into generating socially equitable and environmentally sound development; (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. In 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs. In 1981 the military budget was less than 50% of what it is now.

The cost of Canada's peacekeeping operations is less than \$700 million annually -- only 6% of the defence budget. The Green Party **calls for** suggests that Canada dramatically reduce its military budget, halt low-level flight training in Labrador, and withdraw from the global arms race. (GREEN PARTY OF NEWFOUNDLAND).

\* to prevent further environmental degradation and human rights violation and thus to fully act upon the commitment under principle 14 of the Rio Declaration which calls for the prevention of the transfer to other states of substances or activities that cause environmental degradation or that are harmful to human health. This principle would presumably include toxic, hazardous, and atomic substances and wastes and associated activities. Prior informed consent by the receiving country does not absolve the export state from the commitment to not transfer these substances.

• TO RECOGNIZE THAT TRANSFER OF WASTES IS SOCIALLY UNJUST

IT SHOULD BE REALIZED THAT TRANSFER OF WASTES (TOXIC, HAZARDOUS, AND ATOMIC) IS SOCIALLY UNJUST. HAZARDOUS WASTES THAT RESULT FROM PRODUCTION IS PART OF THE COST OF PRODUCTION SO TRANSFERRING IT

TO ANOTHER COUNTRY IS THE SAME AS TRANSFERRING COSTS TO A COUNTRY THAT DID NOT INCUR THEM. CONSEQUENTLY, NO STATE HAS THE RIGHT TO EXPORT HAZARDOUS WASTES TO ANY OTHER COUNTRY EVEN IF THE IMPORTING COUNTRY HAS NO LEGISLATION THAT PROHIBIT SUCH IMPORTATION. FURTHERMORE, EXPORTING STATES SHALL NOT WITHHOLD INFORMATION ON THE DAMAGING EFFECTS OF THEIR EXPORTS ON HUMAN HEALTH AND ON THE ENVIRONMENT AS A WHOLE. (1998)

- TO REFUSE TO ACCEPT PERMISSION TO BE HARMED

NO SUPPORT SHALL BE GIVEN FOR THE JUSTIFICATION OF THE TRANSFER OF HARMFUL SUBSTANCES TO HUMAN HEALTH AND TO THE ENVIRONMENT ON THE GROUNDS THAT THE RECIPIENT STATE HAS GRANTED PERMISSION FOR THIS TRANSFER.

- TO NOT ACCEPT OR AGREE TO ACCEPT, UNDER ANY CIRCUMSTANCES, HAZARDOUS, TOXIC, OR ATOMIC WASTES FROM ANOTHER STATE. ALSO, UNDER NO CIRCUMSTANCES SHALL A STATE THAT HAS LESS STRINGENT REGULATIONS BE CALLED UPON TO ACCEPT ACTIVITIES OR SUBSTANCES THAT ARE DEEMED TO BE ECOLOGICALLY UNSAFE AND UNSOUND IN ANOTHER STATE THAT HAS MORE STRINGENT REGULATIONS. SIMILARLY, THIS PRINCIPLE SHALL ALSO APPLY WITHIN A STATE WHERE INDUSTRY OR A GOVERNMENT WITHIN A STATE SEEKS TO DEPOSIT TOXIC, HAZARDOUS OR ATOMIC WASTES IN DIFFERENT AREAS OF THE STATE, IN PARTICULAR ON INDIGENOUS LANDS OR IN AREAS IN WHICH THE DISENFRANCHISED MEMBERS OF THE POPULATION LIVE. (1998)

STRESSING THE AFFIRMATION OF STATE RESPONSIBILITY ENUNCIATED IN THE BASEL CONVENTION: "STATES ARE RESPONSIBLE FOR THE FULFILLMENT OF THEIR INTERNATIONAL OBLIGATIONS CONCERNING THE PROTECTION OF HUMAN HEALTH AND PROTECTION AND PRESERVATION OF THE ENVIRONMENT, AND ARE LIABLE IN ACCORDANCE WITH INTERNATIONAL LAW" (PREAMBLE, CONVENTION ON THE CONTROL OF TRANSBOUNDARY MOVEMENTS OF HAZARDOUS WASTES AND THEIR DISPOSAL, BASEL 1992) (1998)

- TO ACT UPON THE ASSESSMENT IN THE BASEL CONVENTION OF THE INCREASED PRODUCTION OF HAZARDOUS WASTE AND OF THE INCREASED

ADVERSE HEALTH IMPACTS OF THESE WASTES, AND THE NEED TO MOVE TOWARDS PREVENTION (1998)

- TO RESPECT THE INHERENT WORTH OF NATURE AND TO ETHICALLY BY ENDORSING THE PRINCIPLE ENUNCIATED IN THE WORLD CHARTER OF NATURE

(A) EVERY FORM OF LIFE IS UNIQUE, WARRANTING RESPECT REGARDLESS OF ITS WORTH TO MAN [HUMAN], AND TO ACCORD OTHER ORGANISMS SUCH RECOGNITION'S, MAN [MUST BE GUIDED BY A MORAL CODE OF ACTION. (1982)

- TO IMMEDIATELY CEASE THE PRODUCTION OF HAZARDOUS WASTE SO AS TO ANTICIPATE AND THUS PREVENT THE TRANSBOUNDARY IMPACT OF HAZARDOUS WASTE (1998)

- TO ESTABLISH MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE INDUSTRY TO BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES (1998)

C. We support consolidation of the delivery of all social programs into a single agency focusing on regional community centres. (ALBERTA GREEN POLICIES, ALBERTA 1997)

I We will consider the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to extend this principle to include transfer within states to lands of indigenous peoples, or to communities of marginalized citizens.

- \* to act upon a commitment in recent UN Conferences to move away from the over-consumptive model of development, reduce the ecological footprint and reject the notion that economic growth will solve the urgency of the global situation.

- \* to invoke the Precautionary Principle found in the Rio Declaration, Convention on Biological Diversity, and Framework Convention on Climate Change Convention) and not wait until there is scientific certainty that environmental degradation, loss or reduction of biodiversity, or climate change will occur for current practices causing environmental degradation, loss or reduction of biodiversity, or climate change to be banned, discontinued, or phased out.

II We will support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO2 by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to adhere to the Prevention of Disasters Principle as enunciated in the Habitat II Agenda, and ban, discontinue and phase out the use of substances and activities that could potentially cause disasters.

#### RESOLUTION: ENSURING THE PREVENTION OF DISASTERS INCLUDING NA-TECHS NATURAL AND TECHNOLOGICAL DISASTERS

Affirming the extension of the concept of disaster reduction to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) (1998)

- TO ENSURE THAT SIGNIFICANT PUBLIC CONCERN ABOUT AN ACTIVITY OR TECHNOLOGY THAT COULD LEAD TO PREVENTABLE DISASTER BE TAKEN SERIOUSLY AND THE ACTIVITY OR TECHNOLOGY SHALL BE PREVENTED OR BANNED 1998)

- TO ENSURE THAT REGULATIONS THAT WILL PREVENT PREVENTABLE ANTHROPOGENIC DISASTERS AND ENCOURAGE CONTINUED DOMESTIC AND INTERNATIONAL RESOURCES FOR DISASTER REDUCTION ACTIVITIES FOR NON-PREVENTABLE DISASTERS 1998)

- TO EMBARK UPON THE PREVENTION OF PREVENTABLE DISASTER, BY PREVENTING THE MINING OF URANIUM, THE CONTINUED PRODUCTION OF NUCLEAR ARMS, FOR THE PRODUCING OF NUCLEAR ARMS, THE TESTING OF NUCLEAR ARMS, THE CIRCULATING AND HARBORING OF NUCLEAR-ARMED OR NUCLEAR-POWERED MILITARY VESSELS, THE USING OF CIVIL NUCLEAR REACTORS, THE USE OF MOX FROM WEAPONS-GRADE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN CIVIL NUCLEAR REACTORS 1998)

- TO BAN THE FURTHER PRODUCTION AND CONSUMPTION OF ALL OZONE DEPLETING SUBSTANCES, AND TO ENSURE THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION (1998)

- TO IMMEDIATELY BAN OF THE PRODUCTION AND USE OF LAND MINES (1998)

- TO RE-SUBMIT A GENERAL ASSEMBLY RESOLUTION ON AN IMMEDIATE CESSATION OF THE PRODUCTION OF NUCLEAR, CHEMICAL AND BIOLOGICAL WEAPONS, AND FOR A TIME-BOUND ABOLITION OF ALL EXISTING WEAPONS OF MASS DESTRUCTION (1998)

- TO CONDEMN THE PHARMACEUTICAL CORPORATIONS DICTATING CHANGES INTO THE CODEX ALIMENTARIUS (1998)

- \* to address the issue of pharmaceutical corporations dictating changes into the Codex Alimentarius.

TO SUPPORT AND PROMOTE AN INTERNATIONAL COURT OF CRIMINAL JUSTICE (PROPOSED, 1998)

- \* to institute an International Court of Compliance where citizens can take evidence of state and corporate non-compliance

- \* TO ELIMINATE THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION AS AGREED IN 1972

(l) Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

4.3. Continued production and export of products that have been banned... or withdrawn

(i) Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

- (ii) Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have been severely restricted in their consumption and/or sale owing to their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)
- (iii) Aware of the harm to health being caused in importing countries by the export of pharmaceutical products ultimately intended also for consumption and/or sale in the home market of the exporting country, but which have not yet been approved there,
- (iv) Considering that many developing countries lack the necessary information and expertise to keep up with developments in this field,
- (v) Considering the need for countries that have been exporting the above-mentioned products to make available the necessary information and assistance to enable the importing countries to adequately protect themselves,
- (vi) Cognizant of the fact that almost all of these products are at present manufactured and exported from a limited number of countries,
- (vii) Taking into account that the primary responsibility for consumer protection rests with each State,
- (viii) Recalling its resolution 36/166 of 16 December 1981 and the report on "Transnational corporations in the pharmaceutical industry of the developing countries", and acting in pursuance of Economic and Social Council resolution 1981/62 of 23 July 1981,
- (ix) Bearing in mind in this context the work of the Food and Agriculture Organization of the United Nations, the World Health Organization, the International Labour Organization, the United Nations Environment Programme, the General Agreement on Tariffs and Trade, the Centre on Transnational Corporations and other relevant intergovernmental organizations
- (Preamble, Resolution 37/137 Protection against products harmful to health and the environment, 1982)

**\* TO DEMAND THAT THE WORLD HEALTH ORGANIZATION (WHO) REVIEW AND STRENGTHEN ITS ETHICAL CODES FOR MEDICAL RESEARCH AND THAT WHO OFFICIALS BE ENCOURAGED TO CEASE COLLABORATION MEDICAL RESEARCHERS ON HUMAN CELL LINES THAT COULD BE PATENTED BY FOREIGN GOVERNMENTS OR CORPORATIONS;**

\* TO DEMAND THAT THE CONVENTION ON BIOLOGICAL DIVERSITY (THE LEGALLY-BINDING INTERNATIONAL ACCORD ADOPTED AT THE 1992 EARTH SUMMIT) ACCEPT ITS LEGAL RESPONSIBILITY FOR HUMAN BIOLOGICAL DIVERSITY AND ESTABLISH STRICT REGULATIONS REGARDING ITS COLLECTION, EXCHANGE, AND INVESTIGATION; (deferred resolution)

\* TO DEMAND THAT THE FOURTH REVIEW CONFERENCE OF THE BIOLOGICAL WEAPONS CONVENTION IN GENEVA IN NOVEMBER, 1996 INSIST THAT CIVILIAN MEDICAL RESEARCH IS KEPT SEPARATE FROM BOWARFARE RESEARCH. (deferred resolution)

\* TO DEMAND THAT THE NEXT REVIEW CONFERENCE OF THE BIOLOGICAL WEAPONS CONVENTION IN INSIST THAT CIVILIAN MEDICAL RESEARCH IS KEPT SEPARATE FROM BOWARFARE RESEARCH. (DEFERRED RESOLUTION)

\* TO LOBBY AGAINST PATENT PROTECTION THAT LIMITS NOT INCREASES, SCIENTIFIC RESEARCH (DEFFERRED RESOLUTION)

\* TO CALL FOR THE BANNING OF GENETICALLY ENGINEERED FOODS AND FOR THE END TO THE HUMAN GENOME PROJECT (CIRCULATED MATERIAL PASSED BY CABINET)

• to BAN THE PATENTING OF HUMAN GENES (1998)

\* TO CALL FOR END TO "BIOPIRACY" OF INDIGENOUS KNOWLEDGE WHICH IS APPROPRIATED WITHOUT RECOGNITION OR CONSENT (DEFERRED RESOLUTION)

\* TO discourage, by whatever means feasible, Canadian purchase of land for use causing direct or indirect rainforest destruction in countries wherein rainforest exists BECAUSE FARMERS IN THE TROPICS ARE BEING FORCED OFF THEIR LAND INTO ENDANGERED RAINFOREST AREAS, DUE TO PRESSURES OF TOURISM (B.C. POLICY CONVENTION, 1989)

92.0 FEDERAL-PROVINCIAL RELATIONS / CANADIAN CONSTITUTION

## 92.1 Enacting International Law

\* TO [IMMEDIATELY] enact THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE WITH international conventions, treaties and undertakings signed by the Canadian government into law, including repealing and amending legislation in contravention of these treaties, conventions and undertakings /except in instances where they are in conflict/ POLICY CONVENTION, 1996;

\* TO not approve any amendment without an amendment recognizing the supremacy of international law (B.C. POLICY CONVENTION, 1986)

\* TO work towards a goal of nuclear and general disarmament and world peace through the non violent resolution of conflict;

\* TO encourage cultural alliances with East Bloc Countries, other nuclear powers, and other countries where we need to improve mutual understanding (B.C. POLICY CONVENTION, 1986)

\* TO support, and where necessary, establish organizations of peace research and education POLICY CONVENTION, 1986.

• TO LOBBY FOR THE LINKING OF FOREST PROTOCOLS WITH LEGALLY BINDING CONVENTIONS

• TO CALL UPON STATES SIGN, AND RATIFY UNITED NATIONS CONVENTIONS RELATED TO FORESTS, AND THAT STATES ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE WITH THESE CONVENTIONS, AND TO ENSURE THAT THE INTERNATIONAL LEGALLY BINDING INSTRUMENTS CAN BE USED BY CITIZENS IN THE NATIONAL AND REGIONAL COURT SYSTEMS.

**DEPARTMENT OF  
FOREIGN AFFAIRS**

**DEPARTMENT OF FOREIGN AFFAIRS AND INTERNATIONAL TRADE**

Foreign Aid \* TO strive to provide, wherever possible, feasible, and appropriate, educational materials, technical, social, and economic expertise, financial and material resources to societies or local communities in need of assistance to overcome the above-mentioned problems which would allow them to live a good quality, environmentally sound lifestyle (B.C. POLICY CONVENTION, 1990)

- TO LEGISLATE AN END TO ENTERTAINMENT THAT USES ANIMALS (1998)

**ENVIRONMENTAL TOXINS**

**Pulp Mill Pollution**

\* TO endorse the four goals of the Pulp Pollution Campaign of the West Coast Environmental Law Research Foundation as a useful first step towards eliminating the toxic discharges of pulp and paper mills:

Goal #1 is elimination of the organochlorines (AOX) from pulp and paper mills according to an urgent and realistic timetable.

Goal #2 is compliance by BC pulp mills with the existing federal and provincial pollution standards, with improvements where necessary.

Goal #3 is wide availability of pulp and paper products free from contamination with organochlorines.

Goal #4 is quick and routine public access to information about the environmental impact and regulatory compliance record of the BC pulp and paper industry.

B.C. POLICY CONVENTION, 1990

PCBs

1225

\* TO DISPOSE OF existing stocks of PCBs by the latest biochemical means and TO GIVE the lumber industry be given a fixed time in which to find alternative methods of treating lumber. POLICY CONVENTION, 1987

#### Toxic and Hazardous Waste

\* TO oppose construction of a toxic waste dump in the Interior bioregion of the province, and call upon the government and the private sector to encourage by all means the altering of production techniques and recycling, so that there is treatment and reduction of toxic waste at the source (B.C. POLICY CONVENTION, 1987

Every household and office should be charged per unit of waste. From these revenues each municipality could support a blue box program. (GREEN PARTY OF NEWFOUNDLAND).

#### RECYCLING, WASTE MANAGEMENT AND INCINERATION

The Green Party of Ontario favours the continued ban on incineration in the province of Ontario. We are opposed to the use of Incineration as an option for Waste disposal for the following reasons.

- 1: Ash residue from incineration contains high levels of heavy metals and dioxin, frequently failing hazardous waste testing.
- 2: Ash poses serious threats to air, water quality, human health, especially that of workers
- 3: Heavy metals emitted from Incinerators bio accumulate in the food chain and therefore pose a health hazard to the public.
- 4: Numerous Science advisory boards have expressed concern over the lack of knowledge concerning municipal waste combustion.
- 5: Combustion sources by their nature produce acid gases which are known to be greenhouse gasses and contribute to acid rain and global warming.

6: 80-90 percent of solid municipal waste can be recycled using current proven safe technology. Therefore, the incineration of garbage is an unnecessary combustion source that could be eliminated early in any rational program of sustainability.

7: It is a waste of valuable resources.

8: There is a terrible loss in burning compostable material which could be used to nurture our depleted soils.

9: Solid waste management is an essential element of environmental health and pollution control.

Therefore, we recommend:

1: Continuing a ban on the construction of new Incinerators.

2: Improved monitoring of the Incinerators in Ontario with complete disclosure of all test results.

3: Support amendments to provincial and federal statutes which promote the use of the least toxic alternatives in product composition, and secondly alternatives which are the most reusable, recyclable, most durable, and most biodegradable as appropriate. In this context biodegradability must address the issue of toxic residue remaining after disintegration.

4: Our society should promote through incentives, and education the minimization of waste at all points of transfer from raw material to consumer products. (GP of Ontario)

5: Support legislation and a taxation (see tax section) that promotes the use of recycled material over virgin materials through fees, taxes, price supports, and tax credits. We must provide incentives to businesses that engage in recycling.

6: Support Municipal and Provincial procurement guidelines for

contractors which enable product life and ability to be repaired to be considered in procurement decisions.

7: Support research into problem areas of waste management such as battery recycling, household hazardous waste collection and recycling possibilities.

8: Implement recycling programs with a goal to recycle and compost 80% of household and commercial waste within 5 years.

9: Support the designation of incinerator ash as hazardous residue unless comprehensive double-blind testing proves otherwise.

10: Support extensive research and monitoring of facilities to establish a database and develop stringent regulatory standards.

## RECYCLING

Recycling is hindered by tipping fees at garbage dumps that do not accurately reflect the full cost of dumping waste in abandoned quarries. Landfill sites leak a leachate that is complex soup of modern chemicals used in the home and industry. The combination of car batteries, soap, water, car oil, transmission fluids, anti freeze, the myriad of toxic chemicals we take for granted percolates through a landfill and pollutes for ever the ground water around landfill sites. All landfill sites leak. They all pose a very real threat to the health of the community in which they are located. This cost can not be calculated in considering landfill verses reduction, reuse, rejection or recycling.

1: Refer to Tax section for a full discussion of tax incentives.

2: Implement dumping fees that reflect the full long-term cost of waste disposal.

3: Require full product responsibility on all products and

packaging. The responsibility of pick-up, recycling, and reuse of all products and packaging material must be born by the manufacturers and passed on to consumers. Ban non reusable containers and products.

For example, included in the cost of the purchase of a car would be a levy that would be used to dismantle, recycle and reuse the remains of the car.

4: Ban the export of recyclable materials. All materials must be recycled in the city nearest where they are consumed.

5. Continue funding and expanding the blue box program. Items are reusable, recyclable or banned.

6. Institute an immediate ban on new landfill site construction.

8. Establish community drop off points for recyclable materials like plastics that are not economical to collect.

9. Ban compostable material from landfill collection in favour of home and business composting. (GREEN PARTY OF ONTARIO, 1994)

• TO [Implement] /consider/ the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO EVALUATE the need for these hazardous chemicals TO EXPLORE and alternatives (B.C. POLICY CONVENTION, 1987)

\* TO advocate incentives for industry to implement pollution prevention approaches, including:

- 1) Tax breaks for industries that install and utilize pollution prevention approaches and demonstrate real reductions in the production of residuum; and
- 2) Establishing tax exempt industrial revenue bonds for underwriting industrial change-over to pollution prevention approaches; and
- 3) Offering awards to industries that have done outstanding jobs of reducing or eliminating residual production; and

- 4) Supporting the use of Residual Exchanges (Waste Exchanges); and
- 5) Encouraging on-site reuse of residuum; and
- 6) Assisting the business community to reduce wastes, above and beyond assisting them to dispose of wastes. (Note: Future subsidies on pollution control can be expected to shrink.) (B.C. POLICY CONVENTION, 1987)

I We will consider the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO PROMOTE AND support the use of disincentives for industry to continue to utilize unsatisfactory residual management approaches, including:

- 1) Banning the use of landfills and deep well injection; and
- 2) Enacting and enforcing strict liability laws; and
- 3) Enacting and enforcing waste end taxes; and
- 4) Enacting and enforcing workers' and citizens' right to know laws; and
- 5) Introducing a waste audit system; and
- 6) Making use of the Way Bill system to track and identify potentially recyclable wastes. (B.C. POLICY CONVENTION, 1987)

\* TO ENSURE all expenditures of time, resources, and finances be in effective in achieving worth while goals and be carefully monitored to ensure maximum benefit  
POLICY CONVENTION, 1990

\* TO {ENSURE] THAT all expenditures of time, resources, and finances be in keeping with the policies and goals of the Greens (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that all expenditures of time, resources, and finances be in keeping with the needs and stated desires of those receiving the assistance (B.C. POLICY CONVENTION, 1990)

Foreign policy

\* TO support the removal of Indonesia from East Timor POLICY CONVENTION, 1993;

\* TO support self determination for East Timor POLICY CONVENTION, 1993;

\* TO support a moratorium on aid, arms sales and investment beneficial to the Indonesian government until its withdrawal from East Timor

(B.C. POLICY CONVENTION, 1993) CONFLICT

\* TO ENSURE that development aid monies to Indonesia be re-channeled to peoples NGOs within Indonesia. POLICY CONVENTION, 1993;

Burma/Myanmar Policy

91.3. a       Whereas the brutal dictatorship of Ne Win began in Burma in 1962; and

91.3. b       Whereas the current State Law and Order Restoration Council (SLORC) government is practicing a "scorched earth" war against the Burmese minorities; and

91.3.c Whereas over 500,000 Burmese have been forcibly relocated, 30,000 have become political prisoners, and tens of thousands have been killed and tortured in the last three years; and

91.3. d       Whereas Aung San Suu Kyi and the National League for Democracy (NLD) won over 80% of the vote and 392 of 485 seats in the National Assembly in the May 1990 multiparty elections,

91.3.1 Be it resolved that the Greens call for SLORC to resign as the Burmese government and allow for the peaceful transfer of power to the democratically elected NLD; and

91.3.2 Further resolved that the Greens support economic sanctions against Burma until SLORC transfers power to the NLD.

91.4       Tibet Policy

\* to recognize Tibet as an independent state. (POLICY CONVENTION, 1993)

## DEPARTMENT OF INDIAN AND NORTHERN AFFAIRS

### INDIAN AFFAIRS AND NORTHERN DEVELOPMENT (4,523,617,000)

**department should be dismantled and the 4.5 billion reassigned and transferred across Canada to allow First Nations to manage their own affairs within a framework of public trust principles so that the following Department commitment will be acted upon:**

**"We will be guided by the findings and recommendations of the Report of the Royal Commission on Aboriginal Peoples which provides eloquent testimony to the need for fundamental changes in relationship between Aboriginal and non-Aboriginal Canadians". Redirect funding away from promoting corporate/First Nations exploitative development into the implementing the Royal Commission report on First Nations.**

Department

Canadian Polar Commission [TO BE DISBANDED]

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### NATIVE RIGHTS, FIRST NATIONS

Greens recognize the immense injustice that has been perpetuated on the indigenous peoples of Canada. From historical policies of conquest and domination, to more recent attempts at assimilation and genocide. The past racist / exploitative practices of those in power cannot be forgotten. The Greens believe that it is morally imperative that self-determination for the First Nations be recognized. Canada must act within the guidelines of the United Nations and constitutionally recognize native self-government

The Greens recognize that treaties agreed to in the past were between sovereign nations, and constituted a plan for co-existence, and not the relinquishing of native sovereignty. It is accepted that existing treaties should be renegotiated with First Nations

representatives, who are recognized by the native peoples themselves. In the case of those disputed land areas, a resolution mechanism that recognizes all treaties and previous land agreements must be instituted. Self government for the First Nations should be explicitly stated in the Constitution of Canada. The Greens accept the position that a debt to the First Nations is owed, and that some form of compensation is mandatory. This would have the purpose of assisting the sovereign aboriginal people in achieving sustainable economies.

A Green government would:

- Begin by negotiating immediately with native people in this province for the immediate return of absolute control over traditional lands to them.

- Negotiate a series of transfer payments, for five to ten years, to assist in the reestablishing of a sustainable economy

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- Continue to offer free post-secondary education to native people. (Ont, 1994)

- Advocate to the federal government for the recognition of full sovereignty to the First Nations of Canada.

- Make constitutional amendments regarding native self-government a priority in federal-provincial dialogue.

The goal of such a policy is to return to the Aboriginal people of Canada their traditional lands. To encourage peaceful coexistence between peoples who occupy the same biosphere. To stimulate the resurrection of native philosophy / traditions and ways to the aboriginal peoples. To give the give First peoples the opportunity

to become independent and proud once again.

(GREEN PARTY OF ONTARIO, 1994)

A Green party government would undertake:

- To work with /Native/ [FIRST NATIONS] groups to achieve a beneficial alliance and understanding. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to recognize the Royal Proclamation of 1763 in its confirmation of original nations as sovereign peoples with inherent rights.

Self government

- \* TO support and recognize aboriginal title as that title is defined and demonstrated by each people for their own lands (B.C. POLICY CONVENTION, 1988)

- \* TO stand in opposition to federal and provincial government policies which insidiously or overtly promote extinction [extinguishment] of indigenous culture (B.C. POLICY CONVENTION, 1988)

- \* TO recognize First Nations self-chosen governments AND SELF DETERMINATION (B.C. POLICY CONVENTION, 1990)

- \* TO recognize any governmental treaties any First Nation is signatory to as internationally binding agreements. (B.C. POLICY CONVENTION, 1990)

- \* TO ENSURE that any negotiations with aboriginal peoples be through each nation's self chosen government, not through Indian bands or any other artificial structure setup by the Canadian government, unless it is the wish of the particular nation involved (B.C. POLICY CONVENTION, 1990)

- \* TO [ENSURE] that any negotiations be individually done with each First Nation, thereby respecting each nation's right to self determination and the rule of international law respecting treaty process (B.C. POLICY CONVENTION, 1990)

- \* TO recognize the right of each First Nation to negotiate land claim settlements (B.C. POLICY CONVENTION, 1990)

- \* TO recognize the right of each First Nation to self-government including negotiating sovereignty-association (B.C. POLICY CONVENTION, 1990)

- TO support /Native/ [FIRST NATIONS] self-determination and the rapid and equitable settlement of land claims. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH

CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS); (deferred resolution)

\* TO work to inform and organize non indigenous people within each aboriginal territory so that ultimately, they can meaningfully negotiate with the indigenous people regarding non-indigenous use and occupancy of aboriginal territories and regarding mutually acceptable, ecologically responsible land management goals (B.C. POLICY CONVENTION, 1988).

• TO acknowledge that we have much to learn from Native Peoples both ecologically and spiritually, and we will solicit their wisdom on these issues. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Prevention of Environmental destruction on land of first nations

\* to act on the commitment made at the United Nations conference on

Environment and Development (UNCED, 1992) to not carry out any activities on the lands of indigenous peoples that would cause environmental degradation or that would be culturally inappropriate.

\* to prevent the deposit on the land of first nations peoples of toxic,

hazardous, and atomic wastes, and disallow all testing of weapons over the lands of indigenous peoples.

\* to ensure that no resource extraction, economic activity, or settlement occurs on land which is in dispute, unless the successors of the original nations involved consent to such activity in the absence of consent, interim measure shall be in place. The fiduciary obligations of the Federal Government to the successors of the original nations, wherever they live in Canada, must be increased during this healing and transition process. Programs flowing from these obligations need to be planned, operated, and controlled by original peoples in their local communities in order to be culturally appropriate and responsive to needs.

\* TO DISALLOW [IN CONSULTATION WITH] FIRST NATIONS ON RESERVES TO RESELL GOODS LIKE CIGARETTES, [CASINOS] ALCOHOL, AND GASOLINE TAX-FREE (Deferred resolution)

\* TO DISALLOW FIRST NATIONS POLICIES THAT OVEREXPLOIT NATURAL RESOURCES OR THREATEN SPECIES OR HABITATS. (deferred resolution) OR IN VIOLATION WITH INTERNATIONAL ENVIRONMENTAL AGREEMENTS.

\* TO ADDRESS THE VIOLATION OF CIVIL AND POLITICAL RIGHTS OF FIRST NATIONS PEOPLES IN CANADA (passed by cabinet and issued as a petition and document)

• TO acknowledge that we have much to learn from Native Peoples both ecologically and spiritually, and we will solicit their wisdom on these issues. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Self government

\* TO support and recognize aboriginal title as that title is defined and demonstrated by each people for their own lands (B.C. POLICY CONVENTION, 1988)

\* TO stand in opposition to federal and provincial government policies which insidiously or overtly promote extinction [extinguishment] of indigenous culture (B.C. POLICY CONVENTION, 1988)

\* TO recognize First Nations self-chosen governments AND SELF DETERMINATION (B.C. POLICY CONVENTION, 1990)

\* TO recognize any governmental treaties any First Nation is signatory to as internationally binding agreements. (B.C. POLICY CONVENTION, 1990)

\* TO ENSURE that any negotiations with aboriginal peoples be through each nation's self chosen government, not through Indian bands or any other artificial structure setup by the Canadian government, unless it is the wish of the particular nation involved (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that any negotiations be individually done with each First Nation, thereby respecting each nation's right to self determination and the rule of international law respecting treaty process (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to negotiate land claim settlements (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to self-government including negotiating sovereignty-association (B.C. POLICY CONVENTION, 1990)

\* to seek honourable settlements with the successors of original nations that will lead to the creation of culturally and economically self-governing successors of original nations throughout Canada.

\* to seek nation-to-nation partnerships with the original nations of North America

\* to not impose a form of self-government or a framework of nationhood on the successors of the original nations. Original peoples can best choose the forms of governance appropriate for themselves;

• TO support /Native/ [FIRST NATIONS] self-determination and the rapid and equitable settlement of land claims. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS); (deferred resolution)

\* TO RECOGNIZE OFF-RESERVE INDIGENOUS PEOPLES; (deferred resolution)

\* TO work to inform and organize non indigenous people within each aboriginal territory so that ultimately, they can meaningfully negotiate with the indigenous people regarding non-indigenous use and occupancy of aboriginal territories and regarding mutually acceptable, ecologically responsible land management goals (B.C. POLICY CONVENTION, 1988).

\* to call a national meeting in 1997 to discuss the implementation of the recommendations of the Royal Commission Report on Aboriginal Peoples

\* to apologize to First Nations for the Indian Act, and for residential schools.

Integrated Indian and Inuit community

based Health care

Indians or Inuit for cost of construction and

extension or renovation hospitals

5: Withdraw provincial funding for research into or support for Water Diversion Projects. Current plans for James Bay directly affect 22,000 treaty Indians in Northern Ontario.

Policy and Internal services • End all factory ship fishing in waters under Canadian jurisdiction (GPC, 1988)

•

Rivers have been damaged by waste from cities and factories.

Here we see a picture of the Saguenay River, Quebec. Whales, fish and other animals that are native to this river and the Fleuve Saint-Laurent have been seriously affected by heavy metal poisoning. (GREEN PARTY OF NEWFOUNDLAND).

- [ban] hunting, trapping, and fishing in all provincial parks, conservation areas, and Crown game preserves (GPC, 1988, Ontario)

### Hunting and Fishing

-Hunting with rifles and fishing with electronic fish finders should be banned. Hunting is a natural act that is an integral part of the natural balance (Ontario)

Further aware that fish, reptiles, birds and mammals, including humans are all affected by POPs via a growing list of actual and suspected effects that include cancer, damage to immune and reproductive systems and developmental problems. IUCN, 1996

- \* TO IMMEDIATELY CEASE ALL predator control measures for the support of grazing operations and commercial fisheries also be ceased immediately B.C. POLICY CONVENTION, 1987

Of the 34 Chemicals commonly used to kill dandelions 62% are toxic to fish and the nervous system of humans, 35% cause birth defects in humans and are toxic to bees and birds, 29% cause cancer and kidney damage, and 85% are sensitizers, that means they cause people to develop allergic type reactions to the chemical.

Ontario soils have lost as much as 50% of their organic content since cultivation began. This has led soils to be highly susceptible to erosion and compaction. A fundamental component of soil degradation is the suppression of biological activity. Healthy soil is teeming with life, from earthworms to microorganisms. The situation is approaching critical as local instances of soil burnout is occurring. If conventional agriculture is continued

Ontario's agricultural soils will reach a threshold beyond which productivity cannot be easily restored.

To this end we recommend:

1: A total ban on the use of pesticides and herbicides for private lawn care purposes. (Ontario)

mercury in fish, Ont

#### **DEPARTMENT OF FISHERIES/OCEANS (1,314,065,000)**

**Canada at the international level has incurred obligations to protect the marine environment and community watersheds. Nationally, the federal government has failed to implement sufficiently the Federal Fisheries Act in enforcing the section which designates as a crime the deposit of deleterious substances that could contribute to loss or reduction of fish habitat. In addition, the federal government under the Convention on Biological Diversity has undertaken to conserve biodiversity and not create "megadiversity" through fish farming and genetically engineered fish. The funding of the Fisheries Department must be redirected to enforcing the Act, to banning fish farming and genetically engineered fish, to restoring wild stocks and ecosystems, and to assisting fishers who have been impacted by the failure of the Federal and provincial governments to protect the wild stocks. Revise the Vessel Operator Licence to ensure that it sufficiently addresses enhanced safe vessel operation. There has to be greater hands-on education in respect to safe vessel operation and navigation, and the immediate commitment to having this licence be a requirement for navigation of vessels in Canadian waters. Require mandatory holding tanks in all Canadian waters. Increase Coastguard funding in collaboration with the Disaster Prevention Fund in Department of Defence.**

#### **Sustainable Fisheries**

The use of draggers in both the east and west coast fisheries has decimated our ocean ecosystems. We must recognize and support ecologically appropriate fishing technologies. (GREEN PARTY OF NEWFOUNDLAND).

A Green Party government would undertake:

- \* to ratify the Law of the Sea treaty

- \* to establish a network of Marine parks, and ecological reserves.

- \* to prevent risks of disease transfer from net-cage fish to wild stocks, such as black cod, herring, and salmon. Communities like Gaultois, Newfoundland depend upon the inshore fishery. A sustainable inshore fishery must be pursued in order to save these communities and preserve marine biomasses. (Newfoundland)

- \* to address the following outstanding issues in aquaculture, and maintain a moratorium on increased fish farming: (a) Risks of introduction of exotic diseases from the continued importation of Atlantic salmon into Pacific waters; (b) Pollution from fish sewage, contamination of shellfish, and loss of habitat; (c) Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices; (d) Loss of access to traditional fisheries for First Nations people, with increased risks to their health from exposure to drug residues from food collected near net-cage operations; (e) Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water; (f) Decline of wild stocks. Losses of wild fish, such as herring and juvenile salmon, consumed by net-cage fish; (g) Endangered human health from the increased use of antibiotics and other drugs, which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics.

- \* To invoke the precautionary principle which reads that where there is the possibility of loss of fish habitat and species, the lack of full scientific certainty shall not be used to postpone measures to prevent the threat (submission passed by cabinet to aquaculture commission)

to support an end [end] to all factory ship fishing in waters under Canadian jurisdiction (GPC, 1988)

because

- factory ship fishing is inherently large-scale enterprise in direct competition with the smaller scale efforts of fishers who live nearer to the waters being utilized

- fish populations in waters adjacent to Canada are far lower than before human immigration from Europe and

these lowered fish populations represent a direct threat to the main mammals which rely on fish for their food supply

- to transfer fishing quotas from corporations to individual fishers or fishing communities

- to use small boat technology, more fishers will become active while applying less fishing pressure on commercial species
- to phase out draggers which scour the ocean floor so as to protect this crucial habitat and significantly decrease the amount of bycatch and undersized species caught in commercial fishery
- to ensure individuals or communities receive a set quota per season, per species. These quotas would be transferable such that they may be exchanged for quota of other species
- to encourage fisher to then become active in the management of the resources which gives them more responsibility and liability (GPC, 1996)

## MARINE PROTECTED AREAS

- to establish Marine Protected areas to help maintain biodiversity and guarding important fish habitat

### Application of the precautionary principle to wild species

- \* TO PROTECT ALL FISH SPECIES BY ERRING ON THE SIDE OF CONSERVATION WHEN SCIENTIFIC ADVICE IS UNCERTAIN (deferred resolution); NEED MORE COMMENT ON ACROSS CANADA ISSUES (from deferred resolution comments)
- \* TO AFFIRM that interfering with the natural cycles of wild species is morally wrong; and B.C. POLICY CONVENTION, 1987
- \* TO CONTEND THAT THE dependence on farm-raised salmon may weaken concern for the preservation of spawning streams (B.C. B.C. POLICY CONVENTION, 1987)
- \* TO Protect of Fish from Hydroelectric Development (B.C. POLICY CONVENTION 1993)

### Salmon aquaculture elimination

- \* TO EXPRESS CONCERN THAT the production of salmon on commercial farms is an industry which is chemically intensive utilizing algacide, molluscides, antibiotics, and colouring agents; and B.C. POLICY CONVENTION, 1987
- \* TO AFFIRM THAT the raising of salmon in crowded conditions encourages epidemics which have the potential to infect wild populations; and B.C. POLICY CONVENTION, 1987

\* TO EXPOSE THAT fish farmers have been cited for shooting at and poisoning seals, sea otters, herons, and eagles which they view as a threat to their livestock; and B.C. POLICY CONVENTION, 1987

The Seal Harvest:

A seal harvest should only be implemented when markets are available for the whole animal. A seal harvest should not be used in an attempt to enhance fisheries. (GREEN PARTY OF NEWFOUNDLAND).

\* TO CONDEMN THE INFRINGING OF fish farming upon the natural beauty of the coastline and encroaching on the rights of human and other species to use same; B.C. POLICY CONVENTION, 1987

\* TO oppose the issuing of salmon fish farming permits by the government of British Columbia (B.C. POLICY CONVENTION, 1987)

\* TO PREVENT salmon populations and other species in BC FROM BEING endangered by hydroelectric dams which destroy their natural habitat, B.C. POLICY CONVENTION, 1993

\* TO CONDEMN THE GRANTING OF fish farming permits without the benefit of environmental impact studies and without scientific analysis of the health and economic impact the industry may inflict upon society. (B.C. POLICY CONVENTION, 1987)

• To SUPPORT THE FIRST NATIONS CONCERN THAT fish farming represents a spiritual interference with the life cycle of the salmon and thus degrades and debases the spirit of the salmon itself; B.C. POLICY CONVENTION, 1987

\* TO REQUIRE wholesalers and retailers (including restaurants) to state the source or origin of the salmon being sold. All farm-raised salmon should be labeled as such. (B.C. POLICY CONVENTION, 1987)

\* TO oppose all further hydro electric generation which has negative impact on salmon fisheries or other wildlife, especially watershed diversion; and (B.C. POLICY CONVENTION, 1993)

\* TO support the conversion of existing power generation sites to fish friendly systems. B.C. POLICY CONVENTION, 1993

\* TO oppose the establishment of a West Coast AND EAST COAST seal hunt. B.C. POLICY CONVENTION, 1987

NOTE THE FOLLOWING POLICY IN NEWFOUNDLAND IS NOT ENDORSED BY THE GREEN PARTIES IN OTHER PROVINCES AND IS IN CONFLICT WITH THE PRINCIPLES OF THE GREEN PARTY OF CANADA

XXX The Seal Harvest:

A seal harvest should only be implemented when markets are available for the whole animal. A seal harvest should not be used in an attempt to enhance fisheries. (GREEN PARTY OF NEWFOUNDLAND).

The Green Party supports the Inshore Fishery

Commercial fishing quotas should be transferred from corporations to individual fisherman or fishing communities. Using small boat technology, more fisherman will become active while applying less fishing pressure on commercial species. Reducing the number of draggers scouring the ocean floor will help protect this crucial habitat as well as significantly decreasing the amount of bycatch

and undersized species caught in commercial fishery. (GREEN PARTY OF NEWFOUNDLAND).

Individuals or communities would receive a set quota per season, per species. These quotas would be transferable such that they may be exchanged for quotas of other species. Fisherman then become active in the management of the resource, which gives them more responsibility and liability. (GREEN PARTY OF NEWFOUNDLAND).

The Capelin Fishery:

Since Capelin are the major food source of cod, seabirds and many whales, a moratorium needs to be called for Capelin until the numbers rebound. (GREEN PARTY OF NEWFOUNDLAND).

Marine Parks

The establishment of marine protected areas in Canada is long overdue. In the coastal environment, they do not limit public access, but implement strict controls over fishing

and development in the area. Marine parks and reserves protect the nursery grounds for many marine fish species, including cod. These are highly productive areas which play an important role in any marine ecosystem. Establishing several marine protected areas would help maintain biodiversity while guarding important fish habitat. (GREEN PARTY OF NEWFOUNDLAND).

### **GOVERNOR GENERAL (11,600,000)**

**Salary of Governor General should be reduced by 10,000 to set an example for the members of Parliament and Senators and the spending in the office up to 660,000 should be relocated to Human Right to Housing fund, and the Anti-poverty fund**

### **DEPARTMENT OF HUMAN RESOURCES AND DEVELOPMENT**

#### **(HUMAN RIGHTS)**

#### **HUMAN RESOURCES (26,264,157,000)**

**Rename the Department: suggestion Department of Social Justice and Development**

**Redirect funds, as mentioned in the 1999 Public Trust Green comment away from subsidizing industry wants into promoting human rights and social justice needs. For example, the Department should not invest in questionable industry ventures but begin to redirect the designated funds to the following:**

**(i) to increase income assistance (1 billion), to retirement fund (.4 billion) and to Child Investment fund (.6 billion). and set up an Anti-poverty Fund for poor children and their families.**

**(ii) to address the plight of sweat shop workers. Standards must be in place, complied with and enforced. These standards must include the following: • legal wage must not be below the poverty line and • an external, permanent, funded, nonprofit association to monitor corporate compliance, and to serve as a public voice addressing questions critical to the elimination of sweatshop practices must be established; (iii) to prevent environmental racism such as the locating of dumping sites or polluting industries on or near the lands of first nations peoples;**

**(iv) to institute a provision for students to repay loans through job creation programs, or through community service with union wage in a way that would not impact on job creation. This program would complement provincial loan remission programs. Community service job development permitting students to have work experience in a way that would not jeopardize existing jobs or undercut fair union wages and benefits. Funds relocated and designated: (i) 500 million relocated from Solicitor General to promote youth-related programs, and 1**

**billion from the Department of Defence, 4 million from Parliament and Senate, 1 million from Governor General, and a contribution from judges' salaries to the Anti-Poverty Fund for poor children and their families.**

#### EDUCATION

- [Change the prevailing educational paradigm based on the mechanistic industrial values to an educational paradigm based on humanitarian sustainable values. (GPC, 1988)

The long-term goals of humankind must lead to global survival, and to the emergence of peaceful, just, socially and ecologically responsible societies. Citizens should feel empowered to use their creative and critical abilities to make social, economic and political decisions. Learning will, therefore, be a life-long process and opportunities must be created for all residents of the province to participate in this process. (ALBERTA GREEN POLICIES, ALBERTA)

A. We will encourage the creation of an educational curriculum that recognizes the importance of basic skills. It should also include the development of ecological awareness and respect for diversity, equity, social justice, non-violence and democratic decision-making. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. this includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. all life is vulnerable to the actions of human beings therefor we have an obligation to treat all living creatures humanely and with respect.

(ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will expect Albertans to be actively involved in the education of their children. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to phase-out federal support for college and agency agribusiness

educational programmes and refocus supports on family farm and community scale eco-agriculture workshops, distance education, undergraduate and graduate and diploma.

## 11. Social Equity

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. this includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. all life is vulnerable to the actions of human beings therefor we have an obligation to treat all living creatures humanely and with respect.

The social expression of diversity is decentralization. Applied to our political structures, this means grassroots democracy. Greens are calling for the decentralization of our economies, populations, education systems, and manufacturing; in short, every aspect of our society. For local people, decentralization means a maximum degree of self-determination and involvement in decision-making. (B.C. POLICY CONVENTION, 1986)

- TO PROMOTE ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES THROUGH REGULATIONS AND EDUCATION (1998)

- \* to support the establishment of a diversity of public and farm-based model demonstration and experimental stations for extension and education in each of Canada's natural regions.

- TO [INITIATE AND PROMOTE] /We will encourage/ research and education to help farmers sustain the topsoil on their land. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO IMPLEMENT, PROMOTE AND SUPPORT /implementation of/ educational programs on soil conservation and sustainable agriculture; and (B.C. POLICY CONVENTION, 1986)

- Encourage a reduction in meat consumption with an educational campaign; (BC Policy, 1990)

- \* TO support education programs that would enable people to attain food nutrition by eating healthy, uncontaminated, locally grown food POLICY CONVENTION, 1986.

- \* to develop, cooperatively with the provinces, a programme of land use and protection standards and practices, education, incentives, disincentives and expropriation compensation to ensure that land managers utilize and/or protect their lands as per its zoning such that: prime farmland is protected for agriculture from industrial or residential development; endangered plant and animal habitat, and special Eco communities are given ; farms are generally developed and operated as part of a sustainable natural Eco community by protecting and /or restoring native woodlands, grasslands, wetlands and watersheds.

- We feel a vegetarian diet is healthier, more environmentally

- benign and should be encouraged through education. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

• TO ELIMINATE GROWTH STIMULANTS AND ANTIBIOTICS IN THE PRODUCTION OF MEAT [AND OTHER ANIMAL FOOD PRODUCTS], REQUIRE IMMEDIATE LABELLING DURING PHASE OUT PERIOD, AND EDUCATION OF THE PUBLIC AS TO AVAILABLE ALTERNATIVE FOOD SOURCES; (1998)

4: Our society should promote through incentives,

and education the minimization of waste at all points of transfer from raw material to consumer products. (GP of Ontario)

6: Redirect agricultural education, extension services and research to address sustainable methods. GP Ontario)

#### Pesticides reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987

• to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND)

\* improving education concerning prenatal care

\* educating the public with regards to environmentally induced

diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

• to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide

freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

\* to initiate an effective program of public education about the health

benefits of uncontaminated food, water and air (Alberta, 1997)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

\* TO PROVIDE EDUCATIONAL MATERIAL EMPHASIZING

FOOD COMBINATIONS THAT STRESS COMPLETE PROTEINS (DEFERRED RESOLUTION ROWENA ELOISE).

\* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to nicotine addiction. B.C. POLICY CONVENTION, 1988

\* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to alcohol addiction.

encourage the health care practitioners to emphasize wellness through holistic and /preventative/ [PREVENTIVE] approaches to the practice of medicine.

### 72.3.1 Birth Control

\* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

\* to immediately reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into generating socially equitable and environmentally sound development; (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. In 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs. In 1981 the military budget was less than 50% of what it is now.

\* TO support, and where necessary, establish organizations of peace research and education POLICY CONVENTION, 1986.

### Foreign Aid

\* TO strive to provide, wherever possible, feasible, and appropriate, educational materials, technical, social, and economic expertise, financial and material resources to societies or local communities in need of assistance to overcome the above-mentioned problems which would allow them to live a good quality, environmentally sound lifestyle (B.C. POLICY CONVENTION, 1990)

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS);  
(deferred resolution)

\* parenting education

\* encouraging workplace childcare  
(ONTARIO POLICY KINGSTON, 1997)

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA,

## Education

•To Remove the present education policy from GPO policy book.

The Green Party acknowledges that decisions concerning the education of children should be made by parents, communities and students. To this end parents, communities and students should have as many choices as possible, there should be plenty of diversity in educational options.

a) Home schooling should be an option for parents and communities. Home schooling parents should receive partial compensation.

b) Since post-secondary education is necessary for most jobs, tuition should be minimal. Living expenses are already a large burden for students.

c) Students should have the option of repaying loans through community work.

d) The Green Party suggests expanding the options of students for work terms, apprenticeships, and work place visits.

e) Education should be rooted in Green philosophy. (ONTARIO POLICY KINGSTON, 1997)

## 16. POLICY ON EDUCATION (carried with amendments)

The Green Party believes that the problems affecting us education system reflects a deeper crisis in our culture. We believe that our dominant cultural values and practices, including the emphasis on competition over cooperation, consumption over sustainable resource use, and bureaucracy over authentic human interaction, have been destructive to the health of the ecosystem and to human development. The current education system perpetuates these values and practices. The Green Party envisions a single expanded and diverse public education system with a new philosophical and programmatic framework. This system will be rooted in a global and ecological perspective, one that will prepare people for entry into an ever-regenerating society rather than one that perpetuates existing conventions that have proven to be unsustainable. Education is central to the survival of our planet. Only when this is recognized can we truly develop a system that provides the opportunity for every person in Ontario to grow fully to their potential. The Green Party has five key policy directions for education in Ontario.

### 1. Critical Thinking and Citizenship Responsibility

The current educational focus on skills relevant for today's job market has caused some policy directors to ignore the importance of developing critical thinking, citizenship, and change management skills in our students. The Green Party feels that these skills are essential to the survival of our planet and would develop a program grounded in a global and ecological perspective to address this.

### 2. Class Size and School Size

The Green Party believes that class size and school size must be recognized as the factors that greatly influence the quality of public education.

### 3. Basic Services Supplied Equally to All

We would ensure that basic services are supplied equally to all schools. More and more schools are turning to corporate and wealthy donors to supply services that we believe should be supplied by government. Schools should not accept private or corporate funding unless they come with 'no strings attached'.

### 4. Encouraging Local Curriculum Initiatives

We would ensure that Ontario's communities have a hand in developing education which addresses their needs. The trend towards centralized decision-making control threatens to drown out the voices of these communities. This trend must be balanced so that support is provided for local curriculum initiatives, especially local second language programs. (ONTARIO POLICY KINGSTON, 1997)

## EDUCATION PRIMARY AND SECONDARY

Education in Ontario is currently a monopoly. We advocate a voucher system to disperse tax dollars currently allocated for education. It costs over \$ 7,500 a year to educate an average child. Children with special needs currently cost up to \$ 30,000 a year.

Each child would be assessed for his or her specific needs. After assessment the child's parents choose the school that they feel suits their children's needs. The Public-school system would become much more responsive to the needs of the students and parents.

Accredited teachers who have completed appropriate training would be free to establish their own schools as long as they do not perpetuate sexist, racist or patriarchal values. Excellence in education will only occur when the current monopoly in education is broken. It is not for the Green Party to advocate one form of education over another. It is enough that parents be given the choice to choose what is best for their family.

The ministry of education would set goals, allocate funding and negotiate with the teacher unions. The goal is to have a diversity of educational options that meet the needs of the local community. This can not be achieved under the current system.

#### Universities

The Green Party of Ontario feels that a university education should be made available to all who meet minimum educational requirements regardless of a person's financial status. We encourage the adoption of a loan repayment plan that is contingent on the income of the graduate.

Increasingly, university students are exposed to nothing more than technical and professional training. Basic science is being replaced by military and commercial research. The result is an expensive system that only benefits middle-class professionals while serving to push industry's training, research, and development costs onto the public. This serves to limit academic freedom.

Under current legislation our universities are controlled by Boards of Governors who are neither elected nor responsible to the University or society. These Boards should be replaced by the already existing university Senates which consist of elected

faculty, students, and staff.

Rather than accrediting professionals and technicians for the workplace the highest priority would be placed upon teaching fully-rounded, ethical individuals. Scientific and technical research would be focused on sustainable commercial technologies.

#### Community Colleges

Industry and professional associations must shoulder their full burden for training. Professions should be taught at community Colleges. The costs would be born by a licence fee on members of that profession. Each association of trained individuals, from doctors to hairdressers would have an association levy that would fund the education of their peers. The role of the tax dollar should be limited to the education of individuals who can communicate, reason, and enjoy life. The training of technicians for industry is the responsibility of Industry.

(GREEN PARTY OF ONTARIO, 1994)

#### Animals in Research

##### Animals in Research

-Ban the use of animals for the testing of cosmetics and household products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

Animals as Entertainment (GPC, 1988)

-encourage a reduction in meat consumption with an educational campaign. (Ontario)

Guaranteed Annual Income and childcare support; and

[other adopted GPPABC] policies.

[This support] system should include such things as:

education about adoption;

more homes for single mothers;

single parent support groups;

pre natal and post natal services; and

life skills training.

#### **DEPARTMENT OF FISHERIES/OCEANS (1,314,065,000)**

**Canada at the international level has incurred obligations to protect the marine environment and community watersheds. Nationally, the federal government has failed to implement sufficiently the Federal Fisheries Act in enforcing the section which designates as a crime the deposit of deleterious substances that could contribute to loss or reduction of fish habitat. In addition, the federal government under the Convention on Biological Diversity has undertaken to conserve biodiversity and not create "megadiversity" through fish farming and genetically engineered fish. The funding of the Fisheries Department must be redirected to enforcing the Act, to banning fish farming and genetically engineered fish, to**

**restoring wild stocks and ecosystems, and to assisting fishers who have been impacted by the failure of the Federal and provincial governments to protect the wild stocks. Revise the Vessel Operator Licence to ensure that it sufficiently addresses enhanced safe vessel operation. There has to be greater hands-on education in respect to safe vessel operation and navigation, and the immediate commitment to having this licence be a requirement for navigation of vessels in Canadian waters. Require mandatory holding tanks in all Canadian waters. Increase Coastguard funding in collaboration with the Disaster Prevention Fund in Department of Defence.**

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA,

**Funds should be redirected from Judges salaries to an Anti-Poverty fund for poor children and their families Funds should be redirected to support the decriminalization of drugs and the implementation of other harm-reduction strategies including education and recognition of the substantive differences in the physiological and psychological effects of individual drugs and the need for regulatory regimes to reflect these differences ( such as the properties of individual substances, the consequences of their use and sale, and the consequences of attempting to prohibit, restrict, or control their sale and use.) (Budget 2000)**

• to “promote, as agreed in Habitat II, crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and resulting crime, by addressing poverty, inequality, family stress, unemployment, absence of education and vocational opportunities, and lack of health care, including mental health services” (91 a ter. Habitat II)

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GpO , 1994)

4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GpO, 1994)

transportation

Public awareness through media, public speakers, public education system, etc.  
B.C. POLICY CONVENTION, 1990

- To support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* provide education on the hazards and pitfalls of gambling (ONTARIO POLICY KINGSTON, 1997)

- to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

- \* TO ENSURE LEGISLATION REQUIRES FOR PAID LEAVE FOR CHILD REARING EDUCATIONAL LEAVE. (deferred resolution)

C. We will maintain a balanced annual budget by efficient use of resources in the areas of health care, education and social services. If this is not possible without introducing serious deficits into these services, tax revenue will have to be increased. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to ensure that CBC-TV will be required to produce programs that are educational, thought-provoking, useful and unavailable elsewhere.

Under article 7 of the Convention on the Elimination of all Forms of Racial Discrimination States Parties undertake to adopt immediate and effective measures, particularly in the fields of teaching, education, culture and information, with a view to combating prejudices which lead to racial discrimination and to promoting understanding, tolerance and friendship among nations and racial or ethnic groups, as well as to propagating the purposes and principles of the Charter of the United Nations, the Universal Declaration of Human Rights, the United Nations Declaration on the Elimination of All Forms of Racial Discrimination, and this Convention.

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

Citizens in Canada share common concerns about the deterioration of the environment, about the growing influence of corporations upon all sectors of society, and about the threats to education, health and culture. Canadian citizens continue to suffer discrimination and inequitable treatment. Canadian citizens are constantly disillusioned by the discrepancy between government rhetoric and action at all levels. Instead of acting on these concerns, the Federal government has devolved responsibilities upon the provinces and the corporations. (Press release, Calgary Unity, 1999)

- To recognize that every human being shall have equitable access to food, clothing, shelter, and health care; due process under a just system; control of her/his thoughts; education as and when needed, in accordance with the philosophy of non-violence and respect for the biosphere; and (BC Policy 1986/9)

A Green Party government would undertake:

\* to ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds

concluding with the expression "other status" which indicated the intention to include other grounds as they arose. Through various human rights instruments, states have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour, ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status.

\* to include sexual orientation as a listed ground of discrimination. in

all Canadian human rights documents, and to lobby for its inclusion in all international human rights documents.

\* to ensure the right to shelter, THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY SOUND WITH TENURE SECURITY the right to food, the right to social security, the right to universal affordable quality education including the option of repaying student loans through community service, and the right to work in socially equitable and environmentally sound employment.

## REDEFINING OF WHAT CONSTITUTES "WORK" AND RECASTING WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND

- TO DEPLORE THAT ACTIVITIES AND SUBSTANCES CONTRIBUTE TO OZONE DEPLETION, GREENHOUSE GAS PRODUCTION, EXCESSIVE RESOURCE EXTRACTION AND TO PRODUCTION OF TOXIC, HAZARDOUS, AND RADIOACTIVE WASTES, AND THUS TO CONSEQUENCES THAT ARE HARMFUL TO HUMAN HEALTH AND THAT CAUSE ENVIRONMENTAL DEGRADATION, HUMAN RIGHT VIOLATIONS AND WAR AND CONFLICT;
- TO ENSURE THE FOLLOWING SO THAT IT WILL BE POSSIBLE TO ENCOURAGE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK, AND TO VALUE AND REIMBURSE THE WORK OF THE SOCIAL SECTOR THAT IS ATTEMPTING TO PREVENT OR RECTIFY THE HARM CAUSED BY INDUSTRIAL ACTIVITY: (1998)

\* to enact a Social Security Act to provide national standards for welfare.

### 70.1.1 Income Assistance

#### WELFARE REFORM

As currently practiced, welfare assistance is inefficient, unfair to both government and individuals, and fails to serve those

who need it the most. Because welfare is presently a municipal issue, its costs tend to be born by those governments which are least able to support the program, simply because poorer communities will tend to

(a:) have more people on the welfare roles, and

(b:) have a smaller tax base.

Because of this fact, many smaller communities routinely limit their benefits. This results in our poorest citizens moving to parts of the country where living expenses are highest. In addition, welfare disbursement tends to be dominated by the desire for control rather than a will to serve. As a result, far too much money is spent on administration. Many needy people are also unable to receive benefits because they run afoul of such "Catch-22" dilemmas as having to have a fixed address to receive benefits, but being too poor to rent any place to live. A Green Canada would eliminate these problems by replacing the welfare system with a guaranteed annual income. Under such a program, the federal government would decide upon a minimum allowable income and award a "reverse" income tax to those individuals or families which were unable to secure employment. Because such a payment would be raised through federal taxation, no one community would be penalized for having too many poor people. In addition, there would be a strong incentive for the poor to leave urban areas where the cost of living is high and to move to the countryside where they could be encouraged to become self-sufficient in food, fuel, housing, etc. By eliminating the need for a welfare bureaucracy, enough money would be saved to expand payments.

The guaranteed income would support other Green economic programs. The minimum acceptable wage would rise for jobs such as fast-food, janitorial, etc., because people will be able to "opt out" of the workforce until they find some dignified employment. This would have a leveling effect on social stratification. In addition, rewarding, but poorly-paid work that presently benefits the whole community will expand as the guaranteed income allows increasing numbers of people to "opt for" a life of community service. The guaranteed income will also give workers a greater say in industrial management, as the strongest weapon (fear of poverty) is removed from business's arsenal of strike-breaking tactics.

Finally, the guaranteed income will ensure that the costs of switching from a steadily expanding economy to a conservator society will be borne equally by all its citizens. The Greens would like to see a sustainable society that is not supported by widespread poverty. (GREEN PARTY OF ONTARIO, 1994)

Greens also endorse the idea of a minimum and maximum income. The guaranteed income being at 1 and using a ratio of 20 to 1 this would mean that an individual who received the Guaranteed annual income of \$ 10,000 with a minimum wage of \$ 15,000 would dictate the wage of the highest earner which would be \$ 500,000 a year. The goal of those at the top therefore is to increase the well being of those at the bottom. The current spread between the richest and poorest is approximately 150: 1. Using a minimum wage of \$15,000 and an average corporate presidents' remuneration of \$2,250,000 a year. (GREEN PARTY OF ONTARIO, 1994)

\* TO INITIATE a large-scale public process combining actuarial and anecdotal evidence to determine what level of income is needed for a person to meet their basic human needs with dignity including the human need for recreation and leisure. ANNUAL GENERAL MEETING, 1995

\* TO INDEX income assistance programs to the consumer price index ANNUAL GENERAL MEETING, 1995

#### 70.2.1 Canada Assistance Plan

\* TO BE in solidarity with End Legislated Poverty and other anti-poverty groups campaigning for inclusion of these rights in provincial legislation ANNUAL GENERAL MEETING, 1995

\* TO support the current U.N. investigation into violations of international human rights standards by the Canadian government's repeal of the Canada Assistance Plan  
ANNUAL GENERAL MEETING, 1995

• TO REVENTING OF POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT (1998)

#### Green Day Care

##### GREEN PARTY POLICY ON CHILDCARE (carried with amendments)

It is well known that how we care for our children will ultimately determine how people care for each other and the earth. The Green Party sees parenting as a valuable investment not only in the well-being of our children, but in the future of our society as a whole. It should be treated as such by providing real support for parenting instead of encouraging people to work for short-term economic gain which in the end creates enormous stress on families and diminishes both social and human resources. The Green Party believes in subsidizing

parents to look after their own children. We feel that the implementation of a Green Party Childcare policy would encourage parents to take time from work to raise their children. As a result of this family life would be enriched, stress would be diminished and the overall health of our society would be improved.

Green Party Childcare Policy initiatives would include:

- \* a Guaranteed Annual Income that would pay one parent to stay at home.
- \* extended paid parental leaves.
- \* job-sharing options.
- \* encouraging part time work.
- \* flexible work hours to match the school day.
- \* personal days to care for sick children.
- \* better paid day care workers to reflect the importance of the work they do
- \* a high-quality day-care system for those who need it, with the professional standards and training required by daycare workers.
- \* parenting education
- \* encouraging workplace childcare

(ONTARIO POLICY KINGSTON, 1997)

## DAY CARE

Greens support the principle of universal access to flexible, private and publicly-funded, non-profit child care as well as the extension of government paid maternity leave and parental leaves. It is, however, important to recognize that many of the pressures

for day care come from a consumer society in which parents both work to accumulate more belongings than needed for a balanced lifestyle. With the guaranteed annual income and community land trusts it would be increasingly less necessary for families to have two incomes to survive.

## SOCIAL WORK

Lack of funding to family services and the incredible caseload of social workers is crippling our ability to assist individuals to be active members of the community. Greens recommend an increase in the funding made available to social workers and a reduction in the case load of social workers. Currently the caseload of social workers is as high as one worker dealing with 300 families. This should be reduced to 1 / 30 families. This massive increase in spending will be offset by a dividend of increased employment, increased detection of child abuse, sexual abuse and an increase number of individuals who become functioning members of society again. The cost of inaction is much higher than the cost of action.

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA,

\* TO PROVIDE quality government or community funded childcare, including direct support of primary care givers, that meets the needs of children from infancy to adolescence, is universally accessible, and [is] responsive to the needs of parents and the community POLICY CONVENTION, 1987.

## 73.0 Family

A. We will actively encourage the creation a financial support program which recognizes the right of all people to an acceptable quality of life, which gives only to those in need and which concentrates all available resources into one efficient system. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### 73.1.1 Single Parent Families

\* TO IMMEDIATELY RAISE IN THE short-term resolution, of the amount of money that welfare recipients may keep from their earned incomes POLICY CONVENTION, 1987.

### 73.2.1 Parental Responsibilities

Resolved that the Greens are committed to family legislation which encourages both parents in a separation or divorce to continue to be directly responsible to their children (e.g. visiting, attending school functions, providing clothes, etc.) POLICY CONVENTION, 1987

\* to [INSTITUTE] a system to ensure that both parents in a separation or divorce share the financial responsibility of caring for their children and establish a publicly funded enforcement system to ensure that both parents live up to this responsibility POLICY CONVENTION, 1987

\* TO [ROVIDE] resources to encourage and enable divorced or separated parents to resolve disputes without involving the court. POLICY CONVENTION, 1987

### Common Law Relationship Act

\* TO introduce a Common-Law Relationship Act, which would allow any two people who chose to live together the same benefits and recognition accorded to women and men in traditional marriages POLICY CONVENTION, 1990

\* TO amend any other legislation that discriminates against non traditional marriages or single people POLICY CONVENTION, 1990

F. We will expand the definition of family for the purpose of provincial benefits and tax treatment to include same-sex relationships. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Parental Responsibilities

\* TO [ENACT] family legislation which encourages both parents in a separation or divorce to continue to be directly responsible to their children (e.g. visiting, attending school functions, providing clothes, etc.); POLICY CONVENTION, 1987

\* TO {INSTITUTE} a system to ensure that both parents in a separation or divorce share the financial responsibility of caring for their children and establish a publicly funded enforcement system to ensure that both parents live up to this responsibility; POLICY CONVENTION, 1987

\* TO PROVIDE resources to encourage and enable divorced or separated parents to resolve disputes without involving the court. POLICY CONVENTION, 1987

## Common Law Relationship Act

\* TO introduce a Common-Law Relationship Act, which would allow any two people who chose to live together the same benefits and recognition accorded to women and men in traditional marriages POLICY CONVENTION, 1990

\* TO amend any other legislation that discriminates against non traditional marriages or single people POLICY CONVENTION, 1990

## 72.9.1 Green Day Care

\* TO PROVIDE /Resolved that the Greens advocate the provision of / quality government or community funded childcare, including direct support of primary care givers, that meets the needs of children from infancy to adolescence, is universally accessible, and [is] responsive to the needs of parents and the community. POLICY CONVENTION, 1987

## LABOUR

### Union Support

- To advance the ideal that all industrial production shall be ecologically sustainable; and
- To support the inherent right of workers' organizations to exist with all of their attendant democratic and legal rights and social and ecological responsibilities.

Because:

- workers have the right to withhold their services individually or collectively,
- workers have the right to negotiate the environmental conditions of their labour either individually or collectively,
- workers' organizations have value to their members and to society as a whole,
- the present affluence experienced in BC and the industrial world has been less the result of entrepreneurial expertise and workers organizations than of the careless abuse of the earth and its resources,
- the development of health and welfare programs brought about by the efforts of workers' organizations fall short by not addressing the most important problem of sustainability, and
- workers organizations should be encouraged to direct their activities to such things as:
  - a. environmental impact
  - b. full and meaningful employment
  - c. cooperative preventative community health care
  - d. opportunities for creativity in the enjoyment of leisure and retirement; and
- organizations have a vital role to play in the revitalization of the democratic processes; and
- considerable social and economic advances sought about by workers organizations have not been accompanied by care of the earth and its systems; (B.C. Convention 1990)

## Worker Owned Cooperatives

- To introduce a program to encourage the establishment of worker owned businesses, and to assist workers wishing to assume ownership of existing businesses.
- To ensure that such a program would assist worker owned businesses through low interest loans, free consultation services, technical assistance, and lower tax rates. This program would only be available to those businesses which meet strict environmental protection criteria as established by a Commission made up of representatives of environmental interest groups.

### Because:

- it is vital that society provides all persons with an opportunity for meaningful work while at the same time producing goods and services only at an ecologically sustainable rate; and
- much of the wealth extracted from the planet is spent supporting enormous levels of bureaucracy, over management, and return for investors in the corporate world; and
- the never-ending battle between management and labour has led to ever larger, more efficient corporations, and bigger and bigger unions to fight the giant corporations, rather than smaller, innovative, and flexible businesses; and
- Greens support the concepts of local control, self-responsibility, and cooperativeness;  
POLICY CONVENTION, 1990

- To support initiatives, cooperation and accountability in economic enterprises  
(ALBERTA GREEN POLICIES, ALBERTA 1997)

## Regional Teacher Bargaining

- To support a district by district teacher bargaining process. POLICY CONVENTION 1993

## Mechanization

- To oppose the current federal tax deductions for mechanization (research and development and capital investment deductions) ANNUAL GENERAL MEETING, 1995

## WORK/JOB CREATION

- To support:

- the expansion of non-job work in more self-sufficient communities in place of dependence on mega-projects and centralized and capital-intensive manufacturing processes.
- encouragement of self-employment in local services and production.
- work exchange, product exchange, barter, payment in kind service for family and community benefits.
- job creation in smaller-scale energy development projects, in alternative technology, by public funding of recycling, conservation and environmental clean-up, by funding adequate child-care programs, in programs rooted in the community.
- redirecting capital towards greater development of low cost housing and model ecological communities.
- redirecting production towards sustainable technologies and methods.
- a flexible system of job sharing and shorter work hours should be encouraged.
- a minimum income scheme to support those who earn a low income or who work seasonally or part-time to replace the current welfare? system.
- recognition and reward of the care of home and children.
- encouragement of alternative life styles by making them economically viable.

In short, the development of an alternative society to replace our

present industrial society which makes multitudes outcasts by leaving them unemployed, underemployed or with unrewarding employment.

(GREEN PARTY OF ONTARIO, 1994)

## RESOLUTION: GUARANTEEING THE RIGHT TO SAFE, HEALTHY AND ENVIRONMENTALLY SOUND WORKING CONDITIONS

- To the right to safe and healthy working conditions

The States Parties to the present Covenant recognize the right of everyone to the enjoyment of just and favourable conditions of work, which ensure, in particular:

- remuneration which provides all workers, as a minimum, with:
  - fair wages and equal remuneration for work of equal value without distinction of any kind, in particular women being guaranteed conditions of work not inferior to those enjoyed by men, with equal pay of equal value (a) (i);
  - a decent living for themselves and their families in accordance with the provisions of the present Covenant (a) (ii);
- safe and healthy working conditions (b);
- equal opportunity for everyone to be promoted in his employment to an appropriate higher level, subject to no considerations other than those of seniority and competence...

(Art. 7 International Covenant of Civil and Political Rights, 1966).

- To enshrine the right to freedom of association

Everyone shall have the right to freedom of association with others, including the right to form and join trade unions for the protection of his interests (Art. 22. 1 International Covenant of Civil and Political Rights, 1966)

- To ensure the right to form trade unions

the right of everyone to form trade unions and join the trade union of his choice, subject only to the rules of the organization concerned, for the promotion and protection of his/her economic and social interests. No restrictions may be placed on the exercise of this right other than those prescribed by law and which are necessary in a democratic society in the interests of national security or public order or for the protection of the rights and freedoms of others (Art. 8. 1.a International Covenant of Civil and Political Rights, 1966)

- To ensure the right to strike in conformity with the law

the right to strike, provided that it is exercised in conformity with the laws of the particular country (Art. 8. 1.d International Covenant of Civil and Political Rights, 1966)

## **DEPARTMENT OF INDUSTRY**

### **DEPARTMENT OF INDUSTRY (3,502,284,000)**

**Rename the department of industry to the Department of "Just Transition"**

**Redirect 2,000,000,000 to fair and just transition programs for workers and communities affected by conversion of sunset industries to socially equitable and environmentally sound development and employment. In the 1999 Public Trust Green Budget there was a recommendation to relocate the funds in the Department of Industry away from subsidizing corporations and corporate-beneficial research. To address the challenges of the 21st century, Canada must move away from policies of economic growth at any cost. In the future, the Canadian government must act with foresight to prevent the entrenchment of socially inequitable and environmentally unsound practices. Canada is in a situation where a transition and conversion policy is necessary to phase out, or**

**ban socially inequitable and environmentally unsound practices. Public policies must direct public funding to ensuring a just transition for workers and communities economically affected by these transition policies. There must be a national commitment to implementing the public trust throughout the country with a fair distribution of the effects, and an obligation to communities and to maintain full income and all-inclusive targeted transition assistance for working people who are dislocated as a result of the implementation of specific policies until they can find comparable work. Workers and the communities affected by the policy must be involved in the decision-making process from the development of the terms of reference and throughout the process, and that the decision-making process must be based on the fundamental principles of Just Transition supported by respective unions. Redirect 1,502,284,000 from the National Research Council and Natural Science and Social Science and humanities research to socially equitable and environmentally sound projects. The research must not be linked to industry or "partner-shipped with industry".**

**DEPARTMENT OF JUSTICE (885,697,000) -**

**The department should seek an advisory opinion from the International Court of Justice on whether Canada has been in violation of Canada's international obligations because of Canada's failure to enact the necessary legislation to ensure compliance. This recommendation builds on the recommendation from the 1999 Public Trust Green Comment that some funding should be redirected from the Justice department to the implementation of International law in Canada in recognition of the culmination of the Decade Devoted to the Furtherance of International Law in 1999. The Law Commission should recommend that the practice by developers of intimidating citizens and locally elected officials through law suits. be treated as a "criminal offence of intimidation". The section in the Criminal code on the dissemination of hate literature must be revised to correspond to the more stringent obligation contained in the International Convention on the elimination of all forms of racial discrimination. Human rights codes must include the following grounds:**

- race, tribe, or culture;**
- colour, ethnicity, national ethnic or social origin, or language; nationality, place of birth, or nature of residence (refugee or immigrant, migrant worker);**
- gender, sex, sexual orientation, gender identity, marital status, or form of family,**
- disability or age;**
- religion or conviction, political or other opinion, or - class, economic position, social conditions or other status;**

**(1966 International Covenant on Civil and Political Rights, and the 1966 International Covenant on Economic, Social and Cultural Rights, among others);**

**Funds should be redirected from Judges salaries to an Anti-Poverty fund for poor children and their families Funds should be redirected to support the**

Commissioner for Federal and Judicial Affairs

Federal Court of Canada

Law Commission of Canada

Offices of the Information and Privacy commissioners of Canada

Supreme Court of Canada

Tax Court of Canada

### **Canadian Human Rights Commission**

### **Canadian human Rights Tribunal**

A Green Party government would undertake:

\* to ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "other status" which indicated the intention to include other grounds as they arose. Through various human rights instruments, states have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour, ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status.

\* to include sexual orientation as a listed ground of discrimination. in

all Canadian human rights documents, and to lobby for its inclusion in all international human rights documents.

\* to ensure the right to shelter, THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY SOUND WITH TENURE SECURITY the right to food, the right to social security, the right to universal affordable quality education including the option of repaying student loans through community service, and the right to work in socially equitable and environmentally sound employment.

A Green party government would undertake:

### **Law [Reform] Commission of Canada**

\* to institute substantial reforms to the administration of justice within Canada, in terms of human rights, electoral and government reform, law enforcement and reform of the criminal code.

- TO establish an independent process for appointing the members of regulatory boards. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To advocate restorative justice: Justice should be restorative rather than retributive. Crime should be defined as a violation of one person by another, not as a violation of the state. The 80% of offenders who are non-violent should be sent directly to halfway houses. Sentencing circles should be used as an alternative to trial by judge and jury. (GREEN PARTY OF NEWFOUNDLAND).

### Crime Prevention

- To move away from a program of crime mitigation through incarceration to one of crime prevention through guaranteeing the rights to basic needs

\* To prevent CRIME THROUGH SOCIAL PROGRAMS and thus to reaffirm

the General Assembly resolution on Crime Prevention, and Criminal Justice, which stated “that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order” (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

- To support the call in Habitat II Agenda for the formation of lawful community-based crime prevention: “As appropriate, promote personal security and reduce fear by improving police services, making them more accountable to the communities they serve, and by encouraging and facilitating, whenever appropriate, the formation of lawful community-based crime prevention measures and systems” (91 d Habitat II)

- TO REDIRECT MISPLACED PRIORITIES RELATED TO CRIME—MITIGATION THROUGH INCARCERATION RATHER THAN PREVENTION THROUGH THE GUARANTEEING OF POSITIVE HUMAN RIGHTS—THE RIGHT TO SOCIAL SECURITY, HEALTH CARE, SHELTER, FOOD ETC. AS WAS UNDERTAKEN THROUGH THE INTERNATIONAL COVENANT ON SOCIAL CULTURAL ECONOMIC RIGHTS) (1998)

- to “promote, as agreed in Habitat II, crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and resulting crime, by addressing poverty, inequality, family stress, unemployment, absence of education and vocational opportunities, and lack of health care, including mental health services” (91 a ter. Habitat II)

- To prevent and reduce violence and crime, especially at the local levels, Governments, in partnership with all community-minded citizens and groups with a wide range of experience and expertise” including some members of the community that could be socially and environmentally disadvantaged by the decisions

- To prevent crime through guaranteeing of positive human rights—the right to social security, health care, shelter, food etc. as was undertaken through the International Covenant on Social Cultural Economic Rights), (1998)

- \* to institute a system of justice which fairly balances the right to due process with collective security and works to reduce crime through prevention, deterrence and rehabilitation.

- \* to institute an inclusive electoral political process which represents

both minority and mainstream views effectively.

∞ Senate reform

The Green Party of Ontario feels that the Federal Senate should be patterned after senate models that have been successful in other countries. In many European countries for example all significant constituencies are represented. Canadian constituencies might include: Geographic regions, native peoples, minority groups, and professions. Each constituency would be allowed seats dependent upon the number of members, they had in their organizations. Checks and balances would be instituted to guarantee gender parity and proportional representation. (GREEN PARTY OF ONTARIO, 1994)

\* to hold a referendum (either by preferential ballot or followed by a series of runoffs) giving Canadians the opportunity to set the direction senate reform should take.

\* TO IMPLEMENT SENATE ELECTED BY PROPORTIONAL REPRESENTATION (deferred resolution)

\* TO ABOLISH THE SENATE (Deferred resolution, proposed by Andy Shadrack)

## LEGAL REFORM

\* to implement anti-SLAPP legislation strictly limiting the rights of corporations to sue groups and individuals for pecuniary loss.

One of the fundamental tenets of Green Politics is Social Justice. Social Justice is achieved to a large extent through the legal system.

The law society of upper Canada mediates disputes between lawyers and clients. This is a body composed of lawyers. Lawyers determine the policy for judging the validity of a complaint. These

same lawyers also serve as directors of the lawyers professional indemnity company. How can they implement an impartial policy to judge a complaint when they are directors of the company that will have to pay if the complaint is valid? Clearly the law society has failed its obligation to provide the public with an independent body to hear complaints about legal practice.

Errors and omissions insurance exist to protect the public from lawyers who are incompetent, negligent, substance abusers or criminals. However, this system is flawed and rarely allows for the settlement of one legal wrongdoing without the hiring of another lawyer at considerable expense.

To restructure the legal system

system so that lawyers are not required

for many simple functions, such as wills, land transfers, divorce

settlements. These functions can be more efficiently performed by

paralegals and negotiators. (GREEN PARTY OF ONTARIO, 1994)

2: All legal documents must be written in plain English. (GREEN PARTY OF ONTARIO, 1994)

3: Registration of all wills. (GREEN PARTY OF ONTARIO, 1994)

4: Thumb print of lawyer required on all significant documents

including land transfers and wills. (GREEN PARTY OF ONTARIO, 1994)

5: Lawyer discipline boards must be composed of publicly elected citizens. (GREEN PARTY OF ONTARIO, 1994)

6: Elections of all Judges at all levels. Judges are currently a patronage appointment. (GREEN PARTY OF ONTARIO, 1994)

7: Amend the Law Society of Upper Canada act meaningful full public

participation and allow public access to Law Society records. (GREEN PARTY OF ONTARIO, 1994)

8: Remove the disciplining of lawyers from the mandate of law societies. Place them under the auspicious of the department of consumer and corporate affairs. (GREEN PARTY OF ONTARIO, 1994)

9: Provide funding for legal costs in cases involving Social Justice, employment equity, and Environmental rights. (GREEN PARTY OF ONTARIO, 1994)

Addictive drugs, alcohol, marijuana, tobacco

1: We do not encourage the use of drugs.

2: Illicit drug laws generally do more harm than the drug they attempt to control.

3: We do not support monopolies on production, rather we would like /

\* to regulate alcohol, tobacco and currently prohibited opiates, hallucinogens, stimulants and depressants (such as marijuana, heroin, cocaine, MDA, MDMA, LSD etc.) under the same legislation as one another.

- to promote local, small scaled production of alcohol rather than monopolies on production (GREEN PARTY OF ONTARIO, 1994)

- To Legalize and regulate the production and consumption of marijuana and hashish. (GREEN PARTY OF ONTARIO, 1994)

- To not tax "Brew your own" establishments. (GREEN PARTY OF ONTARIO, 1994)

- To introduce a deposit system which would require the return and filling of wine and liquor bottles. This would be a non tariff barrier to trade and encourage the local production of Wine, beer and alcohol. (GREEN PARTY OF ONTARIO, 1994)

- to advocate a significant reduction of provincial taxes on locally produced wine, beer, and alcohol. This loss of revenue

would be compensated for by increased local economic activity and improved efficiency. GREEN PARTY OF ONTARIO, 1994)

- To enquire the listing of all additives on alcohol and tobacco products. GREEN PARTY OF ONTARIO, 1994)
- To Legalize and regulate the use of stills by individuals for the production of fuel and consumable alcohol. GREEN PARTY OF ONTARIO, 1994)
- To Treat hard drug use as a medical rather than criminal problem. GREEN PARTY OF ONTARIO, 1994)

\* TO DECRIMINALIZE MARIJUANA, AND TO PROVIDE TREATMENT FOR ADDICTION FROM OTHER DRUGS (SEE PAPER CIRCULATED DURING ELECTION, SIGNIFICANT OMISSION IN PLATFORM AND RECENT B.C. RESOLUTION)

#### Tobacco restrictions

- TO [INFORM THE PUBLIC THAT Cigarettes cause 35,000 premature deaths annually which results in a yearly drain on the economy in lost income and medical costs of over \$5.2 billion as opposed to the \$3 billion the tobacco industry contributes to the economy through jobs and taxes. (UPDATE)
- To CLOSE / Entering into negotiations with the Federal government to close/ our borders to imported tobacco and ban the export of all tobacco products.
- TO Ban the advertising of all tobacco products. including the funding of sporting and cultural events.
- TO PROTECT Protecting the rights of non-smokers by banning smoking in any enclosed public place and on all forms of public transportation.
- TO SUBSTANTIALLY INCREASE /Substantial increases in/ penalties for the selling of tobacco products to minors.
- TO ban the/ selling of tobacco products from vending machines.

- TO REGULARLY CHANGE Strongly worded /, regularly changed/ health warnings on cigarette packages. (GREEN PARTY OF ONTARIO, 1994)

## **Supreme Court of Canada**

### Supreme Court judges

- \* TO ALLOW PROVINCIAL GOVERNMENTS TO APPOINT SUPREME COURT JUDGES (DEFERRED RESOLUTION)

### Sentencing

- \* TO EXPERIMENT WITH SENTENCING CIRCLES, IN WHICH MEMBERS OF THE COMMUNITY ARE INVOLVED IN METING OUT APPROPRIATE PUNISHMENTS, AS AN ALTERNATIVE TO JUDGES AND JURIES (DEFERRED RESOLUTION);
- \* to keep non-violent individuals who are employed while under house arrest, on parole or performing community service.
- \* TO INSTITUTE A REQUIREMENT TO COMPENSATE THEIR VICTIMS AND/OR PERFORM COMMUNITY SERVICE (DEFERRED RESOLUTION);
- \* TO REVIEW DEFINING CRIME AS A VIOLATION OF ONE PERSON BY ANOTHER, RATHER THAN AS A VIOLATION OF THE STATE (DEFERRED RESOLUTION)
- \* TO FOCUS THE SEARCH FOR JUSTICE ON REPAIR OF SOCIAL INJURY, THE RIGHTS OF VICTIMS, AND THE RESPONSIBILITIES OF THE OFFENDER IN FINDING SOLUTIONS (DEFERRED RESOLUTION)
- \* TO EXPERIMENT WITH DEVELOPING DIALOGUE AND NEGOTIATION RATHER THAN ADVERSARIAL RELATIONSHIPS AND PROCESSES AROUND NON-VIOLENT CRIME, ESPECIALLY DIRECT INVOLVEMENT BY PARTICIPANTS; (DEFERRED RESOLUTION)
- \* TO REVIEW REVISING THE YOUNG OFFENDERS ACT (YOA) SO THAT YOUNG CRIMINALS ARE ACCOUNTABLE FOR THEIR ACTIONS;
- \* TO STUDY CHANGING THE YOA SO THAT YOUNG PEOPLE ARE CHANNELLED INTO ALTERNATIVE PROGRAMS; (DEFERRED RESOLUTION)
- \* TO EXPERIMENT WITH VIOLENT CRIME SENTENCING WHEREIN THE PRIME OBJECTIVE IS TO PROTECT THE VICTIMS, FAMILY, NEIGHBOURS AND COMMUNITY FIRST, REHABILITATE THOSE WHO CAN BE, AND PROTECT THE

COMMUNITY PERMANENTLY FROM THOSE WHO CANNOT BE REHABILITATED.  
(DEFERRED RESOLUTION)

\* to closely examine the use of sentencing circles, house arrest for non-violent crime, increased community service and civil suits for punitive damages to keep non-violent first offenders out of prison facilities.

Inter-species rights bill

\* to enact a bill of inter-species rights which would guarantee all species native to Canada the following rights:(a) the right to exist; (b) the right to exist in at least one geographical location without human interference;

(c) the right to access to food, clean water and clean air

\* to conduct a full review of government contracts, procedures, statutes and regulations to address other areas in which same-sex couples face systematic discrimination.

\* to redirect government gun control efforts as follows: (a) a ban on all assault weapons;(b) clearer regulation of gun storage OFF-SITE STORAGE OF ALL HUNTING RIFLES (DEFERRED RESOLUTION); (c) a program to phase-out handguns by tightening eligibility requirements over time; (d) a ban on large capacity magazines.

Environmental rights

\* to guarantee through legislation: a) the right to clean air; b) the right to clean water; c) the right to uncontaminated food

\* to empower Canadians whose environmental rights have been violated to take governments, corporations and individuals to court for violation of these rights.

Gun Control

We advocate:

- to ban on all assault weapons, handguns and large capacity magazines except for public servants in the pursuit of their duties. (GREEN PARTY OF ONTARIO, 1994)

- to Define and require strict storage of all firearms. (GREEN PARTY OF ONTARIO, 1994)

- to improve screening for the FAC and the restricted weapons permit. (GREEN PARTY OF ONTARIO, 1994)

- to Require FAC for ammunition purchases. (GREEN PARTY OF ONTARIO, 1994)

{TO CONSIDER THE USE OF GUNS FOR ABORIGINAL SUBSISTENCE LIFESTYLES} (PROPOSED ADDITION TO DEFERRED RESOLUTION)

Doctor assisted suicide and euthanasia

- to DECRIMINALIZE DOCTOR ASSISTED SUICIDE AND EUTHANASIA (1998)

Whereas between 1991 and 1995, on six occasions, individuals in Canada who openly admitted to compassionately helping others to die received a conditional discharge or a suspended sentence; and

- TO PROVIDE legislation is needed to allow euthanasia or assisted suicide not as a way of liberating encouraging the practice, but as a way of restricting it to the situations that we, as a society, deem

appropriate; (Green party of Canada )

- TO decriminalize doctor-assisted suicide (Green party of Canada)
- to regulate eligibility for euthanasia; (Green party of Canada )
- to establish a process that will require thorough family consultation and a specified waiting period for euthanasia; (Green party of Canada)
- to narrow the definition of an offence of assisted suicide
- TO legalize assisted suicide and euthanasia under limited conditions (Green party of Canada)
- to allow compassionate homicide as a criminal defence or change the punishment for assisted suicide (Green Party of Canada)

Charter of Rights and Freedoms

\* TO PROPOSE that the government of British Columbia propose and negotiate for the following changes to the Canadian Charter of Rights and Freedoms:

- 1 removal of the notwithstanding clause
- 2 removal of the demonstrably justifiable clause
- 3 addition of the following human rights: the right to clean air, the right to clean water, the right to uncontaminated food and the right to shelter

4 addition of a section covering inter-species rights including the right of every indigenous species in Canada to exist in its natural habitat

(B.C. POLICY CONVENTION, 1996)

**DEPARTMENT  
OF NATURAL RESOURCES AND ENERGY**

**NATURAL RESOURCES (713,039,000)**

**ENVIRONMENTALLY SOUND PRACTICES DEPARTMENT**

**Internationally Canada has undertaken to move away from logging old growth, to reduce greenhouse gas emissions, to conserve carbon sinks, and to conserve biodiversity, including endangered species, Funding must be redirected away from deregulation, voluntary compliance (ISO 14,000) to Mandatory International Normative Standards (MINS) based on international principles drawn from obligations incurred through conventions, treaties; and commitments made through conference action plans. There must be a phasing out of sunset industries (nuclear, fossil fuel) coupled with a fair and just transition program for affected workers and communities, and with the active promotion of environmentally sound alternative energy (as agreed to in numerous international agreements). All further transfers of Plutonium from dismantled nuclear weapons and sales of CANDU reactors must be prohibited.**

**Redirecting .696 billion into developing environmentally sound energy, transportation**

**Transferring .7 billion into developing environmentally sound energy, transportation and BEST (Best Environmentally Sound Techniques) practices. All decisions in this department including those related to forests must be in compliance with the Convention on Biological Diversity (invoking the precautionary principle to justify the banning of environmentally unsound practices that contribute to the reduction or loss of biodiversity) and with the Framework Convention on Climate Change (conserving carbon sinks)**

**All further promotion and sale of CANDU reactors cease including to those countries that are part of the CANDU Group (Korea - 2 sold and built 2 under construction; Argentina 1 sold and built; Rumania 1 sold and built second half built; China sold loan 1.5 billion, Turkey current bid with possible loan. All subsidies to fossil fuel and nuclear industry must cease and funding redirected to conservation and to the development of environmentally sound alternatives such as solar, wind, and tidal etc.**

**\*Transferring 1.7 billion into fulfilling Canada's commitment at the Habitat II Conference to move away from car-dependency, reducing the ecological footprint, developing environmentally sound transportation. In addition to assist Canada in discharging its obligations under the Climate change Convention to reduce greenhouse gas emissions. (a Convention that Canada has been in violation of since Canada signed and ratified the Convention in 1992).**

## ENERGY

Use of non-polluting energy is essential to the security of the environment. Conservation of all sources of energy is vital to the future well being of the provinces. Modifications to human lifestyles which increase energy efficiency will support conservation. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Renewable Energy and Conservation

In view of global climate change and the dangers of radioactive waste, the Green Party suggests phasing out fossil fuels and nuclear energy in favour of renewable energy sources such as solar, wind, biomass, and micro-hydro. The transition to sustainable energy can be achieved through improved energy efficiency, conservation and co-generation. (GREEN PARTY OF NEWFOUNDLAND).

• to support the creation of, and already existing, areas in "soft energy" and conservation; (B.C. POLICY CONVENTION, 1986)

A Green Party government would undertake:

\* to change the focus of international energy assistance away from mega projects towards appropriately sized community planned and driven projects.

\* to prevent the transfer to other states of substances or activities that are harmful to human health or the environment.

\* to dismiss the use of "Prior Informed Consent" to justify the transfer of harmful substances; "the right to be harmed" is not a legitimate right.

\* to focus programs related to fossil fuel energy supply, production and consumption on reducing greenhouse gas emissions and other harmful environmental impacts.

\* TO oppose the export of electric power from the province; and (BC ANNUAL GENERAL MEEETING, 1986) AND CANADA

\* to stop sale of nuclear technology from Canada (technology for dealing safely with nuclear waste does not exist).

\* to eliminate subsidies to nuclear power and to fossil fuels and/or chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to eliminate subsidies for nuclear and fossil fuels and to raise taxes on them to reflect environmental costs.

\* to cease involvement in the CANDU owners' group, to end all subsidies to AECL and to cease to sell CANDU reactors internationally

\* to prevent the transfer of plutonium from dismantled nuclear weapons in Russia and the USA to be used in CANDU reactors

\* to discontinue all spending on nuclear energy research, including the subsidy to Atomic Energy of Canada.

\* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to allocate a significant portion of energy research and development spending to support field trials and commercialization of renewable energy technologies to improve

their reliability, efficiency and competitiveness in Canadian and international markets and thereby accelerate their adoption by clients.

\* to immediately revise tax treatment of renewable energy and energy efficiency investments to make them at least as attractive to investors as investments in conventional energy sources (such as oil and gas) including changes to flow-through share eligibility to include development costs and elimination of the Specified Energy Property rules.

\* to redirect research and development spending to focus on [SOCIALLY EQUITABLE AND] environmentally sound energy technologies.

A. We will encourage efforts to produce energy from renewable and non-polluting sources such as wind, sun and biomass. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To encourage recovery of waste energy through co-generation such as providing heat for buildings from cooling water at power plants

- To consider the negative impacts of the nuclear industry to outweigh its benefits. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\*TO DIRECT government and research aid be directed to support SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND alternate/appropriate energy sources B.C. POLICY CONVENTION, 1986

B.C. POLICY CONVENTION, 1986

\* to accelerate investment in sustainable energy infrastructure.

\* to provide incentives to renewable energy producers and investors with a production credit of \$0.05 per kilowatt hour.

\* to implement an Energy Research & Development Act to divert in excess of \$1 billion in annual federal research and development spending to fund sustainable energy research and development.

## ELECTRICITY

The Green Party is committed to a non-nuclear future for Ontario. In Ontario 50% of our baseline electrical supply comes from Nuclear powered plants.

The dangers of Nuclear power include:

- It's association with the nuclear arms race.
- The lack of safe storage sites for radioactive wastes.

- The technologically and financially inability to decommission nuclear reactors.
- The uneconomic nature of the technology.
- The bureaucracy of specialists required to operate the system.
- The long-term health risks associated with this technology.
- The diversion of capital from, and the inevitable undermining and suppression of competing alternatives.
- The resulting promotion of electricity waste instead of conservation.
- The inevitable catastrophic melt downs.
- It is inefficient, inflexible and unreliable.
- There are security risks.
- Uranium is a non-renewable resource that causes occupational as well as environmental destruction in its production and distribution.
- Ecologically acceptable alternative technologies are available in Ontario.

Nuclear power is only possible through a complicated system of subsidies and grants. The end of Nuclear power will only come about when market forces are imposed on Ontario Hydro.

The Green Party of Ontario advocates:

1: Removing all subsidies for hooking up new installations to the power grids. It currently costs Ontario Hydro in new capital expenditures \$ 50,000 to hook a new single-family residence with electric heating onto the Nuclear Grid in Ontario. This subsidy encourages the use of Nuclear power production over solar or co-generation. There would be no exemptions to this policy. The objective is to get as many homes and businesses off the power grid

as possible.

2. Instruct Ontario Hydro to buy electricity from non-utility generators at full-avoided costs.

3: Hydro's own internal planning documents reveal that a 1978 inventory of undeveloped low-profile hydro sites of small to medium scale dams, extensions to existing powerhouses, and redevelopment of abandoned sites would generate 14,000 mw of peak electric power. This is 28 times the peak output of a Pickering sized plant.

Ontario Hydro's own studies indicate that hydraulic development after conservation could displace the need for Darlington, Bruce and Pickering nuclear power station. This power would be generated when needed as opposed to nuclear's 60% over production requirements to meet peak demand. It would be generated at about \$ 950 for each new kilowatt (1981) or about 1500% less than Darlington

4: Electricity is at its peak demand in Ontario during the winter months. This is also when 73% of Ontario homes are burning oil or natural gas to heat their homes. The Green Party advocates retrofitting through tax credits the purchase of co generation furnaces that generate electricity when they burn oil or gas.

5: A program of research and development should be implemented to enable all homes to have their own photo-voltaic cell generation system and or co-generation capacity.

6: The electric grid should be used as an electricity exchange system and a means of access to reserve supply from existing hydro-electric, solar and co-generation plants.

7: Hydro rate structure should be revised to Reward conservation and production rather than waste.

8: Remove the exemption from home owners and life insurance to residents of Ontario in the event of a nuclear accident. Currently you are not insured if there is a nuclear accident. This would effectively end any discussions about the economics of nuclear power.

9: Divert Ontario Hydro's nuclear research funds and resources to developing sustainable soft energy alternatives.

10: Continue and expand conservation strategies.

11: New industries should be encouraged to build and maintain locally controlled generation systems.

12: Ontario Hydro's board should be elected not appointed.

13: Direct passive solar heating for homes and smaller public buildings and hot water heating are now economically viable when combined with insulation and R-2000 building design. Other forms of heating and cooling can be reduced to occasional supplementary use.

14: A vigorous campaign to create new home design and retrofit existing homes to the required standards to achieve this objective should be implemented immediately, supported by redirected research and funds no longer required for the nuclear power program.

15: Research to improve the efficiency of and control the pollution from wood-burning stoves.

16: Hydro should pay an amount equal to the full avoided capital cost to the consumer for improvements that result in lower electrical consumption. ENDANGERED SPECIES AND HABITAT ACT

ONTARIO???

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will instigate an independent audit of Alberta's remaining low-cost petroleum resources, so that Albertans can make informed decisions regarding exports of oil and

gas and the long-term energy security of the province. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to spend 50% of energy research and development on renewable energy technologies by the year 2000

\* To give highest priority to the development of renewable energy resources and technologies such as wind, water, solar, and small scale geothermal (B.C. POLICY CONVENTION, 1986)

\* TO REQUIRE THAT 20% OF ELECTRICITY FROM GREEN SOURCES (WIND, SOLAR, BIOMASS, SMALL HYDRO AND COGENERATION OF ELECTRICITY AND HEAT) WITHIN TEN YEARS; (Deferred resolution)

\* TO CONVERT THE FEDERAL VEHICLE FLEET TO ELECTRIC, PROPANE, NATURAL GAS, ETHANOL, ETC., AS A MEANS TO REDUCE EMISSIONS OF CARBON DIOXIDE AND OTHER HARMFUL SUBSTANCES BY 50% WITHIN TEN YEARS; (Deferred resolution)

\* TO RETROFIT AND USE OF OTHER ENERGY EFFICIENCY MEASURES

TO IMPROVE FEDERALLY OWNED OR CONTROLLED BUILDING STOCK BY 25% WITHIN FIVE YEARS AND 50% WITHIN TEN YEARS. (Deferred resolution)

\* TO IMPLEMENT A CARBON CONSUMPTION TAX TO GRADUALLY DOUBLE THE REAL PRICE OF THESE FUELS OVER A TEN-YEAR PERIOD. (Deferred

\* TO encourage [ENSURE] the construction of small decentralized power plants; and (B.C. POLICY CONVENTION, 1986) PROVIDING THAT THERE IS EQUAL ACCESS TO POWER AND PROVIDING THAT THERE IS A REQUIREMENT TO PROVIDE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND ENERGY [

F. We will encourage small power producers to install power generation units which use renewable energy, and ensure that the electrical grid system buys surpluses at reasonable rates. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO support a change/raise in energy prices to true replacement costs for all users; and B.C. POLICY CONVENTION, 1986

\* TO support a change in rate structures to encourage conservation; and B.C. POLICY CONVENTION, 1986

\* To create regional soft energy supply councils to advise all levels of government on soft energy issues, with representatives from government, small soft energy companies, and interested groups and citizens (B.C. POLICY CONVENTION, 1986)

\* TO support the replacement of coal-fired thermal generating plants as soon as possible and oppose the construction of any new coal-fired facilities (B.C. POLICY CONVENTION, 1986)

\* TO support transitional financing to municipalities instituting biomass conversion [of non-toxic organic wastes including sewage solids]; (B.C. POLICY CONVENTION, 1986)

## WATER

\* TO oppose the export of water from the province (B.C. POLICY CONVENTION, 1986) AND FROM CANADA [SEE PRESS RELEASE SUPPORTING GOVERNMENT ON POSITION OF BANNING EXPORT OF WATER]

\* to ensure that water is not declared to be an "economic good"

\* to prevent any privatization of community water systems.

## MINING

\* TO PLACE a moratorium on offshore oil drilling; and B.C. POLICY CONVENTION, 1986

\* to review the mining industry establishing mineral conservation, environmental protection, and human safety (B.C. B.C. POLICY CONVENTION, 1986)

The Ontario ministry of Northern Development says the mining industry's "right to mine" should be given top priority. But the mining industry does not always act in the best interests of Native peoples, the citizens of the province, local communities, or the variety of life forms with which we share this planet. The Industry has diverted rivers, drained lakes, acidified the delicately balanced soils of northeastern Ontario, and laid barren the entire Sudbury basin. The impact of mining on the Northern environment must be minimized to protect wildlife habitat, aesthetics and spiritual values. Mining practices reflect total disregard for the

biosphere. Legislation has reduced some of the extreme examples, however, we feel there is still a long way to go.

Therefore, we recommend:

- Investigations to plan for restitution be paid to Native peoples in Ontario

- Prohibit mine exploration and other mining activities in wilderness areas, parks, areas of natural and scientific interest and other environmentally significant areas.

- Require public notification, independent baseline flora and fauna studies, and an outline of planned habitat protection measures.

- Designate all proposed new mines and mine related activities under the environmental assessment acts.

- Zero discharge of toxins from mines. Emissions of pollutants must be reduced to zero. Refer to section on zero discharge.

- Require on-site treatment of all mine waste water and tailings leachate before it is released into ground water or adjacent water bodies.

- Require a closure plan, including financial assurance to be filed for public review 30 days before a new mine or mine related facility can be approved. Require a closure plan and financial assurances for all existing mines

- Tax mining production to more accurately reflect the costs to the public and the environment.

- Phase out of Uranium mining in Ontario.

(GREEN PARTY OF ONTARIO, 1994)

\* TO ban the mining and export of uranium (B.C. POLICY CONVENTION, 1986)

Uranium Mining

TO ban the exploration for and the mining of uranium in the province{S}, and the transport of uranium {WITHIN PROVINCES, AMONG PROVINCES AND OUTSIDE OF CANADA} BECAUSE OF THE HAZARDS OF RADIOACTIVITY IS UNSAFE FOR LIFE AT ANY STAGE FROM EXTRACTION OF RAW MATERIALS TO DISPOSAL (. B.C. POLICY CONVENTION, 1987)

## FORESTRY

Our forests are among our most valued ecosystems. Stewardship of this resource must include the protection of the ecosystem as well as support of the communities which are dependent on forest industries. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To develop regulations whereby the forest industries will be integrated into local sustainable economies. We will prevent the exploitation of the forest for the export of raw resources by multinational corporations. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- to recognize that Forests belong to future generations and provide habitat for other species. clear-cutting should be banned and the remaining 1% of old growth should be preserved. Higher stumpage fees would encourage selective cutting, and value-added production creates more jobs than exporting raw logs. Hemp and kenaf should be grown as alternative sources of paper fiber. (GREEN PARTY OF NEWFOUNDLAND).

- To support and work toward

legislation and regulations to accomplish the following:

a) That 20% of public land in Ontario be preserved.

b) Wildlife species and their habitat will be protected by a system of wildlife preserves in all vegetation zones and ecosystems, surrounded by buffer zones and connected by corridors, reproduced at all scales to the smallest, in all areas including rural agricultural and residential areas, and urban areas, with the goal of having all recoverable species which were present in 1500 in each vegetation zone, widely present in the same zone in the future, except that in the deciduous forest zone large predators and elk may be limited to one or a few large

tracts.

c) The province and municipalities will accept co-responsibility with the federal government for the protection of wildlife and habitat.

d) Forested areas will be managed so as to at least cycle through a relatively lengthy stage in which the species composition and water quality (as far as water quality is controllable by land use) is the same as before European settlement, and that if because of timber cutting or other land use practices the species complement is temporarily reduced, it can and will replenish itself from the surrounding area. Management practices will include the maintenance of a sufficient number of standing dead trees and downed trees to maintain all species.

e) Forest management practices for timber will be directed at producing product which is high in value per unit of volume, and is suitable to have high value added to it, preferably locally. Management practices will favour multiple tree species and multiple use, and will aim at a steady state forest of mixed tree species, wherever practicable.

f) There will be developed a pattern on forest management by local communities, including First Nations communities, within provincial guidelines, suitable for general application.

g) Forest areas which cannot be regenerated will not be cut.

h) Management practices will avoid effects on water quality and flow significantly greater in magnitude and duration than those which may occur naturally through seasonal changes and short-term cyclical climatic changes.

0) Taxation of forested land will be reformed to eliminate

incentives for the liquidation of biological capital, in the form of the standing stock of trees and the other species which depend of them.

j) Stream banks, in agricultural areas and elsewhere, and their surroundings which are essential for the preservation of stream water quality and species composition, will be maintained in appropriate native vegetation. Areas to be protected from cultivation, planting, grazing, and food and vehicle traffic, will be strictly delineated. Where necessary or appropriate, conservation easements or land will be purchased and held by the province, by conservation authorities, or by other public bodies.

k) Protected strips along streams will be integrated with wildlife corridors and walking trails (generally at one edge) where appropriate, as will steep slopes. Flood plains will be used for corridors, buffer zones, and preserves where appropriate. (ONTARIO POLICY KINGSTON, 1997)

The goal of an ecological forest management strategy should be to protect the resource for the future use of all species and yet at the same time provide long term employment.

To this end it is imperative that we

-Ease the pressure on forest ecosystems by promoting improved efficiency in resource use. As an example, we must implement a system of converting used lumber products in wood composite products.

-New forestry leases should only be granted to individuals. These leases would be inheritable so that an individual who was steward to the land could pass it on to his children. These land grants

would be no larger than 5,000 acres to any individual family.

These "new foresters" would be educated to ensure that harvesting / silvicultural techniques used were appropriate to facilitate successful regeneration.

- Banning of clear-cut forestry. Clear cutting is not forestry. It is a crime as morally abhorrent as rape. Maximum sizes of cuts must be legislated and appropriate densities of trees after harvesting as well as unharvested buffers must be mandated.

- Co-operatively run sawmills and pulp facilities would process the harvest. Provincial loan guarantees should be made available to purchase existing facilities from non residents.

- Developing a value-added forest economy that reflected the needs and goals of the community. Legislate that 50% of the harvest must be processed within that community.

- Establishing urban forests. Provide funds for the establishment of forests near the sources of consumption. The goal being to make all bioregions in the province as self sufficient as possible.

- Incorporating environmental costs into forest product through full cost accounting. This could be instituted through stumpage fees that reflected the true costs of sustainable forest management.

- Incorporating forest values and other uses into the timber planning process. This involves developing quantifiable objectives for non-timber values such as genetic diversity, recreation, water yield and quality, wildlife habitat. These should be identified as distinct components of forest management and integrated into existing timber and other related management guidelines.

Identify and protect the forests by

- Establishing and publishing comprehensive annual inventories

- Establishing as a target the protection of 50% of all standing forest for Wildlife / recreation reserves. In these areas only forestry that enhances the health of the ecosystem would be allowed.
- Banning forestry in other areas of ecological significance.
- Undertake site rehabilitation and planting as necessary on previously cut and burned sites that are failing to regenerate naturally.
- Extend protection to all remaining old growth forests. (ONTARIO POLICY, 1994)

## FORESTRY THE ALGOMA HIGHLANDS

The Algoma Highlands contain the unlogged headwaters of the Mississagi, Batchewana, Goulais, Montreal, West Abinandong, and Nushatogani Rivers. 100 Km. north of Sault Ste. Marie and 80 Km. east of Lake Superior. During the 80's and early 90's clear-cut logging began to encroach on the area. Now further large scale logging operations are being planned. This area is home to Ontario's largest areas of dense unlogged old-growth sugar maple, yellow birch and white pine forests. This area contains a tremendous variety of plants and animals including wolves and other species that survive best in undisturbed landscapes. High quality wilderness experiences as well as fly-in hunting and fishing recreational activities are possible because of the Algoma Highlands' rich diversity of life. This area could act as a hunting, fishing ecological and recreational reserve which would help to protect traditional land uses in the region.

Ontario is divided into 13 ecological site regions which are

subdivided into 65 ecological site districts. The Green Party of Ontario government is committed to protecting 50% of representative areas of each ecological site district in Ontario.

The Algoma Highlands area straddles the boundary of two ecological site districts, one of which has no representative protected areas while the other is only partially represented. The Algoma Highlands could be part of an international program to link protected areas across the continent. The Highlands could become an important reference point for ongoing scientific study. The Canadian Forestry Service, Canadian Wildlife Service and the Ministry of Natural Resources are all conducting research in this area.

• To Recommend:

1: The Algoma Highlands be set aside as a wilderness preserve where there would be no further commercial resource extraction activities.

2: That the proposed Farewell Lake Rd. and Toll Creek Rd. that threatens to bisect the Highlands be stopped.

3: Only activities that do not threaten the old-growth red and white pine forests in the areas be permitted to take place in this area.

4: Withdraw approval for the construction of a large new mill in the area. This mill was approved without public consultation.

5: Release of the draft Gap Analysis Report for Site District 4E3, which rated this area as worthy of protection, be immediately released, since it is critical to the full examination of land use alternatives.

\* TO support the immediate retention of all [remaining] ancient forest [canopy]. (B.C, ANNUAL GENERAL MEETING 1993)

\* TO support non-violent civil disobedience aimed at opposing the accelerating "high-grading" of the last stands of old growth forests. (B.C, POLICY CONVENTION, 1987

#### 15.1.1 Local Sustainable Forests

\* TO develop policies whereby the forest industry and its products would be gradually integrated into local sustainable economies and cease to be primarily for international export; and B.C. POLICY CONVENTION, 1986

[\* TO BAN ALL FURTHER RAW LOG AND LOG EXPORTS AND STIMULATE LOCAL VALUE-ADDED PRODUCTS]

\* TO ban on the export of raw logs. B.C. POLICY CONVENTION, 1986

\* TO encourage pilot projects regionally in ecologically sustainable [SELECTION] logging practices and in regeneration of severely damaged forest areas. B.C. POLICY CONVENTION, 1986, 1993

• To permit only those forestry methods which are ecologically economically sustainable. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\*TO HOLD the perpetrators of /such damage/ [ENVIRONMENTAL DESTRUCTION OF THE FORESTS] be financially responsible B.C. POLICY CONVENTION, 1986, 1993

\* TO PROPOSE that such regeneration programs involve the training of cooperative groups to live and work in such designated areas B.C. POLICY CONVENTION, 1986, 1993

\* TO support and develop eco-empathic practices of forest management leading to a variety of sustainable uses; and B.C. POLICY CONVENTION, 1986

\* TO REQUIRE SELECTION LOGGING OR ECO-FORESTRY

\* TO ENSURE that some /forest resources/ FORESTS MUST /may also/ be designated as minimal or no-use areas in the form of wilderness zones or spiritual sanctuaries. B.C. POLICY CONVENTION, 1986

## Bioregional Forestry

\* [TO ADVOCATE, UNDER A FRAMEWORK OF OVERARCHING PRINCIPLES] greater control of [FORESTS] /forest resources/ by bioregional organizations, whether municipalities, local communities, local co operatives, or small business, from the perspective of sustainable yield of forests for the purpose of providing long-term local employment and a secure local economic base, and for the purpose of developing and disseminating cultural and educational values for the bioregional forest ecosystems. (B.C. POLICY CONVENTION, 1986)

\* TO increase in stumpage fees to a level to allow for reforestation of logged lands; and B.C. POLICY CONVENTION, 1986

### 15.5.1 Community Forest Boards

\* TO SUPPORT THE ENTRUSTING [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES], OF citizens of communities with the long-term care and use of the public forests (B.C. POLICY CONVENTION, 1987)

\* TO PHASE OUT existing tenure system of corporate forest use B.C. POLICY CONVENTION, 1987

\* TO TRANSFER THE CARE OF THE FORESTS to the citizens of the watershed area, and that these citizens can implement a diversity of tenure best suited to the particular needs of their region [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES] (B.C. POLICY CONVENTION, 1987)

\* TO ENABLE each watershed region, elect a Community Forest Board which shall ensure the responsible care and protection of the watershed forests. (B.C. POLICY CONVENTION, 1987)

\* TO promote policies which recognize that water is the connector in all ecosystems, including forests, and therefore must receive critical attention (B.C. POLICY CONVENTION, 1987)

\* TO REQUIRE AND promote policies which recognize the importance of maintaining intact forest soils (B.C. POLICY CONVENTION, 1987)

\* TO support the creation of elected Regional Forest Boards with a majority representation of citizens, and with native, labour, environment, and business representatives to oversee planning, inventories, ecological concerns, forest use allocation, and other aspects of human interaction with the forests; and (B.C. POLICY CONVENTION, 1987)

\* TO [PASS LEGISLATION] /support legislation/ to end large scale tenure for corporations or individuals, replacing it with a

long term system of [SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND] /sustainable woodlots/, subject to periodic review by the local Forestry Board [WHICH FUNCTIONS WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES.] (B.C. POLICY CONVENTION, 1987)

\* TO GIVE the local forestry Board the power to revoke tenure; and (B.C. POLICY CONVENTION, 1987)

\* [TO PHASE OUT] /support phasing out of/ the involvement of large corporations in timber harvesting or reforestation, permitting instead only small-scale businesses to do this work /while processing work may still be done by the larger businesses/ (B.C. POLICY CONVENTION, 1987)

\* TO [ALLOW FOR] stumpage fees TO be determined by the local Forest Boards and/or a council representing all regional Forest Boards, and that the stumpage fees be sufficient to cover all costs of forest use including [ /IMPLEMENTATION OF LOCALLY BASED FOREST OPERATIONS WITH SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRACTICES] /road building, reforestation, ecological impact studies, etc/

\* TO support a policy of broadening the selection process for forest ministry staff to include any citizens with appropriate skills, knowledge, or experience; and (B.C. POLICY CONVENTION, 1987)

\* TO DEVELOP AND PROMOTE /development of/ an apprenticeship program for professional foresters whereby extensive practical experience (several years) [IN ENVIRONMENTALLY SOUND SELECTION FORESTRY] will be part of becoming a registered professional forester; and (B.C. POLICY CONVENTION, 1987) POLICY CONVENTION, 1987

\* TO DEVELOP AND PROMOTE /support the development/ of a marketing system for small producers of forest products; (B.C. POLICY CONVENTION, 1987)

\* TO DEVELOP AND PROMOTE Extension programs for the public to assist people in following ecologically sound forest practices. (B.C. POLICY CONVENTION, 1987)

\* TO EXPAND SILVICULTURE to include [ENVIRONMENTALLY SOUND] /sustaining a/ mix of life forms and processes within a long term / [ENVIRONMENTALLY SOUND] /sustainable/ plan. From this point of view, all logging decisions must be married to forest rebuilding decisions, so that these functions are not being determined by different people or at different times. This plan must recognize that profits that may be deferred by ecological logging practices can be expected to be regained through decreased silvicultural expenses. The goal of silviculture shall be to maximize natural regeneration

by promoting partial cut methods which maintain an uneven edge forest. (B.C. POLICY CONVENTION, 1987)

### Residency Requirement

\* TO GIVE priority in tenure and cutting rights to applicants meeting bioregional residency requirements to be regulated by Community Forest Boards through watershed management districts. (B.C. POLICY CONVENTION, 1987)

### Forest Management

#### POLICY CONVENTION, 1987

\* TO PHASE OUT CURRENT METHODS in favour of more ecological methods; (B.C. POLICY CONVENTION, 1987)

\* TO END ALL DISPUTED LAND USE /the disputed land use/ until an arbitrated settlement is reached if there be a dispute of decision between the elected watershed Forest Boards, (B.C. POLICY CONVENTION, 1987)

\* TO establish a council of Forestry Board representatives to function in the arbitration process [OVER DISPUTED LAND USE]; and (B.C. POLICY CONVENTION, 1987)

\* TO end all use of pesticides in forest management strategy; and (B.C. POLICY CONVENTION, 1987)

\* TO REPLACE large scale clear cutting as a forest management strategy WITH ecological /models of cutting/ SOUND. [SELECTION LOGGING] (B.C. POLICY CONVENTION, 1987)

### Slash burning

\* TO BAN prescription burning (slash burning) of wood waste following timber harvest [BECAUSE IT] is accompanied by the production of potentially toxic, complex organic hydrocarbons (organic pyrosynthesis) including dioxins, and P.A.H.s.; and (B.C. POLICY CONVENTION, 1989)

\* TO BAN prescription burning of forest lands [BECAUSE FOREST LANDS] previously treated with herbicides and/or pesticides adds significantly to this medical risk by providing precursors for the pyrosynthesis of these hydrocarbons; and (B.C. POLICY CONVENTION, 1989)

\* TO end all slash burning in BC, as a regular practice and instead implement alternatives to slash burning such as chipping and composting; and (B.C. POLICY CONVENTION, 1989)

\* TO IMMEDIATELY IMPLEMENT an air quality monitoring system sophisticated enough to assess pyro synthetic hydrocarbon pollution due to slash burning (B.C. POLICY CONVENTION, 1989)

\* TO CANCEL FOREST TENURES OF logging firms whose deferred taxes amounting to more than \$9 billion at the end of the fiscal year 1993/94, have not been paid by the end of each fiscal years have their logging tenures cancelled and that they be required to pay all deferred taxes plus interest before being considered for new tenures. ANNUAL GENERAL MEETING, 1995

#### **DEPARTMENT OF NATIONAL REVENUE** Community Economic Development

\* TO ENSURE all expenditures of time, resources, and finances be in effective in achieving worth while goals and be carefully monitored to ensure maximum benefit POLICY CONVENTION, 1990

\* TO {ENSURE] THAT all expenditures of time, resources, and finances be in keeping with the policies and goals of the Greens (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that all expenditures of time, resources, and finances be in keeping with the needs and stated desires of those receiving the assistance (B.C. POLICY CONVENTION, 1990)

Transnational corporations have no stake in the communities where they get their raw materials or where they operate. As a result, resources are overexploited and jobs migrate to where labour is cheapest and environmental standards are lowest. Green tax reform would favour locally owned and operated businesses that use local resources for value-added production in a sustainable manner, thereby keeping jobs, decision-making and profits in the community. (GREEN PARTY OF NEWFOUNDLAND).

\* TO REPLACE THE TERM A Sustainable Economy TO 'A REGENERATIVE ECONOMY' OR TO A SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND ECONOMY. (PROPOSALS AT A WORKSHOP

\* TO WORK FOR THE CREATION OF AN ECONOMY BASED ON LOCALLY [SUGGESTION FROM WORKSHOP: BIOREGIONALLY] OWNED AND OPERATED BUSINESSES WHICH USE [BIOREGIONAL] RESOURCES FOR VALUE-ADDED PRODUCTION IN A SUSTAINABLE MANNER; (deferred resolution)

• To strive to reduce the export of raw materials and increase the production of value-added goods. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO ENSURE THAT THROUGH TAXATION REFORM THESE BUSINESSES BE ENABLED TO INVEST IN THE COMMUNITY, CREATE LOCAL EMPLOYMENT, AND CREATE GOODS AND SERVICES DESIGNED TO BE LASTING, USEFUL, AND EASILY REPAIRED; (deferred resolution)

\* TO ADOPT THE PRINCIPLES OF COMMUNITY ECONOMIC DEVELOPMENT (CED) INCLUDING THE DEVELOPMENT OF A TAXATION SYSTEM THAT PROMOTES LOCAL SOURCING, REVOLVING COMMUNITY LOANS, DEVELOPMENT OF LOCAL [BIOREGIONAL] SOCIAL AND MATERIAL NEEDS INVENTORIES, AND MATCHING OF THOSE NEEDS WITH LOCAL SUPPLIERS. (deferred resolution)

\* To ensure that Community Economic Development function within a framework of overarching principles related to

1. promoting and fully guaranteeing respect for human rights, labour rights and social justice;
2. enabling socially equitable and environmentally sound development;
3. achieving a state of peace, justice and security;
4. creating a global structure that respects the rule of law; and
5. ensuring the preservation and protection of the environment.

(circulated in press release, and budget presentation)

\* to support the LETS or similar community-based programs INCLUDING BARTER BUCKS (added to include program developed in the Kootenays, B.C.).

\* to enact legislation that would ensure that corporate owners and officers be held legally liable, in criminal and civil court, for any environmental and social harm they cause.

\* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to replace the Gross National Product with the Genuine Progress Indicator (GPI). The GNP excludes social and environmental costs in its accounting, thus facilitating the illusion that community breakdown, crime, the loss of farmland and biodiversity, and unemployment have no economic significance.

\* to institute an average four-day/32-hour work week which would mean that existing jobs could be shared with those now unemployed.

INTRODUCTION OF A FOUR DAY/32 HOUR WORK WEEK, WITH THE LEGAL RIGHT OF INDIVIDUALS AND UNION CONTRACTS TO REFUSE OVERTIME (deferred resolution)

- to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

- TO GUARANTEE THE RIGHT TO WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK

MINDFUL OF THE NEED TO QUALIFY THE “RIGHT TO WORK” AS EXPRESSED IN THE INTERNATIONAL COVENANT OF CIVIL AND POLITICAL RIGHTS: “THE STATES PARTIES TO THE PRESENT COVENANT RECOGNIZE THE

RIGHT TO WORK, WHICH INCLUDES THE RIGHT OF EVERYONE TO THE OPPORTUNITY TO

GAIN HIS/HER LIVING BY WORK PROVIDING THE WORK IS NOT IN VIOLATION OF HUMAN RIGHTS, DOES NOT CAUSE ENVIRONMENTAL DEGRADATION, OR DOES NOT CONTRIBUTE TO CONFLICT AND WAR, WHICH HE FREELY CHOOSES OR ACCEPTS, AND WILL TAKE APPROPRIATE STEPS TO SAFEGUARD THIS RIGHT (ART. 6. 1. INTERNATIONAL COVENANT OF CIVIL AND POLITICAL RIGHTS, 1966)

WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS

- TO RECOGNIZE THE RIGHT OF EVERYONE TO WORK FOR FAIR WAGES

- TO RECOGNIZE THE RIGHT FOR EQUAL PAY FOR WORK OF EQUAL VALUE
- TO PROVIDE WORK THAT IS NOT IN VIOLATION OF HUMAN RIGHTS, DOES NOT CAUSE ENVIRONMENTAL DEGRADATION OR DOES NOT CONTRIBUTE TO CONFLICT AND WAR (1998)

\*TO ENACT FIVE WEEKS OF VACATION PER YEAR; (deferred resolution)

\* TO FACILITATE JOB SHARING; (deferred resolution)

\* TO ENSURE LEGISLATION REQUIRES FOR PAID LEAVE FOR CHILD REARING EDUCATIONAL LEAVE. (deferred resolution)

\* to enact product stewardship legislation that would require producers to increase the life span of their products and to assume the full recycling and disposal costs.

\* to enforce the "Polluter, Pay Principle", to raise corporate taxes to OECD levels.

<sup>a</sup> TO THAT CORPORATE TAXES BE CONSIDERABLY RAISED AND IMMEDIATELY TRANSFERRED INTO SOCIAL PROGRAMS SUCH AS EDUCATION, HEALTH AND SOCIAL SECURITY. (1998)

IV We will impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)

II We will introduce legislation that will make manufactures and suppliers of products responsible for the cost of their ultimate disposal, or return and reuse. III We will introduce economic instruments which encourage recycling of used materials rather than consumption of new resources. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to cease involvement in the CANDU owners' group, to end all subsidies to AECL and to cease to sell CANDU reactors internationally

\* to prevent the transfer of plutonium from dismantled nuclear weapons in Russia and the USA to be used in CANDU reactors

\* to prevent the transfer to other states of substances or activities that are harmful to human health or the environment.

- \* to dismiss the use of "Prior Informed Consent" to justify the transfer of harmful substances; "the right to be harmed" is not a legitimate right.
- \* to revise the tax treatment of renewable energy and energy efficiency investments immediately to make them more attractive to investors than investments in conventional energy sources such as oil and gas.
- \* to spend 50% of energy research and development on renewable energy technologies by the year 2000.
- \* to discontinue all spending on nuclear energy research, including the subsidy to Atomic Energy of Canada.
- \* to focus programs related to fossil fuel energy supply, production and consumption on reducing greenhouse gas emissions and other harmful environmental impacts.

**FINANCE (63,718,189.000) Surplus transfer 12 billion**

**Auditor General should be elected by an all-Party Committee. Apart from the Commission on Sustainable Development, there should be a position to determine the comparative legitimacy of the nature and type of expenditures and not just the auditing appropriateness. Examine COMER's banking reforms.**

#### **CITIZENSHIP AND IMMIGRATION (758,325,000)**

**Canada must discontinue socially inequitable and environmentally unsound international investment that contributes to the development of economic and ecological refugees. It would be important for the Department to acknowledge the role that Canada plays in contributing to the displacement of people. The Department must ensure that the Citizenship Act is not unjust and discriminatory and is in compliance with international law. and that the Act incorporates the recommendations of the Coalition for the rights of Immigrants and Refugees. The Act must not (i) discriminate on the grounds of social condition by giving priority to privileges of affluent applicants by bringing government policies in line with "the forces of globalization" (ii) penalize immigrants who may have inadvertently misrepresented her/himself on an application; (iii) discount the time spent in Canada as being counted for residence status; (iv) continue the use of terms such as "crime", abuse" and maintaining the safety of society which send a message that immigrants are dangerous; similarly or such as "illegal" being used to designate refugees; (v) permit excessive new powers of the Minister to annul citizenship or of the Cabinet to refuse citizenship on the basis of undefined 'national interest; (vi) download the costs of language and skills training to community groups and individual immigrants and refugees and their sponsors; (vii) intimidate potential sponsors with threats of law suits when failure to support sponsored immigrants occurs. The Government must implement the Convention for the Protecting of Refugees, and must sign and ratify and implement the Convention for the Protection of Migrant workers and their families.**

#### **PARLIAMENT**

**Salaries of each Parliamentarian should be reduced by 10,000 and the savings transferred to the Department of Public Works and Government Services into initiating a fund to assist in fulfilling the human right to housing (@3,00,000) and to the Department of Human Resources into the Anti-Poverty Fund. Each Senator's salary should be also reduced by 10,000 and the (@1,000,000) savings transferred into the above funds. The criteria for selection of senators should be changed from the whim of patronage to the commitment to merit based on life time contribution to the promotion of the Public Trust.**

Parliament

Senate

Library of Parliament

### **PRIVY COUNCIL (271,182,000)**

**The Election's Act should be revised to require full disclosure of donations to political parties not only when given directly to the political party and during an election but also when given to regional associations and to candidates, and leadership campaigns outside of elections. Corporate donations should be disallowed. The inequitable "first past the post system"-- which contravenes Section 15 of the Charter should be replaced with some form of mixed proportional representation system". The fact that representatives, from NGO's with charitable status, run for political office should not jeopardize the charitable status of the organization. Funding should be redirected to extending the role of the Auditor General's Commission on Sustainable Development to assess the governments' level of compliance with international agreements and to creating an additional position for assessing the substance of government spending.**

## ELECTIONS CANADA

### RECALL

- enact a law whereby if an electoral district requests with reason a member of parliament to be recalled, that person must resign his/her seat as a member and an election to be held with 60 days to fill the vacant seat (GPC, 1990).

- Recall could be initiated by any person within an electoral district by collecting signatures, on forms to be made available by the electoral officer

- Recall would require signatures of 20% plus one of the eligible voters [of the electoral district] verified to be accurate by the [district's returning officers, [[who would implement the recall]] (GPC, 1990). Verification by the returning officer would be in the form of a poll whereby all eligible voters [within the electoral district] may take part, as if an election was being held. this may happen only once between general elections [and only once] per [electoral district]

A Green Party government would undertake

- \* to phase out limits to democratic participation such as \$1000 deposits required for federal candidates.

Alternative voting systems

Proportional representation

The present electoral system in Alberta and in Canada [throughout Canada] creates governments which are not representative of the population. The Green Party would introduce a system of proportional representation, similar to that used in /most

developed countries/. [countries]. Some seats would be contested according to our present system, and some seats would be allocated in proportion to the total votes cast for each party. This will encourage participation by all citizens and reduce conflicts caused by regional differences. (RENEWAL OF DEMOCRACY GREEN' ELECTION PLATFORM Alberta, 1997)

## ELECTORAL REFORM

Our electoral system is surprisingly undemocratic. In:

-1979 Joe Clark formed a government with 36 % of the popular vote, the Liberals received 40 % of the vote.

-1980 Trudeau received a solid majority with 44 % of votes cast.

-1988 Mulroney won with 43 %, he then pushed through the F.T.A.. The Liberals and N.D.P. received 52 % of the vote opposed it.

-1990 Bob Rae received a solid majority with 36 % of the vote.

-1991 the N.D.P. in B.C. and Saskatchewan are in power with 65 % of the seats and less than 40 % of the vote.

-1993 the Conservatives received 2 million votes and only 2 seats.

As well as producing undemocratic results, the system is not open to all Canadians. During election campaigns, millions of dollars are spent on advertising and campaign tours. This media saturation works and it strongly favours the party with the most money. As a result, the party in power generally represents the interests of those that can provide the most financial support---big businesses and wealthy individuals. If the interests of the majority of Canadians are to be fairly represented by our governments, it is critical that we remove the advantages of spending power in election campaigns. (GREEN PARTY OF ONTARIO, 1994)

## PROPORTIONAL REPRESENTATION

Our current electoral system undermines Canada's democratic integrity as political parties usually win a solid majority of the seats while only capturing a minority of the total votes.

In 1993, the Liberal Party won 60% of the seats with only 41% of the vote. the current system also makes votes unequal depending on who you vote for.

For example, in 1993, the Bloc Quebecois elected 54 members with 13% of the vote while the Progressive Conservatives won just two seats despite having 16% of the electorate supporting them. this means that it took more votes to elect one PC Mp than any other party.

RESOLUTION ON PROPORTIONAL REPRESENTATION (carried with amendments)

Whereas it is desirable that representation in the legislature accurately reflect the opinion of the voters, and that major changes in the structure and function of the Government of Ontario shall not be undertaken without a consensus among legislators and voters, therefore be it resolved that the Green Party of Ontario advocates a system of proportional representation for elections to the Ontario legislature, and be it further resolved that the Green Party of Ontario will support and work toward legislation embodying the following measures:

1. A Royal Commission shall be established to investigate and present to Ontarians the major possibilities for electoral reform encompassing the selection of MPPs from single-member constituencies by a majority rather than a plurality method, and alternatively, systems of proportional representation, and the Royal Commission shall present succinct analyses of the merits and demerits of each choice together with references to more detailed analyses and studies.
2. The systems of proportional representation presented shall include those offering voters a choice among candidates of the

same party in multi-member constituencies, as well as systems in which the order of election of individual candidates of the same party is determined by the party alone.

3. A referendum, preferably at the same time as a general election, shall be held to permit the voters to choose among the systems presented by the Royal Commission.

4. The voting method used for the referendum shall be one which selects as far as possible a system approved by the majority of Ontario voters, and it shall be one of: a decision tree, or the single transferable vote (preferential vote or alternative vote), or the approval vote, or a combination of two or more of these systems. (ONTARIO POLICY KINGSTON, 1997)

### Proportional Representation

The Green Party suggests switching to proportional representation so that when a party receives 15% of the popular vote it would also receive 15% of the seats in Parliament. We would oppose paid political advertising and political donations. Instead all parties should receive equal access to the media and funding. (GREEN PARTY OF NEWFOUNDLAND).

### Participatory Democracy

Proportional representation provides an electoral system that produces governments which are responsive to the will of the electorate. Under the current system, a party could win 20% of the vote across Canada and not receive a single seat in Parliament. Proportional representation means that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties.

Our democracy regularly disenfranchises 1/3 of the electorate

by not representing them in the legislature and places people in power who do not have the approval of the majority of the voters.

-1979 Clark won with 36 % of the vote, the Liberals lost with 40.

-1980 Trudeau won a majority with only 44% of the votes.

-1988 Mulroney received 43 % of the vote, he enacts the F.T.A.. The Liberals and N.D.P. opposed it and received 52% of the vote.

-1990 Rae receives a solid majority with 36 % of the vote.

-1991 N.D.P. in B.C. and Saskatchewan are in power with 65% of the seats and less than 40 % of the vote.

-1993 Conservatives receive over 2 million votes and 2 seats.

Webster's dictionary defines democracy as "government by the people; especially, rule of the majority." By this definition Canada is only occasionally a democracy.

Whatever the divisions between Ontario and Quebec and the rest of Canada, they are reinforced by our voting system. To gain power a party need only win the majority of seats in Ontario and Quebec. Thus, the interests of the other eight provinces and the two territories are secondary. Major parties choose candidates particularly in winnable seats, who are predominantly middle-aged, middle-class, white males who have a tendency to be lawyers. Only 10% of MPs are women yet more than half the population is female. Countries using a proportional voting system elect woman in far greater numbers. Parties no longer represent an ideological perspective, rather they pander to the lowest common denominator during an election in a cynical attempt to get 40% of the vote and then implement their hidden agenda during their tenure.

Most countries use proportional representation in national elections. This leads to coalition governments that more accurately

reflect the population. Many have noted that Canada is best governed under a minority government because like a government elected under the proportional representation system they are forced to work together in the common interest of voters. Our system leads to a strong government that does not have to moderate its opinion with the views of others. The greater danger lies in the current system's ability to elect governments that represent only a minority of the electorate, but have an unassailable majority in Parliament.

We favour the additional member system of proportional representation practiced which maintains constituency links. The system regionally "tops up" seats, which means almost all voters will be represented by a regional MP from his or her preferred party.

The Green Party advocates:

- 1: The Green party advocates replacement of the present first-past-the-post electoral system with the additional member system of proportional representation as practised in many countries. This implies that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties. This system maintains constituency links by regionally "topping up" seats so that all voters will be represented by a regional MP from his or her preferred party.
2. No advertising by political parties, governments or special interest groups. The positions of the parties would be presented in free and equal time/space in the national media. The individual candidates would be presented to the community by door to door canvassing, "town hall" meetings and by free and equal time/space in

the local media.

3. Each party and each candidate would be given, from public funds, sufficient monies to cover only basic office expenses.

Additional spending would not be permitted.

4: The Green party advocates banning of non reusable or recyclable lawn signs used during political campaigns. They are wasteful of resources and perpetuate a very shallow level of participation of the public in electoral politics.

5: A binding "none of the above" option on the ballot, if none of the above receives the most votes a new election would be triggered.

6: A binding legislative initiative, referendum and recall authority for voters.

\* to reform our current electoral system along the principles of proportional representation where a party receives a number of seats equal to their share of the vote.

\* to promote proportional representation for its positive effect in electing more women and minorities to parliaments around the world.

\* to recommend a Promotional Representative system similar to that used in Germany and New Zealand, where political parties hold seats after passing a 5%-threshold of the popular vote.

\* to encourage the use of the mixed-member-proportional system where Canadians would vote twice: once for their local representative (as they do now) and once for the party of their choice (which would determine how many seats a party can have). Such a system would ensure Canadians have both personal and political representation.

• To create an Independent Assembly of CANADIANS /Albertans/ which will examine and make recommendation on all processes involved in provincial and municipal governments. Priority would be given to the following issues: (ALBERTA GREEN POLICIES, ALBERTA 1997)

I. Alternative methods of electing our representatives in government, for example proportional representation (ALBERTA GREEN POLICIES, ALBERTA 1997)

II alternative methods of government which would encourage cooperation between political parties instead of the present adversarial relationships

III the right of recall of MLAs (ALBERTA GREEN POLICIES, ALBERTA 1997)

## 21. RESOLUTION ON ELECTORAL REFORM FOR ONTARIO MUNICIPALITIES

(carried as is)

Whereas the interests of citizens in municipal government as at other levels of government are best served by the accurate representation of voter opinion on municipal councils and in the selection of mayors, by the avoidance of artificial dominance by minority groups, and by the avoidance of vote-splitting in mayoral elections, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. In Ontario municipal elections for mayor or reeve, the voting method employed shall be the single transferable vote (preferential vote or alternative vote), or if the municipality so, chooses, the approval vote, whether the electorate is the voters at large or the council.
2. Elections for municipal councils in Ontario shall be conducted by the single transferable vote in constituencies each electing not less than three members of council using the Droop quota and Gregory transfers.

### 3. Definitions:

Approval vote: the method in which each voter may give one vote only to as many candidates as he or she considers acceptable, and the single candidate with the most votes wins election.

Single transferable vote: the method in which each voter allocates a rank or preference number to as many candidates on

the ballot as he or she wishes or the law prescribes, and where there is more than one place to be filled (member to be elected) in a constituency, a quota is established, and initially any candidate having a number of first choice (rank or reference number 1) votes equal to or exceeding the quota is elected and any surplus ballot papers bearing surplus votes for such candidates are transferred to the candidates of next preference number on the ballot paper, and after the transfer of surpluses the candidate with the least number of first choice plus transferred votes is dropped from consideration, and that candidate's ballot papers are transferred to the candidates having the next preference rank on each ballot, and the process continues until the required number of candidates either meets the quota or has more votes than the single remaining alternative.

Alternative vote: the single transferable vote applied to the filling of one place or the selection of one choice, as in a mayoral election or the selection of a councilor or MPP from a single-member ward or constituency.

Drop quota: the number obtained by dividing the total number of valid votes cast in a constituency by a number which is one more than the number of places to be filled (members to be elected) and increasing the result to the next whole number.

Gregory transfer: the method of transferring surplus votes by transferring all of the candidate's votes but giving each vote a fractional value equal to the number of surplus votes divided by the candidate's total number of votes, so that  $s/c \times c = sc/c = s$ , thus, making the number of votes transferred to each remaining

candidate the same however many times the count is repeated.

(ONTARIO POLICY KINGSTON, 1997)

Voting in government

- To Allow all elected representatives TO participate in the process of government THROUGH free votes in most circumstances. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Financial Reforms

**(ii) institutional collusion which continues to occur through the condoning of corporate donations to political parties;**

The Elections Act failed to substantively address a loophole where contributions to constituency associations and to candidates, including leadership candidates, outside of the formal election period are not presently required to be disclosed thus permitting questionable and undisclosed corporate contributions.

SMP SYSTEM PERPETUATES THE FAILURE TO DISCLOSE SOURCE OF DONATIONS

SMP SUPPORTS THE CONTINUATION OF CORPORATE FUNDING

The Liberals, Reform and Progressive Conservatives have about 75% of the seats. All three parties accept corporate funding from the Banks, financial institutions, greenhouse gas producers (oil, coal and gas, automobile, forest companies); mining industry, chemical industry; pharmaceutical industry, agribusiness industry, tobacco companies, food chains and restaurants nuclear industry; gun lobby (Reform) military industries etc.... "unethical screen) through which they pass political donations, it is not surprising that there is the lack of political will to establish strong mandatory guidelines to regulate industry. Given that 75% of the elected representatives are dependent on these donations there is little likelihood that they would support a clause in the Election's Act preventing corporate funding and permitting only individuals to contribute to political parties, given that only individuals vote.

In the international sphere, it is deemed to be illegal for Canadian corporations to give money to elected officials in governments outside of Canada (this practice is referred to as "bribery" in Canadian law, see EDC document prepared for Globe 2000).

- The Elections Act failed to substantively address a loophole where contributions to constituency associations and to candidates, including leadership candidates, outside of the formal election period are not presently required to be disclosed thus permitting questionable and undisclosed corporate contributions.

Canada has international made a commitment to reproductive health which includes the right to choose an abortion. If Canada does reverse this, they would have international repercussions.

#### Political Donations

- To support and work toward legislation embodying the following measures and principles:

1. Corporate contributions to Ontario political parties, constituency associations, and candidates shall be unlawful, and effective penalties shall be provided.

2. Individual contributions shall be limited to a total of \$ 2000 per calendar year plus \$ 2000 per election period, to all parties, constituency associations, and candidates combined, throughout the province.

3. The Ontario political contribution tax credit system for contributions from individuals shall be maintained substantially as it exists at present.

4. Election subsidies payable to candidates and parties shall be calculated on an amount per vote obtained, and there shall be no minimum vote requirement to qualify for subsidy.

5. Legislation on political financing shall be designed on the

assumption that it is desirable to facilitate the establishment and growth of new political parties in order to encourage the development of new ideas and policies and to promote a healthy competition among parties. (ONTARIO POLICY KINGSTON, 1997)

strategy for funding political parties:

(a) The Ontario Commission on Election Finances shall make annual payments from provincial funds to registered parties and constituency associations, to a total amount which shall cover the greater part of their total expenses averaged over election and non-election years.

(b) The amount distributed to each party and constituency association in each year shall be determined by allotting to each Ontario resident who files an income tax return and his or her adult dependents, for the preceding calendar year, a sum such as a dollar to be divided among the registered parties as the tax filer or adult dependent sees fit, and an equal sum to be divided in the same proportions among the registered constituency associations of the various parties in the constituency in which the tax filer resides.

(c) The distribution shall be accomplished by providing to each Ontario tax filer and adult dependent along with the income tax return, a machine-readable form which shall bear the name of each registered party and the address, telephone number and email and website address of its provincial headquarters, and opposite each party name the form shall bear outlined squares to some such

number as ten, each square having some such nominal value as ten cents.

(d) Each tax filer or dependent shall darken a number of squares representing the total amount which he or she has been allotted to divide among the registered parties, and shall return the form to Revenue Canada with his or her tax return, and Revenue Canada shall enter upon each form the tax filer's postal code in machine readable form so that from the postal code the tax filer's constituency of residence may be determined, and so that from that point on the necessary calculations up to the issuance of cheques can be completely computerized and can be accomplished economically.

(e) If the tax filer or dependent does not darken the correct number of squares then the sums allotted to that person shall be distributed in proportion to the number of squares actually darkened.

(f) If the tax filer or dependent does not fill out the form in a useable manner, or at all, then the sums allotted to that person shall be distributed according to the average of all those forms which were filled out in a useable manner.

(g) If a registered party does not have a registered constituency association in any given constituency, then any sum which may have been allocated to that nonexistent constituency association shall be paid to the registered party in a manner which permits the party to identify the constituency in respect of which the money has been paid.

(f) The Commission on Election Finances shall enter into a contract with Revenue Canada under which Revenue Canada shall

distribute, collect and process the forms, shall store them until the following general election, shall preserve the confidentiality of the information contained on the forms, and shall perform the necessary calculations except those under subsection (g) above.

(ONTARIO POLICY KINGSTON, 1997)

19. RESOLUTION ON ONTARIO MUNICIPAL ELECTION FINANCES (carried with amendments)

Whereas it is desirable that municipal politics shall be conducted in the interests of citizens rather than in the interests of businesses or real estate developers, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. Corporate contributions to the election campaigns of candidates for mayor and councilor in Ontario municipalities shall be unlawful, and effective penalties shall be provided.
2. Contributions from one individual to the election campaigns of candidates for mayor and councilors in Ontario municipalities shall be limited to a total of \$ 500 for all candidates combined in all Ontario municipalities during and for any one election period.
3. Individual contributions shall be creditable against Ontario income tax payable, to the extent of 75% for the first \$50 and 50% for the next \$ 100, and this credit shall be in addition to the credit for contributions to provincial parties, constituency associations, and candidates. (ONTARIO POLICY KINGSTON, 1997)

- to replace paid political advertising and political donations with equal access to the media [delete: and funding for all parties (GPC, 1996)]

\* to impose strict limits upon election campaign spending, and particularly limit amounts raised from vested economic interests such as corporations and unions, and eliminate refund of 22.5%

- TO reform regulations for financial contributions to political parties and electoral campaigns so that only individuals who are qualified to vote may donate. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO mandate that all political party advertising will be paid for by the political party itself. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### DONATIONS

- TO reform regulations for financial contributions to political parties and electoral campaigns so that only individuals who are qualified to vote may donate. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to eliminate the use of funds by incumbent and government parties during the pre-election writ period.

\* TO PROPOSE THAT during a provincial election campaign no political party or candidate would be permitted to spend directly or indirectly more than \$50 (indexed for inflation) per eligible voter in the riding POLICY CONVENTION, 1987

\* TO PROPOSE THAT no political party or candidate for elected office be permitted to receive more than \$3000 per year from any one individual or other agency POLICY CONVENTION, 1987

#### Equal access to media

\* to ensure equal access by all registered political parties to publicly regulated media during elections

#### Boundary redefinition

- TO establish an independent process for defining new electoral boundaries. Consideration will be given to bioregional differences, and only a 10 % variance in population will be permitted. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Fixed term

\* TO PROPOSE that the provincial legislature should be moved to fixed-term sessions, with regularly scheduled elections except when there is a motion of non confidence POLICY CONVENTION, 1987

- To move to a fixed four-year term for Provincial Governments and we will mandate at least two sittings of the legislature per year. (ALBERTA GREEN POLICIES, ALBERTA 1997)

To ensure that all Canadian citizens have the opportunity to choose, in a referendum, among proposals for electoral reform from all political parties and other citizens' groups  
ANNUAL GENERAL MEETING, 1995

- To advocate that the constitutional amendments include: most of the legislators elected by proportional representation (% of votes received = % of seats received)  
ANNUAL GENERAL MEETING, 1995

some legislators elected by district and the majority by party list

legislative representation for parties receiving 2% or more of the provincial popular vote

provisions for parties and independents receiving less than the minimum to assign their votes to another candidate

district representation for isolated and distinct areas

no discrimination based on the wealth or income of a candidate, party, or referendum committee, etc.

the right of each voter to be informed of all candidates', referendum committees' and parties' electoral information

ample, equal and free broadcast time for all candidates on all broadcast media, spending limits in each electoral district

door-to-door enumeration of voters to revise a permanent voters list for all levels of government

## Electoral Reform Regulations

- To enact the following:

- a) abolition of election fees and deposits

- b) spending limits in each electoral district indexed to the median provincial income (plus travel allowances in non-urban ridings)

- c) distribution of paper and electronic copies (including recorded copies for the visually impaired) of "voters' booklets" to each voter including statements from each candidate (in their electoral district) and

statements from each party and referendum committee

- d) closure of all businesses and government offices on polling day except for essential, news media, and electoral services

- e) possible incentives to attend the polls or disincentives to shun the polls

ANNUAL GENERAL MEETING, 1995

## Grass Roots Democracy

- To endorse the principle that all government should be decentralized to the most appropriate human scale; and POLICY CONVENTION, 1986

- To endorse the principle that all people should have the opportunity to be directly involved in the decisions that affect their lives through direct participatory democracy; and POLICY CONVENTION, 1986

### 1. Government reform

TO PROVIDE SYSTEMS FOR /provide/ all citizens with the opportunity to have input into the decisions which affect their lives. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To endorse the principle that the local community or neighbourhood and its watershed is the basic unit of self-government since it is the locus of direct democracy, human-scale institutions, and fine-grained adaptation to place; and

- To endorse the principle that government at regional and provincial levels would serve primarily as coordinating bodies needed to accomplish larger cooperative projects, as well as arbitrate disputes, address broader human and non-human interests, and provide information and expertise. B.C. POLICY CONVENTION, 1986
- To increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997) [WITHIN A FRAMEWORK OF PRINCIPLES]

### DEPARTMENT OF PUBLIC WORKS AND GOVERNMENT SERVICES (

**Funds relocated from Parliamentarians (@3,00,000,000). from Senators (@1,000,000) from Governor General budget (@3,00,000).to Human Right to Housing fund. At Habitat II (1996) Canada made a commitment to develop environmentally sound human settlements in consultation with community organizations and individuals, particularly those that have been traditionally marginalized from the decision-making process. Ensuring that all Canadians have access to housing is not only the right thing to do but also is a human right recognized under the International Covenant of Cultural and Economic Rights, 1966. Redirect, as proposed in 1999, 1.63 billion from Department of Public works to implement commitments made though Habitat II, in particular, funds from Canada Mortgage and Housing should be redirected to guaranteeing the human right to housing.**

#### HOUSING:

The Ontario Greens believe that decent housing is a universal

social right and utilitarian necessity. The primary obstacles to home ownership are policies that encourage an increase in population which increases the demand on existing housing. This facilitates an environment of land speculation and created scarcity.

There is a need for housing in 4 general categories

- 1) Privately owned homes
  - 2) Coop housing
  - 3) Rental accommodations
  - 4) Social assisted housing
- 1) Privately owned homes

A Green government is committed to encouraging home ownership by implementing the following policies.

1: The Green Party of Ontario is committed to entering into negotiations with the Federal government to regulate the funds raised from R.R.S.P.'s to be used solely for the purpose of providing mortgages for Canadians.

2: We are also committed to government support for the creation of community land trusts.

A community land trust is a non profit corporation which owns land. It leases the land to individuals according to the use value of that land. Our needs for land are many and often in conflict. Land can provide all the things we need if we plan carefully and secure local control over land use decisions. The central principal motivating a land trust is that buildings, and all things done in or on the land should be owned by individuals, but the land itself should be owned by the community as a whole.

A land trusts primary function is to buy or accept gifts of land and lease it back to members under a 99-year lease that is

automatically renewable and inheritable. Part of the process is determining, in conjunction with land use planners, local government and the community at large, the most appropriate use for a given parcel of land.

The business of the land trust is conducted by a board of governors elected by the membership. Members are encouraged to join or form committees to address particular issues of land use. The Community Land Trust allows people to buy a house for what it is worth without having to buy the artificially inflated land that it sits on.

The lease restricts the resale price of the home to the value of the building and other improvements in or on the land, that is the cost of rebuilding the same house and grounds again at the time of the sale. This makes it's affordable for every subsequent buyer, not just the first. No one buying the house will have to pay for the inflated price of the land. The return to the seller is therefore, equal to the increase in the price of building materials and labour in the area. The same holds true for commercial land and farm land. A leaseholder owns, buys and sells the result of real work, not the result of speculation.

At its core the community land trust is a management group. It can work flexibly with individuals or organizations to accomplish the objectives of the community for agricultural, commercial, industrial, open spaces, or other land uses. Community land trusts are not abstract theories but living working organizations. There are dozens of land trusts in existence in North America today.

## 2) Coop housing

For first time and low-income home buyers as well as for other

tax payers the most cost-effective way to acquire a home is through a coop. In coops individuals work together to build (sweat equity), organize and, maintain their homes. Government loan guarantees, small grants as seed money and zoning changes are all that is needed to provide individuals with their own homes. Personal initiative and pride will finish the project.

### 3) Rental accommodations

In a society freed from an expanding population and land speculation rental properties could be returned to the free market. For the large numbers of people who for whatever reason don't want to own a home, or be part of a coop, rental accommodation must be made available. Greens do not see rent controls as being desirable, they are however necessary in our current economic climate.

### 4) Social assisted housing

The Green Party of Ontario is committed to policies which facilitate decent, permanent shelter for those in need:

We are committed to making changes to the zoning regulations of our province which will encourage a mix of housing alternatives in every community.

New communities (and renovated older communities) would be required to have as a percentage of total houses built:

1: More options for temporary housing must be provided such as Group homes and temporary shelters, Rent-subsidized, public housing.

2: Every neighbourhood should have councils to consider building permits which would ensure that every development would have a range of price variations.

## LAND USE Refer to Insert

The objective of Green land use policy is to

- 1: Ensure that land is used in a frugal fashion.
- 2: Ensure that our cities and its inhabitants consume as few resources as possible
- 3: Ensure that land use planning and development practices in urban and rural Ontario consider the present and future environmental, social and economic needs of all species in the Province.

To that end we recommend:

- 1: Improved land use planning through meaningful public participation in land use planning at all stages of development.
- 2: Mandate full intervenor funding for all Ontario Municipal Board hearings.
3. Restrict strip development through the development of Greenbelts around urban areas.

4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GpO, 1994)

5: The establishment of model ecological communities based on our definition of sustainability. (Section 1)

6: The identification of areas of ecological and cultural value.

And the protection of these areas with strong legislation that provides jail terms for individuals who ignore land use guidelines.

This would be accomplished through a new Heritage Act which would outline strict provincial guidelines expanded to cover the natural heritage of the rural landscape i.e., agricultural land, wood lots, heritage buildings, wet lands, coastlines and waterways.

7: The protection of all Class 1 and 2 farm land in Ontario without exception. Policies to be adopted that will make farming a viable alternative is outlined in community land trusts and agriculture sections.

8: Improved wildlife and wetland habitat conservation and restoration, wilderness and public recreation parks.

9: Establish a program to set aside 50% of Ontario's landmass in wilderness parks and biological preserves. The objective being to protect representatives of all-natural ecosystems and species in Ontario. (GREEN PARTY OF ONTARIO, 1994)

### DEPARTMENT OF TRANSPORT

#### TRANSPORT -

**Redirect funds to promote environmentally sound alternative transportation. At Habitat II (1996), Canada made a commitment to move away from car-dependency; the question is no longer whether or not to move away from car-dependency but how. At UNCED (1992), Canada made a commitment to promote environmentally sound public transportation. Substantial funding should be redirected to preventing harm through regulation not through “clean-up and mitigation’s”, and to enacting legislation across Canada to ensure compliance with the Convention on Biological Diversity, including Endangered Species legislation and with the previous obligation incurred in response to the Framework Convention on Climate Change--reduction of CO2 emissions 20% from 1990 levels by the year 2000= through removing subsidies to fossil fuel companies and through moving away from car dependency.**

**Redirect funding to developing environmentally sound transportation across Canada and to revitalize the railway system.**

## DEPARTMENT OF CANADIAN HERITAGE

Through the Department Report, the following objective has been enunciated:

**"Objective is to build a strong society in which Canadians participate, celebrate and give expression to their values and heritage". Cultural Development and Heritage helps create an environment in which Canada's heritage is preserved and made accessible, artistic expression can flourish, cultural markets develop thereby ensuring the availability of, and access to, Canadian arts, heritage, broadcasting products and services." To achieve this objective, Canada is a signatory of the Convention on the Protection of Cultural and Natural Heritage, and has a responsibility to preserve sites of value in Canada, and not created "islands of protection" -- preserved sites surrounded by inappropriate development. Too often, significant sites are lost because of lack of political will to curb resource extraction. In addition, the practice ---of developers purchasing sensitive land with significant ecosystem, hiring consultants to identify features that would trigger an environmental assessment and then proceed to destroy the features--must end. 388,000,000 should be relocated from the Foreign Affairs budget for "Safe Anti-racism Sites" across Canada 300 million should be redirected as additional funding for CBC, and additional 10 million, for the Status of Women.**

Status of Women

It is the right of all Albertans to preserve and practice their culture providing that it does not infringe upon the individual rights of others to an unreasonable extent. We recognize that there are areas where collective rights and individual rights may clash and we will work towards finding equitable solutions. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We support the preservation of areas with special cultural significance such as archeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### DEPARTMENT OR Arts and Culture

While the cost of funding the arts is relatively low, its social benefits and economic multiplier effects are high. Greens would maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities. (GREEN PARTY OF NEWFOUNDLAND).

A Green party government would undertake:

\* to increase the share of Canadian programming watched by Canadians beyond the present figure of 4.4%.

\* to require the Canadian Broadcasting Corporation to promote the cultural diversity of Canadian music, literature, dance and drama, many of which are already funded by Canadian taxpayers.

\* to maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities.

\* to eliminate the Goods and Services Tax on books, magazines, newspapers, films, videotapes, audiotapes, compact disks and all other means of artistic expression.

\* to ensure that CBC-TV will be required to produce programs that are educational, thought-provoking, useful and unavailable elsewhere.

\* to provide stable funding for the Canadian Broadcasting Corporation both radio and television services.

## ADVERTISING AND COMMUNITY TELEVISION

Advertising is used to promote consumption and create artificial needs. Also, advertisers impose a threatening restriction of free speech by limiting voices that oppose their goal of increased consumption and resource destruction.

This is the antitheses of what the Green Party stands for. To counter the negative effects of this widespread mass culture based on consumerism the Green Party believes we must lobby the C.R.T.C. to:

1: Reevaluate the licensing of commercial channels to reduce the amount of advertising currently on commercial channels.

2: Democratize the airwaves. With the development of "Death star" satellites capable of beaming over 500 channels into the home it is

imperative and now technologically feasible to provide community based channels on the cable networks that are not controlled by the cable network corporations. These channels are to be made available to advocacy, special interest, artistic, political and ideological groups. These programs would be funded by cable vision subscription revenues and sponsorship. They would be commercial free and would provide an alternative to consumption-based advertising funded programs.

3: Broadcasters are granted a licence to use the public airwaves in return they are expected to serve the public interest. Today the airwaves are controlled by a small circle of large corporations and advertisers. The business side is not balanced by a commitment to public service. We, the citizens, no longer enjoy access. Instead we have been relegated to the role of products as we are measured, packaged, and sold in bulk to the highest bidder. As a public resource they belong neither to the government nor to private industry, nor to broadcasters. We advocate that as a condition of licence, broadcasters be required to set aside four 30 second time slots every hour for the owners of the airwaves; the citizens. This time would be given over to citizen produced messages. (GREEN PARTY OF ONTARIO, 1994)

#### Culture and Language issues

- to preserve and practice their culture providing that it does not infringe upon the individual rights of others to an unreasonable extent. We recognize that there are areas where collective rights and individual rights may clash and we will work towards finding equitable solutions. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To recognize French as an official language of Canada and support the provision of services in French in areas where the number of francophones warrants it. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To support the preservation of areas with special cultural significance such as archeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## PRESENTATION BY JOAN RUSSOW TO THE CRTC

Not only would multicultural/multilingual programming fulfill a need in the community it would also discharge an obligation that the Federal government has incurred under the International Convention for the Elimination of All Forms of Racial Discrimination

Under article 7 of the Convention on the Elimination of all Forms of Racial Discrimination States Parties undertake to adopt immediate and effective measures, particularly in the fields of teaching, education, culture and information, with a view to combating prejudices which lead to racial discrimination and to promoting understanding, tolerance and friendship among nations and racial or ethnic groups, as well as to propagating the purposes and principles of the Charter of the United Nations, the Universal Declaration of Human Rights, the United Nations Declaration on the Elimination of All Forms of Racial Discrimination, and this Convention.

This places a positive duty to combat prejudice and discrimination through education and information including media broadcasting. We would expect that the CRTC would equally respect this duty in the granting of licences.

Often, it is thought that multilingual/ multicultural programs are only necessary where there is an ethnic population that warrants it. A distinction could be made between multiculturalism which caters only to the audience and varies with the composition the community, and polycultures which seeks to encourage appreciation of all cultures. In the latter case it is extremely important for the mainstream community to become aware of the diversity of cultures through progressive race relations programming. In B.C. there is prejudice which often manifests itself in discrimination and racism. We need look no further than the demonizing of the Serbs and the dehumanizing response to the Chinese recent asylum seekers.

It must be admitted that racism exists in the Vancouver/Vancouver Island area and every effort must be made to combat prejudices and promote understanding.

Often recent immigrants whose language is not English are hesitant about speaking out on issues because they are overly concerned about integration into what they perceive to be Canadian society and values. They must be encouraged to participate in issues that they believe to be vital regardless of the comfort zone of the mainstream community. There is a strong activist community in Canada that is seeking change in Canadian values and this activist voice must be heard as well.

The opportunity for the ethnocultural community to hear events through their own language is essential. Having an opportunity for them to speak in their mother tongue with subtitles, when possible, would begin to break down barriers that have arisen as a result of Linguistic discrimination.

- to ensure Investigative reporting, incisive analysis of issues would serve the needs of Victorian.

- to institute **a one-hour program in English bringing together journalists, community, business, government and academic leaders and activists to share their views on various issues. WITH THESE HIGHPROFILE NEWS BROADCASTS WE WOULD HOPE THAT MEMBERS OF THE ETHNOCULTURAL COMMUNITY WOULD HAVE THE OPPORTUNITY TO SPEAK IN THEIR MOTHER TONGUE WITH SUBTITLES.**

- to ensure that there are progressive race relations with provision for titling, when possible, for the mainstream to hear the voices.

**to implement progressive race relations programming.**

- to investigative, in-depth reporting, examining vital issues in the community**

- to ensure that the human rights of the marginalized and disadvantaged, including persons with disabilities, are fully respected on and on-going basis in their broadcast programming**

- to promote independent socio-political long and short form documentary production in Vancouver and Vancouver Island to be broadcast in prime time**

CULTURAL DIVERSITY

The Green Party recognizes that Canadian society is unique and consists of different racial, ethnic, religious, sexual, and linguistic communities. The Green Party refuses to tolerate discrimination based on these characteristics. ECONOMIC POLICY:

#### GENERAL

The economy of Ontario is burdened by high levels of unemployment, a large deficit, a large public Debt, reliance on technologies that are not sustainable due to high levels of resource consumption, reliance on technologies that are harmful to the both human and non human residents of Ontario and finally it's relative success is not judged by the happiness or health of the population but rather on its ability to perpetuate a cancerous growth rate and unsustainable rate of resource consumption.

#### STATUS OF WOMEN

##### Green Day Care

#### GREEN PARTY POLICY ON CHILDCARE (carried with amendments)

It is well known that how we care for our children will ultimately determine how people care for each other and the earth. The Green Party sees parenting as a valuable investment not only in the well-being of our children, but in the future of our society as a whole. It should be treated as such by providing real support for parenting instead of encouraging people to work for shortterm economic gain which in the end creates enormous stress on families and diminishes both social and human resources. The Green Party believes in subsidizing

parents to look after their own children. We feel that the implementation of a Green Party Childcare policy would encourage parents to take time from work to raise their children. As a result of this family life would be enriched, stress would be diminished and the overall health of our society would be improved.

Green Party Childcare Policy initiatives would include:

- \* a Guaranteed Annual Income that would pay one parent to stay at home.
- \* extended paid parental leaves.
- \* job-sharing options.
- \* encouraging part time work.
- \* flexible work hours to match the school day.
- \* personal days to care for sick children.
- \* better paid day care workers to reflect the importance of the work they do
- \* a high-quality day-care system for those who need it, with the professional standards and training required by daycare workers.
- \* parenting education
- \* encouraging workplace childcare

(ONTARIO POLICY KINGSTON, 1997)

## DAY CARE

Greens support the principle of universal access to flexible, private and publicly-funded, non-profit child care as well as the extension of government paid maternity leave and parental leaves. It is, however, important to recognize that many of the pressures

for day care come from a consumer society in which parents both work to accumulate more belongings than needed for a balanced lifestyle. With the guaranteed annual income and community land trusts it would be increasingly less necessary for families to have two incomes to survive.

\* to include health research and health services responsive to women's needs and reflective of the diversity of women's life stages.

TO FUND RESEARCH INTO ENVIRONMENTALLY INDUCED DISEASES (1998)

\* to endorse a program of reproductive health.

#### RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and

practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely

decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and practices that eliminate discrimination against women and encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## ABORTION

The Green Party of Ontario supports the right of women to decide whether or not to have an abortion. (GREEN PARTY OF ONTARIO, 1994)

- to LIMIT, REGULATE AND MONITOR REPRODUCTIVE TECHNOLOGIES (1998)

- to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. ..Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

- to implement programs to establish and strength preventive and curative health
- to implement programs to establish and strengthen women centred health care

4\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH.  
(Deferred resolution)

(1) A basis of lifelong good health is proper infant nutrition.

Women will be encouraged to breast feed by the providing all prospective parents with accurate information on the risks of artificial feeding and on the advantages of breast feeding.

A woman's right to breast feed in public will be protected.

The World Health Organization's Code of Marketing of Breast milk Substitutes will be enacted as legislation in Ontario to protect women and their babies from advertising which misleadingly suggests that artificial substitutes are an acceptable substitute for nature's food for babies. Hospitals and birthing centres will be required to satisfy the "baby-friendly hospital" guidelines of the World Health Organization and UNICEF. These measures, by increasing the rate and duration of breast feeding, will greatly reduce the incidence of childhood illness; and since some of the health giving benefits of breast feeding continue long after weaning, the incidence of adult illness will also eventually decrease. It will also help prevent breast cancer for the mothers.

## **DEPARTMENT OF INTERGOVERNMENTAL AFFAIRS**

### **GOVERNMENT: MAKING IT WORK**

When Government agencies do not perform the function, they are designed to perform citizens have little recourse. Regulatory Reform lies in realizing that in most cases regulatory agencies

have become the tools of the Industry they were designed to regulate. The solution is not to abolish regulatory agencies, life would be chaos without them, the solution is to realize you can't trust them.

The Green Party suggest the following.

1: Goal setting. Penalties must be legislated if Goals are not met.

2: Arm the public with information. Enhance food labeling legislation for nutritional content, freedom of information, drop the charge for Statistics Canada information.

3: Citizen Enforcement of Public Health and environmental laws.

"Any violation witnessed and sworn to by any person over 18 years old and mentally competent, shall have the same status as if it were witnessed by an official government inspector.

4: Take away regulatory agency's discretion. Regulations should be modeled after traffic tickets, Pay the fine or talk to a Judge. We have given too much power to bureaucrats to negotiate with dishonest business persons.

5: Liability. Liability should be strict, meaning no showing of negligence is necessary and that required proof of cause and effect is minimal. Liability should be joint and several meaning each liable party is potentially responsible for the whole situation.

6: Background Laws. Require background checks on any individual doing business with Government. If an individual or a corporation has a record of convictions they should not be allowed to do business with the government.

7: The revolving door. Political appointees and senior executive service personnel should not be able to accept any form of direct or indirect compensation from any person regulated by their agency

for a period of five years after they have left government. This law would apply to lawyers as well.

8: Conflict of interest. No regulatory agencies may spend appropriated funds to promote, or to advocate the use of products or services which it regulates. The Nuclear industry comes to mind.

9: Reward whistle blowers. When a whistle blower's charge proves correct she should be given a promotion, and a cash award not to exceed 10% of the savings. This would increase the number of whistle blowers and decrease the amount of waste, fraud, and abuse of power.

10: Allow citizens to sue government officials. Government officials should be liable for civil suits for damages caused by the failure to do their duty.

11: Award fines to grass roots groups. Fines paid in environmental suits should be turned over to grass roots environmental organizations. Polluters now pay fines regularly as a cost of doing business. If they knew the fines would go to their adversaries paying the fine would take on a new meaning. This would give citizens a new incentive to ferret out violations (GREEN PARTY OF ONTARIO, 1994)

A Green party government would undertake:

\* to ensure that provincial decision-making functions within a framework of overarching environment, social justice and human rights principles.

A. We recognize French as an official language of Canada and support the provision of services in French in areas where the number of francophones warrants it. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO OUTLINE A FEDERAL POLICY IN PLACE ON SEPARATION OF ANY PROVINCE (NORMAN THYER (BC) DEFERRED RESOLUTION):

REVISED POSITION IN SUBMISSION TO CALGARY CONFERENCE

## CANADIAN UNITY DEPENDS ON ENSURING THAT REAL CHANGE OCCURS IN CANADA

\* To ensure that government-to-government negotiations take place to resolve the outstanding land rights of First Nations peoples, and by enshrining the constitutional measures that would protect the French language and culture in Quebec. (Statement passed by cabinet and submitted as part of a statement to the UNITY Commission)

Canadians need to first ask "Why does Quebec want to secede? rather than "What will Quebec look like when it secedes?"

Unity will only occur when Canada as a nation ensures that the common concerns as well as specific concerns of citizens are addressed.

Citizens in Canada share common concerns about the deterioration of the environment, about the growing influence of corporations upon all sectors of society, and about the threats to education, health and culture. Canadian citizens continue to suffer discrimination and inequitable treatment. Canadian citizens are constantly disillusioned by the discrepancy between government rhetoric and action at all levels. Instead of acting on these concerns, the Federal government has devolved responsibilities upon the provinces and the corporations. (Press release, Calgary Unity, 1999)

Canada along with other member states of the United Nations has undertaken to do the following:

- (i) to promote and fully guarantee respect for human rights and social justice;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security, and
- (v) to enable socially equitable and environmentally sound development.
- (vi) to not do anything on the lands of indigenous peoples that would cause environmental destruction or that would be culturally inappropriate.

Canadian and provincial governments, however, have rarely demonstrated that these undertakings have been more than public relations exercises, and have thus failed to address many of the general concerns of Canadians

Quebec has very specific concerns that need to be more clearly communicated and addressed through consultation. At the same time that Canada must undertake to discharge obligations, act on commitments and fulfill expectations so that the common concerns of Canadians will be addressed, the Canadian government has to undertake to do the following to ensure the maintenance and perpetuation of the French language and culture in Quebec:

- \* to ensure that provincial decision-making functions within a framework of overarching environment, social justice and human rights principles

- \* to constitutionally entrench the opt-out powers that Quebec has now That is to say that Quebec would enjoy the same opt-out powers that it has now, but that they would irrevocably be entrenched in the Constitution.

- \* to permit Quebec to submit to the federal government of the day a list of nine Supreme Court judge candidates, from which the federal government would select three to sit on the Supreme Court of Canada, recognizing Quebec's need to be involved in the process with respect to the province's particular judicial character.

- \* to ensure the constitutional entrenchment of power over immigration for Quebec. Immigration in Quebec has been centred around maintaining and perpetuating the French language and culture in that province and its immigration policies should provide for that.

- \* to recognize that protection of the French language and culture in Quebec is essential to its identity as a nation, constitutional protection is unequivocally necessary insofar as Quebec finds itself surrounded by a continent which is primarily Anglocentric.

- \* to clarify and redefine the phrase "distinct society"; it is necessary

to clearly define the terms and conditions involved in the constitutional protection of the French language and culture in Quebec, and to clarify that distinct society is to be conceived within the Charter of Rights and Freedoms.

- \* to support constitutional protection of the French language and culture in Quebec on the condition that its definition be clearly defined by Quebecers and the Quebec governments with a view towards avoiding any alienation of the non-French-Canadian population of Quebec.

This weekend's provincial "Unity" meeting that has denied the participation of first nations peoples and that proceeds without the participation of Quebec is ill-conceived.

Only when the general concerns of citizens of Canada and the specific concerns of the citizens of Quebec are addressed will there be real unity. If we as a nation address these concerns that have plagued Quebec since the Quiet Revolution, perhaps we will finally see an end to separatist politics, given that the protection of French language and culture in Quebec will finally be irrevocably enshrined in the Canadian Constitution.

\* TO SUPPORT TERMS OF SEPARATION DECIDED COLLECTIVELY BY THE PARLIAMENTS OF CANADA; deferred resolution

\* TO SUPPORT THE RIGHT OF FIRST NATIONS PEOPLES WITHIN QUEBEC (AND WITHIN CANADA) TO SELF-DETERMINATION INCLUDING THE RIGHT TO CHOOSE THEIR RELATIONSHIP WITH QUEBEC AND CANADA; deferred resolution

\* TO REMAIN IN CANADA IF THAT IS THEIR DEMOCRATICALLY EXPRESSED WISH. (deferred resolution)

## TOURISM, SPORT AND RECREATION

Heli-assisted Recreation B.C. POLICY CONVENTION, 1990

- To oppose Heli assisted recreation B.C. POLICY CONVENTION, 1990.

Operation of All-terrain Vehicles (Bill M219

- to endorse legislation which would ban the use of all-terrain vehicles for recreational purposes off-road on all public lands and endorses legislation to consign to the local level laws respecting the use of all-terrain vehicles for recreational purposes. B.C. ANNUAL GENERAL MEETING, 1991

## SUSTAINABILITY

## Sustainability

B.C. POLICY CONVENTION, 1990

43.1. a        Whereas the Greens promote sustainability as an important goal;

43.11 [Resolved that] activities are sustainable when they:

Use materials in continuing cycles.

Use continuously renewable sources of energy.

Insure continuation of the earth's natural systems.

## CONSUMER AFFAIRS

### Truth in Packaging

•To ensure that non-information advertising shall not be considered a legitimate business expense for tax purposes. B.C. POLICY CONVENTION, 1986

## POLITICAL/LEGAL ISSUES

### Government

### Green Party Lists

- To adopt a requirement in any proportional system to field women as every second candidate on their proportional lists ANNUAL GENERAL MEETING 1995

#### Constitution/Legislative Change/Recall

- To endorse the principle that all individuals would have the right to initiate legislative change; and
- To endorse the principle that all elected officials be subject to recall procedures. - individuals acting collectively are the ultimate source of authority for the existence and actions of government; and
- any group of individuals may form an autonomous government to provide goods and services which affect only those individuals; and
- all individuals shall have equal input into government in regard to their interests; and
- all decisions by government at any level must promote the long term good for all individuals collectively;
- To support the development of a transitional provincial constitution which would establish and entrench the complete autonomy of municipalities and regions over all matters appropriate to those jurisdictions; B.C.

#### POLICY CONVENTION, 1986

#### Public Investment Notice

- to require government by law to make public a complete list of investments weekly,
- To make available information on public investments in writing on request through government offices in British Columbia, and by telephone, or electronic mail.

ANNUAL GENERAL MEETING, 1995

#### Pensions

- To REQUIRE MLAs [and MPS] to contribute 9% (current pension contribution) of their salary to creation of a constituency ecological trust fund (B.C ANNUAL GENERAL MEETING, 1995

\* to HAVE THE FUND ADMINISTERED by a board of citizens invited by the MLA

E We will establish an independent process for determining current MLAs salaries, benefits and eligible expense, and for making recommendations for fair treatment of previous MLAs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Government Ministries

- To place an immediate moratorium on ministerial and government restructuring until a non-partisan non-ideological task force of individuals familiar with the efficient operation of government can be convened and report to cabinet
- To adopt the results of such an enquiry with necessary amendments to reflect new government directions and public service employment B.C. POLICY CONVENTION, 1996

## Provincial Constitution

- To add a procedure for amendment to the constitution of the province of British Columbia which can either be initiated by an act of the legislature or petition by the public (an initiative) which must then be put to binding public referendum.

### Because

- the province of British Columbia recognizes, as its constitution, documents which may be changed by an ordinary act of the legislature,
- constitutional changes are at the whim of the government of the day, with no assurance that improvements will be kept by following governments, ANNUAL GENERAL MEETING, 1995

## Democracy and bioregionalism

- to adopt as a general principle the development of strong local communities. strong local communities are the only social units sensitive enough to local conditions to be able to adapt to their environments, and are the loci of grass roots direct democracy; B.C. POLICY CONVENTION, 1986

## Bioregionalism

- \* To endorse the principles of bioregionalism; the fostering of strong regional identities and cultures; watershed democracy; bioregional economies of place; living in place and reinhabitation. B.C. POLICY CONVENTION, 1986

## Welcome Home Statement

- to endorse the Welcome Home statement of the 1st North American Bioregional Congress and to live in place is to live within the means of the local bioregion rather than relying on the exploitative mass market system;

B.C. POLICY CONVENTION, 1986

### Social Ecology

- to the positively encourage an ecological culture and not just to impose negative sanctions on those reluctant to cooperate because the development of an ecological society is not just a legislative project, but [also] a cultural one; and because there is concern about the tendency in the environmental movement that would force people into ways of behaving that a minority believe to be ecological B.C. POLICY CONVENTION, 1986

### INFORMATION

#### Freedom of Government Information

- To support the Freedom of Information legislation for the province which will ensure public access to all information held by government which is necessary for citizens to make sound decisions (Virtually all information, except, of course, personal information); and (B.C. B.C. POLICY CONVENTION, 1987)
- To [introduce] work toward and introduce legislation to make all such information related to public health and safety, available and easily accessible to the general public in a format that can be easily understood; and
- To [introduce] work toward and introduce legislation to change the government bureaucratic service(s) so that its primary clients would be the public, and not private interests.

Because environmental and public interest groups and organizations are hampered by existing access to information laws B.C. POLICY CONVENTION, 198963.3.1

- To ensure that Freedom of Information legislation is extended to all government information, and access is made affordable. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## . Government reform

- To advocate that Governments must develop systems which provide all citizens with the opportunity to have input into the decisions which affect their lives. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Intervenor funding

- To support development of a funding program for intervenor groups at public hearings and commissions. (B.C. B.C. POLICY CONVENTION, 1989)

- To support a funding program for intervenor groups at public hearings and commissions. (ALBERTA GREEN POLICIES, ALBERTA 1997)63.2.1 Access to Information

## Government Language Reform

- To replace in all publications by government at all levels, gender biased designations by gender neutral designations, such as person power in place of manpower. B.C. POLICY CONVENTION, 1990

## RIGHTS AND ENTITLEMENTS

- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and
- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs. B.C. POLICY CONVENTION, 1986/9

## Human and Animal Rights

- To recognize that every human being shall have equitable access to food, clothing, shelter, and health care; due process under a just system; control of her/his thoughts; education as and when needed, in accordance with the philosophy of non-violence and respect for the biosphere; and (BC Policy 1986/9)
- To recognize that every human being shall have equitable access to opportunities regardless of race, creed, colour, sex, mental or physical condition, nationality, language normally spoken, ancestry, place of origin, age, sexual orientation, religion, marital status, family composition, source of income, or political belief; and
- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and
- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs.

### Because

It is necessary to continue to work towards, developing a society that recognizes and respects the dignity and worth of each person, and upholds human rights and responsibilities, and the inalienable rights of other living forms and natural processes that share the Earth with us; B.C. POLICY CONVENTION, 1986/9

## Animal Rights

### Animals in Research

### Animals in Research

-Ban the use of animals for the testing of cosmetics and household

products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

Animals as Entertainment (GPC, 1988)

To require that animals imported for zoos must have been born in captivity or be projects to save a nearly extinct species

- to set up strict standards for the treatment of animals used for entertainment in horse racing, zoos, circuses, etc.

- [not allow] new forms of entertainment using animals; i.e. dog racing, rodeos, bull fighting, etc. (GPC, 1988)

-animals imported for zoos must have been born in captivity or be projects to save a threatened species.

-no new forms of entertainment using animals to be allowed; ie. dog racing, rodeos, bullfighting, etc. (GREEN PARTY OF ONTARIO, 1994, GPC 1988))

- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs (GPC, 1988)
- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and

- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs. B.C. POLICY CONVENTION, 1986/9
- To affirm that human beings, as part of the natural world, must live in harmony with it. Human health and survival utterly depend on the health and survival of the planet which in turn depends on the sheer diversity of the other species sharing the planet with us; therefore, the health of humankind is equally dependent on the health and survival of other animals;
- [to ensure that] all species have an intrinsic right to exist. Their existence need not be justified by their usefulness to humankind. All animals have the right to fair and ethical treatment by human beings. (GPC, 1988)

#### Killing of Animals

-We acknowledge the right to kill animals to provide essentials.

Further consideration must be given to the needs of the aboriginal peoples right to self determine their practices on their lands. (GPC, 1988)

#### DEPARTMENT OF FISHERIES ?

\* TO EXPOSE THAT fish farmers have been cited for shooting at and poisoning seals, sea otters, herons, and eagles which they view as a threat to their livestock; and B.C. POLICY CONVENTION, 1987

#### Hunting and Fishing

-Hunting with rifles and fishing with electronic fish finders should be. banned. Hunting is a natural act that is an integral part of the natural balance

-We advocate a strategy that would reestablish predators such as the wolf and lynx in southern Ontario. We would eliminate predator bounties.

-We advocate increased funding to conservation officers to stop illegal sport hunting and poaching.

-Hunting, trapping and fishing are to be banned in all provincial parks, conservation areas and Crown game preserves.

-Increase the penalties for poaching. - Ban the leg hold trap.

#### Animals in Agriculture

-establish and enforce standards for the care of farm animals.

-Outlaw the use of furs on ornamental clothing. The use of furs in some survival application is accepted.

-gradually phase out battery farming through stringent measures to favour free-range husbandry.

-ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement.

-encourage a reduction in meat consumption with an educational campaign.

-ban the transport of live animals over long distances.

-ban the use of growth stimulants for meat animals and the routine use of antibiotics in animal feeds. (Ontario,)

#### WILD ANIMALS

-Hunting with rifles and fishing with electronic fish finders should be banned. Hunting is a natural act that is an integral part of the natural balance. (Ontario,)

- [ban] hunting, trapping, and fishing in all provincial parks, conservation areas, and Crown game preserves (GPC, 1988, Ontario)

- -increase funding to conservation officers to stop illegal sport hunting and poaching. (Ontario,)

- Substantially increase the number of conservation officers

-We advocate a strategy that would reestablish predators such as the wolf and lynx in southern Ontario. We would eliminate predator

bounties. (Ontario)

- the penalties for poaching. -
- Ban the leg hold trap and other slow-kill trapping methods
- Support federal funding to establish appropriate economic alternatives to commercial fur trapping for aboriginal peoples. (GPC 1988).

-Outlaw the use of furs on ornamental clothing. The use of furs in some survival application is accepted.

-gradually phase out battery farming through stringent measures to favour free-range husbandry.

-ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement.

## Animal Rights

-encourage a reduction in meat consumption with an educational campaign. (Ontario?)

-ban the transport of live animals over long distances.

-ban the use of growth stimulants for meat animals and the routine use of antibiotics in animal feeds. (Ontario,)

- To publicly and actively support any action carried out to uphold the rights of animals providing such action is compatible with the Green philosophy on non-violence.

Because animals experience pleasure and pain, have needs and wants, seek companionship and, in many cases, family life B.C. POLICY CONVENTION, 1986

\* TO oppose the establishment of a West Coast AND EAST COAST seal hunt. B.C. POLICY CONVENTION, 1987

## ETHICAL TREATMENT OF ANIMALS

Whereas all species have the intrinsic right to exist without regard to their usefulness to humankind;

whereas all animals, whether wild or domesticated, have the right to fair and ethical treatment by human beings;

- increase funding for conservation officers to stop illegal sport hunting and poaching;
- eliminate non-food trophy hunting
- ban leg-hold traps, as suggested by the European Parliament and the Cree, the largest group of native trappers
- legislate standards for the care of farm animals that would phase in free-range organic production techniques
- eliminate growth stimulants and antibiotics in the production of meat [and other animal food products] require immediate labeling during phase-out period, and education of the public as to available alternative food sources
- ban the importation of products produced in a fashion which would not comply with Canadian animal treatment legislation
- ban importation of animals for zoos except where this is related to projects to save threatened species
- legislate an end to containment that uses animals i.e. dog racing, rodeos, bullfighting etc. (GPC, 1988)

## TRADE IN WILD ANIMALS

- To ban any trade in wild animals or wild animal parts which could constitute a threat to natural wildlife Populations. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Animals in Research

Animals in Research

-Ban the use of animals for the testing of cosmetics and household

products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

Animals as Entertainment (GPC, 1988)

-encourage a reduction in meat consumption with an educational campaign. (Ontario?)

Guaranteed Annual Income and childcare support; and

[other adopted GPPABC] policies.

[This support] system should include such things as:

education about adoption;

more homes for single mothers;

single parent support groups;

pre natal and post natal services; and

life skills training.

Midwifery

- To support the right of women to choose freely the option of home birth;
- To support the recognition of midwifery as a professional service available to all women in BC and that the provincial government should work with the Midwives Association of BC to establish a professional midwifery license. B.C. POLICY CONVENTION, 1988

## Lactation

- To favour governments restricting dangerous baby products to at least the standards of the World Health Organization's Code of Marketing of Breast Milk Substitutes.
- To support the boycott of Nestle & American Home Products and London Drugs because they violate the W.H.O.'s guidelines. C.M.B.S. Infant formula kills an estimated 1.5 million babies annually. ANNUAL GENERAL MEETING, 1994

ANNUAL GENERAL MEETING, 1994

## 72.7.1 Ecofeminism

### Feminist and Post patriarchal Studies

#### 4.2 Ecofeminism

B.C. POLICY CONVENTION, 1990

A we will support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA

1997)

- To encourage women to participate in political activity at every level of the decision-making process, including affirmative action; and
- To advocate the replacement of school materials which portray people in sexist stereotypes with non-sexist material; and (B.C. POLICY CONVENTION, 1986)
- To advocate that non-sexist life programs and education be available to all students, appropriate to the age level; and (B.C. POLICY CONVENTION, 1986)

- To advocate that provisions for women's studies courses be made in public schools, along with an inclusion of the contributions of women to other courses of study; (B.C. POLICY CONVENTION, 1986)
- To advocate that every student has the choice of a full range of programs and activities to achieve excellence in non-traditional and/or traditional areas of endeavour and unique talents, without discouragement based on sexist attitudes from teachers or counselors; (B.C. POLICY CONVENTION, 1986)
- To advocate that access to non-sexist vocational and academic counseling be ensured (B.C. POLICY CONVENTION, 1986)
- To ensure that a procedure to address sexual harassment of students be activated in the current school systems (B.C. POLICY CONVENTION, 1986)
- To encourage workers' associations to negotiate sexual harassment clauses into their contracts which would include definition of same and grievance procedures in the event of such harassment (B.C. POLICY CONVENTION, 1986)

## BECAUSE

-Ecofeminism involves close examination of cultural symptoms of alienation from the Earth; heterosexism, sexism, racism, classism, speciesism, militarism, ageism, and exploitation of nature are a few examples of such alienation.

-As people of an alienated culture, we carry internalized systems of domination into our work as Greens.

-It is an ongoing and interpersonal journey for us to rid ourselves of behavioural patterns that hurt ourselves, others, and the environment. Qualities such as cooperation and nurturing are fundamental to a green world.

Ecofeminists seek to understand the interconnected roots of all domination and to learn ways of achieving balanced behaviour.

- To advocate equal pay for work of equal value; and
- To implement pay equity. Women, minorities and the disabled have the right to equal pay for equal work. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To advocate the decriminalization of prostitution between consenting adults (B.C. POLICY CONVENTION, 1986)
- TO [ENSURE] /recognize/ that the term violence against women is inclusive of females of all ages; and (B.C. B.C. POLICY CONVENTION, 1986)
- TO [INSTITUTE] /advocate /community-based financial support for emergency care centres for rape or assault victims (B.C. B.C. POLICY CONVENTION, 1986)

- TO [REQUIRE] /advocate/ the designation of crisis centre information as public service announcements for all media (B.C. B.C. POLICY CONVENTION, 1986)
- TO /advocate the position of their party/ [PROVIDE] as a medium for the distribution of information concerning women's support groups, whether that information be printed, verbal, or in the form of future seminars (B.C. B.C. POLICY CONVENTION, 1986)
- TO [ENSURE] /advocate/ that information concerning women's support groups become a part of the GPPABC Resource Centre Library (B.C. B.C. POLICY CONVENTION, 1986)
- TO [ESTABLISH] /advocate the establishment of/ a guaranteed annual income for all homemakers (B.C. B.C. POLICY CONVENTION, 1986)
- TO [ESTABLISH] /advocate the establishment of/ financial services specifically designed for the needs of single parents (B.C. POLICY CONVENTION, 1986)
- TO [PROVIDE] /advocate the provision of / quality childcare centres and services, that meet the needs of children from infancy to adolescence, are universally accessible, and are responsive to the needs of parents and the community (B.C. POLICY CONVENTION, 1986)
- TO support the alternative of any person being legally entitled to a chosen name. ( B.C. POLICY CONVENTION, 1986)
- TO support the creation of post-secondary institutes of feminist and post-patriarchal studies (B.C. POLICY CONVENTION, 1986)
- .
- To support community-based funding for housing for street people ( B.C. POLICY CONVENTION, 1986)
- TO work with communities to develop and provide low-cost housing alternatives. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- TO equalize tax treatment for families regardless of whether one or both parents are working. (ALBERTA GREEN POLICIES, ALBERTA

## EDUCATION

### Education Curricula

- TO ORIENT educational curricula toward not only providing facts and technical skills, but also toward encouraging ecological awareness, social responsibility and quality in human relations
- To encourage development of skills in critical thinking, basic communications, and conflict resolution; and provide peace education within the educational framework; and
- To encourage education in family and community living, skills such as parenting, child rearing and personal financial planning for both males and females. (B.C. POLICY CONVENTION, 1986)

### Community Integration of schools

- to decentralized schools from Provincial control to the level of the community and be integrated into community life; and
- To endorse opening up existing school facilities such as libraries, laboratories, workshops and art studios to all members of the community; and
- To encourage community and student participation in both academic and non-academic activities and a diversity of groupings for learning, such as mixed age classes, home schooling and self-directed learning; and
- To support broadening the concept of learning. That learning take place outside of school as part of the daily functioning of the community, so that young and old alike share their skills, knowledge and information, with everyone becoming both student and teacher. (B.C. POLICY CONVENTION, 1986)

### Alternate Resource Studies

- To endorse the need for new approaches to resource use, agricultural practices, forestry, fisheries, mining practices, energy generation, and environmental protection;
- To support the establishment of alternative energy and ecology research institutes in the province; and
- To endorse increased funding for alternative energy studies in university engineering departments across the province, including small scale hydro and appropriate wind

power, methane gas, biomass conversion, and use of industrial waste steam. ( B.C. POLICY CONVENTION, 1986)

- To implement policies which ensure that the same funding rate per student applies throughout the province with extra funding for programs which address special needs programs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Corporate involvement in schools

- To move to eliminate the influence of business in our education system. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO END ALL CORPORATE INTRUSION INTO EDUCATION AT ALL LEVELS (1998)

\* TO DISALLOW ALL DONATION OF FUNDS OR GOODS AND

SERVICES IN KIND TO FEDERAL CANADIAN POLITICAL PARTIES. IN ADDITION, ALL CORPORATE CONNECTIONS OF CANDIDATES INCLUDING THOSE FOR THE LEADERSHIP OF PARTIES BE REVEALED (1998)

#### Alternative and Experimental Schools

- to encourage the funding of alternative and experimental school

(B.C. POLICY CONVENTION, 1986)

#### People with Disabilities

To support the principles of community living, guaranteed income and level access to all people with disabilities. ANNUAL GENERAL MEETING, 1993

#### Lifestyles

- To recognize that in many cases, the behaviour of society, not of ecosystems, requires adjustment and hence a need to define resource problems in human terms;
- To recognize that human lifestyle may need to adjust to the natural carrying capacity of the region; and
- To recognize that resource management must be heavily weighted toward the long-term and global perspective; and

- To recognize that a multiple mean (land use) approach is generally useful but some areas must be designated for special use, e.g. ecological reserves; and
- To recognize that a multiple means approach is desirable, including examination of the end goals of the population and then considering the widest range of possible means of achieving those goals; and
- To recognize that irreversible decisions should be avoided. (B.C. POLICY CONVENTION, 1986)

### Family Life Education

- To [recognize that] without reproductive choice, the value of female members of a society will inevitably be defined in terms of their capacity to bear children, and thus just as inevitably increase the population's size;
- to [ensure] that sex education and family life planning be part of the school curriculum in British Columbia, being brought into the curriculum appropriately at several levels in a child's education; and (B.C. POLICY CONVENTION, 1987)

### Naturist Policy

- To support the legalization of special recreational areas for public clothes optional use in places already traditionally used for such, as a first step toward removing nudity as an offence in the criminal code and leaving what is acceptable to local laws and customs.

#### Because

- the welfare and well being of all peoples including the discouragement of oppression of any kind and that every human being shall have equitable access to opportunities regardless of race, creed, colour, sex, mental or physical condition, nationality, language normally spoken, ancestry, place of origin, age, sexual orientation, religion, marital status, family composition, source of income, or political belief; and
- clothes optional recreation is practiced by thousands of people on the beaches of the Marine Drive Foreshore Park and to a lesser extent on isolated beaches and areas throughout the province; and
- the state of being nude is not offensive or obscene and currently constitutes a criminal offence; and
- people nude can coexist with people clothed; and

- in other countries in the world, most notably European, it is no longer, or it never was a crime to be nude at public beaches or parks; (B.C. POLICY CONVENTION, 1987)

## Air Pollution and Smoking

- To adopt as official policy no smoking within [GPPABC] meetings.
- To oppose the move of the federal and provincial governments to lower tobacco taxes instead of addressing many issues including aboriginal rights, the US/Canada Free Trade Agreement, health, etc. B.C. POLICY CONVENTION, 1985

## ANNUAL GENERAL MEETING 1994

### Human Population

78.1.1. a      Whereas the interaction of the human population with its surrounding environment imposes demands on that environment in the form of resource utilization, energy requirements, and waste treatment; and

78.1.1. b      Whereas these demands are a function of population numbers and the level of technology attained by the population; and

78.1.1.c      Whereas the extent of these demands will constitute a quantifiable people pressure impact on this environment; and

78.1.1. d      Whereas the human species has, in its technological advances, intervened in the natural processes

of human population control by medical techniques which reduce the death rate,

- To support easy access to birth control information and methods (B.C. POLICY CONVENTION, 1986)
- To support offering assistance in family planning to others who desire this; and
- To support better and more equitable methods of contraception.

## Population

- To promote human population decrease world wide, including [in] industrialized countries; and
- To introduce incentives and educational programs would to slow down human population growth with the intent to achieve population decrease over time. (B.C. POLICY CONVENTION, 1990)

## ENDNOTES

1. Definition from the 2nd North American Bioregional Congress press release dated January 1987, announcing to N.A. BC II proceedings
2. Small is Beautiful: Economics as If People Mattered, by E.F. Schumacher, Harper, New York, 1973
3. Constitution of the Green Party-Political Association of BC See Appendix I.
4. Statement of the 1st North American Bioregional Congress. See Appendix II.
5. BC Green Party News, Volume 2, Number 2, Green Party-Political Association of BC, Vancouver, June 1985. (page 7)
6. BC Human rights Act, Province of British Columbia, Queen's Printer for BC, Victoria, 1985. (section 1 -interpretation).
7. BC Forest Act, Province of British Columbia, Queen's Printer for BC, Victoria, 1986. (sections 82 through 87 and Schedule A).
8. Our Common Future, the report of the U.N. World Commission of Environment and Development (WCED), Oxford University Press, June, 1987. (Also known as the Brundtland Report after commission chair, Gro Harlem Brundtland).
9. Values and Roots definitions adopted at the 2nd Canadian Greens/Green Party of Canada Convention, September 1st, 1988

## Appendix I

### CONSTITUTION

#### of the GREEN PARTY-POLITICAL ASSOCIATION OF BRITISH COLUMBIA

(Adopted February, 1983)

(Amended June, 1984)

(Revised July, 1985)

(Amended July, 1988)

1. The name of the Society is the Green Party Political Association of British Columbia.
  
2. The purposes of the Society are:
  - (a) to carry on the functions of a political party;
  - (b) to work towards achieving the goal of nuclear and general disarmament, and world peace through the non-violent resolution of conflict;
  - (c) to work towards achieving the goal of a conserver society;
  - (d) to work towards an economic system based upon sound environmental and ecological principles;
  - (e) to work towards developing a society that accepts responsibility for and upholds the inalienable rights of all life forms and natural processes that share the earth;
  - (f) to develop a community-based democracy with local decision-making and control; and
  - (g) to undertake all such other activities consistent with these purposes which the Society's provincial representatives consider appropriate.

WELCOME HOME STATEMENT REMOVED FROM THIS DOCUMENT

### III. Definitions

Please note that the following definitions have not been adopted by the Green Party Political Association of BC membership and are presented only to assist in policy interpretation.

#### "non-violence"

A method of resolving conflict and of waging conflict with as little damage as possible to the human person and physical and biological environment.

#### "grass-roots democracy"

A more active realization of decentralized direct democracy.

#### "Conserving society"

A society where energy and resource wastes are reduced to offset ever-increasing consumption, i.e. a society that lives within its means

#### "bioregion"

A life region - a geographical area whose rough boundaries are set by nature (not humankind), distinguishable from other areas by characteristics of flora, fauna, water, climate, rocks, soils, land forms and human settlements. See also appendix II.

#### "soft energy"

Energy resources which are decentralized, renewable and ecologically sustainable.

#### "biomass conversion"

Any conversion process that turns non-usable organic matter into a more usable form, such as municipal/commercial anaerobic composting which converts organic garbage and sewage solids into methane gas and organic fertilizer.

"fossil energy"

Energy produced from non-renewable fuels obtained from the earth.

"workers' association"

An organization of employees formed for purposes that include the regulation of relations between employees and employers, i.e. a Trade or Labour Union.

"stumpage fees"

Money due to the province for the harvest of timber; Stumpage and Royalty rates as define in the BC Forest Act.

"direct democracy"

Democracy where an individual has a direct say in the affairs of government.

"watershed democracy" Democracy on a scale of watersheds; democratic regions whose boundaries follow the line of separation between two contiguous drainage valleys.

"multiple means"

A method of using something in different ways, each of which does not compromise any other.

"re-inhabitation"

To restore to a former sense of living in place; to restore "a critical awareness of and respect for, the integrity of our ecological communities"; to restore to the bioregional perspective outlined in the "Welcome Home" statement in appendix II.

## 4.0 GREEN DEFINITIONS

### 4.1 Deep Ecology

(B.C. POLICY CONVENTION, 1987)

Resolved that the Greens work towards incorporating the principles of deep ecology in all policies, programs, and platforms.

4.1. a Whereas the Western technical cultural evolution of the human species has been characterized by progressive physical and spiritual alienation from other life forms and natural processes of the earth's ecosystems; and

4.1. b Whereas this alienation has been manifested as an illusion of arrogant uniqueness, human exemption from, and control of, these life forms and processes; and

4.1.c Whereas some Greens envision a planet on which the human population lives harmoniously and dynamically by employing a sophisticated and unobtrusive technology in a world environment which is left natural; and B.C. POLICY CONVENTION, 1987)

### GUIDING PRINCIPLES (GUIDING PRINCIPLES Alberta, 1997)

-We are dynamic beings living in a dynamic world. The world is constantly changing and we recognize that human beings are capable of affecting the rate at which those changes occur (GUIDING PRINCIPLES Alberta, 1997)

4.1. d Whereas some Greens are of the opinion that the institutionalization of an ecological consciousness will occur when most persons begin to see the diminishment of people and the diminishment of the planet and its non-human inhabitants as essentially one and the same problem; and

4.1. e Whereas some Greens believe that to achieve the aforementioned, it will require a total reorientation of the thrust of Western culture; and

4.1. f Whereas some Greens believe that without a major change of consciousness, a profound and intimate sense of inter-relatedness with non human nature, there is no hope for beginning to turn the situation around; and

4.1. g Whereas these ecological and evolutionary insights have become synthesized and extended as principles of Deep Ecology, such as the following:

Shallow Ecology

Natural diversity is valuable as a resource for us.

It is nonsense to talk about value except as value for humankind.

Plant species should be saved because of their value as a genetic reserve for agriculture and medicine.

Pollution should be decrease if it threatens ecological equilibrium.

Third World population growth threatens ecological equilibrium.

Resource means resource for humans.

People will not tolerate a broad decrease in their standard of living.

Nature is cruel and necessarily so.

"Deep Ecology

Natural diversity has its own (intrinsic) value.

Equating value with value for humans reveals a species prejudice.

Plant species should be saved because of their intrinsic value.

Decreasing pollution has priority over economic growth.

World population at present levels threatens ecosystems but the population and behaviour of industrial states more than any other. Human population is excessive.

Resource means resource for living beings.

People should not tolerate a decrease in the quality of life but in the standard of living in overdeveloped nations.

- We measure economic progress in terms of improvements in the quality of life rather than [in] the acquisition of consumer goods. (GUIDING PRINCIPLES Alberta, 1997)  
Humans are cruel but not necessarily so.

## SPECIFIC RESOLUTIONS

### BC specific resolutions

#### 22.3.1 Carmanah Watershed

\* TO ENSURE that no logging take place in presently unlogged portions of the Carmanah watershed 9 B.C. POLICY CONVENTION, 1990).

#### 22.4.1 Clayoquot Sound

\* TO [ENSURE] that all remaining old growth forest in Clayoquot Sound be declared [a] protected [area]. B.C. ANNUAL GENERAL MEETING 1993

\* TO REPLACE some of the forest industry jobs lost in the area with employment in the restoration of the damaged areas of the Sound.

#### B.C. ANNUAL GENERAL MEETING 1993

##### 20.2.1 Strathcona Park

###### B.C. POLICY CONVENTION, 1988

\* TO advocate restoration of the boundaries and status of Strathcona Park to December 31, 1986 positions; and

\* TO support the Friends of Strathcona Park and similar groups in all their non violent actions, including their civil disobedience, in their efforts to keep any industrial activity out of Strathcona Park (pre-December 1986 boundaries).

##### 20.3.1 Flathead/Akamina Kishinina Area

\* TO support efforts to immediately freeze development of the Flathead/Akhima Kishinina area by annexation to Waterton Lake National Park, having duly settled all aboriginal claims in this area. (B.C. POLICY CONVENTION, 1989)

##### 20.4.1 Khutzemateen Wildlife Area

\* TO SUPPORT THE establishing a joint Federal Provincial Wildlife Management area in the Khutzemateen area of BC as one of the measures necessary to preserve a viable grizzly bear population in North America. (B.C. POLICY CONVENTION, 1990)

• TO DECOMMISSION // We will decommission / the Oldman Dam as recommended by the Federal Government Environmental Impact Assessment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## GREEN PARTY OF CANADA IN NEWFOUNDLAND AND LABRADOR

We live on a finite planet with finite resources, but are consuming our ecological capital instead of living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water and air, topsoil, fish, and trees. We must move from growth to sustainability. (GREEN PARTY OF NEWFOUNDLAND).

See "Sustainability - A Choice to Consider" for more information

## GREEN VS GREY

Politics is no longer defined by the struggle between the Left and the Right. The politics of the 21st century will be divided between the Green and the Grey: between those who see the Earth as an interconnected web of life, and those who see it as a collection of resources to be exploited for maximum short-term profit. (GREEN PARTY OF NEWFOUNDLAND).

In a Grey economy, the worth of vanishing species and natural resources is disregarded because these cannot be easily quantified. Instead economic indicators rise with every automobile accident, with every oil spill, and with every newly diagnosed cancer patient. (GREEN PARTY OF NEWFOUNDLAND).

In a Green economy, progress would be redefined to stop counting the liquidation of nature as income; corporations would be held responsible for their products from cradle to grave; new economic indicators would be applied to account for the social and ecological costs of products and services; and to create jobs, income and consumption

taxes would be replaced with environmental taxes. (GREEN PARTY OF NEWFOUNDLAND).

## GREEN JOBS NOT PINK SLIPS

There are many more jobs in a Green economy than in a Grey economy. A Green economy is labour-intensive, sustainable, based on the skills of people, and produces quality products from local resources incorporating local culture. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Communities like Gaultois, Newfoundland depend upon the inshore fishery. A sustainable inshore fishery must be pursued in order to save these communities and preserve marine biomasses.

## Tax Bads NOT Goods

The Green Party suggests shifting taxes away from personal income and onto non-renewable resources, and eliminating taxes on ecologically benign products and processes. Green taxes reward sustainable businesses and penalize resource-intensive industries. Reducing income taxes and payroll taxes makes people less expensive to employ. (GREEN PARTY OF NEWFOUNDLAND) .

## Sustainable Forestry

Forests belong to future generations and provide habitat for other species. clear-cutting should be banned and the remaining 1% of old growth should be preserved. Higher stumpage fees would encourage selective cutting, and value-added production creates more jobs than exporting raw logs. Hemp and kenaf should be grown as alternative sources of paper fibre. (GREEN PARTY OF NEWFOUNDLAND).

## Organic Agriculture

Agribusiness encourages mono-cropping, chemical farming, centralization, over processing, long-distance transportation and decreased employment. Greens seek to preserve crop diversity, reconnect the farmer with the consumer and ensure a supply of locally produced, pesticide-free food. Product labels should indicate the use of pesticides and bio-engineering. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by H. Pinsent]

## Renewable Energy and Conservation

In view of global climate change and the dangers of radioactive waste, the Green Party suggests phasing out fossil fuels and nuclear energy in favour of renewable energy sources such as solar, wind, biomass, and micro-hydro. The transition to sustainable energy can be achieved through improved energy efficiency, conservation and co-generation. (GREEN PARTY OF NEWFOUNDLAND).

## Life-cycle Product Stewardship

Pollution is resources being wasted. Land-filling is like burying money in the ground. Nothing should be land-filled or released into the air, water or soil. Greens would introduce product-stewardship programs that would require producers to assume the full recycling and disposal costs of their products. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Rivers have been damaged by waste from cities and factories.

Here we see a picture of the Saguenay River, Quebec. Whales, fish and other animals that are native to this river and the Fleuve Saint-Laurent have been seriously affected by heavy metal poisoning. (GREEN PARTY OF NEWFOUNDLAND).

## Community Economic Development

Transnational corporations have no stake in the communities where they get their raw materials or where they operate. As a result, resources are over-exploited and jobs migrate to where labour is cheapest and environmental standards are lowest. Green tax reform would favour locally owned and operated businesses that use local resources for value-added production in a sustainable manner, thereby keeping jobs, decision-making and profits in the community. (GREEN PARTY OF NEWFOUNDLAND).

## Guaranteed Income Supplement

Welfare and Employment Insurance should be replaced with a Guaranteed Income Supplement plan that would encourage recipients to seek employment. A GIS would provide financial compensation for traditionally unpaid and undervalued contributions to society, such as child-rearing and homemaking, and would contribute to the support of artists, students, volunteers and small-business start-ups. (GREEN PARTY OF NEWFOUNDLAND).

#### Pedestrian Communities and Rail

Trains concentrate development while cars encourage sprawl. Greens would revitalize the rail system for long-distance haulage and passenger travel. We envision gradually rebuilding all urban areas into pedestrian communities, interconnected by surface light rail, making the private automobile redundant. (GREEN PARTY OF NEWFOUNDLAND).

#### An End to Deficit Budgeting

Twenty-five cents of every federal tax dollar goes directly to commercial banks to pay the interest on Canada's \$600-billion debt. Greens recommend that the Bank of Canada take over a significant portion of the debt as an interest-free loan. Greens also suggest implementing a currency transaction tax. (GREEN PARTY OF NEWFOUNDLAND).

#### Proportional Representation

The Green Party suggests switching to proportional representation so that when a party receives 15% of the popular vote it would also receive 15% of the seats in Parliament. We would oppose paid political advertising and political donations. Instead all parties should receive equal access to the media and funding. (GREEN PARTY OF NEWFOUNDLAND).

## Restorative Justice

Justice should be restorative rather than retributive. Crime should be defined as a violation of one person by another, not as a violation of the state. The 80% of offenders who are non-violent should be sent directly to halfway houses. Sentencing circles should be used as an alternative to trial by judge and jury. (GREEN PARTY OF NEWFOUNDLAND).

## The Four-day Work Week

Moving to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

## Biodiversity and Wilderness

A conservation strategy is needed to protect biodiversity on an evolutionary scale. Canada needs a system of core reserves, corridors, and buffer zones free from development to accommodate viable, self-reproducing, genetically diverse native plant and animal species, including large predators. (GREEN PARTY OF NEWFOUNDLAND).

## Sustainable Fisheries

The use of draggers in both the east and west coast fisheries has decimated our ocean ecosystems. We must recognize and support ecologically appropriate fishing technologies. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by H. Pinsent]

A typical Newfoundland community.

### Cultural Funding

While the cost of funding the arts is relatively low, its social benefits and economic multiplier effects are high. Greens would maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Many Newfoundland communities continue cultural traditions such as painting stylized "scrolls" on storehouses and barns

### Military Reductions

The cost of Canada's peacekeeping operations is less than \$700 million annually -- only 6% of the defence budget. The Green Party suggests that Canada dramatically reduce its military budget, halt low-level flight training in Labrador, and withdraw from the global arms race. (GREEN PARTY OF NEWFOUNDLAND).

CITIZENS TREATY OF ETHICS,  
EQUITY AND ECOLOGY

Recognizing the Interdependence of Peace, Environmental Protection and  
Human Rights and Social Justice

(Formerly the anti-free trade citizen's treaty for corporate and state compliance: nemesis of the MAI). Proposed General Assembly Resolution to be circulated to governments by their citizens

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development

Recognizing the Interdependence of Peace, Environmental Protection and  
Human Rights and Social Justice

(Formerly the anti-free trade citizen's treaty for corporate and state compliance: nemesis of the MAI)

Proposed General Assembly Resolution to be circulated to governments by their citizens

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations,

commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development

Concerned that trade organizations such as the World Trade Organization (WTO) and Asia Pacific Economic Cooperation (APEC), and trade agreements such as the North American Free Trade Agreement (NAFTA) and the Multilateral Agreement on Investments (MAI) undermine the work of over 50 years in creating obligations, commitments and expectations with respect to the matters set out above;

Dismayed by the continued global urgency resulting from the failure of member states of the United Nations to discharge their obligations arising from conventions, treaties and covenants, to act on commitments made in conference action plans, and to fulfill expectations arising from general assembly resolutions.

Recalling the expectations created through resolutions of the General Assembly, commitments made in Conference Action plans, and obligations incurred through Conventions:

- to guarantee "the inherent dignity and the equal and inalienable rights of all members of the human family" - to "prevent the scourge of war",
- to recognize "Peoples' right to peace",
- to "eliminate production of weapons of mass destruction",

- to ensure that "the use of scientific technology should be in peace and for the benefits of humanity",
- to "reduce the military budget and transfer the savings into promoting social programs particularly in developing countries",
- to "ensure social justice and the equitable distribution of resources",
- to respect "the right to work for equal pay for work of equal value",
- to "ensure the rights of future generations", and
- to "respect the inherent worth of nature beyond human purpose";

Noting that December 10, 1998 is the 50th Anniversary of the Universal Declaration of Human Rights and that there must be no discrimination on the following grounds:

Race, tribe, or culture, colour, ethnicity, national ethnic or social origin, nationality, place of birth, nature of residence (refugee or immigrant, migrant worker) status, colour, gender, sex, sexual orientation, gender identity, marital status, form of family, disability, age, language, religion or conviction, political or other opinion, or, class, economic position, or other status

Recalling the commitment made by all the member states of the United Nations in the Platform of Action at the UN Conference on Women: Equality, Development and Peace (Beijing, 1995) and in the Habitat II Agenda, "to ensure that corporations including transnational corporations comply with national codes, social security laws, and international law, including international environmental law";

WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS TO UNDERTAKE THE FOLLOWING:

1. To discharge obligations, act on commitments, and fulfill expectations arising from Public Trust international agreements and thus:

- (a) to sign and ratify those existing international conventions, treaties, and covenants that have not yet been signed and ratified,
- (b) to enact the domestic legislation necessary to implement them and to fulfill the legitimate expectations created by General Assembly resolutions and declarations, and
- (c) to act upon commitments arising from conference action plans;

2. To establish mandatory international standards and regulations (MINS), based on international principles and on the highest and strongest regulations from member states, harmonizing standards and regulations continually upwards with respect to:

- a. Promoting and fully guaranteeing respect for human rights including labour rights, health rights and social justice;
- b. Enabling socially equitable and environmentally sound employment;
- c. Achieving a state of peace, justice and security;
- d. Creating a global structure that respects the rule of law; and
- e. Ensuring the preservation and protection of the environment.

3. To demand compensation and reparations from corporations, and from administrations that have permitted corporations to, or assisted them in, degrading the environment, violating fundamental human rights, causing harm to human health, especially where those actions occurred:

- (a) in developed and developing countries, or
- (b) on the lands of indigenous peoples or in the communities of

marginalized citizens in either developing or developed countries;

4. To revoke the licenses and charters of corporations, including transnational corporations, if those corporations have persistently:

- (a) violated human rights or denied social justice,
- (b) caused environmental degradation, or harm to human health,
- (c) disregarded labour rights, or
- (d) contributed to conflict and war, or if they fail to pay compensation for past non-compliance with international agreements;

5. To reduce the global military budgets by at least 50% and use the savings:

(a) to guarantee:

- the right to safe and adequate food, which has been not genetically altered or irradiated, or grown with pesticides
- the right to safe and affordable shelter,
- the right to universal health care,
- the right to safe drinking water,
- the right to a safe environment,
- the right to education, and
- the right to peace;

(b) to fund socially equitable and environmentally sound work; and

(c) to fund education and research free from corporate direction and control;

6. To increase funding for United Nations agencies and for international, national and regional educational institutions so that their missions will not be undermined by corporate direction or control. All funding to the United Nations should be conditional and dedicated to the

furthering of international public trust law, not vested interest economic agreements such as GATT, WTO, MAI etc. Given the security council is controlled by the nuclear armed states, the security council should be disbanded, and rotational councils should be selected from the membership of the general assembly.

7. To develop criteria for partnership with the United Nations so as to ensure the exclusion of corporations and to ensure that all partners have in no way in any of their activities violated human rights, including labour rights caused environmental degradation, contributed to war and conflict, or failed to promote socially equitable and environmentally sound employment;

8. To distinguish "civil society" from the "market" — as business activity conducted for profit and civil society as those elements of society that serve to guarantee human rights, foster justice, protect and conserve the environment, prevent war and conflict, and provide for socially equitable and environmentally sound employment —

9. To prevent the transfer to other states of substances and activities that cause environmental degradation or that are harmful to human health, as agreed in the Rio Declaration, UNCED, 1992;

This prohibition must cover activities

such as those related to:

- (a) production, importation or exportation of toxic, hazardous, or atomic substances and wastes,
- (b) production or consumption of ozone-depleting substances,
- (c) extraction of resources by environmentally unsound methods,
- (d) production or distribution of genetically-engineered food

substances and genetically modified organisms,

(e) production or distribution of genetically engineered crop/pesticide systems,

(f) production of greenhouse gas emissions;

10. To act upon the commitments made at recent United Nations Conferences to move away from the over-consumptive model of development, to reduce the ecological footprint, to move away from car-dependency, and to reject the economic dogma that maximum

economic growth will resolve the urgency of the global situation;

11. To prohibit all trade zones that have the effect of circumventing

obligations and commitments intended to guarantee human rights, including social justice and labour rights, or to protect, preserve and conserve the environment.

12. To work for the unconditional forgiveness of all developing nations

debt arising from loans made prior to 1990 and for the termination of all

structural adjustment programs (saps) which seek to ensure repayment of

such debt at the expense of ordinary people, including programs which seek:

(a) the indiscriminate privatization of state-owned enterprises,

(b) the indiscriminate reduction of government expenditures,

(c) the indiscriminate liberalization of trade regimes,

(d) the indiscriminate opening of states to increased foreign investment,

especially where this entails the attraction of foreign capital by

deregulating markets and offering low wages, high interest rates, and

little or no environmental protection,

(e) the indiscriminate encouragement of producing of goods for export at

the expense of traditional crops, products and services which serve the

needs of domestic peoples, or

(f) to force a developing nation to adopt a policy of creating or exacerbating an imbalance between imports and exports;

13. To ensure that no state relaxes environmental, health, human rights or labour standards in order to attract industry, and that no corporation allows a branch or subsidiary to engage in:

(a) practices that are unacceptable in the controlling corporation's state of origin,

(b) activities that are banned or restricted in the controlling corporation's state of origin, or

(c) manufacturing or transferring substances that are banned or restricted in the controlling corporation's state of origin.

14. To ensure that no state shall justify trade with a country that violates human rights, including labour rights on the grounds that such trade will lead to a betterment of human rights, except where continued trade is conditional on eliminating human rights abuses.

15. To establish an International Court of Compliance where citizens can bring evidence of state and corporate non-compliance with all states' overriding obligations and commitments to:

(a) protect and advance human rights, including health rights, and labour rights and social justice,

(b) protect and conserve the environment,

(c) prevent war and conflict, and

(d) enable socially equitable and environmentally sound employment

16. To ensure the right of citizens to sue corporate owners and officers, in criminal and civil court, for any legally violation of human rights, including labour rights, denying

social justice, for destroying the environment, for causing serious harm to human health, and for contributing to devastation through arms trade

75.2.1 Meares Island

(B.C. POLICY CONVENTION, 1985)

75.2.1 Resolved that the Greens recognize Meares Island as a tribal park.

( ) THAT in 1997, on November 21, I wrote the following to the ministers and states participating in the APEC CONFERENCE

URGENCY

To the Ministers and Heads of State participating in APEC

Friday, November 21, 1997

LEST YOU FORGET

URGENCY  
OF THE GLOBAL SITUATION  
RECOGNITION OF  
THE URGENCY OF THE GLOBAL SITUATION

1.1. Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Preamble, Agenda 21, UNCED, 1992)

(1)

IMPACT OF CONTINUED IMPOSITION OF  
CONSUMPTIVE MODEL OF DEVELOPMENT

- 1.1. Continued stress on global ecosystem from the pattern of over-consumptive development in industrialized countries
- 1.2. Continued deterioration of the global environment and aggravation of poverty caused by unsustainable patterns of consumption
- 1.3. Continued failure to reduce the ecological footprint through continued adherence to the consumptive model of development
- 1.4. Continued elimination of the ecological heritage of future generations
- 1.5. Continued depletion of resources upon which future generations depend
- 1.6. Continued political, economic and ecological crises, systemic or de facto discrimination, and other forms of alien domination or foreign occupation
- 1.7. Continued reliance on economic growth paradigm as the solution to global problems
- 1.8. Continue negative impact of structural adjustment programs based on the imposition of over-consumptive model of development
- 1.9. Continued promoting of socially inequitable and environmentally unsound employment and development

1.10. Continued failure to redefine “development” in equitable and ecological terms

(2)

## INEQUITABLE DISTRIBUTION OF RESOURCES AND DENIAL OF BASIC RIGHTS AND NEEDS

2.1. Continued inequitable distribution of natural resources

2.2. Continued inequality/inequity between "developed", "developing" and "underdeveloped" states

2.3. Continued gravity of the economic and social situation of the least developed countries

2.5. Continued lack of fulfillment of basic needs, and failure to guarantee the right to food, right to shelter, right to education, right to health care

2.6. Continued lack of access to basic sanitation and adequate waste disposal services

2.7. Continued lack of access to food and water

2.8. Continued lack of access of poor to suitable arable land

2.9. Continued increase in the number of people who do not have access to safe, affordable and healthy shelter

2.10. Continued food crisis violating right to life and human dignity

2.11. Increased use of manipulative Biotechnology

2.12. Increased introduction of genetically-engineered food, terminator genes in seeds, genetic screening, transfer of genetically engineered products

2.13. Increased control by Multi-National Agri-Food, Pharmaceutical, and Petro-chemical companies world's food supplies

2.14. Continued unethical patenting of seeds by multinationals

2.15. Continued experimentation in the human genome project

2.16. Increased corporate control of their crop varieties

2.17. Increased modification of seeds for profit

2.18. Increased modification of organisms through “genetically modified organisms”

- 2.19 Continued widespread unemployment and underemployment
- 2.20 Continued failure to link health to over-consumption and inappropriate development
- 2.21 Continued failure to address and prevent environmentally-induced diseases
- 2.22 Increased deterioration of public health system, public health spending and privatization of health care systems
- 2.23. Continuing spread of communicable infections
- 2.24 Continued unequal access to basic health resources
- 2.25 Continued high birth mortality rate
  - High percentage of child mortality rate of deaths per live births.

(3)

#### DETERIORATION OF ENVIRONMENTAL QUALITY AND IMPLICATIONS FOR HUMAN HEALTH

- 4.1. Continued impact on health from environmental degradation
- 4.2. Increased impact on health and environment from toxic and hazardous chemicals
- 4.4. Increased air, water and land pollution
- 4.5. Continued adverse health and environmental effects of transboundary air pollution
- 4.6. Continued transferring and trafficking in toxic, hazardous including atomic substances, activities, and waste that are dangerous to health and to the environment
- 4.7. Continued risks of damage to human health and the environment from transboundary hazardous waste
- 4.8. Increased generation and transboundary movement of hazardous waste causing threat to human health and environment
- 4.9. Continued relocation or transfer to other states of activities and substances that cause severe environmental degradation or are found to be harmful to human health
- 4,10 Continued disregard for the precautionary principle

- 4.11. Continued awareness of the harm of exporting banned or withdrawn products on human health
- 4.12. Increased deterioration of the environment and health through anthropogenic actions
- 4.13. Continued ecological and human health effects of environmentally destructive model of development
- 4.14. Continued use of banned and restricted pesticides designated as being hazardous to human or environmental health
- 4.15. Increased resistance of antibiotics

(4)

#### ENVIRONMENTAL DEGRADATION AND LOSS OF NATURE

- 5.1. Continued loss of biological diversity
- 5.2. Continued threat to genetic diversity
- 5.3. Increased deforestation and land degradation
- 5.4. Increased soil erosion
- 5.5. Increased desertification
- 5.6. Increased loss and degradation of mountain ecosystems
- 5.7. Increased erosion and soil loss in river basins
- 5.8. Increased watershed deterioration
- 5.9. Increased marine environment degradation
- 5.10. Increased vulnerability of marine environment to change
- 5.11. Increased risk of impact from increase in sea level
- 5.12. Increased of carbon sinks
- 5.13. Increased impact of global climate change
- 5.14. Increased potential of climate change
- 5.15. Increased depletion of the ozone layer
- 5.15. Increased threats to the ecological rights of future generations
- 5.16. Increased environmental damage from waste accumulation

- 5.17. Unprecedented Increase in environmentally persistent wastes
- 5.18. Continued trafficking in toxic and dangerous products
- 5.19. Continued export to developing countries of substances and activities that are banned or restricted in country of origin
- 5.20. Increased generation of nuclear wastes
- 5.21. Increased Loss of biodiversity through ecologically unsound practices
- 5.22. Increased ignoring of carrying capacity of ecosystem
- 5.23. Continued violation of collective human rights through dumping of toxic, hazardous and atomic wastes is a violation

(5)

#### ACKNOWLEDGMENT OF URGENCY

#### VIOLATION OF HUMAN RIGHTS

- 6.1. Continued violation of human rights on the basis of gender, sexual orientation, sexual identity, family structure, disabilities, refugee or immigrant status, aboriginal ancestry, race, tribe, culture, ethnicity, religion or socioeconomic conditions
- 6.2. Continued violations of human rights through the following activities:
  - Mistreatment, and hasty judicial procedures
  - Lack of respect for due process of law (access to a lawyer or visiting rights)
  - Arbitrary detentions
  - In camera trials
  - Detention without charge and notification to next of kin
  - Lack of defence counsel in trials before revolutionary courts
  - lack of the right of appeal
  - Ill-treatment and torture of detainees
  - Torture of the cruelest kind and other inhuman practices

- Widespread routine practice of systematic torture in its most cruel forms
- Wide application of the death sentence
- Carrying out of extra-judicial executions
- Orchestrated mass executions and burials
- Extra judicial killings including political killings
- hostage taking and use of persons as 'human shields'
- Constitutional, legislative and judicial protection, while on paper, are revealed as totally ineffective in combating human rights abuses
- Extreme and indiscriminate measures in the control of civil disturbances
- Enforced or involuntary disappearances, routinely practiced arbitrary arrest and detention, including
  - , the elderly and children
- Abuses of political rights and violation of democratic rights
- Unfair elections
- Activity against members of opposition living abroad
- Harassment and suppression of opposition politically
- Suppression of students and strikers
- Targeting by terrorists of certain members of the press, intelligentsia, judiciary and political ranks
- Failure to grant exit permits

6.3. Increased migration of populations of migrants, refugees and displaced persons

6.4. Continued critical situation of children

6.5. Continued concern about discrimination against women continues despite Human Rights instruments

6.6. Continued barriers faced by women

6.7. Continued female genital mutilation and other harmful practices

6.8. Denial of fundamental rights and freedoms

Suppression of freedom of thought, Media and religion and conscience • systemic discrimination

- 6.9. Continued denial of moral and humanitarian values through religious intolerance and extremism
- 6.10. Continued massive violations of human rights, ethnic cleansing and systematic rape
- 6.11. Continued wars of aggression, armed conflicts, alien domination and foreign occupation, civil wars, terrorism and extremist violence
- 6.12. Continued violation of human rights of women including murder, torture, systematic rape, forced pregnancy
- 6.13. Continued ethnic cleansing
- 6.14. Continued xenophobia  
Fear and aversion to foreigners continues throughout the world
- 6.15. Continued violation of human rights during armed conflict
- 6.16. Continued discrimination of and violence against women
- 6.17. Continued violation against indigenous peoples
- 6.18. Increased violations of the rights of refugees
- 6.19. Continued insufficient protection of the rights of migrant workers
- 6.20. Continued marginalization of specific women by their lack of knowledge of their rights and redress
- 6.21. Continued Insufficient protection of the rights of migrant workers
- 6.22. Continued multiple discrimination against indigenous women
- 6.23. Continued gender inequities

(7)

## DESTRUCTION THROUGH CONFLICT, WAR AND MILITARIZATION

### THE GREEN PARTY OF CANADA: THE POLITICS OF PUBLIC TRUST

Few will deny that there is an urgent need for change. But without political action, change happens only when it does not conflict with vested economic interests. The result is that effective responses to issues - like erosion of health care, environmental degradation, disintegration of communities, over-consumptive models of development,

globalization through corporate control, and privatization of essential services - have not occurred.

If positive change is to occur, it must come as a reflection of global public trust, rather than at the whim of vested economic interests.

For over fifty years, through international agreements, member states of the United Nations have incurred obligations through conventions, treaties and covenants. Member states of the United Nations have also made commitments through U.N. Conference action plans, and created expectations through General Assembly resolutions.

The "politics of public trust" in contrast to the politics of "vested economic interest" is consistent with international principles that have been established through the United Nations system.

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development.

Unfortunately, the global governments continue to undermine these international obligations, commitments and expectations. Green Parties have both international, national and local roots. Moreover, they have the political will to address these urgent issues by applying global principles to local issues. Green Party policies are in harmony with principles reflected in international agreements.

Green parties have been dismayed by the continued global urgency resulting from the failure of member states of the United Nations to discharge their obligations arising

from conventions, treaties and covenants, to act on commitments made in conference action plans, and to fulfill expectations arising from general assembly resolutions.

Green party policies are also in harmony with ethical, **equitable and ecological principles**.

## PRINCIPLES AND VISION OF THE GREEN PARTY OF CANADA FOR THE CREATION OF A SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND FUTURE

This document draws upon policy passed through conventions of the federal Green party and through conventions of the provincial parties from Alberta, British Columbia, Newfoundland, Ontario, and [Quebec].

### INCREASED RELEVANCE OF AND NEED FOR THE GREEN PARTY

"The insane demand for unsustainable economic growth which legitimizes treaties such as the proposed MAI is causing irreparable harm to the natural world in which we live, skews the distribution of wealth between peoples, enriches the rich, and impoverishes the poor." (Frank Hughes).

Every day through the media, and through communication from concerned citizens, more and more Canadians are calling for the increasing need for a different kind of public policy—the public trust policy advocated by the Green Party.

The Green party is at a turning point in Canada. More and more the general public is becoming concerned about the health, environment, peace, social justice, and community issues that the Green party has been addressing for years. The implications and consequences of the failure to

move away from the current model of over-consumption and uncontrolled economic growth, of the failure to satisfy human fundamental needs, and of the failure to address the issues of inequitable distribution of resources and environmental degradation are becoming more and more evident.

Recently there has been serious public concern about government and corporate negligence related to the failure to test in the case of hepatitis C, to the failure to act with other countries to ban of a bleach agent in white bread, to the failure of Canada to anticipate the consequences of selling Canadian nuclear technology to India, and to the failure to act to prevent the demise of a generation of first nations men working in the first Canadian uranium mine .

And yet our governments and corporations continue to endorse and undertake practices proven to damage human health and the environment.

There is a general malaise as more and more stories of negligence in the area of health and the environment are reported in the media.

Citizens are looking for comprehensive solutions where the interdependence of human rights, health, social justice, environmental protection and conflict prevention is affirmed and promoted.

Unlike other parties, the Green Party writes policies based on 'the precautionary principle.' This principle affirms that where there is a threat of environmental degradation or harm to human health, lack of scientific certainty should not be used as a reason to postpone per measures to prevent the threat. Currently underfunded public advocates must take on corporations and governments in an attempt to prevent potential threats that will, when implemented, only later surface as being harmful.

The myth that economic growth will address the urgency of the global situation must be dispelled.

We live on a finite planet with finite resources, but are consuming our ecological capital instead of living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water and air, topsoil, fish, and trees. We must

recognize the necessity of limits to growth We must move from growth to sustainability. (GREEN PARTY OF NEWFOUNDLAND).

What is A socially equitable and environmentally sound future is based on a firm foundation of ethical, equitable and ecological principles. sustainable future?

A socially equitable and environmentally sound future will not be stumbled upon while trying to achieve some other goal. Sustainable development is understood by some to mean an expanding economy. This is not possible. Most people now realize that it is not going to be achieved without changes to our lifestyles and our standard of living.

### Urgency

We will not solve the environmental, economic and social problems we all face by having the rest of the planet emulate our consumption habits. It is only when we in North America, Japan and Europe "the first world" stop our excessive consumption, our exploitation and our cruelty to the planet and all its inhabitants, that we will be able to choose a path that is truly sustainable. (GREEN PARTY OF ONTARIO 1994)

Green development" is not simply "sustainable development" development we can survive. It is regenerative development, development which directly works to heal the individual, the community, and the environment. This must be achieved through a gradual restructuring of our economy, and through the growth of appropriate enterprises, guided by grassroots processes of community design and planning. It is not enough to place limits on the destructiveness of conventional economic growth -- our survival depends on mandating that economic growth heal the planet and community. (GREEN PARTY OF ONTARIO 1994)

## BASIC ASSUMPTIONS AND PRINCIPLES

### Co-evolution

#### 1.1 Interdependence

The biosphere and ecosphere are dynamic interacting systems of energy flow, cycles of matter, and plant and animal species. Within these systems Greens recognize the complete and total inter-connectedness of all things. Within nature and society every

activity in some way affects everything else. All things are joined in the web of life and so are fundamentally interdependent with each other. (B.C. POLICY CONVENTION, 1986)

- We acknowledge the inter-relatedness and interdependence of all things. We must learn to celebrate our connections with other life forms and respect the systems that support our existence on this planet (GUIDING PRINCIPLES Alberta, 1997)

interdependence of issues

“The 1994 conference was explicitly given a broader mandate on development issues than previous population conferences, reflecting the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation”. (Preamble, 1.5., International Conference on Population and Development, 1994) • to support the consideration of the interdependence of issues related to Peace, human rights, social justice, environment, and socially equitable and environmentally sound development

- RECOGNIZING THE INTERDEPENDENCE OF HEALTH AND ENVIRONMENT EXPRESSED IN CHAPTER 6 “PROTECTING AND PROMOTING HEALTH (AGENDA 21): (1998)

ENDORSEMENT OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

## 1.2 Process

POLICY CONVENTION, 1986

Within this net of interdependence, all things are in process and are changing in response to a changing environment and each other. The Greens accept change as a consistent feature within nature and society. Our view must account for this coevolving environment and thus be, itself, always in process.

## 1.3 Adaptation

## POLICY CONVENTION, 1986

Recognizing the changing environment, we are in, human societies must be able to adapt to changing circumstances; what worked in the past may not work in the future. Also, assuming a high degree of interdependence with nature, our societies must be carefully adapted to each particular ecological and social situation. We cannot, in the long term, expect nature to adapt to us; we must adapt to it.

- We appreciate appropriateness. Appropriate action implies a minimum (GUIDING PRINCIPLES Alberta, 1997)

### 1.4 Finitude

## POLICY CONVENTION, 1990

The Greens understand the finite nature of the world: the earth and all its ecosystems. All elements are connected in an interconnected system. Lands, waters, oceans, and resources, can no longer be thought of as limitless. Greens understand that for humans to coexist we must live within nature's means.

I We will promote policies which recognize that water is the connecting medium between all ecosystems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## 2.0 GREEN PHILOSOPHY AND KEY CONCEPTS

### GREEN VISION

the green vision of reality is based on love of life, respect for nature and an awareness of the interdependent and cooperative structure of the world. We recognize that we are part of nature, not above it, and the continuation of life itself depends upon our wise interaction with the environment. Our political and economic decisions must be made with this in mind. (GREEN VISION, Alberta, 1997)

RESOLUTION: RECOGNIZING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

CONCURRING WITH THE AFFIRMATION IN THE WORLD CHARTER OF NATURE THAT

EVERY FORM OF LIFE IS UNIQUE, WARRANTING RESPECT REGARDLESS OF ITS WORTH TO MAN [HUMAN], AND TO ACCORD OTHER ORGANISMS SUCH RECOGNITION'S, MAN [MUST BE GUIDED BY A MORAL CODE OF ACTION. (A, UN GENERAL ASSEMBLY RESOLUTION 1982) (1998)

The Green vision includes a responsibility to create both a healthy environment and a healthy society, both of which are fundamentally interrelated. The following concepts, values, and definitions have been

organized into three basic categories: Ecological Concepts, Social Values, and Concept (B.C. POLICY CONVENTION, 1986)

## 12. RESPONSIBILITIES

Albertans should be prepared to accept the responsibilities which accompany their rights. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A. We will expect Albertans to expend the time and effort required for participating in community decision making processes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will expect that Albertans will take reasonable measures to protect their own health. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will expect Albertans to be actively involved in the education of their children. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. We will expect Albertans to diligently work to protect the environment and thus provide for their children's future. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A we will support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA 1997) Definitions.

• TO ADHERE THE PRECAUTIONARY PRINCIPLE, AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

- TO APPLY THE PRECAUTIONARY PRINCIPLE TO ALL POTENTIALLY HARMFUL EMISSIONS, CONTAMINANTS, AGENTS OF POLLUTANTS, OR RECONCENTRATED SUBSTANCES—CREATED THROUGH IMBALANCE IN BIOGEOCHEMICAL CYCLES. THROUGH MANDATORY INTERNATIONAL STANDARDS, STATES SHALL INVOKE AND ENSURE COMPLIANCE WITH THE PRECAUTIONARY PRINCIPLE. (1998)

(NOTE: THAT THE PRECAUTIONARY PRINCIPLE SHALL NOT BE MISCONSTRUED TO MEAN” THAT THERE IS EVIDENCE BUT NOT SCIENTIFIC CERTAINTY THAT A PARTICULAR PRACTICE, SUBSTANCE OR ACTIVITY IS CAUSING HARM THEREFORE WE SHALL CONTINUE THE PRACTICE; OR THE PRECAUTIONARY PRINCIPLE SHOULD NOT BE USED TO JUSTIFY NOT USING AN ENVIRONMENTALLY SOUND PRACTICE BECAUSE IT IS NOT SCIENTIFICALLY BASED.) (1998)

RESOLUTION: ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a transboundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

Noting that in the international documents, different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

#### ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effect are not fully understood, the activities should not proceed (General Assembly Resolution, 37/7, 1982)

## ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

### TAKING INTO ACCOUNT CRADLE-TO-GRAVE APPROACH

taking into account the cradle-to-grave approach **by phasing out and eventually eliminating the production and consumption of hazardous waste to the management of hazardous wastes, in order to identify BEST practices for phasing out and eventually eliminating options for minimizing the generation of hazardous wastes, through safer handling, storage, disposal and destruction** (20.20 e Hazardous wastes, Agenda 21).

## ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, and **through the establishment of Mandatory International Normative standards** should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

## ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products **including the phasing out and eventual elimination of toxic chemicals and the ensuring of BEST (Best Environmentally Sound Traditions) practices** (19.15 e, Toxic Chemicals, Agenda 21)

### Life-cycle Product Stewardship

Pollution is resources being wasted. Land-filling is like burying money in the ground. Nothing should be land-filled or released into the air, water or soil. Greens would introduce product-stewardship programs that would require producers to assume the full recycling and disposal costs of their products. (GREEN PARTY OF NEWFOUNDLAND).

## PROMOTING A CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

## ENSURING RESPONSIBLE CARE

Industry **shall be required** *should be encouraged* to (19.51 Toxic chemicals) “develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

## REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

## \*RESOLUTION: INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

### RE: TREATING WASTE AS A RESOURCE

recommendation C13

Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates, together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I)

(b) In the development of human settlements, the quality of the environment must be preserved. Pollution should be prevented by minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)

(vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

**We call upon states:**

**• to ensure that in all their activities and the activities of corporations including transnational corporations there is adherence to the anticipatory principle.**

**• to adhere to the anticipatory principle as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.**

**RESOLUTION: RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM**

Welcoming the expectation created in the Habitat II Agenda that "Sustainable human settlements development incorporates... the precautionary principle, pollution prevention,

respect for the carrying capacity of ecosystems and preservation of opportunities for future generations” . (16, Habitat II).

**Respecting the carrying capacity of ecosystems also entails acknowledging that there are limits to growth, and respecting the inherent worth of nature, and thus does not justify increased pollution in pristine areas, or give a licence to pollute less polluted areas.**

**Call upon governments:**

- **to respect the carrying capacity of the ecosystem**
- **to ensure that this principle is not used to justify increased pollution in pristine or less polluted areas**

**RESOLUTION: REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE**

Concurring with Habitat II that the need for “promoting changes in unsustainable production and consumption patterns, particularly in industrialized countries...settlement structures that are more sustainable, reduce environmental stress , promote the efficient and rational use of natural resources- including water, air, biodiversity, forests, energy sources and land - and meet basic needs thereby providing a healthy living and working environment for all and reducing the ecological footprint of human settlement”

Aware of the undertaking by members states of the United Nations **in 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws”.** **This undertaking was reaffirmed and extended in the Habitat II Agenda to include the “private sector”.**

Under no circumstances should an industry or individual be pardoned of any regulation or standard concerning environmental law. (GREEN PARTY OF NEWFOUNDLAND).

Call upon Government

\* to phase out all environmentally unsound practices, to institute regulations that will phase out and eventually ban all environmentally unsound practices that contribute to the ecological footprint

- to drive industry to BEST (Best Environmentally Sound Traditions) practices

## 2.0.1 ECOLOGICAL CONCEPTS

The following are ecological concepts and values that should be reflected in all Green policies and activities.

### 2.1 Ecological

POLICY CONVENTION, 1986

A Green ethic is based upon a more complete perception of reality than one which places only economic values upon nature, living and non-living. As Greens, we recognize the complete interdependence of all things in nature. In light of this, we have an ethical responsibility to preserve and maintain other species and natural processes. It is clear that if we destroy nature, we will be destroyed, ourselves.

### 2.2 Appropriate Scale

POLICY CONVENTION, 1986

Bigger is not better and there are ecological limits to both size and growth. This applies throughout nature and was the primary message in Schumacher's *Small is Beautiful*.<sup>2</sup> The appropriate scale for anything is that which is carefully adapted and fitted to the particular ecosystem, society or job at hand.

### 2.3 Sustainability

POLICY CONVENTION, 1986

Sustainability in nature represents a successful adaptation that maintains both the organism and its environment in a state of health and balance. As a basic ecological value, organisms, ecosystems, or societies that are sustainable and can continue to

function are better off than ones that cannot. To be concerned with sustainability is to take the long-term view.

## Diversity

Diversity is recognized as a positive feature in nature, creating flexibility and thus stability in any system. Greens can encourage natural diversity by halting the extinction of animal species, saving indigenous plant and seed stocks, and valuing all human cultures. The principle of diversity stands full against current world trends toward standardization and monoculture. (B.C. POLICY CONVENTION, 1986)

- We encourage diversity. A rich diversity of opinions, of cultures, and of economic alternative, are all indicators of a healthy and stable community.

of interference with the environment, and requires a thorough understanding of the consequences of our actions. (GUIDING PRINCIPLES Alberta, 1997)

B. We support the preservation of areas with special cultural significance such as archeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## SOCIAL VALUES

The following are social values and concepts that should be reflected in all Green policies and activities:

### 3.1 Social Responsibility

Recognizing our interdependence within society, and the common source of the human species, we have an ethical responsibility to create a society which guarantees the welfare and well-being of all peoples. This includes the encouragement of self-determination and the discouragement of oppression of any kind. (B.C. POLICY CONVENTION, 1986)

## 11. Social Equity

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. This includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. All life is vulnerable to the actions of human beings therefore we have an obligation to treat all living creatures humanely and with respect.

(ALBERTA GREEN POLICIES, ALBERTA 1997)

## 12. RESPONSIBILITIES

[Canadians] should be prepared to accept the responsibilities which accompany their rights. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A. to expend the time and effort required for participating in community decision making processes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. to take reasonable measures to protect their own health. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. to be actively involved in the education of their children. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. to diligently work to protect the environment and thus provide for their children's future. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## 3.2 Non-Violence

POLICY CONVENTION, 1986

[The Green party adheres to the principle of non-violence which calls not only for total global disarmament but also adoption of a basic non-violent approach to all social and ecological issues]

Greens believe in total global disarmament, but our notion of non-violence and peace runs deeper than this. It represents our basic approach to all social and ecological problems. A rich body of theory exists around non-violence which can be consulted.

## 3.3 Decentralization and Grass Roots Democracy

The social expression of diversity is decentralization. Applied to our political structures, this means grassroots democracy. Greens are calling for the decentralization of our economies, populations, education systems, and manufacturing; in short, every aspect of our society. For local people, decentralization means a maximum degree of self-determination and involvement in decision-making. (B.C. POLICY CONVENTION, 1986)

#### PRINCIPLE-BASED DECISION MAKING. COMMUNITY DECISION MAKING WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES (PLATFORM 1997)

We will increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO DISCONTINUE ALL MULTI-STAKEHOLDER ROUND TABLES EXTOLLING A DECISION-MAKING PROCESS THAT GLORIFIES CONFLICT OF INTEREST BE DISCONTINUED. THESE TABLES IN PRACTICE INVITE CORPORATE INTERESTS TO DETERMINE THROUGH CONSENSUS POLICIES THAT DIRECTLY AFFECT THEM AND MUST BE STOPPED. (1998)

#### 1. The Renewal of Democracy

The present electoral system in Alberta and in Canada [throughout Canada] creates governments which are not representative of the population. The Green Party would introduce a system of proportional representation, similar to that used in most developed countries. [countries]. Some seats would be contested according to our present system, and some seats would be allocated in proportion to the total votes cast for each party. This will encourage participation by all citizens and reduce conflicts caused by regional differences. (RENEWAL OF DEMOCRACY GREEN' ELECTION PLATFORM Alberta, 1997)

#### 3.4 Feminism

POLICY CONVENTION, 1986

Feminism is an important concept for Greens. It aims at developing holistic personalities and a balance between the male and female principles; and at creating a non-sexist, non-violent, and egalitarian society.

### 3.5 Community

Local, democratic communities are the most decentralized way to fulfill the Green commitment to social responsibility. Communities, as face-to-face relations, represent the appropriate scale for personal caring and for developing sensitivity to a particular bioregion. Communities and the individuals within them must be empowered politically, economically, and socially. Communities are the basic sustaining unit of a Green society. (B.C. POLICY CONVENTION, 1986)

- We believe that the community is the foundation of participatory democracy. Any government should be responsive to the communities which it serves by involving citizens in the decision-making process (GUIDING PRINCIPLES Alberta, 1997)

The structure of human society is being destroyed by self interest and greed. The quality of life for the majority of people is steadily decreasing. Materialism and consumption rule. The Greens seek to restore and strengthen local communities and to empower them to create equitable and supportive societies. (Restoration of Community GREEN' ELECTION PLATFORM Alberta, 1997)

We will increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Cooperation

POLICY CONVENTION, 1986

In a world obsessed with competitive values, Greens believe that cooperation, not competition, is the basis for human societies. Green societies should be structured around the cooperative principle. This

has ramifications in decision-making where cooperative solutions are favoured over win-lose situations.

A we will support initiatives, cooperation and accountability in economic enterprises  
(ALBERTA GREEN POLICIES, ALBERTA 1997)

## Economic Recovery Assistance

Program (1998 Ice Storm)

Adaptation and rural development within  
the agriculture and agri-food sector

A Green Party government would undertake:

### Institutional changes

\* to develop and communicate eco-agricultural models and practices from studying and synthesizing principles from the diversity of sustainable, natural and eco-community-centred agricultural approaches created by indigenous peoples and traditional subsistence mixed farmers together with modern sustainable, organic agriculture, regenerative agriculture, permaculture, agroecology, and other approaches to farming the natural way in nature's image.

- to work for 50% of all farms to be organic [within 15 years] (GPC, 1997)

### PESTICIDE

- to phase-out without delay, the production, use and export of toxic herbicides and pesticides (GPC, 1988)

### ANTIBIOTICS

- to phase-out without delay the use of antibiotics and hormones in meat fish and other food production

\* to phase out Agriculture Canada and other federal research support for large-scale agribusiness chemical, pesticide and genetic and other bioengineering practices and refocus support on the development of family and community scale ecological agriculture models, principles and practices such as biological soil and pest management approaches like soil rebuilding crop rotations, companion planting, intercropping, and perennial polycultures.

- TO CALL UPON ALL LEVELS OF GOVERNMENT TO INSTITUTE PROGRAMS FOR SORTING AND RECYCLING OF ORGANIC WASTES (GPC, 1988)

\* to phase-out federal support for college and agency agribusiness

educational programmes and refocus supports on family farm and community scale eco-agriculture workshops, distance education, undergraduate and graduate and diploma.

## IRRADIATION

- is opposed to irradiated food because it is hazardous to consume and dangerous to produce, and because food irradiation presents citizens and consumers with greater health and safety risks than it offers in real benefits (GPC 1988)
- to prevent the creation of an infrastructure for the irradiation industry (GPC 1988)
- to label accurately any and all irradiated foods and food ingredients which are distributed despite the best efforts to prevent the irradiation of food (GPC 1988)
- to establish sound public policies which prohibit food irradiation (GPC, 1988)
- 

Genetically engineered foods ban

\* TO BAN /support a permanent ban on/ the sale or production of irradiated foods in the province. B.C. POLICY CONVENTION, 1987

- 
- to PARTICIPATE IN A BOYCOT AGAINST THE GENETICALLY ALTERED FOOD, SUCH AS CORN AND SOYA BEANS THAT HAVE BEEN ALTERED BY MONSANTO AND CIBA-GEIGY (1998)

\* to support each people's right to NON-GENETICALLY ENGINEERED OR NON-RADIATED FOOD WHICH HAS BEEN ORGANICALLY GROWN (1998)

- TO INVOKE THE PRECAUTIONARY PRINCIPLE AND INSTITUTE AN IMMEDIATE BAN ON ALL GENETICALLY ENGINEERED PROCESSES, FOODS, CROPS AND ANIMALS
- TO INVOKE THE "ORDRE PUBLIC" PRINCIPLE AND BAN THE PATENTING OF LIVING ORGANISMS AND THEIR PARTS
- TO CRIMINALIZE BIOPIRACY AND STEALING OF INDIGENOUS GENES AND KNOWLEGE OF FARMERS, PEASANTS, AND INDIGENOUS PEOPLES
- TO PLACE A MORATORIUM ON GENETICALLY ENGINEERED MEDICAL RESEARCH UNTIL ETHICAL STANDARDS CAN BE IN PLACE

- TO URGE THE FULL RATIFICATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY AND THE ENACTMENT OF DOMESTIC LEGISLATION TO ENSURE COMPLIANCE
- TO PROMOTE ORGANIC AND ECOLOGICALLY SOUND AGRICULTURE
- TO INSTITUTE A FAIR AND JUST TRANSITION PROGRAM FOR AFFECTED FARMERS AND COMMUNITIES (ADAPTION OF SEATTLE STATEMENT ON GENETIC ENGINEERING, 1999)

#### Organic agriculture promotion

- \* TO IMPLEMENT encourage methods that reduce dependence on chemicals and fossil fuels, and pursue renewable energy and ecologically sustainable agriculture, and promote this in urban and rural areas; and (B.C. POLICY CONVENTION, 1986)
  - to adopt a set of national organic farming standards similar to those set out by the already organized organic growers' associations (GPC, 1988)
  - To PROMOTE ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES THROUGH REGULATIONS AND EDUCATION (1998)
    - to institute a five-year phase-out and eventual ban on all synthetic pesticides and herbicides; (GPC 1997)
- \* to support basic and field research in the natural breeding, field trials, propagation and protection of alternative ecologically adaptable crops such as native perennials, 'heritage' vegetables, grains, legumes and fruits, hemp and quinoa.
  - to re-introduce heritage varieties (GPC, 1997)
  - to fund only organic farming techniques research (GPC, 1997)
- \* to support the establishment of a diversity of public and farm-based model demonstration and experimental stations for extension and education in each of Canada's natural regions.
  - TO PROMOTE /We will promote/ mixed farming for local consumption and work to reduce our economic dependence on specialized crop production for export. We will encourage research in the domestic use of plants as a food source. (AGRICULTURE ALBERTA POLICY 1997)
- \* to establish, monitor and enforce Eco-agriculture Standards,

\* TO IDENTIFY AND ELIMINATE harmful additives, or other additives that are possibly disease causing, TO ENSURE THAT ALL ADDITIVES BE LISTED ON FOOD PACKAGING /be identified and/or identified on food packaging/; and POLICY CONVENTION, 1989

\* TO ENSURE THAT ALL all chemicals which have been used in growing and/or processing of any

food BE INCLUDED ON THE LABEL POLICY CONVENTION, 1989

\* TO BAN ALL /, including/ chemicals with known disease linkages, /be identified in advertising and at point of sale/. POLICY CONVENTION, 1989

#### Certification and Labeling.

• TO PASS /We will support/ a food information act that will require all food being sold, either packaged or fresh to list the contents and proportion of ingredients and any processing including irradiation that the food has undergone. We will support labeling of bio-engineered or genetically altered food products. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to support the efforts of organic and ecological agriculture associations in establishing organic/ecological farm practice codes, standards and certification processes. Included in the principles and standards would be: the use of naturally bred, non-genetically manipulated plant or animal seed-stock; soils, plants and pests managed and grown without synthetic pesticides or significant soil loss or deterioration; farmstead and fields planned and worked as part of an integral preserved or restored community of native woodlands, grasslands, wetlands and watershed protecting native plant and animal habitat; livestock provided with species-appropriate shelter, space and freedom of movement, clean water, natural foods free of antibiotics, no growth or lactation stimulants and humane treatment and transport.

• to work for development of a Canadian and an international certification program for organic produce (GPC, 1997)

\* TO ENCOURAGE consumers and governments TO SUPPORT producers of organic food; (POLICY CONVENTION, 1987)

\* TO support the creation of an Organic Food Consumer Advisory Board, regionally based, and democratically run, and also involved in marketing excess produce between regions and outside the province; and (POLICY CONVENTION, 1987)

\* TO INITIATE, PROMOTE AND support the development, with input from producers and consumers, of a system of organic food certifications; and (POLICY CONVENTION, 1987)

## Pesticide elimination

\* TO GRANT, as a transitional measure, tax exemptions or other support to those food producers who resist the machine intensive, chemical fertilizer/spray trend in agriculture; and (B.C. POLICY CONVENTION, 1986)

- to offer tax incentives to farmers for conversion to organic agricultural methods as defined in the national standards (GPC, 1988)

- to offer strong support for small family and cooperatively managed farms, possibly through tax incentives (GPC, 1988)

- to work for the removal of tax rebates for fuel and equipment purchases. (GPC, 1997)

- To phase out nitrogen fertilizers from petro-chemicals, (GPC, 1988) and TO BAN THE RECYCLING OF TOXIC, AND HAZARDOUS WASTE INTO FERTILIZERS

\* TO BAN THE USE CHEMICAL PESTICIDES (Proposal by Ian Whyte)

- TO [ELIMINATE] /We will adopt a goal of/ elimination of pesticides and herbicides. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to establish, monitor and enforce a system of labeling for both domestic and imported foods as to contents, chemicals utilized in cultivation and pest management, seed-stock breeding history if genetically engineered, livestock husbandry practices. An 'organic audit trail' and a regularly monitored and enforced food pesticide residue level process would be required components of this certification system.

## Seed patenting prevention

- TO LEGISLATE AGAINST THE UNETHICAL PATENTING OF SEEDS BY MULTINATIONALS

- TO CEASE THE GENETIC MODIFICATION OF SEEDS TO WITHSTAND SPECIFIC HERBICIDE

- TO APPLY THE PRECAUTIONARY AND REVERSE ONUS PRINCIPLE TO BIOTECHNOLOGY AND REQUIRE SUBSTANTIAL REGULATION ALONG WITH PROHIBITION OF CERTAIN ACTIVITIES AND PRODUCTS AND SUBSTANCES (1998)

^

- \* to inform consumers of the excessive amounts of protein, particularly meat protein used by Canadians

- \* to revise the Canada Food Guide to present legumes, vegetables, fruits and grains as a complete alternative to a meat-based diet and one which will meet all nutritional needs,

including all proteins, while reducing health hazards such as heart, stroke, kidney, urinary, osteoporosis and certain cancers.

\* To ban genetically engineered and irradiated foods (included in the Treaty circulated by the Green Party)

#### Agricultural land protection

• TO GUARANTEE CONSERVATION OF SAFE AND FERTILE AREAS FOR GROWING FOOD

• TO PROMOTE the Universal Declaration on the Eradication of Hunger and Malnutrition, WHICH AFFIRMED the importance of assuring “the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment”. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974) (1998)

\* To preserve agricultural land for future agricultural use (B.C. POLICY CONVENTION, 1987)

• TO ENSURE THAT /We will ensure that/ public land leased for agricultural purposes is managed in such a manner that its ecological and recreational value is maintained. Leaseholders will be responsible for preventing damage resulting from their activities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO PROTECT /We will protect/ good agricultural land from urban expansion. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO advocate changes in the tax system that would eliminate speculation in agricultural land. (B.C. POLICY CONVENTION, 1986)

\* To preserve potential agricultural land (open spaces and treed land) for possible future agricultural use, provided that it is not required for other ecosystem functions such as genetic diversity or oxygen balance; (B.C. POLICY CONVENTION, 1987)

\* To establish effective agricultural land reserves (B.C. POLICY CONVENTION, 1987)

\* to establish a federal agricultural land reserve program (GPC 1988)

\* to ensure that where speculation and development pressures drive land costs up to prohibit agricultural uses of the land, buying land for agricultural land banks to make farming viable (perhaps by leasing to private renters for agricultural use) should be considered [IMPLEMENTED]. (B.C. POLICY CONVENTION, 1987)

• to ensure that food prices reflect the true environmental costs of production. (GPC, 1988)

## Soil protection and enrichment

- \* TO reorient agricultural philosophy toward enriching the earth rather than depleting it; and. (B.C. POLICY CONVENTION, 1986)
- \* TO recognize that soil is a critical resource, and TO take appropriate measures to stop the process of soil erosion and degradation, and develop policies and actions toward regeneration of this vital life support system; and (B.C. POLICY CONVENTION, 1986)
- \* TO IMPLEMENT, PROMOTE AND support development of programs to restore damaged soils; and (B.C. POLICY CONVENTION, 1986)
- TO [INITIATE AND PROMOTE] /We will encourage/ research and education to help farmers sustain the topsoil on their land. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- \* TO make pollution of water from agricultural chemicals a legal offence (B.C. POLICY CONVENTION, 1986)
- \* TO IMPLEMENT, PROMOTE AND SUPPORT /implementation of/ educational programs on soil conservation and sustainable agriculture; and (B.C. POLICY CONVENTION, 1986)

## Genetic diversity

- TO ENSURE /We will take steps to ensure/ that the vital resources of genetic diversity of plant and animals is preserved and protected. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- \*to ensure that the vital resource of the genetic diversity of plants and animals is preserved and protected. (B.C. POLICY CONVENTION, 1986)
- \* TO DISCOURAGE THE METHODICAL USE AND ABUSE OF FERTILIZERS AND PESTICIDES (PREAMBLE B.C. POLICY CONVENTION, 1986)
- \* TO DISCOURAGE MONOCULTURE AGRICULTURAL PRACTICES THAT RESULT IN DISTURBED ECOSYSTEMS IN WHICH NATURAL SUCCESSION HAS BEEN HALTED OR SET BACK (PREAMBLE B.C. POLICY CONVENTION, 1986)
- \* TO support and PROMOTE integrated plant species farming and support the adoption of a more ecological approach to agriculture TO PREVENT SIMPLIFIED

ECOSYSTEMS WHICH BECOME VULNERABLE TO PESTS AND OTHER  
IMBALANCES (PREAMBLE B.C. POLICY CONVENTION, 1986)

.  
\* TO adopt an official policy of opposition to Federal Bill [C 107 (formerly Bill C 32)] The Plant Breeders Rights Act BECAUSE THIS BILL WILL BE INSTRUMENTAL IN CONTRIBUTING TO THE DESTRUCTION OF THE WORLD'S PLANT GENETIC DIVERSITY, THEREBY THREATENING WORLD FOOD SUPPLY (Plant Patent Legislation

B.C. POLICY CONVENTION, 1985

Subsidy elimination

\* TO INITIATE AND call for a formal inquiry into the SUBSIDIES, economic and environmental costs of domestic grazing animals ON FEDERAL AND PROVINCIAL CROWN LAND /to the BC land base/. INCLUDING THE PREEMPTION OF SUCH LAND FOR USE BY WILDLIFE (B.C. POLICY CONVENTION, 1990

• TO REMOVE /WE will remove/ subsidies from unsuitable agricultural land and encourage its return to natural prairie forest or wetlands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO INITIATE, PROMOTE support and work toward the return of the organic hemp industry to Canada FOR THE PROVISION OF FOOD, FUEL, FIBRE, PLASTIC AND SOME MEDICINES Any regulation or licensing should not limit small scale operations and should encourage grower collectives and co-operatives. ANNUAL GENERAL MEETING, 1994

\* TO oppose the commercial farming of wild animals for meat, and trophy hunts on farms and ranches, on private or crown land, in the province. (B.C. POLICY CONVENTION, 1986)

Animals in Agriculture

• to establish and enforce standards for the care of farm animals;

-Phase out battery farming through stringent measures to favour free range husbandry;

-Ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement;

-Encourage a reduction in meat consumption with an educational campaign; (BC Policy, 1990)

-Discourage the import and export of live animals over long distances;

-Phase in a ban on the use of growth stimulants for animals and the routine use of antibiotics in animal feeds; (B.C. POLICY CONVENTION, 1990)

- TO PHASE /We will phase/ out all game ranching and game farming in Alberta. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO promote regional food self-sufficiency globally (B.C. POLICY CONVENTION, 1986)

- TO PROMOTE SELF-SUFFICIENCY IN FOOD PRODUCTION (GPC 1988)

Self sufficiency promotion

- TO ESTABLISH /We will work toward establishing/ a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO PROMOTE /We will promote/ regional food self-sufficiency. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- [TO ESTABLISH] /We will work toward establishing/ a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO discourage cheap food import policies; and (B.C. POLICY CONVENTION, 1986)

- TO ENSURE THAT with the aim of regional self-sufficiency, decisions regarding agricultural goals and commodity pricing would be locally decided; and (B.C. POLICY CONVENTION, 1986)

- \* TO encourage the development of farmers markets and community gardens. (B.C. POLICY CONVENTION, 1986)

- \* TO PROMOTE local production of food for local consumption WHICH is essential to strong local economies and self-sustaining communities (B.C. POLICY CONVENTION, 1986)

\* TO ENSURE that the development of small-scale sustainable agriculture directed toward meeting local needs must be a resource priority for the Greens; and. (B.C. POLICY CONVENTION, 1986)

\* TO ENSURE that suitable Crown land should be made easily available for small-scale sustainable agriculture and homesteading. (B.C. POLICY CONVENTION, 1986)

#### Exploitation of developing countries prevention

\* TO ADDRESS THE ISSUE THAT reliance on the global market economy for food production perpetuates exploitation of the Third World, minority people, and the environment. (B.C. POLICY CONVENTION, 1986)

#### Nutrition information promotion

\* TO PREVENT information about the nutritional requirements of humans BEING obscured by the food industry POLICY CONVENTION, 1986;

\* TO support education programs that would enable people to attain food nutrition by eating healthy, uncontaminated, locally grown food POLICY CONVENTION, 1986.

\* TO INITIATE, PROMOTE AND support a Food Information Act which would require all food being sold, packaged or fresh, to list the contents and any processing, including irradiation, the food has undergone.

• TO SUPPORT /We will support/ a food information act that will require all food being sold, either packaged or fresh to list the contents and proportion of ingredients and any processing including irradiation that the food has undergone. We will support labeling of bio-engineered or genetically altered food products. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Free trade abrogation

\* to cancel or renegotiate completely those aspects of GATT and NAFTA which distort and limit Canada's ability to restore a community and regionally based self sufficient and sustainable ecological agriculture and food provision system.

B. We will work toward establishing a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO ELIMINATE THE PROVISIONS ALL FREE TRADE PROVISIONS THAT DISTORT AND LIMIT CANADA'S ABILITY TO RESTORE A COMMUNITY AND REGIONALLY BASED SELF SUFFICIENT AND SUSTAINABLE ECOLOGICAL AGRICULTURE AND FOOD PROVISION SYSTEM

\* [To abrogate NAFTA] This correction of the above section was made during the election on reviewing existing Green Party Policy]

\* TO WITHDRAW FROM GATT AND TO INSULATE CANADIANS FROM GLOBAL TRADE WITH TARIFFS, AND TO WORK TO RESTORE CANADIAN SELF-SUFFICIENCY IN BASIC GOODS AND SERVICES; (Deferred resolution proposed by Mark Mealing)

Anti-dumping provisions

\* TO IMPLEMENT STRONG AND SWIFT ANTI-DUMPING PROVISIONS TO ENSURE THAT CANADIAN COMPANIES AND WORKERS NOT HAVE TO COMPETE WITH EXPLOITATIVE FIRMS IN OTHER PARTS OF THE WORLD (deferred resolution);

[\* To call for the signing and ratifying of the Convention on the Protection of Migrant workers and their families (passed by cabinet and circulated)]

[\* to call for the implementation of a Treaty for Fairness, Equity and

Environmental Soundness" to counteract vested interest economic agreements such as those emanating from OECD and WTO (treaty prepared; by the Green party of Canada and circulated internationally)]

\* TO WORK TOWARD THE INTERNATIONAL IMPLEMENTATION OF HUMANE, ECOLOGICALLY SOUND AND NON-EXPLOITATIVE TRADE STANDARDS THROUGH A REVISED GATT (deferred resolution possibly addressed by the above);

\* TO WORK FOR INTERNATIONAL TRADE BASED ON RELATIONSHIPS WITH TRADING PARTNERS SET VIA A MULTI-TIERED TARIFF ARRANGEMENT THAT ASSIGNS TARIFF CLASSES ACCORDING TO THE DEGREE WITH WHICH:

A) WAGE, ENVIRONMENTAL, AND SAFETY STANDARDS ARE ENFORCED;

B) UNION ACTIVITY IS PROTECTED;

C) A TRADING PARTNER HAS A BALANCED ECONOMY; (deferred resolution possibly addressed by the above);

food self sufficiency. Where climatic and other natural limitations restrict the growing of food necessities by Canadians or other peoples, equitable trade will be established directly between producer and consumers. Cooperatives or similar Green structures would replace transnational food cartels.

\* to complete a national Environment Canada/Agriculture Canada GIS Canada Land Inventory-based map zoned for agricultural and ecological integrated use planning and protection

\* to develop, cooperatively with the provinces, a programme of land use and protection standards and practices, education, incentives, disincentives and expropriation compensation to ensure that land managers utilize and/or protect their lands as per its zoning such that: prime farmland is protected for agriculture from industrial or residential development; endangered plant and animal habitat, and special eco-communities are given ; farms are generally developed and operated as part of a sustainable natural eco-community by protecting and /or restoring native woodlands, grasslands, wetlands and watersheds.

Agribusiness encourages mono-cropping, chemical farming, centralization, over processing, long-distance transportation and decreased employment. Greens seek to preserve crop diversity, reconnect the farmer with the consumer and ensure a supply of locally produced, pesticide-free food. Product labels should indicate the use of pesticides and bio-engineering. (GREEN PARTY OF NEWFOUNDLAND).

- to increase employment through the establishment of small farms; (GPC, 1997)
- to work for consumer support of local farms (GPC, 1997)

## AGRICULTURE IN ONTARIO

The objective of Green agriculture policy is to:

- 1) Reestablish the financial viability of the family farm.
- 2) Assure a supply of locally produced food

3) Preservation of ecological diversity

4) Stability in social and economic life of a community

#### Transitional Policy

-Reestablish import barriers to protect unfair competition from subsidized producers abroad.

-Establish prototype ecological communities incorporating organic agriculture and other sustainable activities as the base for economic activity.

-Remove all subsidies to chemical agriculture such as the P.S.T. free status of pesticides.

#### Specific Policy Recommendations

-Redirect tax and subsidy programs to support organic techniques as a transition Integrated Pest Management should be encouraged. Based on survey results on nine commodities from 15 different states, and considering practices on only one crop per state, farmers using Integrated Pest Management collectively earned \$579 million more in profits than they would have otherwise. Texas cotton farmers using I.P.M. had net returns per hectare averaging \$282 higher than other cotton farmers. (Postel, 1987, p. 29)

-Tighten the regulation of topsoil removal and sales on a provincial and administrative basis according to the topsoil preservation act.

-Establish a program to set aside 25 % of Ontario's farmlands near Urban centers as community land trusts. These lands would be purchased at a fair market value as they became available and turned over to municipalities with the purpose of establishing local sources of food production. (See Community land trusts)

-Provide Homestead sites on provincially owned lands and interest free loans to unemployed and under employed individuals wishing to

establish sustainable cooperatively based communities.

LOW T.H.C. HEMP the Green Party encourages the cultivation of hemp for ecological reasons:

1: Hemp growers in England have a return of \$ 3000 per acre, compared to the \$290 per acre that Canadians farmers get for grain.

2: Hemp can be grown for the production of biomass as a clean alternative to fossil fuels. An estimated 3 million acres of hemp would replace all of Canada's fossil fuel demands.

3: An acre of hemp will produce as much pulp for paper as 4 acres of trees over a twenty-year period. Current paper mills are convertible to hemp. Hemp paper-making process requires no dioxin-producing chlorine bleach and uses 75% less Sulphur-based acid. Until the late 1800s, 80% of all paper was made with hemp fiber.

4: Hemp can be grown in Canada, cotton cannot. Hemp cloth is stronger, more durable, warmer and more absorbent than cotton.

5: Hemp requires no herbicide, fungicide or insecticide applications and will grow in poor soils.

6: No licence should be required to grow Low THC Hemp. ANIMAL RIGHTS POLICY

-The Ontario Greens affirm that we must live in harmony with the natural world. Human survival depends on the vitality and health of other plants and animals.

-All species have the intrinsic right to exist without regard to their usefulness to humankind. All animals, whether wild or domesticated, have the right to fair and ethical treatment by human beings.

Killing for Food and Clothing.

-We acknowledge the right to kill animals to provide essentials.

Further consideration must be given to the needs of the aboriginal peoples right to self determine their practices on their lands.

-We feel a vegetarian diet is healthier, more environmentally

benign and should be encouraged through education. (ALBERTA GREEN POLICIES, ALBERTA 1997)

The practice of agriculture is one of the cornerstones of human civilization. We encourage agricultural practices which are environmentally sound, economically viable and humane. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Department

Immigration and Refugee Board

Proposed: That the words "reducing immigration" be removed from the Green Party of Ontario Policies, Section on Economics, subsection, Limits to Population. (ONTARIO POLICY KINGSTON, 1997)

\* TO DEVELOP AN IMMIGRATION POLICY LINKED TO FOREIGN AND ENVIRONMENTAL POLICY (deferred resolution)

\* TO FOCUS IMMIGRATION POLICY ON POLITICAL REFUGEES REQUIRING ASYLUM RATHER THAN THE IMMIGRANTS' ABILITY TO PAY;

\* TO ELIMINATE THE \$1000 HEAD TAX (deferred resolution)

\* TO REDUCE THE NEED FOR LARGE SCALE IMMIGRATION DUE TO WAR, POVERTY AND ECOLOGICAL DESTRUCTION (deferred resolution)

\* TO FAIRLY COMPENSATE DEVELOPING COUNTRIES FOR THEIR COMMODITIES; (deferred resolution)

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

### 78.3.1 Population and Immigration

ANNUAL GENERAL MEETING, 1995

78.3.1. a *Whereas the circumference of the earth is not increasing; and*

78.3.1b *Whereas continuation of population growth is killing us; and*

78.3.1.c *Whereas population multiplied by standard of living equals human impact on the biosphere; and*

78.3.1. d *Whereas a consumer in Canada consumes 16 times the quantity of resources consumed by a person in the developing world; and*

78.3.1. e *Whereas current Canadian immigration policy is based on "pay at the door" principles; and*

78.3.1. f *Whereas an unacceptable portion of people fleeing persecution are turned away from Canada*

*78.3.1 Resolved that BC seek a special deal for immigration management similar to that between the Canadian and Quebec governments transferring control over immigration from the federal to the provincial government*

*78.3.2 Further resolved that BC's immigration policy be to welcome political refugees (as determined by international standards) and immigration to re-unify the immediate family of Canadian residents*

*78.3.3 Further resolved that BC seek to phase in a goal of zero or negative population growth through increased direct aid to improve human rights and living conditions in developing countries and policies to decrease BC's birthrate*

*78.3.4 Further resolved that a policy of zero or negative population growth be adopted for the over-stressed and overburdened Georgia and Okanagan basins until a scientific audit of these regions' carrying capacity is carried out*

*78.3.5 Further resolved that we oppose settling on unceded First Nations' land without their approval*

*78.3.6 Further resolved that growth boundaries be developed for each bioregion*

*78.4.1 Population Density*

*78.4.1. a Whereas problems exist in current urban planning*

*78.4.1 Resolved that municipalities be encouraged to maintain the same aggregate density*

## LIMITS TO POPULATION

Is not possible to plan for sustainability without considering population. Greens feel that population levels in Ontario and Canada must be reduced considerably. This should be accomplished through education, providing opportunities for women *and reducing immigration*. We also suggest removing any tax credits for second

and subsequent children, as well as the elimination of all baby bonuses. (GREEN PARTY OF ONTARIO, 1994)

\* TO ENCOURAGE increased densification of residential areas including development of secondary suites to increase the currently insufficient industrial, agricultural and parkland

areas within cities (ANNUAL GENERAL MEETING, 1995)

NEEDS A COMPREHENSIVE RESOLUTION

## DEPARTMENT OF DEFENCE

### NATIONAL DEFENCE (10,304,500,000)

**1999 was the culmination of the Decade devoted to the furtherance of international law, and 2000 is the beginning of the Decade of a Culture of Peace. A culture of peace will be achieved through the "force of compliance". Through over 50 years of international agreements, the Canadian government has incurred obligations, made commitments and created expectations related to the promotion of the public trust. In a General Assembly resolution from 1981, for example, expectations were created that governments would reduce the military budget. The Canadian government has the opportunity of being at the forefront of promoting a culture of peace by reducing the military budget and relocating 3 billion into health care, 1 billion into higher education, 1 billion to Human Resources into an 'Anti-poverty fund for poor children and their families, and 304,500,000, to the department of environment. Two billion could be redirected into conversion programs linked with Just transition programs for affected workers, and 3 billion redirected into a natural and anthropogenic disaster prevention and mitigation training program and into promoting a culture of peace through the "force of compliance". This program could be used to prepare the Canadian military for the expected increase in weather related events brought about through climate change. This program could also be mandated to prevent risks incurred by the Federal government such as the berthing of nuclear armed or nuclear capable vessels, the continued use of bases such as the Nanoose weapons testing range, and the use and disposing of depleted uranium from military activities. 304,500,000 transferred to the department of environment to supplement the cost of restoring sites damaged through military activities.**

A Green Party government would undertake:

- \* to enforce the World Court decision which affirmed that the use or threat of nuclear weapons is contrary to international humanitarian law.
- \* to terminate international training exercises with offensive purposes on Canadian soil. This includes low-level flying exercises in Goose Bay, Labrador, cruise missile testing in Cold Lake, Alberta and submarine training in Nanoose Bay, British Columbia.
- \* to convert the manufacturing of arms to sustainable and useful production.
- \* to reduce the military budget by 50% and transfer the savings into achieving a culture of peace-the guaranteeing of human rights, the protecting of the environment, the preventing of conflict, and the creating of socially equitable and environmentally sound work.
- \* to withdraw from the global arms race, including through the phasing out of uranium mining
- \* to promote the banning of nuclear, chemical and biological weapons, and land mines.
- \* to close Canadian waters and ports to nuclear armed and/or powered warships;
- \* to establish a civilian-based national defence program that would train citizens in unarmed national defense initiatives.
- \* to permit the redirection of taxes from the military to promote peace initiatives.

90.0           DEFENCE

90.1           Nuclear Weapons Free Canada

\*] TO ACT ON ADDRESSING THE ISSUE THAT] the international nuclear industry complex is intimately tied in with the nuclear arms race; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO [INITIATE, PROMOTE] support a nuclear free policy for Canada which includes:

cessation of exploration for and mining of radioactive materials;

the shut down of the nuclear industry including nuclear power plants;

the cessation of trade in nuclear technology inside and outside Canada with the exception (at this time) of that related to medical research; and

the banning of nuclear weapons and nuclear weapons technology from Canadian territory. (B.C. B.C. POLICY CONVENTION, 1988)

\* TO declare Canada a Nuclear Weapons Free Zone and require proof that persons or vehicles wishing to enter Canada ([via] land, sea, or air) are not carrying nuclear weapons; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO endorse the concept of an International Arctic Nordic Nuclear Weapons Free Zone; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO close Canadian ports and related facilities to all nuclear-powered vessels. (B.C. B.C. POLICY CONVENTION, 1988)

90.2 Peace and Security

(B.C. B.C. POLICY CONVENTION, 1990)

\* [TO MAKE CITIZEN AWARE THAT] the major threats to our security are changing climate, ozone depletion, diminishing resources, and deterioration of air quality, water, and soil; and (B.C. B.C. POLICY CONVENTION, 1990)

\* [TO ENSURE] that the spending of defense budgets and the training and use of defense personnel should address environmental protection and ecological preservation. This could include research of environmental abuse, ensuring environmental legislation is carried out, monitoring toxic storage facilities and organizing clean up programs; (B.C. B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE THAT] defense forces perform treaty verification, search and rescue, and ecological reclamation (B.C. B.C. POLICY CONVENTION, 1990); and

\* TO [ENSURE] that all activities performed by defense forces be done non violently and that

training methods address the [FIND COMPLETION]

## DEPARTMENT OF ENVIRONMENT

**ENVIRONMENT (541,794,000) +**

**Relocate 304,500,000 from military budget to monitor compliance with international agreements and federal statutory law. Canada incurred an obligation under the Framework Convention on Climate change (1992) to reduce Greenhouse gas emissions and to conserve carbon sinks such as bogs and old growth forests. Canada has already reneged on its promise to reduce Greenhouse gas emissions to 1990 levels by the year 2000. Canada also incurred an obligation under the Convention on Biological Diversity (1992) to conserve biodiversity with no distinction between public and private land, or between provinces. Funding should be redirected to the prevention of harm, to the implementation of the precautionary principle, and to establish Mandatory Standards and Regulations to drive industry towards socially equitable and environmentally sound practices. Principle should rule industry and not be overruled by industry. Voluntary compliance measures such as ISO 14,000 should be discontinued. In two recent UN conferences every member state of the UN including Canada undertook to ensure that corporations including transitional comply with international law including international environmental law. These Mandatory Standards and Regulations should be based on the following principles:**

- **The "precautionary principle" - where there are threats of environmental degradation lack of full scientific certainty should not be used as a reason for postponing measures to prevent the three (Rio Declaration, UNCED, 1992)**

- **The "reverse-onus principle" - the proponent of an intervention into an ecosystem shall be required to demonstrate the safety of the intervention rather than the opponent of the intervention having to demonstrate harm (principle endorse by the Federal Department of Environment)**
- **The "polluter pay" principle (Rio Declaration, 1992)**
- **The respect for the inherent worth of nature beyond human purpose (World Charter of Nature, 1982)**
- **The "compensatory principle" (Agenda 21, 1992)**
- **The disaster prevention principle (Habitat II, 1996)**
- **the ecological footprint reduction principle (habitat II, 1996)**
- **The "non-transference of substances or activities that are harmful to human health or the environment" principle - states should prevent the transfer to other states of activities or substances that cause environmental damage or that are harmful to human health (Rio Declaration, UNCED, 1992)**

A Green party government would undertake:

\* to invoke the precautionary principle in relation to practices that could contribute to loss or reduction of biodiversity. Where there is a threat of loss or reduction of Biodiversity it is not necessary "to wait until there is "scientific certainty" that clear-cut logging and other ecologically unsound practices "contribute to the reduction and loss of biodiversity."

\* to avoid and minimize the threat to biodiversity by banning ecologically unsound practices.

\* to ensure the stability of animal populations.

\* to ensure that all biosphere reserves have an extended core area with conservation corridors where no commercial intrusion can take place, and have all practices in buffer and transition zones linked to the convention on biological diversity

\* to discontinue the current practice of privatization of parks services.

\* to produce a "Green Forest Field Guide" for the public on forest issues as a critique of, and interpretive guide to, pulp and lumber companies' public relations statements. This will give the public an opportunity to carefully consider information disseminated by the forest industries.

\* to fulfill the requirements of the Convention on Biological Diversity by: (a) establishing a system of protected areas or areas where special measures need to be taken to conserve biological diversity (b) protecting ecosystems (c) promoting the protection of natural habitats (d) promoting the maintenance of viable populations

\* to recognize that all of the species of plants and animals in Canada are part of Canada's heritage, and if their continued existence becomes threatened or endangered, then part of the heritage of Canada similarly becomes threatened or endangered.

\* to enact a Code detailing the Rights of Species in Canada. These Rights will include the right to life, to habitat and to areas large enough to support species in their natural habitat. It will be in the form of an Act and will apply to all of Canada -- its lands, waters and air space.

\* to negotiate with provinces having similar Acts; since these Acts differ among the provinces, the aim of negotiations will be to place the responsibility for all of Canada's species with the federal government. The Federal government will cooperate with provincial jurisdictions to satisfy both the letter and the spirit of the federal Act.

\* to cooperate closely with First Nations in the development of and

implementation of an Act Respecting the Rights of Species in Canada. A Green Party government would: ensure protection of all Canadian animal and plant species in their natural habitat through creation of legislation that would maintain wilderness areas and interconnected wildlife corridors through preserving all remaining old growth forest areas and other critical habitat.

\* to seek advice of scientists working in the field in any decisions made about listing endangered or threatened species of plants or animals.

\* to automatically include the habitat of any species on the list, and to be required (a) to protect the habitat of any and all endangered species; give the force of law to recovery plans for threatened or endangered species;(b) subject to an advance review comprising of a thorough environmental impact assessment any development projects proposed for areas containing, or found to contain, threatened or endangered species and will

**- require the Minister of Canadian Heritage to bring to the attention of the Cabinet and of the Minister of Environment evidence presented by the scientific community that a species is facing imminent threats to its survival,**

- enable any citizen to bring private enforcement actions in court where the government is not enforcing the law upholding the rights of species,
- act immediately when there is an immediate threat to a species' survival.

## Biodiversity and Wilderness

A conservation strategy is needed to protect biodiversity on an evolutionary scale. Canada needs a system of core reserves, corridors, and buffer zones free from development to accommodate viable, self-reproducing, genetically diverse native plant and animal species, including large predators. (GREEN PARTY OF NEWFOUNDLAND).

In 1994, twenty species have been added this year to Canada's endangered list. The list now contains 258 plant and animal species in danger. The species added in Ontario were: birds - the king rail, Acadian flycatcher, yellow-breasted chat, hooded warbler, northern bobwhite, short-eared owl; fish - the warmouth, eastern sand darter, rosy face shiner, and lake chubsucker, plants; blunt-lobed woodsia, deer berry, round-leaved greenbrier.

Therefore we recommend

1: The provincial government should enact legislation requiring habitat protection and restoration for endangered species. None of the 258 species on the endangered list receives any mandatory protection from the law. Unlike the U.S., Canada does not have an endangered species law. Neither federal nor provincial wildlife laws require a response when a species becomes endangered. Such legislation would in some cases mean an absolute prohibition on human activity that threatens a sensitive habitat. In others, it would mean that environmental assessments of projects would be required to take into account the status of pressured species. The law would give the public the right to seek a court injunction

when human activity threatens the existence of a species.

2: Ontario should develop a wilderness-based conservation strategy. (Canada is losing at least one square kilometer of wilderness every hour according to the World Wildlife Fund. Only 4.6% of Canada's land and waters have been set aside as wilderness.) A wilderness-based conservation strategy would set aside large tracts of Ontario - as much as 50% of each of Ontario's 53 ecological zones - aside as wilderness. These areas should be interconnected with wildlife corridors, surrounded by buffer zones, free from permanent human habitation, resource exploitation, and contain no roads and railways. (GREEN PARTY OF ONTARIO, 1994)

- Whereas Canada is home to an estimated 300,000 species, yet we have only identified 72,000; and

- whereas we are losing species at 100 to 1,000 times the natural rate of extinction; and

- Whereas over 80% of species at risk in Canada are in trouble because of assaults on their habitat; and

- Whereas the Canadian Endangered Species Act covers only species in national parks, 4% of Canada's land mass; and

- Whereas the act does not cover habitat loss of endangered species in these parks; and

- Whereas in Canada there are no laws at the national level that make it illegal to destroy the habitat of an endangered species or to prevent its demise through over-hunting or through toxic contamination; and

- Whereas federal wildlife laws do not require a response when a species becomes endangered.

Resolved that the Green Party of Canada continue to work for legislation that will protect all endangered species, provide mandatory protection for any critical habitat, prohibit killing or harming of endangered species across Canada, require advance review of projects that affect endangered species or their habitats and provide a national safety net to ensure that species do not become extinct as a result of provincial inaction (GPC, 1996)

\* TO CONDEMN the western cultural world view, all components of non human nature are considered valuable only insofar as they represent resources to the human population; and (B.C. POLICY CONVENTION, 1987)

\* TO CONDEMN this resourcist world view has rationalized the exploitation of a multitude of life forms and natural processes for which any human use has been found; and B.C. POLICY CONVENTION, 1987

\* TO DEPLORE THAT exploitation has resulted in an accelerating domination and pre-emption of the earth's ecosystems by the human population; and (B.C. POLICY CONVENTION, 1987)

\* TO ACKNOWLEDGE THAT pre-emption for human use has resulted in a calamitous decline and outright extinction of many species once part of those ecosystems; and (B.C. POLICY CONVENTION, 1987)

\* TO CONDEMN THE BELIEF THE CONVICTION THAT non resource components of nature are treated as valueless, or as competitors which must be eliminated; and (B.C. POLICY CONVENTION, 1987)

A Green Party government would undertake:

\* to provide preventive and restorative solutions to problems of environmental and social instability thus moving government and society away from the current "clean up after-the-fact" approach.

\* to address the fact that we are among the 20% of the world's population who consume 80% of the world's resources, and thus reduce the Canadian ecological footprint.

\* to promote an amendment to the Charter of Rights and Freedoms to ensure the right to an ecological heritage and to a clean and safe environment, and to require political decisions to be made on the basis of ecological integrity.

\* to restructure the current environmental assessment review process so that it becomes a legitimate environmental assessment and less a project review mechanism.

• TO REQUIRE EIAs for all large projects, projects in particularly sensitive areas, projects that involve unproven technologies, and any projects which generate significant

public concern. EIAs are part of the cost of doing business and will be paid for by the project proponents. Provision will be made for dividing the cost of EIAs among groups of similar projects. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO require the EIAs be all encompassing in terms of the environment and the people affected by each project and include the cumulative effect of related projects.

(ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO require that EIA review panels be elected by the citizens of Alberta, have local representation and have the power to approve, change, or halt any project they review.

(ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO ESTABLISH PROCEDURES TO ENSURE THAT AN ENVIRONMENTAL ASSESSMENT REVIEW OF ANY PRACTICES OR SUBSTANCES THAT COULD CONTRIBUTE TO THE LOSS OR REDUCTION OF BIODIVERSITY SHALL BE IN PLACE (1998)

- TO ASSESS THE FULL COSTS OF VIOLATING THE RIGHTS OF THE DISENFRANCHISED SHALL BE CARRIED OUT. THE GROUPS BEARING THE GREATEST IMPACT FROM ECOLOGICALLY UNSOUND PRACTICES AND DISPOSAL OF TOXIC, HAZARDOUS, AND ATOMIC WASTES ARE OFTEN THE DISENFRANCHISED IN SOCIETY. (1998)

- TO ENSURE A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT THROUGH MANDATORY INTERNATIONAL NORMATIVE STANDARDS, STATES SHALL REQUIRE A LEGITIMATE ENVIRONMENTAL ASSESSMENT REVIEW OF ANY PRACTICE, ACTIVITY OR SUBSTANCE THAT COULD HAVE SIGNIFICANT ADVERSE ENVIRONMENTAL EFFECTS. AN ACTUAL ASSESSMENT OF THE SHORT AND LONG TERM POTENTIALLY ADVERSE ENVIRONMENTAL EFFECTS OF EXISTING AND PROPOSED PROJECTS AND ACTIVITIES SHALL BE CARRIED OUT. IT IS UNDERSTOOD THAT A REVIEW OF A PROJECT OR ACTIVITY TO ASSESS THE "ENVIRONMENTAL, ECONOMIC, SOCIAL, CULTURAL, HERITAGE, HEALTH EFFECTS OF THE REVIEWABLE PROJECTS" IS NOT A LEGITIMATE ENVIRONMENTAL IMPACT ASSESSMENT. (1998)

- TO REQUIRE COST RECOVERY FOR ENVIRONMENTAL IMPACT ASSESSMENT AND FOR MONITORING AND ENFORCING REGULATIONS

INDUSTRIES THAT ARE PERMITTED TO ENGAGE IN ENVIRONMENTALLY UNSOUND PRACTICES THAT REQUIRE REGULATIONS AND ENFORCEMENT SHALL BEAR THE FULL COST OF THE ADDITIONAL CHARGES INCURRING AS A RESULT OF GOVERNMENTS HAVING TO ENSURE COMPLIANCE WITH

REGULATIONS. IN ADDITION, FOR ALL PROPOSALS, PROJECTS, ACTIVITIES THAT INTERVENE IN AN ENVIRONMENTALLY UNSOUND WAY IN THE ECOSYSTEM, AND THAT ARE DEEMED TO REQUIRE AN ENVIRONMENTAL ASSESSMENT REVIEW GOVERNMENTS SHALL RECOVER THE FULL COSTS OF THE REVIEW. (1998)

\* to ensure that Canada implements all international environmental agreements by enacting the necessary legislation for compliance and enforcement, and enforces all federal and provincial environmental acts and statutes.

\* to strengthen the current Canadian Environmental Protection Act., and to incorporate into the Act an Environmental Bill of Rights.

\* to phase out the production and consumption of ozone-depleting substances.

\* to strengthen the resolve to reduce greenhouse gas emissions with time-bound and enforced reduction targets.

• TO propose and support initiative which will end production of all ozone-depleting chemicals. (ALBERTA GREEN POLICIES, ALBERTA 1997)

TO HALT immediately All production of all [Ozone Layer] damaging chemicals be immediately; and (B.C. ANNUAL GENERAL MEETING, 1989 B.C. POLICY CONVENTION, 1993)

\* to introduce legislation to promote the reuse or replacement of minerals in industrial production

\* to ban the use of cyanide leaching process for mineral extraction.

\* to require the double hulling of all vessels carrying petroleum products in Canadian waters.

\* to discourage the continued production and consumption of substances and continued activities that are harmful to human health and to the environment. The environmental and health impacts of the continued production and use of toxic, and hazardous (including nuclear substances) wastes are becoming more and more evident.

• TO impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to phase out of all substances and processes which have been clearly shown to be hazardous or deleterious to human health or to the environment, including genetically engineered foods.

\* to require the "Reverse Onus Principle" where the proponent of an intervention that could be harmful to human health or the environment shall have to demonstrate the safety of the intervention rather than the opponent of the intervention having to demonstrate the harm.

\* to allocate significant research funding into preventing environmentally-induced diseases.

\* to establish a policy across Canada to prevent pharmaceutical companies, along with other corporations involved with biotechnology, and with environmentally unsound practices from sponsoring and influencing the direction of research

\* to increase support for research into ecological interrelationships, social structures and their reciprocal effects one another by independent scientific bodies.

\* to encourage efforts and initiatives which promote free political and scientific activity in universities and a science in the service of humanity

\* TO ENACT PRODUCT STEWARDSHIP LEGISLATION THAT WOULD REQUIRE PRODUCERS TO INCREASE THE LIFE- SPAN OF THEIR PRODUCTS AND TO ASSUME THE FULL RECYCLING AND LIFE CYCLE ANALYSIS (deferred resolution)

• to fund municipalities for the reduction of collection at the source, and the large-scale reduction, of garbage.

• to support local recycling efforts. (B.C. POLICY CONVENTION, 1986)

## PRODUCT RESPONSIBILITY

During the last 50 years humans have developed thousands of products for which there is no environmentally sound method of disposal. To set acceptable limits on the damage this has done government developed a system of risk assessment. Risk assessment fails because

1: It is focused on damage to the most exposed individual

2: We will forever lack key information needed to make accurate risk assessments.

3: Science can never provide the needed analytic techniques to test for the health effects of the synergetic effect of different chemicals

For this reason, the Green Party recommends we turn our attention to the way things are made. There are 3 categories of Products

1: Consumption Products: These items are purchased then converted by chemical reaction into energy or by products. Examples would be soap or food. They are normally used once then released into the environment. They must be biodegradable, they must not bioaccumulate, be toxic or cause cancer or birth defects.

2: Service Products: These goods provide services. Examples would be Automobiles or Televisions. Consumers should not own these products but lease them from manufacturers who remain responsible for their ultimate destiny. An alternative would be purchase with a refundable deposit. After it has served its function it is returned to the manufacturer where it is renewed or disassembled and recycled at the expense of the manufacturer.

3: Unmarketable products: These items cannot be consumed or used in an environmentally friendly way. An example is the waste from the production of aluminum. These are products for which no recycling technology exists. These products must be banned until zero discharge production is achieved. Toxic wastes already created must be stored in interim above ground retrievable storage bunkers. This suggestion only works if the entire product

## ZERO DISCHARGE

The most important news of 1992 went largely unreported in

Ontario. At a Ministerial meeting September 21-23 in Paris, 13 European Nations agreed in principle to eliminate all discharges and emissions of chemicals that are toxic, persistent, and likely to bio accumulate. These nations made a binding commitment to achieve "Zero Discharge". For the first a significant portion of the industrialized world (Belgium, Denmark, Finland, France, Germany, Iceland, Ireland, the Netherlands, Norway, Portugal, Spain, Sweden, and the United Kingdom rejected the old philosophy of "prove harm" as a basis for pollution control. A new era of environmental protection has begun and The Green Party of Ontario is committed to having Ontario meet the same levels of environmental protection as our competitors.

Conventional Chemical Engineering and risk assessment has long been based on three key assumption.

Assumption 1: Humans can manage the environment by deciding how much of any material the Earth can safely absorb. Scientists call this the assimilative capacity approach. According to this approach scientists can reliably decide how much of any material the earth can assimilate without causing harm. This is what a risk assessment claims to do.

Assumption 2: Once the assimilative capacity for a particular chemical is reached we see to it that no more of that chemical is released into the environment. We will set limits, river by river, chemical by chemical, everywhere on the planet, so that the total cumulative releases do not exceed the assimilative capacity of the Earth.

Assumption 3: We know what is harmful and what is not, and in the case of those substance that we do not know for certain we will be

warned of possible dangers by traumatic but sub lethal shocks that will alert of us to the danger before it is too late.

#### ALL THREE ASSUMPTION ARE DEAD WRONG

As a result, the well-being of the planet is in serious danger. The depletion of the ozone hole, global warming, acid rain, lead poisoning in our children, mercury in fish, PCB's in the ocean, rising cancer rates, increases in immune system disorders like asthma, rising rates of nervous system disorders like Parkinson's disease and Lou Gehrig's Disease are the result of this presumptuousness and ignorance of the scientific community.

The approach adopted at the Paris meeting and the approach advocated by the Green Party of Ontario is " We do not know and most likely we will never know how much toxic material the environment can stand, so we won't chance it. Therefore, we will contain everything and discharge nothing. In sum, Zero discharge.

#### Zoning

- 1: Allow and encourage the zoning of current single-family homes into multiple family units.
- 2: Encourage infilling and intensification of our cities; discourage urban sprawl with Greenbelts around all urban centers in Ontario.
- 3: Encourage the establishment of home-based business, with the only zoning requirement being the approval of your immediate neighbours (GREEN PARTY OF ONTARIO, 1994)

#### RESPONSIBILITY concept

is accepted otherwise the amount of waste would be unmanageable.

Criteria for safe storage includes, no spontaneous combustion,

no release of gas, no release of liquids. To simplify retrieval different kinds of waste and substances would be stored separately.

The user of the building must prove every 5 years that no method of treatment exists. Ownership of the building remains in public control and the owner of the waste remains responsible for the waste and rental of the building.

Advantages of the Above ground bunker include:

- 1: It enforces the polluter pay principle
- 2: Encourages the development of alternative technologies for specific waste problems' and discourages waste exporting
- 3: Avoids over capacity of waste facilities.
- 4: Promotes the rethinking of products that produce waste.
- 5: Puts the market to work minimizing unmanageable waste.
- 6: Encourages reuse because wastes are not mixed together
- 8: Environmentally sound management the responsibility of the producer.
- 9: Guarantees zero discharge technology \*GREEN PARTY OF ONTARIO, 1994)

\* TO adopt the following definition as the fundamental guiding principles of wilderness protection: B.C. POLICY CONVENTION, 1988

wilderness / wilderness / n. (ME., fr. wildern wild, fr. OE. wilddeoren of wild beasts) (1.3c)

1 a (1): a tract or region uncultivated and uninhabited by human beings (2): an area essentially undisturbed by human activity together with its naturally developed life community b: an empty or pathless area or region c: wild or uncultivated state

wilderness area: an often-large tract (such as at least 5000 hectares) of public land retained essentially in its natural state and protected against introduction of intrusive artifacts (as roads and buildings and motorized travel) where government has the authority to regulate access on a case-by-case basis

\* TO identify and establish a series of wilderness preserves in which there would be little or no human impact. POLICY CONVENTION, 1986.

• TO DISCONTINUE THE PRACTICE OF PRIVATIZATION OF PARKS SERVICES

NOTING THAT CONCERN WAS RAISED AT THE IUCN MEETING OF THE COMMISSION ON PARKS AND CONSERVATION ABOUT THE PRACTICE OF PRIVATIZING PARKS SERVICES (1998)

• TO PROHIBITING MINING AND OTHER INDUSTRIAL ACTIVITY IN PARKS (1998)

• TO ENSURING ADEQUATE SIZE OF PARKS INCLUDING CONSERVATION CORRIDORS TO PROTECT BIODIVERSITY (1998)

• TO PREVENT THE "ISLAND MENTALITY" OF A PARK SURROUNDED BY INCOMPATIBLE DEVELOPMENT (1998)

• To establish the Park system to protect and preserve outstanding natural scenic and historical features for present and future generations; and (B.C. POLICY CONVENTION, 1987)

• TO [PREVENT] the eroding the integrity of Class A provincial parks to cater to commercial and industrial interests such as mining exploration, timber harvest, and concessions to mechanized recreation and access (B.C. POLICY CONVENTION, 1987)

• to protect parks from intrusive and industrial activities. (B.C. POLICY CONVENTION, 1987)

\* TO ENSURE that Crown Land be open to public access [BUT NOT TO ILLEGAL ENVIRONMENTALLY DESTRUCTIVE OR INAPPROPRIATE USES].

(B.C. ANNUAL GENERAL MEETING 1993)

\* TO advocate an ecologically grounded and comprehensive preservation strategy for all the ecosystems of the province, to be undertaken by the Ministries of Environment and Culture, Parks and Recreation B.C. POLICY CONVENTION, 1987

\* to educate sport hunters and other outdoor recreationists to the values of low population (but many species) undisturbed environments; that is, quality over quantity, and diversity over monoculture. POLICY CONVENTION, 1987

\* TO IMMEDIATELY CEASE ALL predator control measures for such species as wolf, grizzly and cougar, for the enhancement of game species. POLICY CONVENTION, 1987

\* TO IMMEDIATELY CEASE ALL predator control measures for the support of grazing operations and commercial fisheries also be ceased immediately B.C. POLICY CONVENTION, 1987

\* TO institute programs which will eliminate activities such as the use of all terrain vehicles, fly in hunting camps for non resident hunters, etc., in de facto wilderness, which shift predator populations towards inhabited areas. B.C. POLICY CONVENTION, 1987

- TO ELIMINATE NON-FOOD TROPHY HUNTING; (1998)

- TO BAN ON LEG-HOLD TRAPS, AS SUGGESTED BY THE EUROPEAN PARLIAMENT AND THE CREE, THE LARGEST GROUP OF NATIVE TRAPPERS; (1998)

\* TO IMMEDIATELY halt to these predator control activities [ WOLF KILL- WHICH USES POISONED BAIT IN RANCHING AND FARMING AREAS (B.C. POLICY CONVENTION, 1988

\* TO undertake research and implementation of (preferably non-lethal) ways of reducing livestock losses from predators and find ways of compensating farmers and ranchers for their losses.

- TO ELIMINATE GROWTH STIMULANTS AND ANTIBIOTICS IN THE PRODUCTION OF MEAT [AND OTHER ANIMAL FOOD PRODUCTS], REQUIRE IMMEDIATE LABELLING DURING PHASE OUT PERIOD, AND EDUCATION OF THE PUBLIC AS TO AVAILABLE ALTERNATIVE FOOD SOURCES; (1998)

- TO LEGISLATE AN END TO COSMETIC AND HOUSEHOLD PRODUCTS TESTING AND TO PHASE OUT PSYCHOLOGICAL AND MEDICAL RESEARCH WHICH USES ANIMALS; (1998)

- TO BAN THE IMPORTATION OF PRODUCTS PRODUCED IN A FASHION WHICH WOULD NOT COMPLY WITH HUMAN ANIMAL TREATMENT LEGISLATION; ((1998)

- TO BAN IMPORTATION OF ANIMALS FOR ZOOS EXCEPT WHERE THIS IS RELATED TO PROJECTS TO SAVE

THREATENED SPECIES; ((1998)

- TO LEGISLATE AN END TO ENTERTAINMENT THAT USES ANIMALS (1998)

## ENVIRONMENTAL TOXINS

### Pulp Mill Pollution

\* TO endorse the four goals of the Pulp Pollution Campaign of the West Coast Environmental Law Research Foundation as a useful first step towards eliminating the toxic discharges of pulp and paper mills:

Goal #1 is elimination of the organochlorines (AOX) from pulp and paper mills according to an urgent and realistic timetable.

Goal #2 is compliance by BC pulp mills with the existing federal and provincial pollution standards, with improvements where necessary.

Goal #3 is wide availability of pulp and paper products free from contamination with organochlorines.

Goal #4 is quick and routine public access to information about the environmental impact and regulatory compliance record of the BC pulp and paper industry.

B.C. POLICY CONVENTION, 1990

### PCBs

\* TO DISPOSE OF existing stocks of PCBs by the latest biochemical means and TO GIVE the lumber industry be given a fixed time in which to find alternative methods of treating lumber. POLICY CONVENTION, 1987

### Toxic and Hazardous Waste

\* TO oppose construction of a toxic waste dump in the Interior bioregion of the province, and call upon the government and the private sector to encourage by all means the altering of production techniques and recycling, so that there is treatment and reduction of toxic waste at the source (B.C. POLICY CONVENTION, 1987)

Every household and office should be charged per unit of waste. From these revenues each municipality could support a blue box program. (GREEN PARTY OF NEWFOUNDLAND).

## RECYCLING, WASTE MANAGEMENT AND INCINERATION

The Green Party of Ontario favours the continued ban on incineration in the province of Ontario. We are opposed to the use of Incineration as an option for Waste disposal for the following reasons.

- 1: Ash residue from incineration contains high levels of heavy metals and dioxin, frequently failing hazardous waste testing.
- 2: Ash poses serious threats to air, water quality, human health, especially that of workers
- 3: Heavy metals emitted from Incinerators bio accumulate in the food chain and therefore pose a health hazard to the public.
- 4: Numerous Science advisory boards have expressed concern over the lack of knowledge concerning municipal waste combustion.
- 5: Combustion sources by their nature produce acid gases which are known to be greenhouse gasses and contribute to acid rain and global warming.
- 6: 80-90 percent of solid municipal waste can be recycled using current proven safe technology. Therefore, the incineration of garbage is an unnecessary combustion source that could be eliminated early in any rational program of sustainability.
- 7: It is a waste of valuable resources.
- 8: There is a terrible loss in burning compostable material which could be used to nurture our depleted soils.
- 9: Solid waste management is an essential element of environmental health and pollution control.

Therefore, we recommend:

- 1: Continuing a ban on the construction of new Incinerators.
- 2: Improved monitoring of the Incinerators in Ontario with complete disclosure of all test results.
- 3: Support amendments to provincial and federal statutes which promote the use of the least toxic alternatives in product composition, and secondly alternatives which are the most reusable, recyclable, most durable, and most biodegradable as appropriate. In this context biodegradability must address the issue of toxic residue remaining after disintegration.
  
- 4: Our society should promote through incentives, and education the minimization of waste at all points of transfer from raw material to consumer products. (GP of Ontario)
- 5: Support legislation and a taxation (see tax section) that promotes the use of recycled material over virgin materials through fees, taxes, price supports, and tax credits. We must provide incentives to businesses that engage in recycling.
- 6: Support Municipal and Provincial procurement guidelines for contractors which enable product life and ability to be repaired to be considered in procurement decisions.
- 7: Support research into problem areas of waste management such as battery recycling, household hazardous waste collection and recycling possibilities.
- 8: Implement recycling programs with a goal to recycle and compost 80% of household and commercial waste within 5 years.
- 9: Support the designation of incinerator ash as hazardous residue unless comprehensive double-blind testing proves otherwise.

10: Support extensive research and monitoring of facilities to establish a database and develop stringent regulatory standards.

## RECYCLING

Recycling is hindered by tipping fees at garbage dumps that do not accurately reflect the full cost of dumping waste in abandoned quarries. Landfill sites leak a leachate that is complex soup of modern chemicals used in the home and industry. The combination of car batteries, soap, water, car oil, transmission fluids, anti freeze, the myriad of toxic chemicals we take for granted percolates through a landfill and pollutes for ever the ground water around landfill sites. All landfill sites leak. They all pose a very real threat to the health of the community in which they are located. This cost can not be calculated in considering landfill verses reduction, reuse, rejection or recycling.

1: Refer to Tax section for a full discussion of tax incentives.

2: Implement dumping fees that reflect the full long-term cost of waste disposal.

3: Require full product responsibility on all products and packaging. The responsibility of pick-up, recycling, and reuse of all products and packaging material must be born by the manufacturers and passed on to consumers. Ban non reusable containers and products.

For example, included in the cost of the purchase of a car would be a levy that would be used to dismantle, recycle and reuse the remains of the car.

4: Ban the export of recyclable materials. All materials must be recycled in the city nearest where they are consumed.

5. Continue funding and expanding the blue box program. Items are reusable, recyclable or banned.
6. Institute an immediate ban on new landfill site construction.
8. Establish community drop off points for recyclable materials like plastics that are not economical to collect.
9. Ban compostable material from landfill collection in favour of home and business composting. (GREEN PARTY OF ONTARIO, 1994)

- TO [Implement] /consider/ the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO EVALUATE the need for these hazardous chemicals TO EXPLORE and alternatives (B.C. POLICY CONVENTION, 1987)

- \* TO advocate incentives for industry to implement pollution prevention approaches, including:

- 1) Tax breaks for industries that install and utilize pollution prevention approaches and demonstrate real reductions in the production of residuum; and
- 2) Establishing tax exempt industrial revenue bonds for underwriting industrial change-over to pollution prevention approaches; and
- 3) Offering awards to industries that have done outstanding jobs of reducing or eliminating residual production; and
- 4) Supporting the use of Residual Exchanges (Waste Exchanges); and
- 5) Encouraging on-site reuse of residuum; and
- 6) Assisting the business community to reduce wastes, above and beyond assisting them to dispose of wastes. (Note: Future subsidies on pollution control can be expected to shrink.) (B.C. POLICY CONVENTION, 1987)

I We will consider the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO PROMOTE AND support the use of disincentives for industry to continue to utilize unsatisfactory residual management approaches, including:

- 1) Banning the use of landfills and deep well injection; and
- 2) Enacting and enforcing strict liability laws; and
- 3) Enacting and enforcing waste end taxes; and
- 4) Enacting and enforcing workers' and citizens' right to know laws; and
- 5) Introducing a waste audit system; and
- 6) Making use of the Way Bill system to track and identify potentially recyclable wastes. (B.C. POLICY CONVENTION, 1987)

\* TO encourage research and development into:

- 1) Safe methods for the conversion of residuum into useful products; and
- 2) New products and/or [the] redesign [of] old products in order to minimize [the use of] materials and energy in their manufacture; and
- 3) Ways to educate citizens to distinguish between the concept of waste and the concept of residuum; and
- 4) Ways to develop an awareness within the minds of our political, industrial, academic, and civic leaders of the ecological and economic advantages of managing wastes through pollution prevention approaches; and
- 5) Non polluting products to produce fewer pollutants (e.g. substituting water-based adhesives for solvent-based adhesives); and
- 6) Modification of industrial processes; and
- 7) Redesign of equipment used in the manufacturing process; and
- 8) Recycling or recovery for reuse or resale.

(B.C. POLICY CONVENTION, 1987)

#### Commercial Use of Chemicals

\* TO advocate the expansion and upgrading of environmental monitoring of chemicals in our environment, WORK PLACE, HOME B.C. POLICY CONVENTION, 1987

• TO PHASE-OUT THE CHEMICALS AMONG THE OVER 100,000 CHEMICAL SUBSTANCES IN COMMERCIAL PRODUCTS THAT HAVE BEEN LINKED cancer,

respiratory, cardiovascular, neurological and behaviour disorders and detrimental effects on immune systems and the physiology of reproduction. POLICY CONVENTION, 1987

\* TO request that the Ministries of Health, Environment and Agriculture coordinate their roles in this monitoring in a more rigorous and comprehensive manner than at present. B.C. POLICY CONVENTION, 1987

Acid Rain, Pesticides and Herbicides

## PESTICIDES

Since the second world war, chemical agriculture with has been promoted as the technological fix-all for soil nutrition and the management of plants, insects and disease.

After 50 years of chemical warfare with the planet it is now clear that the promise of chemical pesticides was never realized. Efforts to control crop damage with pesticides have failed and insect borne diseases remain as serious a threat as ever. In 1940 annual crop damage was 7%, after 50 years of chemical warfare it is at 13%. The fact is that pests develop resistance to pesticides.

According to the United States department of Agriculture between 97% and 99% of pesticides do not reach their target. But those pesticides go somewhere and they are toxic. There have been hundreds of studies that link pesticides to adverse health effects. These include but are not limited to disrupting every major organ system in the human body, altered immune system functions, mutagenic, teratogenic responses, embryo toxicity, reproductive failure, and an array of neurological effects.

Despite the hard-scientific proof that we would be better off without pesticides in 1988 more than one billion pounds of

pesticides, 660 million pounds of herbicides, and 400 million pounds of fungicides and insecticides were spread onto our food producing land and around our homes in North America.

Of the 34 Chemicals commonly used to kill dandelions 62% are toxic to fish and the nervous system of humans, 35% cause birth defects in humans and are toxic to bees and birds, 29% cause cancer and kidney damage, and 85% are sensitizers, that means they cause people to develop allergic type reactions to the chemical.

Ontario soils have lost as much as 50% of their organic content since cultivation began. This has led soils to be highly susceptible to erosion and compaction. A fundamental component of soil degradation is the suppression of biological activity. Healthy soil is teeming with life, from earthworms to microorganisms. The situation is approaching critical as local instances of soil burnout is occurring. If conventional agriculture is continued Ontario's agricultural soils will reach a threshold beyond which productivity cannot be easily restored.

To this end we recommend:

- 1: A total ban on the use of pesticides and herbicides for private lawn care purposes.
- 2: A total ban of the pesticide 2,4-D.
- 3: Require the labeling of all pesticides used in the production of a food product sold in Ontario stores.
- 4: Adopt a target for the implementing sustainable agriculture in 100% of Ontario's cropland by the year 2000
- 5: Support the organic food industry in establishing a province wide system of organic certification
- 6: End the P.S.T. free status of pesticides for farmers.

5: Provide financial support in the transition period for farmers willing to make the conversion to organic agriculture.

6: Redirect agricultural education, extension services and research to address sustainable methods. GP Ontario)

7: Establish targets for Ontario food self sufficiency.

- TO BAN PESTICIDES FOR THE FOLLOWING REASONS: HAZARDS TO HUMAN OR ENVIRONMENTAL HEALTH, EVIDENCE OF WIDESPREAD USE AND RESULTING HARM, BANS IN EXPORTING COUNTRIES, ... PESTICIDE DEPENDENCIES.... [MANY] PESTICIDES ARE BANNED OR UNREGISTERED IN MANY COUNTRIES BECAUSE OF THEIR KNOWN HAZARDS. YET MANY ARE STILL WIDELY PROMOTED AND USED, ESPECIALLY IN DEVELOPING COUNTRIES, WHERE WEAK CONTROLS AND DANGEROUS WORKING CONDITIONS MAKE THEIR IMPACT EVEN MORE DEVASTATION" (FROM PESTICIDE ACTION NETWORK (PAN, 1995) (1998)

- TO RECOGNIZE THAT THE GREEN REVOLUTION HAS FAILED BECAUSE IT COULD NOT ENSURE GLOBAL FOOD SECURITY AND TO A HIGH EXTENT HAS CAUSED AND PROMOTED THE ACCELERATED DEGRADATION OF THE EARTH'S NATURAL ECOSYSTEMS. MORE THAN EVEN BEFORE, THE HARMONIZATION OF HUMAN ACTIVITY AND ITS NATURAL ENVIRONMENT ...IS THE KEY TO THE SURVIVAL OF MANY LIVING COMMUNITIES, INCLUDING HUMAN KIND. IFOAM (INTERNATIONAL FEDERATION OF ORGANIC AGRICULTURE MOVEMENTS) PROMOTES THE CONSTRUCTIVE INTEGRATION OF ORGANIC AGRICULTURE AND NATURE CONSERVATION. (1998)

- TO END THE USE OF PESTICIDES WHOSE SAFETY CANNOT BE ASSURED;
- TO ENSURE THAT HUMAN AND ENVIRONMENTAL HEALTH ARE CONSIDERED FOREMOST IN ALL •
- TO ELIMINATE THE DOUBLE STANDARDS IN GLOBAL PESTICIDE TRADE
- TO GENERATE SUPPORT FOR RESEARCH AND IMPLEMENTATION OF SUSTAINABLE PEST CONTROL METHODS (RECOMMENDATIONS BY PESTICIDE ACTION NETWORK —PAN, 1995).

- TO ENSURE THE “DEMISE OF THE DIRTY DOZEN CHART HIGHLIGHTS BANS AND SEVERE RESTRICTIONS ON THE DIRTY DOZEN’S CAMPAIGN TO TARGET A LIST OF PARTICULARLY HAZARDOUS PESTICIDES FOR STRICT CONTROLS, BANS, AND ULTIMATELY ELIMINATION” (5/93 FOR PAN INTERNATIONAL BY PAN NORTH AMERICA REGIONAL CENTER, 1995). (1998)

- \* TO TAKE / support taking/ immediate steps to stop acid rain; B.C. POLICY CONVENTION, 1986

- \* TO support research and implementation of alternatives to pesticides and herbicides, such as biological controls. B.C. POLICY CONVENTION, 1986

- \* TO ADOPT Ecological Pest Management- deploys a wide range of pest control techniques based on taking advantage of the natural enemies of pests in an ecosystem, and de-emphasizing the widespread use of pesticides; as an adjunct to, and eventual replacement of, pesticide - BECAUSE pest damage to crops has increased due to pesticide induced pest resistance, the triggering of new pest outbreaks via species eliminations and species distributional changes in the pesticide disturbed ecosystem, and removal of predator and parasite species that are the natural enemies of pests B.C. POLICY CONVENTION, 1986

- To BAN PERSISTENT ORGANIC POLLUTANTS

Aware of the mounting evidence that reveals the global scale and severity of toxic persistent organic pollutant (POP) contamination of all life forms and ecosystems, in all regions of the planet;

Further aware that fish, reptiles, birds and mammals, including humans are all affected by POPs via a growing list of actual and suspected effects that include cancer, damage to immune and reproductive systems and developmental problems.

Appreciative of the special attention that the United Nations Environment Programme (UNEP) has given to POPs, in The context (a) of its May 1995 Governing Council Decision 18/32 that established an expedited assessment process for prioritized list of POPs, and (b) the Washington Conference on Protection of the Marine Environment from Land Based Activities, which agreed, among other things that “international action is needed to develop a global legally binding instrument, amongst other international and national actions, for the reduction and/or elimination of emissions and discharges,

whether intentional or not, and where appropriate, the elimination of the manufacture and use of, and illegal traffic in “priority toxic persistent organic pollutants;

Appreciative also of the Fourth Session (1996) of the Commission on Sustainable Development’s endorsement of the Washington conference’s global Programme of Action, including recognition of the intention of governments to take action to develop a global, legally binding instrument to regulate POPs, with special consideration for countries in need of assistance;

Call on the member states of the United Nations

to support the establishment of an Intergovernmental Negotiating Committee (INC) with a mandate to meet several times during 1997, and beyond as a matter of high priority, and

(b) support in the INC for the negotiation of a legally binding, comprehensive POPs instrument that:

(i) has as its overall goal the elimination of the POPs listed as priorities in Decision 18/32 with implementation measures that are rapid, equitable and enforceable;

(ii) includes mechanisms for adding other POPs beyond the original, prioritized ones, based on scientific, social, economic and moral considerations;

(iii) includes, as a matter of priority mechanisms for special financing, technology transfer and capacity building for the benefit of countries in need of assistance; and

(iv) promotes information exchange, transparency and effective civil society participation in decision making.

(from original resolution by Friends of the Earth International, and Greenpeace Australia proposed for consideration at the IUCN World Conservation Union meeting in Montreal 1996.

## CHLORINE PHASE

### OUT

The Chlorine bleaching of paper in North America gives rise to over 150,000 tons of persistent toxic pollutants each year, including substantial quantities of dioxin. For this reason, the

Green Party insists on a phase out of Chlorine.

Chlorine is highly reactive chemical which makes it an excellent disinfectant. However, chlorine reacts with organic substances found naturally in drinking water and causes the formation of a class of chemicals called the trihalomethanes. Some commonly known trihalomehtanes are chloroform, benzene, carbon tetrachloride and toluene, all of which are known carcinogens. Between 1974 and 1988 there have been 18 conclusive studies linking carcinogens in drinking water to human cancers.

Chlorine must be phase out for the following reasons

- 1: Chlorinated organic chemicals including PCB's pesticides, dibenzodioxins and dibenzofurans and many other products or byproducts of the chlorine based industrial process are the primary cause of stratospheric ozone depletion. Ozone depletion is expected to cause millions of additional cases of cataracts, skin cancers, immune suppression, as well as major effects on aquatic and terrestrial food chains.
- 2: All chlorinated organic compounds that have been studied exhibit at least one of a wide range of serious toxic effects such as endocrine dysfunction, developmental impairment, birth defects, reproductive dysfunction infertility, immunosuppression, and cancer, often at extremely low doses.
- 3: Many chlorinated compounds such as methylene chloride and trichloroethylene are recognized as significant workplace hazards.
- 4: In the Great lakes, reproductive, developmental, and behavioral dysfunction has been reported in 14 species at the top of the food chain including humans.
- 5: The Green Party of Ontario concurs with the bi-national Science

advisory board of the International Joint Commission on the Great Lakes in recommending that the weight of scientific evidence suggests that exposure to organochlorides should be presumed to pose a health problem and that policies to protect public health should be directed towards eventually having no exposure to chlorinated organic chemicals as a class rather than continuing to focus on a series of isolated, individual chemicals

6: Chlorinating our drinking solves some problems but it creates others. We should switch to ozone treatment, abandoning treatment.

The Green Party recognizes that:

1: The implementation of specific deadlines for phase out in specific industries would be made after investigation into the feasibility in each industrial category.

2: That some uses have no alternative, such as in specific pharmaceutical applications.

3: There has been considerable job losses in the last 2 years because of the phase out of ozone depleting feed stock to 5 closed chlorine plants.

4: The workers in this industry must not bear the brunt of societies need to phase out the industry and we must implement retraining and assistance programs for displaced workers. (GREEN PARTY OF ONTARIO, 1994)

### Aerial Spraying

\* TO legislate ban on the spraying [of] pesticides from the air.

B.C. POLICY CONVENTION, 1987.

### Pesticides reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the (BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987)

\* TO democratize the pesticide appeal process by inclusion of pertinent medical and ecological data in its terms of reference. (B.C. POLICY CONVENTION, 1987)

### Styrofoam

\* TO ban the use of CFC-producing Styrofoam containers for food service, egg sales, and packaging material (B.C. POLICY CONVENTION, 1988)

\* TO INSTITUTE regulations requiring all restaurants and food outlets (including [the] BC Ferry Corporation) to use permanent wares except for biodegradable containers for take-out orders ( B.C. POLICY CONVENTION, 1988)

### Waste Management & Disposal Tax

\* TO INTERNALIZE the disposal or (preferably) recycling cost of a product in the price of [the] product by an appropriate level of taxation at the source and manufacturing level. Taxation would be applied in a manner which encourages manufacturers to innovate to reduce the environmental and social costs of their products. (B.C. POLICY CONVENTION, 1988)

• To [IMPLEMENT] /We will consider the implementation of/ a variable environmental impact charge on goods and services to fund waste elimination and public awareness programs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Recycling

#### Municipal Recycling

\* TO ENCOURAGE AND REQUIRE ALL municipalities to supply curb side pick-up, resource recovery, sorting, and marketing of all municipal garbage, with relocation/retraining of displaced waste disposal personnel. (B.C. POLICY CONVENTION, 1986)

## ENVIRONMENTAL PROTECTION

### Private Prosecution of Environmental Offenders

\* TO stand in contradiction and protest any provincial law which in any way encumbers private prosecution of environmental offenders ANNUAL GENERAL MEETING, 1991.

### Garbage Disposal

### Pesticides Reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987

\* TO oppose shipping garbage from major metropolitan areas to other bioregions and call upon the regional districts to immediately begin recycling, coupled with consumer education on the need to reduce waste. B.C. POLICY CONVENTION, 1987

3. [PREVENTION OF ENVIRONMENTAL DESTRUCTION] The restoration of the Environment the environment lies almost completely within the jurisdiction of the provinces, and the state of Alberta's environment is critical. The last of our wilderness is being consumed by developments. Biodiversity is diminishing, chemicals threaten human health and carbon dioxide from fossil fuel energy is damaging the atmosphere. The Green Party is committed to turning back this tide of destruction, not by technological tinkering but by giving nature the time and space with which to heal itself.

4. The Creation of a sustainable Economy (Restoration of the Environment GREEN' ELECTION PLATFORM Alberta, 1997)

The future of all life on the planet is endangered by our disregard for the health of the environment. All the Earth's systems are interconnected and all species, of animals and plants must co-exist. We must preserve the Earth's ecosystems to sustain our will being. We must begin to Rethink, Refuse, Reduce, Reuse and Recycle. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Water

\* to ensure that water is not declared to be an "economic good"

V We will oppose any plan to divert water to the United States. (ALBERTA GREEN POLICIES, ALBERTA 1997)

III We will encourage water conservation by placing an appropriate value on water taken from lakes or rivers for agricultural, industrial or domestic purposes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO REQUIRE MANDATORY WATER CONSERVATION RELATED TO NEEDS NOT WANTS (PROPOSED RESOLUTION, 1998)

III We will encourage water conservation by placing an appropriate value on water taken from lakes or rivers for agricultural, industrial or domestic purposes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## WATER QUALITY

The Green Party sees three key areas of concern.

- 1: The restoration of water related ecosystems.
- 2: The establishment of a Safe Drinking Water Act.
- 3: Phasing out chlorine use in Ontario.

### Restoration of Water Ecosystems

We support current efforts to maintain Ontario's wetlands.

### Recommendations:

- 1: 50-meter buffer zones to protect streams and creeks.
- 2: Strengthen current wetland conservation legislation.
- 3: Ecosystem based watershed management.
- 4: Re establishment of flood control basins.
- 5: Withdraw provincial funding for research into or support for Water Diversion Projects. Current plans for James Bay directly affect 22,000 treaty Indians in Northern Ontario.

### Safe Drinking Water Act

Much of the drinking water in urban Ontario is laced with

dioxins, pesticide residue and heavy metal contamination. A recent study in Eastern Ontario found that 75% of well water was contaminated with pesticides. The full implications of pesticides, chlorine compounds, municipal dumps, old oil gasification plants and the synergistic effects of all these chemicals in our water supply is not fully understood.

The residents of Ontario are entitled to clean drinking water. The Green Party advocates a Safe Drinking Water Act. It would

1: Set legally enforceable standards for zero discharge of toxic elements into the environment. (Refer to Zero Discharge policy)

2: Establish a monitoring program for water contaminants which includes full public disclosure of all test results.

3: Support the rights of citizens groups to sue water polluters for losses as well as establishing protection for whistle blowers.

4: Provide the right to seek judicial review of the Minister of the Environment for failure to perform his/her duties.

5: Chlorine phase out in Ontario. Refer to section on Chlorine.

6: Enact a provincial Water Self-Sufficiency Act requiring municipalities to:

A: develop and assist the installation of domestic rain water collection and purification technologies eliminating the cost of urban large water purification plants and rural wells.

B: treat storm water and sewage on site using UV light and in local constructed wetlands and greenhouses eliminating the need for sewers and centralized sewage treatment plants.

C: accommodate on site storm water pecculation eliminating the need for storm sewers.

D: encourage the installation of water conservation measures like

low-flush toilets, shower heads, and grey water recycling systems.

(GREEN PARTY OF ONTARIO, 1994)

Every municipality should be required to treat waste, at least primarily. (GREEN PARTY OF NEWFOUNDLAND).

#### RESOLUTION: REQUIRING MANDATORY WATER CONSERVATION

Aware that, at least since 1992, at UNCED the member states of the United Nations have undertaken through adopting Agenda 21, UNCED to implement water conservation measures; measures that, if instituted, would offset the need to increase water supply

Rational water utilization schemes for the development of surface and underground water-supply sources and other potential sources have to be supported by concurrent water conservation and wastage minimization measures. Priority, however, must be accorded to flood prevention and control measures, as well as sedimentation control, where required. (Art. 18.3 UNCED)

Concurring with UNCED on the importance of promoting water conservation

Promotion of water conservation through improved water-use efficiency and wastage minimization schemes for all users, including the development of water-saving devices; (18.12 I, UNCED, 1992)

Concurring with UNCED on the need for demand management, water conservation, reuse...;(18.17, UNCED, 1992) and regulatory measures (18.12 e)

Mindful of the recommendation from UNCED to protect water resources and conservation of water (18.40 a, UNCED, 1992):

;

;

Noting also the recommendation from UNCED about the use of the precautionary approach in water- quality

Introduction of the precautionary approach in water-quality management, where appropriate, with a focus on pollution minimization and prevention through use of new technologies (18.40 b iv, UNCED, 1992):

Concurring with UNCED that environmental and social impact assessment of potential flood occurrences must be carried out along with drought management. (18.12 f, UNCED, 1992)

Understanding that the member states of the United Nations have reaffirmed this undertaking of water conservation at Habitat II:

... ensure that environmental protection and conservation plans are designed and implemented to restore polluted water systems and rebuild damaged watersheds (98 a bis, Habitat II);

Understanding that other provincial jurisdictions have legislated measures for water conservation

Realizing that if water conservation measures had been duly legislated and undertaken 1992, that water consumption would have decreased

I

Noting the applicability of the precautionary principle that society does not have to wait for scientific certainty that environmental degradation will occur to act to prevent the potential degradation

Realizing that there is an increased need for water to service the essential needs of the community farms, and that this increased need could be addressed through conservation and conversion of water use from non-necessity use to necessity use

Call upon member states to institute mandatory water conservation measures

\* to prevent any privatization of community water systems.

\* to revise the tax treatment of renewable energy and energy efficiency investments immediately to make them more attractive to investors than investments in conventional energy sources such as oil and gas.

## Energy Conservation

• To take the lead in encouraging all energy producers to see the long term need to conserve energy and to set realistic prices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

E. we will require that building and land use planning codes have high standards of energy conservation, including the energy used in making components and transporting them to a building site. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO encourage the construction of small decentralized power plants; [PROVIDING THAT THERE ARE OVERARCHING PRINCIPLES RELATED TO EQUITY AND ECOLOGY] B.C. POLICY CONVENTION, 1986

\* TO DIRECT government and research aid to support alternate/appropriate energy sources (B.C. POLICY CONVENTION, 1986)

\* TO support a change/raise in energy prices to true replacement costs for all users (B.C. POLICY CONVENTION, 1986)

\* TO support a change in rate structures to encourage conservation (B.C. POLICY CONVENTION, 1986)

\* TO support local recycling efforts. (B.C. POLICY CONVENTION, 1986)

## Conservation Society

\* TO support the creation of regional soft energy supply councils to advise all levels of government on soft energy issues, with representatives from government, small soft energy companies, and interested groups and citizens; and

\* TO REPLACE coal-fired thermal generating plants as soon as possible and oppose the construction of any new coal-fired facilities (B.C. POLICY CONVENTION, 1986)

\* TO [INCREASE FUNDING support increased funding to study soft energy production (B.C. POLICY CONVENTION, 1986)

\* TO support transitional financing to municipalities instituting biomass conversion [of non-toxic organic wastes including sewage solids]; (B.C. POLICY CONVENTION, 1986)

\* TO support the creation of, and already existing, areas in "soft energy" and conservation (B.C. POLICY CONVENTION, 1986)

\* [TO FUND] municipalities for the reduction of collection at the source, and the large-scale reduction, of garbage.

#### Power Export

- To oppose the export of electric power from the province (B.C. POLICY CONVENTION, 1986)

- To oppose the export of water from the province.

(B.C. POLICY CONVENTION, 1986)

#### 10.5.1 Energy Export and Site C Dam

\* TO oppose power exportation from the province and the construction of the Site C dam and other hydroelectric projects planned for this purpose (B.C. POLICY CONVENTION, 1987)

#### Oil Transport

\* TO ENSURE THE FOLLOWING:

- 1) All tanker traffic stays outside the 200-mile limit; and
- 2) Fossil fuels must be phased out as an energy source and safe, renewable alternatives be developed and used; and

3) The Canadian Navy and Coast Guard shall witness against violation of the 200-mile limit on all tanker traffic; and

4) The Armed Forces be [directed] to help in the cleanup process. (B.C. ANNUAL GENERAL MEETING, 1989)

### 10.8.1 BC Energy Strategy

\* TO DEVELOP a comprehensive energy-use strategy with the long-term goal of making BC energy-use sustainable. Sustainable energy use means energy which is renewable, relying on the interest generated by natural capital rather than the capital itself, and which does not threaten the viability of ecological systems (B.C. B.C. POLICY CONVENTION 1993)

\* TO ENSURE that this strategy should have at least four objectives: reduction of greenhouse gas emissions, reduction of energy use through conservation and greater efficiency, integration of energy-related environmental impacts into all resource and economic development decisions, and the minimization of environmental and resource impacts of energy development. ( B.C. POLICY CONVENTION 1993)

### Building Demolition

\* TO ENSURE that demolition of structures not be undertaken unless said structures are unsafe and their repair would consume more resources than a new structure would (B.C. POLICY CONVENTION 1993).

### PACKAGING

\* TO [DRAFT] a Product Packaging Act for the province which, through regulation and encouragement, will serve to standardize packaging wherever possible (i.e.: jars, bottles, containers, shipping boxes, etc.), reduce unnecessary packaging, and restrict the use of plastic containers and bags in favour of biodegradable industry standardized materials

and encourage the refilling and other forms of recycling of reusable containers. (B.C. B.C. POLICY CONVENTION, 1987)

## Atmosphere

### Earth's Ozone Layer

- to halt All production of all [Ozone Layer] damaging chemicals immediately because ANNUAL GENERAL MEETING, 1989

#### B.C. POLICY CONVENTION, 1993

- to propose and support initiative which will end production of all ozone-depleting chemicals. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- to towards preventing what has already been produced from entering the atmosphere (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To address the issues of [Ozone Layer] depletion and global warming as a central component in every aspect of its policy (ALBERTA GREEN POLICIES, ALBERTA 1997)
- to support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO2 by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### CARBON TAXES

- to support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO2 by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

4) To address the problem, Canadians must pool all their resources, share the losses, and find new social, political, and economic relationships with each other.

- To ensure that there be laws, incentives and community empowerment programs to require the immediate cessation of production and emission depleting compounds.

B.C. POLICY CONVENTION, 1993• to [ensure] that economic and social impacts be dealt with after the cessation of production of target compounds. (B.C. POLICY CONVENTION, 1993)

## Global Warming Gases

(B.C. POLICY CONVENTION 1993)

Whereas current government goals of a 50% decrease in global warming gas emissions perpetuate wealth inequities between north and south;

- to reduce human caused emissions of global warming gases to 20% of 1987 BC levels in developed nations such as Canada. (B.C. POLICY CONVENTION 1993)

## Changing Atmosphere

- To accept the goal of moving closer to the atmospheric composition of pre-industrial times; and to recognize that it is essential that this process be implemented globally, immediately. (B.C. POLICY CONVENTION 1990)
- To look for ways to improve indoor air quality standards and ensure that health is not compromised by the use of energy efficient but harmful materials. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Water

### Watershed Conservation

- to ensure that maintaining the integrity, quality, quantity, and timing of flow of watersheds should be given priority over any other resource use because all life and well-being of human habitation depends upon sufficient supply of quality water. (B.C. POLICY CONVENTION, 1986)

### Water Safety

- To support using enterococci testing of marine waters on a trial basis, paralleled with current standards, to determine if water safety can be more accurately determined; and B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994
- To investigate alternate ways of sewage treatment and adopt the policy of source control and responsibility for all kinds of wastes and strictly enforce the law; and B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994

- To make public via the media recreational water quality counts for each sampling point (in lieu of geometric means,) ongoing year round, at the frequency that they are sampled, with a clear explanation as to what is considered safe and in a form that is easy to understand, in the same way that the daily air quality levels are currently published; and

B.C. POLICY CONVENTION, 1987 ANNUAL GENERAL MEETING, 1994

- to impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To adopt a policy of sampling sites that are not posted for all water activities where people would enter that water; and B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

- To adopt a policy of arranging sample sites to test waters that would be most affected by faulty storm drains and industrial outfalls; and
- To adopt the policy of full spectrum testing so that toxic and harmful substance levels are also checked in addition to indicator bacteria, for all water quality tests, including drinking water. B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

- To ensure that any laws and regulations that require the use of chlorine in water purification and treatment, and promote the use of safe alternatives. B.C. POLICY CONVENTION, 1987

ANNUAL GENERAL MEETING, 1994

#### Water exports

- To oppose any plan to divert water to the United States. (ALBERTA GREEN POLICIES, ALBERTA 1997)

NOTE PAPER REVIEWED BY CABINET ON THE BANNING OF WATER SALES (1998)

- To advance laws, regulations, incentives and community empowerment to:
  - 1) Emphasize small-scale as opposed to large-scale hydro-electric development.

2) Set minimum water quality standards pursuant to federal health law. B.C. POLICY CONVENTION 1993

#### Water Treatment/Quality

- To ensure that all new provincial, regional and local government water purification systems in British Columbia utilize rapid sand filtration, ozonation and/or ultraviolet treatment as an alternative to chlorination and chloramination; (B.C. POLICY CONVENTION, 1996)
- To establish timetable for existing provincial, regional and municipal systems to phase out chlorine use in favour of rapid sand filtration, ozonation and/or ultraviolet treatment; (B.C. POLICY CONVENTION, 1996)
- To prohibit by law all logging, gravel pits and other ecologically interruptive activities in consumptive watersheds by law with penalties including fines and custodial terms for violation (B.C. POLICY CONVENTION, 1996)
- To work to make the issue of water quality a key issue in the next provincial general election. (B.C. POLICY CONVENTION, 1996)

### DEPARTMENT OF FINANCE

**FINANCE (63,718,189.000) Surplus transfer 12 billion?**

**Auditor General should be elected by an all-Party Committee. Apart from the Commission on Sustainable Development, there should be a position to determine the comparative legitimacy of the nature and type of expenditures and not just the auditing appropriateness. Examine COMER's banking reforms.**

- Promote the development of self-sufficiency for bioregions
- Promote community resistance to the destruction of its economic bioregion
- Support legislation that promotes sustainable economic activity and legislation that restricts non-sustainable activity
- Promote the development of community exchange system such as LETS (Local Exchange Trading System) and barter

- Promote the development of local and/or regional legal tender
- Promote local economic activity based on voluntary reciprocity
- Educate and raise consciousness about sustainable consumer and producer practices
- Support environmentally benign product

## A STEADY STATE BANKING SYSTEM

The Federal Government, through its agency the central bank, must be the sole authority for manufacture and redemption of all forms of money. It is vital that the central bank's activities be controlled non-politically. The controlling body for the central bank would be an elected commission whose mandate was to provide enough currency for the economy without creating inflation. All banks will be required to hold 100% reserves of central bank notes or currency against their depositors' balances. Banks will then make loans only from their holdings or central bank money. The key effect of this will be to enable the central bank to control money supply and thus control recessions and inflation directly. This will be done by varying the supply of money rather than through the manipulation of interest rates. The national debt would be refinanced at the central bank at no interest. Interest rates will be restored to their legitimate function of compensating a lender for depriving himself or herself of the use of the money while it is lent to a borrower. Interest rates will return to levels that

existed before the current high interest rate dogma became fashionable with the financial establishment.

All public capital projects would be funded by central bank credits provided interest free. The principle of these loans will be repaid over the useful lifetime of the project. The central bank will allocate funds at a rate that will be guided by its money supply management policy of inflation / recession control.

### Background

Too much money in circulation results in inflation, too little causes recession. A proper balance ensures stability. Yet we suffer from both in the present system. The reason for this phenomenon is that the Bank of Canada issues and redeems only about five percent of Canadian money. The other 95 percent is issued and redeemed by chartered banks under the fractional reserve banking system in which they are required to hold; in cash or central bank credits a reserve of only five percent against their deposit liabilities.

Chartered banks do not lend their depositor's money. When a loan is taken at a chartered bank new money is created. As a result of this system 95 percent of the money in circulation in Canada has been issued and remains in circulation only as long as someone has taken out a loan at a bank. The quantity of money in circulation is equal to the total loans outstanding. This has little to do with the correct amount of money in circulation that would provide reasonable stability for economic activity without excessive inflation or recession.

The Bank of Canada attempts to influence the quantity of money in circulation by influencing the quantity of loans by manipulating

interest rates. Higher rates discourage borrowing, while lower rates encourage it. This is an undesirable method because:

(1) Chartered banks are able to circumvent Bank of Canada measures when it is in their interest to do so.

(2) The range of interest rates is restricted by the perceived need to "protect the dollar". A "flight of capital" is considered a disastrous scenario and the to be results are a high value Canadian dollar, high interest rates, and a severe recession.

Canada does not need foreign capital or speculative investments that are attracted by interest rates. We advocate that the Bank of Canada provide the money the economy needs. Our money is just as valid as those currently provided by foreign banks to foreign investors or speculators. Canada possesses abundant resources and a well-educated work force capable of producing almost all of our needs for a high standard of living using sustainable economic principles.

The Provincial and national debt, the chronic inability of governments in Canada to avoid deficits and higher taxes, may be traced to the existence of the fractional reserve banking system.

The Bank of Canada currently provides five percent of government loan requirements interest free. This is restricted to five percent of government loan requirements because the Bank of Canada credit forms the reserves of chartered banks. If it were to expand so would the reserves of the Banks. This would greatly expand the money supply and cause inflation. The solution is to raise chartered bank reserves to 100% of loans. This would limit the threat of inflation.

The result of the current system is that one-third of all of

your tax dollars go to pay interest to privately owned banks who have been granted the ability to issue money to the Federal reserve and charge you interest for the service. Government overspending will not be reduced by restructuring transfer payments or cutting spending on Social services but rather by raising chartered bank reserves to 100% of loans and financing governments monetary requirements at no interest. This presupposes that the government will run a balanced budget but that would be possible because the largest expenditure of the Federal government, interest at 35% of total expenses have been reduced to zero. Inflation would be avoided because the government is not "Printing money" nor is it allowing the banks to print money.

All yearly federal government loan requirements could be financed at no interest at the Bank of Canada, all of the provincial and national debt would be refinanced there too.

Under the current system the debt-interest dilemma remains totally unsolvable. The current social system must collapse and the current recession must continue and the debt load will continue to grow or inflation must be allowed to devalue the debt.

Important issues

The transition to a steady state poses many practical problems such as international trade adjustments and legitimate third world needs for further growth up to sufficient levels. But in a sense, they are not relevant as this policy is to establish that the growth economy is unworkable and SSE in broad outline is feasible and desirable.

The Keynesian revolution did not occur because Keynes arguments were lucid and unanswerable. It was the Great Depression that convinced people that something was wrong with an economic system

that denied employment to so many. Likewise, it will probably take a great ecological spasm to convince people that something is wrong with economic theory that denies the possibility of an economic system exceeding its optimum scale. But even in that unhappy event it is necessary to have an alternative vision ready to present when crisis conditions provide a receptive public. (GREEN PARTY OF ONTARIO, 1994)

Our economy is based on the concept of unlimited growth and relentless competition. Non-renewable resources are liquidated at the fastest rate possible for maximum profit. The power of our government is subordinate to the power of transnational corporations. Wealth is concentrating in the hands of fewer and fewer individuals. This is a recipe for disaster. The Green Party recognizes that a sustainable economy must be constrained by the limits of the natural world. We must strive for stability rather than growth, and an equitable distribution of wealth. We must measure progress in terms of improving our quality of life rather than raising our standards of living. (Creation of a sustainable economy GREEN' ELECTION PLATFORM Alberta, 1997)

## 6. GREEN ECONOMIC CONCERNS AND SOLUTIONS (carried as is)

Given that:

- \* blind pursuit of Gross Domestic Product is leading us toward environmental and social disasters.
- \* there are good and emerging indicators of 'genuine progress' which can correct our measure of well-being and alert us to problems so that we can steer away from them.
- \* promoting a new measure of progress is Green Party Policy
- \* the economic and social fall-out from pursuing the misguided measure of progress is affecting vast numbers of people and as such provides a funnel for introducing more people to the Green option. (ONTARIO POLICY KINGSTON, 1997)

Be it Resolved that:

Economic Concerns and Solutions be formally adopted as a Green Party campaign. This resolution seeks cooperation in making the connections between emerging problems, the mistaken goal of GDP and the Green Party's interest in tuning society's measure of well-being so that it does in fact indicate progress toward or deviation away from long-term well-being. While Party approval is said to be unnecessary to pursue such a program, formal approval will help bring it to the attention of Greens across Ontario and around the world. This introduction is critical as many of the solutions to economic problems are such that countries adopting them unilaterally would assume a serious competitive disadvantage in the global economy. A broadly-based international approach is the only realistic hope for overcoming the vicious "race to the bottom" nurtured by the present trade regime. The GPO can provide the necessary introduction by formally adopting the Economic Concerns and Solutions campaign. (ONTARIO POLICY KINGSTON, 1997)

\* TO INCLUDE "work" in the home and volunteer "work" in the community be included in the GPI.) (Deferred Rowena Eloise)

\*TO SUPPLEMENT THE GPI WITH THE U.N. HUMAN DEVELOPMENT INDEX (1996 LATEST EDITION) DEALING WITH QUALITY OF LIFE INDICATORS. THIS HDI INDICATOR WOULD SUPPLEMENT THE DATA IN THE GPI. (deferred resolution, Harry Garfinkle)

\* to support the LETS or similar community-based programs INCLUDING BARTER BUCKS (added to include program developed in the Kootenays, B.C.).

\* to enact legislation that would ensure that corporate owners and officers be held legally liable, in criminal and civil court, for any environmental and social harm they cause.

\* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to replace the Gross National Product with the Genuine Progress Indicator (GPI). The GNP excludes social and environmental costs in its accounting, thus facilitating the illusion that community breakdown, crime, the loss of farmland and biodiversity, and unemployment have no economic significance.

\* to institute an average four-day/32-hour work week which would mean that existing jobs could be shared with those now unemployed.

OTHER BENEFITS OF A 32-HOUR WORK WEEK WOULD INCLUDE

A REDUCED HEALTH COSTS

B REDUCED EDUCATION COSTS

- AS GOVERNMENT COSTS ARE LOWERED, INCOME AND PAYROLL TAXES COULD ALSO BE REDUCED. CONSEQUENTLY, A REDUCED WORK WEEK WOULD NOT RESULT IN A SIGNIFICANT PAY REDUCTION

(PROPOSED BY SHADOW CABINET IN 1997)

INTRODUCTION OF A FOUR DAY/32 HOUR WORK WEEK, WITH THE LEGAL RIGHT OF INDIVIDUALS AND UNION CONTRACTS TO REFUSE OVERTIME  
(deferred resolution)

• to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND)

• We measure economic progress in terms of improvements in the quality of life rather than [in] the acquisition of consumer goods. (GUIDING PRINCIPLES Alberta, 1997)

\* TO USE INDEX OF SUSTAINABLE ECONOMIC WELFARE (ISEW) AND ANOTHER MEASURE OF ECONOMIC WELLNESS (SOURCE: DALY AND COBB'S FOR THE COMMON GOOD). (deferred resolution Jim Bohlen (BC):

\* to institute along with the GPI the Criteria of Public Trust (GPT) (includes criteria related to peace, human rights, social justice, environmental protection and preservation (circulated at the tabling of the budget February 1998)

- To work for legislation to replace the Gross National Product with the Genuine Progress Indicator (GPC, 1996)

- \* TO NOT USE economic growth oriented economic indicators as indicators of the health of an economy [because these indicators undervalue human and planetary health preamble] (B.C. B.C. POLICY CONVENTION 1993)

- \* TO ADOPT economic indicators which quantitatively represent changes in environmental, ecological PEACE, and social well-being, such as those suggested by Hazel Henderson, Herman Daly and the World Watch Institute [AMONG OTHERS], (B.C. B.C. POLICY CONVENTION 1993)

### Economic Manifesto

- \* TO EXPOSE THAT exponential growth is gobbling up non-renewable resources, polluting and depleting air, water, and soil and is threatening the survival of all Canadians: (B.C. B.C. POLICY CONVENTION 1993)

- \* TO IMMEDIATELY IMPOSE regulations [ENSURING] promoting:

- 1) Conservation of forests, rivers, soils, and air.

- 2) Development of value-added small-scale agricultural and resource industries to supply local and regional requirements.

- To strive to reduce the export of raw materials and increase the production of value-added goods. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- 3) Use of regionally produced and processed food and manufactured goods before importation of food and manufactured goods from outside the region.

- 4) Adopt a GND (gross national destruction) or similar measure to monitor and control industrial depletion of air, water, and soil.

(B.C. POLICY CONVENTION 1993)

### Local Economies

- \* TO support and encourage the development of democratic control of local economies [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES] ( B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

- \* TO encourage local economies to be adapted to their own bioregions, thereby reducing their dependency on the ecologically destructive and socially exploitative

aspects of the world market system. (B.C. B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

\* TO oppose government purchase of shares in transregional corporations POLICY (B.C. B.C. POLICY CONVENTION, 1986, ANNUAL GENERAL MEETING, 1993)

\* TO [ENSURE THAT] / to be committed/ to everyone having the right to the basic necessities of life and to a reasonable quality of living; and ( B.C. POLICY CONVENTION, 1987)

\* TO support the principle of human scale and appropriate technological economic activity, and that resources should be used according to this principle.

## DEPARTMENT OF HEALTH

**HEALTH 2,162, 073,000**

**Maintain a universal accessible non-two tier non privatized, public health system with an emphasis on preventive medicine.**

.

**Redirect 3 billion from the current military budget into Department of Finance for transfer payments for health. Instituting a health promotion and disease prevention program through invoking the precautionary principle including eliminating environmentally induced health risks. Funding must be redirected to research into prevention of environmentally induced illnesses. Replace the current food guide with a new Canada food Guide based on the recommendations of the Physicians committee for responsible Medicine (PCRM) as a model. The current Canada Food Guide should be replaced by a New Canada Food Guide based on the recommendations of the Physicians Committee for Responsible Medicine (P.C.R.M) as a model. A New Canada Food Guide will recommend the New Four Food Groups which the P.C.R.M. recommends, i.e. (1) fruits, (2) vegetables, (3) grains, and (4) legumes with other items mentioned as foods that people may choose to eat, but not recommended as ideal or necessary for health. Human right to safe, unadulterated food must be guaranteed.**

Indians or Inuit for cost of construction and  
extension or renovation hospitals

#### 9. GREEN PARTY HEALTH POLICY (carried with amendments)

The Green Party believes that the best way to create a healthy society is through a healthy lifestyle. This would include a good diet (pesticide-free, non-irradiated food and less animal products), exercise, stress reduction techniques and avoidance of tobacco, abuse of alcohol and illicit drugs, and misuse of prescription and over the counter drugs. This philosophy of health maintenance would reduce the need for treating preventable diseases, which is presently very costly. Also, by making our environment and communities' healthier places in which to live and work, we will see a reduction in many diseases.

The Green Party Health Care Policy would include:

- \* educating the public on lifestyle changes and choices that contribute to disease prevention, beginning in school
- \* ensuring access to pesticide-free, non-irradiated food, non-genetically engineered food, clean air, water and land for present and future generations
- \* funding research into causes of illness, and into techniques that complement drugs and surgery, funding through OHIP those therapies that prove worthwhile
- \* shifting treatment to the home wherever possible with adequate support of health care professionals
- \* funding small community-based hospitals that emphasize and promote health maintenance
- \* providing accurate information on the advantages of breast feeding and providing adequate post-natal support
- \* giving doctors the choice of being paid salaries as opposed to the current fee-for-service system, in order to allow them to spend more time with patients and to encourage them to work in rural areas
- \* making available and covering the cost of those drugs of all kinds including alternative medicine and alternative treatments that prove effective
- \* taxing goods that cause poor health such as tobacco and alcohol
- \* including dentistry under OHIP
- \* offering nicotine replacement products such as patches, gum, nasal sprays and inhalers so smokers avoid the adverse cardiovascular and carcinogenic effects of smoking

\* improving education concerning prenatal care

\* educating the public with regards to environmentally induced

diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

## HEALTH CARE

## FOOD POLICY

Greens believe that sufficient nutritious food is a basic human right for all. We recognize that at present we are poorly nourished and overfed. The vitamins and micro nutrients content of food has decreased dramatically in the last few decades. Pesticide residues in food are a constant fear. The Present food system encourages mono-cropping, chemical farming, centralization, over processing, long distance transportation. and the substitution of chemicals for all manner of ingredients in our food.

Greens would therefore

-Reward farmers for converting from chemical to ecological methods of farming

\* improving education concerning prenatal care

\* educating the public with regards to environmentally induced

diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

-Encourage the education of the public and especially the children

about the 8 food groups, what nutritious food is, how it depends on rich soil, micro organisms, clean water, and good farming methods. There must be strong education to counter advertising aimed at children that does not encourage good food habits. (Green Party of Ontario, 1994)

- Encourage the consumption of locally grown food
- Encourage appropriate social networks so that children have a nutritious diet.
- Encourage the consumption of food in its natural state with little processing, no irradiation and no artificial additives or substitutes.
- Discourage research into gene splicing technology that is used to create new life forms
- Discourage the use of food irradiation.
- Require labeling of all foods that have been irradiated
- When dealing with new chemicals that are to be added to our food supply the Green Party of Ontario recommends the following.

1: Regard Chemicals as harmful until proven there is conclusive scientific proof declaring them safe.

2: Do not try to control chemicals one by one, using risk assessment. Instead we recommend avoiding irreversible harm by taking precautionous action to ban or phase out whole classes of chemicals as soon as there is evidence of harm, not waiting for conclusive scientific proof.

(GREEN PARTY OF ONTARIO, 1994)

Health Care: Health Maintenance

Our current health care system concentrates on treatment,

rather than prevention, of disease. This approach allows unnecessary suffering to occur. Treatments often only partially alleviate suffering, and often cause harm themselves. One disease is treated at a time, and little is done to improve the overall health of the body. Health care is focused on expensive high-technology machines rather than on people.

There are opportunities for tremendous reduction in disease rates by preventive measures. This approach will both improve the quality of life of the average resident of Ontario and conserve health care tax dollars.

Educational campaigns and incentives will make it easier for individuals to take charge of their own health through better nutrition, exercise, avoidance of drugs, and techniques such as stress management.

(1) A basis of lifelong good health is proper infant nutrition.

Women will be encouraged to breast feed by the providing all prospective parents with accurate information on the risks of artificial feeding and on the advantages of breast feeding.

A woman's right to breast feed in public will be protected.

The World Health Organization's Code of Marketing of Breast milk Substitutes will be enacted as legislation in Ontario to protect women and their babies from advertising which misleadingly suggests that artificial substitutes are an acceptable substitute for nature's food for babies. Hospitals and birthing centres will be required to satisfy the "baby-friendly hospital" guidelines of the World Health Organization and UNICEF. These measures, by increasing the rate and duration of breast feeding, will greatly reduce the incidence

of childhood illness; and since some of the health giving benefits of breast feeding continue long after weaning, the incidence of adult illness will also eventually decrease. It will also help prevent breast cancer for the mothers.

- (2) Students in primary and secondary schools and, via the media, the adult population, will be educated to promote the philosophy that we are responsible for our own health. The program will emphasize nutrition, especially organically grown whole foods, and exercise. In addition, relaxation, stress management, drug avoidance, and the use of nutritional supplements will be taught. This program will result in a healthier population, and reduce the amount of money that needs to be spent on disease treatment.
- (3) The use of therapeutic drugs (except when absolutely necessary) and recreational drugs will be discouraged. Programs to stop smoking, drinking alcohol, or using other addictive drugs will be fully funded by O.H.I.P. provided they are reasonably cost-effective in comparison to similar programs. Taxes on cigarettes and alcohol will be further increased.
- (4) Exercise will be encouraged by a transportation policy that makes it easy, safe, pleasant, and cheap to walk or cycle for most trips. (See transportation policy.)
- (5) A junk food tax will be introduced on highly refined and processed foods, to encourage better nutrition and help fund some of the other health care programs.
- (6) Research and application of ergonomics will be encouraged to reduce the incidence of injury in the workplace and the home.

## Health Care: Treatment

Hospitals currently are focused around expensive equipment and tend to be large, impersonal and understaffed. Allopathic medicine, which dominates the health care system, tends to treat diseases with drugs and surgery. These methods focus on eliminating a single disease while doing little to improve overall health. In fact, drugs, surgery and irradiation always cause some harm to the body. Often alternative treatments exist which eliminate the disease effectively while avoiding harm and improving overall health.

The function of health care practitioners should be to help us heal ourselves. Professions which take this approach include chiropractic, naturopathy, acupuncture, midwifery, lactation consulting and homeopathy. These professions deserve greater status in the health care plan.

Ontario Greens' health care policy focuses on providing greater access to alternative health care systems, and on providing treatment facilities that are human-scale, community-centred places of healing.

- (1) Dental care and chiropractic care will be fully covered by O.H.I.P. Lactation consulting will become a regulated profession Naturopathy will be reinstated as a regulated profession, both will be fully funded by O.H.I.P.
- (2) Research will be funded into the efficacy of non-allopathic treatments for both disease treatment and prevention. O.H.I.P coverage will be extended to cover proven techniques. Research will also be done into the efficacy of allopathic techniques, and O.H.I.P. coverage withdrawn for treatments

proven to be largely ineffective. Where possible, consumers will have a choice of allopathic and non-allopathic treatments, all covered by O.H.I.P.; but if one treatment is much safer, more effective and cheaper than another, the less effective one will not be funded. Thus, health care focused on health maintenance and safe, low-technology treatments will be emphasized.

- (3) When feasible, treatments will be shifted to the home rather than hospitals. New hospitals will be small and community-based. The emphasis on hospital funding will be on staffing, improving the quality of hospital food and providing counselling on health maintenance for hospital patients, rather than on expensive technology. Home-like birth centres, with midwives in attendance, will be opened. Community health centres, featuring a variety of health care practitioners, will be established to assist and encourage people to take charge of their own health. These measures will save money by reducing the use of large, high-technology hospitals.
- (4) Treatments allowed to be performed by nurses and paramedics will be increased. A limit to liability for health care practitioners will be set

- To Phase OUT, Eliminate, PREVENT AND Reduce HEALTH AND ENVIRONMENT HAZARDS (1998)

- to recognize the right of everyone to the highest attainable standards of physical and mental health

The States Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standard of physical and mental health (Article 12 International Covenant Economic, Social & Cultural Covenant, 1966)

to endorse...attainment of world-wide social goal of health for all by the year 2000

Endorses the Global Strategy for Health for All by the

Year 2000 1995 [Global Compliance Research Project] as a major contribution of Member States to the attainment of the world-wide social goal of health for all by the year 2000 and to the fulfillment of the International Development Strategy for the Third United Nations Development Decade (Art. UN General Assembly Resolution 36/43, 1981)

- to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. . Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

- to implement programs to establish and strength preventive and curative health
- to implement programs to establish and strengthen women centred health care

- "Health is a fundamental human right. we must uphold this right we must fight for it. Health is inseparable from individual rights and freedoms and from the rights to development (Hiroshima, WHO, cited in Women's Health in Women's hands). There needs to be a clear understanding that the human rights norms should be used in a proactive manner to promote health policies and practices that validate all people and enhance the health of all (Women's Health in Women's hands, 1995)

It is essential that all /Albertans/[Canadians] have equal access to health care services. A health car program that advocates prevention of illness and personal responsibility for well-being will be more efficient and cost effective than a system which emphasizes illness and technological intervention. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will develop a decentralized model for health care service delivery, assuring local accountability and community participation. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will encourage dialogue among health care consumers and providers about the allocation of health care resources. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. We will give a higher priority to investment in appropriate low-technology interventions that serve large numbers of people rather than expensive, high-risk, high-technology methods which benefit few. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A Green Party government would undertake:

\* to build on the strong foundation of the Canada Health Act by providing research funding for healing techniques that complement drugs and surgery, and by including reportedly effective techniques from world medicine and traditional practices.

\* to establish channels to align Canada's research excellence more closely with effective techniques from world medicine and traditional practices.

\* to ensure an admonitory labeling strategy for all non-nutritive substances and processes affecting food (e.g. genetic engineering).

• TO INVOKE THE DISASTER PREVENTION, THE ENVIRONMENTAL ASSESSMENT, THE PRECAUTIONARY AND REVERSE ONUS PRINCIPLES

• TO BAN GENETICALLY ENGINEERED FOODS

• TO CURTAIL IMMEDIATELY GENETICALLY ENGINEERED VIRUSES (1998)

\* to address the concern that the health of Canadians is currently under threat from decisions that are made both inside and outside Canada.

Governments have cut health care spending and have contemplated privatization or a two-tier system.

\* to allocate significant research funding to healing techniques that complement drugs and surgery

\* to initiate an effective program of public education about the health

benefits of uncontaminated food, water and air (Alberta, 1997)

\* to establish environmental standards to protect health rather than just promote trade

\* to include the health status of the human population and the ecosystem as criteria in any scale or method for assessing prosperity

\* to encourage research that factors in all the determinants of health (the medical equivalent of "full cost accounting).

F We will introduce a system of full cost accounting for project evaluation and eliminate long-term subsidies, both explicitly and hidden. The price of a product should clearly represent its cost in terms of resource consumption, environmental impact, waste disposal and social services.

E. We will promote the elimination of pollutants from the environment as a positive instrument of health care. (ALBERTA GREEN POLICIES, ALBERTA 1997)

(ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to ensure that doctors and hospitals continue to serve their valuable role in our communities while also engaging resources for the health promotion and disease prevention.

A. We will encourage health care practitioners to emphasize wellness, self reliance and conservation through preventive approaches to the practice of medicine. (ALBERTA GREEN POLICIES, ALBERTA 1997)

we will assess hospital service requirements throughout the province. Small under-utilized hospitals could be converted to wellness centres serving local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to work co-operatively to address First Nations' health concerns.

\* to include health research and health services responsive to women's needs and reflective of the diversity of women's life stages.

TO FUND RESEARCH INTO ENVIRONMENTALLY INDUCED DISEASES (1998)

\* to endorse a program of reproductive health.

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

\* to initiate an effective program of public education about the health

benefits of uncontaminated food, water and air (Alberta, 1997)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and

practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and practices that eliminate discrimination against women and encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## ABORTION

The Green Party of Ontario supports the right of women to decide whether or not to have an abortion. (GREEN PARTY OF ONTARIO, 1994)

- to LIMIT, REGULATE AND MONITOR REPRODUCTIVE TECHNOLOGIES (1998)

\* to respect the wishes of patients who are of sound mind as to the manner and duration of their treatments.

\* to reorient the priorities of the Health Protection Branch to provide a more stringent and holistic review process for new and existing human-made chemicals, technologies, genetic manipulation and electromagnetic disruption.

- TO REQUIRE THE STANDARD OF EXPOSURE AT LEAST 1/2 OF THE EXPOSURE LEVEL THAT HAS BEEN SHOWN TO CREATE A RISK OF LEUKEMIA. (1998)

\* to take a friendlier approach to the views of herbalists and citizens who use time-tested, naturally occurring substances in health care.

\* to evaluate policies by considering the well-being of future generations rather than relying only on short term indicators of progress.

\* to ensure the availability of less expensive generic prescription drugs

\* to replace the current Canada Food Guide with a New Canada Food Guide based on the recommendations of the Physicians Committee for Responsible Medicine (P.C.R.M.) as a model. A New Canada Food Guide will recommend the New Four Food Groups which the P.C.R.M. recommends, i.e. (1) fruits, (2) vegetables, (3) grains, and (4) legumes, with other items mentioned as foods that people may choose to eat, but not recommended as ideal or necessary for health.

\* TO PROVIDE EDUCATIONAL MATERIAL EMPHASIZING

FOOD COMBINATIONS THAT STRESS COMPLETE PROTEINS (DEFERRED RESOLUTION ROWENA ELOISE).

\* TO ESTABLISH "Help Centres" be established (Drug and Alcohol Abuse Centres, education and social upgrading) (DEFERRED RESOLUTION ROWENA ELOISE).

- to end Canadian participation

in the federal and international trade of endocrine disrupting

chemicals, especially where they are sold to, or produced and

used in, third-world countries that lack the resources or

technology to properly monitor and control exposure levels; (are we suggesting that

Canada has the resources to monitor these levels, and are we suggesting that Canada is not a third world country?) (Green Party of Canada)

- To fund research to examine diverse wildlife species at all levels of biological organization in order to better understand and eliminate chemical endocrine disruption at the molecular, cellular, individual,

population, and ecosystem levels; (Green Party of Canada)

- To introduce labeling legislation that requires manufacturers to release the

names of all chemicals used in their products and their potential

as developmental health hazards; (Green Party of Canada)

- To require mandatory permanent liability insurance of those producing and developing new synthetic chemical products; (Green Party of Canada)

- To require more stringent safety standards for new chemicals to assure product safety beyond a reasonable doubt; (Green Party of Canada)

- To educate family

physicians and other health practitioners and administrators on the possible occupational and environmental hazards which synthetic chemical agents play in underlying or constituting risk factors for "primary" human diseases; (Green Party of Canada

- to require adequate medical school training for physicians on the often-latent affects of pollutants on human development and health; (Green Party of Canada

- to establish a coordinated speakers bureau and on-line systems such as a site on the World Wide Web for endocrine-disruptors. (Green Party of Canada

## 76.0 HEALTH

### 76.1.1 Tobacco Advertising

- \* TO ban on all advertising and promotion of tobacco and allied products; and

- \* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to nicotine addiction.( B.C. POLICY CONVENTION, 1988)

### 76.2.1 Alcohol Advertising

( B.C. POLICY CONVENTION, 1988)

- \* TO support a ban on all advertising and promotion of alcoholic products and

- \* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to alcohol addiction.

encourage the health care practitioners to emphasize wellness through holistic and /preventative/ [PREVENTIVE] approaches to the practice of medicine.

### 76.4.1 Hospital Boards

\* TO [ENSURE THAT] /advocate/ that hospital boards should be elected by the citizens of the province in the same manner and time as the municipal elections in the province. (B.C. POLICY CONVENTION, 1987)

(SO THAT thus control of public money is done by privately elected hospital boards'

#### 76.5.1 Health Care System

(B.C. POLICY CONVENTION, 1988)

\* TO ENSURE THAT THERE IS a health care system where the inability to pay must not be an impediment to health care services. (B.C. POLICY CONVENTION, 1988)

#### 77.2.1 Lifestyle Counselling

77.2.1 Resolved that Greens request that the ministry of health reinstate lifestyle counselling as part of the BC Medical [Services] Plan. [BECAUSE PREVENTION HAS TO BECOME AN ESTABLISHED PRINCIPLE AND PRACTICE OF MODERN MEDICINE] (B.C. POLICY CONVENTION, 1987)

### 72.0 WOMEN'S ISSUES

#### 72.1.1 Abortion Funding

(B.C. POLICY CONVENTION, 1988)

72.1.1.a Whereas the Supreme Court of Canada has declared that the provisions of the Criminal Code dealing with abortion were not in accordance with the Charter of Rights; and

72.1.1.b Whereas the BC Government has stated it will not pay for abortions through the provincial medical plan except in life threatening situations; and

72.1.1.c Whereas all provinces receive funds from the Government of Canada in order that a common health care standard exists throughout the country; and

72.1.1.d Whereas other provinces do fund such operations through their health care systems;

\* TO [ENSURE] support payment by [the] province of BC [ALL PROVINCES] from the provincial health plan for abortions performed by qualified medical personnel.

#### 72.2.1 Choice on Abortion

72.2.1.a Whereas a woman's right to choose abortion is a human right; and

72.2.1.b Whereas this right is supported by the Green principles of feminism and self-determination;

\* TO recognize that choice on abortion is solely the province of the woman seeking the abortion. B.C. ANNUAL GENERAL MEETING, 1994

72.3.1 Birth Control

\* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

\* [TO ESTABLISH] / endorse establishment of/ a support system for women who do not choose abortion. B.C. POLICY CONVENTION, 1988

## **DEPARTMENT OF FOREIGN AFFAIRS AND INTERNATIONAL TRADE**

### **DEPARTMENT OF INTERNATIONAL COOPERATION**

388,000,000 should be relocated to the Department of Canadian Culture for the promotion of "Safe Anti-racism Sites" and implementation of the International Convention for the Elimination of All Forms of Racial Discrimination. Funds should be redirected from subsidizing international vested economic agreements to implementing international public trust agreements. Rather than acknowledging obligations, commitments and expectations under International public trust agreements, the Canadian government only appears to adhere to perceived privileges and demands under international vested interest agreements or institutions such as WTO, NAFTA, GATT, APEC, NATO. The Canadian government has failed to sign and ratify significant conventions such as the Law of the Sea and the Convention on the Rights of Migrant Workers and Their Families. When Canada does sign and ratify international public trust agreements, it often has failed to implement the necessary legislation to ensure compliance. Canada has also made commitments through UN Conference Action plans. The funds in Foreign Affairs must be relocated to and redirected towards the promotion of and compliance with the public trust international law. The Canadian government should support the call for the dismantling of NATO for violation of international law, and should work towards the Dismantling of the WTO and APEC and other vested economic interest international agreements for contravening international Public Trust law. Funds in CIDA must be redirected away from subsidizing the vested economic interests of Canadian industries to supporting the public trust While continued levels of funding for CIDA should be at current rates, funding to support Canadian corporations in

developing countries should be terminated immediately and redirected to projects that are socially equitable and environmentally sound and that have been conceived in consultation with marginalized citizens of partner countries. The funding for IDRC should be maintained but its mandate revised to include the examination of the failure of international agreements to be implemented in Canada.

### **UN Organization**

A Green party government would call upon the member states of the United Nations:

\* to sign and ratify international agreements that they have not yet signed and ratified, and to enact the necessary legislation to ensure compliance and enforcement.

\* to undertake to fulfill expectations created through General Assembly resolutions and declarations, and to act upon commitments arising from conference action plans.

\* to ensure that corporations including transnationals comply with national codes, social security... international laws, including international environmental law.

\* to establish mandatory international normative standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member states harmonized continually upwards.

\* to recommend to the OECD to cease deliberations on the Multilateral Agreement on Investments (MAI) which if implemented would undermine the United Nations, and the ability of nation states to harmonize social and environmental standards upwards.

\* to revoke charters of corporations that violate human rights, cause environmental degradation, or contribute to conflict or war

\* TO REVOKE CORPORATE CHARTERS WHERE QUALITY OF LIFE  
LEGISLATION IS VIOLATED (deferred resolution)

\* to revoke the licences and charters of corporations, including transnational corporations, if those corporations have persistently:

- (a) violated human rights or denied social justice
- (b) caused environmental degradation,
- (c) disregarded labour rights, or
- (d) contributed to conflict and war, or if they fail to pay compensation for past non-compliance with international agreements; (statement in proposed Treaty circulated by Green Party of Canada)

## 12. CORPORATE CHARTERS (carried with amendments)

The topic section on Corporate Charters to be completely removed and replaced with the following (with thanks to the BC Greens).

New topic title would now be REGIONAL BUSINESS. Local and regional business is an important component of Green economy.

Local and regional businesses generate employment, community accountability and local ownership. A Green Party government

would work to shift business taxes, employment taxes and property taxes away from local and regional independent businesses and onto large national and multi-national corporations. A Green Party government would also end many of the hidden subsidies to big corporations that disadvantage local and regional business competitors. Businesses that apply for government contracts would be expected to practice high labour and environmental standards in Canada and abroad. (ONTARIO POLICY KINGSTON, 1997)

## CORPORATE CHARTERS

Corporations are artificial creatures that exist because of provincial legislation. They are not loyal to individuals or communities. Creating a sustainable future will depend on restructuring this key institution.

The Green Party suggests the following conditions before a Corporate Charter is granted to a limited company.

- 1: Corporate owners and officers must be legally liable, criminally and in civil court for the harm they cause.
- 2: Corporations that do not enhance the quality of life of the community must have their charters revoked. This is not merely a deterrent to corporate abuse but a critical element of an ecological society because it creates feedback loops that prompt accountability, citizen involvement, and learning.
- 3: Corporations should be encouraged through the tax system to be cooperatively owned by the employees of the company. (Green party of ONTARIO, 1994)

TO ENSURE THAT COMPENSATION AND REPARATION BE PAID BY CORPORATIONS TO COUNTRIES TO INDIGENOUS PEOPLES, AND TO DISENFRANCHISED PEOPLE WHOSE LAND HAS BEEN

DEGRADED, WHOSE RIGHTS HAVE BEEN VIOLATED AND WHOSE LIVES HAVE BEEN DESTROYED THROUGH CORPORATE SUPPORT FOR OPPRESSIVE REGIMES. IT IS NOT SO MUCH DEBT FORGIVENESS BUT COMPENSATION AND REPARATION FOR THE DEVASTATION CAUSED BY THE OVERCONSUMPTIVE MODELS OF DEVELOPMENT IMPOSED ON DEVELOPING COUNTRIES THAT IS NECESSARY (1998).

- TO DISALLOW ALL ATTEMPTS BY INDUSTRY THROUGH THE INTERNATIONAL STANDARDIZATION ORGANIZATION'S (ISO) 14,000 TO MOVE AWAY FROM "COMMAND AND CONTROL" AND REGULATIONS (1998)

- \* TO PROMOTE THE RIGHT OF FIRST REFUSAL BY EMPLOYEES AND/OR LOCAL CITIZENS

OF CORPORATE SHARES, WITH A MINIMAL REQUIREMENT OF 50% IN REGION OWNERSHIP WHERE THE CORPORATION IS OUT OF THE BIOREGION; (deferred resolution)

- \* TO WORK for LEGISLATION ON THE FOLLOWING THE RIGHT OF CITIZENS TO SUE CORPORATE OWNERS AND OFFICERS, IN CRIMINAL AND CIVIL COURT, FOR ANY LEGAL (deferred resolution) VIOLATION OF HUMAN RIGHTS, INCLUDING LABOUR RIGHTS, DENYING SOCIAL JUSTICE, FOR DESTROYING THE ENVIRONMENT, FOR CAUSING SERIOUS HARM TO HUMAN HEALTH, AND FOR CONTRIBUTING TO DEVASTATION THROUGH ARMS TRADE

(included in the Treaty circulated by the Green Party of Canada)

- TO PREVENT POVERTY THROUGH FULFILLING BASIC NEEDS, PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND PREVENTING WAR AND CONFLICT (1998)

- TO ACT ON THE COMMITMENT MADE TO ERADICATE HUNGER UNDER THE UNIVERSAL DECLARATION ON THE ERADICATION OF HUNGER (1998)

\* to act upon the Malaysian General Assembly resolution which affirmed that "the continuing existence of nuclear weapons poses a threat to all humanity".

\* to embark immediately and conclude before the year 2000 negotiations on a nuclear weapons abolition convention that requires the phased elimination of all nuclear weapons within a time bound framework with provisions for effective verification and enforcement

\* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

\* to immediately reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into generating socially equitable and environmentally sound development; (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. In 1981 there was a General Assembly resolution to reduce the military budget and transfer the savings into social programs. In 1981 the military budget was less than 50% of what it is now.

The cost of Canada's peacekeeping operations is less than \$700 million annually -- only 6% of the defence budget. The Green Party **calls for** *suggests that* Canada dramatically reduce its military budget, halt low-level flight training in Labrador, and withdraw from the global arms race. (GREEN PARTY OF NEWFOUNDLAND).

\* to prevent further environmental degradation and human rights violation and thus to fully act upon the commitment under principle 14 of the Rio Declaration which calls for the prevention of the transfer to other states of substances or activities that cause environmental degradation or that are harmful to human health. This principle would presumably include toxic, hazardous, and atomic substances and wastes and associated activities. Prior informed consent by the receiving country does not absolve the export state from the commitment to not transfer these substances.

• TO RECOGNIZE THAT TRANSFER OF WASTES IS SOCIALLY UNJUST

IT SHOULD BE REALIZED THAT TRANSFER OF WASTES (TOXIC, HAZARDOUS, AND ATOMIC) IS SOCIALLY UNJUST. HAZARDOUS WASTES THAT RESULT FROM PRODUCTION IS PART OF THE COST OF PRODUCTION SO TRANSFERRING IT

TO ANOTHER COUNTRY IS THE SAME AS TRANSFERRING COSTS TO A COUNTRY THAT DID NOT INCUR THEM. CONSEQUENTLY, NO STATE HAS THE RIGHT TO EXPORT HAZARDOUS WASTES TO ANY OTHER COUNTRY EVEN IF THE IMPORTING COUNTRY HAS NO LEGISLATION THAT PROHIBIT SUCH IMPORTATION. FURTHERMORE, EXPORTING STATES SHALL NOT WITHHOLD INFORMATION ON THE DAMAGING EFFECTS OF THEIR EXPORTS ON HUMAN HEALTH AND ON THE ENVIRONMENT AS A WHOLE. (1998)

- TO REFUSE TO ACCEPT PERMISSION TO BE HARMED

NO SUPPORT SHALL BE GIVEN FOR THE JUSTIFICATION OF THE TRANSFER OF HARMFUL SUBSTANCES TO HUMAN HEALTH AND TO THE ENVIRONMENT ON THE GROUNDS THAT THE RECIPIENT STATE HAS GRANTED PERMISSION FOR THIS TRANSFER.

- TO NOT ACCEPT OR AGREE TO ACCEPT, UNDER ANY CIRCUMSTANCES, HAZARDOUS, TOXIC, OR ATOMIC WASTES FROM ANOTHER STATE. ALSO, UNDER NO CIRCUMSTANCES SHALL A STATE THAT HAS LESS STRINGENT REGULATIONS BE CALLED UPON TO ACCEPT ACTIVITIES OR SUBSTANCES THAT ARE DEEMED TO BE ECOLOGICALLY UNSAFE AND UNSOUND IN ANOTHER STATE THAT HAS MORE STRINGENT REGULATIONS. SIMILARLY, THIS PRINCIPLE SHALL ALSO APPLY WITHIN A STATE WHERE INDUSTRY OR A GOVERNMENT WITHIN A STATE SEEKS TO DEPOSIT TOXIC, HAZARDOUS OR ATOMIC WASTES IN DIFFERENT AREAS OF THE STATE, IN PARTICULAR ON INDIGENOUS LANDS OR IN AREAS IN WHICH THE DISENFRANCHISED MEMBERS OF THE POPULATION LIVE. (1998)

STRESSING THE AFFIRMATION OF STATE RESPONSIBILITY ENUNCIATED IN THE BASEL CONVENTION: "STATES ARE RESPONSIBLE FOR THE FULFILLMENT OF THEIR INTERNATIONAL OBLIGATIONS CONCERNING THE PROTECTION OF HUMAN HEALTH AND PROTECTION AND PRESERVATION OF THE ENVIRONMENT, AND ARE LIABLE IN ACCORDANCE WITH INTERNATIONAL LAW" (PREAMBLE, CONVENTION ON THE CONTROL OF TRANSBOUNDARY MOVEMENTS OF HAZARDOUS WASTES AND THEIR DISPOSAL, BASEL 1992) (1998)

- TO ACT UPON THE ASSESSMENT IN THE BASEL CONVENTION OF THE INCREASED PRODUCTION OF HAZARDOUS WASTE AND OF THE INCREASED

ADVERSE HEALTH IMPACTS OF THESE WASTES, AND THE NEED TO MOVE TOWARDS PREVENTION (1998)

- TO RESPECT THE INHERENT WORTH OF NATURE AND TO ETHICALLY BY ENDORSING THE PRINCIPLE ENUNCIATED IN THE WORLD CHARTER OF NATURE

(A) EVERY FORM OF LIFE IS UNIQUE, WARRANTING RESPECT REGARDLESS OF ITS WORTH TO MAN [HUMAN], AND TO ACCORD OTHER ORGANISMS SUCH RECOGNITION'S, MAN [MUST BE GUIDED BY A MORAL CODE OF ACTION. (1982)

- TO IMMEDIATELY CEASE THE PRODUCTION OF HAZARDOUS WASTE SO AS TO ANTICIPATE AND THUS PREVENT THE TRANSBOUNDARY IMPACT OF HAZARDOUS WASTE (1998)

- TO ESTABLISH MANDATORY INTERNATIONAL NORMATIVE STANDARDS TO DRIVE INDUSTRY TO BEST (BEST ENVIRONMENTALLY SOUND TRADITIONS) PRACTICES (1998)

C. We support consolidation of the delivery of all social programs into a single agency focusing on regional community centres. (ALBERTA GREEN POLICIES, ALBERTA 1997)

I We will consider the implementation of a variable environmental impact charge on goods and services to fund waste elimination a public awareness program. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to extend this principle to include transfer within states to lands of indigenous peoples, or to communities of marginalized citizens.

\* to act upon a commitment in recent UN Conferences to move away from the over-consumptive model of development, reduce the ecological footprint and reject the notion that economic growth will solve the urgency of the global situation.

\* to invoke the Precautionary Principle found in the Rio Declaration, Convention on Biological Diversity, and Framework Convention on Climate Change Convention) and not wait until there is scientific certainty that environmental degradation, loss or reduction of biodiversity, or climate change will occur for current practices causing environmental degradation, loss or reduction of biodiversity, or climate change to be banned, discontinued, or phased out.

II We will support any measures necessary to reduce and ultimately eliminate the causes of global warming, including stabilization of atmospheric CO2 by carbon taxes if necessary. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to adhere to the Prevention of Disasters Principle as enunciated in the Habitat II Agenda, and ban, discontinue and phase out the use of substances and activities that could potentially cause disasters.

#### RESOLUTION: ENSURING THE PREVENTION OF DISASTERS INCLUDING NA-TECHS NATURAL AND TECHNOLOGICAL DISASTERS

Affirming the extension of the concept of disaster reduction to cover natural and other disaster situations including environmental and technological disasters (Na-Techs) (1998)

- TO ENSURE THAT SIGNIFICANT PUBLIC CONCERN ABOUT AN ACTIVITY OR TECHNOLOGY THAT COULD LEAD TO PREVENTABLE DISASTER BE TAKEN SERIOUSLY AND THE ACTIVITY OR TECHNOLOGY SHALL BE PREVENTED OR BANNED 1998)

- TO ENSURE THAT REGULATIONS THAT WILL PREVENT PREVENTABLE ANTHROPOGENIC DISASTERS AND ENCOURAGE CONTINUED DOMESTIC AND INTERNATIONAL RESOURCES FOR DISASTER REDUCTION ACTIVITIES FOR NON-PREVENTABLE DISASTERS 1998)

- TO EMBARK UPON THE PREVENTION OF PREVENTABLE DISASTER, BY PREVENTING THE MINING OF URANIUM, THE CONTINUED PRODUCTION OF NUCLEAR ARMS, FOR THE PRODUCING OF NUCLEAR ARMS, THE TESTING OF NUCLEAR ARMS, THE CIRCULATING AND HARBORING OF NUCLEAR-ARMED OR NUCLEAR-POWERED MILITARY VESSELS, THE USING OF CIVIL NUCLEAR REACTORS, THE USE OF MOX FROM WEAPONS-GRADE PLUTONIUM FROM DISMANTLED NUCLEAR WEAPONS IN CIVIL NUCLEAR REACTORS 1998)

- TO BAN THE FURTHER PRODUCTION AND CONSUMPTION OF ALL OZONE DEPLETING SUBSTANCES, AND TO ENSURE THAT THE RECYCLING OF THESE SUBSTANCES NOT BE USED AS A JUSTIFICATION FOR THE CONTINUED PRODUCTION AND CONSUMPTION (1998)

- TO IMMEDIATELY BAN OF THE PRODUCTION AND USE OF LAND MINES (1998)

- TO RE-SUBMIT A GENERAL ASSEMBLY RESOLUTION ON AN IMMEDIATE CESSATION OF THE PRODUCTION OF NUCLEAR, CHEMICAL AND BIOLOGICAL WEAPONS, AND FOR A TIME-BOUND ABOLITION OF ALL EXISTING WEAPONS OF MASS DESTRUCTION (1998)

- TO CONDEMN THE PHARMACEUTICAL CORPORATIONS DICTATING CHANGES INTO THE CODEX ALIMENTARIUS (1998)

\* to address the issue of pharmaceutical corporations dictating changes into the Codex Alimentarius.

TO SUPPORT AND PROMOTE AN INTERNATIONAL COURT OF CRIMINAL JUSTICE (PROPOSED, 1998)

\* to institute an International Court of Compliance where citizens can take evidence of state and corporate non-compliance

\* TO ELIMINATE THE PRODUCTION OF WEAPONS OF MASS DESTRUCTION AS AGREED IN 1972

(l) Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

4.3. Continued production and export of products that have been banned... or withdrawn

(i) Aware of the damage to health and the environment that the continued production and export of products that have been banned and/or permanently withdrawn on grounds of human health and safety from domestic markets is causing in the importing countries (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)

- (ii) Aware that some products, although they present a certain usefulness in specific cases and/or under certain conditions, have been severely restricted in their consumption and/or sale owing to their toxic effects on health and the environment (Preamble Resolution 37/137 Protection against products harmful to health and the environment, 1982)
  - (iii) Aware of the harm to health being caused in importing countries by the export of pharmaceutical products ultimately intended also for consumption and/or sale in the home market of the exporting country, but which have not yet been approved there,
  - (iv) Considering that many developing countries lack the necessary information and expertise to keep up with developments in this field,
  - (v) Considering the need for countries that have been exporting the above-mentioned products to make available the necessary information and assistance to enable the importing countries to adequately protect themselves,
  - (vi) Cognizant of the fact that almost all of these products are at present manufactured and exported from a limited number of countries,
  - (vii) Taking into account that the primary responsibility for consumer protection rests with each State,
  - (viii) Recalling its resolution 36/166 of 16 December 1981 and the report on "Transnational corporations in the pharmaceutical industry of the developing countries", and acting in pursuance of Economic and Social Council resolution 1981/62 of 23 July 1981,
  - (ix) Bearing in mind in this context the work of the Food and Agriculture Organization of the United Nations, the World Health Organization, the International Labour Organization, the United Nations Environment Programme, the General Agreement on Tariffs and Trade, the Centre on Transnational Corporations and other relevant intergovernmental organizations
- (Preamble, Resolution 37/137 Protection against products harmful to health and the environment, 1982)

**\* TO DEMAND THAT THE WORLD HEALTH ORGANIZATION (WHO) REVIEW AND STRENGTHEN ITS ETHICAL CODES FOR MEDICAL RESEARCH AND THAT WHO OFFICIALS BE ENCOURAGED TO CEASE COLLABORATION MEDICAL RESEARCHERS ON HUMAN CELL LINES THAT COULD BE PATENTED BY FOREIGN GOVERNMENTS OR CORPORATIONS;**

\* TO DEMAND THAT THE CONVENTION ON BIOLOGICAL DIVERSITY (THE LEGALLY-BINDING INTERNATIONAL ACCORD ADOPTED AT THE 1992 EARTH SUMMIT) ACCEPT ITS LEGAL RESPONSIBILITY FOR HUMAN BIOLOGICAL DIVERSITY AND ESTABLISH STRICT REGULATIONS REGARDING ITS COLLECTION, EXCHANGE, AND

INVESTIGATION; (deferred resolution)

\* TO DEMAND THAT THE FOURTH REVIEW CONFERENCE OF THE BIOLOGICAL WEAPONS CONVENTION IN GENEVA IN NOVEMBER, 1996 INSIST THAT CIVILIAN MEDICAL RESEARCH IS KEPT SEPARATE FROM BOWARFARE RESEARCH.

(deferred resolution)

\* TO DEMAND THAT THE NEXT REVIEW CONFERENCE OF THE BIOLOGICAL WEAPONS CONVENTION IN INSIST THAT CIVILIAN MEDICAL RESEARCH IS KEPT SEPARATE FROM BOWARFARE RESEARCH. (DEFERRED RESOLUTION)

\* TO LOBBY AGAINST PATENT PROTECTION THAT LIMITS NOT INCREASES, SCIENTIFIC RESEARCH (DEFFERRED RESOLUTION)

\* TO CALL FOR THE BANNING OF GENETICALLY ENGINEERED FOODS AND FOR THE END TO THE HUMAN GENOME PROJECT (CIRCULATED MATERIAL PASSED BY CABINET)

• to BAN THE PATENTING OF HUMAN GENES (1998)

\* TO CALL FOR END TO "BIOPIRACY" OF INDIGENOUS KNOWLEDGE WHICH IS APPROPRIATED WITHOUT RECOGNITION OR CONSENT (DEFERRED RESOLUTION)

\* TO discourage, by whatever means feasible, Canadian purchase of land for use causing direct or indirect rainforest destruction in countries wherein rainforest exists BECAUSE FARMERS IN THE TROPICS ARE BEING FORCED OFF THEIR LAND INTO ENDANGERED RAINFOREST AREAS, DUE TO PRESSURES OF TOURISM (B.C. POLICY CONVENTION, 1989)

## 92.0 FEDERAL-PROVINCIAL RELATIONS / CANADIAN CONSTITUTION

## 92.1 Enacting International Law

\* TO [IMMEDIATELY] enact THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE WITH international conventions, treaties and undertakings signed by the Canadian government into law, including repealing and amending legislation in contravention of these treaties, conventions and undertakings /except in instances where they are in conflict/ POLICY CONVENTION, 1996;

\* TO not approve any amendment without an amendment recognizing the supremacy of international law (B.C. POLICY CONVENTION, 1986)

\* TO work towards a goal of nuclear and general disarmament and world peace through the non violent resolution of conflict;

\* TO encourage cultural alliances with East Bloc Countries, other nuclear powers, and other countries where we need to improve mutual understanding (B.C. POLICY CONVENTION, 1986)

\* TO support, and where necessary, establish organizations of peace research and education POLICY CONVENTION, 1986.

• TO LOBBY FOR THE LINKING OF FOREST PROTOCOLS WITH LEGALLY BINDING CONVENTIONS

• TO CALL UPON STATES SIGN, AND RATIFY UNITED NATIONS CONVENTIONS RELATED TO FORESTS, AND THAT STATES ENACT THE NECESSARY LEGISLATION TO ENSURE COMPLIANCE WITH THESE CONVENTIONS, AND TO ENSURE THAT THE INTERNATIONAL LEGALLY BINDING INSTRUMENTS CAN BE USED BY CITIZENS IN THE NATIONAL AND REGIONAL COURT SYSTEMS.

**DEPARTMENT OF  
FOREIGN AFFAIRS**

**DEPARTMENT OF FOREIGN AFFAIRS AND INTERNATIONAL TRADE**

**\$388,000,000 should be relocated to Department of Canadian Culture for the promotion of "Safe Anti-racism Sites" and implementation of the International Convention for the Elimination of All Forms of Racial Discrimination. Funds should be redirected from subsidizing international vested economic agreements to implementing international public trust agreements. Rather than acknowledging obligations, commitments and expectations under International public trust agreements, the Canadian government only appears to adhere to perceived privileges and demands under international vested interest agreements or institutions such as WTO, NAFTA, GATT, APEC, NATO. The Canadian government has failed to sign and ratify significant conventions such as the Law of the Sea and the Convention on the Rights of Migrant Workers and Their Families. When Canada does sign and ratify international public trust agreements, it often has failed to implement the necessary legislation to ensure compliance. Canada has also made commitments through UN Conference Action plans. The funds in Foreign Affairs must be relocated to and redirected towards the promotion of and compliance with the public trust international law. The Canadian government should support the call for the dismantling of NATO for violation of international law, and should work towards the Dismantling of the WTO and APEC and other vested interest international agreements for contravening international Public Trust law. The funding for IDRC should be maintained but its mandate extended to include also the failure of international agreements to be implemented in Canada.**

A Green Party government would undertake:

- \* to advocate that security be achieved through fair trade not free trade.
- \* to discontinue the arms trade including the banning of anti-personnel land mines

- \* TO END THE CANADIAN ARMS TRADE (deferred resolution)
- \* to demilitarize Canada's North and stop low-level flights.
- \* to cease treating the unique ecosystem of the North and the communities living there as commodities for the use of southern urban centres.
- \* to withdraw from NATO and NORAD.
- \* to improve Canada's contribution to conflict prevention and resolution, and peace-building.
- \* to make environmental and social charters the backbone of trade deals.
- \* to stop all exports of arms from Canada (for the last 5 years Canada has been annually increasing its arms exports).
- \* to improve regulations for imports to avoid products made with child and slave labour.
- \* to stop all export and national movements of hazardous wastes.
- \* to stop sale of nuclear technology from Canada (technology for dealing safely with nuclear waste does not exist).
- \* to reduce the need for large-scale human migration by requiring rich countries to pay a fair price for third world commodities, and through eliminating the arms trade.
- \* to maintain and expand trade sanctions with countries with human rights abuses.
- \* to encourage bioregional self-reliance in basic goods and services.
- \* to ensure debt forgiveness for poor countries and to restrict wealth transfer from poor to rich countries in the form of corporate profits.

#### Foreign Aid

\* TO strive to provide, wherever possible, feasible, and appropriate, educational materials, technical, social, and economic expertise, financial and material resources to societies or local communities in need of assistance to overcome the above-mentioned problems which would allow them to live a good quality, environmentally sound lifestyle (B.C. POLICY CONVENTION, 1990)

\* TO ENSURE all expenditures of time, resources, and finances be in effective in achieving worth while goals and be carefully monitored to ensure maximum benefit  
POLICY CONVENTION, 1990

\* TO {ENSURE] THAT all expenditures of time, resources, and finances be in keeping with the policies and goals of the Greens (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that all expenditures of time, resources, and finances be in keeping with the needs and stated desires of those receiving the assistance (B.C. POLICY CONVENTION, 1990)

#### Foreign policy

\* TO support the removal of Indonesia from East Timor POLICY CONVENTION, 1993;

\* TO support self determination for East Timor POLICY CONVENTION, 1993;

\* TO support a moratorium on aid, arms sales and investment beneficial to the Indonesian government until its withdrawal from East Timor

(B.C. POLICY CONVENTION, 1993) CONFLICT

\* TO ENSURE that development aid monies to Indonesia be re-channeled to peoples NGOs within Indonesia. POLICY CONVENTION, 1993;

#### Burma/Myanmar Policy

91.3. a       Whereas the brutal dictatorship of Ne Win began in Burma in 1962; and

91.3. b       Whereas the current State Law and Order Restoration Council (SLORC) government is practicing a "scorched earth" war against the Burmese minorities; and

91.3.c Whereas over 500,000 Burmese have been forcibly relocated, 30,000 have become political prisoners, and tens of thousands have been killed and tortured in the last three years; and

91.3. d       Whereas Aung San Suu Kyi and the National League for Democracy (NLD) won over 80% of the vote and 392 of 485 seats in the National Assembly in the May 1990 multiparty elections,

91.3.1 Be it resolved that the Greens call for SLORC to resign as the Burmese government and allow for the peaceful transfer of power to the democratically elected NLD; and

91.3.2 Further resolved that the Greens support economic sanctions against Burma until SLORC transfers power to the NLD.

91.4 Tibet Policy

\* to recognize Tibet as an independent state. (POLICY CONVENTION, 1993)

## **DEPARTMENT OF INDIAN AND NORTHERN AFFAIRS**

### **INDIAN AFFAIRS AND NORTHERN DEVELOPMENT (4,523,617,000)**

**The department should be dismantled and the 4.5 billion reassigned and transferred across Canada to allow First Nations to manage their own affairs within a framework of public trust principles so that the following Department commitment will be acted upon:**

**"We will be guided by the findings and recommendations of the Report of the Royal Commission on Aboriginal Peoples which provides eloquent testimony to the need for fundamental changes in relationship between Aboriginal and non-Aboriginal Canadians". Redirect funding away from promoting corporate/First Nations exploitative development into the implementing the Royal Commission report on First Nations.**

Department

Canadian Polar Commission [TO BE DISBANDED]

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### **NATIVE RIGHTS, FIRST NATIONS**

Greens recognize the immense injustice that has been perpetuated on the indigenous peoples of Canada. From historical policies of conquest and domination, to more recent attempts at assimilation

and genocide. The past racist / exploitative practices of those in power cannot be forgotten. The Greens believe that it is morally imperative that self-determination for the First Nations be recognized. Canada must act within the guidelines of the United Nations and constitutionally recognize native self-government. The Greens recognize that treaties agreed to in the past were between sovereign nations, and constituted a plan for co-existence, and not the relinquishing of native sovereignty. It is accepted that existing treaties should be renegotiated with First Nations representatives, who are recognized by the native peoples themselves. In the case of those disputed land areas, a resolution mechanism that recognizes all treaties and previous land agreements must be instituted. Self government for the First Nations should be explicitly stated in the Constitution of Canada. The Greens accept the position that a debt to the First Nations is owed, and that some form of compensation is mandatory. This would have the purpose of assisting the sovereign aboriginal people in achieving sustainable economies.

A Green government would:

- Begin by negotiating immediately with native people in this province for the immediate return of absolute control over traditional lands to them.
- Negotiate a series of transfer payments, for five to ten years, to assist in the reestablishing of a sustainable economy

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

-Continue to offer free post-secondary education to native people. (Ont, 1994)

-Advocate to the federal government for the recognition of full sovereignty to the First Nations of Canada.

-Make constitutional amendments regarding native self-government a priority in federal-provincial dialogue.

The goal of such a policy is to return to the Aboriginal people of Canada their traditional lands. To encourage peaceful coexistence between peoples who occupy the same biosphere. To stimulate the resurrection of native philosophy / traditions and ways to the aboriginal peoples. To give the give First peoples the opportunity to become independent and proud once again.

(GREEN PARTY OF ONTARIO, 1994)

A Green party government would undertake:

- To work with /Native/ [FIRST NATIONS] groups to achieve a beneficial alliance and understanding. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to recognize the Royal Proclamation of 1763 in its confirmation of original nations as sovereign peoples with inherent rights.

Self government

- \* TO support and recognize aboriginal title as that title is defined and demonstrated by each people for their own lands (B.C. POLICY CONVENTION, 1988)

- \* TO stand in opposition to federal and provincial government policies which insidiously or overtly promote extinction [extinguishing] of indigenous culture (B.C. POLICY CONVENTION, 1988)

- \* TO recognize First Nations self-chosen governments AND SELF DETERMINATION (B.C. POLICY CONVENTION, 1990)

- \* TO recognize any governmental treaties any First Nation is signatory to as internationally binding agreements. (B.C. POLICY CONVENTION, 1990)

- \* TO ENSURE that any negotiations with aboriginal peoples be through each nation's self chosen government, not through Indian bands or any other artificial structure setup by the Canadian government, unless it is the wish of the particular nation involved (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that any negotiations be individually done with each First Nation, thereby respecting each nation's right to self determination and the rule of international law respecting treaty process (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to negotiate land claim settlements (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to self-government including negotiating sovereignty-association (B.C. POLICY CONVENTION, 1990)

• TO support /Native/ [FIRST NATIONS] self-determination and the rapid and equitable settlement of land claims. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS); (deferred resolution)

\* TO work to inform and organize non indigenous people within each aboriginal territory so that ultimately, they can meaningfully negotiate with the indigenous people regarding non-indigenous use and occupancy of aboriginal territories and regarding mutually acceptable, ecologically responsible land management goals (B.C. POLICY CONVENTION, 1988).

• TO acknowledge that we have much to learn from Native Peoples both ecologically and spiritually, and we will solicit their wisdom on these issues. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Prevention of Environmental destruction on land of first nations

\* to act on the commitment made at the United Nations conference on

Environment and Development (UNCED, 1992) to not carry out any activities on the lands of indigenous peoples that would cause environmental degradation or that would be culturally inappropriate.

\* to prevent the deposit on the land of first nations peoples of toxic,

hazardous, and atomic wastes, and disallow all testing of weapons over the lands of indigenous peoples.

\* to ensure that no resource extraction, economic activity, or settlement occurs on land which is in dispute, unless the successors of the original nations involved consent to

such activity in the absence of consent, interim measure shall be in place. The fiduciary obligations of the Federal Government to the successors of the original nations, wherever they live in Canada, must be increased during this healing and transition process. Programs flowing from these obligations need to be planned, operated, and controlled by original peoples in their local communities in order to be culturally appropriate and responsive to needs.

\* TO DISALLOW [IN CONSULTATION WITH] FIRST NATIONS ON RESERVES TO RESELL GOODS LIKE CIGARETTES, [CASINOS] ALCOHOL, AND GASOLINE TAX-FREE (Deferred resolution)

\* TO DISALLOW FIRST NATIONS POLICIES THAT OVEREXPLOIT NATURAL RESOURCES OR THREATEN SPECIES OR HABITATS. (deferred resolution) OR IN VIOLATION WITH INTERNATIONAL ENVIRONMENTAL AGREEMENTS.

\* TO ADDRESS THE VIOLATION OF CIVIL AND POLITICAL RIGHTS OF FIRST NATIONS PEOPLES IN CANADA (passed by cabinet and issued as a petition and document)

• TO acknowledge that we have much to learn from Native Peoples both ecologically and spiritually, and we will solicit their wisdom on these issues. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Self government

\* TO support and recognize aboriginal title as that title is defined and demonstrated by each people for their own lands (B.C. POLICY CONVENTION, 1988)

\* TO stand in opposition to federal and provincial government policies which insidiously or overtly promote extinction [extinguishing] of indigenous culture (B.C. POLICY CONVENTION, 1988)

\* TO recognize First Nations self-chosen governments AND SELF DETERMINATION (B.C. POLICY CONVENTION, 1990)

\* TO recognize any governmental treaties any First Nation is signatory to as internationally binding agreements. (B.C. POLICY CONVENTION, 1990)

\* TO ENSURE that any negotiations with aboriginal peoples be through each nation's self chosen government, not through Indian bands or any other artificial structure setup

by the Canadian government, unless it is the wish of the particular nation involved (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE] that any negotiations be individually done with each First Nation, thereby respecting each nation's right to self determination and the rule of international law respecting treaty process (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to negotiate land claim settlements (B.C. POLICY CONVENTION, 1990)

\* TO recognize the right of each First Nation to self-government including negotiating sovereignty-association (B.C. POLICY CONVENTION, 1990)

\* to seek honourable settlements with the successors of original nations that will lead to the creation of culturally and economically self-governing successors of original nations throughout Canada.

\* to seek nation-to-nation partnerships with the original nations of North America

\* to not impose a form of self-government or a framework of nationhood on the successors of the original nations. Original peoples can best choose the forms of governance appropriate for themselves;

• TO support /Native/ [FIRST NATIONS] self-determination and the rapid and equitable settlement of land claims. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS); (deferred resolution)

\* TO RECOGNIZE OFF-RESERVE INDIGENOUS PEOPLES; (deferred resolution)

\* TO work to inform and organize non indigenous people within each aboriginal territory so that ultimately, they can meaningfully negotiate with the indigenous people regarding non-indigenous use and occupancy of aboriginal territories and regarding mutually acceptable, ecologically responsible land management goals (B.C. POLICY CONVENTION, 1988).

\* to call a national meeting in 1997 to discuss the implementation of the recommendations of the Royal Commission Report on Aboriginal Peoples

\* to apologize to First Nations for the Indian Act, and for residential schools.

Integrated Indian and Inuit community

based Health care

Indians or Inuit for cost of construction and

extension or renovation hospitals

5: Withdraw provincial funding for research into or support for Water Diversion Projects. Current plans for James Bay directly affect 22,000 treaty Indians in Northern Ontario.

Safe Drinking Water Act

## **DEPARTMENT OF FISHERIES**

**(1,314,065,000)**

Canada at the international level has incurred obligations to protect the marine environment and community watersheds. Nationally, the federal government has failed to implement sufficiently the Federal Fisheries Act in enforcing the section which designates as a crime the deposit of deleterious substances that could contribute to loss or reduction of fish habitat. In addition, the federal government under the Convention on Biological Diversity has undertaken to conserve biodiversity and not create "megadiversity" through fish farming and genetically engineered fish. The funding of the Fisheries Department must be redirected to enforcing the Act, to banning fish farming and genetically engineered fish, to restoring wild stocks and ecosystems, and to assisting fishers who have been impacted by the failure of the Federal government to protect the wild stocks. (Budget comment, Feb, 2000)

Policy and Internal services • End all factory ship fishing in waters under Canadian jurisdiction (GPC, 1988)

•

Rivers have been damaged by waste from cities and factories.

Here we see a picture of the Saguenay River, Quebec. Whales, fish and other animals that are native to this river and the Fleuve Saint-Laurent have been seriously affected by heavy metal poisoning. (GREEN PARTY OF NEWFOUNDLAND).

- [ban] hunting, trapping, and fishing in all provincial parks, conservation areas, and Crown game preserves (GPC, 1988, Ontario)

Hunting and Fishing

-Hunting with rifles and fishing with electronic fish finders

should be banned. Hunting is a natural act that is an integral part of the natural balance (Ontario)

Further aware that fish, reptiles, birds and mammals, including humans are all affected by POPs via a growing list of actual and suspected effects that include cancer, damage to immune and reproductive systems and developmental problems. IUCN, 1996

\* TO IMMEDIATELY CEASE ALL predator control measures for the support of grazing operations and commercial fisheries also be ceased immediately B.C. POLICY CONVENTION, 1987

Of the 34 Chemicals commonly used to kill dandelions 62% are toxic to fish and the nervous system of humans, 35% cause birth defects in humans and are toxic to bees and birds, 29% cause cancer and kidney damage, and 85% are sensitizers, that means they cause people to develop allergic type reactions to the chemical.

Ontario soils have lost as much as 50% of their organic content since cultivation began. This has led soils to be highly susceptible to erosion and compaction. A fundamental component of soil degradation is the suppression of biological activity. Healthy soil is teeming with life, from earthworms to microorganisms. The situation is approaching critical as local instances of soil burnout is occurring. If conventional agriculture is continued Ontario's agricultural soils will reach a threshold beyond which productivity cannot be easily restored.

To this end we recommend:

1: A total ban on the use of pesticides and herbicides for private lawn care purposes. (Ontario)

mercury in fish, Ont

#### **DEPARTMENT OF FISHERIES/OCEANS (\$1,314,065,000)**

**Canada at the international level has incurred obligations to protect the marine environment and community watersheds. Nationally, the federal government has failed to implement sufficiently the Federal Fisheries Act in enforcing the section which designates as a crime the deposit of deleterious substances that could contribute to loss or reduction of fish habitat. In addition, the federal government under the Convention on Biological Diversity has undertaken to conserve**

**biodiversity and not create "megadiversity" through fish farming and genetically engineered fish. The funding of the Fisheries Department must be redirected to enforcing the Act, to banning fish farming and genetically engineered fish, to restoring wild stocks and ecosystems, and to assisting fishers who have been impacted by the failure of the Federal and provincial governments to protect the wild stocks. Revise the Vessel Operator Licence to ensure that it sufficiently addresses enhanced safe vessel operation. There has to be greater hands-on education in respect to safe vessel operation and navigation, and the immediate commitment to having this licence be a requirement for navigation of vessels in Canadian waters. Require mandatory holding tanks in all Canadian waters. Increase Coastguard funding in collaboration with the Disaster Prevention Fund in Department of Defence.**

## Sustainable Fisheries

The use of draggers in both the east and west coast fisheries has decimated our ocean ecosystems. We must recognize and support ecologically appropriate fishing technologies. (GREEN PARTY OF NEWFOUNDLAND).

A Green Party government would undertake:

- \* to ratify the Law of the Sea treaty

- \* to establish a network of Marine parks, and ecological reserves.

- \* to prevent risks of disease transfer from netcage fish to wild stocks, such as black cod, herring, and salmon. Communities like Gaultois, Newfoundland depend upon the inshore fishery. A sustainable inshore fishery must be pursued in order to save these communities and preserve marine biomasses. (Newfoundland)

- \* to address the following outstanding issues in aquaculture, and maintain a moratorium on increased fish farming: (a) Risks of introduction of exotic diseases from the continued importation of Atlantic salmon into Pacific waters; (b) Pollution from fish sewage, contamination of shellfish, and loss of habitat; (c) Death, wounding, and harassment of mammal and bird populations due to shootings, net entanglements, and acoustic deterrent devices; (d) Loss of access to traditional fisheries for First Nations people, with increased risks to their health from exposure to drug residues from food collected near netcage operations; (e) Competition for spawning beds and genetic interaction between wild and escaped salmon in fresh and salt water; (f) Decline of wild stocks. Losses of wild fish, such as herring and juvenile salmon, consumed by netcage fish; (g) Endangered human health from the increased use of antibiotics and other

drugs, which have already led to the spread of fish diseases that are fully resistant to three types of antibiotics.

\* To invoke the precautionary principle which reads that where there is the possibility of loss of fish habitat and species, the lack of full scientific certainty shall not be used to postpone measures to prevent the threat (submission passed by cabinet to aquaculture commission)

to support an end [end] to all factory ship fishing in waters under Canadian jurisdiction (GPC, 1988)

because

-factory ship fishing is inherently large-scale enterprise in direct competition with the smaller scale efforts of fishers who live nearer to the waters being utilized

-fish populations in waters adjacent to Canada are far lower than before human immigration from Europe and

these lowered fish populations represent a direct threat to the main mammals which rely on fish for their food supply

- to transfer fishing quotas from corporations to individual fishers or fishing communities
- to use small boat technology, more fishers will become active while applying less fishing pressure on commercial species
- to phase out draggers which scour the ocean floor so as to protect this crucial habitat and significantly decrease the amount of bycatch and undersized species caught in commercial fishery
- to ensure individuals or communities receive a set quota per season, per species. These quotas would be transferable such that they may be exchanged for quota of other species
- to encourage fisher to then become active in the management of the resources which gives them more responsibility and liability (GPC, 1996)

## MARINE PROTECTED AREAS

- to establish Marine Protected areas to help maintain biodiversity and guarding important fish habitat

#### Application of the precautionary principle to wild species

- \* TO PROTECT ALL FISH SPECIES BY ERRING ON THE SIDE OF CONSERVATION WHEN SCIENTIFIC ADVICE IS UNCERTAIN (deferred resolution); NEED MORE COMMENT ON ACROSS CANADA ISSUES (from deferred resolution comments)
- \* TO AFFIRM that interfering with the natural cycles of wild species is morally wrong; and B.C. POLICY CONVENTION, 1987
- \* TO CONTEND THAT THE dependence on farm-raised salmon may weaken concern for the preservation of spawning streams (B.C. B.C. POLICY CONVENTION, 1987)
- \* TO Protect of Fish from Hydroelectric Development (B.C. POLICY CONVENTION 1993)

#### Salmon aquaculture elimination

- \* TO EXPRESS CONCERN THAT the production of salmon on commercial farms is an industry which is chemically intensive utilizing algaecide, molluscides, antibiotics, and colouring agents; and B.C. POLICY CONVENTION, 1987
- \* TO AFFIRM THAT the raising of salmon in crowded conditions encourages epidemics which have the potential to infect wild populations; and B.C. POLICY CONVENTION, 1987
- \* TO EXPOSE THAT fish farmers have been cited for shooting at and poisoning seals, sea otters, herons, and eagles which they view as a threat to their livestock; and B.C. POLICY CONVENTION, 1987

#### *The Seal Harvest:*

*A seal harvest should only be implemented when markets are available for the whole animal. A seal harvest should not be used in an attempt to enhance fisheries. (GREEN PARTY OF NEWFOUNDLAND).*

- \* TO CONDEMN THE INFRINGING OF fish farming upon the natural beauty of the coastline and encroaching on the rights of human and other species to use same; B.C. POLICY CONVENTION, 1987
- \* TO oppose the issuing of salmon fish farming permits by the government of British Columbia (B.C. POLICY CONVENTION, 1987)

\* TO PREVENT salmon populations and other species in BC FROM BEING endangered by hydroelectric dams which destroy their natural habitat, B.C. POLICY CONVENTION, 1993

\* TO CONDEMN THE GRANTING OF fish farming permits without the benefit of environmental impact studies and without scientific analysis of the health and economic impact the industry may inflict upon society. (B.C. POLICY CONVENTION, 1987)

• To SUPPORT THE FIRST NATIONS CONCERN THAT fish farming represents a spiritual interference with the life cycle of the salmon and thus degrades and debases the spirit of the salmon itself; B.C. POLICY CONVENTION, 1987

\* TO REQUIRE wholesalers and retailers (including restaurants) to state the source or origin of the salmon being sold. All farm-raised salmon should be labeled as such. (B.C. POLICY CONVENTION, 1987)

\* TO oppose all further hydro electric generation which has negative impact on salmon fisheries or other wildlife, especially watershed diversion; and (B.C. POLICY CONVENTION, 1993)

\* TO support the conversion of existing power generation sites to fish friendly systems. B.C. POLICY CONVENTION, 1993

\* TO oppose the establishment of a West Coast AND EAST COAST seal hunt. B.C. POLICY CONVENTION, 1987

NOTE THE FOLLOWING POLICY IN NEWFOUNDLAND IS NOT ENDORSED BY THE GREEN PARTIES IN OTHER PROVINCES AND IS IN CONFLICT WITH THE PRINCIPLES OF THE GREEN PARTY OF CANADA

XXX The Seal Harvest:

A seal harvest should only be implemented when markets are available for the whole animal. A seal harvest should not be used in an attempt to enhance fisheries. (GREEN PARTY OF NEWFOUNDLAND).

The Green Party supports the Inshore Fishery

Commercial fishing quotas should be transferred from corporations to individual fisherman or fishing communities. Using small boat technology, more fisherman will

become active while applying less fishing pressure on commercial species. Reducing the number of draggers scouring the ocean floor will help protect this crucial habitat as well as significantly decreasing the amount of bycatch

and undersized species caught in commercial fishery. (GREEN PARTY OF NEWFOUNDLAND).

Individuals or communities would receive a set quota per season, per species. These quotas would be transferable such that they may be exchanged for quotas of other species. Fisherman then become active in the management of the resource, which gives them more responsibility and liability. (GREEN PARTY OF NEWFOUNDLAND).

The Capelin Fishery:

Since Capelin are the major food source of cod, seabirds and many whales, a moratorium needs to be called for Capelin until the numbers rebound. (GREEN PARTY OF NEWFOUNDLAND).

Marine Parks

The establishment of marine protected areas in Canada is long overdue. In the coastal environment, they do not limit public access, but implement strict controls over fishing and development in the area. Marine parks and reserves protect the nursery grounds for many marine fish species, including cod. These are highly productive areas which play an important role in any marine ecosystem. Establishing several marine protected areas would help maintain biodiversity while guarding important fish habitat. (GREEN PARTY OF NEWFOUNDLAND).

### **GOVERNOR GENERAL (11,600,000)**

**Salary of Governor General should be reduced by 10,000 to set an example for the members of Parliament and Senators and the spending in the office up to 660,000 should be relocated to Human Right to Housing fund, and the Anti-poverty fund**

### **DEPARTMENT OF HUMAN RESOURCES AND DEVELOPMENT**

**(HUMAN RIGHTS)**

## **HUMAN RESOURCES (\$26,264,157,000)**

**Rename the Department: suggestion Department of Social Justice and Development**

**Redirect funds, as mentioned in the 1999 Public Trust Green comment away from subsidizing industry wants into promoting human rights and social justice needs. For example, the Department should not invest in questionable industry ventures but begin to redirect the designated funds to the following:**

**(i) to increase income assistance (1 billion), to retirement fund (.4 billion) and to Child Investment fund (.6 billion). and set up an Anti-poverty Fund for poor children and their families.**

**(ii) to address the plight of sweat shop workers. Standards must be in place, complied with and enforced. These standards must include the following: • legal wage must not be below the poverty line and • an external, permanent, funded, nonprofit association to monitor corporate compliance, and to serve as a public voice addressing questions critical to the elimination of sweatshop practices must be established; (iii) to prevent environmental racism such as the locating of dumping sites or polluting industries on or near the lands of first nations peoples;**

**(iv) to institute a provision for students to repay loans through job creation programs, or through community service with union wage in a way that would not impact on job creation. This program would complement provincial loan remission programs. Community service job development permitting students to have work experience in a way that would not jeopardize existing jobs or undercut fair union wages and benefits. Funds relocated and designated: (i) 500 million relocated from Solicitor General to promote youth-related programs, and 1 billion from the Department of Defence, 4 million from Parliament and Senate, 1 million from Governor General, and a contribution from judges' salaries to the Anti-Poverty Fund for poor children and their families.**

## EDUCATION

- [Change the prevailing educational paradigm based on the mechanistic industrial values to an educational paradigm based on humanitarian sustainable values. (GPC, 1988)

The long-term goals of humankind must lead to global survival, and to the emergence of peaceful, just, socially and ecologically responsible societies. Citizens should feel empowered to use their creative and critical abilities to make social, economic and political decisions. Learning will, therefore, be a life-long process and opportunities must be created for all residents of the province to participate in this process. (ALBERTA GREEN POLICIES, ALBERTA

A. We will encourage the creation of an educational curriculum that recognizes the importance of basic skills. It should also include the development of ecological awareness and respect for diversity, equity, social justice, non-violence and democratic decision-making. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. this includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. all life is vulnerable to the actions of human

beings therefor we have an obligation to treat all living creatures humanely and with respect.

(ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will expect Albertans to be actively involved in the education of their children.  
(ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to phase-out federal support for college and agency agribusiness

educational programmes and refocus supports on family farm and community scale  
eco-agriculture workshops, distance education, undergraduate and graduate and  
diploma.

## 11. Social Equity

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. this includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. all life is vulnerable to the actions of human beings therefor we have an obligation to treat all living creatures humanely and with respect.

The social expression of diversity is decentralization. Applied to our political structures, this means grassroots democracy. Greens are calling for the decentralization of our economies, populations, education systems, and manufacturing; in short, every aspect of our society. For local people, decentralization means a maximum degree of self-determination and involvement in decision-making. (B.C. POLICY CONVENTION, 1986)

• To PROMOTE ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES THROUGH REGULATIONS AND EDUCATION (1998)

\* to support the establishment of a diversity of public and farm-based model demonstration and experimental stations for extension and education in each of Canada's natural regions.

• TO [INITIATE AND PROMOTE] /We will encourage/ research and education to help farmers sustain the topsoil on their land. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT, PROMOTE AND SUPPORT /implementation of/ educational programs on soil conservation and sustainable agriculture; and (B.C. POLICY CONVENTION, 1986)

-Encourage a reduction in meat consumption with an educational campaign; (BC Policy, 1990)

\* TO support education programs that would enable people to attain food nutrition by eating healthy, uncontaminated, locally grown food POLICY CONVENTION, 1986.

\* to develop, cooperatively with the provinces, a programme of land use and protection standards and practices, education, incentives, disincentives and expropriation compensation to ensure that land managers utilize and/or protect their lands as per its zoning such that: prime farmland is protected for agriculture from industrial or residential development; endangered plant and animal habitat, and special Eco communities are given ; farms are generally developed and operated as part of a sustainable natural Eco community by protecting and /or restoring native woodlands, grasslands, wetlands and watersheds.

-We feel a vegetarian diet is healthier, more environmentally

benign and should be encouraged through education. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

• TO ELIMINATE GROWTH STIMULANTS AND ANTIBIOTICS IN THE PRODUCTION OF MEAT [AND OTHER ANIMAL FOOD PRODUCTS], REQUIRE IMMEDIATE LABELLING DURING PHASE OUT PERIOD, AND EDUCATION OF THE PUBLIC AS TO AVAILABLE ALTERNATIVE FOOD SOURCES; (1998)

4: Our society should promote through incentives,

and education the minimization of waste at all points of transfer from raw material to consumer products. (GP of Ontario)

6: Redirect agricultural education, extension services and research to address sustainable methods. GP Ontario)

#### Pesticides reduction

\* TO advocate an education program to reduce pesticide use with the aim of eventually eliminating pesticide use; this to be administered by the BC Ministry of Agriculture. B.C. POLICY CONVENTION, 1987

• to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND)

\* improving education concerning prenatal care

\* educating the public with regards to environmentally induced

diseases relating to poor air, soil, and water quality. (ONTARIO POLICY KINGSTON, 1997)

• to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

\* to initiate an effective program of public education about the health

benefits of uncontaminated food, water and air (Alberta, 1997)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- \* TO PROVIDE EDUCATIONAL MATERIAL EMPHASIZING

FOOD COMBINATIONS THAT STRESS COMPLETE PROTEINS (DEFERRED RESOLUTION ROWENA ELOISE).

- \* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to nicotine addiction. B.C. POLICY CONVENTION, 1988

- \* TO provide adequate funding for preventative [PREVENTIVE] education and withdrawal programs related to alcohol addiction.

encourage the health care practitioners to emphasize wellness through holistic and /preventative/ [PREVENTIVE] approaches to the practice of medicine.

### 72.3.1 Birth Control

- \* TO [ENSURE THAT] /advocate/ more adequate youth fertility education, education about pregnancy, and better access to contraceptives. (B.C. POLICY CONVENTION, 1988)

- \* to immediately reduce the military budget by 50% and transfer the savings (i) into guaranteeing the right to food, the right to safe and affordable shelter, the right to universal health care, the right to safe drinking water, the right to a safe environment, the right to education and the right to peace, (ii) into generating socially equitable and environmentally sound development; (iii) into strengthening the United Nations. Currently the global community spends 850 billion on the military. In 1981 there was a

General Assembly resolution to reduce the military budget and transfer the savings into social programs. In 1981 the military budget was less than 50% of what it is now.

\* TO support, and where necessary, establish organizations of peace research and education POLICY CONVENTION, 1986.

#### Foreign Aid

\* TO strive to provide, wherever possible, feasible, and appropriate, educational materials, technical, social, and economic expertise, financial and material resources to societies or local communities in need of assistance to overcome the above-mentioned problems which would allow them to live a good quality, environmentally sound lifestyle (B.C. POLICY CONVENTION, 1990)

/Native/ [First NATIONS] peoples have an inherent right to preserve their traditional values and cultural heritage, and must be supported in developing their own economic, social and education systems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO IMPLEMENT SELF-GOVERNMENT OF FIRST NATIONS PEOPLES INCLUDING CONTROL RESOURCES ON AND UNDER THEIR LANDS, EDUCATION, HEALTH CARE, HOUSING, EMPLOYMENT SERVICES AND THE JUDICIAL SYSTEM (A PARALLEL SYSTEM INCLUDING LAWYERS, PRISONS, PAROLE BOARDS);  
(deferred resolution)

\* parenting education

\* encouraging workplace childcare

(ONTARIO POLICY KINGSTON, 1997)

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA,

## Education

- To Remove the present education policy from GPO policy book.

The Green Party acknowledges that decisions concerning the education of children should be made by parents, communities and students. To this end parents, communities and students should have as many choices as possible, there should be plenty of diversity in educational options.

a) Home schooling should be an option for parents and communities. Home schooling parents should receive partial compensation.

b) Since post-secondary education is necessary for most jobs, tuition should be minimal. Living expenses are already a large burden for students.

c) Students should have the option of repaying loans through community work.

d) The Green Party suggests expanding the options of students for work terms, apprenticeships, and work place visits.

e) Education should be rooted in Green philosophy. (ONTARIO POLICY KINGSTON, 1997)

### 16. POLICY ON EDUCATION (carried with amendments)

The Green Party believes that the problems affecting us education system reflects a deeper crisis in our culture. We believe that our dominant cultural values and practices, including the emphasis on competition over cooperation, consumption over sustainable resource use, and bureaucracy over authentic human interaction, have been destructive to the health of the ecosystem and to human development. The current education system perpetuates these values and practices. The Green Party

envisions a single expanded and diverse public education system with a new philosophical and programmatic framework. This system will be rooted in a global and ecological perspective, one that will prepare people for entry into an ever-regenerating society rather than one that perpetuates existing conventions that have proven to be unsustainable. Education is central to the survival of our planet. Only when this is recognized can we truly develop a system that provides the opportunity for every person in Ontario to grow fully to their potential. The Green Party has five key policy directions for education in Ontario.

#### 1. Critical Thinking and Citizenship Responsibility

The current educational focus on skills relevant for today's job market has caused some policy directors to ignore the importance of developing critical thinking, citizenship, and change management skills in our students. The Green Party feels that these skills are essential to the survival of our planet and would develop a program grounded in a global and ecological perspective to address this.

#### 2. Class Size and School Size

The Green Party believes that class size and school size must be recognized as the factors that greatly influence the quality of public education.

#### 3. Basic Services Supplied Equally to All

We would ensure that basic services are supplied equally to all schools. More and more schools are turning to corporate and wealthy donors to supply services that we believe should be supplied by government. Schools should not accept private or corporate funding unless they come with 'no strings attached'.

#### 4. Encouraging Local Curriculum Initiatives

We would ensure that Ontario's communities have a hand in developing education which addresses their needs. The trend towards centralized decision-making control threatens to drown out the voices of these communities. This trend must be balanced so that support is provided for local curriculum initiatives, especially local second language programs. (ONTARIO POLICY KINGSTON, 1997)

#### EDUCATION PRIMARY AND SECONDARY

Education in Ontario is currently a monopoly. We advocate a voucher system to disperse tax dollars currently allocated for education. It costs over \$ 7,500 a year to educate an average child. Children with special needs currently cost up to \$ 30,000 a year.

Each child would be assessed for his or her specific needs. After assessment the child's parents choose the school that they feel suits their children's needs. The Public-school system would become much more responsive to the needs of the students and parents.

Accredited teachers who have completed appropriate training would be free to establish their own schools as long as they do not perpetuate sexist, racist or patriarchal values. Excellence in education will only occur when the current monopoly in education is broken. It is not for the Green Party to advocate one form of education over another. It is enough that parents be given the choice to choose what is best for their family.

The ministry of education would set goals, allocate funding and negotiate with the teacher unions. The goal is to have a

diversity of educational options that meet the needs of the local community. This can not be achieved under the current system.

#### Universities

The Green Party of Ontario feels that a university education should be made available to all who meet minimum educational requirements regardless of a person's financial status. We encourage the adoption of a loan repayment plan that is contingent on the income of the graduate.

Increasingly, university students are exposed to nothing more than technical and professional training. Basic science is being replaced by military and commercial research. The result is an expensive system that only benefits middle-class professionals while serving to push industry's training, research, and development costs onto the public. This serves to limit academic freedom.

Under current legislation our universities are controlled by Boards of Governors who are neither elected nor responsible to the University or society. These Boards should be replaced by the already existing university Senates which consist of elected faculty, students, and staff.

Rather than accrediting professionals and technicians for the workplace the highest priority would be placed upon teaching fully-rounded, ethical individuals. Scientific and technical research would be focused on sustainable commercial technologies.

#### Community Colleges

Industry and professional associations must shoulder their full burden for training. Professions should be taught at community Colleges. The costs would be born by a licence fee on members of

that profession. Each association of trained individuals, from doctors to hairdressers would have an association levy that would fund the education of their peers. The role of the tax dollar should be limited to the education of individuals who can communicate, reason, and enjoy life. The training of technicians for industry is the responsibility of Industry.

(GREEN PARTY OF ONTARIO, 1994)

#### Animals in Research

#### Animals in Research

-Ban the use of animals for the testing of cosmetics and household products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

#### Animals as Entertainment (GPC, 1988)

-encourage a reduction in meat consumption with an educational campaign. (Ontario)

Guaranteed Annual Income and childcare support; and

[other adopted GPPABC] policies.

[This support] system should include such things as:

education about adoption;

more homes for single mothers;

single parent support groups;

prenatal and post natal services; and

life skills training.

#### **DEPARTMENT OF FISHERIES/OCEANS (1,314,065,000)**

**Canada at the international level has incurred obligations to protect the marine environment and community watersheds. Nationally, the federal government has failed to implement sufficiently the Federal Fisheries Act in enforcing the section which designates as a crime the deposit of deleterious substances that could contribute to loss or reduction of fish habitat. In addition, the federal government under the Convention on Biological Diversity has undertaken to conserve biodiversity and not create "megadiversity" through fish farming and genetically engineered fish. The funding of the Fisheries Department must be redirected to enforcing the Act, to banning fish farming and genetically engineered fish, to restoring wild stocks and ecosystems, and to assisting fishers who have been impacted by the failure of the Federal and provincial governments to protect the wild stocks. Revise the Vessel Operator Licence to ensure that it sufficiently addresses enhanced safe vessel operation. There has to be greater hands-on education in respect to safe vessel operation and navigation, and the immediate commitment to having this licence be a requirement for navigation of vessels in Canadian waters. Require mandatory holding tanks in all Canadian waters. Increase Coastguard funding in collaboration with the Disaster Prevention Fund in Department of Defence.**

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also

important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA,

**Funds should be redirected from Judges salaries to an Anti-Poverty fund for poor children and their families Funds should be redirected to support the decriminalization of drugs and the implementation of other harm-reduction strategies including education and recognition of the substantive differences in the physiological and psychological effects of individual drugs and the need for regulatory regimes to reflect these differences ( such as the properties of individual substances, the consequences of their use and sale, and the consequences of attempting to prohibit, restrict, or control their sale and use.) (Budget 2000)**

• to “promote, as agreed in Habitat II, crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and resulting crime, by addressing poverty, inequality, family stress, unemployment, absence of education and vocational opportunities, and lack of health care, including mental health services” (91 a ter. Habitat II)

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GpO , 1994)

4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self-owned

businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GPO, 1994)

transportation

Public awareness through media, public speakers, public education system, etc. (B.C. POLICY CONVENTION, 1990)

- To support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* provide education on the hazards and pitfalls of gambling (ONTARIO POLICY KINGSTON, 1997)

- to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

- \* TO ENSURE LEGISLATION REQUIRES FOR PAID LEAVE FOR CHILD REARING EDUCATIONAL LEAVE. (deferred resolution)

C. We will maintain a balanced annual budget by efficient use of resources in the areas of health care, education and social services. If this is not possible without introducing serious defects into these services, tax revenue will have to be increased. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to ensure that CBC TV will be required to produce programs that are educational, thought-provoking, useful and unavailable elsewhere.

Under article 7 of the Convention on the Elimination of all Forms of Racial Discrimination States Parties undertake to adopt immediate and effective measures, particularly in the fields of teaching, education, culture and information, with a view to combating prejudices which lead to racial discrimination and to promoting understanding, tolerance and friendship among nations and racial or ethnic groups, as

well as to propagating the purposes and principles of the Charter of the United Nations, the Universal Declaration of Human Rights, the United Nations Declaration on the Elimination of All Forms of Racial Discrimination, and this Convention.

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

Citizens in Canada share common concerns about the deterioration of the environment, about the growing influence of corporations upon all sectors of society, and about the threats to education, health and culture. Canadian citizens continue to suffer discrimination and inequitable treatment. Canadian citizens are constantly disillusioned by the discrepancy between government rhetoric and action at all levels. Instead of acting on these concerns, the Federal government has devolved responsibilities upon the provinces and the corporations. (Press release, Calgary Unity, 1999)

- To recognize that every human being shall have equitable access to food, clothing, shelter, and health care; due process under a just system; control of her/his thoughts; education as and when needed, in accordance with the philosophy of non-violence and respect for the biosphere; and (BC Policy 1986/9)

A Green Party government would undertake:

- \* to ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "other status" which indicated the intention to include other grounds as they arose. Through various human rights instruments, states have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour, ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status.

- \* to include sexual orientation as a listed ground of discrimination. in

all Canadian human rights documents, and to lobby for its inclusion in all international human rights documents.

- \* to ensure the right to shelter, THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY SOUND WITH TENURE SECURITY the right to food, the right to social security, the right to universal affordable quality education including the option of

repaying student loans through community service, and the right to work in socially equitable and environmentally sound employment.

## REDEFINING OF WHAT CONSTITUTES “WORK” AND RECASTING WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND

- TO DEPLORE THAT ACTIVITIES AND SUBSTANCES CONTRIBUTE TO OZONE DEPLETION, GREENHOUSE GAS PRODUCTION, EXCESSIVE RESOURCE EXTRACTION AND TO PRODUCTION OF TOXIC, HAZARDOUS, AND RADIOACTIVE WASTES, AND THUS TO CONSEQUENCES THAT ARE HARMFUL TO HUMAN HEALTH AND THAT CAUSE ENVIRONMENTAL DEGRADATION, HUMAN RIGHT VIOLATIONS AND WAR AND CONFLICT;
- TO ENSURE THE FOLLOWING SO THAT IT WILL BE POSSIBLE TO ENCOURAGE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK, AND TO VALUE AND REIMBURSE THE WORK OF THE SOCIAL SECTOR THAT IS ATTEMPTING TO PREVENT OR RECTIFY THE HARM CAUSED BY INDUSTRIAL ACTIVITY: (1998)

\* to enact a Social Security Act to provide national standards for welfare.

### 70.1.1 Income Assistance

#### WELFARE REFORM

As currently practiced, welfare assistance is inefficient, unfair to both government and individuals, and fails to serve those who need it the most. Because welfare is presently a municipal issue, its costs tend to be born by those governments which are least able to support the program, simply because poorer communities will tend to

(a:) have more people on the welfare roles, and

(b:) have a smaller tax base.

Because of this fact, many smaller communities routinely limit their benefits. This results in our poorest citizens moving to parts of the country where living expenses are highest. In

addition, welfare disbursement tends to be dominated by the desire for control rather than a will to serve. As a result, far too much money is spent on administration. Many needy people are also unable to receive benefits because they run afoul of such "Catch-22" dilemmas as having to have a fixed address to receive benefits, but being too poor to rent any place to live. A Green Canada would eliminate these problems by replacing the welfare system with a guaranteed annual income. Under such a program, the federal government would decide upon a minimum allowable income and award a "reverse" income tax to those individuals or families which were unable to secure employment. Because such a payment would be raised through federal taxation, no one community would be penalized for having too many poor people. In addition, there would be a strong incentive for the poor to leave urban areas where the cost of living is high and to move to the countryside where they could be encouraged to become self-sufficient in food, fuel, housing, etc. By eliminating the need for a welfare bureaucracy, enough money would be saved to expand payments.

The guaranteed income would support other Green economic programs. The minimum acceptable wage would rise for jobs such as fast-food, janitorial, etc., because people will be able to "opt out" of the workforce until they find some dignified employment. This would have a leveling effect on social stratification. In addition, rewarding, but poorly-paid work that presently benefits the whole community will expand as the guaranteed income allows increasing numbers of people to "opt for" a life of community service. The guaranteed income will also give workers a greater

say in industrial management, as the strongest weapon (fear of poverty) is removed from business's arsenal of strike-breaking tactics.

Finally, the guaranteed income will ensure that the costs of switching from a steadily expanding economy to a conservator society will be borne equally by all its citizens. The Greens would like to see a sustainable society that is not supported by widespread poverty. (GREEN PARTY OF ONTARIO, 1994)

Greens also endorse the idea of a minimum and maximum income. The guaranteed income being at 1 and using a ratio of 20 to 1 this would mean that an individual who received the Guaranteed annual income of \$10,000 with a minimum wage of \$15,000 would dictate the wage of the highest earner which would be \$500,000 a year. The goal of those at the top therefore is to increase the well being of those at the bottom. The current spread between the richest and poorest is approximately 150: 1. Using a minimum wage of \$15,000 and an average corporate presidents' remuneration of \$2,250,000 a year. (GREEN PARTY OF ONTARIO, 1994)

\* TO INITIATE a large-scale public process combining actuarial and anecdotal evidence to determine what level of income is needed for a person to meet their basic human needs with dignity including the human need for recreation and leisure. ANNUAL GENERAL MEETING, 1995

\* TO INDEX income assistance programs to the consumer price index ANNUAL GENERAL MEETING, 1995

#### 70.2.1 Canada Assistance Plan

\* TO BE in solidarity with End Legislated Poverty and other anti-poverty groups campaigning for inclusion of these rights in provincial legislation (ANNUAL GENERAL MEETING, 1995)

\* TO support the current U.N. investigation into violations of international human rights standards by the Canadian government's repeal of the Canada Assistance Plan  
(ANNUAL GENERAL MEETING, 1995)

• TO REVENTING OF POVERTY THROUGH FULFILLING BASIC NEEDS,  
PROVIDING EQUITABLE DISTRIBUTION OF RESOURCES, GUARANTEEING  
HUMAN RIGHTS, PRESERVING AND PROTECTING THE ENVIRONMENT, AND  
PREVENTING WAR AND CONFLICT (1998)

## Green Day Care

### GREEN PARTY POLICY ON CHILDCARE (carried with amendments)

It is well known that how we care for our children will ultimately determine how people care for each other and the earth. The Green Party sees parenting as a valuable investment not only in the well-being of our children, but in the future of our society as a whole. It should be treated as such by providing real support for parenting instead of encouraging people to work for short-term economic gain which in the end creates enormous stress on families and diminishes both social and human resources. The Green Party believes in subsidizing parents to look after their own children. We feel that the implementation of a Green Party Childcare policy would encourage parents to take time from work to raise their children. As a result of this family life would be enriched, stress would be diminished and the overall health of our society would be improved.

Green Party Childcare Policy initiatives would include:

\* a Guaranteed Annual Income that would pay one parent to stay at home.

- \* extended paid parental leaves.
- \* job-sharing options.
- \* encouraging part time work.
- \* flexible work hours to match the school day.
- \* personal days to care for sick children.
- \* better paid day care workers to reflect the importance of the work they do
- \* a high-quality day-care system for those who need it, with the professional standards and training required by daycare workers.
- \* parenting education
- \* encouraging workplace childcare

(ONTARIO POLICY KINGSTON, 1997)

## DAY CARE

Greens support the principle of universal access to flexible, private and publicly-funded, non-profit child care as well as the extension of government paid maternity leave and parental leaves. It is, however, important to recognize that many of the pressures for day care come from a consumer society in which parents both work to accumulate more belongings than needed for a balanced lifestyle. With the guaranteed annual income and community land trusts it would be increasingly less necessary for families to have two incomes to survive.

## SOCIAL WORK

Lack of funding to family services and the incredible caseload of social workers is crippling our ability to assist individuals to be active members of the community. Greens recommend an increase in

the funding made available to social workers and a reduction in the case load of social workers. Currently the caseload of social workers is as high as one worker dealing with 300 families. This should be reduced to 1/30 families. This massive increase in spending will be offset by a dividend of increased employment, increased detection of child abuse, sexual abuse and an increase number of individuals who become functioning members of society again. The cost of inaction is much higher than the cost of action.

We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control. (GREEN PARTY OF CANADA)

\* TO PROVIDE quality government or community funded childcare, including direct support of primary care givers, that meets the needs of children from infancy to adolescence, is universally accessible, and [is] responsive to the needs of parents and the community (POLICY CONVENTION, 1987).

## 73.0 Family

A. We will actively encourage the creation a financial support program which recognizes the right of all people to an acceptable quality of life, which gives only to those in need and which concentrates all available resources into one efficient system. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### 73.1.1 Single Parent Families

\* TO IMMEDIATELY RAISE IN THE short-term resolution, of the amount of money that welfare recipients may keep from their earned incomes POLICY CONVENTION, 1987.

### 73.2.1 Parental Responsibilities

73.2.1 Resolved that the Greens are committed to family legislation which encourages both parents in a separation or divorce to continue to be directly responsible to their children (e.g. visiting, attending school functions, providing clothes, etc.) POLICY CONVENTION, 1987

\* to [INSTITUTE] a system to ensure that both parents in a separation or divorce share the financial responsibility of caring for their children and establish a publicly funded enforcement system to ensure that both parents live up to this responsibility POLICY CONVENTION, 1987

\* TO [PROVIDE] resources to encourage and enable divorced or separated parents to resolve disputes without involving the court. (POLICY CONVENTION, 1987)

### Common law Relationship Act

\* TO introduce a Common-law Relationship Act, which would allow any two people who chose to live together the same benefits and recognition accorded to women and men in traditional marriages (POLICY CONVENTION, 1990)

\* TO amend any other legislation that discriminates against non traditional marriages or single people (POLICY CONVENTION, 1990)

F. We will expand the definition of family for the purpose of provincial benefits and tax treatment to include same-sex relationships. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Parental Responsibilities

\* TO [ENACT] family legislation which encourages both parents in a separation or divorce to continue to be directly responsible to their children (e.g. visiting, attending school functions, providing clothes, etc.); (POLICY CONVENTION, 1987)

\* TO {INSTITUTE] a system to ensure that both parents in a separation or divorce share the financial responsibility of caring for their children and establish a publicly funded enforcement system to ensure that both parents live up to this responsibility; (POLICY CONVENTION, 1987)

\* TO PROVIDE resources to encourage and enable divorced or separated parents to resolve disputes without involving the court. (POLICY CONVENTION, 1987)

#### Common law Relationship Act

\* TO introduce a Common-law Relationship Act, which would allow any two people who chose to live together the same benefits and recognition accorded to women and men in traditional marriages (POLICY CONVENTION, 1990)

\* TO amend any other legislation that discriminates against non traditional marriages or single people (POLICY CONVENTION, 1990)

#### 72.9.1 Green Day Care

\* TO PROVIDE /Resolved that the Greens advocate the provision of / quality government or community funded childcare, including direct support of primary care givers, that meets the needs of children from infancy to adolescence, is universally accessible, and [is] responsive to the needs of parents and the community. (POLICY CONVENTION, 1987)

## LABOUR

### Union Support

- To advance the ideal that all industrial production shall be ecologically sustainable; and

- To support the inherent right of workers' organizations to exist with all of their attendant democratic and legal rights and social and ecological responsibilities.

Because:

- workers have the right to withhold their services individually or collectively,
- workers have the right to negotiate the environmental conditions of their labour either individually or collectively,
- workers' organizations have value to their members and to society as a whole,
- the present affluence experienced in BC and the industrial world has been less the result of entrepreneurial expertise and workers organizations than of the careless abuse of the earth and its resources,
- the development of health and welfare programs brought about by the efforts of workers' organizations fall short by not addressing the most important problem of sustainability, and
- workers organizations should be encouraged to direct their activities to such things as:
  - a. environmental impact
  - b. full and meaningful employment
  - c. cooperative preventative community health care
  - d. opportunities for creativity in the enjoyment of leisure and retirement; and
- organizations have a vital role to play in the revitalization of the democratic processes; and
- considerable social and economic advances sought about by workers organizations have not been accompanied by care of the earth and its systems; (B.C. Convention 1990)

### Worker Owned Cooperatives

- To introduce a program to encourage the establishment of worker owned businesses, and to assist workers wishing to assume ownership of existing businesses.

- To ensure that such a program would assist worker owned businesses through low interest loans, free consultation services, technical assistance, and lower tax rates. This program would only be available to those businesses which meet strict environmental protection criteria as established by a Commission made up of representatives of environmental interest groups.

Because:

- it is vital that society provides all persons with an opportunity for meaningful work while at the same time producing goods and services only at an ecologically sustainable rate; and

- much of the wealth extracted from the planet is spent supporting enormous levels of bureaucracy, over management, and return for investors in the corporate world; and

- the never-ending battle between management and labour has led to ever larger, more efficient corporations, and bigger and bigger unions to fight the giant corporations, rather than smaller, innovative, and flexible businesses; and

- Greens support the concepts of local control, self-responsibility, and cooperativeness; (POLICY CONVENTION, 1990)

- To support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Regional Teacher Bargaining

- To support a district by district teacher bargaining process. (POLICY CONVENTION 1993)

## Mechanization

- To oppose the current federal tax deductions for mechanization (research and development and capital investment deductions) (ANNUAL GENERAL MEETING, 1995)

## WORK/JOB CREATION

- To support:
  - the expansion of non-job work in more self-sufficient communities in place of dependence on mega-projects and centralized and capital-intensive manufacturing processes.
  - encouragement of self-employment in local services and production.
  - work exchange, product exchange, barter, payment in kind service for family and community benefits.
  - job creation in smaller-scale energy development projects, in alternative technology, by public funding of recycling, conservation and environmental clean-up, by funding adequate child-care programs, in programs rooted in the community.
  - redirecting capital towards greater development of low cost housing and model ecological communities.
  - redirecting production towards sustainable technologies and methods.
  - a flexible system of job sharing and shorter work hours should be encouraged.
  - a minimum income scheme to support those who earn a low income or who work seasonally or part-time to replace the current welfare? system.
  - recognition and reward of the care of home and children.
  - encouragement of alternative life styles by making them economically viable.

In short: the development of an alternative society to replace our present industrial society which makes multitudes outcasts by leaving them unemployed, underemployed or with unrewarding employment.

(GREEN PARTY OF ONTARIO, 1994)

#### RESOLUTION: GUARANTEEING THE RIGHT TO SAFE, HEALTHY AND ENVIRONMENTALLY SOUND WORKING CONDITIONS

- To the right to safe and healthy working conditions

The States Parties to the present Covenant recognize the right of everyone to the enjoyment of just and favourable conditions of work, which ensure, in particular:

- remuneration which provides all workers, as a minimum, with:
  - fair wages and equal remuneration for work of equal value without distinction of any kind, in particular women being guaranteed conditions of work not inferior to those enjoyed by men, with equal pay for equal work (a) (i);
  - a decent living for themselves and their families in accordance with the provisions of the present Covenant (a) (ii);
- safe and healthy working conditions (b);
- equal opportunity for everyone to be promoted in his employment to an appropriate higher level, subject to no considerations other than those of seniority and competence...

(Art. 7 International Covenant of Civil and Political Rights, 1966).

- To enshrine the right to freedom of association

Everyone shall have the right to freedom of association with others, including the right to form and join trade unions for the protection of his

interests (Art. 22. 1 International Covenant of Civil and Political Rights, 1966)

- To ensure the right to form trade unions

the right of everyone to form trade unions and join the trade union of his choice, subject only to the rules of the organization concerned, for the promotion and protection of his/her economic and social interests. No restrictions may be placed on the exercise of this right other than those prescribed by law and which are necessary in a democratic society in the interests of national security or public order or for the protection of the rights and freedoms of others (Art. 8. 1.a International Covenant of Civil and Political Rights, 1966)

- To ensure the right to strike in conformity with the law

the right to strike, provided that it is exercised in conformity with the laws of the particular country (Art. 8. 1.d International Covenant of Civil and Political Rights, 1966)

## **DEPARTMENT OF INDUSTRY**

**DEPARTMENT OF INDUSTRY (\$3,502,284,000)**

**Rename the department of industry to the Department of "Just Transition"**

**Redirect 2,000,000,000 to fair and just transition programs for workers and communities affected by conversion of sunset industries to socially equitable and environmentally sound development and employment. In the 1999 Public Trust Green Budget there was a recommendation to relocate the funds in the Department of Industry away from subsidizing corporations and corporate-beneficial research. To address the challenges of the 21st century, Canada must move away from policies of economic growth at any cost. In the future, the Canadian government must act with foresight to prevent the entrenchment of**

**socially inequitable and environmentally unsound practices. Canada is in a situation where a transition and conversion policy is necessary to phase out, or ban socially inequitable and environmentally unsound practices. Public policies must direct public funding to ensuring a just transition for workers and communities economically affected by these transition policies. There must be a national commitment to implementing the public trust throughout the country with a fair distribution of the effects, and an obligation to communities and to maintain full income and all-inclusive targeted transition assistance for working people who are dislocated as a result of the implementation of specific policies until they can find comparable work. Workers and the communities affected by the policy must be involved in the decision-making process from the development of the terms of reference and throughout the process, and that the decision-making process must be based on the fundamental principles of Just Transition supported by respective unions. Redirect \$1,502,284,000 from the National Research Council and Natural Science and Social Science and humanities research to socially equitable and environmentally sound projects. The research must not be linked to industry or "partner-shipped with industry".**

**DEPARTMENT OF JUSTICE (\$885,697,000) -**

**The department should seek an advisory opinion from the International Court of Justice on whether Canada has been in violation of Canada's international obligations because of Canada's failure to enact the necessary legislation to ensure compliance. This recommendation builds on the recommendation from the 1999 Public Trust Green Comment that some funding should be redirected from the Justice department to the implementation of International law in Canada in recognition of the culmination of the Decade Devoted to the Furtherance of International Law in 1999. The Law Commission should recommend that the practice by developers of intimidating citizens and locally elected officials through law suits. be treated as a "criminal offence of intimidation". The section in the Criminal code on the dissemination of hate literature must be revised to correspond to the more stringent obligation contained in the International Convention on the elimination of all forms of racial discrimination. Human rights codes must include the following grounds:**

- race, tribe, or culture;**
- colour, ethnicity, national ethnic or social origin, or language; nationality, place of birth, or nature of residence (refugee or immigrant, migrant worker);**
- gender, sex, sexual orientation, gender identity, marital status, or form of family,**
- disability or age;**
- religion or conviction, political or other opinion, or - class, economic position, social conditions or other status;**

**(1966 International Covenant on Civil and Political Rights, and the 1966 International Covenant on Economic, Social and Cultural Rights, among others);**

**Funds should be redirected from Judges salaries to an Anti-Poverty fund for poor children and their families Funds should be redirected to support the**

**decriminalization of drugs and the implementation of other harm-reduction strategies including education and recognition of the substantive differences in the physiological and psychological effects of individual drugs and the need for regulatory regimes to reflect these differences ( such as the properties of individual substances, the consequences of their use and sale, and the consequences of attempting to prohibit, restrict, or control their sale and use.) (Budget 2000)**

## DEPARTMENT

Canadian Human Rights Commission

Canadian human Rights Tribunal

Commissioner for Federal and Judicial Affairs

Federal Court of Canada

Law Commission of Canada

Offices of the Information and Privacy commissioners of Canada

Supreme Court of Canada

Tax Court of Canada

### **Canadian Human Rights Commission**

### **Canadian human Rights Tribunal**

A Green Party government would undertake:

\* to ensure that the protection from discrimination should be inclusive of additional grounds that have been recognized since the adoption of the Universal Declaration of Human Rights in 1948. In this Declaration, there were listed a series of grounds concluding with the expression "other status" which indicated the intention to include other grounds as they arose. Through various human rights instruments, states have recognized the following grounds of discrimination: race, sex, gender, tribe, culture, colour, ethnicity, national ethnic or social origin, nationality of birth, refugee or immigrant status, marital status, different forms of the family, disabilities, age, language, religion or conviction, political or other opinion, nature of residency or other status.

\* to include sexual orientation as a listed ground of discrimination. in

all Canadian human rights documents, and to lobby for its inclusion in all international human rights documents.

\* to ensure the right to shelter, THAT IS AFFORDABLE, ACCESSIBLE, ENVIRONMENTALLY SOUND WITH TENURE SECURITY the right to food, the right to social security, the right to universal affordable quality education including the option of repaying student loans through community service, and the right to work in socially equitable and environmentally sound employment.

A Green party government would undertake:

### **Law [Reform] Commission of Canada**

\* to institute substantial reforms to the administration of justice within Canada, in terms of human rights, electoral and government reform, law enforcement and reform of the criminal code.

- TO establish an independent process for appointing the members of regulatory boards. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To advocate restorative justice: Justice should be restorative rather than retributive. Crime should be defined as a violation of one person by another, not as a violation of the state. The 80% of offenders who are non-violent should be sent directly to halfway houses. Sentencing circles should be used as an alternative to trial by judge and jury. (GREEN PARTY OF NEWFOUNDLAND).

### Crime Prevention

- To move away from a program of crime mitigation through incarceration to one of crime prevention through guaranteeing the rights to basic needs

\* To prevent CRIME THROUGH SOCIAL PROGRAMS and thus to reaffirm

the General Assembly resolution on Crime Prevention, and Criminal Justice, which stated “that crime prevention and criminal justice should be considered in the context of economic development, political, social and cultural systems and social values and changes, as well as in the context of the New International Economic Order” (2 Crime Prevention and Criminal Justice and development, the General Assembly Resolution, 1981)

- To support the call in Habitat II Agenda for the formation of lawful community-based crime prevention: “As appropriate, promote personal security and reduce fear by improving police services, making them more accountable to the communities they serve, and by encouraging and facilitating, whenever appropriate, the formation of lawful community-based crime prevention measures and systems” (91 d Habitat II)

- TO REDIRECT MISPLACED PRIORITIES RELATED TO CRIME—MITIGATION THROUGH INCARCERATION RATHER THAN PREVENTION THROUGH THE GUARANTEEING OF POSITIVE HUMAN RIGHTS—THE RIGHT TO SOCIAL SECURITY, HEALTH CARE, SHELTER, FOOD ETC. AS WAS UNDERTAKEN THROUGH THE INTERNATIONAL COVENANT ON SOCIAL CULTURAL ECONOMIC RIGHTS) (1998)

- to “promote, as agreed in Habitat II, crime prevention through social development by finding ways to help communities deal with underlying factors that undermine community safety and resulting crime, by addressing poverty, inequality, family stress, unemployment, absence of education and vocational opportunities, and lack of health care, including mental health services” (91 a ter. Habitat II)

- To prevent and reduce violence and crime, especially at the local levels, Governments, in partnership with all community-minded citizens and groups with a wide range of experience and expertise” including some members of the community that could be socially and environmentally disadvantaged by the decisions

- To prevent crime through guaranteeing of positive human rights—the right to social security, health care, shelter, food etc. as was undertaken through the International Covenant on Social Cultural Economic Rights), (1998)

- \* to institute a system of justice which fairly balances the right to due process with collective security and works to reduce crime through prevention, deterrence and rehabilitation.

- \* to institute an inclusive electoral political process which represents

both minority and mainstream views effectively.

∞ Senate reform

The Green Party of Ontario feels that the Federal Senate should be patterned after senate models that have been successful in other countries. In many European countries for example all significant constituencies are represented. Canadian constituencies might include: Geographic regions, native peoples, minority groups, and professions. Each constituency would be allowed seats dependent upon the number of members, they had in their organizations. Checks and balances would be instituted to guarantee gender parity and proportional representation. (GREEN PARTY OF ONTARIO, 1994)

\* to hold a referendum (either by preferential ballot or followed by a series of runoffs) giving Canadians the opportunity to set the direction senate reform should take.

\* TO IMPLEMENT SENATE ELECTED BY PROPORTIONAL REPRESENTATION (deferred resolution)

\* TO ABOLISH THE SENATE (Deferred resolution, proposed by Andy Shadrack)

## LEGAL REFORM

\* to implement anti-SLAPP legislation strictly limiting the rights of corporations to sue groups and individuals for pecuniary loss.

One of the fundamental tenets of Green Politics is Social Justice. Social Justice is achieved to a large extent through the legal system.

The law society of upper Canada mediates disputes between lawyers and clients. This is a body composed of lawyers. Lawyers determine the policy for judging the validity of a complaint. These

same lawyers also serve as directors of the lawyers professional indemnity company. How can they implement an impartial policy to judge a complaint when they are directors of the company that will have to pay if the complaint is valid? Clearly the law society has failed its obligation to provide the public with an independent body to hear complaints about legal practice.

Errors and omissions insurance exist to protect the public from lawyers who are incompetent, negligent, substance abusers or criminals. However, this system is flawed and rarely allows for the settlement of one legal wrongdoing without the hiring of another lawyer at considerable expense.

To restructure the legal system

system so that lawyers are not required

for many simple functions, such as wills, land transfers, divorce settlements. These functions can be more efficiently performed by paralegals and negotiators. (GREEN PARTY OF ONTARIO, 1994)

2: All legal documents must be written in plain English. (GREEN PARTY OF ONTARIO, 1994)

3: Registration of all wills. (GREEN PARTY OF ONTARIO, 1994)

4: Thumb print of lawyer required on all significant documents including land transfers and wills. (GREEN PARTY OF ONTARIO, 1994)

5: Lawyer discipline boards must be composed of publicly elected citizens. (GREEN PARTY OF ONTARIO, 1994)

6: Elections of all Judges at all levels. Judges are currently a patronage appointment. (GREEN PARTY OF ONTARIO, 1994)

7: Amend the Law Society of Upper Canada act meaningful full public participation and allow public access to Law Society records. (GREEN PARTY OF ONTARIO, 1994)

8: Remove the disciplining of lawyers from the mandate of law societies. Place them under the auspicious of the department of consumer and corporate affairs. (GREEN PARTY OF ONTARIO, 1994)

9: Provide funding for legal costs in cases involving Social Justice, employment equity, and Environmental rights.  
(GREEN PARTY OF ONTARIO, 1994)

Addictive drugs, alcohol, marijuana, tobacco

1: We do not encourage the use of drugs.

2: Illicit drug laws generally do more harm than the drug they attempt to control.

3: We do not support monopolies on production, rather we would like /

\* to regulate alcohol, tobacco and currently prohibited opiates, hallucinogens, stimulants and depressants (such as marijuana, heroin, cocaine, MDA, MDMA, LSD etc.) under the same legislation as one another.

- to promote local, small scaled production of alcohol rather than monopolies on production (GREEN PARTY OF ONTARIO, 1994)

- To Legalize and regulate the production and consumption of marijuana and hashish. (GREEN PARTY OF ONTARIO, 1994)

- To not tax "Brew your own" establishments. (GREEN PARTY OF ONTARIO, 1994)

- To introduce a deposit system which would require the return and filling of wine and liquor bottles. This would be a non tariff barrier to trade and encourage the local production of Wine, beer and alcohol. (GREEN PARTY OF ONTARIO, 1994)

- to advocate a significant reduction of provincial taxes on locally produced wine, beer, and alcohol. This loss of revenue

would be compensated for by increased local economic activity and improved efficiency. (GREEN PARTY OF ONTARIO, 1994)

- To enquire the listing of all additives on alcohol and tobacco products. (GREEN PARTY OF ONTARIO, 1994)
- To Legalize and regulate the use of stills by individuals for the production of fuel and consumable alcohol. (GREEN PARTY OF ONTARIO, 1994)
- To Treat hard drug use as a medical rather than criminal problem. (GREEN PARTY OF ONTARIO, 1994)

\* TO DECRIMINALIZE MARIJUANA, AND TO PROVIDE TREATMENT FOR ADDICTION FROM OTHER DRUGS (SEE PAPER CIRCULATED DURING ELECTION, SIGNIFICANT OMISSION IN PLATFORM AND RECENT B.C. RESOLUTION)

#### Tobacco restrictions

- TO [INFORM THE PUBLIC THAT Cigarettes cause 35,000 premature deaths annually which results in a yearly drain on the economy in lost income and medical costs of over \$5.2 billion as opposed to the \$3 billion the tobacco industry contributes to the economy through jobs and taxes. (UPDATE)
- To CLOSE / Entering into negotiations with the Federal government to close/ our borders to imported tobacco and ban the export of all tobacco products.
- TO Ban the advertising of all tobacco products. including the funding of sporting and cultural events.
- TO PROTECT Protecting the rights of non-smokers by banning smoking in any enclosed public place and on all forms of public transportation.
- TO SUBSTANTIALLY INCREASE /Substantial increases in/ penalties for the selling of tobacco products to minors.
- TO ban the/ selling of tobacco products from vending machines.
- TO REGULARLY CHANGE Strongly worded /, regularly changed/ health warnings on cigarette packages. (GREEN PARTY OF ONTARIO, 1994)

## **Supreme Court of Canada**

### Supreme Court judges

\* TO ALLOW PROVINCIAL GOVERNMENTS TO APPOINT SUPREME COURT JUDGES (DEFERRED RESOLUTION)

### Sentencing

\* TO EXPERIMENT WITH SENTENCING CIRCLES, IN WHICH MEMBERS OF THE COMMUNITY ARE INVOLVED IN METING OUT APPROPRIATE PUNISHMENTS, AS AN ALTERNATIVE TO JUDGES AND JURIES (DEFERRED RESOLUTION);

\* to keep non-violent individuals who are employed while under house arrest, on parole or performing community service.

\* TO INSTITUTE A REQUIREMENT TO COMPENSATE THEIR VICTIMS AND/OR PERFORM COMMUNITY SERVICE (DEFERRED RESOLUTION);

\* TO REVIEW DEFINING CRIME AS A VIOLATION OF ONE PERSON BY ANOTHER, RATHER THAN AS A VIOLATION OF THE STATE (DEFERRED RESOLUTION)

\* TO FOCUS THE SEARCH FOR JUSTICE ON REPAIR OF SOCIAL INJURY, THE RIGHTS OF VICTIMS, AND THE RESPONSIBILITIES OF THE OFFENDER IN FINDING SOLUTIONS (DEFERRED RESOLUTION)

\* TO EXPERIMENT WITH DEVELOPING DIALOGUE AND NEGOTIATION RATHER THAN ADVERSARIAL RELATIONSHIPS AND PROCESSES AROUND NON-VIOLENT CRIME, ESPECIALLY DIRECT INVOLVEMENT BY PARTICIPANTS; (DEFERRED RESOLUTION)

\* TO REVIEW REVISING THE YOUNG OFFENDERS ACT (YOA) SO THAT YOUNG CRIMINALS ARE ACCOUNTABLE FOR THEIR ACTIONS;

\* TO STUDY CHANGING THE YOA SO THAT YOUNG PEOPLE ARE CHANNELLED INTO ALTERNATIVE PROGRAMS; (DEFERRED RESOLUTION)

\* TO EXPERIMENT WITH VIOLENT CRIME SENTENCING WHEREIN THE PRIME OBJECTIVE IS TO PROTECT THE VICTIMS, FAMILY, NEIGHBOURS AND COMMUNITY FIRST, REHABILITATE THOSE WHO CAN BE, AND PROTECT THE COMMUNITY PERMANENTLY FROM THOSE WHO CANNOT BE REHABILITATED. (DEFERRED RESOLUTION)

\* to closely examine the use of sentencing circles, house arrest for non-violent crime, increased community service and civil suits for punitive damages to keep non-violent first offenders out of prison facilities.

#### Inter-species rights bill

\* to enact a bill of inter-species rights which would guarantee all species native to Canada the following rights:(a) the right to exist; (b) the right to exist in at least one geographical location without human interference;

(c) the right to access to food, clean water and clean air

\* to conduct a full review of government contracts, procedures, statutes and regulations to address other areas in which same-sex couples face systematic discrimination.

\* to redirect government gun control efforts as follows: (a) a ban on all assault weapons;(b) clearer regulation of gun storage OFF-SITE STORAGE OF ALL HUNTING RIFLES (DEFERRED RESOLUTION); (c) a program to phase-out handguns by tightening eligibility requirements over time; (d) a ban on large capacity magazines.

#### Environmental rights

\* to guarantee through legislation: a) the right to clean air; b) the right to clean water; c) the right to uncontaminated food

\* to empower Canadians whose environmental rights have been violated to take governments, corporations and individuals to court for violation of these rights.

#### Gun Control

We advocate:

- to ban on all assault weapons, handguns and large capacity magazines except for public servants in the pursuit of their duties. (GREEN PARTY OF ONTARIO, 1994)
- to Define and require strict storage of all firearms. (GREEN PARTY OF ONTARIO, 1994)
- to improve screening for the FAC and the restricted weapons permit. (GREEN PARTY OF ONTARIO, 1994)
- to Require FAC for ammunition purchases. (GREEN PARTY OF ONTARIO, 1994)

{TO CONSIDER THE USE OF GUNS FOR ABORIGINAL SUBSISTENCE LIFESTYLES} (PROPOSED ADDITION TO DEFERRED RESOLUTION)

Doctor assisted suicide and euthanasia

- to DECRIMINALIZE DOCTOR ASSISTED SUICIDE AND EUTHANASIA (1998)

Whereas between 1991 and 1995, on six occasions, individuals in Canada who openly admitted to compassionately helping others to die received a conditional discharge or a suspended sentence; and

- TO PROVIDE legislation is needed to allow euthanasia or assisted suicide not as a way of liberating encouraging the practice, but as a way of restricting it to the situations that we, as a society, deem appropriate; (Green Party of Canada )

- TO decriminalize doctor-assisted suicide (Green Party of Canada)
- to regulate eligibility for euthanasia; (Green Party of Canada )
- to establish a process that will require thorough family consultation and a specified waiting period for euthanasia; (Green Party of Canada)
- to narrow the definition of an offence of assisted suicide
- TO legalize assisted suicide and euthanasia under limited conditions (Green Party of Canada)
- to allow compassionate homicide as a criminal defence or change the punishment for assisted suicide (Green Party of Canada)

Charter of Rights and Freedoms

\* TO PROPOSE that the government of British Columbia propose and negotiate for the following changes to the Canadian Charter of Rights and Freedoms:

- 1 removal of the notwithstanding clause
- 2 removal of the demonstrably justifiable clause
- 3 addition of the following human rights: the right to clean air, the right to clean water, the right to uncontaminated food and the right to shelter

4 addition of a section covering inter-species rights including the right of every indigenous species in Canada to exist in its natural habitat

(B.C. POLICY CONVENTION, 1996)

**DEPARTMENT  
OF NATURAL RESOURCES AND ENERGY**

**NATURAL RESOURCES (\$713,039,000)**

**ENVIRONMENTALLY SOUND PRACTICES DEPARTMENT**

**Internationally Canada has undertaken to move away from logging old growth, to reduce greenhouse gas emissions, to conserve carbon sinks, and to conserve biodiversity, including endangered species, Funding must be redirected away from deregulation, voluntary compliance (ISO 14,000) to Mandatory International Normative Standards (MINS) based on international principles drawn from obligations incurred through conventions, treaties; and commitments made through conference action plans. There must be a phasing out of sunset industries (nuclear, fossil fuel) coupled with a fair and just transition program for affected workers and communities, and with the active promotion of environmentally sound alternative energy (as agreed to in numerous international agreements). All further transfers of Plutonium from dismantled nuclear weapons and sales of CANDU reactors must be prohibited.**

**Redirecting .696 billion into developing environmentally sound energy, transportation**

**Transferring .7 billion into developing environmentally sound energy, transportation and BEST (Best Environmentally Sound Techniques) practices. All decisions in this department including those related to forests must be in compliance with the Convention on Biological Diversity (invoking the precautionary principle to justify the banning of environmentally unsound practices that contribute to the reduction or loss of biodiversity) and with the Framework Convention on Climate Change (conserving carbon sinks)**

**All further promotion and sale of CANDU reactors cease including to those countries that are part of the CANDU Group (Korea - 2 sold and built 2 under construction; Argentina 1 sold and built; Romania 1 sold and built second half built; China sold loan 1.5 billion, Turkey current bid with possible loan. All subsidies to fossil fuel and nuclear industry must cease and funding redirected to conservation and to the development of environmentally sound alternatives such as solar, wind, and tidal etc.**

**\*Transferring 1.7 billion into fulfilling Canada's commitment at the Habitat II Conference to move away from car-dependency, reducing the ecological footprint, developing environmentally sound transportation. In addition to assist Canada in discharging its obligations under the Climate change Convention to reduce greenhouse gas emissions. (a Convention that Canada has been in violation of since Canada signed and ratified the Convention in 1992).**

## ENERGY

Use of non-polluting energy is essential to the security of the environment. Conservation of all sources of energy is vital to the future well being of the provinces. Modifications to human lifestyles which increase energy efficiency will support conservation. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Renewable Energy and Conservation

In view of global climate change and the dangers of radioactive waste, the Green Party suggests phasing out fossil fuels and nuclear energy in favour of renewable energy sources such as solar, wind, biomass, and micro-hydro. The transition to sustainable energy can be achieved through improved energy efficiency, conservation and co-generation. (GREEN PARTY OF NEWFOUNDLAND).

• to support the creation of, and already existing, areas in "soft energy" and conservation; (B.C. POLICY CONVENTION, 1986)

A Green Party government would undertake:

\* to change the focus of international energy assistance away from mega projects towards appropriately sized community planned and driven projects.

\* to prevent the transfer to other states of substances or activities that are harmful to human health or the environment.

\* to dismiss the use of "Prior Informed Consent" to justify the transfer of harmful substances; "the right to be harmed" is not a legitimate right.

\* to focus programs related to fossil fuel energy supply, production and consumption on reducing greenhouse gas emissions and other harmful environmental impacts.

\* TO oppose the export of electric power from the province; and (BC ANNUAL GENERAL MEEETING, 1986) AND CANADA

\* to stop sale of nuclear technology from Canada (technology for dealing safely with nuclear waste does not exist).

\* to eliminate subsidies to nuclear power and to fossil fuels and/or chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to eliminate subsidies for nuclear and fossil fuels and to raise taxes on them to reflect environmental costs.

\* to cease involvement in the CANDU owners' group, to end all subsidies to AECL and to cease to sell CANDU reactors internationally

\* to prevent the transfer of plutonium from dismantled nuclear weapons in Russia and the USA to be used in CANDU reactors

\* to discontinue all spending on nuclear energy research, including the subsidy to Atomic Energy of Canada.

\* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

\* to allocate a significant portion of energy research and development spending to support field trials and commercialization of renewable energy technologies to improve

their reliability, efficiency and competitiveness in Canadian and international markets and thereby accelerate their adoption by clients.

\* to immediately revise tax treatment of renewable energy and energy efficiency investments to make them at least as attractive to investors as investments in conventional energy sources (such as oil and gas) including changes to flow-through share eligibility to include development costs and elimination of the Specified Energy Property rules.

\* to redirect research and development spending to focus on [SOCIALY EQUITABLE AND] environmentally sound energy technologies.

A. We will encourage efforts to produce energy from renewable and non-polluting sources such as wind, sun and biomass. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To encourage recovery of waste energy through co-generation such as providing heat for buildings from cooling water at power plants

- To consider the negative impacts of the nuclear industry to outweigh its benefits. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\*TO DIRECT government and research aid be directed to support SOCIALY EQUITABLE AND ENVIRONMENTALLY SOUND alternate/appropriate energy sources (B.C. POLICY CONVENTION, 1986)

\* to accelerate investment in sustainable energy infrastructure.

\* to provide incentives to renewable energy producers and investors with a production credit of \$0.05 per kilowatt hour.

\* to implement an Energy Research & Development Act to divert in excess of \$1 billion in annual federal research and development spending to fund sustainable energy research and development.

## ELECTRICITY

The Green Party is committed to a non-nuclear future for Ontario. In Ontario 50% of our baseline electrical supply comes from Nuclear powered plants.

The dangers of Nuclear power include:

- It's association with the nuclear arms race.
- The lack of safe storage sites for radioactive wastes.
- The technologically and financially inability to decommission

nuclear reactors.

- The uneconomic nature of the technology.
- The bureaucracy of specialists required to operate the system.
- The long-term health risks associated with this technology.
- The diversion of capital from, and the inevitable undermining and suppression of competing alternatives.
- The resulting promotion of electricity waste instead of conservation.
- The inevitable catastrophic melt downs.
- It is inefficient, inflexible and unreliable.
- There are security risks.
- Uranium is a non-renewable resource that causes occupational as well as environmental destruction in its production and distribution.
- Ecologically acceptable alternative technologies are available in Ontario.

Nuclear power is only possible through a complicated system of subsidies and grants. The end of Nuclear power will only come about when market forces are imposed on Ontario Hydro.

The Green Party of Ontario advocates:

1: Removing all subsidies for hooking up new installations to the power grids. It currently costs Ontario Hydro in new capital expenditures \$ 50,000 to hook a new single-family residence with electric heating onto the Nuclear Grid in Ontario. This subsidy encourages the use of Nuclear power production over solar or co-generation. There would be no exemptions to this policy. The objective is to get as many homes and businesses off the power grid as possible.

2. Instruct Ontario Hydro to buy electricity from non-utility generators at full-avoided costs.

3: Hydro's own internal planning documents reveal that a 1978 inventory of undeveloped low-profile hydro sites of small to medium scale dams, extensions to existing powerhouses, and redevelopment of abandoned sites would generate 14,000 MW of peak electric power. This is 28 times the peak output of a Pickering sized plant.

Ontario Hydro's own studies indicate that hydraulic development after conservation could displace the need for Darlington, Bruce and Pickering nuclear power station. This power would be generated when needed as opposed to nuclear's 60% over production requirements to meet peak demand. It would be generated at about \$ 950 for each new kilowatt (1981) or about 1500% less than Darlington

4: Electricity is at its peak demand in Ontario during the winter months. This is also when 73% of Ontario homes are burning oil or natural gas to heat their homes. The Green Party advocates retrofitting through tax credits the purchase of co generation furnaces that generate electricity when they burn oil or gas.

5: A program of research and development should be implemented to enable all homes to have their own photo-voltaic cell generation system and or co-generation capacity.

6: The electric grid should be used as an electricity exchange system and a means of access to reserve supply from existing hydro-electric, solar and co-generation plants.

7: Hydro rate structure should be revised to Reward conservation and production rather than waste.

8: Remove the exemption from home owners and life insurance to

residents of Ontario in the event of a nuclear accident. Currently you are not insured if there is a nuclear accident. This would effectively end any discussions about the economics of nuclear power.

9: Divert Ontario Hydro's nuclear research funds and resources to developing sustainable soft energy alternatives.

10: Continue and expand conservation strategies.

11: New industries should be encouraged to build and maintain locally controlled generation systems.

12: Ontario Hydro's board should be elected not appointed.

13: Direct passive solar heating for homes and smaller public buildings and hot water heating are now economically viable when combined with insulation and R-2000 building design. Other forms of heating and cooling can be reduced to occasional supplementary use.

14: A vigorous campaign to create new home design and retrofit existing homes to the required standards to achieve this objective should be implemented immediately, supported by redirected research and funds no longer required for the nuclear power program.

15: Research to improve the efficiency of and control the pollution from wood-burning stoves.

16: Hydro should pay an amount equal to the full avoided capital cost to the consumer for improvements that result in lower electrical consumption. ENDANGERED SPECIES AND HABITAT ACT

ONTARIO???

D. WE will support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will instigate an independent audit of Alberta's remaining low-cost petroleum resources, so that Albertans can make informed decisions regarding exports of oil and gas and the long-term energy security of the province. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to spend 50% of energy research and development on renewable energy technologies by the year 2000

\* To give highest priority to the development of renewable energy resources and technologies such as wind, water, solar, and small scale geothermal (B.C. POLICY CONVENTION, 1986)

\* TO REQUIRE THAT 20% OF ELECTRICITY FROM GREEN SOURCES (WIND, SOLAR, BIOMASS, SMALL HYDRO AND COGENERATION OF ELECTRICITY AND HEAT) WITHIN TEN YEARS; (Deferred resolution)

\* TO CONVERT THE FEDERAL VEHICLE FLEET TO ELECTRIC, PROPANE, NATURAL GAS, ETHANOL, ETC., AS A MEANS TO REDUCE EMISSIONS OF CARBON DIOXIDE AND OTHER HARMFUL SUBSTANCES BY 50% WITHIN TEN YEARS; (Deferred resolution)

\* TO RETROFIT AND USE OF OTHER ENERGY EFFICIENCY MEASURES TO IMPROVE FEDERALLY OWNED OR CONTROLLED BUILDING STOCK BY 25% WITHIN FIVE YEARS AND 50% WITHIN TEN YEARS. (Deferred resolution)

\* TO IMPLEMENT A CARBON CONSUMPTION TAX TO GRADUALLY DOUBLE THE REAL PRICE OF THESE FUELS OVER A TEN-YEAR PERIOD. (Deferred

\* TO encourage [ENSURE] the construction of small decentralized power plants; and (B.C. POLICY CONVENTION, 1986) PROVIDING THAT THERE IS EQUAL ACCESS TO POWER AND PROVIDING THAT THERE IS A REQUIREMENT TO PROVIDE SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND ENERGY [

F. We will encourage small power producers to install power generation units which use renewable energy, and ensure that the electrical grid system buys surpluses at reasonable rates. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO support a change/raise in energy prices to true replacement costs for all users; and B.C. POLICY CONVENTION, 1986

\* TO support a change in rate structures to encourage conservation; and B.C. POLICY CONVENTION, 1986

\* To create regional soft energy supply councils to advise all levels of government on soft energy issues, with representatives from government, small soft energy companies, and interested groups and citizens (B.C. POLICY CONVENTION, 1986)

\* TO support the replacement of coal-fired thermal generating plants as soon as possible and oppose the construction of any new coal-fired facilities (B.C. POLICY CONVENTION, 1986)

\* TO support transitional financing to municipalities instituting biomass conversion [of non-toxic organic wastes including sewage solids]; (B.C. POLICY CONVENTION, 1986)

## WATER

\* TO oppose the export of water from the province (B.C. POLICY CONVENTION, 1986) AND FROM CANADA [SEE PRESS RELEASE SUPPORTING GOVERNMENT ON POSITION OF BANNING EXPORT OF WATER]

\* to ensure that water is not declared to be an "economic good"

\* to prevent any privatization of community water systems.

## MINING

\* TO PLACE a moratorium on offshore oil drilling; and B.C. POLICY CONVENTION, 1986

\* to review the mining industry establishing mineral conservation, environmental protection, and human safety (B.C. B.C. POLICY CONVENTION, 1986)

The Ontario ministry of Northern Development says the mining industry's "right to mine" should be given top priority. But the mining industry does not always act in the best interests of Native peoples, the citizens of the province, local communities, or the variety of life forms with which we share this planet. The Industry has diverted rivers, drained lakes, acidified the delicately balanced soils of northeastern Ontario, and laid barren the entire Sudbury basin. The impact of mining on the Northern environment must be minimized to protect wildlife habitat, aesthetics and spiritual values. Mining practices reflect total disregard for the biosphere. Legislation has reduced some of the extreme examples, however, we feel there is still a long way to go.

Therefore, we recommend:

- Investigations to plan for restitution be paid to Native peoples in Ontario
- Prohibit mine exploration and other mining activities in wilderness areas, parks, areas of natural and scientific interest and other environmentally significant areas.
- Require public notification, independent baseline flora and fauna studies, and an outline of planned habitat protection measures.
- Designate all proposed new mines and mine related activities under the environmental assessment acts.
- Zero discharge of toxins from mines. Emissions of pollutants must be reduced to zero. Refer to section on zero discharge.
- Require on-site treatment of all mine waste water and tailings leachate before it is released into ground water or adjacent water bodies.
- Require a closure plan, including financial assurance to be filed for public review 30 days before a new mine or mine related facility can be approved. Require a closure plan and financial assurances for all existing mines
- Tax mining production to more accurately reflect the costs to the public and the environment.
- Phase out of Uranium mining in Ontario.

(GREEN PARTY OF ONTARIO, 1994)

\* TO ban the mining and export of uranium (B.C. POLICY CONVENTION, 1986)

## Uranium Mining

TO ban the exploration for and the mining of uranium in the province{S}, and the transport of uranium {WITHIN PROVINCES, AMONG PROVINCES AND OUTSIDE OF CANADA} BECAUSE OF THE HAZARDS OF RADIOACTIVITY IS UNSAFE FOR LIFE

AT ANY STAGE FROM EXTRACTION OF RAW MATERIALS TO DISPOSAL (. B.C. POLICY CONVENTION, 1987)

## FORESTRY

Our forests are among our most valued ecosystems. Stewardship of this resource must include the protection of the ecosystem as well as support of the communities which are dependent on forest industries. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To develop regulations whereby the forest industries will be integrated into local sustainable economies. We will prevent the exploitation of the forest for the export of raw resources by multinationals corporations. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- to recognize that Forests belong to future generations and provide habitat for other species. clear-cutting should be banned and the remaining 1% of old growth should be preserved. Higher stumpage fees would encourage selective cutting, and value-added production creates more jobs than exporting raw logs. Hemp and kenaf should be grown as alternative sources of paper fiber. (GREEN PARTY OF NEWFOUNDLAND).

- To support and work toward

legislation and regulations to accomplish the following:

a) That 20% of public land in Ontario be preserved.

b) Wildlife species and their habitat will be protected by a system of wildlife preserves in all vegetation zones and ecosystems, surrounded by buffer zones and connected by corridors, reproduced at all scales to the smallest, in all areas including rural agricultural and residential areas, and urban areas, with the goal of having all recoverable species which were present in 1500 in each vegetation zone, widely present in the same zone in the future, except that in the deciduous forest zone large predators and elk may be limited to one or a few large tracts.

c) The province and municipalities will accept co-responsibility

with the federal government for the protection of wildlife and habitat.

d) Forested areas will be managed so as to at least cycle through a relatively lengthy stage in which the species composition and water quality (as far as water quality is controllable by land use) is the same as before European settlement, and that if because of timber cutting or other land use practices the species complement is temporarily reduced, it can and will replenish itself from the surrounding area. Management practices will include the maintenance of a sufficient number of standing dead trees and downed trees to maintain all species.

e) Forest management practices for timber will be directed at producing product which is high in value per unit of volume, and is suitable to have high value added to it, preferably locally. Management practices will favour multiple tree species and multiple use, and will aim at a steady state forest of mixed tree species, wherever practicable.

f) There will be developed a pattern on forest management by local communities, including First Nations communities, within provincial guidelines, suitable for general application.

g) Forest areas which cannot be regenerated will not be cut.

h) Management practices will avoid effects on water quality and flow significantly greater in magnitude and duration than those which may occur naturally through seasonal changes and short-term cyclical climatic changes.

0) Taxation of forested land will be reformed to eliminate incentives for the liquidation of biological capital, in the form of the standing stock of trees and the other species which depend

on them.

j) Stream banks, in agricultural areas and elsewhere, and their surroundings which are essential for the preservation of stream water quality and species composition, will be maintained in appropriate native vegetation. Areas to be protected from cultivation, planting, grazing, and food and vehicle traffic, will be strictly delineated. Where necessary or appropriate, conservation easements or land will be purchased and held by the province, by conservation authorities, or by other public bodies.

k) Protected strips along streams will be integrated with wildlife corridors and walking trails, (generally at one edge) where appropriate, as will steep slopes. Flood plains will be used for corridors, buffer zones, and preserves where appropriate. (ONTARIO POLICY KINGSTON, 1997)

The goal of an ecological forest management strategy should be to protect the resource for the future use of all species and yet at the same time provide long term employment.

To this end it is imperative that we:

-Ease the pressure on forest ecosystems by promoting improved efficiency in resource use. As an example, we must implement a system of converting used lumber products in wood composite products.

-New forestry leases should only be granted to individuals. These leases would be inheritable so that an individual who was steward to the land could pass it on to his children. These land grants would be no larger than 5,000 acres to any individual family.

These "new foresters" would be educated to ensure that harvesting

/ silvicultural techniques used were appropriate to facilitate successful regeneration.

-Banning of clear-cut forestry. Clear cutting is not forestry. It is a crime as morally abhorrent as rape. Maximum sizes of cuts must be legislated and appropriate densities of trees after harvesting as well as unharvested buffers must be mandated.

-Cooperatively run sawmills and pulp facilities would process the harvest. Provincial loan guarantees should be made available to purchase existing facilities from non residents.

-Developing a value-added forest economy that reflected the needs and goals of the community. Legislate that 50% of the harvest must be processed within that community.

-Establishing urban forests. Provide funds for the establishment of forests near the sources of consumption. The goal being to make all bioregions in the province as self sufficient as possible.

-Incorporating environmental costs into forest product through full cost accounting. This could be instituted through stumpage fees that reflected the true costs of sustainable forest management.

-Incorporating forest values and other uses into the timber planning process. This involves developing quantifiable objectives for non-timber values such as genetic diversity, recreation, water yield and quality, wildlife habitat. These should be identified as distinct components of forest management and integrated into existing timber and other related management guidelines.

Identify and protect the forests by

-Establishing and publishing comprehensive annual inventories

-Establishing as a target the protection of 50% of all standing forest for Wildlife / recreation reserves. In these areas only

forestry that enhances the health of the ecosystem would be allowed.

-Banning forestry in other areas of ecological significance.

-Undertake site rehabilitation and planting as necessary on previously cut and burned sites that are failing to regenerate naturally.

-Extend protection to all remaining old growth forests. ONTARIO POLICY, 1994)

## FORESTRY THE ALGOMA HIGHLANDS

The Algoma Highlands contain the unlogged headwaters of the Mississagi, Batchewana, Goulais, Montreal, West Abinandong, and Nushatogani Rivers. 100 Km. north of Sault Ste. Marie and 80 Km. east of Lake Superior. During the 80's and early 90's clear-cut logging began to encroach on the area. Now further large scale logging operations are being planned. This area is home to Ontario's largest areas of dense unlogged old-growth sugar maple, yellow birch and white pine forests. This area contains a tremendous variety of plants and animals including wolves and other species that survive best in undisturbed landscapes. High quality wilderness experiences as well as fly-in hunting and fishing recreational activities are possible because of the Algoma Highlands' rich diversity of life. This area could act as a hunting, fishing ecological and recreational reserve which would help to protect traditional land uses in the region.

Ontario is divided into 13 ecological site regions which are subdivided into 65 ecological site districts. The Green Party of Ontario government is committed to protecting 50% of

representative areas of each ecological site district in Ontario.

The Algoma Highlands area straddles the boundary of two ecological site districts, one of which has no representative protected areas while the other is only partially represented. The Algoma Highlands could be part of an international program to link protected areas across the continent. The Highlands could become an important reference point for ongoing scientific study. The Canadian Forestry Service, Canadian Wildlife Service and the Ministry of Natural Resources are all conducting research in this area.

• To Recommend:

1: The Algoma Highlands be set aside as a wilderness preserve where there would be no further commercial resource extraction activities.

2: That the proposed Farewell Lake Rd. and Toll Creek Rd. that threatens to bisect the Highlands be stopped.

3: Only activities that do not threaten the old-growth red and white pine forests in the areas be permitted to take place in this area.

4: Withdraw approval for the construction of a large new mill in the area. This mill was approved without public consultation.

5: Release of the draft Gap Analysis Report for Site District 4E3, which rated this area as worthy of protection, be immediately released, since it is critical to the full examination of land use alternatives.

\* TO support the immediate retention of all [remaining] ancient forest [canopy]. (B.C, ANNUAL GENERAL MEETING 1993)

\* TO support non-violent civil disobedience aimed at opposing the accelerating "high-grading" of the last stands of old growth forests. (B.C, POLICY CONVENTION, 1987

#### 15.1.1 Local Sustainable Forests

\* TO develop policies whereby the forest industry and its products would be gradually integrated into local sustainable economies and cease to be primarily for international export (B.C. POLICY CONVENTION, 1986); and

[\* TO BAN ALL FURTHER RAW LOG AND LOG EXPORTS AND STIMULATE LOCAL VALUE-ADDED PRODUCTS]

\* TO ban on the export of raw logs. (B.C. POLICY CONVENTION, 1986)

\* TO encourage pilot projects regionally in ecologically sustainable [SELECTION] logging practices and in regeneration of severely damaged forest areas. (B.C. POLICY CONVENTION, 1986, 1993)

• To permit only those forestry methods which are ecologically economically sustainable. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\*TO HOLD the perpetrators of /such damage/ [ENVIRONMENTAL DESTRUCTION OF THE FORESTS] be financially responsible (B.C. POLICY CONVENTION, 1986, 1993)

\* TO PROPOSE that such regeneration programs involve the training of cooperative groups to live and work in such designated areas (B.C. POLICY CONVENTION, 1986, 1993)

\* TO support and develop eco-empathic practices of forest management leading to a variety of sustainable uses; (B.C. POLICY CONVENTION, 1986) and:

\* TO REQUIRE SELECTION LOGGING OR ECO-FORESTRY

\* TO ENSURE that some /forest resources/ FORESTS MUST /may also/ be designated as minimal or no-use areas in the form of wilderness zones or spiritual sanctuaries. B.C. POLICY CONVENTION, 1986

## Bioregional Forestry

\* [TO ADVOCATE, UNDER A FRAMEWORK OF OVERARCHING PRINCIPLES] greater control of [FORESTS] /forest resources/ by bioregional organizations, whether municipalities, local communities, local co operatives, or small business, from the perspective of sustainable yield of forests for the purpose of providing long-term local employment and a secure local economic base, and for the purpose of developing and disseminating cultural and educational values for the bioregional forest ecosystems. (B.C. POLICY CONVENTION, 1986)

\* TO increase in stumpage fees to a level to allow for reforestation of logged lands; and (B.C. POLICY CONVENTION, 1986)

### 15.5.1 Community Forest Boards

\* TO SUPPORT THE ENTRUSTING [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES], OF citizens of communities with the long-term care and use of the public forests (B.C. POLICY CONVENTION, 1987)

\* TO PHASE OUT existing tenure system of corporate forest use (B.C. POLICY CONVENTION, 1987)\* TO TRANSFER THE CARE OF THE FORESTS to the citizens of the watershed area, and that these citizens can implement a diversity of tenure best suited to the particular needs of their region [WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES] (B.C. POLICY CONVENTION, 1987)

\* TO ENABLE each watershed region, elect a Community Forest Board which shall ensure the responsible care and protection of the watershed forests. (B.C. POLICY CONVENTION, 1987)

\* TO promote policies which recognize that water is the connector in all ecosystems, including forests, and therefore must receive critical attention (B.C. POLICY CONVENTION, 1987)

\* TO REQUIRE AND promote policies which recognize the importance of maintaining intact forest soils (B.C. POLICY CONVENTION, 1987)

\* TO support the creation of elected Regional Forest Boards with a majority representation of citizens, and with native, labour, environment, and business representatives to oversee planning, inventories, ecological concerns, forest use allocation, and other aspects of human interaction with the forests; and(B.C. POLICY CONVENTION, 1987)

\* TO [PASS LEGISLATION] /support legislation/ to end large scale tenure for corporations or individuals, replacing it with a long term system of [SOCIALY EQUITABLE AND ENVIRONMENTALLY SOUND] /sustainable woodlots/, subject to periodic review by the local Forestry Board [WHICH FUNCTIONS WITHIN A

FRAMEWORK OF OVERARCHING PRINCIPLES.] (B.C. POLICY CONVENTION, 1987)

\* TO GIVE the local forestry Board the power to revoke tenure; and (B.C. POLICY CONVENTION, 1987)

\* [TO PHASE OUT] /support phasing out of/ the involvement of large corporations in timber harvesting or reforestation, permitting instead only small-scale businesses to do this work /while processing work may still be done by the larger businesses/ (B.C. POLICY CONVENTION, 1987)

\* TO [ALLOW FOR] stumpage fees TO be determined by the local Forest Boards and/or a council representing all regional Forest Boards, and that the stumpage fees be sufficient to cover all costs of forest use including [ /IMPLEMENTATION OF LOCALLY BASED FOREST OPERATIONS WITH SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND PRACTICES] /road building, reforestation, ecological impact studies, etc/

\* TO support a policy of broadening the selection process for forest ministry staff to include any citizens with appropriate skills, knowledge, or experience; and (B.C. POLICY CONVENTION, 1987)

\* TO DEVELOP AND PROMOTE /development of/ an apprenticeship program for professional foresters whereby extensive practical experience (several years) [IN ENVIRONMENTALLY SOUND SELECTION FORESTRY] will be part of becoming a registered professional forester; and (B.C. POLICY CONVENTION, 1987)

\* TO DEVELOP AND PROMOTE /support the development/ of a marketing system for small producers of forest products; (B.C. POLICY CONVENTION, 1987)

\* TO DEVELOP AND PROMOTE Extension programs for the public to assist people in following ecologically sound forest practices. (B.C. POLICY CONVENTION, 1987)

\* TO EXPAND SILVICULTURE to include [ENVIRONMENTALLY SOUND] /sustaining a/ mix of life forms and processes within a long term / [ENVIRONMENTALLY SOUND] /sustainable/ plan. From this point of view, all logging decisions must be married to forest rebuilding decisions, so that these functions are not being determined by different people or at different times. This plan must recognize that profits that may be deferred by ecological logging practices can be expected to be regained through decreased silvicultural expenses. The goal of silviculture shall be to maximize natural regeneration by promoting partial cut methods which maintain an uneven edge forest. (B.C. POLICY CONVENTION, 1987)

## Residency Requirement

\* TO GIVE priority in tenure and cutting rights to applicants meeting bioregional residency requirements to be regulated by Community Forest Boards through watershed management districts. (B.C. POLICY CONVENTION, 1987)

## Forest Management

### POLICY CONVENTION, 1987

\* TO PHASE OUT CURRENT METHODS in favour of more ecological methods; (B.C. POLICY CONVENTION, 1987)

\* TO END ALL DISPUTED LAND USE /the disputed land use/ until an arbitrated settlement is reached if there be a dispute of decision between the elected watershed Forest Boards, (B.C. POLICY CONVENTION, 1987)

\* TO establish a council of Forestry Board representatives to function in the arbitration process [OVER DISPUTED LAND USE]; and (B.C. POLICY CONVENTION, 1987)

\* TO end all use of pesticides in forest management strategy; and (B.C. POLICY CONVENTION, 1987)

\* TO REPLACE large scale clear cutting as a forest management strategy WITH ecological /models of cutting/ SOUND. [SELECTION LOGGING] (B.C. POLICY CONVENTION, 1987)

## Slash burning

\* TO BAN prescription burning (slash burning) of wood waste following timber harvest [BECAUSE IT] is accompanied by the production of potentially toxic, complex organic hydrocarbons (organic pyrosynthesis) including dioxins, and P.A.H.s.; and (B.C. POLICY CONVENTION, 1989)

\* TO BAN prescription burning of forest lands [BECAUSE FOREST LANDS] previously treated with herbicides and/or pesticides adds significantly to this medical risk by providing precursors for the pyrosynthesis of these hydrocarbons; and (B.C. POLICY CONVENTION, 1989)

\* TO end all slash burning in BC, as a regular practice and instead implement alternatives to slash burning such as chipping and composting; and (B.C. POLICY CONVENTION, 1989)

\* TO IMMEDIATELY IMPLEMENT an air quality monitoring system sophisticated enough to assess pyro synthetic hydrocarbon pollution due to slash burning (B.C. POLICY CONVENTION, 1989)

\* TO CANCEL FOREST TENURES OF logging firms whose deferred taxes amounting to more than \$9 billion at the end of the fiscal year 1993/94, have not been paid by the end of each fiscal years have their logging tenures canceled and that they be required to pay all deferred taxes plus interest before being considered for new tenures. (ANNUAL GENERAL MEETING, 1995)

## **DEPARTMENT OF NATIONAL REVENUE (\$2,533,507,000)**

**Maintain a universal accessible non-two tier non-privatized, public health system with an emphasis on preventive medicine. Redirect 3 billion from the current military budget into Department of Finance for transfer payments for health. Instituting a health promotion and disease prevention program through invoking the precautionary principle including eliminating environmentally induced health risks. Funding must be redirected to research into prevention of environmentally induced illnesses. Replace the current food guide with a new Canada food Guide based on the recommendations of the Physicians committee for responsible Medicine (PCRM) as a model. The current Canada Food Guide should be replaced by a New Canada Food Guide based on the recommendations of the Physicians Committee for Responsible Medicine (P.C.R.M) as a model. A New Canada Food Guide will recommend the New Four Food Groups which the P.C.R.M. recommends, i.e. (1) fruits, (2) vegetables, (3) grains, and (4) legumes with other items mentioned as foods that people may choose to eat, but not recommended as ideal or necessary for health. Human right to safe, unadulterated food must be guaranteed.**

cost of the federal and provincial sales taxes

**FINANCE (\$63,718,189.000) Surplus transfer 12 billion**

**Auditor General should be elected by an all-Party Committee. Apart from the Commission on Sustainable Development, there should be a position to determine the comparative legitimacy of the nature and type of expenditures and not just the auditing appropriateness. Examine COMER's banking reforms.**

**CITIZENSHIP AND IMMIGRATION (\$758,325,000)**

**Canada must discontinue socially inequitable and environmentally unsound international investment that contributes to the development of economic and ecological refugees. It would be important for the Department to acknowledge the role that Canada plays in contributing to the displacement of people. The Department must ensure that the Citizenship Act is not unjust and discriminatory and is in compliance with international law; and that the Act incorporates the recommendations of the Coalition for the rights of Immigrants and Refugees. The Act must not (i) discriminate on the grounds of social condition by giving priority to privileges of affluent applicants by bringing government policies in line with "the forces of globalization" (ii) penalize immigrants who may have inadvertently misrepresented her/himself on an application; (iii) discount the time spent in Canada as being counted for residence status; (iv) continue the use of terms such as "crime", abuse" and maintaining the safety of society which send a message that immigrants are dangerous; similarly or such as "illegal" being used to designate refugees; (v) permit excessive new powers of the Minister to annul citizenship or of the Cabinet to refuse citizenship on the basis of undefined 'national interest; (vi) download the costs of language and skills training to community groups and individual immigrants and refugees and their sponsors; (vii) intimidate potential sponsors with threats of law suits when failure to support sponsored immigrants occurs. The Government must implement the Convention for the Protecting of Refugees, and must sign and ratify and implement the Convention for the Protection of Migrant workers and their families.**

## **PARLIAMENT (\$310,272,000)**

**Salaries of each Parliamentarian should be reduced by \$10,000 and the savings transferred to the Department of Public Works and Government Services into initiating a fund to assist in fulfilling the human right to housing (@\$3,00,000) and to the Department of Human Resources into the Anti-Poverty Fund. Each Senator's salary should be also reduced by \$10,000 and the (@\$1,000,000) savings transferred into the above funds. The criteria for selection of senators should be changed from the whim of patronage to the commitment to merit based on life time contribution to the promotion of the Public Trust.**

Parliament

Senate

Library of Parliament

## **PRIVY COUNCIL (\$271,182,000)**

**The Election's Act should be revised to require full disclosure of donations to political parties not only when given directly to the political party and during an election but also when given to regional associations and to candidates, and leadership campaigns outside of elections. Corporate donations should be disallowed. The inequitable "first past the post system"-- which contravenes Section 15 of the Charter should be replaced with some form of mixed proportional representation system". The fact that representatives, from NGO's with charitable status, run for political office should not jeopardize the charitable status of the organization. Funding should be redirected to extending the role of the Auditor General's Commission on Sustainable Development to assess the governments' level of compliance with international agreements and to creating an additional position for assessing the substance of government spending.**

## ELECTIONS CANADA

### RECALL

- enact a law whereby if an electoral district requests with reason a member of parliament to be recalled, that person must resign his/her seat as a member and an election to be held with 60 days to fill the vacant seat (GPC, 1990).

- Recall could be initiated by any person within an electoral district by collecting signatures, on forms to be made available by the electoral officer

- Recall would require signatures of 20% plus one of the eligible voters [of the electoral district] verified to be accurate by the [district's returning officers, [[who would implement the recall]]] (GPC, 1990). Verification by the returning officer would be in the form of a poll whereby all eligible voters [within the electoral district] may take part, as if an election was being held. this may happen only once between general elections [and only once] per [electoral district]

A Green Party government would undertake

\* to phase out limits to democratic participation such as \$1000 deposits required for federal candidates.

Alternative voting systems

Proportional representation

The present electoral system in Alberta and in Canada [throughout Canada] creates governments which are not representative of the population. The Green Party would introduce a system of proportional representation, similar to that used in /most developed countries/. [countries]. Some seats would be contested according to our present system, and some seats would be allocated in proportion to the total votes cast for each party. This will encourage participation by all citizens and reduce conflicts caused by regional differences. (RENEWAL OF DEMOCRACY GREEN ELECTION PLATFORM Alberta, 1997)

ELECTORAL REFORM

Our electoral system is surprisingly undemocratic. In:

-1979 Joe Clark formed a government with 36 % of the popular vote, the Liberals received 40 % of the vote.

-1980 Trudeau received a solid majority with 44 % of votes cast.

-1988 Mulroney won with 43 %, he then pushed through the F.T.A..

The Liberals and N.D.P. received 52 % of the vote opposed it.

-1990 Bob Rae received a solid majority with 36 % of the vote.

-1991 the N.D.P. in B.C. and Saskatchewan are in power with 65 % of the seats and less than 40 % of the vote.

-1993 the Conservatives received 2 million votes and only 2 seats.

As well as producing undemocratic results, the system is not open to all Canadians. During election campaigns, millions of dollars are spent on advertising and campaign tours. This media saturation works and it strongly favours the party with the most money. As a result, the party in power generally represents the

interests of those that can provide the most financial support---big businesses and wealthy individuals. If the interests of the majority of Canadians are to be fairly represented by our governments, it is critical that we remove the advantages of spending power in election campaigns. (GREEN PARTY OF ONTARIO, 1994)

## PROPORTIONAL REPRESENTATION

Our current electoral system undermines Canada's democratic integrity as political parties usually win a solid majority of the seats while only capturing a minority of the total votes.

In 1993, the Liberal Party won 60% of the seats with only 41% of the vote. the current system also makes votes unequal depending on who you vote for.

For example, in 1993, the Bloc Quebecois elected 54 members with 13% of the vote while the Progressive Conservatives won just two seats despite having 16% of the electorate supporting them. this means that it took more votes to elect one PC Mp than any other party.

## RESOLUTION ON PROPORTIONAL REPRESENTATION (carried with amendments)

Whereas it is desirable that representation in the legislature accurately reflect the opinion of the voters, and that major changes in the structure and function of the Government of Ontario shall not be undertaken without a consensus among legislators and voters, therefore be it resolved that the Green Party of Ontario advocates a system of proportional representation for elections to the Ontario legislature, and be it further resolved that the Green Party of Ontario will support and work toward legislation embodying the following measures:

1. A Royal Commission shall be established to investigate and present to Ontarians the major possibilities for electoral reform encompassing the selection of MPPs from single-member

constituencies by a majority rather than a plurality method, and alternatively, systems of proportional representation, and the Royal Commission shall present succinct analyses of the merits and demerits of each choice together with references to more detailed analyses and studies.

2. The systems of proportional representation presented shall include those offering voters a choice among candidates of the same party in multi-member constituencies, as well as systems in which the order of election of individual candidates of the same party is determined by the party alone.

3. A referendum, preferably at the same time as a general election, shall be held to permit the voters to choose among the systems presented by the Royal Commission.

4. The voting method used for the referendum shall be one which selects as far as possible a system approved by the majority of Ontario voters, and it shall be one of: a decision tree, or the single transferable vote (preferential vote or alternative vote), or the approval vote, or a combination of two or more of these systems. (ONTARIO POLICY KINGSTON, 1997)

### Proportional Representation

The Green Party suggests switching to proportional representation so that when a party receives 15% of the popular vote it would also receive 15% of the seats in Parliament. We would oppose paid political advertising and political donations. Instead all parties should receive equal access to the media and funding. (GREEN PARTY OF NEWFOUNDLAND).

### Participatory Democracy

Proportional representation provides an electoral system that

produces governments which are responsive to the will of the electorate. Under the current system, a party could win 20% of the vote across Canada and not receive a single seat in Parliament. Proportional representation means that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties.

Our democracy regularly disenfranchises 1/3 of the electorate by not representing them in the legislature and places people in power who do not have the approval of the majority of the voters.

-1979 Clark won with 36 % of the vote, the Liberals lost with 40.

-1980 Trudeau won a majority with only 44% of the votes.

-1988 Mulroney received 43 % of the vote, he enacts the F.T.A.. The Liberals and N.D.P. opposed it and received 52% of the vote.

-1990 Rae receives a solid majority with 36 % of the vote.

-1991 N.D.P. in B.C. and Saskatchewan are in power with 65% of the seats and less than 40 % of the vote.

-1993 Conservatives receive over 2 million votes and 2 seats.

Webster's dictionary defines democracy as "government by the people; especially, rule of the majority." By this definition Canada is only occasionally a democracy.

Whatever the divisions between Ontario and Quebec and the rest of Canada, they are reinforced by our voting system. To gain power a party need only win the majority of seats in Ontario and Quebec. Thus, the interests of the other eight provinces and the two territories are secondary. Major parties choose candidates particularly in winnable seats, who are predominantly middle-aged, middle-class, white males who have a tendency to be lawyers. Only 10% of MP's are women yet more than half the population is female.

Countries using a proportional voting system elect woman in far greater numbers. Parties no longer represent an ideological perspective, rather they pander to the lowest common denominator during an election in a cynical attempt to get 40% of the vote and then implement their hidden agenda during their tenure.

Most countries use proportional representation in national elections. This leads to coalition governments that more accurately reflect the population. Many have noted that Canada is best governed under a minority government because like a government elected under the proportional representation system they are forced to work together in the common interest of voters. Our system leads to a strong government that does not have to moderate its opinion with the views of others. The greater danger lies in the current system's ability to elect governments that represent only a minority of the electorate, but have an unassailable majority in Parliament.

We favour the additional member system of proportional representation practiced which maintains constituency links. The system regionally "tops up" seats, which means almost all voters will be represented by a regional MP from his or her preferred party.

The Green Party advocates:

1: The Green party advocates replacement of the present first-past-the-post electoral system with the additional member system of proportional representation as practised in many countries. This implies that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties. This system maintains constituency links by

regionally "topping up" seats so that all voters will be represented by a regional MP from his or her preferred party.

2. No advertising by political parties, governments or special interest groups. The positions of the parties would be presented in free and equal time/space in the national media. The individual candidates would be presented to the community by door to door canvassing, "town hall" meetings and by free and equal time/space in the local media.

3. Each party and each candidate would be given, from public funds, sufficient monies to cover only basic office expenses. Additional spending would not be permitted.

4: The Green party advocates banning of non reusable or recyclable lawn signs used during political campaigns. They are wasteful of resources and perpetuate a very shallow level of participation of the public in electoral politics.

5: A binding "none of the above" option on the ballot, if none of the above receives the most votes a new election would be triggered.

6: A binding legislative initiative, referendum and recall authority for voters.

\* to reform our current electoral system along the principles of proportional representation where a party receives a number of seats equal to their share of the vote.

\* to promote proportional representation for its positive effect in electing more women and minorities to parliaments around the world.

\* to recommend a Promotional Representative system similar to that used in Germany and New Zealand, where political parties hold seats after passing a 5%-threshold of the popular vote.

\* to encourage the use of the mixed-member-proportional system where Canadians would vote twice: once for their local representative (as they do now) and once for the

party of their choice (which would determine how many seats a party can have). Such a system would ensure Canadians have both personal and political representation.

- To create an Independent Assembly of CANADIANS /Albertans/ which will examine and make recommendation on all processes involved in provincial and municipal governments. Priority would be given to the following issues: (ALBERTA GREEN POLICIES, ALBERTA 1997)

I. Alternative methods of electing our representatives in government, for example proportional representation (ALBERTA GREEN POLICIES, ALBERTA 1997)

II alternative methods of government which would encourage cooperation between political parties instead of the present adversarial relationships

III the right of recall of MLA's (ALBERTA GREEN POLICIES, ALBERTA 1997)

## 21. RESOLUTION ON ELECTORAL REFORM FOR ONTARIO MUNICIPALITIES

(carried as is)

Whereas the interests of citizens in municipal government as at other levels of government are best served by the accurate representation of voter opinion on municipal councils and in the selection of mayors, by the avoidance of artificial dominance by minority groups, and by the avoidance of vote-splitting in mayoral elections, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. In Ontario municipal elections for mayor or reeve, the voting method employed shall be the single transferable vote (preferential vote or alternative vote), or if the municipality so, chooses, the approval vote, whether the electorate is the voters at large or the council.
2. Elections for municipal councils in Ontario shall be conducted by the single transferable vote in constituencies each electing

not less than three members of council using the Droop quota and Gregory transfers.

### 3. Definitions:

Approval vote: the method in which each voter may give one vote only to as many candidates as he or she considers acceptable, and the single candidate with the most votes wins election.

Single transferable vote: the method in which each voter allocates a rank or preference number to as many candidates on the ballot as he or she wishes or the law prescribes, and where there is more than one place to be filled (member to be elected) in a constituency, a quota is established, and initially any candidate having a number of first choice (rank or reference number 1) votes equal to or exceeding the quota is elected and any surplus ballot papers bearing surplus votes for such candidates are transferred to the candidates of next preference number on the ballot paper, and after the transfer of surpluses the candidate with the least number of first choice plus transferred votes is dropped from consideration, and that candidate's ballot papers are transferred to the candidates having the next preference rank on each ballot, and the process continues until the required number of candidates either meets the quota or has more votes than the single remaining alternative.

Alternative vote: the single transferable vote applied to the filling of one place or the selection of one choice, as in a mayoral election or the selection of a councilor or MPP from a single-member ward or constituency.

Drop quota: the number obtained by dividing the total number of

valid votes cast in a constituency by a number which is one more than the number of places to be filled (members to be elected) and increasing the result to the next whole number.

Gregory transfer: the method of transferring surplus votes by transferring all of the candidate's votes but giving each vote a fractional value equal to the number of surplus votes divided by the candidate's total number of votes, so that  $s/c \times c = sc/c = s$ , thus, making the number of votes transferred to each remaining candidate the same however many times the count is repeated.

(ONTARIO POLICY KINGSTON, 1997)

Voting in government

- To Allow all elected representatives TO participate in the process of government THROUGH free votes in most circumstances. (ALBERTA GREEN POLICIES, ALBERTA 1997)

Financial Reforms

**(ii) institutional collusion which continues to occur through the condoning of corporate donations to political parties;**

The Elections Act failed to substantively address a loophole where contributions to constituency associations and to candidates, including leadership candidates, outside of the formal election period are not presently required to be disclosed thus permitting questionable and undisclosed corporate contributions.

SMP SYSTEM PERPETUATES THE FAILURE TO DISCLOSE SOURCE OF DONATIONS

SMP SUPPORTS THE CONTINUATION OF CORPORATE FUNDING

The Liberals, Reform and Progressive Conservatives have about 75% of the seats. All three parties accept corporate funding from the Banks, financial institutions, greenhouse

gas producers (oil, coal and gas, automobile, forest companies); mining industry, chemical industry; pharmaceutical industry, agribusiness industry, tobacco companies, food chains and restaurants nuclear industry; gun lobby (Reform) military industries etc.... "unethical screen) through which they pass political donations, it is not surprising that there is the lack of political will to establish strong mandatory guidelines to regulate industry. Given that 75% of the elected representatives are dependent on these donations there is little likelihood that they would support a clause in the Election's Act preventing corporate funding and permitting only individuals to contribute to political parties, given that only individuals vote.

In the international sphere, it is deemed to be illegal for Canadian corporations to give money to elected officials in governments outside of Canada (this practice is referred to as "bribery" in Canadian law, see EDC document prepared for Globe 2000).

- The Elections Act failed to substantively address a loophole where contributions to constituency associations and to candidates, including leadership candidates, outside of the formal election period are not presently required to be disclosed thus permitting questionable and undisclosed corporate contributions.

Canada has international made a commitment to reproductive health which includes the right to choose an abortion. If Canada does reverse this, they would have international repercussions.

## Political Donations

- To support and work toward legislation embodying the following measures and principles:

1. Corporate contributions to Ontario political parties, constituency associations, and candidates shall be unlawful, and effective penalties shall be provided.

2. Individual contributions shall be limited to a total of \$ 2000 per calendar year plus \$ 2000 per election period, to all parties, constituency associations, and candidates combined, throughout the province.

3. The Ontario political contribution tax credit system for contributions from individuals shall be maintained substantially as it exists at present.
4. Election subsidies payable to candidates and parties shall be calculated on an amount per vote obtained, and there shall be no minimum vote requirement to qualify for subsidy.
5. Legislation on political financing shall be designed on the assumption that it is desirable to facilitate the establishment and growth of new political parties in order to encourage the development of new ideas and policies and to promote a healthy competition among parties. (ONTARIO POLICY KINGSTON, 1997)

Strategy for funding political parties:

- (a) The Ontario Commission on Election Finances shall make annual payments from provincial funds to registered parties and constituency associations, to a total amount which shall cover the greater part of their total expenses averaged over election and non-election years.
- (b) The amount distributed to each party and constituency association in each year shall be determined by allotting to each Ontario resident who files an income tax return and his or her adult dependents, for the preceding calendar year, a sum such as a dollar to be divided among the registered parties as the tax filer or adult dependent sees fit, and an equal sum to be divided in the same proportions among the registered constituency associations of the various parties in the constituency in which

the tax filer resides.

(c) The distribution shall be accomplished by providing to each Ontario tax filer and adult dependent along with the income tax return, a machine-readable form which shall bear the name of each registered party and the address, telephone number and email and website address of its provincial headquarters, and opposite each party name the form shall bear outlined squares to some such number as ten, each square having some such nominal value as ten cents.

(d) Each tax filer or dependent shall darken a number of squares representing the total amount which he or she has been allotted to divide among the registered parties, and shall return the form to Revenue Canada with his or her tax return, and Revenue Canada shall enter upon each form the tax filer's postal code in machine readable form so that from the postal code the tax filer's constituency of residence may be determined, and so that from that point on the necessary calculations up to the issuance of cheques can be completely computerized and can be accomplished economically.

(e) If the tax filer or dependent does not darken the correct number of squares then the sums allotted to that person shall be distributed in proportion to the number of squares actually darkened.

(f) If the tax filer or dependent does not fill out the form in a usable manner, or at all, then the sums allotted to that person shall be distributed according to the average of all those forms which were filled out in a usable manner.

(g) If a registered party does not have a registered constituency

association in any given constituency, then any sum which may have been allocated to that nonexistent constituency association shall be paid to the registered party in a manner which permits the party to identify the constituency in respect of which the money has been paid.

(f) The Commission on Election Finances shall enter into a contract with Revenue Canada under which Revenue Canada shall distribute, collect and process the forms, shall store them until the following general election, shall preserve the confidentiality of the information contained on the forms, and shall perform the necessary calculations except those under subsection (g) above.

(ONTARIO POLICY KINGSTON, 1997)

#### 19. RESOLUTION ON ONTARIO MUNICIPAL ELECTION FINANCES (carried with amendments)

Whereas it is desirable that municipal politics shall be conducted in the interests of citizens rather than in the interests of businesses or real estate developers, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. Corporate contributions to the election campaigns of candidates for mayor and councilor in Ontario municipalities shall be unlawful, and effective penalties shall be provided.
2. Contributions from one individual to the election campaigns of candidates for mayor and councilors in Ontario municipalities shall be limited to a total of \$ 500 for all candidates combined in all Ontario municipalities during and for any one election

period. 3. Individual contributions shall be creditable against Ontario income tax payable, to the extent of 75% for the first \$50 and 50% for the next \$ 100, and this credit shall be in addition to the credit for contributions to provincial parties, constituency associations, and candidates. (ONTARIO POLICY KINGSTON, 1997)

- to replace paid political advertising and political donations with equal access to the media [delete: and funding for all parties (GPC, 1996)

- \* to impose strict limits upon election campaign spending, and particularly limit amounts raised from vested economic interests such as corporations and unions, and eliminate refund of 22.5%

- TO reform regulations for financial contributions to political parties and electoral campaigns so that only individuals who are qualified to vote may donate. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO mandate that all political party advertising will be paid for by the political party itself. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### DONATIONS

- TO reform regulations for financial contributions to political parties and electoral campaigns so that only individuals who are qualified to vote may donate. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to eliminate the use of funds by incumbent and government parties during the pre-election writ period.

- \* TO PROPOSE THAT during a provincial election campaign no political party or candidate would be permitted to spend directly or indirectly more than \$50 (indexed for inflation) per eligible voter in the riding (POLICY CONVENTION, 1987)

- \* TO PROPOSE THAT no political party or candidate for elected office be permitted to receive more than \$3000 per year from any one individual or other agency (POLICY CONVENTION, 1987)

#### Equal access to media

- \* to ensure equal access by all registered political parties to publicly regulated media during elections

## Boundary redefinition

- TO establish an independent process for defining new electoral boundaries. Consideration will be given to bioregional differences, and only a 10 % variance in population will be permitted. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Fixed term

- \* TO PROPOSE that the provincial legislature should be moved to fixed-term sessions, with regularly scheduled elections except when there is a motion of non confidence (POLICY CONVENTION, 1987)
- To move to a fixed four-year term for Provincial Governments and we will mandate at least two sittings of the legislature per year. (ALBERTA GREEN POLICIES, ALBERTA 1997)

To ensure that all Canadian citizens have the opportunity to choose, in a referendum, among proposals for electoral reform from all political parties and other citizens' groups (ANNUAL GENERAL MEETING, 1995)

- To advocate that the constitutional amendments include: most of the legislators elected by proportional representation (% of votes received = % of seats received) (ANNUAL GENERAL MEETING, 1995)

some legislators elected by district and the majority by party list

legislative representation for parties receiving 2% or more of the provincial popular vote

provisions for parties and independents receiving less than the minimum to assign their votes to another candidate

district representation for isolated and distinct areas

no discrimination based on the wealth or income of a candidate, party, or referendum committee, etc.

the right of each voter to be informed of all candidates', referendum committees' and parties' electoral information

ample, equal and free broadcast time for all candidates on all broadcast media, spending limits in each electoral district

door-to-door enumeration of voters to revise a permanent voters list for all levels of government

### Electoral Reform Regulations

- To enact the following:

- a) abolition of election fees and deposits

- b) spending limits in each electoral district indexed to the median provincial income (plus travel allowances in non-urban ridings)

- c) distribution of paper and electronic copies (including recorded copies for the visually impaired) of "voters' booklets" to each voter including statements from each candidate (in their electoral district) and

statements from each party and referendum committee

- d) closure of all businesses and government offices on polling day except for essential, news media, and electoral services

- e) possible incentives to attend the polls or disincentives to shun the polls  
(ANNUAL GENERAL MEETING, 1995)

### Grass Roots Democracy

- To endorse the principle that all government should be decentralized to the most appropriate human scale; and (POLICY CONVENTION, 1986)

- To endorse the principle that all people should have the opportunity to be directly involved in the decisions that affect their lives through direct participatory democracy; and (POLICY CONVENTION, 1986)

## 1. Government reform

TO PROVIDE SYSTEMS FOR /provide/ all citizens with the opportunity to have input into the decisions which affect their lives. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- To endorse the principle that the local community or neighbourhood and its watershed is the basic unit of self-government since it is the locus of direct democracy, human-scale institutions, and fine-grained adaptation to place; and
- To endorse the principle that government at regional and provincial levels would serve primarily as coordinating bodies needed to accomplish larger cooperative projects, as well as arbitrate disputes, address broader human and non-human interests, and provide information and expertise. (B.C. POLICY CONVENTION, 1986)
- TO increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997) [WITHIN A FRAMEWORK OF PRINCIPLES]

## **DEPARTMENT OF PUBLIC WORKS AND GOVERNMENT SERVICES (3,811,119,000)**

**Funds relocated from Parliamentarians (@\$3,00,000,000). from Senators (@1,000,000) from Governor General budget (@\$3,00,000).to Human Right to Housing fund. At Habitat II (1996) Canada made a commitment to develop environmentally sound human settlements in consultation with community organizations and individuals, particularly those that have been traditionally marginalized from the decision-making process. Ensuring that all Canadians have access to housing is not only the right thing to do but also is a human right recognized under the International Covenant of Cultural and Economic Rights, 1966. Redirect, as proposed in 1999, \$1.63 billion from Department of Public works to implement commitments made though Habitat II, in particular, funds from Canada Mortgage and Housing should be redirected to guaranteeing the human right to housing.**

## HOUSING:

The Ontario Greens believe that decent housing is a universal social right and utilitarian necessity. The primary obstacles to home ownership are policies that encourage an increase in population which increases the demand on existing housing. This facilitates an environment of land speculation and created scarcity.

There is a need for housing in 4 general categories

- 1) Privately owned homes
  - 2) Coop housing
  - 3) Rental accommodations
  - 4) Social assisted housing
- 1) Privately owned homes

A Green government is committed to encouraging home ownership by implementing the following policies.

1: The Green Party of Ontario is committed to entering into negotiations with the Federal government to regulate the funds raised from R.R.S.P.'s to be used solely for the purpose of providing mortgages for Canadians.

2: We are also committed to government support for the creation of community land trusts.

A community land trust is a non profit corporation which owns land. It leases the land to individuals according to the use value of that land. Our needs for land are many and often in conflict. Land can provide all the things we need if we plan carefully and

secure local control over land use decisions. The central principal motivating a land trust is that buildings, and all things done in or on the land should be owned by individuals, but the land itself should be owned by the community as a whole.

A land trusts primary function is to buy or accept gifts of land and lease it back to members under a 99-year lease that is automatically renewable and inheritable. Part of the process is determining, in conjunction with land use planners, local government and the community at large, the most appropriate use for a given parcel of land.

The business of the land trust is conducted by a board of governors elected by the membership. Members are encouraged to join or form committees to address particular issues of land use. The Community Land Trust allows people to buy a house for what it is worth without having to buy the artificially inflated land that it sits on.

The lease restricts the resale price of the home to the value of the building and other improvements in or on the land, that is the cost of rebuilding the same house and grounds again at the time of the sale. This makes it's affordable for every subsequent buyer, not just the first. No one buying the house will have to pay for the inflated price of the land. The return to the seller is therefore, equal to the increase in the price of building materials and labour in the area. The same holds true for commercial land and farm land. A leaseholder owns, buys and sells the result of real work, not the result of speculation.

At its core the community land trust is a management group. It can work flexibly with individuals or organizations to accomplish the

objectives of the community for agricultural, commercial, industrial, open spaces, or other land uses. Community land trusts are not abstract theories but living working organizations. There are dozens of land trusts in existence in North America today.

## 2) Coop housing

For first time and low-income home buyers as well as for other tax payers the most cost-effective way to acquire a home is through A Co-op. In co-ops, individuals work together to build (sweat equity), organize and, maintain their homes. Government loan guarantees, small grants as seed money and zoning changes are all that is needed to provide individuals with their own homes. Personal initiative and pride will finish the project.

## 3) Rental accommodations

In a society freed from an expanding population and land speculation rental properties could be returned to the free market. For the large numbers of people who for whatever reason don't want to own a home, or be part of a co-op, rental accommodation must be made available. Greens do not see rent controls as being desirable, they are however necessary in our current economic climate.

## 4) Social assisted housing

The Green Party of Ontario is committed to policies which facilitate decent, permanent shelter for those in need:

We are committed to making changes to the zoning regulations of our province which will encourage a mix of housing alternatives in every community.

New communities (and renovated older communities) would be required to have as a percentage of total houses built:

1: More options for temporary housing must be provided such as

Group homes and temporary shelters, Rent-subsidized, public housing.

2: Every neighbourhood should have councils to consider building permits which would ensure that every development would have a range of price variations.

LAND USE Refer to Insert

The objective of Green land use policy is to

- 1: Ensure that land is used in a frugal fashion.
- 2: Ensure that our cities and its inhabitants consume as few resources as possible
- 3: Ensure that land use planning and development practices in urban and rural Ontario consider the present and future environmental, social and economic needs of all species in the Province.

To that end we recommend:

- 1: Improved land use planning through meaningful public participation in land use planning at all stages of development.
- 2: Mandate full intervenor funding for all Ontario Municipal Board hearings.
3. Restrict strip development through the development of Greenbelts around urban areas.
  
4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood. (GPO, 1994)

5: The establishment of model ecological communities based on our definition of sustainability. (Section 1)

6: The identification of areas of ecological and cultural value.

And the protection of these areas with strong legislation that provides jail terms for individuals who ignore land use guidelines.

This would be accomplished through a new Heritage Act which would outline strict provincial guidelines expanded to cover the natural heritage of the rural landscape i.e., agricultural land, wood lots, heritage buildings, wet lands, coastlines and waterways.

7: The protection of all Class 1 and 2 farm land in Ontario without exception. Policies to be adopted that will make farming a viable alternative is outlined in community land trusts and agriculture sections.

8: Improved wildlife and wetland habitat conservation and restoration, wilderness and public recreation parks.

9: Establish a program to set aside 50% of Ontario's landmass in wilderness parks and biological preserves. The objective being to protect representatives of all-natural ecosystems and species in Ontario. (GREEN PARTY OF ONTARIO, 1994)

## DEPARTMENT OF TRANSPORT

### TRANSPORT (911,872,000) -

**Redirect funds to promote environmentally sound alternative transportation. At Habitat II (1996), Canada made a commitment to move away from car-dependency; the question is no longer whether or not to move away from car-dependency but how. At UNCED (1992), Canada made a commitment to promote environmentally sound public transportation. Substantial funding should be redirected to preventing harm through regulation not through “clean-up and mitigation”, and to enacting legislation across Canada to ensure compliance with the Convention on Biological Diversity, including Endangered Species legislation and with the previous obligation incurred in response to the Framework Convention on Climate Change--reduction of CO2 emissions 20% from 1990 levels by the year 2000= through removing subsidies to fossil fuel companies and through moving away from car dependency.**

**Redirect funding to developing environmentally sound transportation across Canada and to revitalize the railway system.**

### GRANTS

Programs and Divestitures

Airport etc

Highway subsidy including bridges

\*Marine St Lawrence

Pedestrian Communities and Rail

Trains concentrate development while cars encourage sprawl. Greens would revitalize the rail system for long-distance haulage and passenger travel. We envision gradually

rebuilding all urban areas into pedestrian communities, interconnected by surface light rail, making the private automobile redundant. (GREEN PARTY OF NEWFOUNDLAND).

A Green government would undertake:

- \* to move away from car-dependency as agreed to at the Habitat II Conference (1996).
  - \* to tax all vehicles to pay for the damage they do to the roads and environment.
  - \* to design all highways to serve first walkers, then cyclists, then public transport, then other forms of transport.
  - \* to design taxes and support research to build an efficient, cheap automobile, suitable for rural use, the range to be suitable for the user to travel to the nearest rail station;
  - \* to actively promote the use of rail for all heavy loads, and extend the rail network to serve all urban locations conveniently.
  - \* TO REVITALIZE THE RAIL SYSTEM FOR LONG DISTANCE HAULING OF GOODS, AND INTER-COMMUNITY PASSENGER TRAVEL; (deferred resolution)
  - \* to actively promote and extend light rail transport for all city and inter-city travel
  - \* to adopt the green transportation hierarchy: walking, bicycles, transit, and lastly private automobiles.
- III We will encourage the use of public transportation, car pooling, bicycling and walking in order to reduce urban air pollution. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- \* to promote the reformation of cities to an aggregate of neighbourhoods, to minimize the need for travel.
  - \* to advocate that the heaviest loads should be, where possible, carried by water;
  - \* to de-emphasize the use of air transport or eliminate it if surface transportation is faster.
  - \* to promote environmentally-sound transportation systems that contribute to the development of Ecocities.

- TO MOVE AWAY FROM CAR-DEPENDENCY, BY INSTITUTING APPROPRIATE REGULATIONS, PHASING OUT THE USE OF THE AUTOMOBILE AND ADOPTING OF ENVIRONMENTALLY SOUND TRANSPORTATION SUCH AS BICYCLE PATHS (1998)

- TO DEVELOP TRANSPORT POLICIES THAT EMPHASIZE MOBILITY ALTERNATIVES OTHER THAN THE AUTOMOBILE, DEVELOPING ALTERNATIVE FUELS AND ALTERNATIVE FUEL VEHICLES, IMPROVING THE ENVIRONMENTAL PERFORMANCE OF EXISTING MODES OF TRANSPORT, AND ADOPTING APPROPRIATE PRICING (1998)

- TO URGE "CAR-DEPENDENT" STATES, PARTICULARLY THOSE THAT ARE PROMINENT IN THE AUTOMOBILE INDUSTRY, TO BEGIN TO PHASE OUT THE USE OF THE AUTOMOBILE, AND TO STOP PROMOTING THE AUTOMOBILE IN THE DEVELOPING COUNTRIES (1998)

- TO URGE THE CURRENTLY "NON-CAR-DEPENDENT" STATES TO HELP THE CAR-DEPENDENT STATES TO CHANGE, AND TO NOT IMITATE THE HARMFUL PRACTICES OF THE CAR-DEPENDENT STATES (1998)

- \* TO MAINTAIN PUBLIC ACCESS TO CURRENTLY UNUSED RAIL RIGHTS-OF-WAY (Deferred resolution)

- \* TO GRADUALLY CONVERT URBAN AREAS TO PEDESTRIAN COMMUNITIES CONNECTED BY LIGHT RAIL (Deferred resolution);

- \* TO ESTABLISH A GOAL OF BRINGING PLACES OF WORK, LIVING, AND RECREATION CLOSER TOGETHER (Deferred resolution);

- \* TO MAKE TRANSIT PASSES TAX FREE (Deferred resolution).

- \* TO REQUIRE ALL THOSE BUYING CAR LICENCE TO ALSO BUY PUBLIC TRANSIT PASSES, REDUCE THE COST OF PUBLIC TRANSIT PASSES AND INSURANCE TO ACCOMMODATE THIS REQUIREMENT (PROPOSED IN PETITION CURRENTLY BEING CIRCULATED)

- \* TO "INCLUDE IN AUTOMOBILE LICENSE FEES" AND "THE COSTS OF POLICING", INSERT "AND FUEL TAXES". THEN THE CONTRIBUTION

WOULD DEPEND PARTLY ON THE AMOUNT DRIVEN, AND NOT ONLY ON THE PERIOD FOR WHICH THE VEHICLE IS LICENSED. (Deferred resolution) OBJECTION BY ANDY SHADRACK, BECAUSE THIS WOULD UNFAIRLY PENALIZE PEOPLE IN RURAL AREAS WHERE ALTERNATIVES TO PRIVATE VEHICLES DO NOT EXIST]

NOTE: GREEN PARTY OF CANADA IS INVOLVED WITH DRAFTING OF A PETITION ABOUT MOVING AWAY FROM CAR-DEPENDENCY TO BE PRESENTED TO THE FEDERAL GOVERNMENT AND TO THE UNITED NATIONS

\* TO [ACT ON THE CONCLUSIONS OF] the international Conference on the Changing Atmosphere, held June 27 30, 1988, in Toronto sponsored by Environment Canada that unless we act immediately, the climate though the production of greenhouse gasses would seriously alter the earth; and (B.C. POLICY CONVENTION, 1990)

\* [TO PUBLICIZE] one of the most important sources of greenhouse gases is the burning of fossil fuels, which produce carbon dioxide; B.C. POLICY CONVENTION, 1990

\* TO work toward and introduce legislation to drastically cut the use of Automobiles in urban centres through/by:

Increasing the use of public transportation (which is wheelchair accessible); B.C. POLICY CONVENTION, 1990

Car pooling programs wherever possible including programs oriented toward neighbourhoods as well as business; (B.C. POLICY CONVENTION, 1990)

Increasing the use of public transportation, including minibuses, increased subsidies of public transport; (B.C. POLICY CONVENTION, 1990)

Bicycle programs to encourage cycling including bicycle coordinators and specialists in government departments, advertising bicycle use, more and better bicycle routes, bicycle racks, carriers, and areas on public transportation; (B.C. POLICY CONVENTION, 1990)

Walking programs to increase walking including core district pedestrian only areas; (B.C. POLICY CONVENTION, 1990)

Municipal legislation restricting automobile use; (B.C. POLICY CONVENTION, 1990)

(B.C. POLICY CONVENTION, 1990)

Crown Corporations and Transportation Boards

\* TO MOVE ICBC, BC Transit, BC Rail, and the transport component of Cycling BC under the authority of the ministry of transportation. (B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE THAT THE] focus of the ministry of transport should be to modify current transportation facilities to better accommodate cyclists, buses, railways, and other more energy efficient forms of transportation. (B.C. POLICY CONVENTION, 1993)

• To support education and research into energy-efficient homes, businesses and government offices. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO CREATE a broad-based advisory council to have input in major transportation decisions. (B.C. POLICY CONVENTION, 1993)

\* TO immediately PLACE a moratorium on construction of the Expressway until a comprehensive regional land use and transportation plan is formed. (B.C. POLICY CONVENTION, 1993)

\* TO ALLOCATE resources to making the existing Island Highway safe. (B.C. POLICY CONVENTION, 1993)

## TRANSPORTATION

The Green Party of Ontario sees the current transportation system and the structure of our cities as unacceptable due to their wastefulness. We are opposed to the current use of the automobile. We opposed to the design and construction of cities that place the accommodation of automobiles above the health and happiness of the

occupants of a city. Our cities should be designed so that a car is not required because services and jobs are designed within walking distance of where people live. Current land use patterns are unacceptable.

The problems of our present transportation system

1: Our current system is heavily subsidized. In Ontario alone the total subsidies to Automobiles are estimated to be in excess of five billion dollars a year.

2: Exhaust from cars is responsible for global warming, acid rain, respiratory ailments and deterioration in the urban environment.

3: The infrastructure that supports the automobile wastes land that should be used for agriculture, wild life restoration or recreation.

4: Facilities for automobiles are expensive and cause more traffic, congestion and suburbanization.

5: Cycling and walking are dangerous because of the Automobile.

6: There are negative social and environmental consequences associated with the procurement and transportation of oil.

7: Private automobiles are directly responsible for 5,000 human and 3,000,000 animal deaths in Ontario every year.

Green transportation policy:

The Green Party of Ontario is dedicated to cleaner, cheaper, more energy efficient and safer forms of transportation, which will be accessible to everyone. The Greens intend to encourage a reduction in the total volume of road traffic. These general objectives can be achieved through the following specific policies:

1: Modify the zoning of cities to bring places of work, living and recreation closer together.

- 2: Remove all subsidies to the private automobile, Include in the licence fee for a private auto the and costs of Police, Hospitalization, pollution cleanup, road construction, and maintenance of the road network.
- 3: Revitalize an efficient rail system for long distance haulage of goods and for inter-community personal travel.
- 4: Legislate as a maximum displacement of 1 litre for vehicles licensed and used for personal transportation in Ontario.
- 5: Maintain public access to currently unused rail rights of ways.
- 6: Yearly safety checks on all vehicles using Ontario roads including a strict enforcement of automobile emission regulations.
- 7: Promote cities where people do not need to commute and commodities are transported by rail.
- 8: Introduce taxing systems that reflect the long term ecological costs of transportation services.
- 9: Require any car owner served by public transit to present a valid yearly transit pass at the time of vehicle licensing.

Politics is no longer defined by the struggle between the Left and the Right. The politics of the 21st century will be divided between the Green and the Grey: between those who see the Earth as an interconnected web of life, and those who see it as a collection of resources to be exploited for maximum short-term profit. (GREEN PARTY OF NEWFOUNDLAND).

In a Grey economy, the worth of vanishing species and natural resources is disregarded because these cannot be easily quantified. Instead economic indicators rise with every automobile accident, with every oil spill, and with every newly diagnosed cancer patient.(GREEN PARTY OF NEWFOUNDLAND) .

In a Green economy, progress would be redefined to stop counting the liquidation of nature as income; corporations would be held responsible for their products from cradle to grave; new economic indicators would be applied to account for the social and ecological costs of products and services; and to create jobs, income and consumption taxes would be replaced with environmental taxes. (GREEN PARTY OF NEWFOUNDLAND) .

#### Tax Bads NOT Goods

The Green Party suggests shifting taxes away from personal income and onto non-renewable resources, and eliminating taxes on ecologically benign products and processes. Green taxes reward sustainable businesses and penalize resource-intensive industries. Reducing income taxes and payroll taxes makes people less expensive to employ. (GREEN PARTY OF NEWFOUNDLAND) .

#### GREEN JOBS NOT PINK SLIPS

There are many more jobs in a Green economy than in a Grey economy. A Green economy is labour-intensive, sustainable, based on the skills of people, and produces quality products from local resources incorporating local culture. (GREEN PARTY OF NEWFOUNDLAND) .

#### *10. UNIONS AND IMMIGRATION (carried as is)*

*Proposed: That the sentences, "A maximum income would allow the outlawing of strikes which have become intolerably exploitative of the general public. Unions would not be needed to confront power since power would be more broadly shared." be removed from the Green Party of Ontario Policies, Section on Economics, subsection, Minimum and Maximum Income. (GREEN PARTY OF ONTARIO, 1994)*

## ESTABLISHMENT OF PROVINCIAL L.E.T.S.

Economics serves the political objectives of elite establishments. Resource depletion and long term sustainability in general, are ignored as external costs. A healthy sustainable local economy is best achieved by a local currency. To this end the Green Party advocates the creation of provincially licensed, locally controlled Local Employment Trading system or L.E.T.S.

A L.E.T. system is a non profit, interest free, bartering system. Individuals can buy services and pay taxes with the system. Service exchanges such as the L.E.T.S. are really an interest free money system. (GREEN PARTY OF ONTARIO, 1994)

## CREATING A STEADY STATE ECONOMY (SSE)

### INTRODUCTION

The Economy grows in physical scale but the ecosystem does not. Our growing economy is a threat to the health and well being of our society and our long-term survival.

A steady state economy is an economy with constant stocks of things and people. These two populations are constant but not static. Births replace deaths and production must replace depreciation. These inputs and output rates are to be equal at low levels so that life expectancy of people and durability of artifacts will be high. It is important to note what is not constant in SSE. Knowledge and technology are not held constant. Neither is the distribution of income nor the allocation of resources. The SSE will develop qualitatively but not quantitatively.

The SSE model stands in contrast to conventional economics

which emphasis growth. Economic growth is held to be the cure for poverty and pollution; in short, a panacea. Today we consider the depletion of ecological life support systems as net current income. This economic paradigm is not sustainable.

Real production and consumption are based on a linear throughput beginning with depletion and ending with pollution. An economy is not an isolated system, as suggested by conventional economic models. Connections to the larger environment must be accounted for in any sustainable economic design.

## MONEY

Aristotle first noted the dangers involved when an economy shifts its focus from use value of money to exchange value of money. Money is a tool to facilitate exchange; nothing more in a sustainable economy. Modern Economies have perverted this to make money into a commodity that generates production with the purpose of generating more money. Abstract exchange values accumulate by themselves due to interest. This is an absurd human convention that pits itself against the basic laws of nature, the law on entropy.

An economy is not sustainable if the use value of money is bypassed by exchange values of money.

## TRANSITION TO A STEADY STATE:

A realistic discussion cannot assume a blank slate, but must start with a historically given initial condition. These given initial conditions are the institutions of private property and the price system. These basic systems must be bent and stretched but not abolished because we lack the wisdom, leadership or time to replace

them with something novel.

A contemporary design principle must combine micro freedom and variability with macro stability and control. This means relying on market allocations of an aggregate resource throughput who's total is not set by the market but rather fixed collectively on ecological criteria of sustainability and ethical criteria of stewardship. This avoids the pitfalls of central planning and the tragedy of unregulated markets. (GREEN PARTY OF ONTARIO, 1994)

#### INSTITUTIONS OF A STEADY STATE ECONOMY

It is clear that two limits are required to achieve a steady state economy. Limits on the population of human bodies and limits on the population of artifacts. A third limit not derivable from the definition but important in the interest of justice is to impose a limit on the degree of inequality in the distribution of artifacts among the population; ie a limit on the distribution of income.

#### DEPLETION QUOTAS.

The strategic point at which to impose control is at the depletion of resources. Quotas are more desirable than taxes because they directly control aggregate throughput. Taxes can only control indirectly and within very uncertain limits. If the government taxes automobiles to reduce resource depletion people turn to bicycles and trains. But how is the saved money spent? If people use their new found wealth on airline tickets resource depletion would increase not decrease. The only way to guarantee that resource consumption will be limited is to impose aggregate

quantitative limits on resource extraction and let prices allocate or ration the fixed aggregate among firms. The qualitative nature of wastes i.e. their degree of toxicity and biodegradability are dealt with separately by pollution taxes and standards (Refer to sections on manufacturing, zero discharge, taxation, chlorine phase out, corporate charters, incineration, nuclear power and product stewardship.)

The distribution of these artifacts would be controlled by depletion quota auction. A depletion quota auction is a two tiered resource market. In the first tier the total amount to be extracted of each resource category would be set by a government agency and auctioned of in divisible units as rights to purchase or extract the resource up to a specified amount. (Refer to section, Government: making it work) Purchase of the depletion quota allows entry into the second tier of the market which would be a competitive private market. In addition to paying the market price to the extracting company, the purchaser must present the previously purchased depletion quota rights that the firm will present to the auditors at tax time. The scheme sets total quantity centrally, but leaves the decentralized price system to determine allocation of the fixed total among alternative uses.

This institution would have the following effects

- 1: Reduce the levels of depletion and pollution and limit the scale of aggregate stock of artifacts.
- 2: raise relative prices of resources which will force greater efficiency in resource use.
- 3: Result in a large revenue to the government in the form of auction receipts. This third consequence ties in with limits on

inequity.

4: Higher prices would have a regressive effect on income distribution, much like a sales tax. (GREEN PARTY OF ONTARIO, 1994)

## TAXES

The role selective taxation can play in establishing an ecological society is crucial. The Green Party of Ontario is proposing significant reductions in personal income taxes in favour of taxes on non renewable resources and the taxation of all products which cause cumulative degradation to the environment, and correspondingly no taxes on ecologically benign products and processes. For example, the purchase of bicycles, public transit, rail transportation and organically produced food would be tax free, the revenue loss being made up by a carbon tax on gas, roads, and chemical pesticides and heavily processed, refined, nutritionally bankrupt foods. Disposable diapers would be taxed, non bleached, raw cotton diapers and decentralized diaper services would be tax free.

Under our tax system soft energy systems such as solar, wind and biomass would be tax free and nuclear, coal and hydro electric power would be heavily taxed. Manufacturers who abide by the zero-discharge principle and who manufacture products with a long useful life would receive tax relief while companies which pollute and produce disposable products would pay heavy taxes until their closure. At present the 300 companies which continue to dump toxic chemicals into the Great Lakes are taxed equally to those who have invested in pollution control. Such a tax structure would encourage ecologically sustainable development.

All non-renewable fuels and resources should be taxed at source to ensure that they are used sparingly. Taxes on labour would be phased out.

A disposal tax would help eliminate the need for dumps. Products which are not repairable, reusable or recyclable should be taxed to promote those which are. Single-use packaging and containers should be heavily taxed until it is practical to ban them while reusable containers would be tax free.

We know that every tonne of recycled paper saves 19 trees, produces 75% less air pollution and 35% less water pollution, yet both recycled and virgin paper are taxed equally. Taxes on virgin paper should be used to encourage reduction of paper use, to develop ecologically sound forestry practices and to build paper recycling facilities.

Around the home the tax-free list should be long. Gardening equipment, seeds, tree and shrubs, composters, insulation, double windows, sky lights, compact florescent light bulbs, efficient appliances, environmentally friendly cleaners and solvents, clothes lines, solar hot water heaters, photo voltaic cells, lead free paints -- in short, all ecologically benign products should be tax free.

Selective taxation is how a government implements its philosophy. Only the introduction of significant green taxes will demonstrate that our governments are interested in preserving the life giving capacity of the biosphere.

We also feel that the tax credit system should be expanded to include tax credits for volunteer work and expanding the family tax credit for care givers working at home. Our current tax system does

not recognize the work done in the home. (GREEN PARTY OF ONTARIO, 1994)

## MINIMUM AND MAXIMUM INCOME

Without limits private property and the whole market economy lose their moral basis. Exchange relations are mutually beneficial only among relative equals. Between the powerful and the powerless it is only nominally voluntary and can easily be a mask for exploitation, especially in the labour market.

The minimum income would work as a negative income tax and be financed by the resource rents collected by the government. In this way we would serve the goal of ecological sustainability by limiting throughput scale, we would serve the goal of efficiency by higher resource prices and serve the goal of equity by redistributing the resource rents resulting from the higher prices that in turn result from limits on the scale of throughput.

Many fear that a maximum income would dull incentives and reduce growth. However, growth is no longer a goal and the increased incentive to the majority at the bottom would more than compensate the reduced incentives to those who now demand the highest wages. A range of inequity would still exist to reward real differences in effort, risk and conditions of work. Incentive differentials are important, and fairness in a larger sense is not served by equalizing all incomes. A factor of ten difference would be sufficient of functional inequality.

A concentration of wealth is inconsistent with both a market economy and political democracy. A labour market is a legitimate bastion against exploitation, but this is only true if everyone has some minimum control of that market. Otherwise the market becomes the instrument of exploitation rather than a guarantee against it.

Maximum income and wealth would remove many of the incentives to monopolistic practices. A minimum income would allow the outlawing of strikes which have become intolerably exploitative of the general public. Unions would not be needed to confront power since power would be more broadly shared.

## GAMING

### 5. ANOTHER GAMBLING POLICY (carried with amendments)

The Rae government introduced casino gambling in 1992, and this was supported by the Liberal and now the Conservative governments. Unlike other parties, the Green Party is against expanded gambling opportunities in Ontario, and would begin a gradual process of phasing out state-promoted gambling. The deleterious effects on the individual, family and society, in the form of personal financial loss, job loss in others sectors such as dining and entertainment, family breakup and violence are well described. Our government must wean itself off reliance on revenues from gambling o fight the deficit, and admit that this is an unethical mode of creating revenue. Given the evidence that the resulting social costs out-weigh the revenue generated, gambling as a revenue-generator is counter-productive. Charities should not have to rely on gambling to survive. They should be better-funded and receive more favourable tax credits. Small-scale occasional gambling events for charity-raising should be permitted as long as they involve small amounts of participants' money, they are run by small local businesses and they are not used as government revenue generators. The Green Party would:

- \* halt expansion of gambling of any type
  - \* cap the existing advertising budget on the Ontario Lottery Corporation with a 10 % reduction each year
  - \* end lotteries linked to commercial sport
  - \* cancel all plans for expansion of casinos, slot machines and video terminals
  - \* give charitable donations more favourable tax credits
- 
- \* provide education on the hazards and pitfalls of gambling (ONTARIO POLICY KINGSTON, 1997)

## TRADE

Without completely dismissing the concept of free trade in limited discussions about specific sectors of the economy the Green Party of Ontario at present expresses opposition to free trade, as currently being encouraged between Canada the United States and Mexico, in light of the following considerations:

### Moral

The reason for expanding trade with Mexico and the Southern United States are essentially to benefit from lower wages and taxes. We then import the goods cheaper than we can make them. The dubious and short sighted logic of this scenario assumes that we will either lower our wages to theirs and therefore compete or we will lower our taxes by reducing services to the people of Canada. The free trade deal with the States has de-industrialized Ontario making the blue-collar population desperate for any form of work at any price. The benefactors are not the workers of Canada.

## Economic

Greens advocate meeting needs locally. The concentration of Corporate power leads to an increase in wealth for a few and large scale unemployment and exploitation for the majority. Competing is not the answer to our social problems. Only by co-operating and allowing truly free trade between equals that we can achieve real prosperity. Trilateral trade will only lead to continued de-industrialization of Ontario and a reduction in the quality of life for residents of Ontario. Given their record on environmental matters, their penchant to eliminate jobs through automation, and their disregard for social impacts (e.g., family upheaval) in closing plant locations, transnational corporations should not be encouraged to grow as a result of a free trade policy. Free trade threatens the long-term sustainability of the economy by allowing producers to centralize. The costs of transportation will inevitably rise to the point where this competitive advantage is gone, until then non-renewable resources will have been squandered in the name of economic efficiency. This centralization leads to corruption and subsidies to large corporations this disadvantage the operation of small businesses.

## Environmental

Our environmental resources have become bargaining chips. It is fundamental to the Green party that lawful and legitimate local participation is fundamental to the preservation of the Natural world, and our continued survival.

## Cultural Autonomy

Free Trade is a threat to Canadian culture in that our political and economic decisions are now made by a tribunal in Washington and Geneva. The Free trade deals and the G.A.T.T. has had effects on legislation dealing with diverse areas as: Imports Federal Courts Broadcasting Standards Insurance Loans Banking Copyrights Food Income tax Investment Canada and Trusts.

The alternative to International trade is:

- 1: Satisfy our local needs locally, strengthen our own economies by not exploiting others.
- 2: Strengthen local bioregional trade.
- 3: Closely scrutinized sector by sector trade negotiations. (GREEN PARTY OF ONTARIO, 1994)

## [AFFIRMING] THE RIGHT TO AN [ADEQUATE] STANDARDS OF LIVING

THEY [HUMAN BEINGS] HAVE THE RIGHT TO AN ADEQUATE STANDARD OF LIVING FOR THEMSELVES AND THEIR FAMILIES INCLUDING ADEQUATE FOOD, CLOTHING, HOUSING, WATER (Principle 2. International Conference on Population and Development, 1994) (1998)

We believe that a sound economic system must be build upon sound ecological practices. In the recent past Alberta's financial prosperity has been supported by the sale of our nonrenewable petroleum resources. These are now seriously depleted. We must not buy prosperity today by damaging our renewable resources such as forests and water, and leaving little for future generations. Only a sustainable and regenerative economy will provide for the long-term needs of society while preserving the integrity of our natural ecosystems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D We recognize that /Albertans/ Canadians are required to face the consequences of difficult economic decisions. We will require that elected representatives and government employees accept the same financial realities as the citizens they serve. (ALBERTA GREEN POLICIES, ALBERTA 1997)

E We will strive to ensure that wealthy individuals and corporations accept their fair share of responsibility for the economic well being of the community. (ALBERTA GREEN POLICIES, ALBERTA 1997)

We will create a complete and simplified accounting procedure so that Albertans are always informed of the true financial state of the province.

We will rationalize the position of the Alberta Heritage Trust fund and lottery funds within the provincial financial system. This will open up its administration to normal legislative process, and make its resources available for sensible debt reduction. Governments must no longer benefit from the discretionary use of its revenue while at the same time borrowing money for general expenditures. (ALBERTA GREEN POLICIES, ALBERTA 1997)

We will strive to reduce the export of raw materials and increase the production of value-added goods. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO COLLECT IMMEDIATELY ALL DEFERRED TAXES FOR CORPORATE ACTIVITIES THAT HAVE PERPETUATED SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT (1998)

A Green Party government would undertake:

\* to reduce the current 10.6 billion military budget by 50%, and transfer a significant proportion of the savings into restoring transfer payments to the provinces.

\* to institute a Community Economic Development (CED) that promotes local sourcing, revolving community loans, development of bioregional social and material needs inventories, and matching of those needs with local suppliers. A study of the feasibility of developing local alternative currencies would be encouraged.

### Community Economic Development

Transnational corporations have no stake in the communities where they get their raw materials or where they operate. As a result, resources are over-exploited and jobs migrate to where labour is cheapest and environmental standards are lowest. Green tax reform would favour locally owned and operated businesses that use local resources for value-added production in a sustainable manner, thereby keeping jobs, decision-making and profits in the community. (GREEN PARTY OF NEWFOUNDLAND).

\* TO REPLACE THE TERM A Sustainable Economy TO 'A REGENERATIVE ECONOMY' OR TO A SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND ECONOMY. (PROPOSALS AT A WORKSHOP

\* TO WORK FOR THE CREATION OF AN ECONOMY BASED ON LOCALLY [SUGGESTION FROM WORKSHOP: BIOREGIONALLY] OWNED AND OPERATED BUSINESSES WHICH USE [BIOREGIONAL] RESOURCES FOR VALUE-ADDED PRODUCTION IN A SUSTAINABLE MANNER; (deferred resolution)

- To strive to reduce the export of raw materials and increase the production of value-added goods. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO ENSURE THAT THROUGH TAXATION REFORM THESE BUSINESSES BE ENABLED TO INVEST IN THE COMMUNITY, CREATE LOCAL EMPLOYMENT, AND CREATE GOODS AND SERVICES DESIGNED TO BE LASTING, USEFUL, AND EASILY REPAIRED; (deferred resolution)

- \* TO ADOPT THE PRINCIPLES OF COMMUNITY ECONOMIC DEVELOPMENT (CED) INCLUDING THE DEVELOPMENT OF A TAXATION SYSTEM THAT PROMOTES LOCAL SOURCING, REVOLVING COMMUNITY LOANS, DEVELOPMENT OF LOCAL [BIOREGIONAL] SOCIAL AND MATERIAL NEEDS INVENTORIES, AND MATCHING OF THOSE NEEDS WITH LOCAL SUPPLIERS. (deferred resolution)

- \* To ensure that Community Economic Development function within a framework of overarching principles related to

1. promoting and fully guaranteeing respect for human rights, labour rights and social justice;
2. enabling socially equitable and environmentally sound development;
3. achieving a state of peace, justice and security;
4. creating a global structure that respects the rule of law; and
5. ensuring the preservation and protection of the environment.

(circulated in press release, and budget presentation)

- \* to support the LETS or similar community-based programs INCLUDING BARTER BUCKS (added to include program developed in the Kootenays, B.C.).

- \* to enact legislation that would ensure that corporate owners and officers be held legally liable, in criminal and civil court, for any environmental and social harm they cause.

- \* to eliminate subsidies to nuclear power and to fossil fuels and/or

chemical-dependent sectors and to embark on time-bound phasing out of the use of civil nuclear power and fossil fuels

- \* to replace the Gross National Product with the Genuine Progress Indicator (GPI). The GNP excludes social and environmental costs in its accounting, thus facilitating the illusion that community breakdown, crime, the loss of farmland and biodiversity, and unemployment have no economic significance.

\* to institute an average four-day/32-hour work week which would mean that existing jobs could be shared with those now unemployed.

INTRODUCTION OF A FOUR DAY/32 HOUR WORK WEEK, WITH THE LEGAL RIGHT OF INDIVIDUALS AND UNION CONTRACTS TO REFUSE OVERTIME (deferred resolution)

- to move to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

- TO GUARANTEE THE RIGHT TO WORK IN SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND WORK

MINDFUL OF THE NEED TO QUALIFY THE “RIGHT TO WORK” AS EXPRESSED IN THE INTERNATIONAL COVENANT OF CIVIL AND POLITICAL RIGHTS: “THE STATES PARTIES TO THE PRESENT COVENANT RECOGNIZE THE

RIGHT TO WORK, WHICH INCLUDES THE RIGHT OF EVERYONE TO THE OPPORTUNITY TO

GAIN HIS/HER LIVING BY WORK PROVIDING THE WORK IS NOT IN VIOLATION OF HUMAN RIGHTS, DOES NOT CAUSE ENVIRONMENTAL DEGRADATION, OR DOES NOT CONTRIBUTE TO CONFLICT AND WAR, WHICH HE FREELY CHOOSES OR ACCEPTS, AND WILL TAKE APPROPRIATE STEPS TO SAFEGUARD THIS RIGHT (ART. 6. 1. INTERNATIONAL COVENANT OF CIVIL AND POLITICAL RIGHTS, 1966)

WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS

- TO RECOGNIZE THE RIGHT OF EVERYONE TO WORK FOR FAIR WAGES
- TO RECOGNIZE THE RIGHT FOR EQUAL PAY FOR WORK OF EQUAL VALUE

- TO PROVIDE WORK THAT IS NOT IN VIOLATION OF HUMAN RIGHTS, DOES NOT CAUSE ENVIRONMENTAL DEGRADATION OR DOES NOT CONTRIBUTE TO CONFLICT AND WAR (1998)

- \*TO ENACT FIVE WEEKS OF VACATION PER YEAR; (deferred resolution)

- \* TO FACILITATE JOB SHARING; (deferred resolution)

- \* TO ENSURE LEGISLATION REQUIRES FOR PAID LEAVE FOR CHILD REARING EDUCATIONAL LEAVE. (deferred resolution)

- \* to enact product stewardship legislation that would require producers to increase the life span of their products and to assume the full recycling and disposal costs.

- \* to enforce the "Polluter, Pay Principle", to raise corporate taxes to OECD levels.

- <sup>a</sup> TO ENSURE THAT CORPORATE TAXES BE CONSIDERABLY RAISED AND IMMEDIATELY TRANSFERRED INTO SOCIAL PROGRAMS SUCH AS EDUCATION, HEALTH AND SOCIAL SECURITY. (1998)

I / We will impose strict regulations on all effluent producing industries and ensure that the costs of water treatment or purification are born by the polluter. (ALBERTA GREEN POLICIES, ALBERTA 1997)

I/ We will introduce legislation that will make manufactures and suppliers of products responsible for the cost of their ultimate disposal, or return and reuse.

I / We will introduce economic instruments which encourage recycling of used materials rather than consumption of new resources. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* to cease involvement in the CANDU owners' group, to end all subsidies to AECL and to cease to sell CANDU reactors internationally

- \* to prevent the transfer of plutonium from dismantled nuclear weapons in Russia and the USA to be used in CANDU reactors

- \* to prevent the transfer to other states of substances or activities that are harmful to human health or the environment.

- \* to dismiss the use of "Prior Informed Consent" to justify the transfer of harmful substances; "the right to be harmed" is not a legitimate right.

- \* to revise the tax treatment of renewable energy and energy efficiency investments immediately to make them more attractive to investors than investments in conventional energy sources such as oil and gas.

\* to spend 50% of energy research and development on renewable energy technologies by the year 2000.

\* to discontinue all spending on nuclear energy research, including the subsidy to Atomic Energy of Canada.

\* to focus programs related to fossil fuel energy supply, production and consumption on reducing greenhouse gas emissions and other harmful environmental impacts.

\* to stop all foreign energy assistance related to energy mega-projects by the year 2000.

\* to discontinue all foreign energy assistance related to nuclear and fossil fuel projects by the year 2000.

\* to make energy efficiency and renewable energy supply from appropriately sized community planned and driven projects a key focus of overseas development assistance.

\* to advocate the creation of a jointly administered federal/provincial Guaranteed Income Supplement (GIS) which would replace all current income support programs. A GIS would provide a subsistence income to those who are unable to work and top up the incomes of the under-employed and unemployed by 50% of the gap toward a target income at, or slightly above the, poverty line.

• To replace Welfare and Employment Insurance with a Guaranteed Income Supplement plan that would encourage recipients to seek employment. A GIS would provide financial compensation for traditionally unpaid and undervalued contributions to society, such as child-rearing and homemaking, and would contribute to the support of artists, students, volunteers and small-business start-ups. (GREEN PARTY OF NEWFOUNDLAND).

\* to prevent the situation where states that wish to raise their standards and regulations, are prevented from doing so through GATT or Multilateral Agreement on Investment (MAI) or through threats from the corporate sector to relocate elsewhere by establishing Mandatory International Normative Standards/regulations (MINS) drawn from international principles and from the highest and strongest regulations from member states harmonized continually upwards.

\* to require corporations to increase corporate % contributions to public revenue. (Currently corporations in Canada make the least % contribution of the G7 countries).

\* TO WORK FOR CREATION OF A SUSTAINABLE [SOCIALY EQUITABLE AND ENVIRONMENTALLY SOUND] TAXATION POLICY THAT:

A) DECREASES PERSONAL INCOME TAXES;

B) B) ELIMINATES TAXES ON ECOLOGICALLY BENIGN PRODUCTS AND PROCESSES;

C) ELIMINATES PAYROLL DEDUCTIONS AND EMPLOYER COSTS WHICH DISCOURAGE HIRING OF CITIZENS;

D) CREATES GREEN TAXES FOR CORPORATE EQUIPMENT PURCHASES (WHICH DO NOT MAKE WORK SAFER OR LESS MONOTONOUS), NON-RENEWABLE RESOURCE CONSUMPTION, GREEN HOUSE GAS EMISSIONS, WASTE DISPOSAL, CURRENCY, FINANCIAL AND PROPERTY SPECULATION, AND CAPITAL INHERITANCE (Deferred resolution) .

\* TO PROMOTE 'CREATING A STEADY-STATE ECONOMY". ONE SECTION OF THIS IS "A STEADY-STATE BANKING SYSTEM", WHICH HAS RELEVANCE TO DEBT AND DEFICIT. (deferred resolution, Ken Toews)

#### An End to Deficit Budgeting

Twenty-five cents of every federal tax dollar go directly to commercial banks to pay the interest on Canada's \$600-billion debt. Greens recommend that the Bank of Canada take over a significant portion of the debt as an interest-free loan. Greens also suggest implementing a currency transaction tax. (GREEN PARTY OF NEWFOUNDLAND).

\* TO ENSURE LEGISLATION REQUIRES FOR PAID LEAVE FOR CHILD REARING EDUCATIONAL LEAVE. (deferred resolution)

C. We will maintain a balanced annual budget by efficient use of resources in the areas of health care, education and social services. If this is not possible without introducing serious defects into these services, tax revenue will have to be increased. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO ADDRESS DEBT AND DEFICIT ISSUES THROUGH FOLLOWING MEASURES:

A) ELIMINATE SUBSIDIES FOR NUCLEAR POWER, FOSSIL FUELS AND/OR CHEMICAL-DEPENDENT SECTORS;

B) ELIMINATE OVERLAP BETWEEN PROVINCIAL AND FEDERAL GOVERNMENT IN FORESTRY, AGRICULTURE, EDUCATION, TRANSPORTATION, ETC.;

C) ENACTMENT OF A FINANCIAL TRANSACTION TAX (FTT);

D) RESTRICT CURRENCY EXCHANGE AND CAPITAL FLOW SO THAT MOST CANADIAN FINANCIAL WEALTH REMAINS IN CANADA;

E) DEVELOP A CORPORATE TAX SYSTEM DESIGNED TO REWARD PRODUCTIVE INVESTMENT AND TO DISCOURAGE SPECULATION;

F) ALLOCATE THAT PORTION OF THE BANKING INDUSTRY'S CAPITAL HELD BY THE FEDERAL DEPOSIT INSURANCE CORPORATION TO THE BANK OF CANADA WHO WILL, IN TURN, RE-LOAN THIS TO THE FEDERAL GOVERNMENT INTEREST-FREE. (deferred resolution)

\* TO REDUCE DEBT BY CLOSING CORPORATE TAXATION LOOPHOLES (deferred resolution Fly-Tie Walters (Surrey, BC)

\* TO COMBINE ALL OF THE INCOME ASSISTANCE AND TRANSFER PROGRAMS INTO A GUARANTEED INCOME SUPPLEMENT (GIS); (Andy Shadrack Deferred resolutions see recent cabinet e-mail discussion)

\* TO ENSURE THAT GIS PROVIDES A SUBSISTENCE INCOME, EQUIVALENT TO WELFARE, TO THOSE WHO DO NOT WORK, OF 50% OF A TARGET INCOME (E.G. IF THE TARGET INCOME WERE SET AT \$14,000, \$7000 WOULD BE TRANSFERRED TO UNEMPLOYED PERSONS); (Andy Shadrack Deferred resolutions see recent cabinet e-mail discussion)

\* TO TOP UP THE GIS THE INCOMES OF THE UNDEREMPLOYED BY 50% TOWARD A TARGET INCOME (E.G. IF AN UNDEREMPLOYED PERSON MADE \$8,000 PER YEAR, AN ADDITIONAL \$3,000 WOULD BE TRANSFERRED. (Andy Shadrack Deferred resolutions see recent cabinet

e-mail discussion)

## Tax Reform

• TO COLLECT IMMEDIATELY ALL DEFERRED TAXES FOR CORPORATE ACTIVITIES THAT HAVE PERPETUATED SOCIALLY INEQUITABLE AND ENVIRONMENTALLY UNSOUND DEVELOPMENT (1998)

### 1. RESOLUTION ON GREEN TAXES (Carried with amendments)

The Green Party believes that the provincial government should begin a revenue neutral tax shift from income and consumption taxes to resource taxes (emissions, land, water, fossil fuels, air, mineral, metals and aggregates). This proposal will not hurt the economy since it doesn't encourage or discourage economic activity, it only causes a reduction of throughput in industrial processes. Industry, which follows the path of tax resistance,

will quickly retool to take advantages of reduced taxation on green technologies and processes.

a) The government should impose a shift from income taxes to ecological taxes. Tax reduction should begin at the bottom by raising the basic personal exemption amount.

b) That the federal government switch the source of revenue for the Canada Pension Plan and Employment Insurance from payroll taxes to general revenue, the federal government revenue shortfall made up by instituting green taxes.

- To recommend that municipal transit passes be tax deductible for employers so that companies to encourage transit use among their employees. (ONTARIO POLICY KINGSTON, 1997)

\* TO [RECTIFY THE SITUATION WHERE] deferred corporate income tax is now believed to be in excess of \$40 billion, [ UPDATE] (B.C. ANNUAL GENERAL MEETING, 1995)

\* TO [RECTIFY THE SITUATION WHERE] when the Canadian Inheritance Tax was abolished in 1972, certain families were allowed to create tax exempt trust funds which have assets are now in excess of \$56 billion, (B.C. ANNUAL GENERAL MEETING, 1995)

\* TO condemn both the federal and provincial governments for failure to collect taxes in accord with the rates that low- and middle-income taxpayers and small and medium business are levied, (B.C. ANNUAL GENERAL MEETING, 1995)

\* TO make tax reform through collection of appropriate levels of taxation and elimination of inappropriate deductions an ongoing part of our political work. (B.C. ANNUAL GENERAL MEETING, 1995)

#### Access to Resources

\* TO [IMPLEMENT] AND support an incomes policy [which] includes:

a) a guaranteed cash income intended to meet the basic survival needs of shelter, food and clothing, at a level determined by the method used by the federal government to calculate the poverty line. This guaranteed cash income is to be universal and taxable.

b) a program of incentives which would encourage the development of community resources and projects including:

- a capital fund available to groups who wish to develop local community projects;
- a process whereby public land, subject to Native land claims settlement, would be trusted to groups for use in community development projects; and
- providing information, technical assistance, and skilled persons to assist in the community development projects. (B.C. POLICY CONVENTION, 1988)

\* TO [ENSURE THAT] funding would be administered at a local level by a bioregional or neighbourhood board. Priority in community funding would be given to projects which:

-conform to Green philosophy and other Green policy, i.e.; [EQUITY AND ENVIRONMENTAL SOUNDNESS] / sustainability/, non-exploitative, non-polluting, etc.; and contribute to the improvement of community self reliance. (B.C. POLICY CONVENTION, 1988)

\*[TO EXPOSE THAT] the term sustainable development, as defined by the Brundtland Commission, involves accepting that there will be twice as many people on the planet carrying on 5 or 10 times the manufacturing of goods that there is now before the human impact on the biosphere can be stabilized (B.C. POLICY CONVENTION, 1988)

\* [TO EXPOSE THAT] global poverty, population growth, and ecological destruction are inextricably intertwined, but the tremendous growth in human impact on the biosphere envisaged by the Brundtland Commission is not a solution because the planetary capacity has clearly already been exceeded (B.C. POLICY CONVENTION, 1988)

\* [TO EXPOSE THAT] the logic of growth depends on believing that the population in the First World will not face up to the fact that there are limits to growth and will not cooperate with the rest of humanity in an effort to restore balance; (B.C. POLICY CONVENTION, 1988)

\* TO oppose the production of goods and services for the sake of economic growth; (B.C. POLICY CONVENTION, 1988)

\* TO support economic] activity sufficient to give everyone the basic necessities of life and a reasonable quality of living; and (B.C. POLICY CONVENTION, 1988)

\* TO look for growth in areas of human activity such as spirituality and creativity, and other sorts of well being that do not rely on resource use. (B.C. POLICY CONVENTION, 1988)

• To work toward establishing a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the

security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## Sustainable Development

\* TO express [concern at] the common understanding of the term sustainable development TO encourage the use and understanding of the term sustainable dynamic equilibrium ( B.C. POLICY CONVENTION, 1988)

### FOR THE FOLLOWING REASONS:

the common accepted use of the word development is held to be economic development leading to the material betterment of the conditions of human beings; and

. b [a good] definition of sustainable compatible with [GPPABC] philosophy would be to endure and continue without perishing or yielding; and

c the common usage of both terms does not recognizes the interests of all life forms and natural processes that share the Earth; and

d the constraints of finite ecosystems, sustainable development for the human population will only be possible at the expense of non human populations and processes in these ecosystems; and

e the exploitation, or development, of non renewable resources is non sustainable by definition of a non-renewable resource; and

f the term sustainable development does not address the myths and fallacies of the dominant paradigm (view) of unlimited simultaneous population growth and economic growth as illustrated by the phrase from [the World Commission of Environment and Development's report] Our Common Future 8 page 89 the international economy must speed up world growth while respecting the environmental concerns ; and

. g this definition is incompatible with Green Party [Political Assoc.] of BC philosophy and commitment to a conserver society rather than a consumer society;

\* TO REPLACE THE EXPRESSION OF "SUSTAINABLE DEVELOPMENT' WIT THE EXPRESSION SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT (TO BE PROPOSED)

\* TO reaffirm its commitment to the principles of Deep Ecology by recognizing the threat to stable ecosystems that continued adherence to hierarchical, anthropocentric, and non ecological belief-systems will promote.

## DEPARTMENT OF CANADIAN HERITAGE (\$2, 654,076,000)

Through the Department Report, the following objective has been enunciated:

**"Objective is to build a strong society in which Canadians participate, celebrate and give expression to their values and heritage". Cultural Development and Heritage helps create an environment in which Canada's heritage is preserved and made accessible, artistic expression can flourish, cultural markets develop thereby ensuring the availability of, and access to, Canadian arts, heritage, broadcasting products and services." To achieve this objective, Canada is a signatory of the Convention on the Protection of Cultural and Natural Heritage, and has a responsibility to preserve sites of value in Canada, and not created "islands of protection" -- preserved sites surrounded by inappropriate development. Too often, significant sites are lost because of lack of political will to curb resource extraction. In addition, the practice ---of developers purchasing sensitive land with significant ecosystem, hiring consultants to identify features that would trigger an environmental assessment and then proceed to destroy the features--must end. \$388,000,000 should be relocated from the Foreign Affairs budget for "Safe Anti-racism Sites" across Canada \$300 million should be redirected as additional funding for CBC, and additional 10 million, for the Status of Women.**

Status of Women

11

It is the right of all Albertans to preserve and practice their culture providing that it does not infringe upon the individual rights of others to an unreasonable extent. We recognize that there are areas where collective rights and individual rights may clash and we will work towards finding equitable solutions. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We support the preservation of areas with special cultural significance such as archaeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Arts and Culture

While the cost of funding the arts is relatively low, its social benefits and economic multiplier effects are high. Greens would maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities. (GREEN PARTY OF NEWFOUNDLAND).

A Green party government would undertake:

- \* to increase the share of Canadian programming watched by Canadians beyond the present figure of 4.4%.
- \* to require the Canadian Broadcasting Corporation to promote the cultural diversity of Canadian music, literature, dance and drama, many of which are already funded by Canadian taxpayers.
- \* to maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities.
- \* to eliminate the Goods and Services Tax on books, magazines, newspapers, films, videotapes, audiotapes, compact disks and all other means of artistic expression.

\* to ensure that CBC-TV will be required to produce programs that are educational, thought-provoking, useful and unavailable elsewhere.

\* to provide stable funding for the Canadian Broadcasting Corporation both radio and television services.

## ADVERTISING AND COMMUNITY TELEVISION

Advertising is used to promote consumption and create artificial needs. Also, advertisers impose a threatening restriction of free speech by limiting voices that oppose their goal of increased consumption and resource destruction.

This is the antitheses of what the Green Party stands for. To counter the negative effects of this widespread mass culture based on consumerism the Green Party believes we must lobby the C.R.T.C. to:

1: Reevaluate the licensing of commercial channels to reduce the amount of advertising currently on commercial channels.

2: Democratize the airwaves. With the development of "Death star" satellites capable of beaming over 500 channels into the home it is imperative and now technologically feasible to provide community based channels on the cable networks that are not controlled by the cable network corporations. These channels are to be made available to advocacy, special interest, artistic, political and ideological groups. These programs would be funded by cable vision subscription revenues and sponsorship. They would be commercial free and would provide an alternative to consumption-based advertising funded programs.

3: Broadcasters are granted a licence to use the public airwaves in

return they are expected to serve the public interest. Today the airwaves are controlled by a small circle of large corporations and advertisers. The business side is not balanced by a commitment to public service. We, the citizens, no longer enjoy access. Instead we have been relegated to the role of products as we are measured, packaged, and sold in bulk to the highest bidder. As a public resource they belong neither to the government nor to private industry, nor to broadcasters. We advocate that as a condition of licence, broadcasters be required to set aside four 30 second time slots every hour for the owners of the airwaves; the citizens. This time would be given over to citizen produced messages. (GREEN PARTY OF ONTARIO, 1994)

#### Culture and Language issues

- to preserve and practice their culture providing that it does not infringe upon the individual rights of others to an unreasonable extent. We recognize that there are areas where collective rights and individual rights may clash and we will work towards finding equitable solutions. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To recognize French as an official language of Canada and support the provision of services in French in areas where the number of francophones warrants it. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To support the preservation of areas with special cultural significance such as archaeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### PRESENTATION BY JOAN RUSSOW TO THE CRTC

Not only would multicultural/multilingual programming fulfill a need in the community it would also discharge an obligation that the Federal government has incurred under the International Convention for the Elimination of All Forms of Racial Discrimination

Under article 7 of the Convention on the Elimination of all Forms of Racial Discrimination States Parties undertake to adopt immediate and effective measures, particularly in the fields of teaching, education, culture and information, with a view to combating prejudices which lead to racial discrimination and to promoting understanding, tolerance and friendship among nations and racial or ethnic groups, as well as to propagating the purposes and principles of the Charter of the United Nations, the Universal Declaration of Human Rights, the United Nations Declaration on the Elimination of All Forms of Racial Discrimination, and this Convention.

This places a positive duty to combat prejudice and discrimination through education and information including media broadcasting. We would expect that the CRTC would equally respect this duty in the granting of licenses.

Often, it is thought that multilingual/ multicultural programs are only necessary where there is an ethnic population that warrants it. A distinction could be made between multiculturalism which caters only to the audience and varies with the composition the community, and polycultures which seeks to encourage appreciation of all cultures. In the latter case it is extremely important for the mainstream community to become aware of the diversity of cultures through progressive race relations programming. In B.C. there is prejudice which often manifests itself in discrimination and racism. We need look no further than the demonizing of the Serbs and the dehumanizing response to the Chinese recent asylum seekers.

It must be admitted that racism exists in the Vancouver/Vancouver Island area and every effort must be made to combat prejudices and promote understanding.

Often recent immigrants whose language is not English are hesitant about speaking out on issues because they are overly concerned about integration into what they perceive to be Canadian society and values. They must be encouraged to participate in issues that they believe to be vital regardless of the comfort zone of the mainstream community. There is a strong activist community in Canada that is seeking change in Canadian values and this activist voice must be heard as well.

The opportunity for the ethnocultural community to hear events through their own language is essential. Having an opportunity for them to speak in their mother tongue with subtitles, when possible, would begin to break down barriers that have arisen as a result of Linguistic discrimination.

- to ensure Investigative reporting, incisive analysis of issues would serve the needs of Victorian.

- to institute a **one-hour program in English bringing together journalists, community, business, government and academic leaders and activists to share their views on various issues. WITH THESE HIGHPROFILE NEWS BROADCASTS WE WOULD HOPE THAT MEMBERS OF THE ETHNOCULTURAL COMMUNITY WOULD HAVE THE OPPORTUNITY TO SPEAK IN THEIR MOTHER TONGUE WITH SUBTITLES.**

- to ensure that there are progressive race relations with provision for titling, when possible, for the mainstream to hear the voices.

**to implement progressive race relations programming.**

- to investigative, in-depth reporting, examining vital issues in the community**

- to ensure that the human rights of the marginalized and disadvantaged, including persons with disabilities, are fully respected on an on-going basis in their broadcast programming**

- to promote independent socio-political long and short form documentary production in Vancouver and Vancouver Island to be broadcast in prime time**

## CULTURAL DIVERSITY

The Green Party recognizes that Canadian society is unique and consists of different racial, ethnic, religious, sexual, and linguistic communities. The Green Party refuses to tolerate discrimination based on these characteristics. ECONOMIC POLICY:

## GENERAL

The economy of Ontario is burdened by high levels of unemployment, a large deficit, a large public Debt, reliance on technologies that are not sustainable due to high levels of resource consumption, reliance on technologies that are harmful to

the both human and non human residents of Ontario and finally it's relative success is not judged by the happiness or health of the population but rather on its ability to perpetuate a cancerous growth rate and unsustainable rate of resource consumption.

## STATUS OF WOMEN

### Green Day Care

#### GREEN PARTY POLICY ON CHILDCARE (carried with amendments)

It is well known that how we care for our children will ultimately determine how people care for each other and the earth. The Green Party sees parenting as a valuable investment not only in the well-being of our children, but in the future of our society as a whole. It should be treated as such by providing real support for parenting instead of encouraging people to work for short-term economic gain which in the end creates enormous stress on families and diminishes both social and human resources. The Green Party believes in subsidizing parents to look after their own children. We feel that the implementation of a Green Party Childcare policy would encourage parents to take time from work to raise their children. As a result of this family life would be enriched, stress would be diminished and the overall health of our society would be improved.

Green Party Childcare Policy initiatives would include:

- \* a Guaranteed Annual Income that would pay one parent to stay at home.

- \* extended paid parental leaves.
- \* job-sharing options.
- \* encouraging part time work.
- \* flexible work hours to match the school day.
- \* personal days to care for sick children.
- \* better paid day care workers to reflect the importance of the work they do
- \* a high-quality day-care system for those who need it, with the professional standards and training required by daycare workers.
- \* parenting education
- \* encouraging workplace childcare

(ONTARIO POLICY KINGSTON, 1997)

## DAY CARE

Greens support the principle of universal access to flexible, private and publicly-funded, non-profit child care as well as the extension of government paid maternity leave and parental leaves. It is, however, important to recognize that many of the pressures for day care come from a consumer society in which parents both work to accumulate more belongings than needed for a balanced lifestyle. With the guaranteed annual income and community land trusts it would be increasingly less necessary for families to have two incomes to survive.

- \* to include health research and health services responsive to women's needs and reflective of the diversity of women's life stages.

TO FUND RESEARCH INTO ENVIRONMENTALLY INDUCED DISEASES (1998)

\* to endorse a program of reproductive health.

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## RESOLUTION: PROMOTING REPRODUCTIVE CHOICE

Concurring with Women's Health in Women's Hands that "Governments should guarantee the rights of women and girls to high quality health services, recognizing that women's reproductive rights are basic human rights which enable women to freely decide whether, with whom, when and how often to have children (Women's Health in Women's Hands, 1995)

Concurring also with the Women's Action Agenda that Aware " the right to reproductive health and choice is a basic human right of all individuals, we point out that the World Fertility Survey estimates that there are 500 million couples who wish to plan their family size but have no access to the means to do so (Women's Action AGENDA, 1992)

Convinced that Any attempt to deprive women of reproductive freedom or the knowledge to exercise that freedom shall be condemned (drawn from Women's Action AGENDA, 1992)

We call upon the member states of the United Nations:

## Ensuring the right to accessible and safe abortions

- To ensure the right to accessible and safe abortions, as unsafe abortions are a leading cause of mortality (Women's Health in Women's Hands, 1995)

- To ensure the provision of women-centered, women-managed comprehensive reproductive health care and family planning including the right to prenatal care, with family planning safe and legal voluntary contraceptive and abortion, stressing the importance of sex education and information (Women's Action AGENDA, 1992)

- To provide full information on the possible side effects of contraceptives

It is essential that extensive research is carried out on the potential side effects of contraceptives, and that this information is widely distributed

- To increasing investments in comprehensive reproductive health services

We urge governments, multilateral and donor agency shall to increase investments in comprehensive reproductive health services and to include men as beneficiaries of family planning education and services. Family support services should shall include child care and parental leave. These investments should be directed to the aforementioned women-managed health care facilities (Women's Action AGENDA, 1992)

- to Reinforce laws, reform institutions and promote norms and

practices that eliminate discrimination against women and

encourage both women and men to take responsibility for their sexual and reproductive behaviour; [ensure the full respect for the physical integrity of the human body]; [and take action to ensure the conditions necessary for women to exercise their reproductive rights] [and eliminate, where possible, coercive laws and practices] ] (108 d Advance draft, Platform of Action, UN Conference on Women, May 15)

## ABORTION

The Green Party of Ontario supports the right of women to decide whether or not to have an abortion. (GREEN PARTY OF ONTARIO, 1994)

- to LIMIT, REGULATE AND MONITOR REPRODUCTIVE TECHNOLOGIES (1998)

- to implement and strengthen preventive and curative health facilities

Implement, as a matter of urgency, in accordance with country-specific conditions and legal systems, measures to ensure that women and men have the same right to decide freely and responsibly on the number and spacing of their children and have access to the information, education and means, as appropriate, to enable them to exercise this right in keeping with their freedom, dignity and personally held values, taking into account ethical and cultural considerations. ..Programmes should focus on providing comprehensive health care, including prenatal care, education and information on health and responsible parenthood and should provide the opportunity for all women to breast-feed fully, at least during the first four months post-part. Programmes should fully support women's productive and reproductive roles and well-being, with special attention to the need for providing equal and improved health care for all children and the need to reduce the risk of maternal and child mortality and sickness (3.8. j. Combating Poverty, Agenda 21, UNCED, 1992)

- to implement programs to establish and strength preventive and curative health
- to implement programs to establish and strengthen women centred health care

4\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH.  
(Deferred resolution)

(1) A basis of lifelong good health is proper infant nutrition.

Women will be encouraged to breast feed by the providing all prospective parents with accurate information on the risks of artificial feeding and on the advantages of breast feeding.

A woman's right to breast feed in public will be protected.

The World Health Organization's Code of Marketing of Breast milk Substitutes will be enacted as legislation in Ontario to protect women and their babies from advertising which

misleadingly suggests that artificial substitutes are an acceptable substitute for nature's food for babies. Hospitals and birthing centres will be required to satisfy the "baby-friendly hospital" guidelines of the World Health Organization and UNICEF. These measures, by increasing the rate and duration of breast feeding, will greatly reduce the incidence of childhood illness; and since some of the health giving benefits of breast feeding continue long after weaning, the incidence of adult illness will also eventually decrease. It will also help prevent breast cancer for the mothers.

## **DEPARTMENT OF INTERGOVERNMENTAL AFFAIRS**

### **GOVERNMENT: MAKING IT WORK**

When Government agencies do not perform the function, they are designed to perform citizens have little recourse. Regulatory Reform lies in realizing that in most cases regulatory agencies have become the tools of the Industry they were designed to regulate. The solution is not to abolish regulatory agencies, life would be chaos without them, the solution is to realize you can't trust them.

The Green Party suggest the following.

- 1: Goal setting. Penalties must be legislated if Goals are not met.
  - 2: Arm the public with information. Enhance food labeling legislation for nutritional content, freedom of information, drop the charge for Statistics Canada information.
  - 3: Citizen Enforcement of Public Health and environmental laws.
- "Any violation witnessed and sworn to by any person over 18 years

old and mentally competent, shall have the same status as if it were witnessed by an official government inspector.

4: Take away regulatory agency's discretion. Regulations should be modeled after traffic tickets, Pay the fine or talk to a Judge. We have given too much power to bureaucrats to negotiate with dishonest business persons.

5: Liability. Liability should be strict, meaning no showing of negligence is necessary and that required proof of cause and effect is minimal. Liability should be joint and several meaning each liable party is potentially responsible for the whole situation.

6: Background Laws. Require background checks on any individual doing business with Government. If an individual or a corporation has a record of convictions they should not be allowed to do business with the government.

7: The revolving door. Political appointees and senior executive service personnel should not be able to accept any form of direct or indirect compensation from any person regulated by their agency for a period of five years after they have left government. This law would apply to lawyers as well.

8: Conflict of interest. No regulatory agencies may spend appropriated funds to promote, or to advocate the use of products or services which it regulates. The Nuclear industry comes to mind.

9: Reward whistle blowers. When a whistle blower's charge proves correct she should be given a promotion, and a cash award not to exceed 10% of the savings. This would increase the number of whistle blowers and decrease the amount of waste, fraud, and abuse of power.

10: Allow citizens to sue government officials. Government

officials should be liable for civil suits for damages caused by the failure to do their duty.

11: Award fines to grass roots groups. Fines paid in environmental suits should be turned over to grass roots environmental organizations. Polluters now pay fines regularly as a cost of doing business. If they knew the fines would go to their adversaries paying the fine would take on a new meaning. This would give citizens a new incentive to ferret out violations (GREEN PARTY OF ONTARIO, 1994)

A Green party government would undertake:

\* to ensure that provincial decision-making functions within a framework of overarching environment, social justice and human rights principles.

A. We recognize French as an official language of Canada and support the provision of services in French in areas where the number of francophones warrants it. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO OUTLINE A FEDERAL POLICY IN PLACE ON SEPARATION OF ANY PROVINCE (NORMAN THYER (BC) DEFERRED RESOLUTION):

REVISED POSITION IN SUBMISSION TO CALGARY CONFERENCE

CANADIAN UNITY DEPENDS ON ENSURING THAT REAL CHANGE OCCURS IN CANADA

\* To ensure that government-to-government negotiations take place to resolve the outstanding land rights of First Nations peoples, and by enshrining the constitutional measures that would protect the French language and culture in Quebec. (Statement passed by cabinet and submitted as part of a statement to the UNITY Commission)

Canadians need to first ask "Why does Quebec want to secede? rather than "What will Quebec look like when it secedes?

Unity will only occur when Canada as a nation ensures that the common concerns as well as specific concerns of citizens are addressed.

Citizens in Canada share common concerns about the deterioration of the environment, about the growing influence of corporations upon all sectors of society, and about the threats to education, health and culture. Canadian citizens continue to suffer discrimination and inequitable treatment. Canadian citizens are constantly disillusioned by the discrepancy between government rhetoric and action at all levels. Instead of acting on these concerns, the Federal government has devolved responsibilities upon the provinces and the corporations. (Press release, Calgary Unity, 1999)

Canada along with other member states of the United Nations

has undertaken to do the following:

- (i) to promote and fully guarantee respect for human rights and social justice;
- (ii) to ensure the preservation and protection of the environment;
- (iii) to create a global structure that respects the rule of law;
- (iv) to achieve a state of peace; justice and security, and
- (v) to enable socially equitable and environmentally sound development.
- (vi) to not do anything on the lands of indigenous peoples that would cause environmental destruction or that would be culturally inappropriate.

Canadian and provincial governments, however, have rarely demonstrated that these undertakings have been more than public relations exercises, and have thus failed to address many of the general concerns of Canadians

Quebec has very specific concerns that need to be more clearly communicated and addressed through consultation. At the same time that Canada must undertake to discharge obligations, act on commitments and fulfill expectations so that the common concerns of Canadians will be addressed, the Canadian government has to undertake to do the following to ensure the maintenance and perpetuation of the French language and culture in Quebec:

\* to ensure that provincial decision-making functions within a framework of overarching environment, social justice and human rights principles

\* to constitutionally entrench the opt-out powers that Quebec has now That is to say that Quebec would enjoy the same opt-out powers that it has now, but that they would irrevocably be entrenched in the Constitution.

\* to permit Quebec to submit to the federal government of the day a list of nine Supreme Court judge candidates, from which the federal government would select three to sit on the Supreme Court of Canada, recognizing Quebec's need to be involved in the process with respect to the province's particular judicial character.

\* to ensure the constitutional entrenchment of power over immigration for Quebec. Immigration in Quebec has been centred around maintaining and perpetuating the French language and culture in that province and its immigration policies should provide for that.

\* to recognize that protection of the French language and culture in Quebec is essential to its identity as a nation, constitutional protection is unequivocally necessary insofar as Quebec finds itself surrounded by a continent which is primarily Anglocentric.

\* to clarify and redefine the phrase "distinct society"; it is necessary

to clearly define the terms and conditions involved in the constitutional protection of the French language and culture in Quebec, and to clarify that distinct society is to be conceived within the Charter of Rights and Freedoms.

\* to support constitutional protection of the French language and culture in Quebec on the condition that its definition be clearly defined by Quebecers and the Quebec governments with a view towards avoiding any alienation of the non-French-Canadian population of Quebec.

This weekend's provincial "Unity" meeting that has denied the participation of first nations peoples and that proceeds without the participation of Quebec is ill-conceived.

Only when the general concerns of citizens of Canada and the specific concerns of the citizens of Quebec are addressed will there be real unity. If we as a nation address these concerns that have plagued Quebec since the Quiet Revolution, perhaps we will finally see an end to separatist politics, given that the protection of French language and culture in Quebec will finally be irrevocably enshrined in the Canadian Constitution.

\* TO SUPPORT TERMS OF SEPARATION DECIDED COLLECTIVELY BY THE PARLIAMENTS OF CANADA; deferred resolution

\* TO SUPPORT THE RIGHT OF FIRST NATIONS PEOPLES WITHIN QUEBEC (AND WITHIN CANADA) TO SELF-DETERMINATION INCLUDING THE RIGHT TO CHOOSE THEIR RELATIONSHIP WITH QUEBEC AND CANADA; deferred resolution

\* TO REMAIN IN CANADA IF THAT IS THEIR DEMOCRATICALLY EXPRESSED WISH. (deferred resolution)

## TOURISM, SPORT AND RECREATION

Heli-assisted Recreation B.C. POLICY CONVENTION, 1990

- To oppose Heli assisted recreation B.C. POLICY CONVENTION, 1990.

Operation of All-terrain Vehicles (Bill M219

- to endorse legislation which would ban the use of all-terrain vehicles for recreational purposes off-road on all public lands and endorses legislation to consign to the local level laws respecting the use of all-terrain vehicles for recreational purposes. (B.C. ANNUAL GENERAL MEETING, 1991)

## SUSTAINABILITY

Sustainability

(B.C. POLICY CONVENTION, 1990)

43.1. a       Whereas the Greens promote sustainability as an important goal;

43.11 [Resolved that] activities are sustainable when they:

Use materials in continuing cycles.

Use continuously renewable sources of energy.

Insure continuation of the earth's natural systems.

## CONSUMER AFFAIRS

### Truth in Packaging

- To ensure that non-information advertising shall not be considered a legitimate business expense for tax purposes. (B.C. POLICY CONVENTION, 1986)

## POLITICAL/LEGAL ISSUES

### Government

### Green Party Lists

- To adopt a requirement in any proportional system to field women as every second candidate on their proportional lists (ANNUAL GENERAL MEETING 1995)

### Constitution/Legislative Change/Recall

- To endorse the principle that all individuals would have the right to initiate legislative change; and

- To endorse the principle that all elected officials be subject to recall procedures. - individuals acting collectively are the ultimate source of authority for the existence and actions of government; and

- any group of individuals may form an autonomous government to provide goods and services which affect only those individuals; and

- all individuals shall have equal input into government in regard to their interests; and

- all decisions by government at any level must promote the long term good for all individuals collectively;

- To support the development of a transitional provincial constitution which would establish and entrench the complete autonomy of municipalities and regions over all matters appropriate to those jurisdictions; B.C.

## POLICY CONVENTION, 1986

### Public Investment Notice

- to require government by law to make public a complete list of investments weekly,
- To make available information on public investments in writing on request through government offices in British Columbia, and by telephone, or electronic mail.  
(ANNUAL GENERAL MEETING, 1995)

### Pensions

- To REQUIRE MLAs [and MPS] to contribute 9% (current pension contribution) of their salary to creation of a constituency ecological trust fund (ANNUAL GENERAL MEETING, 1995)
  - \* to HAVE THE FUND ADMINISTERED by a board of citizens invited by the MLA
- E We will establish an independent process for determining current MLAs salaries, benefits and eligible expense, and for making recommendations for fair treatment of previous MLAs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Government Ministries

- To place an immediate moratorium on ministerial and government restructuring until a non-partisan non-ideological task force of individuals familiar with the efficient operation of government can be convened and report to cabinet
- To adopt the results of such an enquiry with necessary amendments to reflect new government directions and public service employment (B.C. POLICY CONVENTION, 1996)

### Provincial Constitution

- To add a procedure for amendment to the constitution of the province of British Columbia which can either be initiated by an act of the legislature or petition by the public (an initiative) which must then be put to binding public referendum.

## Because

-the province of British Columbia recognizes, as its constitution, documents which may be changed by an ordinary act of the legislature,

- constitutional changes are at the whim of the government of the day, with no assurance that improvements will be kept by following governments, (ANNUAL GENERAL MEETING, 1995)

## Democracy and bioregionalism

- to adopt as a general principle the development of strong local communities. strong local communities are the only social units sensitive enough to local conditions to be able to adapt to their environments, and are the loci of grass roots direct democracy; B.C. POLICY CONVENTION, 1986

## Bioregionalism

\* To endorse the principles of bioregionalism; the fostering of strong regional identities and cultures; watershed democracy; bioregional economies of place; living in place and reinhabitation. (B.C. POLICY CONVENTION, 1986)

## Welcome Home Statement

- to endorse the Welcome Home statement of the 1st North American Bioregional Congress and to live in place is to live within the means of the local bioregion rather than relying on the exploitative mass market system;

(B.C. POLICY CONVENTION, 1986)

## Social Ecology

- to the positively encourage an ecological culture and not just to impose negative sanctions on those reluctant to cooperate because the development of an ecological society is not just a legislative project, but [also] a cultural one; and

because there is concern about the tendency in the environmental movement that would force people into ways of behaving that a minority believe to be ecological (B.C. POLICY CONVENTION, 1986)

## INFORMATION

### Freedom of Government Information

- To support the Freedom of Information legislation for the province which will ensure public access to all information held by government which is necessary for citizens to make sound decisions (Virtually all information, except, of course, personal information); and (B.C. POLICY CONVENTION, 1987)

- To [introduce] work toward and introduce legislation to make all such information related to public health and safety, available and easily accessible to the general public in a format that can be easily understood; and

- To [introduce] work toward and introduce legislation to change the government bureaucratic service(s) so that its primary clients would be the public, and not private interests.

Because environmental and public interest groups and organizations are hampered by existing access to information laws (B.C. POLICY CONVENTION, 1989,) 63.3.1

- To ensure that Freedom of Information legislation is extended to all government information, and access is made affordable. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### . Government reform

- To advocate that Governments must develop systems which provide all citizens with the opportunity to have input into the decisions which affect their lives. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Intervenor funding

- To support development of a funding program for intervenor groups at public hearings and commissions. ( B.C. POLICY CONVENTION, 1989)

- To support a funding program for intervenor groups at public hearings and commissions. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### 63.2.1 Access to Information

## Government Language Reform

- To replace in all publications by government at all levels, gender biased designations by gender neutral designations, such as person power in place of manpower. ( B.C. POLICY CONVENTION, 1990)

## RIGHTS AND ENTITLEMENTS

- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and
- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs. (B.C. POLICY CONVENTION, 1986/9)

## Human and Animal Rights

- To recognize that every human being shall have equitable access to food, clothing, shelter, and health care; due process under a just system; control of her/his thoughts; education as and when needed, in accordance with the philosophy of non-violence and respect for the biosphere; and (BC Policy 1986/9)
- To recognize that every human being shall have equitable access to opportunities regardless of race, creed, colour, sex, mental or physical condition, nationality, language normally spoken, ancestry, place of origin, age, sexual orientation, religion, marital status, family composition, source of income, or political belief; and
- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and

- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs.

Because

It is necessary to continue to work towards, developing a society that recognizes and respects the dignity and worth of each person, and upholds human rights and responsibilities, and the inalienable rights of other living forms and natural processes that share the Earth with us; (B.C. POLICY CONVENTION, 1986/9)

## Animal Rights

### Animals in Research

#### Animals in Research

-Ban the use of animals for the testing of cosmetics and household products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

### Animals as Entertainment (GPC, 1988)

To require that animals imported for zoos must have been born in captivity or be projects to save a nearly extinct species

- to set up strict standards for the treatment of animals used for entertainment in horse racing, zoos, circuses, etc.

- [not allow] new forms of entertainment using animals; i.e. dog racing, rodeos, bull fighting, etc. (GPC, 1988)

-animals imported for zoos must have been born in captivity or be projects to save a threatened species.

-no new forms of entertainment using animals to be allowed; IE. dog racing, rodeos, bullfighting, etc. (GREEN PARTY OF ONTARIO, 1994, GPC 1988))

- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs (GPC, 1988)
- To promote the development of alternatives to animal experimentation; and
- To promote the preservation of wildlife and wildlife habitats; and
- To oppose entertainment involving animal exploitation; and
- To put in place new comprehensive legislation to prevent cruelty to animals;
- To increase funding for the animal protection functions of humane societies;
- To increase funding be increased] for pounds and humane societies including spay/neuter clinics, extended holding days for impounded animals, and innovative pet placement programs. (B.C. POLICY CONVENTION, 1986/9)
- To affirm that human beings, as part of the natural world, must live in harmony with it. Human health and survival utterly depend on the health and survival of the planet which in turn depends on the sheer diversity of the other species sharing the planet with us; therefore, the health of humankind is equally dependent on the health and survival of other animals;
- [to ensure that] all species have an intrinsic right to exist. Their existence need not be justified by their usefulness to humankind. All animals have the right to fair and ethical treatment by human beings. (GPC, 1988)

### Killing of Animals

-We acknowledge the right to kill animals to provide essentials.

Further consideration must be given to the needs of the aboriginal peoples right to self determine their practices on their lands. (GPC, 1988)

\* TO EXPOSE THAT fish farmers have been cited for shooting at and poisoning seals, sea otters, herons, and eagles which they view as a threat to their livestock; and B.C. POLICY CONVENTION, 1987

### Hunting and Fishing

-Hunting with rifles and fishing with electronic fish finders should be banned. Hunting is a natural act that is an integral part of the natural balance

-We advocate a strategy that would reestablish predators such as the wolf and lynx in southern Ontario. We would eliminate predator bounties.

-We advocate increased funding to conservation officers to stop illegal sport hunting and poaching.

-Hunting, trapping and fishing are to be banned in all provincial parks, conservation areas and Crown game preserves.

-Increase the penalties for poaching. - Ban the leg hold trap.

### Animals in Agriculture

-establish and enforce standards for the care of farm animals.

-Outlaw the use of furs on ornamental clothing. The use of furs in some survival application is accepted.

-gradually phase out battery farming through stringent measures to favour free-range husbandry.

-ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement.

-encourage a reduction in meat consumption with an educational campaign.

- ban the transport of live animals over long distances.
- ban the use of growth stimulants for meat animals and the routine use of antibiotics in animal feeds. (Ontario,)

## WILD ANIMALS

- Hunting with rifles and fishing with electronic fish finders should be banned. Hunting is a natural act that is an integral part of the natural balance. (Ontario,)
  - [ban] hunting, trapping, and fishing in all provincial parks, conservation areas, and Crown game preserves (GPC, 1988, Ontario)
  - -increase funding to conservation officers to stop illegal sport hunting and poaching. (Ontario,)
  - Substantially increase the number of conservation officers
- We advocate a strategy that would reestablish predators such as the wolf and lynx in southern Ontario. We would eliminate predator bounties. (Ontario)
- the penalties for poaching. -
  - Ban the leg hold trap and other slow-kill trapping methods
  - Support federal funding to establish appropriate economic alternatives to commercial fur trapping for aboriginal peoples. (GPC 1988).
- Outlaw the use of furs on ornamental clothing. The use of furs in some survival application is accepted.
- gradually phase out battery farming through stringent measures to favour free-range husbandry.
- ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement.

## Animal Rights

-encourage a reduction in meat consumption with an educational campaign. (Ontario?)

-ban the transport of live animals over long distances.

-ban the use of growth stimulants for meat animals and the routine use of antibiotics in animal feeds. (Ontario,)

- To publicly and actively support any action carried out to uphold the rights of animals providing such action is compatible with the Green philosophy on non-violence.

Because animals experience pleasure and pain, have needs and wants, seek companionship and, in many cases, family life (B.C. POLICY CONVENTION, 1986)

\* TO oppose the establishment of a West Coast AND EAST COAST seal hunt. (B.C. POLICY CONVENTION, 1987)

## ETHICAL TREATMENT OF ANIMALS

Whereas all species have the intrinsic right to exist without regard to their usefulness to humankind;

whereas all animals, whether wild or domesticated, have the right to fair and ethical treatment by human beings;

- increase funding for conservation officers to stop illegal sport hunting and poaching;
- eliminate non-food trophy hunting
- ban leg-hold traps, as suggested by the European Parliament and the Cree, the largest group of native trappers
- legislate standards for the care of farm animals that would phase in free-range organic production techniques

- eliminate growth stimulants and antibiotics in the production of meat [and other animal food products] require immediate labeling during phase-out period, and education of the public a to available alternative food sources
- ban the importation of products produced in a fashion which would not comply with Canadian animal treatment legislation
- ban importation of animals for zoos except where this is related to projects to save threatened species
- legislate an end to containment that uses animals i.e. dog racing, rodeos, bullfighting etc. (GPC, 1988)

#### TRADE IN WILD ANIMALS

- To ban any trade in wild animals or wild animal parts which could constitute a threat to natural wildlife Populations. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- TO ENSURE THAT NO INDUSTRIAL FOOD PRODUCTION WOULD DESTROY THE HABITAT OF NATURAL AND WILD SPECIES (1998)

#### Animals in Agriculture

- to establish and enforce standards for the care of farm animals;
- Phase out battery farming through stringent measures to favour free range husbandry;
- Ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement;
- Encourage a reduction in meat consumption with an educational campaign;
- Discourage the import and export of live animals over long distances;
- Phase in a ban on the use of growth stimulants for animals and the routine use of antibiotics in animal feeds; (B.C. POLICY CONVENTION, 1990)

#### Animals in Research

- Ban the use of animals for the testing of cosmetics and household

products, for psychological research, and other non-medical research.

-set up independent, community-based committees to review all research projects using animals.

-eliminate unnecessary vivisectionist for educational purposes.

-fund research into alternatives to animal testing for medical research.

Animals as Entertainment (GPC, 1988)

-encourage a reduction in meat consumption with an educational campaign. (Ontario?)

Guaranteed Annual Income and childcare support; and

[other adopted GPPABC] policies.

[This support] system should include such things as:

education about adoption;

more homes for single mothers;

single parent support groups;

prenatal and post natal services; and

life skills training.

## Midwifery

- To support the right of women to choose freely the option of home birth;
- To support the recognition of midwifery as a professional service available to all women in BC and that the provincial government should work with the Midwives Association of BC to establish a professional midwifery license. (B.C. POLICY CONVENTION, 1988)

## Lactation

- To favour governments restricting dangerous baby products to at least the standards of the World Health Organization's Code of Marketing of Breast Milk Substitutes.
- To support the boycott of Nestle & American Home Products and London Drugs because they violate the W.H.O.'s guidelines. C.M.B.S. Infant formula kills an estimated 1.5 million babies annually. (ANNUAL GENERAL MEETING, 1994)

ANNUAL GENERAL MEETING, 1994

## 72.7.1 Ecofeminism

### Feminist and Post patriarchal Studies

#### 4.2 Ecofeminism

(B.C. POLICY CONVENTION, 1990)

A we will support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA, 1997)

- To encourage women to participate in political activity at every level of the decision-making process, including affirmative action; and
- To advocate the replacement of school materials which portray people in sexist stereotypes with non-sexist material; and (B.C. POLICY CONVENTION, 1986)
- To advocate that non-sexist life programs and education be available to all students, appropriate to the age level; and (B.C. POLICY CONVENTION, 1986)

- To advocate that provisions for women's studies courses be made in public schools, along with an inclusion of the contributions of women to other courses of study; (B.C. POLICY CONVENTION, 1986)
- To advocate that every student has the choice of a full range of programs and activities to achieve excellence in non-traditional and/or traditional areas of endeavour and unique talents, without discouragement based on sexist attitudes from teachers or counselors; (B.C. POLICY CONVENTION, 1986)
- To advocate that access to non-sexist vocational and academic counseling be ensured (B.C. POLICY CONVENTION, 1986)
- To ensure that a procedure to address sexual harassment of students be activated in the current school systems (B.C. POLICY CONVENTION, 1986)
- To encourage workers' associations to negotiate sexual harassment clauses into their contracts which would include definition of same and grievance procedures in the event of such harassment (B.C. POLICY CONVENTION, 1986)

## BECAUSE

-Ecofeminism involves close examination of cultural symptoms of alienation from the Earth; heterosexism, sexism, racism, classism, speciesism, militarism, ageism, and exploitation of nature are a few examples of such alienation.

-As people of an alienated culture, we carry internalized systems of domination into our work as Greens.

-It is an ongoing and interpersonal journey for us to rid ourselves of behavioural patterns that hurt ourselves, others, and the environment. Qualities such as cooperation and nurturing are fundamental to a green world.

Ecofeminists seek to understand the interconnected roots of all domination and to learn ways of achieving balanced behaviour.

- To advocate equal pay for work of equal value; and
- To implement pay equity. Women, minorities and the disabled have the right to equal pay for equal work. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- To advocate the decriminalization of prostitution between consenting adults (B.C. POLICY CONVENTION, 1986)
- TO [ENSURE] /recognize/ that the term violence against women is inclusive of females of all ages; and (B.C. B.C. POLICY CONVENTION, 1986)
- TO [INSTITUTE] /advocate /community-based financial support for emergency care centres for rape or assault victims (B.C. B.C. POLICY CONVENTION, 1986)

- TO [REQUIRE] /advocate/ the designation of crisis centre information as public service announcements for all media ( B.C. POLICY CONVENTION, 1986)
- TO /advocate the position of their party/ [PROVIDE] as a medium for the distribution of information concerning women's support groups, whether that information be printed, verbal, or in the form of future seminars ( B.C. POLICY CONVENTION, 1986)
- TO [ENSURE] /advocate/ that information concerning women's support groups become a part of the GPPABC Resource Centre Library ( B.C. POLICY CONVENTION, 1986)
- TO [ESTABLISH] /advocate the establishment of/ a guaranteed annual income for all homemakers ( B.C. POLICY CONVENTION, 1986)
- TO [ESTABLISH] /advocate the establishment of/ financial services specifically designed for the needs of single parents (B.C. POLICY CONVENTION, 1986)
- TO [PROVIDE] /advocate the provision of / quality childcare centres and services, that meet the needs of children from infancy to adolescence, are universally accessible, and are responsive to the needs of parents and the community ( B.C. POLICY CONVENTION, 1986)
- TO support the alternative of any person being legally entitled to a chosen name. (B.C. B.C. POLICY CONVENTION, 1986)
- TO support the creation of post-secondary institutes of feminist and post-patriarchal studies ( B.C. POLICY CONVENTION, 1986)
- .
- To support community-based funding for housing for street people ( B.C. POLICY CONVENTION, 1986)
- TO work with communities to develop and provide low-cost housing alternatives. (ALBERTA GREEN POLICIES, ALBERTA 1997)
- TO equalize tax treatment for families regardless of whether one or both parents are working. (ALBERTA GREEN POLICIES, ALBERTA

## EDUCATION

### Education Curricul

- TO ORIENT educational curricula toward not only providing facts and technical skills, but also toward encouraging ecological awareness, social responsibility and quality in human relations
- To encourage development of skills in critical thinking, basic communications, and conflict resolution; and provide peace education within the educational framework; and
- To encourage education in family and community living, skills such as parenting, child rearing and personal financial planning for both males and females. (B.C. POLICY CONVENTION, 1986)

### Community Integration of schools

- to decentralized schools from Provincial control to the level of the community and be integrated into community life; and
- To endorse opening up existing school facilities such as libraries, laboratories, workshops and art studios to all members of the community; and
- To encourage community and student participation in both academic and non-academic activities and a diversity of groupings for learning, such as mixed age classes, home schooling and self-directed learning; and
- To support broadening the concept of learning. That learning take place outside of school as part of the daily functioning of the community, so that young and old alike share their skills, knowledge and information, with everyone becoming both student and teacher. (B.C. POLICY CONVENTION, 1986)

### Alternate Resource Studies

- To endorse the need for new approaches to resource use, agricultural practices, forestry, fisheries, mining practices, energy generation, and environmental protection;
- To support the establishment of alternative energy and ecology research institutes in the province; and
- To endorse increased funding for alternative energy studies in university engineering departments across the province, including small scale hydro and appropriate wind

power, methane gas, biomass conversion, and use of industrial waste steam. (B.C. POLICY CONVENTION, 1986)

- To implement policies which ensure that the same funding rate per student applies throughout the province with extra funding for programs which address special needs programs. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Corporate involvement in schools

- To move to eliminate the influence of business in our education system. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO END ALL CORPORATE INTRUSION INTO EDUCATION AT ALL LEVELS (1998)

\* TO DISALLOW ALL DONATION OF FUNDS OR GOODS AND

SERVICES IN KIND TO FEDERAL CANADIAN POLITICAL PARTIES. IN ADDITION, ALL CORPORATE CONNECTIONS OF CANDIDATES INCLUDING THOSE FOR THE LEADERSHIP OF PARTIES BE REVEALED (1998)

#### Alternative and Experimental Schools

- to encourage the funding of alternative and experimental school

(B.C. POLICY CONVENTION, 1986)

#### People with Disabilities

To support the principles of community living, guaranteed income and level access to all people with disabilities. (ANNUAL GENERAL MEETING, 1993)

#### Lifestyles

- To recognize that in many cases, the behaviour of society, not of ecosystems, requires adjustment and hence a need to define resource problems in human terms;
- To recognize that human lifestyle may need to adjust to the natural carrying capacity of the region; and
- To recognize that resource management must be heavily weighted toward the long-term and global perspective; and

- To recognize that a multiple mean (land use) approach is generally useful but some areas must be designated for special use, e.g. ecological reserves; and
- To recognize that a multiple means approach is desirable, including examination of the end goals of the population and then considering the widest range of possible means of achieving those goals; and
- To recognize that irreversible decisions should be avoided. (B.C. POLICY CONVENTION, 1986)

### Family Life Education

- To [recognize that] without reproductive choice, the value of female members of a society will inevitably be defined in terms of their capacity to bear children, and thus just as inevitably increase the population's size;
- to [ensure] that sex education and family life planning be part of the school curriculum in British Columbia, being brought into the curriculum appropriately at several levels in a child's education; and ( B.C. POLICY CONVENTION, 1987)

### Naturist Policy

- To support the legalization of special recreational areas for public clothes optional use in places already traditionally used for such, as a first step toward removing nudity as an offence in the criminal code and leaving what is acceptable to local laws and customs.

#### Because

- the welfare and well being of all peoples including the discouragement of oppression of any kind and that every human being shall have equitable access to opportunities regardless of race, creed, colour, sex, mental or physical condition, nationality, language normally spoken, ancestry, place of origin, age, sexual orientation, religion, marital status, family composition, source of income, or political belief; and
- clothes optional recreation is practiced by thousands of people on the beaches of the Marine Drive Foreshore Park and to a lesser extent on isolated beaches and areas throughout the province; and
- the state of being nude is not offensive or obscene and currently constitutes a criminal offence; and
- people nude can coexist with people clothed; and

- in other countries in the world, most notably European, it is no longer, or it never was a crime to be nude at public beaches or parks; B.C. POLICY CONVENTION, 1987

## Air Pollution and Smoking

- To adopt as official policy no smoking within [GPPABC] meetings.
- To oppose the move of the federal and provincial governments to lower tobacco taxes instead of addressing many issues including aboriginal rights, the US/Canada Free Trade Agreement, health, etc. (B.C. POLICY CONVENTION, 1985)

ANNUAL GENERAL MEETING 1994

## Human Population

78.1.1. a      Whereas the interaction of the human population with its surrounding environment imposes demands on that environment in the form of resource utilization, energy requirements, and waste treatment; and

78.1.1. b      Whereas these demands are a function of population numbers and the level of technology attained by the population; and

78.1.1.c      Whereas the extent of these demands will constitute a quantifiable people pressure impact on this environment; and

78.1.1. d      Whereas the human species has, in its technological advances, intervened in the natural processes

of human population control by medical techniques which reduce the death rate,

- To support easy access to birth control information and methods (B.C. POLICY CONVENTION, 1986)

- To support offering assistance in family planning to others who desire this; and
- To support better and more equitable methods of contraception.

## Population

\*To promote human population decrease world wide, including [in] industrialized countries; and

- To introduce incentives and educational programs would to slow down human population growth with the intent to achieve population decrease over time.  
(B.C. POLICY CONVENTION, 1990)

## ENDNOTES

1. Definition from the 2nd North American Bioregional Congress press release dated January 1987, announcing to N.A. BC II proceedings

## Appendix I

### CONSTITUTION

#### of the GREEN PARTY POLITICAL ASSOCIATION OF BRITISH COLUMBIA

(Adopted February, 1983)

(Amended June, 1984)

(Revised July, 1985)

(Amended July, 1988)

1. The name of the Society is the Green Party-Political Association of British Columbia.
  
2. The purposes of the Society are:
  - (a) to carry on the functions of a political party;
  - (b) to work towards achieving the goal of nuclear and general disarmament, and world peace through the non-violent resolution of conflict;
  - (c) to work towards achieving the goal of a conserver society;
  - (d) to work towards an economic system based upon sound environmental and ecological principles;
  - (e) to work towards developing a society that accepts responsibility for and upholds the inalienable rights of all life forms and natural processes that share the earth;
  - (f) to develop a community-based democracy with local decision-making and control; and
  - (g) to undertake all such other activities consistent with these purposes which the Society's provincial representatives consider appropriate.

WELCOME HOME STATEMENT REMOVED FROM THIS DOCUMENT

### III. Definitions

Please note that the following definitions have not been adopted by the Green Party-Political Association of BC membership and are presented only to assist in policy interpretation.

"non-violence"

A method of resolving conflict and of waging conflict with as little damage as possible to the human person and physical and biological environment.

"grass-roots democracy"

A more active realization of decentralized direct democracy.

"Conservator society"

A society where energy and resource wastes are reduced to offset ever-increasing consumption, i.e. a society that lives within its means

"bioregion"

A life region - a geographical area whose rough boundaries are set by nature (not humankind), distinguishable from other areas by characteristics of flora, fauna, water, climate, rocks, soils, land forms and human settlements. See also appendix II.

"soft energy"

Energy resources which are decentralized, renewable and ecologically sustainable.

"biomass conversion"

Any conversion process that turns non-usable organic matter into a more usable form, such as municipal/commercial anaerobic composting which converts organic garbage and sewage solids into methane gas and organic fertilizer.

"fossil energy"

Energy produced from non-renewable fuels obtained from the earth.

"workers' association"

An organization of employees formed for purposes that include the regulation of relations between employees and employers, i.e. a Trade or Labour Union.

"stumpage fees"

Money due to the province for the harvest of timber; Stumpage and Royalty rates as define in the BC Forest Act.

"direct democracy"

Democracy where an individual has a direct say in the affairs of government.

"watershed democracy"

Democracy on a scale of watersheds; democratic regions whose boundaries follow the line of separation between two contiguous drainage valleys.

"multiple means"

A method of using something in different ways, each of which does not compromise any other.

"re-inhabitation"

To restore to a former sense of living in place; to restore "a critical awareness of and respect for, the integrity of our ecological communities"; to restore to the bioregional perspective outlined in the "Welcome Home" statement in appendix II.

#### 4.0 GREEN DEFINITIONS

##### 4.1 Deep Ecology

B.C. POLICY CONVENTION, 1987

Resolved that the Greens work towards incorporating the principles of deep ecology in all policies, programs, and platforms.

4.1. a Whereas the Western technical cultural evolution of the human species has been characterized by progressive physical and spiritual alienation from other life forms and natural processes of the earth's ecosystems; and

4.1. b Whereas this alienation has been manifested as an illusion of arrogant uniqueness, human exemption from, and control of, these life forms and processes; and

4.1.c Whereas some Greens envision a planet on which the human population lives harmoniously and dynamically by employing a sophisticated and unobtrusive technology in a world environment which is left natural; and ( B.C. POLICY CONVENTION, 1987)

GUIDING PRINCIPLES (GUIDING PRINCIPLES Alberta, 1997)

-We are dynamic beings living in a dynamic world. The world is constantly changing and we recognize that human beings are capable of affecting the rate at which those changes occur (GUIDING PRINCIPLES Alberta, 1997)

4.1. d Whereas some Greens are of the opinion that the institutionalization of an ecological consciousness will occur when most persons begin to see the diminishment of people and the diminishment of the planet and its non-human inhabitants as essentially one and the same problem; and

4.1. e Whereas some Greens believe that to achieve the aforementioned, it will require a total reorientation of the thrust of Western culture; and

4.1. f Whereas some Greens believe that without a major change of consciousness, a profound and intimate sense of inter-relatedness with non human nature, there is no hope for beginning to turn the situation around; and

4.1. g Whereas these ecological and evolutionary insights have become synthesized and extended as principles of Deep Ecology, such as the following:

Shallow Ecology

Natural diversity is valuable as a resource for us.

It is nonsense to talk about value except as value for humankind.

Plant species should be saved because of their value as a genetic reserve for agriculture and medicine.

Pollution should be decrease if it threatens ecological equilibrium.

Third World population growth threatens ecological equilibrium.

Resource means resource for humans.

People will not tolerate a broad decrease in their standard of living.

Nature is cruel and necessarily so.

"Deep Ecology

Natural diversity has its own (intrinsic) value.

Equating value with value for humans reveals a species prejudice.

Plant species should be saved because of their intrinsic value.

Decreasing pollution has priority over economic growth.

World population at present levels threatens ecosystems but the population and behaviour of industrial states more than any other. Human population is excessive.

Resource means resource for living beings.

People should not tolerate a decrease in the quality of life but in the standard of living in overdeveloped nations.

- We measure economic progress in terms of improvements in the quality of life rather than [in] the acquisition of consumer goods. (GUIDING PRINCIPLES Alberta, 1997)  
Humans are cruel but not necessarily so.

## SPECIFIC RESOLUTIONS

BC specific resolutions

### 22.3.1 Carmanah Watershed

- \* TO ENSURE that no logging take place in presently unlogged portions of the Carmanah watershed 9 B.C. POLICY CONVENTION, 1990).

### 22.4.1 Clayoquot Sound

- \* TO [ENSURE] that all remaining old growth forest in Clayoquot Sound be declared [a] protected [area]. B.C. ANNUAL GENERAL MEETING 1993

- \* TO REPLACE some of the forest industry jobs lost in the area with employment in the restoration of the damaged areas of the Sound.

B.C. ANNUAL GENERAL MEETING 1993

### 20.2.1 Strathcona Park

B.C. POLICY CONVENTION, 1988

- \* TO advocate restoration of the boundaries and status of Strathcona Park to December 31, 1986 positions; and

\* TO support the Friends of Strathcona Park and similar groups in all their non violent actions, including their civil disobedience, in their efforts to keep any industrial activity out of Strathcona Park (pre-December 1986 boundaries).

#### 20.3.1 Flathead/Akamina Kishinina Area

\* TO support efforts to immediately freeze development of the Flathead/Akhima Kishinina area by annexation to Waterton Lake National Park, having duly settled all aboriginal claims in this area. ( B.C. POLICY CONVENTION, 1989

• TO DECOMMISSION /II We will decommission / the Oldman Dam as recommended by the Federal Government Environmental Impact Assessment. (ALBERTA GREEN )

#### 20.4.1 Khutzemateen Wildlife Area

\* TO SUPPORT THE establishing a joint Federal Provincial Wildlife Management area in the Khutzemateen area of BC as one of the measures necessary to preserve a viable grizzly bear population in North America. (B.C. POLICY CONVENTION, 1990)

(POLICIES, ALBERTA 1997)

### GREEN PARTY OF CANADA IN NEWFOUNDLAND AND LABRADOR

We live on a finite planet with finite resources, but are consuming our ecological capital instead of living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water and air, topsoil, fish, and trees. We must move from growth to sustainability. (GREEN PARTY OF NEWFOUNDLAND).

See "Sustainability - A Choice to Consider" for more information

## GREEN VS GREY

Politics is no longer defined by the struggle between the Left and the Right. The politics of the 21st century will be divided between the Green and the Grey: between those who see the Earth as an interconnected web of life, and those who see it as a collection of resources to be exploited for maximum short-term profit. (GREEN PARTY OF NEWFOUNDLAND).

In a Grey economy, the worth of vanishing species and natural resources is disregarded because these cannot be easily quantified. Instead economic indicators rise with every automobile accident, with every oil spill, and with every newly diagnosed cancer patient. (GREEN PARTY OF NEWFOUNDLAND).

In a Green economy, progress would be redefined to stop counting the liquidation of nature as income; corporations would be held responsible for their products from cradle to grave; new economic indicators would be applied to account for the social and ecological costs of products and services; and to create jobs, income and consumption taxes would be replaced with environmental taxes. (GREEN PARTY OF NEWFOUNDLAND).

## GREEN JOBS NOT PINK SLIPS

There are many more jobs in a Green economy than in a Grey economy. A Green economy is labour-intensive, sustainable, based on the skills of people, and produces quality products from local resources incorporating local culture. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Communities like Gaultois, Newfoundland depend upon the inshore fishery. A sustainable inshore fishery must be pursued in order to save these communities and preserve marine bio-masses.

### Tax Bads NOT Goods

The Green Party suggests shifting taxes away from personal income and onto non-renewable resources, and eliminating taxes on ecologically benign products and processes. Green taxes reward sustainable businesses and penalize resource-intensive industries. Reducing income taxes and payroll taxes makes people less expensive to employ. (GREEN PARTY OF NEWFOUNDLAND) .

### Sustainable Forestry

Forests belong to future generations and provide habitat for other species. clear-cutting should be banned and the remaining 1% of old growth should be preserved. Higher stumpage fees would encourage selective cutting, and value-added production creates more jobs than exporting raw logs. Hemp and kenaf should be grown as alternative sources of paper fibre. (GREEN PARTY OF NEWFOUNDLAND).

## Organic Agriculture

Agribusiness encourages mono-cropping, chemical farming, centralization, over processing, long-distance transportation and decreased employment. Greens seek to preserve crop diversity, reconnect the farmer with the consumer and ensure a supply of locally produced, pesticide-free food. Product labels should indicate the use of pesticides and bio-engineering. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by H. Pinsent]

## Renewable Energy and Conservation

In view of global climate change and the dangers of radioactive waste, the Green Party suggests phasing out fossil fuels and nuclear energy in favour of renewable energy sources such as solar, wind, biomass, and micro-hydro. The transition to sustainable energy can be achieved through improved energy efficiency, conservation and co-generation. (GREEN PARTY OF NEWFOUNDLAND).

## Life-cycle Product Stewardship

Pollution is resources being wasted. Land-filling is like burying money in the ground. Nothing should be land-filled or released into the air, water or soil. Greens would introduce product-stewardship programs that would require producers to assume the full recycling and disposal costs of their products. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Rivers have been damaged by waste from cities and factories.

Here we see a picture of the Saguenay River, Quebec. Whales, fish and other animals that are native to this river and the Fleuve Saint-Laurent have been seriously affected by heavy metal poisoning. (GREEN PARTY OF NEWFOUNDLAND).

## Community Economic Development

Transnational corporations have no stake in the communities where they get their raw materials or where they operate. As a result, resources are overexploited and jobs migrate to where labour is cheapest and environmental standards are lowest. Green tax reform would favour locally owned and operated businesses that use local resources for value-added production in a sustainable manner, thereby keeping jobs, decision-making and profits in the community. (GREEN PARTY OF NEWFOUNDLAND).

## Guaranteed Income Supplement

Welfare and Employment Insurance should be replaced with a Guaranteed Income Supplement plan that would encourage recipients to seek employment. A GIS would provide financial compensation for traditionally unpaid and undervalued contributions to society, such as child-rearing and homemaking, and would contribute to the support of artists, students, volunteers and small-business start-ups. (GREEN PARTY OF NEWFOUNDLAND).

## Pedestrian Communities and Rail

Trains concentrate development while cars encourage sprawl. Greens would revitalize the rail system for long-distance haulage and passenger travel. We envision gradually

rebuilding all urban areas into pedestrian communities, interconnected by surface light rail, making the private automobile redundant. (GREEN PARTY OF NEWFOUNDLAND).

### An End to Deficit Budgeting

Twenty-five cents of every federal tax dollar goes directly to commercial banks to pay the interest on Canada's \$600-billion debt. Greens recommend that the Bank of Canada take over a significant portion of the debt as an interest-free loan. Greens also suggest implementing a currency transaction tax. (GREEN PARTY OF NEWFOUNDLAND).

### Proportional Representation

The Green Party suggests switching to proportional representation so that when a party receives 15% of the popular vote it would also receive 15% of the seats in Parliament. We would oppose paid political advertising and political donations. Instead all parties should receive equal access to the media and funding. (GREEN PARTY OF NEWFOUNDLAND).

### Restorative Justice

Justice should be restorative rather than retributive. Crime should be defined as a violation of one person by another, not as a violation of the state. The 80% of offenders who are non-violent should be sent directly to halfway houses. Sentencing circles should be used as an alternative to trial by judge and jury. (GREEN PARTY OF NEWFOUNDLAND).

## The Four-day Work Week

Moving to a four-day/32-hour work week would provide jobs for those now unemployed. Greens suggest five weeks of vacation per year, disincentives for overtime, job sharing, paid leave for child rearing and educational leave. Lower welfare and Employment Insurance costs would mean lower income taxes. (GREEN PARTY OF NEWFOUNDLAND).

## Biodiversity and Wilderness

A conservation strategy is needed to protect biodiversity on an evolutionary scale. Canada needs a system of core reserves, corridors, and buffer zones free from development to accommodate viable, self-reproducing, genetically diverse native plant and animal species, including large predators. (GREEN PARTY OF NEWFOUNDLAND).

## Sustainable Fisheries

The use of draggers in both the east and west coast fisheries has decimated our ocean ecosystems. We must recognize and support ecologically appropriate fishing technologies. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by H. Pinsent]

A typical Newfoundland community.

## Cultural Funding

While the cost of funding the arts is relatively low, its social benefits and economic multiplier effects are high. Greens would maintain and increase arts funding, especially for smaller, community-based, participatory arts and recreational activities. (GREEN PARTY OF NEWFOUNDLAND).

[Photo by Jason Crummey]

Many Newfoundland communities continue cultural traditions such as painting stylized "scrolls" on storehouses and barns

## Military Reductions

The cost of Canada's peacekeeping operations is less than \$700 million annually -- only 6% of the defence budget. The Green Party suggests that Canada dramatically reduce its military budget, halt low-level flight training in Labrador, and withdraw from the global arms race. (GREEN PARTY OF NEWFOUNDLAND).

CITIZENS TREATY OF ETHICS,  
EQUITY AND ECOLOGY

Recognizing the Interdependence of Peace, Environmental Protection and

## Human Rights and Social Justice

(Formerly the anti-free trade citizen's treaty for corporate and state compliance: nemesis of the MAI). Proposed General Assembly Resolution to be circulated to governments by their citizens

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development

## Recognizing the Interdependence of Peace, Environmental Protection and Human Rights and Social Justice

(Formerly the anti-free trade citizen's treaty for corporate and state compliance: nemesis of the MAI)

Proposed General Assembly Resolution to be circulated to governments by their citizens

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;

2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development

Concerned that trade organizations such as the World Trade Organization (WTO) and Asia Pacific Economic Cooperation (APEC), and trade agreements such as the North American Free Trade Agreement (NAFTA) and the Multilateral Agreement on Investments (MAI) undermine the work of over 50 years in creating obligations, commitments and expectations with respect to the matters set out above;

Dismayed by the continued global urgency resulting from the failure of member states of the United Nations to discharge their obligations arising from conventions, treaties and covenants, to act on commitments made in conference action plans, and to fulfill expectations arising from general assembly resolutions.

Recalling the expectations created through resolutions of the General Assembly, commitments made in Conference Action plans, and obligations incurred through Conventions:

- to guarantee "the inherent dignity and the equal and inalienable rights of all members of the human family" - to "prevent the scourge of war",
- to recognize "Peoples' right to peace",
- to "eliminate production of weapons of mass destruction",
- to ensure that "the use of scientific technology should be in peace and for the benefits of humanity",
- to "reduce the military budget and transfer the savings into promoting

- social programs particularly in developing countries",
- to "ensure social justice and the equitable distribution of resources",
  - to respect "the right to work for equal pay for work of equal value",
  - to "ensure the rights of future generations", and
  - to "respect the inherent worth of nature beyond human purpose";

Noting that December 10, 1998 is the 50th Anniversary of the Universal Declaration of Human Rights and that there must be no discrimination on the following grounds:

Race, tribe, or culture, colour, ethnicity, national ethnic or social origin, nationality, place of birth, nature of residence (refugee or immigrant, migrant worker) status, colour, gender, sex, sexual orientation, gender identity, marital status, form of family, disability, age, language, religion or conviction, political or other opinion, or, class, economic position, or other status

Recalling the commitment made by all the member states of the United Nations in the Platform of Action at the UN Conference on Women: Equality, Development and Peace (Beijing, 1995) and in the Habitat II Agenda, "to ensure that corporations including transnational corporations comply with national codes, social security laws, and international law, including international environmental law";

**WE CALL UPON THE MEMBER STATES OF THE UNITED NATIONS TO UNDERTAKE THE FOLLOWING:**

1. To discharge obligations, act on commitments, and fulfill expectations

arising from Public Trust international agreements and thus:

- (a) to sign and ratify those existing international conventions, treaties, and covenants that have not yet been signed and ratified,
- (b) to enact the domestic legislation necessary to implement them and to fulfill the legitimate expectations created by General Assembly resolutions and declarations, and
- (c) to act upon commitments arising from conference action plans;

2. To establish mandatory international standards and regulations (MINS), based on international principles and on the highest and strongest regulations from member states, harmonizing standards and regulations continually upwards with respect to:

- a. Promoting and fully guaranteeing respect for human rights including labour rights, health rights and social justice;
- b. Enabling socially equitable and environmentally sound employment;
- c. Achieving a state of peace, justice and security;
- d. Creating a global structure that respects the rule of law; and
- e. Ensuring the preservation and protection of the environment.

3. To demand compensation and reparations from corporations, and from administrations that have permitted corporations to, or assisted them in, degrading the environment, violating fundamental human rights, causing harm to human health, especially where those actions occurred:

- (a) in developed and developing countries, or
- (b) on the lands of indigenous peoples or in the communities of marginalized citizens in either developing or developed countries;

4. To revoke the licenses and charters of corporations, including transnational corporations, if those corporations have persistently:

- (a) violated human rights or denied social justice,
- (b) caused environmental degradation, or harm to human health,
- (c) disregarded labour rights, or
- (d) contributed to conflict and war, or if they fail to pay compensation for past non-compliance with international agreements;

5. To reduce the global military budgets by at least 50% and use the savings:

(a) to guarantee:

- the right to safe and adequate food, which has been not genetically altered or irradiated, or grown with pesticides
- the right to safe and affordable shelter,
- the right to universal health care,
- the right to safe drinking water,
- the right to a safe environment,
- the right to education, and
- the right to peace;

(b) to fund socially equitable and environmentally sound work; and

(c) to fund education and research free from corporate direction and control;

6. To increase funding for United Nations agencies and for international, national and regional educational institutions so that their missions will not be undermined by corporate direction or control. All funding to the United Nations should be conditional and dedicated to the furthering of international public trust law, not vested interest economic agreements such as GATT, WTO, MAI etc. Given the security council is controlled by the nuclear armed states, the security council should be disbanded, and rotational councils should be selected

from the membership of the general assembly.

7. To develop criteria for partnership with the United Nations so as to ensure the exclusion of corporations and to ensure that all partners have in no way in any of their activities violated human rights, including labour rights caused environmental degradation, contributed to war and conflict, or failed to promote socially equitable and environmentally sound employment;

8. To distinguish "civil society" from the "market" — as business activity conducted for profit and civil society as those elements of society that serve to guarantee human rights, foster justice, protect and conserve the environment, prevent war and conflict, and provide for socially equitable and environmentally sound employment —

9. To prevent the transfer to other states of substances and activities that cause environmental degradation or that are harmful to human health, as agreed in the Rio Declaration, UNCED, 1992;

This prohibition must cover activities

such as those related to:

- (a) production, importation or exportation of toxic, hazardous, or atomic substances and wastes,
- (b) production or consumption of ozone-depleting substances,
- (c) extraction of resources by environmentally unsound methods,
- (d) production or distribution of genetically-engineered food substances and genetically modified organisms,
- (e) production or distribution of genetically engineered crop/pesticide systems,
- (f) production of greenhouse gas emissions;

10. To act upon the commitments made at recent United Nations Conferences to move away from the over-consumptive model of development, to reduce the ecological footprint, to move away from car-dependency, and to reject the economic dogma that maximum

economic growth will resolve the urgency of the global situation;

11. To prohibit all trade zones that have the effect of circumventing

obligations and commitments intended to guarantee human rights, including social justice and labour rights, or to protect, preserve and conserve the environment.

12. To work for the unconditional forgiveness of all developing nations

debt arising from loans made prior to 1990 and for the termination of all

structural adjustment programs (saps) which seek to ensure repayment of

such debt at the expense of ordinary people, including programs which seek:

(a) the indiscriminate privatization of state-owned enterprises,

(b) the indiscriminate reduction of government expenditures,

(c) the indiscriminate liberalization of trade regimes,

(d) the indiscriminate opening of states to increased foreign investment,

especially where this entails the attraction of foreign capital by

deregulating markets and offering low wages, high interest rates, and

little or no environmental protection,

(e) the indiscriminate encouragement of producing of goods for export at

the expense of traditional crops, products and services which serve the

needs of domestic peoples, or

(f) to force a developing nation to adopt a policy of creating or

exacerbating an imbalance between imports and exports;

13. To ensure that no state relaxes environmental, health, human rights or

labour standards in order to attract industry, and that no corporation allows a branch or subsidiary to engage in:

- (a) practices that are unacceptable in the controlling corporation's state of origin,
- (b) activities that are banned or restricted in the controlling corporation's state of origin, or
- (c) manufacturing or transferring substances that are banned or restricted in the controlling corporation's state of origin.

14. To ensure that no state shall justify trade with a country that violates human rights, including labour rights on the grounds that such trade will lead to a betterment of human rights, except where continued trade is conditional on eliminating human rights abuses.

15. To establish an International Court of Compliance where citizens can bring evidence of state and corporate non-compliance with all states' overriding obligations and commitments to:

- (a) protect and advance human rights, including health rights, and labour rights and social justice,
- (b) protect and conserve the environment,
- (c) prevent war and conflict, and
- (d) enable socially equitable and environmentally sound employment

16. To ensure the right of citizens to sue corporate owners and officers, in criminal and civil court, for any legally violation of human rights, including labour rights, denying social justice, for destroying the environment, for causing serious harm to human health, and for contributing to devastation through arms trade

75.2.1 Meares Island

B.C. POLICY CONVENTION, 1985

75.2.1 Resolved that the Greens recognize Meares Island as a tribal park.

URGENCY

To the Ministers and Heads of State participating in APEC

Friday, November 21, 1997

LEST YOU FORGET

URGENCY

OF THE GLOBAL SITUATION

## RECOGNITION OF THE URGENCY OF THE GLOBAL SITUATION

1.1. Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Preamble, Agenda 21, UNCED, 1992)

(1)

## IMPACT OF CONTINUED IMPOSITION OF CONSUMPTIVE MODEL OF DEVELOPMENT

- 1.1. Continued stress on global ecosystem from the pattern of over-consumptive development in industrialized countries
- 1.2. Continued deterioration of the global environment and aggravation of poverty caused by unsustainable patterns of consumption
- 1.3. Continued failure to reduce the ecological footprint through continued adherence to the consumptive model of development
- 1.4. Continued elimination of the ecological heritage of future generations
- 1.5. Continued depletion of resources upon which future generations depend
- 1.6. Continued political, economic and ecological crises, systemic or DE facto discrimination, and other forms of alien domination or foreign occupation
- 1.7. Continued reliance on economic growth paradigm as the solution to global problems
- 1.8. Continue negative impact of structural adjustment programs based on the imposition of over-consumptive model of development
- 1.9. Continued promoting of socially inequitable and environmentally unsound employment and development
- 1.10. Continued failure to redefine "development" in equitable and ecological terms

(2)

INEQUITABLE DISTRIBUTION OF RESOURCES  
AND DENIAL OF BASIC RIGHTS AND NEEDS

- 2.1. Continued inequitable distribution of natural resources
- 2.2. Continued inequality/inequity between "developed", "developing" and "underdeveloped" states
- 2.3. Continued gravity of the economic and social situation of the least developed countries
- 2.5. Continued lack of fulfillment of basic needs, and failure to guarantee the right to food, right to shelter, right to education, right of health care
- 2.6. Continued lack of access to basic sanitation and adequate waste disposal services
- 2.7. Continued lack of access to food and water
- 2.8. Continued lack of access of poor to suitable arable land
- 2.9. Continued increase in the number of people who do not have access to safe, affordable and healthy shelter
- 2.10. Continued food crisis violating right to life and human dignity
- 2.11. Increased use of manipulative Biotechnology
- 2.12. Increased introduction of genetically-engineered food, terminator genes in seeds, genetic screening, transfer of genetically engineered products
- 2.13. Increased control by Multi-National Agri-Food, Pharmaceutical, and Petro-chemical companies world's food supplies
- 2.14. Continued unethical patenting of seeds by multinationals
- 2.15. Continued experimentation in the human genome project
- 2.16. Increased corporate control of their crop varieties
- 2.17. Increased modification of seeds for profit
- 2.18. Increased modification of organisms through "genetically modified organisms"
- 2.19. Continued widespread unemployment and underemployment
- 2.20. Continued failure to link health to over-consumption and inappropriate development

- 2.21 Continued failure to address and prevent environmentally-induced diseases
- 2.22 Increased deterioration of public health system, public health spending and privatization of health care systems
- 2.23. Continuing spread of communicable infections
- 2.24 Continued unequal access to basic health resources
- 2.25 Continued high birth mortality rate  
High percentage of child mortality rate of deaths per live births.

(3)

#### DETERIORATION OF ENVIRONMENTAL QUALITY AND IMPLICATIONS FOR HUMAN HEALTH

- 4.1. Continued impact on health from environmental degradation
- 4.2. Increased impact on health and environment from toxic and hazardous chemicals
- 4.4. Increased air, water and land pollution
- 4.5. Continued adverse health and environmental effects of transboundary air pollution
- 4.6. Continued transferring and trafficking in toxic, hazardous including atomic substances, activities, and waste that are dangerous to
- 4.7. Continued risks of damage to human health and the environment from transboundary hazardous waste health and to the environment
- 4.8. Increased generation and transboundary movement of hazardous waste causing threat to human health and environment
- 4.9. Continued relocation or transfer to other states of activities and substances that cause severe environmental degradation or are found to be harmful to human health
- 4,10 Continued disregard for the precautionary principle
- 4.11. Continued awareness of the harm of exporting banned or withdrawn products on human health

- 4.12. Increased deterioration of the environment and health through anthropogenic actions
- 4.13. Continued ecological and human health effects of environmentally destructive model of development
- 4.14. Continued use of banned and restricted pesticides designated as being hazardous to human or environmental health
- 4.15. Increased resistance of antibiotics

(4)

#### ENVIRONMENTAL DEGRADATION AND LOSS OF NATURE

- 5.1. Continued loss of biological diversity
- 5.2. Continued threat to genetic diversity
- 5.3. Increased deforestation and land degradation
- 5.4. Increased soil erosion
- 5.5. Increased desertification
- 5.6. Increased loss and degradation of mountain ecosystems
- 5.7. Increased erosion and soil loss in river basins
- 5.8. Increased watershed deterioration
- 5.9. Increased marine environment degradation
- 5.10. Increased vulnerability of marine environment to change
- 5.11. Increased risk of impact from increase in sea level
- 5.12. Increased of carbon sinks
- 5.13. Increased impact of global climate change
- 5.14. Increased potential of climate change
- 5.15. Increased depletion of the ozone layer
- 5.15. Increased threats to the ecological rights of future generations
- 5.16. Increased environmental damage from waste accumulation
- 5.17. Unprecedented Increase in environmentally persistent wastes

- 5.18. Continued trafficking in toxic and dangerous products
- 5.19. Continued export to developing countries of substances and activities that are banned or restricted in country of origin
- 5.20. Increased generation of nuclear wastes
- 5.21. Increased Loss of biodiversity through ecologically unsound practices
- 5.22. Increased ignoring of carrying capacity of ecosystem
- 5.23. Continued violation of collective human rights through dumping of toxic, hazardous and atomic wastes is a violation

(5)

#### ACKNOWLEDGMENT OF URGENCY

#### VIOLATION OF HUMAN RIGHTS

- 6.1. Continued violation of human rights on the basis of gender, sexual orientation, sexual identity, family structure, disabilities, refugee or immigrant status, aboriginal ancestry, race, tribe, culture, ethnicity, religion or socioeconomic conditions
- 6.2. Continued violations of human rights through the following activities:
  - Mistreatment, and hasty judicial procedures
  - Lack of respect for due process of law (access to a lawyer or visiting rights)
  - Arbitrary detentions
  - In camera trials
  - Detention without charge and notification to next of kin
  - Lack of defence counsel in trials before revolutionary courts
  - lack of the right of appeal
  - Ill-treatment and torture of detainees
  - Torture of the cruelest kind and other inhuman practices
  - Widespread routine practice of systematic torture in its most cruel forms

- Wide application of the death sentence
- Carrying out of extra-judicial executions
- Orchestrated mass executions and burials
- Extra judicial killings including political killings
- hostage taking and use of persons as 'human shields'
- Constitutional, legislative and judicial protection, while on paper, are revealed as totally ineffective in combating human rights abuses
- Extreme and indiscriminate measures in the control of civil disturbances
- Enforced or involuntary disappearances, routinely practiced arbitrary arrest and detention, including women, the elderly and children
- Abuses of political rights and violation of democratic rights
- Unfair elections
- Activity against members of opposition living abroad
- Harassment and suppression of opposition politically
- Suppression of students and strikers
- Targeting by terrorists of certain members of the press, intelligentsia, judiciary and political ranks
- Failure to grant exit permits

6.3. Increased migration of populations of migrants, refugees and displaced persons

6.4. Continued critical situation of children

6.5. Continued concern about discrimination against women continues despite Human Rights instruments

6.6. Continued barriers faced by women

6.7. Continued female genital mutilation and other harmful practice

6.8. Denial of fundamental rights and freedoms

Suppression of freedom of thought, Media and religion and conscience • systemic discrimination

6.9. Continued denial of moral and humanitarian values through religious intolerance and extremism

- 6.10 Continued massive violations of human rights, ethnic cleansing and systematic rape
- 6.11. Continued wars of aggression, armed conflicts, alien domination and foreign occupation, civil wars, terrorism and extremist violence
- 6.12. Continued violation of human rights of women including murder, torture, systematic rape, forced pregnancy
- 6.13. Continued ethnic cleansing
- 6.14. Continued xenophobia  
Fear and aversion to foreigners continues throughout the world
- 6.15. Continued violation of human rights during armed conflict
- 6.16. Continued discrimination of and violence against women
- 6.17. Continued violation against indigenous peoples
- 6.18. Increased violations of the rights of refugees
- 6.19. Continued insufficient protection of the rights of migrant workers
- 6.20. Continued marginalization of specific women by their lack of knowledge of their rights and redress
- 6.21. Continued Insufficient protection of the rights of migrant workers
- 6.22. Continued multiple discrimination against indigenous women
- 6.23. Continued gender inequities

(7)

## DESTRUCTION THROUGH CONFLICT, WAR AND MILITARIZATION

- 7.1. Continued perpetuation of the substantial global expenditures being devoted to production, trafficking and trade of arms
- 7.2. Forcing developing countries to undertake inequitable structural adjustment
- 7.3. Increased poverty
- 7.4. Continued excessive military expenditures while basic needs are not fulfilled
- 7.5. Continued massive humanitarian problems through military intervention
- 7.6. Continued circulation

- 7.7. Continued war crimes against humanity, including genocide ethnic massacres, and “ethnic cleansing”
- 7.8. Increased human and environmental destruction through land mines
- 7.9. Increased war and civilian amputees as a result of land mines
- 7.10. Continued death and displacement of people through war
- 7.11. Continued impact of radiation from nuclear testing on present and future generations
- 7.12. Continued exposure to radiation on present and future generations
- 7.13. Continued mining of uranium for use in nuclear weapons
- 7.14. Continued production, proliferation and testing of nuclear arms
- 7.15. Continued circulating and berthing of nuclear armed or nuclear-powered vessels

e-mail jrussow@coastnet.com

The Green Party of Ontario defines "Sustainability" as follows.

Activities are sustainable when they:

- 1/ use materials in continuing cycles
- 2/ use continuously reliable sources of energy
- 3/ come mainly from the potentials of human beings  
i.e. communication, creativity, coordination, appreciation, and  
spiritual and intellectual development.

Activities are not sustainable when they

- 1/ require continual inputs of non-renewable resources
- 2/ use renewable resources faster than their rate of renewal
- 3/ cause cumulative degradation of the environment
- 4/ require resources in quantities that could never be available  
for all people
- 5/ lead to the extinction of other life forms. (GREEN PARTY OF ONTARIO 1994)

Ken Toews

Policy Coordinator Green Party of Ontario

## Section 2 The Green Primer

### Introduction

Green parties are active around the world trying to create a future where people live with each other and with the planet in a sustainable manner. Historically individuals

like Henry David Thoreau, have articulated a Green perspective. He practiced "plain living and high thinking" for philosophical rather than religious purposes, to examine the true nature of humanity's relationship with the environment. The distinction between living and "getting a living" were among his concerns.

There have been many successful movements involving self-sufficiency and living simply. People like Helen and Scott Nearing and E .F. Schumacher have been a green alternative for many generations. The challenge for the Green Party of Ontario is to spread this time-tested vision to as many people as possible.

"Any discussion of world poverty that does not come around to demanding a radical change in our habits of consumption and waste, our tastes, our profligate standard of living, our values, generally is a hypocrisy. There are no technical answers to ethical questions."

Theodore Roszak, 1972

The Challenge before us.

We have the ability to produce more than we can consume. To match consumption with capacity we stimulate demand through advertising, planned obsolescence, and the arms trade. The results are all around us. Rather than continuing on this race to bury ourselves in a sea of our own waste, we must turn our attention to finding a secure place within the natural order.

We must come to grips with the problems of economic inequality, resource depletion and over population. The goal must be to create the conditions necessary for true world peace. We will examine the nature of our problems and examine alternative solutions. The Green Party does not claim to have all the answers. What we are capable of doing is defining the problem and suggesting some possible alternatives. Perhaps we will also help you find a new sense of hope and purpose.

## Environmental Degradation & Ecological Collapse

The depletion of the ozone layer; the accumulation of greenhouse gases; acid precipitation; the build-up of persistent toxins such as the whole family of chlorinated chemicals; depleted cod, salmon and tuna stocks, the pollution of our lakes, ground waters, and air; the destruction of rain forests in the southern hemisphere and boreal forests in northern countries; species extinction; the loss of topsoil due to modern agricultural practices and urban encroachment. The list gets longer every day. Our natural systems are threatened by human activity.

## Population Growth

The increase in population and resource consumption are basic causes of human suffering and environmental degradation and must become major priorities for national and international action. Population growth tends to overwhelm any possible gains made in improving the human condition. (GREEN PARTY OF ONTARIO 1994 Subsequently changed [Russow])

## Physical Limits to Growth

We live on a finite planet with finite resources. We are consuming our capital when we should be living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water, fish, topsoil, and trees. Problems are increasing faster than solutions. There is a point beyond which a system will fail to produce additional benefits simply by making it larger or more complex. This point has been exceeded in most of our systems. (GREEN PARTY OF ONTARIO 1994)

## The Distribution of Wealth

The industrialized countries make up one-sixth of the world's population and consume one-half of the world's resources and energy. In the grossly wealthy countries, a small minority owns the majority of the wealth leaving only the street and hand-outs for a large and growing number of the people. When this is coupled with the problem of population growth and the limits on the resource base, a truly explosive mix arises. (GREEN PARTY OF ONTARIO 1994)

"Earth provides enough to satisfy every man's need, but not enough for every man's greed."

Gandhi, 1869 - 1948

## War and Peace

Currently, the armaments business grosses a [800 billion] trillion dollars a year. Third world countries, who do not have the ability to house or feed their population have enough nuclear capacity to destroy the planet. Even a tiny diversion of this flood of money could solve problems that have bedeviled humankind for thousands of years and yet the race goes on. (GREEN PARTY OF ONTARIO 1994)

## The Psychological Limits to Growth

By emphasizing competition rather than cooperation, sharing has become foreign to us. The growth of our technological society has alienated large numbers of people who are no longer connected to any natural rhythms. There are large classes of people for whom the only expression of their individuality is consumerism. (GREEN PARTY OF ONTARIO 1994)

The nuclear family, seemingly the core of the social structure is under intense attack. Some experts maintain that 95% of modern families are "dysfunctional". Our economic system is hostile to individuals, families and communities. We are consuming our psychological capital in exactly the same way we are destroying our environmental capital. A sustainable culture would pay more attention to issues such as self-esteem and co-operation. The root cause our crisis is to be found not only in how people interact with nature but in how people interact with each other. not to be found in how people interact with nature but in how we interact with each other.

"Clearly the attitudes and values which make production the central achievement of our society has some exceptionally twisted roots." John Kenneth Galbraith, 1958

## The Nature of the Solution

Our problems are linked by a common value system. A system founded on principles of hierarchical relationships and unlimited growth. We as a culture define tradition, social arrangements, religion, moral codes and technologies. We decide if they will manifest themselves as institutions of sustainability and subsistence or exploitation and destruction.

Our current experiment in social organization has culminated in the list of environmental and social disasters discussed earlier. There was no way that all of these things could not have come out of a social motivation that held nature in such utter disregard, that elevated growth for its own sake above any other consideration, that felt that power (physical and political) was good in and of itself. The problems we face are rooted in the basic assumptions that have molded modern industrial society. Only by establishing the necessity for a different set of assumptions can we ever hope to find our way out of this mess. No amount of tinkering with the existing order will do the job. Hope for a technological breakthrough that will save us is courting disaster.

The economic system we operate under today was created to obtain as much wealth as possible. In contrast, we must create a system based on a different fact, namely the need for survival: a social order based on the satisfaction of human needs, rather than on human wants. There is no basic conflict between the needs of the planet and our

real needs. They are the same, if only because a healthy planet is basic to our needs. We need not blame the economic system; it merely succeeded in doing what it was designed to do. The consequences were unforeseen and guilt is not the issue.

### A Specific Program

Withdraw all support for the status quo. Get Canada out of the arms business. Stop aiding and abetting those who would exploit the poor countries of the world. Refuse to do anything simply because we profit from it. Withdraw government support from enterprises that degrade the environment. Refuse to do anything that would contribute to the decline of rural communities. Simply acting to extract Canada from the web of complicity would occupy any government's talents and abilities for years. Traditional top-down organizations were necessary to a power based economy and political system. As we free ourselves from the old concepts of executive power and a warped definition of efficiency and start giving precedence to empowerment and responsibility whole realms of alternative social organization open up. There are a wealth of community groups straining to assume responsibility for those things that the welfare state now does so poorly. The consolidation of power in the government has acted to the detriment of real community control. Ceasing to stifle community control would be a necessary first step. "Instead of developing techniques for maximum profit, try to develop those that will give maximum of freedom: an entirely new approach."

Simone Weil, 1909 - 1943

### Green Politics in Ontario

The Green Party of Ontario (G.P.O.) is a registered political party under provincial laws and has participated successfully in electoral politics since 1985. Once a year the GPO has a Policy conferences and an Annual General Meeting. The location of these conferences is rotated around the province. We have instituted a system of travel vouchers that allows individuals to travel to conferences subsidized by the generous provincial tax credit system. We believe in participatory democracy and at general meetings all members are allowed to vote on all resolutions. If you join the Green party you do not give your vote to a delegate nor are you excluded from decision making meetings. All members can vote and all members are funded to travel to conferences.

Constituency associations of the Green Party are active between elections seeking to create a Green society. A society based on the following values: The preservation of the natural world, Feminism, Social Justice, Spirituality, Participatory Democracy, and Non-Violence

Our goal is to participate in the electoral process and facilitate the evolution of party politics away from current confrontational power politics.

Campaigning is the best way to present these views to the public, and to inform the other candidates as to the true nature of the challenges we face. It's a great experience to do so. Many other groups are working to establish the public support for one aspect or another of the Green vision, but only the Green party is working toward those goals within the political system.

Our members come with a wide variety of views and opinions. But uniting them all is the realization that whether the issue is the exploited two-thirds, the environment, peace, feminism or social justice, the root cause of the problem must be addressed.

"I would like to become less acquisitive altogether, to be able to see some exquisite piece of porcelain in some other man's house and be wholly glad that it was there and not mine."

Gabriel Fielding 1965

#### A Sustainable Future

"An economy of abundance is under present rules also an economy of waste and repetition; indeed, without this waste the economy would slump. Nobody, however, can be optimistic about the survival of a society with such values."

Robert Theobald, 1961

Our future depends on developing Green principles in the way we interact locally, provincially and internationally. Our success will depend on our ability to identify the threats to our survival and to apply appropriately scaled solutions to the problems we have created for ourselves. The key is in voluntarily and deliberately converting from a want-based system to a need-based system.

A sustainable society would have to rely on renewable rather than fossil fuels. Our goods would be designed to last as long as possible, to be repairable and easily modified. Our intent would be to live in harmony with natural cycles, including our own biological and psychological limits.

A safe, just, and peaceful society would have to be much less centralized. Equity, in all its forms, would have to be the concern of the entire culture. Decentralization and the devolution of decision-making would be the dominant pattern, with decisions being made at appropriate levels. This involves the search for local consensus, rather than simply seeking a majority. Local communities, even within urban areas, would have

much more responsibility for social programs such as health care, education, and the concerns of the young and elderly.

A Green society would be less urban and more rural, with a renewed emphasis on local economies, emphasizing both local manufacturing and agriculture. Modern communications technology would ensure that even remote areas would be able to participate in the political and cultural life of the whole society.

A Green vision is not looking backward with starry eyes wishing for a past that never existed. Rather it is looking forward, taking the best that technology, science and history have to offer and molding it into a more self-sufficient and secure future that is as concerned with the survival of all species as today's society is with satisfying our greed.

Defense would be based on dependability, not amassing large offensive forces. Greens are calling for nuclear disarmament but not total demilitarization. We recognize that an autonomous society requires some defense force. However, the operative word is defense not force. We respect the ideals of M.K. Gandhi of non-violence and forgiveness being superior to retribution.

" I do believe that where there is only a choice between cowardice and violence I would advise violence.....Thus when asked what should have done if present when I was almost fatally assaulted in 1908, should you run away and seen me killed or use physical force and defend me, I advised to defend me even in using violence. Hence it was that I took part in the Boer War... I believe that non-violence is infinitely superior to violence, forgiveness more manly than punishment. But abstinence is forgiveness only when there is power to punish, it is meaningless when it pretends to proceed from a helpless creature."

M.K. Gandhi

This sustainable culture would emphasize the development of healthy humans by providing the physical and emotional conditions for complete social development in a healthy physical environment.

Growth would emphasize the acquisition of skills and talents, not the acquisition of material goods and the exercise of power.

Section 3:

The Values of the Ontario Greens.

The last word in ignorance is the man who says of an animal or plant: "What good is it"  
Aldo Leopold Protection and restoration of the natural world.

The Green Party is seeking to understand the origins of ecological problems. If we proceed by asking successively deeper questions we will arrive at a more complete understanding.

Early ecologists such as Rachel Carson base their criticism not on pollution itself but rather on the questions of why and how such problems have come into existence. This leads to a consideration of our attitude toward nature, non-industrial cultures, and the ecological aspect of widely different economic systems.

Philosophically we draw upon two main sources: Spinoza and Gandhi. From Spinoza we use the idea of developing as wide a concept of self as possible to incorporate and identify with nature. Gandhi gives us the concept of non-violence and self-realization, the latter reinforcing Spinoza's expanded self. Moreover, both self and things are to be conceived of as processes, i.e. not static but changing.

Our eight basic principles are:

1. The well-being of life on earth has value that is independent of its usefulness to humankind.
2. The richness and diversity of life has value in and of itself.
3. Humans have no right to reduce this richness and diversity except to satisfy vital needs.
4. The flourishing of human life and cultures is compatible with a substantial decrease in human population. The flourishing of non-human populations requires such a decrease.
5. Present human interference with the non-human world is excessive, and the situation is rapidly worsening.
6. Basic economic, technological, and ideological structures must be changed.
7. The ideological change is mainly that of appreciating life quality (dwelling in situations of inherent worth) rather than adhering to an increasingly higher standard of living. There will be a profound awareness of the difference between big and great.
8. Those who agree have an obligation to try to implement the necessary changes.

We feel that we must change our viewpoint from a homocentric one to an ecocentric one, and at once. The ideas of "walking gently on the earth" and living simply seem to be obvious first steps toward a more sustainable future. Individuals must work these concepts into their own lives and the institutions that make up our community.

Regardless of one's background, it is possible and, in our view, essential for each individual to come to a realization of the ethics of ecology. The sooner an ethics based on respect for the natural world is adopted, the better. The beneficiaries will be not only ourselves but our children, grandchildren and the thirty million species with which we

share the planet. "We should never lose sight of the fact that the project of human liberation has now become an ecological project, just as conversely, the project of defending the Earth has also become a social project." Murray Bookchin

## Social Justice

Most ecological problems have their roots in social problems. Problems that go back to the very beginning of patricentric culture. The rise of capitalism, based on competition, capital accumulation and limitless growth, brought these problems - ecological and social - to an acute point. To reverse this trend capitalism must be replaced by a society based on non-hierarchical relationships, decentralization in communities, wealth and power. Technologies like solar power, organic agriculture, and humanly scaled industries must be structurally tailored to the ecosystems in which they are located.

To reach this level of advancement major changes in attitudes towards government and its institutions will be required. We must distinguish between what is irrational and anti-ecological in today's society and what could be rational and ecological in a free society. People are a product of natural evolution and as such are a part of the natural order. Our social and economic problems are caused by our society withdrawing from nature through a complex and cumulative evolutionary process.

The economic construction of the world should be such that no one suffers for want of food, clothing and basic shelter. Our social responsibility is to eliminate extreme inequalities. In order to achieve that goal, economic growth should no longer be the goal of society. The Green goal is the elimination of inequalities, employment for those who need it, and the eradication of poverty.

Economic growth is not a separate objective; in fact, it is contrary to the primary goals of a healthy society. The current solution of continuous increases in material production is a false solution. Rather than leading to an increase in real wealth for the world community, we are being led down a path of increased competitiveness, exploitation and structural unemployment.

How can we create an ecologically healthy society where human rights are respected, where individuals are not economically oppressed, and where individuals can participate in a truly representative democratic process?

The solution involves realizing the following basic truths:

- 1) Industrialization involves exploitation of underdeveloped countries.
- 2) Larger-scaled means of production lead to mass unemployment.
- 3) Industrialization involves large capital investments per worker, which exclude large masses of people from control over production.

4) When practiced on a large-scale industrialization places unrealistic demands on our natural resources. The process will be brought to a sudden halt by resource depletion. The debate will rage: politicians claim that studies still need to be done but the problems and solutions have been articulated for generations. "The hottest places in hell are reserved for those who, in times of great moral crisis, maintain their neutrality."

Dante Alighieri

...All men and women cannot fail eventually to adopt

Gandhi's belief that the process of mass applications of force to resolve contentious issues is fundamentally not only wrong, but contains within itself the germs of self-destruction.

General Douglas MacArthur

Non-Violence

The philosophy and lifestyle of M.K. Gandhi defines Non-Violence. Non-violence means "clinging to the truth", the greatest truth being the unity of all life. The vows which Gandhi required of his followers included truth, non-violence, fearlessness, non-possession, bread labour, and equality of religions.

Violence never overcomes evil; it suppresses it to rise later with redoubled vigour. Non-violence on the other hand, puts an end to evil, for it converts the evil-doer.

Satyagraha or non violence in the political sphere assumes the form of civil disobedience. It means mass resistance on a non-violent basis against the government when constitutional methods have failed. It is called 'civil' because it is non-violent resistance by people who are ordinarily law abiding. It is civil also in the sense that those who break the law are to observe the greatest courtesy and gentleness in regard to those who enforce the law. They are even to seek not to embarrass the opponent if possible.

Non-cooperation may express itself in giving up titles and honours, resignation from government service, withdrawal from the police and military, non-payment of taxes, boycott of courts, schools and legislatures, and running parallel institutions to perform these functions.

Such civil disobedience demands on the part of the people disciplined group action, infinite capacity for suffering without retaliation, and strict obedience to the struggle. As this discipline and obedience are not based on force, the leadership must come from individuals of character and public service, whom the people respect and willingly obey. This implies that the leaders generally carry on various forms of constructive service for the people. Gandhi emphasized working through various forms of constructive endeavour, such as working for economic self-sufficiency; education, uplifting of women,

and so on. Satyagraha presupposes day-to-day non-political constructive work aiming at the development of the individual and community.

Forces of oppression cannot be resisted on a piecemeal basis. To be effective requires constructive effort in every sphere of life; individual, social, economic, and political. These spheres have to be refashioned in such a way that people learn to transform their daily lives, manage their affairs in a cooperative basis, and thus acquire sufficient strength and resourcefulness to be able to offer non-violent resistance against organized violence. The practice of non-violence in the political sphere is not a matter of preaching. It involves the building, brick by brick with patience and industry a new non-violent social and economic order. It depends ultimately on banishing violence from the hearts of individuals, and making them a transformed disciplined people. "...it is important that we keep the ecology movement from degrading into a form of nature worship with a new hierarchy of priests and priestesses. The distinction between a needed naturalistic spirituality and a "Green religion" is an important distinction." Murray Bookchin, 1988 Spirituality:

Honour the creator, the earth: they are inseparable. Honour all beings - as they are all manifestations of the same creator. We must dedicate ourselves to restoring the ecological balance of the Earth; remembering that we are one creature among many in an intricate, living web of relationships. We must dedicate ourselves to creating a just world, a sustainable world, for it is within our means to shape ourselves and society.

If our society began to think ecologically to the extent that we recycle our newsprint, aluminum cans and bottles, something quite essential would still be missing. A sustainable society would still have problems such as alcoholism and drug addiction because people have to kill a deep inner pain. An inner pain that is born in the sterility and emptiness of life in a modern industrialized culture.

Our society lacks a connection to the natural rhythms of the planet, and this leads to agitation, negativity, and anxiety. We go through deep crises of meaning pretty much on schedule, as an adolescent, at midlife, and again in old age because we are disconnected from the natural rhythms that could give us meaning and comfort.

The creation centred spirituality movement which is flowering among all major denominations, in which the creation is honoured as the most profound expression of the divine is fundamental to our continued spiritual and emotional well being. This creation centred perspective will allow us to finally be able to say to the Native peoples with an earth-based spirituality, "Oh, now we get it! Now we see what you mean when you say the stars are our grandparents! Our physics has finally figured out that the elements in our bodies were forged at the time of the fireball and came through four billion years of planetary evolution. We used to know this. Old Europe knew it before the Indo-European barbarian invasion brought in their concept of the sky god. They knew that the Earth is sacred. We knew this, yet we lost it. We can look to the Native peoples, who have an unbroken chain of Earth based wisdom, to help us regain our

sense of sacred relationship to the cosmos. Spiritual practice also gives us a sense of hope, joy and love, as well as enabling us to make decisions that are grounded in reality.

Many of us get that familiar sinking feeling in our stomachs when we listen to our leaders. Clearly those people are not grounded. We are never going to insist on a particular way in which people should become spiritual. That's an individual, personal decision, but a truly revolutionary Green movement must find ways to connect to Earth wisdom.

Spirituality plays a prominent part of green politics simply because it is essential to a healthy society. Green politics is a comprehensive politics and a holistic vision addressing all aspects of life on earth. "Feminism is an entire world view, or gestalt, not just a laundry list of "women's issues". Feminist theory provides a basis for understanding every area of our lives, and a feminist perspective can affect the world politically, culturally, economically, and spiritually".

Charlotte Bunch

### Feminism; Women and Men

Traditionally, the contribution of women to the family, to the community and to the economy is massive. They do most of the work in the home, most of the child-rearing, and most of the voluntary work that underpins our social services. Yet despite some improvements, the social, economic and political repression of women is still an undeniable feature of our culture. Women are oppressed and exploited, and are daily exposed to injustice, violence and discrimination.

For hundreds of years, male values have dominated and continue to dominate human activities, while women are consistently exploited and stereotyped by advertising, the media, politicians, education, and the way that men have structured society. Women are expected to do most of the work that is fundamental to keeping society going (birthing, caring for children, cooking, looking after the home, caring for sick and dying people) and little of this work is acknowledged, let alone paid. At the same time, men expect women to be like stars, to be available when required, and not to have any independence.

The Greens believe that a feminist perspective must be applied throughout the governing of our society. It is crucial to our survival. This does not simply mean 'equal opportunities' or token participation; these are man-made concessions which keep women dependent within a patriarchal structure. It means empowerment, both in our internal organization and in our policies, we not only seek to end discrimination, but also to bring that feminist perspective into all areas. We want to liberate both men and women from sexual stereotyping, and to demonstrate that our future strength lies in emphasizing the feminine values that are present in all of us.

Men also suffer from the way our society is structured. Because of the masculine role in general and the suppression of feelings in particular, men by and large lead shorter, less satisfying lives than women. Learning to ignore feelings enables them to work like machines, unaware of the messages of pain their bodies send. However, the continual suppression of feeling, the constant competitiveness, and the common unhappiness of men are not only self-destructive; they also lead men to direct their destruction toward others. Bottled-up feelings spill over into many forms of aggression, violence, and the exercise of power. The planet is poised on the verge of oblivion as a result of macho posturing.

Both men and women need flexible work arrangements and encouragement to take time to 'be' (not just 'do'), to feel, and to grow. The patriarchal relationships we have set up in our society extend to our relationships with the natural world as well. We must learn to be less homocentric and to work towards co-operation instead of domination in all of our relationships.

#### Section 4: Provincial Policies

### MUNICIPAL AND REGIONAL GOVERNMENT

We advocate more autonomy for municipalities. We do not support current trends toward regional governments. History has shown that regional governments are more expensive and less responsive to the needs of constituents than the smaller towns and cities that they are composed of.

We do recommend:

1: Replacing the Ontario Municipal Board with a non political body that would arbitrate on disputes. This body would be selected in a similar manner as a Jury would be selected.

2: Services should be produced where most economical / efficient.

The determination of efficiency should include all cost normally considered externalities by most economists.

3: Municipal services should stress accountability.

4: Develop a new Heritage Act outlining guidelines to cover the

natural heritage of the landscape for example agricultural land, wood lots, heritage buildings, wetlands, coastlines and waterways. Require the conservation of heritage to be include in the official plan and other planning documents of each municipality.

5: Restrict strip development and auto-dependent urban sprawl. Encourage mixed communities where people work, recreate, shop, and study near home.

## SUSTAINABILITY

The Green party's definition of Sustainability is as follows.

Activities are sustainable when they:

- 1: use materials in continuing cycles
- 2: use continuously reliable sources of energy
- 3: come mainly from the potentials of human beings i.e. communication, creativity, coordination, appreciation, and spiritual and intellectual development.

Activities are not sustainable when they

- 1: require continual inputs of non-renewable resources
- 2: use renewable resources faster than their rate of renewal
- 3: cause cumulative degradation of the environment
- 4: require resources in quantities that could never be available for all people
- 5: lead to the extinction of other life forms.

## SUSTAINABLE COMMUNITY DEVELOPMENT Refer to Conservation

Village site plan.

ours

-----

## 5. PRODUCTION OF 1999 ELECTION PLATFORM (carried as is)

- a) That a team of writers be chosen to write and oversee production of the GPO "Green Book" using material from the GPO policy book "Building a Sustainable Future, from the 1995 platform document, and from the new policy resulting from this policy conference.
- b) That the platform be in the form of a four-page tabloid printed on recycled newspaper in order to maximize the number of copies the GPO can afford to print.

Eric Walton, Steven Haylestrom, Chris Walker, Janet Hartford, Lea Westlake, Nancy Mucklaw, Cathy Vakil, Tal Henderson, Doug Woodard, George Brown will work on the publication. The publication will be completed by the next AGM. (ONTARIO POLICY KINGSTON, 1997)

## 8. PROPOSAL TO EXPAND THE POLICY-MAKING PROCESS OF THE GREEN PARTY OF ONTARIO (carried with amendments)

Given the complexity and refinement required to the process of developing leading-edge green economic and social policies and platforms, and given that economic and social policy issues are in constant evolution, we propose the following modification to the policy-making process for the Green Party of Ontario. (ONTARIO POLICY KINGSTON, 1997)

- a) That three Standing Committees be formed, one on green economic policy/platforms, another on green social policy/platforms and a third on general topics that do not fall into either of these categories or combine both. (ONTARIO POLICY KINGSTON, 1997)
- b) Each Standing Committee would develop and propose draft policy and platforms on an on-going basis for membership approval at the annual policy conference of the Green Party of Ontario. (ONTARIO POLICY KINGSTON, 1997)
- c) The composition of each Standing Committees would be of between four to six individuals and would seek to approximate gender parity with a minimum of two of either gender on each of the Committees. Selection of individual members would also seek to maintain an approximate balance between those with specific expertise in the subject areas and "motivated-to-learn" members. (ONTARIO POLICY KINGSTON, 1997)
- d) All Standing Committee members would be chosen by a selection committee comprising the Ontario policy coordinator, the Ontario party president and the presidents of at least three local constituency ridings other than those of the party president and policy coordinator. (ONTARIO POLICY KINGSTON, 1997)
- e) Committee members would be expected to serve at least a two-year term and to focus on at least one specific area within each of the broad categories. (ONTARIO POLICY KINGSTON, 1997)
- f) The Standing Committees would work in close consultation with the Ontario policy coordinator in order to avoid overlap on policy issues. (ONTARIO POLICY KINGSTON, 1997)
- g) Each Standing Committee would elect a Chair whose function would be to coordinate communications/meetings within the group, as well as, someone to act as Liaison with the Ontario policy coordinator. (ONTARIO POLICY KINGSTON, 1997)

h) At their discretion, committees will post their material on the GPO listserv when ideas have been formulated, but not yet finalized. (ONTARIO POLICY KINGSTON, 1997)

"The Canadian Greens is a national party that is built upon the tenets of ecology and conservation. It is an all volunteer organization, with members from coast to coast. The Terra Nova Greens is the Newfoundland and Labrador chapter of the Canadian Greens. We believe that we can flourish as a sustainable society only by encouraging wise use of our earth's resources and careful management of our eco-systems (GREEN PARTY OF NEWFOUNDLAND).

"Canadian political parties have not dealt with the problems that our society must face". (GREEN PARTY OF NEWFOUNDLAND).

circulated a compilation of

1998 COMBINED GREEN PARTY FED AND PROV POLICY unfortunately I received  
this document after I I had submitted the budget. For the budget I relied on submissions  
from the shadow cabinet and I combined it with principles from international law

EXHIBIT

Was so pleased to receive this document because

. I always believed that the role of the leader was to be the spokes person for the policy  
developed by the members

When I became leader, I requested Council to give me permission to support existing policy with international law.

I then went through the policy at the federal and provincial levels because I wanted to respect the precedents in any statements that I made. Also, I was hoping that this document would be helpful in developing new policy and making members aware of what has already been agreed to

NOTE: I found that there appeared to be no clear distinction between federal and provincial jurisdictions. particularly at the provincial level at policy conventions there would be resolutions that would come under federal jurisdiction. That is the reason in the 1997 election I was using The Treasury Board Estimates to try to clarify what came under federal jurisdiction. when I prepared the 1998 budget, I TRIED to place the provincial resolutions related to federal jurisdiction into the relevant federal departments the green party should be clear on the divisions of power but it was very difficult

I DECIDED TO URGE THE MEMBERSHIP IN THE FUTURE TO LOOK THROUGH THE TREASURY BOARD ESTIMATES TO DETERMINE IF THE RESOLUTION THAT THEY ARE PROPOSING COMES UNDER FEDERAL JURISDICTION AND IF SO WHICH DEPARTMENT BEFORE SUBMITTING IT TO THE FEDERAL AGM

Often the resolutions fit into a number of departments the role of the chair at policy conventions should be clear on the need to fit provincial resolution into a format for federal resolution

For example the mover of a BC resolution against visits of nuclear powered and nuclear armed vessels in BC should also to be encouraged to also take the resolution to a federal policy convention

INTEGRATION OF FEDERAL GREEN PARTY POLICY WITH POLICY FROM THE ALBERTA, B.C., ONTARIO AND NEWFOUNDLAND PROVINCIAL GREEN PARTIES

DEFERRED RESOLUTIONS UPPER CASE

press releases and position papers passed by cabinet (lower case with explanation)

## GAPS

There are incredible gaps in policy. I have noticed several and will mention them. I am sure that others will notice many more. Perhaps policy already exists for these areas. If so, the cabinet which was given the task to review policy in all departments so as to prepare a platform for the election was remiss in not including the policy. In many cases the policies were absent federally but provincial policy was able to fill the gap.

We must attempt to draft resolutions related to the Gaps.

1. Department of Immigration
  2. Youth, children programs
  3. Women's issues (a recent position piece was circulated related to women's rights related to drugs and pregnancy - issued on behalf of the Green Party of Canada)
  4. means of addressing poverty, street people, sweat shops,
  5. Education. cutting of funding
  6. Housing policies
- etc.

Joan

The Green Party of Ontario defines "Sustainability" as follows.

Activities are sustainable when they:

- 1/ use materials in continuing cycles
- 2/ use continuously reliable sources of energy
- 3/ come mainly from the potentials of human beings  
i.e. communication, creativity, coordination, appreciation, and spiritual and intellectual development.

Activities are not sustainable when they

- 1/ require continual inputs of non-renewable resources
- 2/ use renewable resources faster than their rate of renewal
- 3/ cause cumulative degradation of the environment
- 4/ require resources in quantities that could never be available for all people
- 5/ lead to the extinction of other life forms. (GREEN PARTY OF ONTARIO 1994)

Ken Toews

Policy Coordinator Green Party of Ontario

## Section 2 The Green Primer

### Introduction

Green parties are active around the world trying to create a future where people live with each other and with the planet in a sustainable manner. Historically individuals like Henry David Thoreau, have articulated a Green perspective. He practiced "plain living and high thinking" for philosophical rather than religious purposes, to examine the true nature of humanity's relationship with the environment. The distinction between living and "getting a living" were among his concerns.

There have been many successful movements involving self-sufficiency and living simply. People like Helen and Scott Nearing and E .F. Schumacher have been a green alternative for many generations. The challenge for the Green Party of Ontario is to spread this time-tested vision to as many people as possible.

"Any discussion of world poverty that does not come around to demanding a radical change in our habits of consumption and waste, our tastes, our profligate standard of living, our values, generally is a hypocrisy. There are no technical answers to ethical questions."

Theodore Roszak, 1972

The Challenge before us.

We have the ability to produce more than we can consume. To match consumption with capacity we stimulate demand through advertising, planned obsolescence, and the arms trade. The results are all around us. Rather than continuing on this race to bury ourselves in a sea of our own waste, we must turn our attention to finding a secure place within the natural order.

We must come to grips with the problems of economic inequality, resource depletion and over population. The goal must be to create the conditions necessary for true world peace. We will examine the nature of our problems and examine alternative solutions. The Green Party does not claim to have all the answers. What we are capable of doing is defining the problem and suggesting some possible alternatives. Perhaps we will also help you find a new sense of hope and purpose.

### Environmental Degradation & Ecological Collapse

The depletion of the ozone layer; the accumulation of greenhouse gases; acid precipitation; the build-up of persistent toxins such as the whole family of chlorinated chemicals; depleted cod, salmon and tuna stocks, the pollution of our lakes, ground waters, and air; the destruction of rain forests in the southern hemisphere and boreal forests in northern countries; species extinction; the loss of topsoil due to modern agricultural practices and urban encroachment. The list gets longer every day. Our natural systems are threatened by human activity.

### Population Growth

The increase in population and resource consumption are basic causes of human suffering and environmental degradation and must become major priorities for national and international action. Population growth tends to overwhelm any possible gains made in improving the human condition. (GREEN PARTY OF ONTARIO 1994 Subsequently changed [Russow])

### Physical Limits to Growth

We live on a finite planet with finite resources. We are consuming our capital when we should be living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water, fish, topsoil, and trees. Problems are increasing faster than solutions. There is a point beyond which a system will fail to produce additional benefits simply by making it larger or more complex. This point has been exceeded in most of our systems. (GREEN PARTY OF ONTARIO 1994)

## The Distribution of Wealth

The industrialized countries make up one-sixth of the world's population and consume one-half of the world's resources and energy. In the grossly wealthy countries, a small minority owns the majority of the wealth leaving only the street and hand-outs for a large and growing number of the people. When this is coupled with the problem of population growth and the limits on the resource base, a truly explosive mix arises. (GREEN PARTY OF ONTARIO 1994)

"Earth provides enough to satisfy every man's need, but not enough for every man's greed."

Gandhi, 1869 - 1948

## War and Peace

Currently, the armaments business grosses a [800 billion] trillion dollars a year. Third world countries, who do not have the ability to house or feed their population have enough nuclear capacity to destroy the planet. Even a tiny diversion of this flood of money could solve problems that have bedeviled humankind for thousands of years and yet the race goes on. (GREEN PARTY OF ONTARIO 1994)

## The Psychological Limits to Growth

By emphasizing competition rather than cooperation, sharing has become foreign to us. The growth of our technological society has alienated large numbers of people who are no longer connected to any natural rhythms. There are large classes of people for whom the only expression of their individuality is consumerism. (GREEN PARTY OF ONTARIO 1994)

The nuclear family, seemingly the core of the social structure is under intense attack. Some experts maintain that 95% of modern families are "dysfunctional". Our economic system is hostile to individuals, families and communities. We are consuming our psychological capital in exactly the same way we are destroying our environmental capital. A sustainable culture would pay more attention to issues such as self-esteem and co-operation. The root cause our crisis is to be found not only in how people interact with nature but in how people interact with each other. not to be found in how people interact with nature but in how we interact with each other.

"Clearly the attitudes and values which make production the central achievement of our society has some exceptionally twisted roots." John Kenneth Galbraith, 1958

## The Nature of the Solution

Our problems are linked by a common value system. A system founded on principles of hierarchical relationships and unlimited growth. We as a culture define tradition, social arrangements, religion, moral codes and technologies. We decide if they will manifest themselves as institutions of sustainability and subsistence or exploitation and destruction.

Our current experiment in social organization has culminated

in the list of environmental and social disasters discussed earlier. There was no way that all of these things could not have come out of a social motivation that held nature in such utter disregard, that elevated growth for its own sake above any other consideration, that felt that power (physical and political) was good in and of itself. The problems we face are rooted in the basic assumptions that have molded modern industrial society. Only by establishing the necessity for a different set of assumptions can we ever hope to find our way out of this mess. No amount of tinkering with the existing order will do the job. Hope for a technological breakthrough that will save us is courting disaster.

The economic system we operate under today was created to obtain as much wealth as possible. In contrast, we must create a system based on a different fact, namely the need for survival: a social order based on the satisfaction of human needs, rather than on human wants. There is no basic conflict between the needs of the planet and our real needs. They are the same, if only because a healthy planet is basic to our needs. We need not blame the economic system; it merely succeeded in doing what it was designed to do. The consequences were unforeseen and guilt is not the

issue.

## A Specific Program

Withdraw all support for the status quo. Get Canada out of the arms business. Stop aiding and abetting those who would exploit the poor countries of the world. Refuse to do anything simply because we profit from it. Withdraw government support from enterprises that degrade the environment. Refuse to do anything that would contribute to the decline of rural communities. Simply acting to extract Canada from the web of complicity would occupy any government's talents and abilities for years. Traditional top-down organizations were necessary to a power based economy and political system. As we free ourselves from the old concepts of executive power and a warped definition of efficiency and start giving precedence to empowerment and responsibility whole realms of alternative social organization open up. There are a wealth of community groups straining to assume responsibility for those things that the welfare state now does so poorly. The consolidation of power in the government has acted to the detriment of real community control. Ceasing to stifle community control would be a

necessary first step. "Instead of developing techniques for maximum profit, try to develop those that will give maximum of freedom: an entirely new approach."

Simone Weil, 1909 - 1943

## Green Politics in Ontario

The Green Party of Ontario (G.P.O.) is a registered political party under provincial laws and has participated successfully in electoral politics since 1985. Once a year the GPO has a Policy conferences and an Annual General Meeting. The location of these conferences is rotated around the province. We have instituted a system of travel vouchers that allows individuals to travel to conferences subsidized by the generous provincial tax credit system. We believe in participatory democracy and at general meetings all members are allowed to vote on all resolutions. If you join the Green party you do not give your vote to a delegate nor are you excluded from decision making meetings. All members can vote and all members are funded to travel to conferences.

Constituency associations of the Green Party are active between elections seeking to create a Green society. A society based on the following values: The preservation of the natural world, Feminism, Social Justice, Spirituality, Participatory Democracy, and Non-Violence

Our goal is to participate in the electoral process and facilitate the evolution of party politics away from current confrontational power politics.

Campaigning is the best way to present these views to the public, and to inform the other candidates as to the true nature of the challenges we face. It's a great experience to do so. Many other groups are working to establish the public support for one aspect or another of the Green vision, but only the Green party is working toward those goals within the political system.

Our members come with a wide variety of views and opinions. But uniting them all is the realization that whether the issue is the exploited two-thirds, the environment, peace, feminism or social justice, the root cause of the problem must be addressed.

"I would like to become less acquisitive altogether, to be able to see some exquisite piece of porcelain in some other man's house and be wholly glad that it was there and not mine."

Gabriel Fielding 1965

## A Sustainable Future

"An economy of abundance is under present rules also an economy of waste and repetition; indeed, without this waste the economy would slump. Nobody, however, can be optimistic about the survival of a society with such values."

Robert Theobald, 1961

Our future depends on developing Green principles in the way we interact locally, provincially and internationally. Our success will depend on our ability to identify the threats to our survival and to apply appropriately scaled solutions to the problems we have created for ourselves. The key is in voluntarily and deliberately converting from a want-based system to a need-based system.

A sustainable society would have to rely on renewable rather than fossil fuels. Our goods would be designed to last as long as possible, to be repairable and easily modified. Our intent would be to live in harmony with natural cycles, including our own biological and psychological limits.

A safe, just, and peaceful society would have to be much less centralized. Equity, in all its forms, would have to be the concern of the entire culture. Decentralization and the devolution of decision-making would be the dominant pattern, with decisions being made at appropriate levels. This involves the search for local consensus, rather than simply seeking a majority. Local communities, even within urban areas, would have much more responsibility for social programs such as health care, education, and the concerns of the young and elderly.

A Green society would be less urban and more rural, with a renewed emphasis on local economies, emphasizing both local manufacturing and agriculture. Modern communications technology would ensure that even remote areas would be able to participate in the political and cultural life of the whole society.

A Green vision is not looking backward with starry eyes wishing for a past that never existed. Rather it is looking forward, taking the best that technology, science and history have to offer and molding it into a more self-sufficient and secure future that is as concerned with the survival of all species as today's society is with satisfying our greed.

Defense would be based on dependability, not amassing large offensive forces. Greens are calling for nuclear disarmament but not total demilitarization. We recognize that an autonomous society requires some defense force. However, the operative word is defense not force. We respect the ideals of M.K. Gandhi of non-violence and forgiveness being superior to retribution.

" I do believe that where there is only a choice between cowardice and violence I would advise violence.....Thus when asked what should have done if present when I was almost fatally assaulted in 1908, should you run away and seen me killed or use physical force and defend me, I advised to defend me even in using violence. Hence it

was that I took part in the Boer War... I believe that non-violence is infinitely superior to violence, forgiveness more manly than punishment. But abstinence is forgiveness only when there is power to punish, it is meaningless when it pretends to proceed from a helpless creature."

M.K. Gandhi

This sustainable culture would emphasize the development of healthy humans by providing the physical and emotional conditions for complete social development in a healthy physical environment.

Growth would emphasize the acquisition of skills and talents, not the acquisition of material goods and the exercise of power.

Section 3:

The Values of the Ontario Greens.

The last word in ignorance is the man who says of an animal or plant: "What good is it" Aldo Leopold Protection and restoration of the natural world.

The Green Party is seeking to understand the origins of ecological problems. If we proceed by asking successively deeper questions we will arrive at a more complete understanding.

Early ecologists such as Rachel Carson base their criticism not on pollution itself but rather on the questions of why and how such problems have come into existence. This leads to a consideration of our attitude toward nature, non-industrial cultures, and the ecological aspect of widely different economic systems.

Philosophically we draw upon two main sources: Spinoza and Gandhi. From Spinoza we use the idea of developing as wide a concept of self as possible to incorporate and identify with nature. Gandhi gives us the concept of non-violence and self-realization, the latter reinforcing Spinoza's expanded self. Moreover, both self and things are to be conceived of as processes, i.e. not static but changing.

Our eight basic principles are:

1. The well-being of life on earth has value that is independent of its usefulness to humankind.
2. The richness and diversity of life has value in and of itself.
3. Humans have no right to reduce this richness and diversity except to satisfy vital needs.

4. The flourishing of human life and cultures is compatible with a substantial decrease in human population. The flourishing of non-human populations requires such a decrease.
5. Present human interference with the non-human world is excessive, and the situation is rapidly worsening.
6. Basic economic, technological, and ideological structures must be changed.
7. The ideological change is mainly that of appreciating life quality (dwelling in situations of inherent worth) rather than adhering to an increasingly higher standard of living. There will be a profound awareness of the difference between big and great.
8. Those who agree have an obligation to try to implement the necessary changes.

We feel that we must change our viewpoint from a homocentric one to an ecocentric one, and at once. The ideas of "walking gently on the earth" and living simply seem to be obvious first steps toward a more sustainable future. Individuals must work these concepts into their own lives and the institutions that make up our community.

Regardless of one's background, it is possible and, in our view, essential for each individual to come to a realization of the ethics of ecology. The sooner an ethics based on respect for the natural world is adopted, the better. The beneficiaries will be not only ourselves but our children, grandchildren and the thirty million species with which we share the planet. "We should never lose sight of the fact that the project of human liberation has now become an ecological project, just as conversely, the project of defending the Earth has also become a social project." Murray Bookchin

## Social Justice

Most ecological problems have their roots in social problems. Problems that go back to the very beginning of patricentric culture. The rise of capitalism, based on competition, capital accumulation and limitless growth, brought these problems - ecological and social - to an acute point. To reverse this trend capitalism must be replaced by a society based on non-hierarchical relationships, decentralization in communities, wealth and power. Technologies like solar power, organic agriculture, and humanly scaled industries must be structurally tailored to the ecosystems in which they are located.

To reach this level of advancement major changes in attitudes towards government and its institutions will be required. We must distinguish between what is irrational and anti-ecological in today's society and what could be rational and ecological in a free society. People are a product of natural evolution and as such are a part of the natural order. Our social and economic problems are caused by our society withdrawing from nature through a complex and cumulative evolutionary process.

The economic construction of the world should be such that no one suffers for want of food, clothing and basic shelter. Our social responsibility is to eliminate extreme

inequalities. In order to achieve that goal, economic growth should no longer be the goal of society. The Green goal is the elimination of inequalities, employment for those who need it, and the eradication of poverty.

Economic growth is not a separate objective; in fact, it is contrary to the primary goals of a healthy society. The current solution of continuous increases in material production is a false solution. Rather than leading to an increase in real wealth for the world community, we are being led down a path of increased competitiveness, exploitation and structural unemployment.

How can we create an ecologically healthy society where human rights are respected, where individuals are not economically oppressed, and where individuals can participate in a truly representative democratic process?

The solution involves realizing the following basic truths:

- 1) Industrialization involves exploitation of underdeveloped countries.
- 2) Larger-scaled means of production lead to mass unemployment.
- 3) Industrialization involves large capital investments per worker, which exclude large masses of people from control over production.
- 4) When practiced on a large-scale industrialization places unrealistic demands on our natural resources. The process will be brought to a sudden halt by resource depletion. The debate will rage: politicians claim that studies still need to be done but the problems and solutions have been articulated for generations. "The hottest places in hell are reserved for those who, in times of great moral crisis, maintain their neutrality."

Dante Alighieri

...All men and women cannot fail eventually to adopt

Gandhi's belief that the process of mass applications of force to resolve contentious issues is fundamentally not only wrong, but contains within itself the germs of self-destruction.

General Douglas MacArthur

Non-Violence

The philosophy and lifestyle of M.K. Gandhi defines Non-Violence. Non-violence means "clinging to the truth", the greatest truth being the unity of all life. The vows which Gandhi required of his followers included truth, non-violence, fearlessness, non-possession, bread labour, and equality of religions.

Violence never overcomes evil; it suppresses it to rise later with redoubled vigour. Non-violence on the other hand, puts an end to evil, for it converts the evil-doer.

Satyagraha or non violence in the political sphere assumes the form of civil disobedience. It means mass resistance on a non-violent basis against the government when constitutional methods have failed. It is called 'civil' because it is non-violent resistance by people who are ordinarily law abiding. It is civil also in the sense that those who break the law are to observe the greatest courtesy and gentleness in regard to those who enforce the law. They are even to seek not to embarrass the opponent if possible.

Non-cooperation may express itself in giving up titles and honours, resignation from government service, withdrawal from the police and military, non-payment of taxes, boycott of courts, schools and legislatures, and running parallel institutions to perform these functions.

Such civil disobedience demands on the part of the people disciplined group action, infinite capacity for suffering without retaliation, and strict obedience to the struggle. As this discipline and obedience are not based on force, the leadership must come from individuals of character and public service, whom the people respect and willingly obey. This implies that the leaders generally carry on various forms of constructive service for the people. Gandhi emphasized working through various forms of constructive endeavour, such as working for economic self-sufficiency; education, uplifting of women, and so on. Satyagraha presupposes day-to-day non-political constructive work aiming at the development of the individual and community.

Forces of oppression cannot be resisted on a piecemeal basis. To be effective requires constructive effort in every sphere of life; individual, social, economic, and political. These spheres have to be refashioned in such a way that people learn to transform their daily lives, manage their affairs in a cooperative basis, and thus acquire sufficient strength and resourcefulness to be able to offer non-violent resistance against organized violence. The practice of non-violence in the political sphere is not a matter of preaching. It involves the building, brick by brick with patience and industry a new non-violent social and economic order. It depends ultimately on banishing violence from the hearts of individuals, and making them a transformed disciplined people. "...it is important that we keep the ecology movement from degrading into a form of nature worship with a new hierarchy of priests and priestesses. The distinction between a needed naturalistic spirituality and a "Green religion" is an important distinction." Murray Bookchin, 1988 Spirituality:

Honour the creator, the earth: they are inseparable. Honour all beings - as they are all manifestations of the same creator. We must dedicate ourselves to restoring the ecological balance of the Earth; remembering that we are one creature among many in an intricate, living web of relationships. We must dedicate ourselves to creating a just world, a sustainable world, for it is within our means to shape ourselves and society.

If our society began to think ecologically to the extent that we recycle our newspaper, aluminum cans and bottles, something quite essential would still be missing. A

sustainable society would still have problems such as alcoholism and drug addiction because people have to kill a deep inner pain. An inner pain that is born in the sterility and emptiness of life in a modern industrialized culture.

Our society lacks a connection to the natural rhythms of the planet, and this leads to agitation, negativity, and anxiety. We go through deep crises of meaning pretty much on schedule, as an adolescent, at midlife, and again in old age because we are disconnected from the natural rhythms that could give us meaning and comfort.

The creation centred spirituality movement which is flowering among all major denominations, in which the creation is honoured as the most profound expression of the divine is fundamental to our continued spiritual and emotional well being. This creation centred perspective will allow us to finally be able to say to the Native peoples with an earth-based spirituality, "Oh, now we get it! Now we see what you mean when you say the stars are our grandparents! Our physics has finally figured out that the elements in our bodies were forged at the time of the fireball and came through four billion years of planetary evolution. We used to know this. Old Europe knew it before the Indo-European barbarian invasion brought in their concept of the sky god. They knew that the Earth is sacred. We knew this, yet we lost it. We can look to the Native peoples, who have an unbroken chain of Earth based wisdom, to help us regain our sense of sacred relationship to the cosmos. Spiritual practice also gives us a sense of hope, joy and love, as well as enabling us to make decisions that are grounded in reality.

Many of us get that familiar sinking feeling in our stomachs when we listen to our leaders. Clearly those people are not grounded. We are never going to insist on a particular way in which people should become spiritual. That's an individual, personal decision, but a truly revolutionary Green movement must find ways to connect to Earth wisdom.

Spirituality plays a prominent part of green politics simply because it is essential to a healthy society. Green politics is a comprehensive politics and a holistic vision addressing all aspects of life on earth. "Feminism is an entire world view, or gestalt, not just a laundry list of "women's issues". Feminist theory provides a basis for understanding every area of our lives, and a feminist perspective can affect the world politically, culturally, economically, and spiritually".

Charlotte Bunch

## Feminism; Women and Men

Traditionally, the contribution of women to the family, to the community and to the economy is massive. They do most of the work in the home, most of the child-rearing, and most of the voluntary work that underpins our social services. Yet despite some improvements, the social, economic and political repression of women is still an undeniable feature of our culture. Women are oppressed and exploited, and are daily exposed to injustice, violence and discrimination.

For hundreds of years, male values have dominated and continue to dominate human activities, while women are consistently exploited and stereotyped by advertising, the media, politicians, education, and the way that men have structured society. Women are expected to do most of the work that is fundamental to keeping society going (birthing, caring for children, cooking, looking after the home, caring for sick and dying people) and little of this work is acknowledged, let alone paid. At the same time, men expect women to be like stars, to be available when required, and not to have any independence.

The Greens believe that a feminist perspective must be applied throughout the governing of our society. It is crucial to our survival. This does not simply mean 'equal opportunities' or token participation; these are man-made concessions which keep women dependent within a patriarchal structure. It means empowerment, both in our internal organization and in our policies, we not only seek to end discrimination, but also to bring that feminist perspective into all areas. We want to liberate both men and women from sexual stereotyping, and to demonstrate that our future strength lies in emphasizing the feminine values that are present in all of us.

Men also suffer from the way our society is structured. Because of the masculine role in general and the suppression of feelings in particular, men by and large lead shorter, less satisfying lives than women. Learning to ignore feelings enables them to work like machines, unaware of the messages of pain their bodies send. However, the continual suppression of feeling, the constant competitiveness, and the common unhappiness of men are not only self-destructive; they also lead men to direct their destruction toward others. Bottled-up feelings spill over into many forms of aggression, violence, and the exercise of power. The planet is poised on the verge of oblivion as a result of macho posturing.

Both men and women need flexible work arrangements and encouragement to take time to 'be' (not just 'do'), to feel, and to grow. The patriarchal relationships we have set up in our society extend to our relationships with the natural world as well. We must learn to be less homocentric and to work towards co-operation instead of domination in all of our relationships.

#### Section 4: Provincial Policies

## MUNICIPAL AND REGIONAL GOVERNMENT

We advocate more autonomy for municipalities. We do not support current trends toward regional governments. History has shown that regional governments are more expensive and less responsive to the needs of constituents than the smaller towns and cities that they are composed of.

We do recommend:

1: Replacing the Ontario Municipal Board with a non political body that would arbitrate on disputes. This body would be selected in a similar manner as a Jury would be selected.

2: Services should be produced where most economical / efficient.

The determination of efficiency should include all cost normally considered externalities by most economists.

3: Municipal services should stress accountability.

4: Develop a new Heritage Act outlining guidelines to cover the natural heritage of the landscape for example agricultural land, wood lots, heritage buildings, wetlands, coastlines and waterways. Require the conservation of heritage to be included in the official plan and other planning documents of each municipality.

5: Restrict strip development and auto-dependent urban sprawl. Encourage mixed communities where people work, recreate, shop, and study near home.

## SUSTAINABILITY

The Green party's definition of Sustainability is as follows.

Activities are sustainable when they:

-1: use materials in continuing cycles

-2: use continuously reliable sources of energy

-3: come mainly from the potentials of human beings i.e. communication, creativity, coordination, appreciation, and spiritual and intellectual development.

Activities are not sustainable when they

-1: require continual inputs of non-renewable resources

-2: use renewable resources faster than their rate of renewal

- 3: cause cumulative degradation of the environment
- 4: require resources in quantities that could never be available for all people
- 5: lead to the extinction of other life forms.

## SUSTAINABLE COMMUNITY DEVELOPMENT Refer to Conservation

Village site plan.

ours

### 5. PRODUCTION OF 1999 ELECTION PLATFORM (carried as is)

- a) That a team of writers be chosen to write and oversee production of the GPO "Green Book" using material from the GPO policy book "Building a Sustainable Future, from the 1995 platform document, and from the new policy resulting from this policy conference.
- b) That the platform be in the form of a four-page tabloid printed on recycled newspaper in order to maximize the number of copies the GPO can afford to print.

Eric Walton, Steven Haylestrom, Chris Walker, Janet Hartford, Lea Westlake, Nancy Mucklaw, Cathy Vakil, Tal Henderson, Doug Woodard, George Brown will work on the publication. The publication will be completed by the next AGM. (ONTARIO POLICY KINGSTON, 1997)

### 8. PROPOSAL TO EXPAND THE POLICY-MAKING PROCESS OF THE GREEN PARTY OF ONTARIO (carried with amendments)

Given the complexity and refinement required to the process of developing leading-edge green economic and social policies and platforms, and given that economic and social policy issues are in constant evolution, we propose the following modification to the policy-making process for the Green Party of Ontario. (ONTARIO POLICY KINGSTON, 1997)

- a) That three Standing Committees be formed, one on green economic policy/platforms, another on green social policy/platforms and a third on general topics that do not fall into either of these categories or combine both. (ONTARIO POLICY KINGSTON, 1997)
- b) Each Standing Committee would develop and propose draft policy and platforms on an on-going basis for membership approval at the annual policy conference of the Green Party of Ontario. (ONTARIO POLICY KINGSTON, 1997)

- c) The composition of each Standing Committees would be of between four to six individuals and would seek to approximate gender parity with a minimum of two of either gender on each of the Committees. Selection of individual members would also seek to maintain an approximate balance between those with specific expertise in the subject areas and "motivated-to-learn" members. (ONTARIO POLICY KINGSTON, 1997)
- d) All Standing Committee members would be chosen by a selection committee comprising the Ontario policy coordinator, the Ontario party president and the presidents of at least three local constituency ridings other than those of the party president and policy coordinator. (ONTARIO POLICY KINGSTON, 1997)
- e) Committee members would be expected to serve at least a two-year term and to focus on at least one specific area within each of the broad categories. (ONTARIO POLICY KINGSTON, 1997)
- f) The Standing Committees would work in close consultation with the Ontario policy coordinator in order to avoid overlap on policy issues. (ONTARIO POLICY KINGSTON, 1997)
- g) Each Standing Committee would elect a Chair whose function would be to coordinate communications/meetings within the group, as well as, someone to act as Liaison with the Ontario policy coordinator. (ONTARIO POLICY KINGSTON, 1997)
- h) At their discretion, committees will post their material on the GPO listserv when ideas have been formulated, but not yet finalized. (ONTARIO POLICY KINGSTON, 1997)

"The Canadian Greens is a national party that is built upon the tenets of ecology and conservation. It is an all volunteer organization, with members from coast to coast. The Terra Nova Greens is the Newfoundland and Labrador chapter of the Canadian Greens. We believe that we can flourish as a sustainable society only by encouraging wise use of our earth's resources and careful management of our eco-systems (GREEN PARTY OF NEWFOUNDLAND).

"Canadian political parties have not dealt with the problems that our society must face". (GREEN PARTY OF NEWFOUNDLAND).

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

Hi Joan,

Attached is our policy book, and the approved minutes of our latest conference are below. cheers. Frank.

## RESOLUTIONS TO THE KINGSTON GPO POLICY CONFERENCE

These resolutions were designed to complement or replace positions in the GPO policy book "Building a Sustainable Future".

### 1. RESOLUTION ON GREEN TAXES (Carried with amendments)

The Green Party believes that the provincial government should begin a revenue neutral tax shift from income and consumption taxes to resource taxes (emissions, land, water, fossil fuels, air, mineral, metals and aggregates). This proposal will not hurt the economy since it doesn't encourage or discourage economic

activity, it only causes a reduction of throughput in industrial processes. Industry, which follows the path of tax resistance, will quickly retool to take advantages of reduced taxation on green technologies and processes.

a) The government should impose a shift from income taxes to ecological taxes. Tax reduction should begin at the bottom by raising the basic personal exemption amount.

b) That the federal government switch the source of revenue for the Canada Pension Plan and Employment Insurance from payroll taxes to general revenue, the federal government revenue shortfall made up by instituting green taxes.

c) That the GPO recommend that municipal transit passes be tax deductible for employers so that companies to encourage transit use among their employees.

## 2. RESOLUTION ON EDUCATION (carried with amendments)

Remove the present education policy from GPO policy book.

The Green Party acknowledges that decisions concerning the education of children should be made by parents, communities and students. To this end parents, communities and students should have as many choices as possible, there should be plenty of diversity in educational options.

a) Home schooling should be an option for parents and communities. Home schooling parents should receive partial compensation.

b) Since post-secondary education is necessary for most jobs, tuition should be minimal. Living expenses are already a large burden for students.

- c) Students should have the option of repaying loans through community work.
- d) The Green Party suggests expanding the options of students for work terms, apprenticeships, and work place visits.
- e) Education should be rooted in Green philosophy.

### 3. RESOLUTION ON FORESTRY

The Green Party of Ontario supports and will work toward legislation and regulations to accomplish the following:

- a) That 20% of public land in Ontario be preserved.
- b) Wildlife species and their habitat will be protected by a system of wildlife preserves in all vegetation zones and ecosystems, surrounded by buffer zones and connected by corridors, reproduced at all scales to the smallest, in all areas including rural agricultural and residential areas, and urban areas, with the goal of having all recoverable species which were present in 1500 in each vegetation zone, widely present in the same zone in the future, except that in the deciduous forest zone large predators and elk may be limited to one or a few large tracts.
- c) The province and municipalities will accept co-responsibility with the federal government for the protection of wildlife and habitat.
- d) Forested areas will be managed so as to at least cycle through a relatively lengthy stage in which the species composition and water quality (as far as water quality is controllable by land use) is the same as before European settlement, and that if because of timber cutting or other land use practices the species

complement is temporarily reduced, it can and will replenish itself from the surrounding area. Management practices will include the maintenance of a sufficient number of standing dead trees and downed trees to maintain all species.

e) Forest management practices for timber will be directed at producing product which is high in value per unit of volume, and is suitable to have high value added to it, preferably locally.

Management practices will favour multiple tree species and multiple use, and will aim at a steady state forest of mixed tree species, wherever practicable.

f) There will be developed a pattern on forest management by local communities, including First Nations communities, within provincial guidelines, suitable for general application.

g) Forest areas which cannot be regenerated will not be cut.

h) Management practices will avoid effects on water quality and flow significantly greater in magnitude and duration than those which may occur naturally through seasonal changes and short-term cyclical climatic changes.

i) Taxation of forested land will be reformed to eliminate incentives for the liquidation of biological capital, in the form of the standing stock of trees and the other species which depend of them.

j) Stream banks, in agricultural areas and elsewhere, and their surrounds which are essential for the preservation of stream water quality and species composition, will be maintained in appropriate native vegetation. Areas to be protected from cultivation, planting, grazing, and food and vehicle traffic, will be strictly delineated. Where necessary or appropriate,

conservation easements or land will be purchased and held by the province, by conservation authorities, or by other public bodies.

k) Protected strips along streams will be integrated with wildlife corridors and walking trails (generally at one edge) where appropriate, as will steep slopes. Flood plains will be used for corridors, buffer zones, and preserves where appropriate.

#### 4. RESOLUTION ON GAMBLING (not carried due to redundancy)

#### 5. PRODUCTION OF 1999 ELECTION PLATFORM (carried as is)

a) That a team of writers be chosen to write and oversee production of the GPO "Green Book" using material from the GPO policy book "Building a Sustainable Future, from the 1995 platform document, and from the new policy resulting from this policy conference.

b) That the platform be in the form of a four-page tabloid printed on recycled newspaper in order to maximize the number of copies the GPO can afford to print.

Eric Walton, Steven Haylestrom, Chris Walker, Janet Hartford, Lea Westlake, Nancy Mucklaw, Cathy Vakil, Tal Henderson, Doug Woodard, George Brown will work on the publication. The publication will be completed by the next AGM.

#### 6. GREEN ECONOMIC CONCERNS AND SOLUTIONS (carried as is)

Given that:

\* blind pursuit of Gross Domestic Product is leading us toward environmental and social disasters.

- \* there are good and emerging indicators of 'genuine progress' which can correct our measure of well-being and alert us to problems so that we can steer away from them.
- \* promoting a new measure of progress is Green Party Policy
- \* the economic and social fall-out from pursuing the misguided measure of progress are effecting vast numbers of people and as such provides a funnel for introducing more people to the Green option.

Be it Resolved that:

Economic Concerns and Solutions be formally adopted as a Green Party campaign. This resolution seeks cooperation in making the connections between emerging problems, the mistaken goal of GDP and the Green Party's interest in tuning society's measure of well-being so that it does in fact indicate progress toward or deviation away from long-term well-being. While Party approval is said to be unnecessary to pursue such a program, formal approval will help bring it to the attention of Greens across Ontario and around the world. This introduction is critical as many of the solutions to economic problems are such that countries adopting them unilaterally would assume a serious competitive disadvantage in the global economy. A broadly based international approach is the only realistic hope for overcoming the vicious "race to the bottom" nurtured by the present trade regime. The GPO can provide the necessary introduction by formally adopting the Economic Concerns and Solutions campaign.

## 7. SOCIAL SERVICES (defeated)

## 8. PROPOSAL TO EXPAND THE POLICY-MAKING PROCESS OF THE GREEN PARTY OF ONTARIO (carried with amendments)

Given the complexity and refinement required to the process of developing leading-edge green economic and social policies and platforms, and given that economic and social policy issues are in constant evolution, we propose the following modification to the policy-making process for the Green Party of Ontario.

- a) That three Standing Committees be formed, one on green economic policy/platforms, another on green social policy/platforms and a third on general topics that do not fall into either of these categories or combine both.
- b) Each Standing Committee would develop and propose draft policy and platforms on an on-going basis for membership approval at the annual policy conference of the Green Party of Ontario.
- c) The composition of each Standing Committees would be of between four to six individuals and would seek to approximate gender parity with a minimum of two of either gender on each of the Committees. Selection of individual members would also seek to maintain an approximate balance between those with specific expertise in the subject areas and "motivated-to-learn" members.
- d) All Standing Committee members would be chosen by a selection committee comprising the Ontario policy coordinator, the Ontario party president and the presidents of at least three local constituency ridings other than those of the party president and policy coordinator.
- e) Committee members would be expected to serve at least a two

year term and to focus on at least one specific area within each of the broad categories.

f) The Standing Committees would work in close consultation with the Ontario policy coordinator in order to avoid overlap on policy issues. g) Each Standing Committee would elect a Chair whose function would be to coordinate communications/meetings within the group, as well as, someone to act as Liaison with the Ontario policy coordinator.

h) At their discretion, committees will post their material on the GPO listserv when ideas have been formulated, but not yet finalized.

#### 9. GREEN PARTY HEALTH POLICY (carried with amendments)

The Green Party believes that the best way to create a healthy society is through a healthy lifestyle. This would include a good diet (pesticide-free, non-irradiated food and less animal products), exercise, stress reduction techniques and avoidance of tobacco, abuse of alcohol and illicit drugs, and misuse of prescription and over the counter drugs. This philosophy of health maintenance would reduce the need for treating preventable diseases, which is presently very costly. Also, by making our environment and communities healthier places in which to live and work, we will see a reduction in many diseases.

The Green Party Health Care Policy would include:

- \* educating the public on lifestyle changes and choices that contribute to disease prevention, beginning in school
- \* ensuring access to pesticide-free , non-irradiated food,

non-genetically engineered food, clean air, water and land for present and future generations

- \* funding research into causes of illness, and into techniques that complement drugs and surgery, funding through OHIP those therapies that prove worthwhile

- \* shifting treatment to the home wherever possible with adequate support of health care professionals

- \* funding small community-based hospitals that emphasize and promote health maintenance

- \* providing accurate information on the advantages of breast feeding and providing adequate post-natal support

- \* giving doctors the choice of being paid salaries as opposed to the current fee-for-service system, in order to allow them to spend more time with patients and to encourage them to work in rural areas

- \* making available and covering the cost of those drugs of all kinds including alternative medicine and alternative treatments that prove effective

- \* taxing goods that cause poor health such as tobacco and alcohol

- \* including dentistry under OHIP

- \* offering nicotine replacement products such as patches, gum, nasal sprays and inhalers so smokers avoid the adverse cardiovascular and carcinogenic effects of smoking

- \* improving education concerning prenatal care

- \* educating the public with regards to environmentally induced diseases relating to poor air, soil, and water quality.

## 10. UNIONS AND IMMIGRATION (carried as is)

Proposed: That the sentences, "A maximum income would allow the outlawing of strikes which have become intolerably exploitative of the general public. Unions would not be needed to confront power since power would be more broadly shared." be removed from the Green Party of Ontario Policies, Section on Economics, subsection, Minimum and Maximum Income.

Proposed: That the words "reducing immigration" be removed from the Green Party of Ontario Policies, Section on Economics, subsection, Limits to Population.

#### 11. SUSTAINABILITY (carried as is)

Resolution to amend the outline of sustainability used by the Green Party of Ontario. The point proposed for amendment is item number 7, dealing with equity issues.

The version presently on the books is:

"Require resources in quantities that could never be available for people everywhere " It would be changed to:

"Require resources in quantities that undermine other people's well-being."

Be it resolved that item #7 in the outline of sustainability be changed in Green Party of Ontario literature from:

"Require resources in quantities that could never be available for people everywhere " to:

"Require resources in quantities that undermine other people's well-being."

#### 12. CORPORATE CHARTERS (carried with amendments)

The topic section on Corporate Charters to be completely removed

and replaced with the following (with thanks to the BC Greens). New topic title would now be REGIONAL BUSINESS. Local and regional business is an important component of Green economy. Local and regional businesses generate employment, community accountability and local ownership. A Green Party government would work to shift business taxes, employment taxes and property taxes away from local and regional independent businesses and onto large national and multi-national corporations. A Green Party government would also end many of the hidden subsidies to big corporations that disadvantage local and regional business competitors. Businesses that apply for government contracts would be expected to practise high labour and environmental standards in Canada and abroad.

#### 13. ECONOMICS (carried with amendments)

Under the topic titled ECONOMICS, we proposed that the sub-section titled Maximum Income be removed. This sub-section needs to needs to be considerably reviewed and reworked.

#### 14. TAXES (not carried)

#### 15. ANOTHER GAMBLING POLICY (carried with amendments)

The Rae government introduced casino gambling in 1992, and this was supported by the Liberal and now the Conservative governments. Unlike other parties, the Green Party is against expanded gambling opportunities in Ontario, and would begin a gradual process of phasing out state-promoted gambling. The deleterious effects on the individual, family and society, in the

form of personal financial loss, job loss in others sectors such as dining and entertainment, family breakup and violence is well described. Our government must wean itself off reliance on revenues from gambling o fight the deficit, and admit that this is an unethical mode of creating revenue. Given the evidence that the resulting social costs out-weigh the revenue generated, gambling as a revenue-generator is counter-productive. Charities should not have to rely on gambling to survive. They should be better-funded and receive more favourable tax credits. Small-scale occasional gambling events for charity-raising should be permitted as long as they involve small amounts of participants' money, they are run by small local businesses and they are not used as government revenue generators. The Green Party would:

- \* halt expansion of gambling of any type
- \* cap the existing advertising budget on the Ontario Lottery Corporation with a 10 % reduction each year
- \* end lotteries linked to commercial sport
- \* cancel all plans for expansion of casinos, slot machines and video terminals
- \* give charitable donations more favourable tax credits
- \* provide education on the hazards and pitfalls of gambling

#### 16. POLICY ON EDUCATION (carried with amendments)

The Green Party believes that the problems affecting our education system reflect a deeper crisis in our culture. We believe that our dominant cultural values and practices, including the emphasis on competition over cooperation, consumption over sustainable resource use, and bureaucracy over

authentic human interaction, have been destructive to the health of the ecosystem and to human development. The current education system perpetuates these values and practices. The Green Party envisions a single expanded and diverse public education system with a new philosophical and programmatic framework. This system will be rooted in a global and ecological perspective, one that will prepare people for entry into an ever regenerating society rather than one that perpetuates existing conventions that have proven to be unsustainable. Education is central to the survival of our planet. Only when this is recognized can we truly develop a system that provides the opportunity for every person in Ontario to grow fully to their potential. The Green Party has five key policy directions for education in Ontario.

#### 1. Critical Thinking and Citizenship Responsibility

The current educational focus on skills relevant for today's job market has caused some policy directors to ignore the importance of developing critical thinking, citizenship, and change management skills in our students. The Green Party feels that these skills are essential to the survival of our planet and would develop a program grounded in a global and ecological perspective to address this.

#### 2. Class Size and School Size

The Green Party believes that class size and school size must be recognized as the factors that greatly influence the quality of public education.

#### 3. Basic Services Supplied Equally to All

We would ensure that basic services are supplied equally to all schools. More and more schools are turning to corporate and

wealthy donors to supply services that we believe should be supplied by government. Schools should not accept private or corporate funding unless they come with 'no strings attached'.

#### 4. Encouraging Local Curriculum Initiatives

We would ensure that Ontario's communities have a hand in developing education which addresses their needs. The trend towards centralized decision making control threatens to drown out the voices of these communities. This trend must be balanced so that support is provided for local curriculum initiatives, especially local second language programs.

#### 17. GREEN PARTY POLICY ON CHILDCARE (carried with amendments)

It is well known that how we care for our children will ultimately determine how people care for each other and the earth. The Green Party sees parenting as a valuable investment not only in the well-being of our children, but in the future of our society as a whole. It should be treated as such by providing real support for parenting instead of encouraging people to work for shortterm economic gain which in the end creates enormous stress on families and diminishes both social and human resources. The Green Party believes in subsidizing parents to look after their own children. We feel that the implementation of a Green Party Childcare policy would encourage parents to take time from work to raise their children. As a result of this family life would be enriched, stress would be diminished and the overall health of our society would be improved.

Green Party Childcare Policy initiatives would include:

- \* a Guaranteed Annual Income that would pay one parent to stay at home.
- \* extended paid parental leaves.
- \* job-sharing options.
- \* encouraging part time work.
- \* flexible work hours to match the school day.
- \* personal days to care for sick children.
- \* better paid day care workers to reflect the importance of the work they do
- \* a high quality day care system for those who need it, with the professional standards and training required by daycare workers.
- \* parenting education
- \* encouraging workplace childcare

#### 18. RESOLUTION ON POLITICAL FINANCES (carried with amendments)

Whereas it is desirable that political parties and candidates be financed by citizens rather than by business corporations, and whereas the financing of the political process in Ontario requires to be placed upon a more democratic basis, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures and principles:

1. Corporate contributions to Ontario political parties, constituency associations, and candidates shall be unlawful, and effective penalties shall be provided.
2. Individual contributions shall be limited to a total of \$ 2000 per calendar year plus \$ 2000 per election period, to all

parties, constituency associations, and candidates combined, throughout the province.

3. The Ontario political contribution tax credit system for contributions from individuals shall be maintained substantially as it exists at present.

4. Election subsidies payable to candidates and parties shall be calculated on an amount per vote obtained, and there shall be no minimum vote requirement to qualify for subsidy.

5. Legislation on political financing shall be designed on the assumption that it is desirable to facilitate the establishment and growth of new political parties in order to encourage the development of new ideas and policies and to promote a healthy competition among parties.

Here is an example of a possible strategy for funding political

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

parties:

(a) The Ontario Commission on Election Finances shall make annual payments from provincial funds to registered parties and constituency associations, to a total amount which shall cover

the greater part of their total expenses averaged over election and non-election years.

(b) The amount distributed to each party and constituency association in each year shall be determined by allotting to each Ontario resident who files an income tax return and his or her adult dependents, for the preceding calendar year, a sum such as a dollar to be divided among the registered parties as the tax filer or adult dependent sees fit, and an equal sum to be divided in the same proportions among the registered constituency associations of the various parties in the constituency in which the tax filer resides.

(c) The distribution shall be accomplished by providing to each Ontario tax filer and adult dependent along with the income tax return, a machine readable form which shall bear the name of each registered party and the address, telephone number and email and website address of its provincial headquarters, and opposite each party name the form shall bear outlined squares to some such number as ten, each square having some such nominal value as ten cents.

(d) Each tax filer or dependent shall darken a number of squares representing the total amount which he or she has been allotted to divide among the registered parties, and shall return the form to Revenue Canada with his or her tax return, and Revenue Canada shall enter upon each form the tax filer's postal code in machine readable form so that from the postal code the tax filer's constituency of residence may be determined, and so that from that point on the necessary calculations up to the issuance of cheques can be completely computerized and can be accomplished

economically.

(e) If the tax filer or dependent does not darken the correct number of squares then the sums allotted to that person shall be distributed in proportion to the number of squares actually darkened.

(f) If the tax filer or dependent does not fill out the form in a usable manner, or at all, then the sums allotted to that person shall be distributed according to the average of all those forms which were filled out in a usable manner.

(g) If a registered party does not have a registered constituency association in any given constituency, then any sum which may have been allocated to that nonexistent constituency association shall be paid to the registered party in a manner which permits the party to identify the constituency in respect of which the money has been paid.

(f) The Commission on Election Finances shall enter into a contract with Revenue Canada under which Revenue Canada shall distribute, collect and process the forms, shall store them until the following general election, shall preserve the confidentiality of the information contained on the forms, and shall perform the necessary calculations except those under subsection (g) above.

#### 19. RESOLUTION ON ONTARIO MUNICIPAL ELECTION FINANCES (carried with amendments)

Whereas it is desirable that municipal politics shall be conducted in the interests of citizens rather than in the interests of businesses or real estate developers, therefore be

it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. Corporate contributions to the election campaigns of candidates for mayor and councillor in Ontario municipalities shall be unlawful, and effective penalties shall be provided.
2. Contributions from one individual to the election campaigns of candidates for mayor and councillor in Ontario municipalities shall be limited to a total of \$ 500 for all candidates combined in all Ontario municipalities during and for any one election period.
3. Individual contributions shall be creditable against Ontario income tax payable, to the extent of 75% for the first \$50 and 50% for the next \$ 100, and this credit shall be in addition to the credit for contributions to provincial parties, constituency associations, and candidates.

## 20. RESOLUTION ON PROPORTIONAL REPRESENTATION (carried with amendments)

Whereas it is desirable that representation in the legislature accurately reflect the opinion of the voters, and that major changes in the structure and function of the Government of Ontario shall not be undertaken without a consensus among legislators and voters, therefore be it resolved that the Green Party of Ontario advocates a system of proportional representation for elections to the Ontario legislature, and be it further resolved that the Green Party of Ontario will support and work toward legislation embodying the following measures:

1. A Royal Commission shall be established to investigate and present to Ontarians the major possibilities for electoral reform

encompassing the selection of MPPs from single-member constituencies by a majority rather than a plurality method, and alternatively systems of proportional representation, and the Royal Commission shall present succinct analyses of the merits and demerits of each choice together with references to more detailed analyses and studies.

2. The systems of proportional representation presented shall include those offering voters a choice among candidates of the same party in multi-member constituencies, as well as systems in which the order of election of individual candidates of the same party is determined by the party alone.

3. A referendum, preferably at the same time as a general election, shall be held to permit the voters to choose among the systems presented by the Royal Commission.

4. The voting method used for the referendum shall be one which selects as far as possible a system approved by the majority of Ontario voters, and it shall be one of: a decision tree, or the single transferable vote (preferential vote or alternative vote), or the approval vote, or a combination of two or more of these systems.

## 21. RESOLUTION ON ELECTORAL REFORM FOR ONTARIO MUNICIPALITIES

(carried as is)

Whereas the interests of citizens in municipal government as at other levels of government are best served by the accurate representation of voter opinion on municipal councils and in the selection of mayors, by the avoidance of artificial dominance by minority groups, and by the avoidance of vote-splitting in

mayoral elections, therefore be it resolved that the Green Party of Ontario supports and will work toward legislation embodying the following measures:

1. In Ontario municipal elections for mayor or reeve, the voting method employed shall be the single transferable vote (preferential vote or alternative vote), or if the municipality so chooses, the approval vote, whether the electorate is the voters at large or the council.
2. Elections for municipal councils in Ontario shall be conducted by the single transferable vote in constituencies each electing not less than three members of council using the Droop quota and Gregory transfers.

3. Definitions:

Approval vote: the method in which each voter may give one vote only to as many candidates as he or she considers acceptable, and the single candidate with the most votes wins election.

Single transferable vote: the method in which each voter allocates a rank or preference number to as many candidates on the ballot as he or she wishes or the law prescribes, and where there is more than one place to be filled (member to be elected) in a constituency, a quota is established, and initially any candidate having a number of first choice (rank or reference number 1) votes equal to or exceeding the quota is elected and any surplus ballot papers bearing surplus votes for such candidates are transferred to the candidates of next preference number on the ballot paper, and after the transfer of surpluses the candidate with the least number of first choice plus transferred votes is dropped from consideration, and that

candidate's ballot papers are transferred to the candidates having the next preference rank on each ballot, and the process continues until the required number of candidates either meets the quota or has more votes than the single remaining alternative.

Alternative vote: the single transferable vote applied to the filling of one place or the selection of one choice, as in a mayoral election or the selection of a councillor or MPP from a single-member ward or constituency.

Drop quota: the number obtained by dividing the total number of valid votes cast in a constituency by a number which is one more than the number of places to be filled (members to be elected) and increasing the result to the next whole number.

Gregory transfer: the method of transferring surplus votes by transferring all of the candidate's votes but giving each vote a fractional value equal to the number of surplus votes divided by the candidate's total number of votes, so that  $s/c \times c = sc/c = s$ , thus making the number of votes transferred to each remaining candidate the same however many times the count is repeated.

## Building a Sustainable Future

The Green Vision recognizes the responsibility to create a sustainable society within a healthy environment.

Ratified by the Green Party of Ontario. Issue 4.0 October 1994

Section 1: What is a sustainable future?

Section 2: The Green Primer

Section 3: The Values of the Green Party of Ontario

Section 4: Provincial Policies

Section 5: Constitution of The Green Party of Ontario.

What is a sustainable future?

A sustainable future will not be stumbled upon while trying to achieve some other goal. Sustainable development is understood by some to mean an expanding economy. This is not possible. Most people now realize that it is not going to be achieved without changes to our lifestyles and our standard of living. We will not solve the environmental, economic and social problems we all face by having the rest of the planet emulate our consumption habits. It is only when we in North America, Japan and Europe "the first world" stop our excessive consumption, our exploitation and our cruelty to the planet and all its inhabitants, that we will be able to choose a path that is truly sustainable.

"Green development" is not simply "sustainable development" development we can survive. It is regenerative development, development which directly works to heal the individual, the community, and the environment. This must be achieved through a gradual restructuring of our economy, and through the growth of appropriate enterprises, guided by grassroots processes of community design and planning. It is not enough to place limits on

the destructiveness of conventional economic growth -- our survival depends on mandating that economic growth heal the planet and community.

The Green Party of Ontario defines "Sustainability" as follows.

Activities are sustainable when they:

- 1/ use materials in continuing cycles
- 2/ use continuously reliable sources of energy
- 3/ come mainly from the potentials of human beings  
ie. communication, creativity, coordination, appreciation, and spiritual and intellectual development.

Activities are not sustainable when they

- 1/ require continual inputs of non-renewable resources
- 2/ use renewable resources faster than their rate of renewal
- 3/ cause cumulative degradation of the environment
- 4/ require resources in quantities that could never be available for all people
- 5/ lead to the extinction of other life forms.

Ken Toews

Policy Coordinator Green Party of Ontario

## Section 2 The Green Primer

### Introduction

Green parties are active around the world trying to create a

future where people live with each other and with the planet in a sustainable manner.

Historically individuals like Henry David Thoreau, have articulated a Green perspective. He practised "plain living and high thinking" for philosophical rather than religious purposes, to examine the true nature of humanity's relationship with the environment. The distinction between living and "getting a living" were among his concerns.

There have been many successful movements involving self-sufficiency and living simply. People like Helen and Scott Nearing and E.F.Schumacher have been a green alternative for many generations. The challenge for the Green Party of Ontario is to spread this time tested vision to as many people as possible.

"Any discussion of world poverty that does not come around to demanding a radical change in our habits of consumption and waste, our tastes, our profligate standard of living, our values, generally is a hypocrisy. There are no technical answers to ethical questions."

Theodore Roszak, 1972

The Challenge before us.

We have the ability to produce more than we can consume. To match consumption with capacity we stimulate demand through advertising, planned obsolescence, and the arms trade. The results are all around us. Rather than continuing on this race to bury ourselves in a sea of our own waste, we must turn our attention to finding a secure place within the natural order.

We must come to grips with the problems of economic

inequality, resource depletion and over population. The goal must be to create the conditions necessary for true world peace.

We will examine the nature of our problems and examine alternative solutions. The Green Party does not claim to have all the answers. What we are capable of doing is defining the problem and suggesting some possible alternatives. Perhaps we will also help you find a new sense of hope and purpose.

### Environmental Degradation & Ecological Collapse

The depletion of the ozone layer; the accumulation of greenhouse gases; acid precipitation; the build-up of persistent toxins such as the whole family of chlorinated chemicals; depleted cod, salmon and tuna stocks, the pollution of our lakes, ground waters, and air; the destruction of rain forests in the southern hemisphere and boreal forests in northern countries; species extinction; the loss of topsoil due to modern agricultural practices and urban encroachment. The list gets longer every day. Our natural systems are threatened by human activity.

### Population Growth

The increase in population and resource consumption are basic causes of human suffering and environmental degradation and must become major priorities for national and international action.

Population growth tends to overwhelm any possible gains made in improving the human condition.

### Physical Limits To Growth

We live on a finite planet with finite resources. We are

consuming our capital when we should be living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water, fish, topsoil, and trees.

Problems are increasing faster than solutions. There is a point beyond which a system will fail to produce additional benefits simply by making it larger or more complex. This point has been exceeded in most of our systems.

### The Distribution Of Wealth

The industrialized countries make up one-sixth of the world's population and consume one-half of the world's resources and energy. In the grossly wealthy countries a small minority owns the majority of the wealth leaving only the street and hand-outs for a large and growing number of the people. When this is coupled with the problem of population growth and the limits on the resource base, a truly explosive mix arises.

"Earth provides enough to satisfy every man's need, but not enough for every man's greed."

Gandhi, 1869 - 1948

### War and Peace

Currently, the armaments business grosses a trillion dollars a year. Third world countries, who do not have the ability to house or feed their population have enough nuclear capacity to destroy the planet. Even a tiny diversion of this flood of money could solve problems that have bedeviled humankind for thousands of years and yet the race goes on.

## The Psychological Limits To Growth

By emphasizing competition rather than cooperation, sharing has become foreign to us. The growth of our technological society has alienated large numbers of people who are no longer connected to any natural rhythms. There are large classes of people for whom the only expression of their individuality is consumerism.

The nuclear family, seemingly the core of the social structure is under intense attack. Some experts maintain that 95% of modern families are "dysfunctional".

Our economic system is hostile to individuals, families and communities. We are consuming our psychological capital in exactly the same way we are destroying our environmental capital. A sustainable culture would pay more attention to issues such as self-esteem and co-operation. The root cause our crisis is not to be found in how people interact with nature but in how we interact with each other.

"Clearly the attitudes and values which make production the central achievement of our society have some exceptionally twisted roots." John Kenneth Galbraith, 1958

## The Nature of the Solution

Our problems are linked by a common value system. A system founded on principles of hierarchical relationships and unlimited growth. We as a culture define tradition, social arrangements, religion, moral codes and technologies. We decide if they will manifest themselves as institutions of sustainability and subsistence or exploitation and destruction.

Our current experiment in social organization has culminated in the list of environmental and social disasters discussed

earlier. There was no way that all of these things could not have come out of a social motivation that held nature in such utter disregard, that elevated growth for its own sake above any other consideration, that felt that power (physical and political) was good in and of itself. The problems we face are rooted in the basic assumptions that have molded modern industrial society. Only by establishing the necessity for a different set of assumptions can we ever hope to find our way out of this mess. No amount of tinkering with the existing order will do the job. Hope for a technological breakthrough that will save us is courting disaster.

The economic system we operate under today was created to obtain as much wealth as possible. In contrast, we must create a system based on a different fact, namely the need for survival: a social order based on the satisfaction of human needs, rather than on human wants. There is no basic conflict between the needs of the planet and our real needs. They are the same, if only because a healthy planet is basic to our needs. We need not blame the economic system; it merely succeeded in doing what it was designed to do. The consequences were unforeseen and guilt is not the issue.

### A Specific Program

Withdraw all support for the status quo. Get Canada out of the arms business. Stop aiding and abetting those who would exploit the poor countries of the world. Refuse to do anything simply because we profit from it. Withdraw government support from enterprises that degrade the environment. Refuse to do anything that would contribute to the decline of rural communities. Simply

acting to extract Canada from the web of complicity would occupy any government's talents and abilities for years.

Traditional top-down organizations were necessary to a power based economy and political system. As we free ourselves from the old concepts of executive power and a warped definition of efficiency and start giving precedence to empowerment and responsibility whole realms of alternative social organization open up. There are a wealth of community groups straining to assume responsibility for those things that the welfare state now does so poorly. The consolidation of power in the government has acted to the detriment of real community control. Ceasing to stifle community control would be a necessary first step.

"Instead of developing techniques for maximum profit, try to develop those that will give maximum of freedom: an entirely new approach."

Simone Weil, 1909 - 1943

## Green Politics in Ontario

The Green Party of Ontario (G.P.O.) is a registered political party under provincial laws and has participated successfully in electoral politics since 1985.

Once a year the GPO has a Policy conferences and an Annual General Meeting. The location of these conferences are rotated around the province. We have instituted a system of travel vouchers that allows individuals to travel to conferences subsidized by the generous provincial tax credit system. We believe in participatory democracy and at general meetings all members are allowed to vote on all resolutions. If your join the Green party

you do not give your vote to a delegate nor are you excluded from decision making meetings. All members can vote and all members are funded to travel to conferences.

Constituency associations of the Green Party are active between elections seeking to create a Green society. A society based on the following values:

The preservation of the natural world, Feminism, Social Justice, Spirituality, Participatory Democracy, and Non-Violence

Our goal is to participate in the electoral process and facilitate the evolution of party politics away from current confrontational power politics.

Campaigning is the best way to present these views to the public, and to inform the other candidates as to the true nature of the challenges we face. It's a great experience to do so. Many other groups are working to establish the public support for one aspect or another of the Green vision, but only the Green party is working toward those goals within the political system.

Our members come with a wide variety of views and opinions. But uniting them all is the realization that whether the issue is

the exploited two-thirds, the environment, peace, feminism or

social justice, the root cause of the problem must be addressed.

"I would like to become less acquisitive altogether, to be able to see some exquisite piece of porcelain in some other man's house and be wholly glad that it was there and not mine."

Gabriel Fielding 1965

A Sustainable Future

"An economy of abundance is under present rules also an economy of waste and repetition; indeed without this waste the economy would slump. Nobody, however, can be optimistic about the survival of a society with such values."

Robert Theobald, 1961

Our future depends on developing Green principles in the way we interact locally, provincially and internationally. Our success will depend on our ability to identify the threats to our survival and to apply appropriately scaled solutions to the problems we have created for ourselves. The key is in voluntarily and deliberately converting from a want-based system to a need-based system.

A sustainable society would have to rely on renewable rather than fossil fuels. Our goods would be designed to last as long as possible, to be repairable and easily modified. Our intent would be to live in harmony with natural cycles, including our own biological and psychological limits.

A safe, just, and peaceful society would have to be much less centralized. Equity, in all its forms, would have to be the concern of the entire culture. Decentralization and the devolution of decision-making would be the dominant pattern, with decisions being

made at appropriate levels. This involves the search for local consensus, rather than simply seeking a majority. Local communities, even within urban areas, would have much more responsibility for social programs such as health care, education, and the concerns of the young and elderly.

A Green society would be less urban and more rural, with a renewed emphasis on local economies, emphasizing both local manufacturing and agriculture. Modern communications technology would insure that even remote areas would be able to participate in the political and cultural life of the whole society.

A Green vision is not looking backward with starry eyes wishing for a past that never existed. Rather it is looking forward, taking the best that technology, science and history have to offer and moulding it into a more self-sufficient and secure future that is as concerned with the survival of all species as today's society is with satisfying our greed.

Defense would be based on dependability, not amassing large offensive forces. Greens are calling for nuclear disarmament but not total demilitarization. We recognize that an autonomous society requires some defense force. However the operative word is defense not force. We respect the ideals of M.K. Ghandi of non-violence and forgiveness being superior to retribution.

" I do believe that where there is only a choice between cowardice and violence I would advise violence.....Thus when asked what should have done if present when I was almost fatally assaulted in 1908, should you run away and seen me killed or use physical force and defend me, I advised to defend me even in using

violence. Hence it was that I took part in the Boer War... I believe that non-violence is infinitely superior to violence, forgiveness more manly than punishment. But abstinence is forgiveness only when there is power to punish, it is meaningless when it pretends to proceed from a helpless creature."

M.K. Gandhi

This sustainable culture would emphasize the development of healthy humans by providing the physical and emotional conditions for complete social development in a healthy physical environment.

Growth would emphasize the acquisition of skills and talents, not the acquisition of material goods and the exercise of power.

Section 3:

The Values of the Ontario Greens.

The last word in ignorance is the man who says of an animal or plant: "What good is it" Aldo Leopold

Protection and restoration of the natural world.

The Green Party is seeking to understand the origins of ecological problems. If we proceed by asking successively deeper questions we will arrive at a more complete understanding.

Early ecologists such as Rachel Carson base their criticism not on pollution itself but rather on the questions of why and how such problems have come into existence. This leads to a consideration of our attitude toward nature, non-industrial cultures, and the ecological aspect of widely different economic systems.

Philosophically we draw upon two main sources: Spinoza and Gandhi. From Spinoza we use the idea of developing as wide a

concept of self as possible to incorporate and identify with nature. Ghandi gives us the concept of non-violence and self-realization, the latter reinforcing Spinoza's expanded self. Moreover, both self and things are to be conceived of as processes, i.e. not static but changing.

Our eight basic principles are:

1. The well-being of life on earth has value that is independent of its usefulness to humankind.
2. The richness and diversity of life has value in and of itself.
3. Humans have no right to reduce this richness and diversity except to satisfy vital needs.
4. The flourishing of human life and cultures is compatible with a substantial decrease in human population. The flourishing of non-human populations requires such a decrease.
5. Present human interference with the non-human world is excessive, and the situation is rapidly worsening.
6. Basic economic, technological, and ideological structures must be changed.
7. The ideological change is mainly that of appreciating life quality (dwelling in situations of inherent worth) rather than adhering to an increasingly higher standard of living. There will be a profound awareness of the difference between big and great.
8. Those who agree have an obligation to try to implement the necessary changes.

We feel that we must change our viewpoint from a homocentric one to an ecocentric one, and at once. The ideas of "walking gently on the earth" and living simply seem to be obvious first steps toward a more sustainable future. Individuals must work

these concepts into their own lives and the institutions that make up our community.

Regardless of one's background, it is possible and, in our view, essential for each individual to come to a realization of the ethics of ecology. The sooner an ethics based on respect for the natural world is adopted, the better. The beneficiaries will be not only ourselves but our children, grandchildren and the thirty million species with which we share the planet. "We should never lose sight of the fact that the project of human liberation has now become an ecological project, just as conversely, the project of defending the Earth has also become a social project." Murray Bookchin

#### Social Justice

Most ecological problems have their roots in social problems. Problems that go back to the very beginning of patricentric culture. The rise of capitalism, based on competition, capital accumulation and limitless growth, brought these problems - ecological and social - to an acute point. To reverse this trend capitalism must be replaced by a society based on non-hierarchical relationships, decentralization in communities, wealth and power. Technologies like solar power, organic agriculture, and humanly scaled industries must be structurally tailored to the ecosystems in which they are located.

To reach this level of advancement major changes in attitudes towards government and its institutions will be required. We must distinguish between what is irrational and anti-ecological in today's society and what could be rational and ecological in a free society. People are a product of natural evolution and as such are

a part of the natural order. Our social and economic problems are caused by our society withdrawing from nature through a complex and cumulative evolutionary process.

The economic construction of the world should be such that no one suffers for want of food, clothing and basic shelter. Our social responsibility is to eliminate extreme inequalities. In order to achieve that goal, economic growth should no longer be the goal of society. The Green goal is the elimination of inequalities, employment for those who need it, and the eradication of poverty.

Economic growth is not a separate objective; in fact it is contrary to the primary goals of a healthy society. The current solution of continuous increases in material production is a false solution. Rather than leading to an increase in real wealth for the world community, we are being lead down a path of increased competitiveness, exploitation and structural unemployment.

How can we create an ecologically healthy society where human rights are respected, where individuals are not economically oppressed, and where individuals can participate in a truly representative democratic process?

The solution involves realizing the following basic truths:

- 1) Industrialization involves exploitation of underdeveloped countries.
- 2) Larger-scaled means of production lead to mass unemployment.
- 3) Industrialization involves large capital investments per worker, which exclude large masses of people from control over production.
- 4) When practised on a large-scale industrialization places unrealistic demands on our natural resources. The process will be

brought to a sudden halt by resource depletion.

The debate will rage: politicians claim that studies still need to be done but the problems and solutions have been articulated for generations. "The hottest places in hell are reserved for those who, in times of great moral crisis, maintain their neutrality."

Dante Alighieri

### Participatory Democracy

Proportional representation provides an electoral system that produces governments which are responsive to the will of the electorate. Under the current system, a party could win 20% of the vote across Canada and not receive a single seat in Parliament. Proportional representation means that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties.

Our democracy regularly disenfranchises 1/3 of the electorate by not representing them in the legislature and places people in power who do not have the approval of the majority of the voters.

-1979 Clark won with 36 % of the vote, the Liberals lost with 40.

-1980 Trudeau won a majority with only 44% of the votes.

-1988 Mulroney received 43 % of the vote, he enacts the F.T.A.. The Liberals and N.D.P. opposed it and received 52% of the vote.

-1990 Rae receives a solid majority with 36 % of the vote.

-1991 N.D.P. in B.C. and Saskatchewan are in power with 65% of the seats and less than 40 % of the vote.

-1993 Conservatives receive over 2 million votes and 2 seats.

Webster's dictionary defines democracy as "government by the people; especially, rule of the majority." By this definition

Canada is only occasionally a democracy.

Whatever the divisions between Ontario and Quebec and the rest of Canada, they are reinforced by our voting system. To gain power a party need only win the majority of seats in Ontario and Quebec. Thus, the interests of the other eight provinces and the two territories are secondary. Major parties choose candidates particularly in winnable seats, who are predominantly middle-aged, middle-class, white males who have a tendency to be lawyers. Only 10% of MPs are women yet more than half the population is female. Countries using a proportional voting system elect women in far greater numbers. Parties no longer represent an ideological perspective, rather they pander to the lowest common denominator during an election in a cynical attempt to get 40% of the vote and then implement their hidden agenda during their tenure.

Most countries use proportional representation in national elections. This leads to coalition governments that more accurately reflect the population. Many have noted that Canada is best governed under a minority government because like a government elected under the proportional representation system they are forced to work together in the common interest of voters. Our system leads to a strong governments that does not have to moderate its opinion with the views of others. The greater danger lies in the current system's ability to elect governments that represent only a minority of the electorate, but have an unassailable majority in Parliament.

We favour the additional member system of proportional representation practised which maintains constituency links. The system regionally "tops up" seats, which means almost all voters

will be represented by a regional MP from his or her preferred party. ...All men and women cannot fail eventually to adopt Gandhi's

belief that the process of mass applications of force to resolve contentious issues is fundamentally not only wrong, but contains within itself the germs of self-destruction.

General Douglas MacArthur

Non-Violence

The philosophy and lifestyle of M.K. Gandhi defines Non-Violence. Non-violence means "clinging to the truth", the greatest truth being the unity of all life. The vows which Gandhi required of his followers included truth, non-violence, fearlessness, non-possession, bread labour, and equality of religions.

Violence never overcomes evil; it suppresses it to rise later with redoubled vigour. Non-violence on the other hand, puts an end to evil, for it converts the evil-doer.

Satyagraha or non violence in the political sphere assumes the form of civil disobedience. It means mass resistance on a non-violent basis against the government when constitutional methods have failed. It is called 'civil' because it is non-violent resistance by people who are ordinarily law abiding. It is civil also in the sense that those who break the law are to observe the greatest courtesy and gentleness in regard to those who enforce the law. They are even to seek not to embarrass the opponent if possible.

Non-cooperation may express itself in giving up titles and honours, resignation from government service, withdrawal from the

police and military, non-payment of taxes, boycott of courts, schools and legislatures, and running parallel institutions to perform these functions.

Such civil disobedience demands on the part of the people disciplined group action, infinite capacity for suffering without retaliation, and strict obedience to the struggle. As this discipline and obedience are not based on force, the leadership must come from individuals of character and public service, whom the people respect and willingly obey. This implies that the leaders generally carry on various forms of constructive service for the people. Gandhi emphasized working through various forms of constructive endeavour, such as working for economic self-sufficiency; education, uplifting of women, and so on. Satyagraha presupposes day-to-day non-political constructive work aiming at the development of the individual and community.

Forces of oppression cannot be resisted on a piecemeal basis. To be effective requires constructive effort in every sphere of life; individual, social, economic, and political. These spheres have to be refashioned in such a way that people learn to transform their daily lives, manage their affairs in a cooperative basis, and thus acquire sufficient strength and resourcefulness to be able to offer non-violent resistance against organized violence. The practice of non-violence in the political sphere is not a matter of preaching. It involves the building, brick by brick with patience and industry a new non-violent social and economic order. It depends ultimately on banishing violence from the hearts of individuals, and making them a transformed disciplined people. "...it is important that we keep the ecology movement from

degrading into a form of nature worship with a new hierarchy of priests and priestesses. The distinction between a needed naturalistic spirituality and a "Green religion" is an important distinction." Murray Bookchin, 1988

Spirituality:

Honour the creator, the earth: they are inseparable. Honour all beings - as they are all manifestations of the same creator. We must dedicate ourselves to restoring the ecological balance of the Earth; remembering that we are one creature among many in an intricate, living web of relationships. We must dedicate ourselves to creating a just world, a sustainable world, for it is within our means to shape ourselves and society.

If our society began to think ecologically to the extent that we recycle our newsprint, aluminum cans and bottles, something quite essential would still be missing. A sustainable society would still have problems such as alcoholism and drug addiction because people have to kill a deep inner pain. An inner pain that is born in the sterility and emptiness of life in a modern industrialized culture.

Our society lacks a connection to the natural rhythms of the planet, and this leads to agitation, negativity, and anxiety. We go through deep crises of meaning pretty much on schedule, as an adolescent, at midlife, and again in old age because we are disconnected from the natural rhythms that could give us meaning and comfort.

The creation centred spirituality movement which is flowering among all major denominations, in which the creation is honoured as the most profound expression of the divine is fundamental to our

continued spiritual and emotional well being. This creation centred perspective will allow us to finally be able to say to the Native peoples with an earth-based spirituality, "Oh, now we get it! Now we see what you mean when you say the stars are our grandparents! Our physics has finally figured out that the elements in our bodies were forged at the time of the fireball and came through four billion years of planetary evolution. We used to know this. Old Europe knew it before the Indo-European barbarian invasion brought in their concept of the sky god. They knew that the Earth is sacred. We knew this, yet we lost it. We can look to the Native peoples, who have an unbroken chain of Earth based wisdom, to help us regain our sense of sacred relationship to the cosmos. Spiritual practice also gives us a sense of hope, joy and love, as well as enabling us to make decisions that are grounded in reality.

Many of us get that familiar sinking feeling in our stomachs when we listen to our leaders. Clearly those people are not grounded. We are never going to insist on a particular way in which people should become spiritual. That's an individual, personal decision, but a truly revolutionary Green movement must find ways to connect to Earth wisdom.

Spirituality plays a prominent part of green politics simply because it is essential to a healthy society. Green politics is a comprehensive politics and a holistic vision addressing all aspects of life on earth. "Feminism is an entire world view, or gestalt, not just a laundry list of "women's issues". Feminist theory provides a basis for understanding every area of our lives, and a feminist perspective can affect the world politically, culturally, economically, and

spiritually".

Charlotte Bunch

Feminism; Women and Men

Traditionally, the contribution of women to the family, to the community and to the economy is massive. They do most of the work in the home, most of the child-rearing, and most of the voluntary work that underpins our social services. Yet despite some improvements, the social, economic and political repression of women is still an undeniable feature of our culture. Women are oppressed and exploited, and are daily exposed to injustice, violence and discrimination.

For hundreds of years, male values have dominated and continue to dominate human activities, while women are consistently exploited and stereotyped by advertising, the media, politicians, education, and the way that men have structured society. Women are expected to do most of the work that is fundamental to keeping society going (birthing, caring for children, cooking, looking after the home, caring for sick and dying people) and little of this work is acknowledged, let alone paid. At the same time, men expect women to be like stars, to be available when required, and not to have any independence.

The Greens believe that a feminist perspective must be applied throughout the governing of our society. It is crucial to our survival. This does not simply mean 'equal opportunities' or token participation; these are man-made concessions which keep women dependent within a patriarchal structure. It means empowerment, both in our internal organization and in our policies, we not only seek to end discrimination, but also to bring that feminist

perspective into all areas. We want to liberate both men and women from sexual stereotyping, and to demonstrate that our future strength lies in emphasizing the feminine values that are present in all of us.

Men also suffer from the way our society is structured. Because of the masculine role in general and the suppression of feelings in particular, men by and large lead shorter, less satisfying lives than women. Learning to ignore feelings enables them to work like machines, unaware of the messages of pain their bodies send. However, the continual suppression of feeling, the constant competitiveness, and the common unhappiness of men are not only self-destructive; they also lead men to direct their destruction toward others. Bottled-up feelings spill over into

many forms of aggression, violence, and the exercise of power. The planet is poised on the verge of oblivion as a result of macho posturing.

Both men and women need flexible work arrangements and encouragement to take time to 'be' (not just 'do'), to feel, and to grow. The patriarchal relationships we have set up in our society extend to our relationships with the natural world as well. We

must learn to be less homocentric and to work towards co-operation instead of domination in all of our relationships.

#### Section 4: Provincial Policies

##### ABORTION

The Green Party of Ontario supports the right of women to decide whether or not to have an abortion.

##### ADVERTISING AND COMMUNITY TELEVISION

Advertising is used to promote consumption and create artificial needs. Also advertisers impose a threatening restriction of free speech by limiting voices that oppose their goal of increased consumption and resource destruction.

This is the antitheses of what the Green Party stands for. To counter the negative effects of this widespread mass culture based on consumerism the Green Party believes we must lobby the C.R.T.C. to:

- 1: Reevaluate the licensing of commercial channels to reduce the amount of advertising currently on commercial channels.
- 2: Democratize the airwaves. With the development of "Death star" satellites capable of beaming over 500 channels into the home it is imperative and now technologically feasible to provide community based channels on the cable networks that are not controlled by the cable network corporations. These channels are to be made available to advocacy, special interest, artistic, political and ideological groups. These programs would be funded by cable vision subscription revenues and sponsorship. They would be commercial free and would provide an alternative to consumption based advertising funded programs.

3: Broadcasters are granted a licence to use the public airwaves in return they are expected to serve the public interest. Today the airwaves are controlled by a small circle of large corporations and advertisers. The business side is not balanced by a commitment to public service. We, the citizens, no longer enjoy access. Instead we have been relegated to the role of products as we are measured, packaged, and sold in bulk to the highest bidder. As a public resource they belong neither to the government nor to private industry, nor to broadcasters. We advocate that as a condition of licence, broadcasters be required to set aside four 30 second time slots every hour for the owners of the airwaves; the citizens. This time would be given over to citizen produced messages.

ADDICTIVE DRUGS, ALCOHOL, MARIJUANA, TOBACCO.

1: We do not encourage the use of drugs.

2: Illicit drug laws generally do more harm than the drug they attempt to control.

3: We do not support monopolies on production, rather we would like to promote local, small scaled production of alcohol.

Because of this we would encourage the federal government to:

1: Legalize and regulate the production and consumption of marijuana and hashish.

2: We would not tax "Brew your own" establishments.

3: We advocate the introduction of a deposit system which would require the return and filling of wine and liquor bottles. This would be a non tariff barrier to trade and encourage the local production of Wine, beer and alcohol.

4: We advocate a significant reduction of provincial taxes on locally produced wine, beer, and alcohol. This loss of revenue

would be compensated for by increased local economic activity and improved efficiency.

5: Require the listing of all additives on alcohol and tobacco products.

6: Legalize and regulate the use of stills by individuals for the production of fuel and consumable alcohol.

7: Treat hard drug use as a medical rather than criminal problem.

Cigarettes cause 35,000 premature deaths annually which results in a yearly drain on the economy in lost income and medical costs of over \$5.2 billion as opposed to the \$3 billion the tobacco industry contributes to the economy through jobs and taxes.

We recommend:

1: Entering into negotiations with the Federal government to close our borders to imported tobacco and ban the export of all tobacco products.

2: Ban the advertising of all tobacco products. including the funding of sporting and cultural events.

3: Protecting the rights of non-smokers by banning smoking in any enclosed public place and on all forms of public transportation.

4: Substantial increases in penalties for the selling of tobacco products to minors.

5: A ban on the selling of tobacco products from vending machines.

6: Strongly worded, regularly changed health warnings on cigarette packages.

## AGRICULTURE IN ONTARIO

The objective of Green agriculture policy is to:

1) Reestablish the financial viability of the family farm.

2) Assure a supply of locally produced food

3) Preservation of ecological diversity

4) Stability in social and economic life of a community

#### Transitional Policy

-Reestablish import barriers to protect unfair competition from subsidized producers abroad.

-Establish prototype ecological communities incorporating organic agriculture and other sustainable activities as the base for economic activity.

-Remove all subsidies to chemical agriculture such as the P.S.T. free status of pesticides.

#### Specific Policy Recommendations

-Redirect tax and subsidy programs to support organic techniques as a transition Integrated Pest Management should be encouraged. Based on survey results on nine commodities from 15 different states, and considering practices on only one crop per state, farmers using Integrated Pest Management collectively earned \$579 million more in profits than they would have otherwise. Texas cotton farmers using I.P.M. had net returns per hectare averaging \$282 higher than other cotton farmers. (Postel, 1987, p. 29)

-Tighten the regulation of topsoil removal and sales on a provincial and administrative basis according to the topsoil preservation act.

-Establish a program to set aside 25 % of Ontario's farmlands near Urban centers as community land trusts. These lands would be purchased at a fair market value as they became available and turned over to municipalities with the purpose of establishing local sources of food production. ( See Community land trusts)

-Provide Homestead sites on provincially owned lands and interest

free loans to unemployed and under employed individuals wishing to establish sustainable cooperatively based communities.

**LOW T.H.C. HEMP** The Green Party encourages the cultivation of hemp for ecological reasons:

1: Hemp growers in England have a return of \$ 3000 per acre, compared to the \$290 per acre that Canadian farmers get for grain.

2: Hemp can be grown for the production of biomass as a clean alternative to fossil fuels. An estimated 3 million acres of hemp would replace all of Canada's fossil fuel demands.

3: An acre of hemp will produce as much pulp for paper as 4 acres of trees over a twenty year period. Current paper mills are convertible to hemp. Hemp paper-making process requires no dioxin-producing chlorine bleach and uses 75% less sulphur-based acid. Until the late 1800s, 80% of all paper was made with hemp fibre.

4: Hemp can be grown in Canada, cotton cannot. Hemp cloth is stronger, more durable, warmer and more absorbent than cotton.

5: Hemp requires no herbicide, fungicide or insecticide applications and will grow in poor soils.

6: No licence should be required to grow Low THC Hemp. **ANIMAL**

## **RIGHTS POLICY**

-The Ontario Greens affirm that we must live in harmony with the natural world. Human survival depends on the vitality and health of other plants and animals.

-All species have the intrinsic right to exist without regard to their usefulness to humankind. All animals, whether wild or domesticated, have the right to fair and ethical treatment by human beings.

### Killing for Food and Clothing.

-We acknowledge the right to kill animals to provide essentials.

Further consideration must be given to the needs of the aboriginal peoples right to self determine their practices on their lands.

-We feel a vegetarian diet is healthier, more environmentally benign and should be encouraged through education.

### Hunting and Fishing

-Hunting with rifles and fishing with electronic fish finders should be banned. Hunting is a natural act that is an integral part of the natural balance.

-We advocate a strategy that would reestablish predators such as the wolf and lynx in southern Ontario. We would eliminate predator bounties.

-We advocate increased funding to conservation officers to stop illegal sport hunting and poaching.

-Hunting, trapping and fishing are to be banned in all provincial parks, conservation areas and Crown game preserves.

-Increase the penalties for poaching. - Ban the leg hold trap.

### Animals in Agriculture

-establish and enforce standards for the care of farm animals.

-Outlaw the use of furs on ornamental clothing. The use of furs in some survival application is accepted.

-gradually phase out battery farming through stringent measures to favour free-range husbandry.

-ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement.

-encourage a reduction in meat consumption with an educational campaign.

- ban the transport of live animals over long distances.
- ban the use of growth stimulants for meat animals and the routine use of antibiotics in animal feeds.

#### Animals in Research

- Ban the use of animals for the testing of cosmetics and household products, for psychological research, and other non-medical research.
- set up independent, community based committees to review all research projects using animals.
- eliminate unnecessary vivisectionist for educational purposes.
- fund research into alternatives to animal testing for medical research.

#### Animals as Entertainment

- animals imported for zoos must have been born in captivity or be projects to save a threatened species.
- no new forms of entertainment using animals to be allowed; ie. dog racing, rodeos, bullfighting, etc.

#### CORPORATE CHARTERS

Corporations are artificial creatures that exist because of provincial legislation. They are not loyal to individuals or communities. Creating a sustainable future will depend on restructuring this key institution.

The Green Party suggests the following conditions before a Corporate Charter is granted to a limited company.

- 1: Corporate owners and officers must be legally liable, criminally and in civil court for the harm they cause.
- 2: Corporations that do not enhance the quality of life of the community must have their charters revoked. This is not merely a

deterrent to corporate abuse but a critical element of an ecological society because it creates feedback loops that prompt accountability, citizen involvement, and learning.

3: Corporations should be encouraged thru the tax system to be cooperatively owned by the employees of the company.  
**CHLORINE PHASE OUT**

The Chlorine bleaching of paper in North America gives rise to over 150,000 tons of persistent toxic pollutants each year, including substantial quantities of dioxin. For this reason the Green Party insists on a phase out of Chlorine.

Chlorine is highly reactive chemical which makes it an excellent disinfectant. However chlorine reacts with organic substances found naturally in drinking water and causes the formation of a class of chemicals called the trihalomethanes. Some commonly known trihalomehtanes are chloroform, benzene, carbon tetrachloride and toluene, all of which are known carcinogens. Between 1974 and 1988 there have been 18 conclusive studies linking carcinogens in drinking water to human cancers.

Chlorine must be phase out for the following reasons

1: Chlorinated organic chemicals including PCB's pesticides, dibenzodioxins and dibenzofurans and many other products or byproducts of the chlorine based industrial process are the primary cause of stratospheric ozone depletion. Ozone depletion is expected to cause millions of additional cases of cataracts, skin cancers, immune suppression, as well as major effects on aquatic and terrestrial food chains.

2: All chlorinated organic compounds that have been studied exhibit at least one of a wide range of serious toxic effects such as

endocrine dysfunction, developmental impairment, birth defects, reproductive dysfunction infertility, immunosuppression, and cancer, often at extremely low doses.

3: Many chlorinated compounds such as methylene chloride and trichloroethylene are recognized as significant workplace hazards.

4: In the Great lakes, reproductive, developmental, and behavioral dysfunction has been reported in 14 species at the top of the food chain including humans.

5: The Green Party of Ontario concurs with the bi-national Science advisory board of the International Joint Commission on the Great Lakes in recommending that the weight of scientific evidence suggests that exposure to organochlorides should be presumed to pose a health problem and that policies to protect public health should be directed towards eventually having no exposure to chlorinated organic chemicals as a class rather than continuing to focus on a series of isolated, individual chemicals

6: Chlorinating our drinking solves some problems but it creates others. We should switch to ozone treatment, abandoning treatment.

The Green Party recognizes that:

1: The implementation of specific deadlines for phase out in specific industries would be made after investigation into the feasibility in each industrial category.

2: That some uses have no alternative, such as in specific pharmaceutical applications.

3: There has been considerable job losses in the last 2 years because of the phase out of ozone depleting feed stock to 5 closed chlorine plants.

4: The workers in this industry must not bear the brunt of

societies need to phase out the industry and we must implement retraining and assistance programs for displaced workers.CULTURAL

## DIVERSITY

The Green Party recognizes that Canadian society is unique and consists of different racial, ethnic, religious, sexual, and linguistic communities. The Green Party refuses to tolerate discrimination based on these characteristics.

## ECONOMIC POLICY:

### GENERAL

The economy of Ontario is burdened by high levels of unemployment, a large deficit, a large public Debt, reliance on technologies that are not sustainable due to high levels of resource consumption, reliance on technologies that are harmful to the both human and non human residents of Ontario and finally it's relative success is not judged by the happiness or health of the population but rather on it's ability to perpetuate a cancerous growth rate and unsustainable rate of resource consumption.

### ESTABLISHMENT OF PROVINCIAL L.E.T.S.

Economics serves the political objectives of elite establishments. Resource depletion and long term sustainability in general, are ignored as external costs. A healthy sustainable local economy is best achieved by a local currency. To this end the Green Party advocates the creation of provincially licensed, locally controlled Local Employment Trading system or L.E.T.S..

A L.E.T. system is a non profit, interest free, bartering

system. Individuals can buy services and pay taxes with the system. Service exchanges such as the L.E.T.S. are really an interest free money system.

## CREATING A STEADY STATE ECONOMY (SSE)

### INTRODUCTION

The Economy grows in physical scale but the ecosystem does not. Our growing economy is a threat to the health and well being of our society and our long term survival.

A steady state economy is an economy with constant stocks of things and people. These two populations are constant but not static. Births replace deaths and production must replace depreciation. These inputs and output rates are to be equal at low levels so that life expectancy of people and durability of artifacts will be high. It is important to note what is not constant in SSE. Knowledge and technology are not held constant. Neither is the distribution of income nor the allocation of resources. The SSE will develop qualitatively but not quantitatively.

The SSE model stands in contrast to conventional economics which emphasis growth. Economic growth is held to be the cure for poverty and pollution; in short a panacea. Today we consider the depletion of ecological life support systems as net current income. This economic paradigm is not sustainable.

Real production and consumption are based on a linear throughput beginning with depletion and ending with pollution. An economy is not an isolated system, as suggested by conventional

economic models. Connections to the larger environment must be accounted for in any sustainable economic design.

## MONEY

Aristotle first noted the dangers involved when an economy shifts its focus from use value of money to exchange value of money. Money is a tool to facilitate exchange; nothing more in a sustainable economy. Modern Economies have perverted this to make money into a commodity that generates production with the purpose of generating more money. Abstract exchange values accumulate by themselves due to interest. This is an absurd human convention that pits itself against the basic laws of nature, the law on entropy.

An economy is not sustainable if the use value of money is bypassed by exchange values of money.

## TRANSITION TO A STEADY STATE:

A realistic discussion cannot assume a blank slate, but must start with a historically given initial condition. These given initial conditions are the institutions of private property and the price system. These basic systems must be bent and stretched but not abolished because we lack the wisdom, leadership or time to replace them with something novel.

A contemporary design principle must combine micro freedom and variability with macro stability and control. This means relying on market allocations of an aggregate resource throughput whose total is not set by the market but rather fixed collectively on ecological criteria of sustainability and ethical criteria of stewardship. This avoids the pitfalls of central planning and the

tragedy of unregulated markets.

## INSTITUTIONS OF A STEADY STATE ECONOMY

It is clear that two limits are required to achieve a steady state economy. Limits on the population of human bodies and limits on the population of artifacts. A third limit not derivable from the definition but important in the interest of justice is to impose a limit on the degree of inequality in the distribution of artifacts among the population; ie a limit on the distribution of income.

## DEPLETION QUOTAS.

The strategic point at which to impose control is at the depletion of resources. Quotas are more desirable than taxes because they directly control aggregate throughput. Taxes can only control indirectly and within very uncertain limits. If the government taxes automobiles to reduce resource depletion people turn to bicycles and trains. But how is the saved money spent? If people use their new found wealth on airline tickets resource depletion would increase not decrease. The only way to guarantee that resource consumption will be limited is to impose aggregate quantitative limits on resource extraction and let prices allocate or ration the fixed aggregate among firms. The qualitative nature of wastes ie their degree of toxicity and biodegradability are dealt with separately by pollution taxes and standards (Refer to sections on manufacturing, zero discharge, taxation, chlorine phase out, corporate charters, incineration, nuclear power and product stewardship.)

The distribution of these artifacts would be controlled by depletion quota auction. A depletion quota auction is a two tiered resource market. In the first tier the total amount to be extracted of each resource category would be set by a government agency and auctioned of in divisible units as rights to purchase or extract the resource up to a specified amount. (Refer to section Government: making it work ) Purchase of the depletion quota allows entry into the second tier of the market which would be a competitive private market. In addition to paying the market price to the extracting company, the purchaser must present the previously purchased depletion quota rights that the firm will present to the auditors at tax time. The scheme sets total quantity centrally, but leaves the decentralized price system to determine allocation of the fixed total among alternative uses.

This institution would have the following effects

- 1: Reduce the levels of depletion and pollution and limit the scale of aggregate stock of artifacts.
- 2: raise relative prices of resources which will force greater efficiency in resource use.
- 3: Result in a large revenue to the government in the form of auction receipts. This third consequence ties in with limits on inequity.
- 4: Higher prices would have a regressive effect on income distribution, much like an sales tax.

## MINIMUM AND MAXIMUM INCOME

Without limits private property and the whole market economy lose their moral basis. Exchange relations are mutually beneficial

only among relative equals. Between the powerful and the powerless it only nominally voluntary and can easily be a mask for exploitation, especially in the labour market.

The minimum income would work as a negative income tax and be financed by the resource rents collected by the government. In this way we would serve the goal of ecological sustainability by limiting throughput scale, we would serve the goal of efficiency by higher resource prices and serve the goal of equity by redistributing the resource rents resulting from the higher prices that in turn result from limits on the scale of throughput.

Many fear that a maximum income would dull incentives and reduce growth. However growth is no longer a goal and the increased incentive to the majority at the bottom would more than compensate

To: jrussow@coastnet.com (Joan Russow)

From: fdejong <fdejong@greenparty.on.ca>

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

the reduced incentives to those who now demand the highest wages.

A range of inequity would still exist to reward real differences in effort, risk and conditions of work. Incentive differentials are important, and fairness in a larger sense is not served by equalizing all incomes. A factor of ten difference would be sufficient of functional inequality.

A concentration of wealth is inconsistent with both a market

economy and political democracy. A labour market is a legitimate bastion against exploitation, but this only true if everyone has some minimum control of that market. Otherwise the market becomes the instrument of exploitation rather than a guarantee against it.

Maximum income and wealth would remove many of the incentives to monopolistic practices. A minimum income would allow the outlawing of strikes which have become intolerably exploitative of the general public. Unions would not be needed to confront power since power would be more broadly shared.

#### LIMITS TO POPULATION

Is not possible to plan for sustainability without considering population. Greens feel that population levels in Ontario and Canada must be reduced considerably. This should be accomplished through education, providing opportunities for women and reducing immigration. We also suggest removing any tax credits for second and subsequent children, as well as the elimination of all baby bonuses.

#### A STEADY STATE BANKING SYSTEM

The Federal Government, through its agency the central bank, must be the sole authority for manufacture and redemption of all forms of money. It is vital that the central bank's activities be controlled non-politically. The controlling body for the central bank would be an elected commission whose mandate was to provide enough currency for the economy without creating inflation. All banks will be required to hold 100% reserves of central bank notes or currency against their depositors' balances. Banks will then

make loans only from their holdings or central bank money. The key effect of this will be to enable the central bank to control money supply and thus control recessions and inflation directly. This will be done by varying the supply of money rather than thru the manipulation of interest rates. The national debt would be refinanced at the central bank at no interest. Interest rates will be restored to their legitimate function of compensating a lender for depriving himself or herself of the use of the money while it is lent to a borrower. Interest rates will return to levels that existed before the current high interest rate dogma became fashionable with the financial establishment.

All public capital projects would be funded by central bank credits provided interest free. The principle of these loans will be repaid over the useful lifetime of the project. The central bank will allocate funds at a rate that will be guided by its money supply management policy of inflation / recession control.

#### Background

Too much money in circulation results in inflation, too little causes recession. A proper balance ensures stability. Yet we suffer from both in the present system. The reason for this phenomenon is that the Bank of Canada issues and redeems only about five percent of Canadian money. The other 95 percent is issued and redeemed by chartered banks under the fractional reserve banking system in which they are required to hold; in cash or central bank credits a reserve of only five percent against their deposit liabilities.

Chartered banks do not lend their depositor's money. When a loan is taken at a chartered bank new money is created. As a result

of this system 95 percent of the money in circulation in Canada has been issued and remains in circulation only as long as someone has taken out a loans at a bank. The quantity of money in circulation is equal to the total loans outstanding. This has little to do with the correct amount of money in circulation that would provide reasonable stability for economic activity without excessive inflation or recession.

The Bank of Canada attempts to influence the quantity of money in circulation by influencing the quantity of loans by manipulating interest rates. Higher rates discourage borrowing, while lower rates encourage it. This is an undesirable method because:

- (1) Chartered banks are able to circumvent Bank of Canada measures when it is in their interest to do so.
- (2) The range of interest rates is restricted by the perceived need to "protect the dollar". A "flight of capital" is considered a disastrous scenario and the to be results are a high value Canadian dollar, high interest rates, and a severe recession.

Canada does not need foreign capital or speculative investments that are attracted by interest rates. We advocate that the Bank of Canada provide the money the economy needs. Our money is just as valid as those currently provided by foreign banks to foreign investors or speculators. Canada possesses abundant resources and a well educated work force capable of producing almost all of our needs for a high standard of living using sustainable economic principles.

The Provincial and national debt, the chronic inability of governments in Canada to avoid deficits and higher taxes, may be traced to the existence of the fractional reserve banking system.

The Bank of Canada currently provides five percent of government loan requirements interest free. This is restricted to five percent of government loan requirements because the Bank of Canada credit forms the reserves of chartered banks. If it were to expand so would the reserves of the Banks. This would greatly expand the money supply and cause inflation. The solution is to raise chartered bank reserves to 100% of loans. This would limit the threat of inflation.

The result of the current system is that one-third of all of your tax dollars go to pay interest to privately owned banks who have been granted the ability to issue money to the Federal reserve and charge you interest for the service. Government overspending will not be reduced by restructuring transfer payments or cutting spending on Social services but rather by raising chartered bank reserves to 100% of loans and financing governments monetary requirements at no interest. This presupposes that the government will run a balanced budget but that would be possible because the largest expenditure of the Federal government, interest at 35% of total expenses has been reduced to zero. Inflation would be avoided because the government is not "Printing money" nor is it allowing the banks to print money.

All yearly federal government loan requirements could be financed at no interest at the Bank of Canada, all of the provincial and national debt would be refinanced there too.

Under the current system the debt-interest dilemma remains totally unsolvable. The current social system must collapse and the current recession must continue and the debt load will continue to grow or inflation must be allowed to devalue the debt.

## Important issues

The transition to a steady state poses many practical problems such as international trade adjustments and legitimate third world needs for further growth up to sufficient levels. But in a sense they are not relevant as this policy is to establish that the growth economy is unworkable and SSE in broad outline is feasible and desirable.

The Keynesian revolution did not occur because Keynes arguments were lucid and unanswerable. It was the Great Depression that convinced people that something was wrong with an economic system that denied employment to so many. Likewise it will probably take a great ecological spasm to convince people that something is wrong with economic theory that denies the possibility of an economic system exceeding its optimum scale. But even in that unhappy event it is necessary to have an alternative vision ready to present when crisis conditions provide a receptive public.

## EDUCATION PRIMARY AND SECONDARY

Education in Ontario is currently a monopoly. We advocate a voucher system to disperse tax dollars currently allocated for education. It costs over \$ 7,500 a year to educate an average child. Children with special needs currently cost up to \$ 30,000 a year.

Each child would be assessed for his or her specific needs. After assessment the child's parents choose the school that they feel suits their children's needs. The Public school system would become much more responsive to the needs of the students and parents.

Accredited teachers who have completed appropriate training

would be free to establish their own schools as long as they do not perpetuate sexist, racist or patriarchal values. Excellence in education will only occur when the current monopoly in education is broken. It is not for the Green Party to advocate one form of education over another. It is enough that parents be given the choice to choose what is best for their family.

The ministry of education would set goals, allocate funding and negotiate with the teacher unions. The goal is to have a diversity of educational options that meet the needs of the local community. This can not be achieved under the current system.

### Universities

The Green Party of Ontario feels that a university education should be made available to all who meet minimum educational requirements regardless of a persons financial status. We encourage the adoption of a loan repayment plan that is contingent on the income of the graduate.

Increasingly, university students are exposed to nothing more than technical and professional training. Basic science is being replaced by military and commercial research. The result is an expensive system that only benefits middle-class professionals while serving to push industry's training, research, and development costs onto the public. This serves to limit academic freedom.

Under current legislation our universities are controlled by Boards of Governors who are neither elected nor responsible to the University or society. These Boards should be replaced by the already existing university Senates which consist of elected faculty, students, and staff.

Rather than accrediting professionals and technicians for the workplace the highest priority would be placed upon teaching fully-rounded, ethical individuals. Scientific and technical research would be focused on sustainable commercial technologies.

### Community Colleges

Industry and professional associations must shoulder their full burden for training. Professions should be taught at community Colleges. The costs would be born by a licence fee on members of that profession. Each association of trained individuals, from doctors to hairdressers would have an association levy that would fund the education of their peers. The role of the tax dollar should be limited to the education of individuals who can communicate, reason, and enjoy life. The training of technicians for industry is the responsibility of Industry.

### ELECTORAL REFORM

Our electoral system is surprisingly undemocratic. In:

-1979 Joe Clark formed a government with 36 % of the popular vote, the Liberals received 40 % of the vote.

-1980 Trudeau received a solid majority with 44 % of votes cast.

-1988 Mulroney won with 43 %, he then pushed through the F.T.A.. The Liberals and N.D.P. received 52 % of the vote opposed it.

-1990 Bob Rae received a solid majority with 36 % of the vote.

-1991 the N.D.P. in B.C. and Saskatchewan are in power with 65 % of the seats and less than 40 % of the vote.

-1993 the Conservatives received 2 million votes and only 2 seats.

As well as producing undemocratic results, the system is not open to all Canadians. During election campaigns, millions of

dollars are spent on advertising and campaign tours. This media saturation works and it strongly favours the party with the most money. As a result, the party in power generally represents the interests of those that can provide the most financial support---big businesses and wealthy individuals. If the interests of the majority of Canadians are to be fairly represented by our governments, it is critical that we remove the advantages of spending power in election campaigns.

The Green Party advocates:

- 1: The Green party advocates replacement of the present first-past-the-post electoral system with the additional member system of proportional representation as practised in many countries. This implies that the number of seats in the house represents the percentage of the population that supports the platforms of the elected parties. This system maintains constituency links by regionally "topping up" seats so that all voters will be represented by a regional MP from his or her preferred party.
2. No advertising by political parties, governments or special interest groups. The positions of the parties would be presented in free and equal time/space in the national media. The individual candidates would be presented to the community by door to door canvassing, "town hall" meetings and by free and equal time/space in the local media.
3. Each party and each candidate would be given, from public funds, sufficient monies to cover only basic office expenses. Additional spending would not be permitted.
- 4: The Green party advocates banning of non reusable or

recyclable lawn signs used during political campaigns. They are wasteful of resources and perpetuate a very shallow level of participation of the public in electoral politics.

5: A binding "none of the above" option on the ballot, if none of the above receives the most votes a new election would be triggered.

6: A binding legislative initiative, referendum and recall authority for voters.

## ELECTRICITY

The Green Party is committed to a non-nuclear future for Ontario. In Ontario 50% of our baseline electrical supply comes from Nuclear powered plants.

The dangers of Nuclear power includes:

- It's association with the nuclear arms race.
- The lack of safe storage sites for radioactive wastes.
- The technologically and financially inability to decommission nuclear reactors.
- The uneconomic nature of the technology.
- The bureaucracy of specialists required to operate the system.
- The long term health risks associated with this technology.
- The diversion of capital from, and the inevitable undermining and suppression of competing alternatives.
- The resulting promotion of electricity waste instead of conservation.
- The inevitable catastrophic melt downs.
- It is inefficient, inflexible and unreliable.
- There are security risks.

-Uranium is a non-renewable resource that causes occupational as well as environmental destruction in its production and distribution.

-Ecologically acceptable alternative technologies are available in Ontario.

Nuclear power is only possible through a complicated system of subsidies and grants. The end of Nuclear power will only come about when market forces are imposed on Ontario Hydro.

The Green Party of Ontario advocates:

1: Removing all subsidies for hooking up new installations to the power grid. It currently costs Ontario Hydro in new capital expenditures \$ 50,000 to hook a new single family residence with electric heating onto the Nuclear Grid in Ontario. This subsidy encourages the use of Nuclear power production over solar or co-generation. There would be no exemptions to this policy. The objective is to get as many homes and businesses off the power grid as possible.

2. Instruct Ontario Hydro to buy electricity from non-utility generators at full-avoided costs.

3: Hydro's own internal planning documents reveal that a 1978 inventory of undeveloped low profile hydro sites of small to medium scale dams, extensions to existing powerhouses, and redevelopment of abandoned sites would generate 14,000 mw of peak electric power. This is 28 times the peak output of a Pickering sized plant.

Ontario Hydro's own studies indicate that hydraulic development after conservation could displace the need for Darlington, Bruce and Pickering nuclear power station. This power would be generated when needed as opposed to nuclear's 60% over production

requirements to meet peak demand. It would be generated at about \$ 950 for each new kilowatt ( 1981) or about 1500% less than Darlington

4: Electricity is at it's peak demand in Ontario during the winter months. This is also when 73% of Ontario homes are burning oil or natural gas to heat their homes. The Green Party advocates retrofitting through tax credits the purchase of co generation furnaces that generate electricity when they burn oil or gas.

5: A program of research and development should be implemented to enable all homes to have their own photo-voltaic cell generation system and or co-generation capacity.

6: The electric grid should be used as an electricity exchange system and a means of access to reserve supply from existing hydro-electric, solar and co-generation plants.

7: Hydro rate structure should be revised to Reward conservation and production rather than waste.

8: Remove the exemption from home owners and life insurance to residents of Ontario in the event of a nuclear accident. Currently you are not insured if there is a nuclear accident. This would effectively end any discussions about the economics of nuclear power.

9: Divert Ontario Hydro's nuclear research funds and resources to developing sustainable soft energy alternatives.

10: Continue and expand conservation strategies.

11: New industries should be encouraged to build and maintain locally controlled generation systems.

12: Ontario Hydro's board should be elected not appointed.

13: Direct passive solar heating for homes and smaller public

buildings and hot water heating is now economically viable when combined with insulation and R-2000 building design. Other forms of heating and cooling can be reduced to occasional supplementary use.

14: A vigorous campaign to create new home design and retrofit existing homes to the required standards to achieve this objective should be implemented immediately, supported by redirected research and funds no longer required for the nuclear power program.

15: Research to improve the efficiency of and control the pollution from wood-burning stoves.

16: Hydro should pay an amount equal to the full avoided capital cost to the conserver for improvements that result in lower electrical consumption.

#### ENDANGERED SPECIES AND HABITAT ACT

In 1994, twenty species have been added this year to Canada's endangered list. The list now contains 258 plant and animal species in danger. The species added in Ontario were: birds - the king rail, Acadian flycatcher, yellow-breasted chat, hooded warbler, northern bobwhite, short-eared owl; fish - the warmouth, eastern sand darter, rosyface shiner, and lake chubsucker, plants; blunt-lobed woodsia, deerberry, round-leaved greenbrier.

Therefore we recommend

1: The provincial government should enact legislation requiring habitat protection and restoration for endangered species. None of the 258 species on the endangered list receives any mandatory protection from the law. Unlike the U.S., Canada does not have an endangered species law. Neither federal nor provincial wildlife laws require a response when a species becomes endangered. Such legislation would in some cases mean an absolute prohibition on human activity that threatens a sensitive habitat. In others, it

would mean that environmental assessments of projects would be required to take into the account the status of pressured species. The law would give the public the right to seek a court injunction when human activity threatens the existence of a species.

2: Ontario should develop a wilderness-based conservation strategy. (Canada is losing at least one square kilometre of wilderness every hour according to the World Wildlife Fund. Only 4.6% of Canada's land and waters have been set aside as wilderness.) A wilderness-based conservation strategy would set aside large tracts of Ontario - as much as 50% of each of Ontario's 53 ecological zones - aside as wilderness. These areas should be interconnected with wildlife corridors, surrounded by buffer zones, free from permanent human habitation, resource exploitation, and contain no roads and railways.

## FOOD POLICY

Greens believe that sufficient nutritious food is a basic human right for all. We recognize that at present we are poorly nourished and overfed. The vitamins and micro nutrients content of food has decreased dramatically in the last few decades. Pesticide residues in food are a constant fear. The Present food system encourages mono-cropping, chemical farming, centralization, over processing, long distance transportation. and the substitution of chemicals for all manner of ingredients in our food.

Greens would therefore

- Reward farmers for converting from chemical to ecological methods of farming
- Encourage the education of the public and especially the children

about the 8 food groups, what nutritious food is, how it depends on rich soil, micro organisms, clean water, and good farming methods. There must be strong education to counter advertising aimed at children that does not encourage good food habits.

-Encourage the consumption of locally grown food

-Encourage appropriate social networks so that children have a nutritious diet.

-Encourage the consumption of food in its natural state with little processing, no irradiation and no artificial additives or substitutes.

-Discourage research into gene splicing technology that is used to create new life forms

-Discourage the use of food irradiation.

-Require labeling of all foods that have been irradiated

-When dealing with new chemicals that are to be added to our food supply the Green Party of Ontario recommends the following.

1: Regard Chemicals as harmful until proven there is conclusive scientific proof declaring them safe.

Date: Tue, 30 Jun 1998 13:55:56 -0400

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

2: Do not try to control chemicals one by one, using risk assessment. Instead we recommend avoiding irreversible harm by

taking precautions action to ban or phase out whole classes of chemicals as soon as there is evidence of harm, not waiting for conclusive scientific proof.

## FORESTRY

The goal of an ecological forest management strategy should be to protect the resource for the future use of all species and yet at the same time provide long term employment.

To this end it is imperative that we

- Ease the pressure on forest ecosystems by promoting improved efficiency in resource use. As an example we must implement a system of converting used lumber products in wood composite products.

- New forestry leases should only be granted to individuals. These leases would be inheritable so that an individual who was steward to the land could pass it on to his children. These land grants would be no larger that 5,000 acres to any individual family.

These "new foresters" would be educated to ensure that harvesting / silvicultural techniques used were appropriate to facilitate successful regeneration.

- Banning of clear cut forestry. Clear cutting is not forestry. It is a crime as morally abhorrent as rape. Maximum sizes of cuts must be legislated and appropriate densities of trees after harvesting as well as unharvested buffers must be mandated.

- Cooperatively run sawmills and pulp facilities would process the harvest. Provincial loan guarantees should be made available to purchase existing facilities from non residents.

- Developing a value added forest economy that reflected the needs

and goals of the community. Legislate that 50% of the harvest must be processed within that community.

- Establishing urban forests. Provide funds for the establishment of forests near the sources of consumption. The goal being to make all bioregions in the province as self sufficient as possible.

- Incorporating environmental costs into forest product through full cost accounting. This could be instituted through stumpage fees that reflected the true costs of sustainable forest management.

- Incorporating forest values and other uses into the timber planning process. This involves developing quantifiable objectives for non-timber values such as genetic diversity, recreation, water yield and quality, wildlife habitat. These should be identified as distinct components of forest management and integrated into existing timber and other related management guidelines.

Identify and protect the forests by

- Establishing and publishing comprehensive annual inventories

- Establishing as a target the protection of 50% of all standing forest for Wildlife / recreation reserves. In these areas only forestry that enhances the health of the ecosystem would be allowed.

- Banning forestry in other areas of ecological significance.

- Undertake site rehabilitation and planting as necessary on previously cut and burned sites that are failing to regenerate naturally.

- Extend protection to all remaining old growth forests.

## FORESTRY THE ALGOMA HIGHLANDS

The Algoma Highlands contain the unlogged headwaters of the

Mississagi, Batchewana, Goulais, Montreal, West Abinandong, and Nushatogani Rivers. 100 Km. north of Sault Ste. Marie and 80 Km. east of Lake Superior. During the 80's and early 90's clear-cut logging began to encroach on the area. Now further large scale logging operations are being planned. This area is home to Ontario's largest areas of dense unlogged old-growth sugar maple, yellow birch and white pine forests. This area contains a tremendous variety of plants and animals including wolves and other species that survive best in undisturbed landscapes. High quality wilderness experiences as well as fly-in hunting and fishing recreational activities are possible because of the Algoma Highlands' rich diversity of life. This area could act as a hunting, fishing ecological and recreational reserve which would help to protect traditional land uses in the region.

Ontario is divided into 13 ecological site regions which are subdivided into 65 ecological site districts. The Green Party of Ontario government is committed to protecting 50% of representative areas of each ecological site district in Ontario. The Algoma Highlands area straddles the boundary of two ecological site districts, one of which has no representative protected areas while the other is only partially represented. The Algoma Highlands could be part of an international program to link protected areas across the continent. The Highlands could become an important reference point for ongoing scientific study. The Canadian Forestry Service, Canadian Wildlife Service and the Ministry of Natural Resources are all conducting research in this area.

## The Green Party of Ontario Recommends

- 1: The Algoma Highlands be set aside as a wilderness preserve where there would be no further commercial resource extraction activities.
- 2: That the proposed Farewell Lake Rd. and Toll Creek Rd. that threatens to bisect the Highlands be stopped.
- 3: Only activities that do not threaten the old-growth red and white pine forests in the areas be permitted to take place in this area.
- 4: Withdraw approval for the construction of a large new mill in the area. This mill was approved without public consultation.
- 5: Release of the draft Gap Analysis Report for Site District 4E3, which rated this area as worthy of protection, be immediately released, since it is critical to the full examination of land use alternatives.

## GUN CONTROL

We advocate:

- 1: A ban on all assault weapons, handguns and large capacity magazines except for public servants in the pursuit of their duties.
- 2: Define and require strict storage of all firearms.
- 3: Improve screening for the FAC and the restricted weapons permit.
- 4: Require FAC for ammunition purchases.

## GOVERNMENT: MAKING IT WORK

When Government agencies do not perform the function they are designed to perform citizens have little recourse. Regulatory Reform lies in realizing that in most cases regulatory agencies have become the tools of the Industry they were designed to regulate. The solution is not to abolish regulatory agencies, life would be chaos without them, the solution is to realize you can't trust them.

The Green Party suggest the following.

1: Goal setting. Penalties must be legislated if Goals are not met.

2: Arm the public with information. Enhance food labeling legislation for nutritional content, freedom of information, drop the charge for Statistics Canada information.

3: Citizen Enforcement of Public Health and environmental laws.

"Any violation witnessed and sworn to by any person over 18 years old and mentally competent, shall have the same status as if it were witnessed by an official government inspector.

4: Take away regulatory agencies discretion. Regulations should be modeled after traffic tickets, Pay the fine or talk to a Judge. We have given too much power to bureaucrats to negotiate with dishonest business persons.

5: Liability. Liability should be strict, meaning no showing of negligence is necessary and that required proof of cause and effect is minimal. Liability should be joint and several meaning each liable party is potentially responsible for the whole situation.

6: Background Laws. Require background checks on any individual doing business with Government. If an individual or a corporation has a record of convictions they should not be allowed to do

business with the government.

7: The revolving door. Political appointees and senior executive service personnel should not be able to accept any form of direct or indirect compensation from any person regulated by their agency for a period of five years after they have left government. This law would apply to lawyers as well.

8: Conflict of interest. No regulatory agencies may spend appropriated funds to promote, or to advocate the use of products or services which it regulates. The Nuclear industry comes to mind.

9: Reward whistle blowers. When a whistle blower's charge proves correct she should be given a promotion, and a cash award not to exceed 10% of the savings. This would increase the number of whistle blowers and decrease the amount of waste, fraud, and abuse of power.

10: Allow citizens to sue government officials. Government officials should be liable for civil suits for damages caused by the failure to do their duty.

11: Award fines to grass roots groups. Fines paid in environmental suits should be turned over to grass roots environmental organizations. Polluters now pay fines regularly as a cost of doing business. If they knew the fines would go to their adversaries paying the fine would take on a new meaning. This would give citizens a new incentive to ferret out violations

## HEALTH CARE

### Health Care: Health Maintenance

Our current health care system concentrates on treatment, rather than prevention, of disease. This approach allows

unnecessary suffering to occur. Treatments often only partially alleviate suffering, and often cause harm themselves. One disease is treated at a time, and little is done to improve the overall health of the body. Health care is focused on expensive high-technology machines rather than on people.

There are opportunities for tremendous reduction in disease rates by preventive measures. This approach will both improve the quality of life of the average resident of Ontario and conserve health care tax dollars.

Educational campaigns and incentives will make it easier for individuals to take charge of their own health through better nutrition, exercise, avoidance of drugs, and techniques such as stress management.

(1) A basis of lifelong good health is proper infant nutrition.

Women will be encouraged to breast feed by the providing all prospective parents with accurate information on the risks of artificial feeding and on the advantages of breast feeding.

A woman's right to breast feed in public will be protected.

The World Health Organization's Code of Marketing of Breast milk Substitutes will be enacted as legislation in Ontario to protect women and their babies from advertising which misleadingly suggests that artificial substitutes are an acceptable substitute for nature's food for babies. Hospitals and birthing centres will be required to satisfy the "baby-friendly hospital" guidelines of the World Health Organization and UNICEF. These measures, by increasing the rate and duration of breast feeding, will greatly reduce the incidence of childhood illness; and since some of the health giving

benefits of breast feeding continue long after weaning, the incidence of adult illness will also eventually decrease. It will also help prevent breast cancer for the mothers.

- (2) Students in primary and secondary schools and, via the media, the adult population, will be educated to promote the philosophy that we are responsible for our own health. The program will emphasize nutrition, especially organically grown whole foods, and exercise. In addition, relaxation, stress management, drug avoidance, and the use of nutritional supplements will be taught. This program will result in a healthier population, and reduce the amount of money that needs to be spent on disease treatment.
- (3) The use of therapeutic drugs (except when absolutely necessary) and recreational drugs will be discouraged. Programs to stop smoking, drinking alcohol, or using other addictive drugs will be fully funded by O.H.I.P. provided they are reasonably cost-effective in comparison to similar programs. Taxes on cigarettes and alcohol will be further increased.
- (4) Exercise will be encouraged by a transportation policy that makes it easy, safe, pleasant, and cheap to walk or cycle for most trips. (See transportation policy.)
- (5) A junk food tax will be introduced on highly refined and processed foods, to encourage better nutrition and help fund some of the other health care programs.
- (6) Research and application of ergonomics will be encouraged to reduce the incidence of injury in the workplace and the home.

## Health Care: Treatment

Hospitals currently are focused around expensive equipment and tend to be large, impersonal and understaffed. Allopathic medicine, which dominates the health care system, tends to treat diseases with drugs and surgery. These methods focus on eliminating a single disease while doing little to improve overall health. In fact, drugs, surgery and irradiation always cause some harm to the body. Often alternative treatments exist which eliminate the disease effectively while avoiding harm and improving overall health.

The function of health care practitioners should be to help us heal ourselves. Professions which take this approach include chiropractic, naturopathy, acupuncture, midwifery, lactation consulting and homeopathy. These professions deserve greater status in the health care plan.

Ontario Greens' health care policy focuses on providing greater access to alternative health care systems, and on providing treatment facilities that are human-scale, community-centred places of healing.

- (1) Dental care and chiropractic care will be fully covered by O.H.I.P. Lactation consulting will become a regulated profession Naturopathy will be reinstated as a regulated profession, both will be fully funded by O.H.I.P.
- (2) Research will be funded into the efficacy of non-allopathic treatments for both disease treatment and prevention. O.H.I.P coverage will be extended to cover proven techniques. Research will also be done into the efficacy of allopathic techniques, and O.H.I.P. coverage withdrawn for treatments

proven to be largely ineffective. Where possible, consumers will have a choice of allopathic and non-allopathic treatments, all covered by O.H.I.P.; but if one treatment is much safer, more effective and cheaper than another, the less effective one will not be funded. Thus health care focused on health maintenance and safe, low-technology treatments will be emphasized.

- (3) When feasible, treatments will be shifted to the home rather than hospitals. New hospitals will be small and community-based. The emphasis on hospital funding will be on staffing, improving the quality of hospital food and providing counselling on health maintenance for hospital patients, rather than on expensive technology. Home-like birth centres, with midwives in attendance, will be opened. Community health centres, featuring a variety of health care practitioners, will be established to assist and encourage people to take charge of their own health. These measures will save money by reducing the use of large, high-technology hospitals.
- (4) Treatments allowed to be performed by nurses and paramedics will be increased. A limit to liability for health care practitioners will be set.

#### HOUSING:

The Ontario Greens believe that decent housing is a universal social right and utilitarian necessity. The primary obstacles to home ownership are policies that encourage an increase in population which increases the demand on existing housing. This facilitates an environment of land speculation and created

scarcity.

In the long term Green policies of zero population growth once realized would alleviate all of the current pressures on housing demand.

There is a need for housing in 4 general categories

- 1) Privately owned homes
- 2) Coop housing
- 3) Rental accommodations
- 4) Social assisted housing

1) Privately owned homes

A Green government is committed to encouraging home ownership by implementing the following policies.

1: The Green Party of Ontario is committed to entering into negotiations with the Federal government to regulate the funds raised from R.R.S.P.'s to be used solely for the purpose of providing mortgages for Canadians.

2: We are also committed to government support for the creation of community land trusts.

A community land trust is a non profit corporation which owns land. It leases the land to individuals according to the use value of that land. Our needs for land are many and often in conflict. Land can provide all the things we need if we plan carefully and secure local control over land use decisions. The central principal motivating a land trust is that buildings, and all things done in or on the land should be owned by individuals, but the land itself should be owned by the community as a whole.

A land trusts primary function is to buy or accept gifts of land and lease it back to members under a 99 year lease that is automatically renewable and inheritable. Part of the process is determining, in conjunction with land use planners, local

government and the community at large, the most appropriate use for a given parcel of land.

The business of the land trust is conducted by a board of governors elected by the membership. Members are encouraged to join or form committees to address particular issues of land use. The Community Land Trust allows people to buy a house for what it is worth without having to buy the artificially inflated land that it sits on.

The lease restricts the resale price of the home to the value of the building and other improvements in or on the land, that is the cost of rebuilding the same house and grounds again at the time of the sale. This makes it's affordable for every subsequent buyer, not just the first. No one buying the house will have to pay for the inflated price of the land. The return to the seller is therefore equal to the increase in the price of building materials and labour in the area. The same holds true for commercial land and farm land . A leaseholder owns, buys and sells the result of real work, not the result of speculation.

At it's core the community land trust is a management group. It can work flexibly with individuals or organizations to accomplish the objectives of the community for agricultural, commercial, industrial, open spaces, or other land uses. Community land trusts are not abstract theories but living working organizations. There are dozens of land trusts in existence in North America today.

## 2) Co-op housing

For first time and low income home buyers as well as for other tax payers the most cost effective way to acquire a home is through A co-op. In co-ops individuals work together to build (sweat equity),

organize and, maintain their homes. Government load guarantees, small grants as seed money and zoning changes are all that is needed to provide individuals with their own homes. Personal initiative and pride will finish the project.

### 3) Rental accommodations

In a society freed from an expanding population and land speculation rental properties could be returned to the free market. For the large numbers of people who for whatever reason don't want to own a home, or be part of a co-op, rental accommodation must be made available. Greens do not see rent controls as being desirable, they are however necessary in our current economic climate.

### 4) Social assisted housing

The Green Party of Ontario is committed to policies which facilitate decent, permanent shelter for those in need:

We are committed to making changes to the zoning regulations of our province which will encourage a mix of housing alternatives in every community.

New communities (and renovated older communities) would be required to have as a percentage of total houses built:

1: More options for temporary housing must be provided such as Group homes and temporary shelters, Rent-subsidized, public housing.

2: Every neighbourhood should have councils to consider building permits which would ensure that every development would have a range of price variations.

LAND USE Refer to Insert

The objective of Green land use policy is to

- 1: Ensure that land is used in a frugal fashion.
- 2: Ensure that our cities and it's inhabitants consume as few resources as possible
- 3: Ensure that land use planning and development practices in urban and rural Ontario consider the present and future environmental, social and economic needs of all species in the Province.

To that end we recommend:

- 1: Improved land use planning through meaningful public participation in land use planning at all stages of development.
- 2: Mandate full intervenor funding for all Ontario Municipal Board hearings.
3. Restrict strip development through the development of Greenbelts around urban areas.
4. Through a re structured zoning act encourage mixed communities where people work from their homes, establishing self owned businesses that serve their neighbours with recreation, shopping, manufacturing, and educational institutions in the neighbourhood.
- 5: The establishment of model ecological communities based on our definition of sustainability. ( Section 1 )
- 6: The identification of areas of ecological and cultural value.  
And the protection of these areas with strong legislation that provides jail terms for individuals who ignore land use guidelines.  
This would be accomplished through a new Heritage Act which would outline strict provincial guidelines expanded to cover the natural heritage of the rural landscape ie., agricultural land, wood lots, heritage buildings, wet lands, coastlines and waterways.
- 7: The protection of all Class 1 and 2 farm land in Ontario without

exception. Policies to be adopted that will make farming a viable alternative are outlined in community land trusts and agriculture sections.

8: Improved wildlife and wetland habitat conservation and restoration, wilderness and public recreation parks.

9: Establish a program to set aside 50% of Ontario's landmass in wilderness parks and biological preserves. The objective being to protect representatives of all natural ecosystems and species in Ontario.

## LEGAL REFORM

Date: Tue, 30 Jun 1998 13:55:56 -0400

X-Sender: green@interware.net

Mime-Version: 1.0

To: jrussow@coastnet.com (Joan Russow)

From: fdejong <fdejong@greenparty.on.ca>

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

One of the fundamental tenets of Green Politics is Social Justice. Social Justice is achieved to a large extent through the legal system.

The law society of upper Canada mediates disputes between lawyers and clients. This is a body composed of lawyers. Lawyers determine the policy for judging the validity of a complaint. These same lawyers also serve as directors of the lawyers professional indemnity company. How can they implement an impartial policy to judge a complaint when they are directors of the company that will

have to pay if the complaint is valid. Clearly the law society has failed it's obligation to provide the public with an independent body to hear complaints about legal practice.

Errors and omissions insurance exists to protect the public from lawyers who are incompetent, negligent, substance abusers or criminals. However this system is flawed and rarely allows for the settlement of one legal wrongdoing without the hiring of another lawyer at considerable expense.

- 1: Restructuring our legal system so that lawyers are not required for many simple functions, such as wills, land transfers, divorce settlements. These functions can be more efficiently performed by paralegals and negotiators.
- 2: All legal documents must be written in plain English.
- 3: Registration of all wills.
- 4: Thumb print of lawyer required on all significant documents including land transfers and wills.
- 5: Lawyer discipline boards must be composed of publicly elected citizens.
- 6: Elections of all Judges at all levels. Judges are currently a patronage appointment.
- 7: Amend the Law Society of Upper Canada act meaningful full public participation and allow public access to Law Society records.
- 8: Remove the disciplining of lawyers from the mandate of law societies. Place them under the auspicious of the department of consumer and corporate affairs.
- 9: Provide funding for legal costs in cases involving Social Justice, employment equity, and Environmental rights.

## MINING

The Ontario ministry of Northern Development says the mining industry's "right to mine" should be given top priority. But the mining industry does not always act in the best interests of Native peoples, the citizens of the province, local communities, or the variety of life forms with which we share this planet. The Industry has diverted rivers, drained lakes, acidified the delicately balanced soils of northeastern Ontario, and laid barren the entire Sudbury basin. The impact of mining on the Northern environment must be minimized to protect wildlife habitat, aesthetics and spiritual values. Mining practices reflect total disregard for the biosphere. Legislation has reduced some of the extreme examples, however we feel there is still a long way to go.

Therefore we recommend:

- Investigations to plan for restitution be paid to Native peoples in Ontario
- Prohibit mine exploration and other mining activities in wilderness areas, parks, areas of natural and scientific interest and other environmentally significant areas.
- Require public notification, independent baseline flora and fauna studies, and an outline of planned habitat protection measures.
- Designate all proposed new mines and mine related activities under the environmental assessment act.
- Zero discharge of toxins from mines. Emissions of pollutants must be reduced to zero. Refer to section on zero discharge.
- Require on-site treatment of all mine waste water and tailings leachate before it is released into ground water or adjacent water

bodies.

-Require a closure plan, including financial assurance to be filed for public review 30 days before a new mine or mine related facility can be approved. Require a closure plan and financial assurances for all existing mines

-Tax mining production to more accurately reflect the costs to the public and the environment.

-Phase out of Uranium mining in Ontario.

## MUNICIPAL AND REGIONAL GOVERNMENT

We advocate more autonomy for municipalities. We do not support current trends toward regional governments. History has shown that regional governments are more expensive and less responsive to the needs of constituents than the smaller towns and cities that they are composed of. We do recommend:

1: Replacing the Ontario Municipal Board with a non political body that would arbitrate on disputes. This body would be selected in a similar manner as a Jury would be selected.

2: Services should be produced where most economical / efficient. The determination of efficiency should include all cost normally considered externalities by most economists.

3: Municipal services should stress accountability.

4: Develop a new Heritage Act outlining guidelines to cover the natural heritage of the landscape for example agricultural land, wood lots, heritage buildings, wetlands, coastlines and waterways. Require the conservation of heritage to be included in the official plan and other planning documents of each municipality.

5: Restrict strip development and auto-dependent urban sprawl.

Encourage mixed communities where people work, recreate, shop, and study near home.

## NATIVE RIGHTS, FIRST NATIONS

Greens recognize the immense injustice that has been perpetuated on the indigenous peoples of Canada. From historical policies of conquest and domination, to more recent attempts at assimilation and genocide. The past racist / exploitative practices of those in power cannot be forgotten. The Greens believe that it is morally imperative that self-determination for the First Nations be recognized. Canada must act within the guidelines of the United Nations and constitutionally recognize native self-government. The Greens recognize that treaties agreed to in the past were between sovereign nations, and constituted a plan for co-existence, and not the relinquishing of native sovereignty. It is accepted that existing treaties should be renegotiated with First Nations representatives, who are recognized by the native peoples themselves. In the case of those disputed land areas, a resolution mechanism that recognizes all treaties and previous land agreements must be instituted. Self government for the First Nations should be explicitly stated in the Constitution of Canada. The Greens accept the position that a debt to the First Nations is owed, and that some form of compensation is mandatory. This would have the purpose of assisting the sovereign aboriginal people in achieving sustainable economies.

A Green government would:

-Begin by negotiating immediately with native people in this province for the immediate return of absolute control over

traditional lands to them.

- Negotiate a series of transfer payments, for five to ten years, to assist in the reestablishing of a sustainable economy
- Continue to offer free post-secondary education to native people.
- Advocate to the federal government for the recognition of full sovereignty to the First Nations of Canada.
- Make constitutional amendments regarding native self-government a priority in federal-provincial dialogue.

The goal of such a policy is to return to the Aboriginal people of Canada their traditional lands. To encourage peaceful coexistence between peoples who occupy the same biosphere. To stimulate the resurrection of native philosophy / traditions and ways to the aboriginal peoples. To give the give First peoples the opportunity to become independent and proud once again.

## PESTICIDES

Since the second world war, chemical agriculture with has been promoted as the technological fix-all for soil nutrition and the management of plants, insects and disease.

After 50 years of chemical warfare with the planet it is now clear that the promise of chemical pesticides was never realized. Efforts to control crop damage with pesticides have failed and insect borne diseases remain as serious a threat as ever. In 1940 annual crop damage was 7%, after 50 years of chemical warfare it is at 13%. The fact is that pests develop resistance to pesticides.

According to the United States department of Agriculture between 97% and 99% of pesticides do not reach their target. But those pesticides go somewhere and they are toxic. There have been

hundreds of studies that link pesticides to adverse health effects. These include but are not limited to disrupting every major organ system in the human body, altered immune system functions, mutagenic, teratogenic responses, embryo toxicity, reproductive failure, and an array of neurological effects.

Despite the hard scientific proof that we would be better off without pesticides in 1988 more than one billion pounds of pesticides, 660 million pounds of herbicides, and 400 million pounds of fungicides and insecticides were spread onto our food producing land and around our homes in North America.

Of the 34 Chemicals commonly used to kill dandelions 62% are toxic to fish and the nervous system of humans, 35% cause birth defects in humans and are toxic to bees and birds, 29% cause cancer and kidney damage, and 85% are sensitizers, that means they cause people to develop allergic type reactions to the chemical.

Ontario soils have lost as much as 50% of their organic content since cultivation began. This has lead soils to be highly susceptible to erosion and compaction. A fundamental component of soil degradation is the suppression of biological activity. Healthy soil is teeming with life, from earthworms to microorganisms. The situation is approaching critical as local instances of soil burnout are occurring. If conventional agriculture is continued Ontario's agricultural soils will reach a threshold beyond which productivity cannot be easily restored.

To this end we recommend:

- 1: A total ban on the use of pesticides and herbicides for private lawn care purposes.
- 2: A total ban of the pesticide 2,4-D.

- 3: Require the labeling of all pesticides used in the production of a food product sold in Ontario stores.
- 4: Adopt a target for the implementing sustainable agriculture in 100% of Ontario's cropland by the year 2000
- 5: Support the organic food industry in establishing a province wide system of organic certification
- 6: End the P.S.T. free status of pesticides for farmers.
- 5: Provide financial support in the transition period for farmers willing to make the conversion to organic agriculture.
- 6: Redirect agricultural education, extension services and research to address sustainable methods.
- 7: Establish targets for Ontario food self sufficiency.

## PRODUCT RESPONSIBILITY

During the last 50 years humans have developed thousands of products for which there is no environmentally sound method of disposal. To set acceptable limits on the damage this has done government developed a system of risk assessment. Risk assessment fails because

- 1: It is focused on damage to the most exposed individual
- 2: We will forever lack key information needed to make accurate risk assessments.
- 3: Science can never provide the needed analytic techniques to test for the health effects of the synergetic effect of different chemicals

For this reason the Green Party recommends we turn our attention to the way things are made.

There are 3 categories of Products:

1: Consumption Products: These items are purchased then converted by chemical reaction into energy or by products. Examples would be soap or food. They are normally used once then released into the environment. They must be biodegradable, they must not bioaccumulate, be toxic or cause cancer or birth defects.

2: Service Products: These goods provide services. Examples would be Automobiles or Televisions. Consumers should not own these products but lease them from manufacturers who remain responsible for their ultimate destiny. An alternative would be purchase with a refundable deposit. After it has served its function it is returned to the manufacturer where it is renewed or disassembled and recycled at the expense of the manufacturer.

3: Unmarketable products: These items cannot be consumed or used in an environmentally friendly way. An example is the waste from the production of aluminium. These are products for which no recycling technology exists. These products must be banned until zero discharge production is achieved. Toxic wastes already created must be stored in interim above ground retrievable storage bunkers. This suggestion only works if the entire product RESPONSIBILITY concept is accepted otherwise the amount of waste would be unmanageable.

Criteria for safe storage includes, no spontaneous combustion, no release of gas, no release of liquids. To simplify retrieval different kinds of waste and substances would be stored separately.

The user of the building must prove every 5 years that no method of treatment exists. Ownership of the building remains in public control and the owner of the waste remains responsible for the waste and rental of the building.

Advantages of the Above ground bunker include:

- 1: It enforces the polluter pay principle
- 2: Encourages the development of alternative technologies for specific waste problems' and discourages waste exporting
- 3: Avoids over capacity of waste facilities.
- 4: Promotes the rethinking of products that produce waste.
- 5: Puts the market to work minimizing unmanageable waste.
- 6: Encourages reuse because wastes are not mixed together
- 8: Environmentally sound management the responsibility of the producer.
- 9: Guarantees zero discharge technology.

MANUFACTURING

The Green Party has developed 5 key goals and detailed criteria for all manufacturers in Ontario. Manufacturers shall meet the following goals and criteria as quickly as possible.

- 1: Establish long term environmental goals for worldwide operations.
- 2: Chemicals or products must be biodegradable and not accumulate in the food chain. They must not be tetrogenic, mutagenic or carcinogenic and they must not be toxic in concentrations occurring under field conditions.
- 3: Producers must not produce organisms that which disrupt ecological systems. It is the responsibility of the company to prove that this goal is met.
- 4: Producers must only use renewable energy resources and must minimize energy consumption.
- 5: Producers must actively protect the existence of animals, plants and their natural habitats.

The Criteria for environmentally sustainable production are listed

below. They are required from producers.

1: Long Term Goals. Acknowledge long term environmental goals as a priority. The company will make training and education available in order to translate long term goals into reality.

2: Global Standards. Apply the same standards for products worldwide and provide enforcement by independent authorities globally.

3: Declarations. Make complete declarations of the contents of all products publicly available.

4: Analyzable substances. Produce only analyzable chemicals, so that each substance can be traced to parts per billion.

5: Degradation knowledge. Have full knowledge of the degradation process of each product. The degradation should not produce any unknown or potentially harmful interim products.

6: Freedom of Information. Make all environmentally relevant data on the toxicological hazards of a product publicly available

7: Catastrophic Accident protection. Ensure that production processes and facilities eliminate the possibility of catastrophic accident.

8: Proliferation protection. Drastically reduce the variety of chemicals produced and only put substances on the market which can be completely defined in chemical and degradation terms.

9: Hazardous waste retention. Manufacturers must retain possession of unmarketable products until environmentally sound use or elimination is possible. If a process generates hazardous waste, that process should stop until the process is clean.

10: Water conservation: Establish closed loop systems for water used in cooling and production. The quality of water used can not

be diminished during production.

11: Ground water contamination. The production of a product or the use of a product must not contaminate the ground water.

12: Animal testing. No corporation should use animal testing.

13: Production of Weapons of War. Manufacturing of Arms and related industries should be banned in Ontario.

14: Liability acceptance. A company in Ontario must accept responsibility and liability for it's product. QUEBEC

The Green Party of Ontario recognizes the importance the civic nationalism, as opposed to ethnic nationalism, in the definition of a state and a people.

The Green Party of Ontario supports the concept of self determination of a people. We do not believe one group should be allowed to impose it's will upon another. Should Quebec decide to separate from the Confederation of Provinces through legitimate non violent means they would do it with the Green Party of Ontario's support.

We feel that special attention should be made by the Government of Canada to ensure the orderly division of Quebec to allow the James Bay Cree and Anglophones in Western Quebec and Montreal to determine their own fate unhindered by the strife caused by ethnic nationalism.

## SENATE REFORM

The Green Party of Ontario feels that the Federal Senate should be patterned after senate models that have been successful in other countries. In many European countries for example all significant constituencies are represented. Canadian constituencies

might include: Geographic regions, native peoples, minority groups, and professions. Each constituency would be allowed seats dependent upon the number of members they had in their organizations. Checks and balances would be instituted to guarantee gender parity and proportional representation.

## SOCIAL SERVICES

### DAY CARE

Greens support the principle of universal access to flexible, private and publicly-funded, non-profit child care as well as the extension of government paid maternity leave and parental leaves. It is, however, important to recognize that many of the pressures for day care come from a consumer society in which parents both work to accumulate more belongings than needed for a balanced lifestyle. With the guaranteed annual income and community land trusts it would be increasingly less necessary for families to have two incomes to survive.

### SOCIAL WORK

Lack of funding to family services and the incredible caseload of social workers is crippling our ability to assist individuals to be active members of the community. Greens recommend an increase in the funding made available to social workers and a reduction in the case load of social workers. Currently the caseload of social workers is as high as one worker dealing with 300 families. This should be reduced to 1 / 30 families. This massive increase in spending will be offset by a dividend of increased employment, increased detection of child abuse, sexual abuse and a increase

number of individuals who become functioning members of society again. The cost of inaction is much higher than the cost of action. We also support family planning clinics based in the community. we stress sex education that puts sex into a biological, emotional and social context with emphasis on love and responsibility. It is also important to fund research to develop effective and safe methods of birth control.

## WELFARE REFORM

As currently practised, welfare assistance is inefficient, unfair to both government and individuals, and fails to serve those who need it the most. Because welfare is presently a municipal issue, its costs tend to be born by those governments which are least able to support the program, simply because poorer communities will tend to

(a:) have more people on the welfare roles, and

(b:) have a smaller tax base.

Because of this fact, many smaller communities routinely limit their benefits. This results in our poorest citizens moving to parts of the country where living expenses are highest. In addition, welfare disbursement tends to be dominated by the desire for control rather than a will to serve. As a result, far too much money is spent on administration. Many needy people are also unable to receive benefits because they run afoul of such "Catch-22" dilemmas as having to have a fixed address to receive benefits, but being too poor to rent any place to live. A Green Canada would eliminate these problems by replacing the welfare system with a guaranteed annual income. Under such a

program, the federal government would decide upon a minimum allowable income and award a "reverse" income tax to those individuals or families which were unable to secure employment. Because such a payment would be raised through federal taxation, no one community would be penalized for having too many poor people. In addition, there would be a strong incentive for the poor to leave urban areas where the cost of living is high and to move to the countryside where they could be encouraged to become self-sufficient in food, fuel, housing, etc.. By eliminating the need for a welfare bureaucracy, enough money would be saved to expand payments.

The guaranteed income would support other Green economic programs. The minimum acceptable wage would rise for jobs such as fast-food, janitorial, etc., because people will be able to "opt out" of the workforce until they find some dignified employment. This would have a leveling effect on social stratification. In addition, rewarding, but poorly-paid work that presently benefits the whole community will expand as the guaranteed income allows increasing numbers of people to "opt for" a life of community service. The guaranteed income will also give workers a greater say in industrial management, as the strongest weapon (fear of poverty) is removed from business's arsenal of strike-breaking tactics.

Finally, the guaranteed income will ensure that the costs of switching from a steadily expanding economy to a conserver society will be borne equally by all its citizens. The Greens would like to see a sustainable society that is not supported by widespread poverty.

Subject: Re: RE policy

X-Attachments: C:\ONT\POLICY.DOS;

Greens also endorse the idea of a minimum and maximum income. The guaranteed income being at 1 and using a ratio of 20 to 1 this would mean that an individuals who received the Guaranteed annual income of \$ 10,000 with a minimum wage of \$ 15,000 would dictate the wage of the highest earner which would be \$ 500,000 a year. The goal of those at the top therefore is to increase the well being of those at the bottom. The current spread between the richest and poorest is approximately 150 : 1. Using a minimum wage of \$15,000 and an average corporate presidents remuneration of \$2,250,000 a year.

## SUSTAINABILITY

The Green party's definition of Sustainability is as follows.

Activities are sustainable when they:

- 1: use materials in continuing cycles
- 2: use continuously reliable sources of energy
- 3: come mainly from the potentials of human beings ie. communication, creativity, coordination, appreciation, and spiritual and intellectual development.

Activities are not sustainable when they

- 1: require continual inputs of non-renewable resources
- 2: use renewable resources faster than their rate of renewal
- 3: cause cumulative degradation of the environment
- 4: require resources in quantities that could never be available for all people
- 5: lead to the extinction of other life forms.

SUSTAINABLE COMMUNITY DEVELOPMENT Refer to Conservation Village site plan.

## TAXES

The role selective taxation can play in establishing an ecological society is crucial. The Green Party of Ontario is proposing significant reductions in personal income taxes in favour of taxes on non renewable resources and the taxation of all products which cause cumulative degradation to the environment, and correspondingly no taxes on ecologically benign products and processes. For example the purchase of bicycles, public transit, rail transportation and organically produced food would be tax free, the revenue loss being made up by a carbon tax on gas, roads, and chemical pesticides and heavily processed, refined, nutritionally bankrupt foods. Disposable diapers would be taxed, non bleached, raw cotton diapers and decentralized diaper services would be tax free.

Under our tax system soft energy systems such as solar, wind and biomass would be tax free and nuclear, coal and hydro electric power would be heavily taxed. Manufacturers who abide by the zero-

discharge principle and who manufacture products with a long useful life would receive tax relief while companies which pollute and produce disposable products would pay heavy taxes until their closure. At present the 300 companies which continue to dump toxic chemicals into the Great Lakes are taxed equally to those who have invested in pollution control. Such a tax structure would encourage ecologically sustainable development.

All non-renewable fuels and resources should be taxed at source to ensure that they are used sparingly. Taxes on labour would be phased out.

A disposal tax would help eliminate the need for dumps. Products which are not repairable, reusable or recyclable should be taxed to promote those which are. Single-use packaging and containers should be heavily taxed until it is practical to ban them while reusable containers would be tax free.

We know that every tonne of recycled paper saves 19 trees, produces 75% less air pollution and 35% less water pollution, yet both recycled and virgin paper are taxed equally. Taxes on virgin paper should be used to encourage reduction of paper use, to develop ecologically sound forestry practices and to build paper recycling facilities.

Around the home the tax free list should be long. Gardening equipment, seeds, tree and shrubs, composters, insulation, double windows, sky lights, compact florescent light bulbs, efficient appliances, environmentally friendly cleaners and solvents, clothes lines, solar hot water heaters, photo voltaic cells, lead free paints -- in short, all ecologically benign products should be tax free.

Selective taxation is how a government implements its philosophy. Only the introduction of significant green taxes will demonstrate that our governments are interested in preserving the life giving capacity of the biosphere.

We also feel that the tax credit system should be expanded to include tax credits for volunteer work and expanding the family tax credit for care givers working at home. Our current tax system does not recognize the work done in the home.

## TRANSPORTATION

The Green Party of Ontario sees the current transportation system and the structure of our cities as unacceptable due to their wastefulness. We are opposed to the current use of the automobile. We opposed to the design and construction of cities that place the accommodation of automobiles above the health and happiness of the occupants of a city. Our cities should be designed so that a car is not required because services and jobs are designed within walking distance of where people live. Current land use patterns are unacceptable.

The problems of our present transportation system

- 1: Our current system is heavily subsidized. In Ontario alone the total subsidies to Automobiles are estimated to be in excess of five billion dollars a year.
- 2: Exhaust from cars is responsible for global warming, acid rain, respiratory ailments and deterioration in the urban environment.
- 3: The infrastructure that supports the automobile wastes land that should be used for agriculture, wild life restoration or recreation.

4: Facilities for automobiles are expensive and cause more traffic, congestion and suburbanization.

5: Cycling and walking are dangerous because of the Automobile.

6: There are negative social and environmental consequences associated with the procurement and transportation of oil.

7: Private automobiles are directly responsible 5,000 human and 3,000,000 animal deaths in Ontario every year.

Green transportation policy:

The Green Party of Ontario is dedicated to cleaner, cheaper, more energy efficient and safer forms of transportation, which will be accessible to everyone. The Greens intend to encourage a reduction in the total volume of road traffic. These general objectives can be achieved through the following specific policies:

1: Modify the zoning of cities to bring places of work, living and recreation closer together.

2: Remove all subsidies to the private automobile, Include in the licence fee for a private auto the costs of Police, Hospitalization, pollution cleanup, road construction, and maintenance of the road network.

3: Revitalize an efficient rail system for long distance haulage of goods and for inter-community personal travel.

4: Legislate as a maximum displacement of 1 litre for vehicles licensed and used for personal transportation in Ontario.

5: Maintain public access to currently unused rail rights of ways.

6: Yearly safety checks on all vehicles using Ontario roads including a strict enforcement of automobile emission regulations.

7: Promote cities where people do not need to commute and commodities are transported by rail.

8: Introduce taxing systems that reflect the long term ecological costs of transportation services.

9: Require any car owner served by public transit to present a valid yearly transit pass at the time of vehicle licensing.

## TRADE

Without completely dismissing the concept of free trade in limited discussions about specific sectors of the economy the Green Party of Ontario at present expresses opposition to free trade, as currently being encouraged between Canada the United States and Mexico, in light of the following considerations:

### Moral

The reason for expanding trade with Mexico and the Southern United States are essentially to benefit from lower wages and taxes. We then import the goods cheaper than we can make them. The dubious and short sighted logic of this scenario assumes that we will either lower our wages to theirs and therefore compete or we will lower our taxes by reducing services to the people of Canada. The free trade deal with the States has deindustrialized Ontario making the blue collar population desperate for any form of work at any price. The benefactors are not the workers of Canada.

### Economic

Greens advocate meeting needs locally. The concentration of Corporate power leads to an increase in wealth for a few and large scale unemployment and exploitation for the majority. Competing is not the answer to our social problems. Only by co-operating and allowing truly free trade between equals that we can achieve real prosperity. Trilateral trade will only lead to continued de-industrialization of Ontario and a reduction in the quality of

life for residents of Ontario. Given their record on environmental matters, their penchant to eliminate jobs through automation, and their disregard for social impacts (e.g., family upheaval) in closing plant locations, trans national corporations should not be encouraged to grow as a result of a free trade policy. Free trade threatens the long term sustainability of the economy by allowing producers to centralize. The costs of transportation will inevitably rise to the point where this competitive advantage is gone, until then non-renewable resources will have been squandered in the name of economic efficiency. This centralization leads to corruption and subsidies to large corporations this disadvantage the operation of small businesses.

#### Environmental

Our environmental resources have become bargaining chips. It is fundamental to the Green party that lawful and legitimate local participation is fundamental to the preservation of the Natural world, and our continued survival.

#### Cultural Autonomy

Free Trade is a threat to Canadian culture in that our political and economic decisions are now made by a tribunals in Washington and Geneva. The Free trade deals and the G.A.T.T. has had effects on legislation dealing with diverse areas as: Imports Federal Courts Broadcasting Standards Insurance Loans Banking Copyrights Food Income tax Investment Canada and Trusts.

The alternative to International trade are:

1: Satisfy our local needs locally, strengthen our own economies by

not exploiting others.

2: Strengthen local bioregional trade.

3: Closely scrutinized sector by sector trade negotiations.

## RECYCLING, WASTE MANAGEMENT AND INCINERATION

The Green Party of Ontario favours the continued ban on incineration in the province of Ontario. We are opposed to the use of Incineration as a option for Waste disposal for the following reasons.

1: Ash residue from incineration contains high levels of heavy metals and dioxin, frequently failing hazardous waste testing.

2: Ash poses serious threats to air, water quality, human health, especially that of workers

3: Heavy metals emitted from Incinerators bio accumulate in the food chain and therefore pose a health hazard to the public.

4: Numerous Science advisory boards have expressed concern over the lack of knowledge concerning municipal waste combustion.

5: Combustion sources by their nature produce acid gases which are known to be greenhouse gasses and contribute to acid rain and global warming.

6: 80-90 percent of solid municipal waste can be recycled using current proven safe technology. Therefore the incineration of garbage is an unnecessary combustion source that could be eliminated early in any rational program of sustainability.

7: It is a waste of valuable resources.

8: There is a terrible loss in burning compostable material which could be used to nurture our depleted soils.

9: Solid waste management is an essential element of environmental

health and pollution control.

Therefore we recommend:

- 1: Continuing a ban on the construction of new Incinerators.
- 2: Improved monitoring of the Incinerators in Ontario with complete disclosure of all test results.
- 3: Support amendments to provincial and federal statues which promote the use of the least toxic alternatives in product composition, and secondly alternatives which are the most reusable, recyclable, most durable, and most biodegradable as appropriate. In this context biodegradability must address the issue of toxic residue remaining after disintegration.
- 4: Our society should promote through incentives, taxation and education the minimization of waste at all points of transfer from raw material to consumer products.
- 5: Support legislation and a taxation ( see tax section)that promotes the use of recycled material over virgin materials through fees, taxes, price supports, and tax credits. We must provide incentives to businesses that engage in recycling.
- 6: Support Municipal and Provincial procurement guidelines for contractors which enable product life and ability to be repaired to be considered in procurement decisions.
- 7: Support research into problem areas of waste management such as battery recycling, household hazardous waste collection and recycling possibilities.
- 8: Implement recycling programs with a goal to recycle and compost 80% of household and commercial waste within 5 years.
- 9: Support the designation of incinerator ash as hazardous residue unless comprehensive double blind testing proves otherwise.

10: Support extensive research and monitoring of facilities to establish a database and develop stringent regulatory standards.

## RECYCLING

Recycling is hindered by tipping fees at garbage dumps that do not accurately reflect the full cost of dumping waste in abandoned quarries. Landfill sites leak a leachate that is complex soup of modern chemicals used in the home and industry. The combination of car batteries, soap, water, car oil, transmission fluids, anti freeze, the myriad of toxic chemicals we take for granted percolates through a landfill and pollutes for ever the ground water around landfill sites. All landfill sites leak. They all pose a very real threat to the health of the community in which they are located. This cost can not be calculated in considering landfill verses reduction, reuse, rejection or recycling.

1: Refer to Tax section for a full discussion of tax incentives.

2: Implement dumping fees that reflect the full long term cost of waste disposal.

3: Require full product responsibility on all products and packaging. The responsibility of pick-up, recycling, and reuse of all products and packaging material must be born by the manufacturers and passed on to consumers. Ban non reusable containers and products.

For example included in the cost of the purchase of a car would be a levy that would be used to dismantle, recycle and reuse the remains of the car.

4: Ban the export of recyclable materials. All materials must be recycled in the city nearest where they are consumed.

5. Continue funding and expanding the blue box program. Items are reusable, recyclable or banned.
6. Institute an immediate ban on new landfill site construction.
8. Establish community drop off points for recyclable materials like plastics that are not economical to collect.
9. Ban compostable material from landfill collection in favour of home and business composting.

## WATER QUALITY

The Green Party sees three key areas of concern.

- 1: The restoration of water related ecosystems.
- 2: The establishment of a Safe Drinking Water Act.
- 3: Phasing out chlorine use in Ontario.

### Restoration of Water Ecosystems

We support current efforts to maintain Ontario's wetlands.

Recommendations:

- 1: 50 meter buffer zones to protect streams and creeks.
- 2: Strengthen current wetland conservation legislation.
- 3: Ecosystem based watershed management.
- 4: Re establishment of flood control basins.
- 5: Withdraw provincial funding for research into or support for Water Diversion Projects. Current plans for James bay directly affect 22,000 treaty Indians in Northern Ontario.

### Safe Drinking Water Act

Much of the drinking water in urban Ontario is laced with dioxins, pesticide residue and heavy metal contamination. A recent study in Eastern Ontario found that 75% of well water was contaminated with pesticides. The full implications of pesticides,

chlorine compounds, municipal dumps, old oil gasification plants and the synergistic effects of all these chemicals in our water supply is not fully understood.

The residents of Ontario are entitled to clean drinking water.

The Green Party advocates a Safe Drinking Water Act. It would

1: Set legally enforceable standards for zero discharge of toxic elements into the environment. (Refer to Zero Discharge policy)

2: Establish a monitoring program for water contaminants which includes full public disclosure of all test results.

3: Support the rights of citizens groups to sue water polluters for losses as well as establishing protection for whistle blowers.

4: Provide the right to seek judicial review of the Minister of the Environment for failure to perform his/her duties.

5: Chlorine phase out in Ontario. Refer to section on Chlorine.

6: Enact a provincial Water Self-Sufficiency Act requiring municipalities to:

A: develop and assist the installation of domestic rain water collection and purification technologies eliminating the cost of urban large water purification plants and rural wells.

B: treat storm water and sewage on site using UV light and in local constructed wetlands and greenhouses eliminating the need for sewers and centralized sewage treatment plants.

C: accommodate on site storm water percolation eliminating the need for storm sewers.

D: encourage the installation of water conservation measures like low-flush toilets, shower heads, and grey water recycling systems.

## WORK/JOB CREATION

The Ontario Greens support:

- the expansion of non-job work in more self-sufficient communities in place of dependence on mega-projects and centralized and capital-intensive manufacturing processes.
- encouragement of self-employment in local services and production.
- work exchange, product exchange, barter, payment in kind service for family and community benefits.
- job creation in smaller-scale energy development projects, in alternative technology, by public funding of recycling, conservation and environmental clean-up, by funding adequate child-care programs, in programs rooted in the community.
- redirecting capital towards greater development of low cost housing and model ecological communities.
- redirecting production towards sustainable technologies and methods.
- a flexible system of job sharing and shorter work hours should be encouraged.
- a minimum income scheme to support those who earn a low income or who work seasonally or part-time to replace the current welfare system.
- recognition and reward of the care of home and children.
- encouragement of alternative life styles by making them economically viable.

In short: the development of an alternative society to replace our present industrial society which makes multitudes outcasts by leaving them unemployed, underemployed or with unrewarding employment.

## ZERO DISCHARGE

The most important news of 1992 went largely unreported in Ontario. At a Ministerial meeting September 21-23 in Paris, 13 European Nations agreed in principle to eliminate all discharges and emissions of chemicals that are toxic, persistent, and likely to bio accumulate. These nations made a binding commitment to achieve "Zero Discharge". For the first a significant portion of the industrialized world ( Belgium, Denmark, Finland, France, Germany, Iceland, Ireland, the Netherlands, Norway, Portugal, Spain, Sweden, and the United Kingdom rejected the old philosophy of "prove harm" as a basis for pollution control. A new era of environmental protection has begun and The Green Party of Ontario is committed to having Ontario meet the same levels of environmental protection as our competitors.

Conventional Chemical Engineering and risk assessment has long been based on three key assumption.

Assumption 1: Humans can manage the environment by deciding how much of any material the Earth can safely absorb. Scientists call this the assimilative capacity approach. According to this approach scientists can reliably decide how much of any material the earth can assimilate without causing harm. This is what a risk assessment claims to do.

Assumption 2: Once the assimilative capacity for a particular chemical is reached we see to it that no more of that chemical is released into the environment. We will set limits, river by river, chemical by chemical, everywhere on the planet, so that the total cumulative releases do not exceed the assimilative capacity of the Earth.

Assumption 3: We know what is harmful and what is not, and in the case of those substance that we do not know for certain we will be warned of possible dangers by traumatic but sub lethal shocks that will alert of us to the danger before it is too late.

### ALL THREE ASSUMPTION ARE DEAD WRONG

As a result the well being of the planet is in serious danger. The depletion of the ozone hole, global warming, acid rain, lead poisoning in our children, mercury in fish, PCB's in the ocean, rising cancer rates, increases in immune system disorders like asthma, rising rates of nervous system disorders like Parkinson's disease and Lou Gehrig's Disease are the result of this presumptuousness and ignorance of the scientific community.

The approach adopted at the Paris meeting and the approach advocated by the Green Party of Ontario is " We do not know and most likely we will never know how much toxic material the environment can stand, so we won't chance it. Therefore we will contain everything and discharge nothing. In sum, Zero discharge.

#### Zoning

- 1: Allow and encourage the zoning of current single family homes into multiple family units.
- 2: Encourage infilling and intensification of our cities; discourage urban sprawl with Greenbelts around all urban centers in Ontario.
- 3: Encourage the establishment of home based business, with the only zoning requirement being the approval of your immediate neighbours

-----

GAPS

There are incredible gaps in policy. I have noticed several and will  
mention them. I am sure that others will notice many more. Perhaps policy  
already exists for these areas. If so, the cabinet which was given the task

1911

to review policy in all departments so as to prepare a platform for the election was remiss in not including the policy. In many cases the policies were absent federally but provincial policy was able to fill the gap.

We must attempt to draft resolutions related to the Gaps.

1. Department of Immigration
  2. Youth, children programs
  3. Women's issues (a recent position piece was circulated related to women's rights related to drugs and pregnancy - issued on behalf of the Green Party of Canada)
  4. means of addressing poverty, street people, sweat shops,
  5. Education. cutting of funding
  6. Housing policies
- etc.

Joan

( ) THAT in 1998 I wrote a draft attempting to place years of green party policy in a framework of Federal departments

## THE GREEN PARTY OF CANADA: THE POLITICS OF PUBLIC TRUST

Few will deny that there is an urgent need for change. But without political action, change happens only when it does not conflict with vested economic interests. The result is that effective responses to issues - like erosion of health care, environmental degradation, disintegration of communities, over-consumptive models of development, globalization through corporate control, and privatization of essential services - have not occurred.

If positive change is to occur, it must come as a reflection of global public trust, rather than at the whim of vested economic interests.

For over fifty years, through international agreements, member states of the United Nations have incurred obligations through conventions, treaties and covenants.

Member states of the United Nations have also made commitments through U.N. Conference action plans, and created expectations through General Assembly resolutions.

The "politics of public trust" in contrast to the politics of "vested economic interest" is consistent with international principles that have been established through the United Nations system.

Through more than 50 years of concerted effort, the member states of the United Nations have created public trust international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
2. to Enable socially equitable and environmentally sound employment;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development.

Unfortunately, the global governments continue to undermine these international obligations, commitments and expectations. Green Parties have both international, national and local roots. Moreover, they have the political will to address these urgent issues by applying global principles to local issues. Green Party policies are in harmony with principles reflected in international agreements.

Green parties have been dismayed by the continued global urgency resulting from the failure of

member states of the United Nations to discharge their obligations arising from conventions, treaties and covenants, to act on commitments made in conference action plans, and to fulfill expectations arising from general assembly resolutions.

Green party policies are also in harmony with ethical, **equitable and ecological principles**.

## PRINCIPLES AND VISION OF THE GREEN PARTY OF CANADA FOR THE CREATION OF A SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND FUTURE

This document draws upon policy passed through conventions of the federal Green party and through conventions of the provincial parties from Alberta, British Columbia, Newfoundland, Ontario, and [Quebec].

### INCREASED RELEVANCE OF AND NEED FOR THE GREEN PARTY

"The insane demand for unsustainable economic growth which legitimizes treaties such as the proposed MAI is causing irreparable harm to the natural world in which we live, skews the distribution of wealth between peoples, enriches the rich, and impoverishes the poor." (Frank Hughes).

Every day through the media, and through communication from concerned citizens, more and more Canadians are calling for the increasing need for a different kind of public policy—the public trust policy advocated by the Green Party.

The Green party is at a turning point in Canada. More and more the general public is becoming concerned about the health, environment, peace, social justice, and community issues that the Green party has been addressing for years. The implications and consequences of the failure to move away from the current model of over-consumption and uncontrolled economic growth, of the failure to satisfy human fundamental needs, and of the failure to address the issues of inequitable distribution of resources and environmental degradation are becoming more and more evident.

Recently there has been serious public concern about government and corporate negligence related to the failure to test in the case of hepatitis C, to the failure to act with other countries to ban of a bleach agent in white bread, to the failure of Canada to anticipate the consequences of selling Canadian nuclear technology to India, and to the failure to act to prevent the demise of a generation of first nations men working in the first Canadian uranium mine .

And yet our governments and corporations continue to endorse and undertake practices proven to damage human health and the environment.

There is a general malaise as more and more stories of negligence in the area of health and the environment are reported in the media.

Citizens are looking for comprehensive solutions where the interdependence of human rights, health, social justice, environmental protection and conflict prevention is affirmed and promoted.

Unlike other parties, the Green Party writes policies based on 'the precautionary principle.' This principle affirms that where there is a threat of environmental degradation or harm to human health, lack of scientific certainty should not be used as a reason to postpone per measures to prevent the threat. Currently underfunded public advocates must take on corporations and governments in an attempt to prevent potential threats that will, when implemented, only later surface as being harmful.

The myth that economic growth will address the urgency of the global situation must be dispelled.

We live on a finite planet with finite resources, but are consuming our ecological capital instead of living off the interest. We are undermining the ability of natural cycles to renew such resources as clean water and air, topsoil, fish, and trees. We must recognize the necessity of limits to growth We must move from growth to sustainability. (GREEN PARTY OF NEWFOUNDLAND).

What is a socially equitable and environmentally sound future is based on a firm foundation of ethical, equitable and ecological principles. sustainable future?

A socially equitable and environmentally sound future will not be stumbled upon while trying to achieve some other goal. Sustainable development is understood by some to mean an expanding economy. This is not possible. Most people now realize that it is not going to be achieved without changes to our lifestyles and our standard of living.

urgency

We will not solve the environmental, economic and social problems we all face by having the rest of the planet emulate our consumption habits. It is only when we in North America, Japan and Europe "the first world" stop our excessive consumption, our exploitation and our cruelty to the planet and all its inhabitants, that we will be able to choose a path that is truly sustainable. (GREEN PARTY OF ONTARIO 1994)

Green development" is not simply "sustainable development" development we can survive. It is regenerative development, development which directly works to heal the individual, the community, and the environment. This must be achieved through a gradual restructuring of our economy, and through the growth of appropriate enterprises, guided by grassroots processes of community design and planning. It is not enough to place limits on the destructiveness of conventional economic growth -- our survival

depends on mandating that economic growth heal the planet and community. (GREEN PARTY OF ONTARIO 1994)

## BASIC ASSUMPTIONS AND PRINCIPLES

### Co-evolution

#### 1.1 Interdependence

The biosphere and ecosphere are dynamic interacting systems of energy flow, cycles of matter, and plant and animal species. Within these systems Greens recognize the complete and total inter-connectedness of all things. Within nature and society every activity in some way affects everything else. All things are joined in the web of life and so are fundamentally interdependent with each other. (B.C. POLICY CONVENTION, 1986)

- We acknowledge the inter-relatedness and interdependence of all things. We must learn to celebrate our connections with other life forms and respect the systems that support our existence on this planet (GUIDING PRINCIPLES Alberta, 1997)

interdependence of issues. The 1994 conference was explicitly given a broader mandate on development issues than previous population conferences, reflecting the growing awareness that population, poverty, patterns of production and consumption and other threats to the environment are so closely interconnected that none of them can be considered in isolation". (Preamble, 1.5., International Conference on Population and Development, 1994) • to support the consideration of the interdependence of issues related to Peace, human rights, social justice, environment, and socially equitable and environmentally sound development

- RECOGNIZING THE INTERDEPENDENCE OF HEALTH AND ENVIRONMENT EXPRESSED IN CHAPTER 6 "PROTECTING AND PROMOTING HEALTH (AGENDA 21): (1998)

## ENDORSEMENT OF SOCIALLY EQUITABLE AND ENVIRONMENTALLY SOUND DEVELOPMENT

#### 1.2 Process

### POLICY CONVENTION, 1986

Within this net of interdependence, all things are in process and are changing in response to a changing environment and each other. The Greens accept change as a

consistent feature within nature and society. Our view must account for this coevolving environment and thus be, itself, always in process.

### 1.3 Adaptation

POLICY CONVENTION, 1986

Recognizing the changing environment, we are in, human societies must be able to adapt to changing circumstances; what worked in the past may not work in the future. Also, assuming a high degree of interdependence with nature, our societies must be carefully adapted to each particular ecological and social situation. We cannot, in the long term, expect nature to adapt to us; we must adapt to it.

- We appreciate appropriateness. Appropriate action implies a minimum (GUIDING PRINCIPLES Alberta, 1997)

### 1.4 Finitude

POLICY CONVENTION, 1990

The Greens understand the finite nature of the world: the earth and all its ecosystems. All elements are connected in an interconnected system. Lands, waters, oceans, and resources, can no longer be thought of as limitless. Greens understand that for humans to coexist we must live within nature's means.

We will promote policies which recognize that water is the connecting medium between all ecosystems. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## 2.0 GREEN PHILOSOPHY AND KEY CONCEPTS

### GREEN VISION

the green vision of reality is based on love of life, respect for nature and an awareness of the interdependent and cooperative structure of the world. We recognize that we are part of nature, not above it, and the continuation of life itself depends upon our wise interaction with the environment. Our political and economic decisions must be made with this in mind. (GREEN VISION, Alberta, 1997)

RESOLUTION: RECOGNIZING THE INHERENT WORTH OF NATURE BEYOND HUMAN PURPOSE

CONCURRING WITH THE AFFIRMATION IN THE WORLD CHARTER OF NATURE THAT

EVERY FORM OF LIFE IS UNIQUE, WARRANTING RESPECT REGARDLESS OF ITS WORTH TO MAN [HUMAN], AND TO ACCORD OTHER ORGANISMS SUCH RECOGNITION'S, MAN [MUST BE GUIDED BY A MORAL CODE OF ACTION. (A, UN GENERAL ASSEMBLY RESOLUTION 1982) (1998)

The Green vision includes a responsibility to create both a healthy environment and a healthy society, both of which are fundamentally interrelated. The following concepts, values, and definitions have been

organized into three basic categories: Ecological Concepts, Social Values, and Concept (B.C. POLICY CONVENTION, 1986)

## 12. RESPONSIBILITIES

Albertans should be prepared to accept the responsibilities which accompany their rights. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A. We will expect Albertans to expend the time and effort required for participating in community decision making processes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. We will expect that Albertans will take reasonable measures to protect their own health. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. We will expect Albertans to be actively involved in the education of their children. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. We will expect Albertans to diligently work to protect the environment and thus provide for their children's future. (ALBERTA GREEN POLICIES, ALBERTA 1997)

E We will support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA 1997) Definitions.

- TO ADHERE THE PRECAUTIONARY PRINCIPLE, AND APPLYING IT TO ALL ENVIRONMENTALLY UNSOUND EXISTING PRACTICES

- TO APPLY THE PRECAUTIONARY PRINCIPLE TO ALL POTENTIALLY HARMFUL EMISSIONS, CONTAMINANTS, AGENTS OF POLLUTANTS, OR RECONCENTRATED SUBSTANCES—CREATED THROUGH IMBALANCE IN BIOGEOCHEMICAL CYCLES. THROUGH MANDATORY INTERNATIONAL STANDARDS, STATES SHALL INVOKE AND ENSURE COMPLIANCE WITH THE PRECAUTIONARY PRINCIPLE. (1998)

(NOTE: THAT THE PRECAUTIONARY PRINCIPLE SHALL NOT BE MISCONSTRUED TO MEAN” THAT THERE IS EVIDENCE BUT NOT SCIENTIFIC CERTAINTY THAT A PARTICULAR PRACTICE, SUBSTANCE OR ACTIVITY IS CAUSING HARM THEREFORE WE SHALL CONTINUE THE PRACTICE; OR THE PRECAUTIONARY

PRINCIPLE SHOULD NOT BE USED TO JUSTIFY NOT USING AN ENVIRONMENTALLY SOUND PRACTICE BECAUSE IT IS NOT SCIENTIFICALLY BASED.) (1998)

#### RESOLUTION: ENSURING THE INSTITUTION OF THE ANTICIPATORY PRINCIPLE, AND APPLYING IT TO PROPOSED NEWLY INTRODUCED PRACTICES

Mindful of the need and importance to develop anticipatory policies and of preventing, mitigating and monitoring significant adverse environmental impact in general and more specifically in a transboundary context (Convention on Environmental Impact Assessment in a Transboundary Context, 1994)

Noting that in the international documents, different aspects of the anticipatory principle are enunciated: proceeding with doubt, prevention and avoidance of costly subsequent means:

##### ENSURING DOUBT-DRIVEN ACTION

Activities which are likely to pose a significant risk to nature shall be preceded by an exhaustive examination; their proponents shall demonstrate that expected benefits outweigh potential damage to nature, and where potential adverse effects are not fully understood, the activities should not proceed (General Assembly Resolution, 37/7, 1982)

##### ENSURING PREVENTIVE MEASURES

A preventive approach, where appropriate, is crucial to the avoiding of costly subsequent measures to rehabilitate, treat and develop new water supplies. (18.45 Fresh water, Agenda 21)

##### TAKING INTO ACCOUNT CRADLE-TO-GRAVE APPROACH

taking into account the cradle-to-grave approach **by phasing out and eventually eliminating the production and consumption of hazardous waste** to the management of hazardous wastes, **in order to identify BEST practices for phasing out and eventually eliminating** options for minimizing **the generation of hazardous wastes**, through safer handling, storage, disposal and destruction (20.20 e Hazardous wastes, Agenda 21).

##### ENSURING THE MONITORING FROM CRADLE TO GRAVE

Governments, in collaboration with industry and appropriate international organizations, and **through the establishment of Mandatory International Normative standards** should develop procedures for monitoring the application of the cradle to grave approach, including environmental audits (20.20 e Hazardous wastes)

## ENSURING FULL LIFE CYCLE CARE

promote efficient use of materials and resources, taking into account all aspects related to life cycles of products **including the phasing out and eventual elimination of toxic chemicals and the ensuring of BEST (Best Environmentally Sound Traditions) practices** (19.15 e, Toxic Chemicals, Agenda 21)

### Life-cycle Product Stewardship

Pollution is resources being wasted. Land-filling is like burying money in the ground. Nothing should be land-filled or released into the air, water or soil. Greens would introduce product-stewardship programs that would require producers to assume the full recycling and disposal costs of their products. (GREEN PARTY OF NEWFOUNDLAND).

## PROMOTING A CULTURE OF SAFETY

to promote a 'culture of safety' in all countries, especially those that are disaster-prone, the following activities should be carried out: (7.60, Disasters, Agenda 21)

## ENSURING RESPONSIBLE CARE

Industry **shall be required** should be encouraged to (19.51 Toxic chemicals)) "develop application of a 'responsible care' approach by producers and manufacturers towards chemical products, taking into account the total life cycle of such products (19.51 b. Toxic chemicals, Agenda 21)

## REVISITING INSUFFICIENT OR OUTDATED CRITERIA OF ACCEPTANCE

Governments, in cooperation with relevant international organizations and programmes, should carry out national reviews, as appropriate, of previously accepted pesticides whose acceptance was based on criteria now recognized as insufficient or outdated and of their possible replacement with other pest control methods, particularly in the case of pesticides that are toxic, persistent and/or bio-accumulative. (19.55 b Toxic chemicals, Agenda 21)

## \*RESOLUTION: INSTITUTING PROGRAMS FOR TREATING WASTE AS A RESOURCE

### RE: TREATING WASTE AS A RESOURCE

recommendation C13

### Waste management and prevention of pollution

(a) The growing amount of waste material is one of the by-products of urbanization, industrialization and the consumer society; the environmental hazards it creates,

together with the need to economize resources, has rendered profligate waste-generating life styles obsolete (Rec. C 13 (a) (Habitat I)

(b) In the development of human settlements, the quality of the environment must be preserved. Pollution should be prevented by minimizing the generation of wastes; wastes which cannot be avoided should be effectively managed and whenever possible turned into a resource. (Habitat I)

(i) Adoption of pollution control measures including incentives and disincentives for location of waste-generating enterprises, and measures to selectively discourage production of materials which add unnecessarily to the waste load; (Habitat I)

(ii) better use of existing technology and development of new technology to reduce the volume of waste material generated, along with better design and choice of materials destined to become waste; (Habitat I)

(iii) Innovative use of unavoidable waste as a by-product (Habitat I)

(vi) Use of sources of energy which have a low or no waste production (Habitat I)

(vii) Re-exploration of traditional uses of waste materials and study of their potential uses in contemporary society; (Habitat I)

**We call upon states:**

• **to ensure that in all their activities and the activities of corporations including transnational corporations there is adherence to the anticipatory principle.**

• **to adhere to the anticipatory principle as a pro-active measure to ensure that substances and processes which are harmful to the environment or to human health are prevented from entering the environment. One aspect of the anticipatory principle is to determine in advance before extracting resources whether the extraction causes environmental harm or is culturally inappropriate to indigenous peoples whose territory is beyond the treaty frontier.**

**RESOLUTION: RESPECTING THE CARRYING CAPACITY OF THE ECOSYSTEM**

Welcoming the expectation created in the Habitat II Agenda that “Sustainable human settlements development incorporates... the precautionary principle, pollution prevention, respect for the carrying capacity of ecosystems and preservation of opportunities for future generations” . (16, Habitat II).

**Respecting the carrying capacity of ecosystems also entails acknowledging that there are limits to growth, and respecting the inherent worth of nature, and thus does not justify increased pollution in pristine areas, or give a licence to pollute less polluted areas.**

## Call upon governments:

- to respect the carrying capacity of the ecosystem
- to ensure that this principle is not used to justify increased pollution in pristine or less polluted areas

## RESOLUTION: REDUCING THE ECOLOGICAL FOOTPRINT PRINCIPLE

Concurring with Habitat II that the need for “promoting changes in unsustainable production and consumption patterns, particularly in industrialized countries...settlement structures that are more sustainable, reduce environmental stress , promote the efficient and rational use of natural resources- including water, air, biodiversity, forests, energy sources and land - and meet basic needs thereby providing a healthy living and working environment for all and reducing the ecological footprint of human settlement”

Aware of the undertaking by members states of the United Nations **in 1995, in the Platform of Action, UN Convention on Women: Equality, Development and Peace, to ensure that “all corporations including transnational corporations, comply with national laws and codes, social security regulations, applicable international agreements, instruments and conventions, including those related to the environment, and other relevant laws”**. **This undertaking was reaffirmed and extended in the Habitat II Agenda to include the private sector”**.

Under no circumstances should an industry or individual be pardoned of any regulation or standard concerning environmental law. (GREEN PARTY OF NEWFOUNDLAND).

## Call upon Government

\* to phase out all environmentally unsound practices, to institute regulations that will phase out and eventually ban all environmentally unsound practices that contribute to the ecological footprint

- to drive industry to BEST (Best Environmentally Sound Traditions) practices

## 2.0.1 ECOLOGICAL CONCEPTS

The following are ecological concepts and values that should be reflected in all Green policies and activities.

## 2.1 Ecological

### POLICY CONVENTION, 1986

A Green ethic is based upon a more complete perception of reality than one which places only economic values upon nature, living and non-living. As Greens, we recognize the complete interdependence of all things in nature. In light of this, we have

an ethical responsibility to preserve and maintain other species and natural processes. It is clear that if we destroy nature, we will be destroyed, ourselves.

## 2.2 Appropriate Scale

POLICY CONVENTION, 1986

Bigger is not better and there are ecological limits to both size and growth. This applies throughout nature and was the primary message in Schumacher's *Small is Beautiful*.<sup>2</sup> The appropriate scale for anything is that which is carefully adapted and fitted to the particular ecosystem, society or job at hand.

## 2.3 Sustainability

POLICY CONVENTION, 1986

Sustainability in nature represents a successful adaptation that maintains both the organism and its environment in a state of health and balance. As a basic ecological value, organisms, ecosystems, or societies that are sustainable and can continue to function are better off than ones that cannot. To be concerned with sustainability is to take the long-term view.

### Diversity

Diversity is recognized as a positive feature in nature, creating flexibility and thus stability in any system. Greens can encourage natural diversity by halting the extinction of animal species, saving indigenous plant and seed stocks, and valuing all human cultures. The principle of diversity stands full against current world trends toward standardization and monoculture. (B.C. POLICY CONVENTION, 1986)

- We encourage diversity. A rich diversity of opinions, of cultures, and of economic alternative, are all indicators of a healthy and stable community.

of interference with the environment, and requires a thorough understanding of the consequences of our actions. (GUIDING PRINCIPLES Alberta, 1997)

B. We support the preservation of areas with special cultural significance such as archaeological sites, historic buildings and sacred Native lands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## SOCIAL VALUES

The following are social values and concepts that should be reflected in all Green policies and activities:

### 3.1 Social Responsibility

Recognizing our interdependence within society, and the common source of the human species, we have an ethical responsibility to create a society which guarantees the welfare and well-being of all peoples. This includes the encouragement of self-determination and the discouragement of oppression of any kind. (B.C. POLICY CONVENTION, 1986)

#### 11. Social Equity

Recognizing our interdependence within society, we have an ethical responsibility to create a community which guarantees the well-being of all people. This includes the encouragement of self-determination by education and employment and the discouragement of oppression of any kind. All life is vulnerable to the actions of human beings therefore we have an obligation to treat all living creatures humanely and with respect. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### 12. RESPONSIBILITIES

[Canadians] should be prepared to accept the responsibilities which accompany their rights. (ALBERTA GREEN POLICIES, ALBERTA 1997)

A. to expend the time and effort required for participating in community decision making processes. (ALBERTA GREEN POLICIES, ALBERTA 1997)

B. to take reasonable measures to protect their own health. (ALBERTA GREEN POLICIES, ALBERTA 1997)

C. to be actively involved in the education of their children. (ALBERTA GREEN POLICIES, ALBERTA 1997)

D. to diligently work to protect the environment and thus provide for their children's future. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### 3.2 Non-Violence

## POLICY CONVENTION, 1986

[The Green party adheres to the principle of non-violence which calls not only for total global disarmament but also adoption of a basic non-violent approach to all social and ecological issues]

Greens believe in total global disarmament, but our notion of non-violence and peace runs deeper than this. It represents our basic approach to all social and ecological problems. A rich body of theory exists around non-violence which can be consulted.

### 3.3 Decentralization and Grass Roots Democracy

The social expression of diversity is decentralization. Applied to our political structures, this means grassroots democracy. Greens are calling for the decentralization of our economies, populations, education systems, and manufacturing; in short, every aspect of our society. For local people, decentralization means a maximum degree of self-determination and involvement in decision-making. (B.C. POLICY CONVENTION, 1986)

#### PRINCIPLE-BASED DECISION MAKING. COMMUNITY DECISION MAKING WITHIN A FRAMEWORK OF OVERARCHING PRINCIPLES (PLATFORM 1997)

We will increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO DISCONTINUE ALL MULTI-STAKEHOLDER ROUND TABLES EXTOLLING A DECISION-MAKING PROCESS THAT GLORIFIES CONFLICT OF INTEREST BE DISCONTINUED. THESE TABLES IN PRACTICE INVITE CORPORATE INTERESTS TO DETERMINE THROUGH CONSENSUS POLICIES THAT DIRECTLY AFFECT THEM AND MUST BE STOPPED. (1998)

#### 1. The Renewal of Democracy

The present electoral system in Alberta and in Canada [throughout Canada] creates governments which are not representative of the population. The Green Party would introduce a system of proportional representation, similar to that used in most developed countries. [countries]. Some seats would be contested according to our present system, and some seats would be allocated in proportion to the total votes cast for each party. This will encourage participation by all citizens and reduce conflicts caused by regional differences. (RENEWAL OF DEMOCRACY GREEN' ELECTION PLATFORM Alberta, 1997)

### 3.4 Feminism

## POLICY CONVENTION, 1986

Feminism is an important concept for Greens. It aims at developing holistic personalities and a balance between the male and female principles; and at creating a non-sexist, non-violent, and egalitarian society.

### 3.5 Community

Local, democratic communities are the most decentralized way to fulfill the Green commitment to social responsibility. Communities, as face-to-face relations, represent the appropriate scale for personal caring and for developing sensitivity to a particular bioregion. Communities and the individuals within them must be empowered politically, economically, and socially. Communities are the basic sustaining unit of a Green society. (B.C. POLICY CONVENTION, 1986)

- We believe that the community is the foundation of participatory democracy. Any government should be responsive to the communities which it serves by involving citizens in the decision-making process (GUIDING PRINCIPLES Alberta, 1997)

The structure of human society is being destroyed by self interest and greed. The quality of life for the majority of people is steadily decreasing. Materialism and consumption rule. The Greens seek to restore and strengthen local communities and to empower them to create equitable and supportive societies. (Restoration of Community GREEN' ELECTION PLATFORM Alberta, 1997)

We will increase the power of municipalities to make decisions affecting their jurisdictions, and promote a greater delegation of municipal decision making to local communities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

### Cooperation

## POLICY CONVENTION, 1986

In a world obsessed with competitive values, Greens believe that cooperation, not competition, is the basis for human societies. Green societies should be structured around the cooperative principle. This has ramifications in decision-making where cooperative solutions are favoured over win-lose situations.

A we will support initiatives, cooperation and accountability in economic enterprises (ALBERTA GREEN POLICIES, ALBERTA 1997)

## THE GREEN PARTY OF CANADA

1997 election PLATFORM, DEFERRED RESOLUTIONS, PRESS RELEASES AND POSITION PIECES ISSUED DURING 1997-98

### DEPARTMENT OF AGRICULTURE

**\* AND AGRI-FOOD (1,976, 310,000)**

**renamed ECO-AGRICULTURE**

**Citizens have a human right to unadulterated healthy food. The human right to unadulterated healthy food is essential and must be based on the precautionary principle. The Food Inspection Branch in the Department of Agriculture has been derelict in the exercising of its duty to protect the food supply in Canada. Funds from the Department of Agriculture must be redirected from "working with the Agribusiness sector to develop and produce competitive products and processes, to increase production...to help position the Canadian agri-food sector to meet its objectives.." to promoting and supporting organic farming and other ecologically sound farming practices, and to assisting farmers and communities to ban GE foods and crops and convert from pesticide-dependent and GE-dependent farming and communities.**

**``Bill 24: for numerous reasons the ALR should be expanded not reduced.``**

Joan Russow PhD

Global Compliance Research Project

Premier Clark fails to recognize that reducing the land base in the ALR will impact on the BC policies related to ``putting families first`` and related to ``protecting farm land and farming families``. The BC government's proposal of reducing farm land in the ALR is out of sync with embracing the important concepts of food security, food sovereignty, precautionary principle and the rights of future generations

### **BILL 24 APPEARS TO CONTRADICT KEY BC GOVERNMENT PRIORTIES**

**Reducing the ALR does not put ``families first or ``conserve farm land`` and support farming families**

It was with great foresight that the agricultural land reserve was created. More and more citizens want to grow food and buy locally and also establish GE free zones..

The World Food Summit of 1996 defined food security as existing:

“When all people at all times have access to sufficient, safe, nutritious food to maintain a healthy and active life”. Commonly, the concept of food security is defined as including both physical and economic access to food that meets people's dietary needs as well as their food preferences...

Food security is built on three pillars:

- 
- Food availability: sufficient quantities of food available on a consistent basis.
- Food access: having sufficient resources to obtain appropriate foods for a nutritious diet.
- Food use: appropriate use based on knowledge of basic nutrition and care, as well as adequate water and sanitation.

A reservation was also expressed about the impacts of globalization ....Globalization may - or may not - lead to the persistence of food insecurity and poverty in rural communities.

With the increase in support for the 100 mile diet and buying local produce, it is unfortunate that the BC government should cause citizens to possibly be more and more dependent on the importation of food.

## **BILL 24 APPEARS TO SACRIFICE FOOD SOVEREIGNTY**

La Via campesina defined Food sovereignty as

The right of peoples to healthy and culturally appropriate food produced through ecologically sound and sustainable methods, and their right to define their own food and agriculture systems.

Food Secure Canada's policy platform, *Resetting the Table: A People's Food Policy for Canada*, provides a detailed account of what food Sovereignty is

## Food Sovereignty

- TO ENSURE THAT NO INDUSTRIAL FOOD PRODUCTION WOULD DESTROY THE HABITAT OF NATURAL AND WILD SPECIES (1998)

### Animals in Agriculture

- to establish and enforce standards for the care of farm animals;
- Phase out battery farming through stringent measures to favour free range husbandry;
- Ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement;
- Encourage a reduction in meat consumption with an educational campaign;
- Discourage the import and export of live animals over long distances;
- Phase in a ban on the use of growth stimulants for animals and the routine use of antibiotics in animal feeds; (B.C. POLICY CONVENTION, 1990)

GRANTS (- .022) \$2,860,000

### EXPANDING MARKETS

Economic Recovery Assistance  
Program (1998 Ice Storm)

Adaptation and rural development within  
the agriculture and agri-food sector

A Green Party government would undertake:  
Institutional changes

\* to develop and communicate eco-agricultural models and practices from studying and synthesizing principles from the diversity of sustainable, natural and eco-community-centred agricultural approaches created by indigenous peoples and traditional subsistence mixed farmers together with modern sustainable, organic agriculture, regenerative agriculture, permaculture, agroecology, and other approaches to farming the natural way in nature's image.

• to work for 50% of all farms to be organic [within 15 years] (GPC, 1997)

## PESTICIDE

• to phase-out without delay, the production, use and export of toxic herbicides and pesticides (GPC, 1988)

## ANTIBIOTICS

• to phase-out without delay the use of antibiotics and hormones in meat fish and other food production

\* to phase out Agriculture Canada and other federal research support for large-scale agribusiness chemical, pesticide and genetic and other bioengineering practices and refocus support on the development of family and community scale ecological agriculture models, principles and practices such as biological soil and pest management approaches like soil rebuilding crop rotations, companion planting, inter-cropping, and perennial polycultures.

• TO CALL UPON ALL LEVELS OF GOVERNMENT TO INSTITUTE PROGRAMS FOR SORTING AND RECYCLING OF ORGANIC WASTES (GPC, 1988)

\* to phase-out federal support for college and agency agribusiness

educational programmes and refocus supports on family farm and community scale eco-agriculture workshops, distance education, undergraduate and graduate and diploma.

## IRRADIATION

• is opposed to irradiated food because it is hazardous to consume and dangerous to produce, and because food irradiation presents citizens and consumers with greater health and safety risks than it offers in real benefits (GPC 1988)

• to prevent the creation of an infrastructure for the irradiation industry (GPC 1988)

• to label accurately any and all irradiated foods and food ingredients which are distributed despite the best efforts to prevent the irradiation of food (GPC 1988)

• to establish sound public policies which prohibit food irradiation (GPC, 1988)

- 

#### Genetically engineered foods ban

\* TO BAN /support a permanent ban on/ the sale or production of irradiated foods in the province. B.C. POLICY CONVENTION, 1987

- 

- to PARTICIPATE IN A BOYCOT AGAINST THE GENETICALLY ALTERED FOOD, SUCH AS CORN AND SOYA BEANS THAT HAVE BEEN ALTERED BY MONSANTO AND CIBA-GEIGY (1998)

\* to support each people's right to NON-GENETICALLY ENGINEERED OR NON-RADIATED FOOD WHICH HAS BEEN ORGANICALLY GROWN (1998)

- TO INVOKE THE PRECAUTIONARY PRINCIPLE AND INSTITUTE AN IMMEDIATE BAN ON ALL GENETICALLY ENGINEERED PROCESSES, FOODS, CROPS AND ANIMALS

- TO INVOKE THE "ORDRE PUBLIC" PRINCIPLE AND BAN THE PATENTING OF LIVING ORGANISMS AND THEIR PARTS

- TO CRIMINALIZE BIOPIRACY AND STEALING OF INDIGENOUS GENES AND KNOWLEGE OF FARMERS, PEASANTS, AND INDIGENOUS PEOPLES

- TO PLACE A MORATORIUM ON GENETICALLY ENGINEERED MEDICAL RESEARCH UNTIL ETHICAL STANDARDS CAN BE IN PLACE

- TO URGE THE FULL RATIFICATION OF THE CONVENTION ON BIOLOGICAL DIVERSITY AND THE ENACTMENT OF DOMESTIC LEGISLATION TO ENSURE COMPLIANCE

- TO PROMOTE ORGANIC AND ECOLOGICALLY SOUND AGRICULTURE

- TO INSTITUTE A FAIR AND JUST TRANSITION PROGRAM FOR AFFECTED FARMERS AND COMMUNITIES (ADAPTION OF SEATTLE STATEMENT ON GENETIC ENGINEERING, 1999)

#### Organic agriculture promotion

\* TO IMPLEMENT encourage methods that reduce dependence on chemicals and fossil fuels, and pursue renewable energy and ecologically sustainable agriculture, and promote this in urban and rural areas; and (B.C. POLICY CONVENTION, 1986)

- to adopt a set of national organic farming standards similar to those set out by the already organized organic growers' associations (GPC, 1988)

• To PROMOTE ORGANIC AGRICULTURE THROUGH REGULATIONS AND EDUCATION, AND THROUGH PHASING OUT THE USE OF CHEMICAL PESTICIDES THROUGH REGULATIONS AND EDUCATION (1998)

• to institute a five-year phase-out and eventual ban on all synthetic pesticides and herbicides; (GPC 1997)

\* to support basic and field research in the natural breeding, field

trials, propagation and protection of alternative ecologically adaptable crops such as native perennials, 'heritage' vegetables, grains, legumes and fruits, hemp and quinoa.

• to re-introduce heritage varieties (GPC, 1997)

• to fund only organic farming techniques research (GPC, 1997)

\* to support the establishment of a diversity of public and farm-based model demonstration and experimental stations for extension and education in each of Canada's natural regions.

TO PROMOTE /We will promote/ mixed farming for local consumption and we will reduce our economic dependence on specialized crop production for export. We will encourage research in the domestic use of plants as a food source. (AGRICULTURE ALBERTA POLICY 1997)

\* to establish, monitor and enforce Eco-agriculture Standards,

\* TO IDENTIFY AND ELIMINATE harmful additives, or other additives that are possibly disease causing, TO ENSURE THAT ALL ADDITIVES BE LISTED ON FOOD PACKAGING /be identified and/or identified on food packaging/; and POLICY CONVENTION, 1989

\* TO ENSURE THAT ALL all chemicals which have been used in growing and/or processing of any

food BE INCLUDED ON THE LABEL POLICY CONVENTION, 1989

\* TO BAN ALL /, including/ chemicals with known disease linkages, /be identified in advertising and at point of sale/. POLICY CONVENTION, 1989

Certification and Labeling.

• TO PASS /We will support/ a food information act that will require all food being sold, either packaged or fresh to list the contents and proportion of ingredients and any processing including irradiation that the food has undergone. We will support labeling of

bio-engineered or genetically altered food products. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to support the efforts of organic and ecological agriculture associations in establishing organic/ecological farm practice codes, standards and certification processes. Included in the principles and standards would be: the use of naturally bred, non-genetically manipulated plant or animal seed-stock; soils, plants and pests managed and grown without synthetic pesticides or significant soil loss or deterioration; farmstead and fields -planned and worked as part of an integral preserved or restored community of native woodlands, grasslands, wetlands and watershed protecting native plant and animal habitat; livestock provided with species-appropriate shelter, space and freedom of movement, clean water, natural foods free of antibiotics, no growth or lactation stimulants and humane treatment and transport.

• to work for development of a Canadian and an international certification program for organic produce (GPC, 1997)

\* TO ENCOURAGE consumers and governments TO SUPPORT producers of organic food; POLICY CONVENTION, 1987

\* TO support the creation of an Organic Food Consumer Advisory Board, regionally based, and democratically run, and also involved in marketing excess produce between regions and outside the province; and (POLICY CONVENTION, 1987)

\* TO INITIATE, PROMOTE AND support the development, with input from producers and consumers, of a system of organic food certifications; and (POLICY CONVENTION, 1987)

#### Pesticide elimination

\* TO GRANT, as a transitional measure, tax exemptions or other support to those food producers who resist the machine intensive, chemical fertilizer/spray trend in agriculture; and (B.C. POLICY CONVENTION, 1986)

• to offer tax incentives to farmers for conversion to organic agricultural methods as defined in the national standards (GPC, 1988)

• to offer strong support for small family and cooperatively managed farms, possibly through tax incentives (GPC, 1988)

• to work for the removal of tax rebates for fuel and equipment purchases. (GPC, 1997)

• To phase out nitrogen fertilizers from petro-chemicals, (GPC, 1988) and TO BAN THE RECYCLING OF TOXIC, AND HAZARDOUS WASTE INTO FERTILIZERS

\* TO BAN THE USE CHEMICAL PESTICIDES (Proposal by Ian Whyte)

• TO [ELIMINATE] /We will adopt a goal of/ elimination of pesticides and herbicides. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* to establish, monitor and enforce a system of labeling for both domestic and imported foods as to contents, chemicals utilized in cultivation and pest management, seed-stock breeding history if genetically engineered, livestock husbandry practices. An 'organic audit trail' and a regularly monitored and enforced food pesticide residue level process would be required components of this certification system.

#### Seed patenting prevention

- TO LEGISLATE AGAINST THE UNETHICAL PATENTING OF SEEDS BY MULTINATIONALS
- TO CEASE THE GENETIC MODIFICATION OF SEEDS TO WITHSTAND SPECIFIC HERBICIDE
- TO APPLY THE PRECAUTIONARY AND REVERSE ONUS PRINCIPLE TO BIOTECHNOLOGY AND REQUIRE SUBSTANTIAL REGULATION ALONG WITH PROHIBITION OF CERTAIN ACTIVITIES AND PRODUCTS AND SUBSTANCES (1998)

^

\* to inform consumers of the excessive amounts of protein, particularly meat protein used by Canadians

\* to revise the Canada Food Guide to present legumes, vegetables, fruits and grains as a complete alternative to a meat-based diet and one which will meet all nutritional needs, including all proteins, while reducing health hazards such as heart, stroke, kidney, urinary, osteoporosis and certain cancers.

\* To ban genetically engineered and irradiated foods (included in the Treaty circulated by the Green Party)

#### Agricultural land protection

- TO GUARANTEE CONSERVATION OF SAFE AND FERTILE AREAS FOR GROWING FOOD
- TO PROMOTE the Universal Declaration on the Eradication of Hunger and Malnutrition, WHICH AFFIRMED the importance of assuring “the proper conservation of natural resources being utilized, or which might be utilized, for food production, all countries must collaborate in order to facilitate the preservation of the environment, including the marine environment”. (Sect. 8., Universal Declaration on the Eradication of Hunger and Malnutrition, 1974) (1998)
- \* To preserve agricultural land for future agricultural use (B.C. POLICY CONVENTION, 1987)
- TO ENSURE THAT /We will ensure that/ public land leased for agricultural purposes is managed in such a manner that its ecological and recreational value is maintained.

Leaseholders will be responsible for preventing damage resulting from their activities. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- TO PROTECT /We will protect/ good agricultural land from urban expansion. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO advocate changes in the tax system that would eliminate speculation in agricultural land. (B.C. POLICY CONVENTION, 1986)

- \* To preserve potential agricultural land (open spaces and treed land) for possible future agricultural use, provided that it is not required for other ecosystem functions such as genetic diversity or oxygen balance; (B.C. POLICY CONVENTION, 1987)

- \* To establish effective agricultural DEPARTMENTS (B.C. POLICY CONVENTION, 1987)

- \* to establish a federal agricultural ALR program (GPC 1988)

- \* to ensure that where speculation and development pressures drive land costs up to prohibit agricultural uses of the land, buying land for agricultural land banks to make farming viable (perhaps by leasing to private renters for agricultural use) should be considered [IMPLEMENTED]. (B.C. POLICY CONVENTION, 1987)

- to ensure that food prices reflect the true environmental costs of production. (GPC, 1988)

#### Soil protection and enrichment

- \* TO reorient agricultural philosophy toward enriching the earth rather than depleting it; and. (B.C. POLICY CONVENTION, 1986)

- \* TO recognize that soil is a critical resource, and TO take appropriate measures to stop the process of soil erosion and degradation, and develop policies and actions toward regeneration of this vital life support system; and (B.C. POLICY CONVENTION, 1986)

- \* TO IMPLEMENT, PROMOTE AND support development of programs to restore damaged soils; and (B.C. POLICY CONVENTION, 1986)

- TO [INITIATE AND PROMOTE] /We will encourage/ research and education to help farmers sustain the topsoil on their land. (ALBERTA GREEN POLICIES, ALBERTA 1997)

- \* TO make pollution of water from agricultural chemicals a legal offence (B.C. POLICY CONVENTION, 1986)

- \* TO IMPLEMENT, PROMOTE AND SUPPORT /implementation of/ educational programs on soil conservation and sustainable agriculture; and (B.C. POLICY CONVENTION, 1986)

#### Genetic diversity

• TO ENSURE /We will take steps to ensure/ that the vital resources of genetic diversity of plant and animals is preserved and protected. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\*to ensure that the vital resource of the genetic diversity of plants and animals is preserved and protected. (B.C. POLICY CONVENTION, 1986)

\* TO DISCOURAGE THE METHODICAL USE AND ABUSE OF FERTILIZERS AND PESTICIDES (PREAMBLE B.C. POLICY CONVENTION, 1986)

\* TO DISCOURAGE MONOCULTURE AGRICULTURAL PRACTICES THAT RESULT IN DISTURBED ECOSYSTEMS IN WHICH NATURAL SUCCESSION HAS BEEN HALTED OR SET BACK (PREAMBLE B.C. POLICY CONVENTION, 1986)

\* TO support and PROMOTE integrated plant species farming and support the adoption of a more ecological approach to agriculture TO PREVENT SIMPLIFIED ECOSYSTEMS WHICH BECOME VULNERABLE TO PESTS AND OTHER IMBALANCES (PREAMBLE B.C. POLICY CONVENTION, 1986) \* TO adopt an official policy of opposition to Federal Bill [C 107 (formerly Bill C 32)] The Plant Breeders Rights Act BECAUSE THIS BILL WILL BE INSTRUMENTAL IN CONTRIBUTING TO THE DESTRUCTION OF THE WORLD'S PLANT GENETIC DIVERSITY, THEREBY THREATENING WORLD FOOD SUPPLY (Plant Patent Legislation)

B.C. POLICY CONVENTION, 1985

Subsidy elimination

\* TO INITIATE AND call for a formal inquiry into the SUBSIDIES, economic and environmental costs of domestic grazing animals ON FEDERAL AND PROVINCIAL CROWN LAND /to the BC land base/. INCLUDING THE PREEMPTION OF SUCH LAND FOR USE BY WILDLIFE (B.C. POLICY CONVENTION, 1990)

• TO REMOVE /WE will remove/ subsidies from unsuitable agricultural land and encourage its return to natural prairie forest or wetlands. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO INITIATE, PROMOTE support and work toward the return of the organic hemp industry to Canada FOR THE PROVISION OF FOOD, FUEL, FIBRE, PLASTIC AND SOME MEDICINES Any regulation or licensing should not limit small scale operations and should encourage grower collectives and co-operatives. ANNUAL GENERAL MEETING, 1994

\* TO oppose the commercial farming of wild animals for meat, and trophy hunts on farms and ranches, on private or crown land, in the province. (B.C. POLICY CONVENTION, 1986)

#### Animals in Agriculture

- to establish and enforce standards for the care of farm animals;
- Phase out battery farming through stringent measures to favour free range husbandry;
- Ban the sale and production of milk fed veal and any other agricultural practices requiring continuous close confinement;
  
- Encourage a reduction in meat consumption with an educational campaign; (BC Policy, 1990)
- Discourage the import and export of live animals over long distances;
- Phase in a ban on the use of growth stimulants for animals and the routine use of antibiotics in animal feeds; B.C. POLICY CONVENTION, 1990

• TO PHASE /We will phase/ out all game ranching and game farming in Alberta. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO promote regional food self-sufficiency globally (B.C. POLICY CONVENTION, 1986)

• TO PROMOTE SELF-SUFFICIENCY IN FOOD PRODUCTION (GPC 1988)

#### Self sufficiency promotion

• TO ESTABLISH /We will work toward establishing/ a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO PROMOTE /We will promote/ regional food self-sufficiency. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• [TO ESTABLISH] /We will work toward establishing/ a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

• TO discourage cheap food import policies; and (B.C. POLICY CONVENTION, 1986)

- TO ENSURE THAT with the aim of regional self-sufficiency, decisions regarding agricultural goals and commodity pricing would be locally decided; and (B.C. POLICY CONVENTION, 1986)

- \* TO encourage the development of farmers markets and community gardens. (B.C. POLICY CONVENTION, 1986)

- \* TO PROMOTE local production of food for local consumption WHICH is essential to strong local economies and self-sustaining communities (B.C. POLICY CONVENTION, 1986)

- \* TO ENSURE that the development of small-scale sustainable agriculture directed toward meeting local needs must be a resource priority for the Greens; and. (B.C. POLICY CONVENTION, 1986)

- \* TO ENSURE that suitable Crown land should be made easily available for small-scale sustainable agriculture and homesteading. (B.C. POLICY CONVENTION, 1986)

#### Exploitation of developing countries prevention

- \* TO ADDRESS THE ISSUE THAT reliance on the global market economy for food production perpetuates exploitation of the Third World, minority people, and the environment. (B.C. POLICY CONVENTION, 1986)

#### Nutrition information promotion

- \* TO PREVENT information about the nutritional requirements of humans BEING obscured by the food industry (POLICY CONVENTION, 1986)

- \* TO support education programs that would enable people to attain food nutrition by eating healthy, uncontaminated, locally grown food (POLICY CONVENTION, 1986).

- \* TO INITIATE, PROMOTE AND support a Food Information Act which would require all food being sold, packaged or fresh, to list the contents and any processing, including irradiation, the food has undergone.

- TO SUPPORT /We will support/ a food information act that will require all food being sold, either packaged or fresh to list the contents and proportion of ingredients and any processing including irradiation that the food has undergone. We will support labeling of bio-engineered or genetically altered food products. (ALBERTA GREEN POLICIES, ALBERTA 1997)

#### Free trade abrogation

- \* to cancel or renegotiate completely those aspects of GATT and NAFTA which distort and limit Canada's ability to restore a community and regionally based self sufficient and sustainable ecological agriculture and food provision system.

B. We will work toward establishing a self-sufficient regional economy centred upon local ownership and operation of businesses. A high level of foreign interests endangers

the security of our resources and environment. (ALBERTA GREEN POLICIES, ALBERTA 1997)

\* TO ELIMINATE THE PROVISIONS ALL FREE TRADE PROVISIONS THAT DISTORT AND LIMIT CANADA'S ABILITY TO RESTORE A COMMUNITY AND REGIONALLY BASED SELF SUFFICIENT AND SUSTAINABLE ECOLOGICAL AGRICULTURE AND FOOD PROVISION SYSTEM

\* [To abrogate NAFTA] This correction of the above section was made during the election on reviewing existing Green Party Policy]

\* TO WITHDRAW FROM GATT AND TO INSULATE CANADIANS FROM GLOBAL TRADE WITH TARIFFS, AND TO WORK TO RESTORE CANADIAN SELF-SUFFICIENCY IN BASIC GOODS AND SERVICES; (Deferred resolution proposed by Mark Mealing)

Anti-dumping provisions

\* TO IMPLEMENT STRONG AND SWIFT ANTI-DUMPING PROVISIONS TO ENSURE THAT CANADIAN COMPANIES AND WORKERS NOT HAVE TO COMPETE WITH EXPLOITIVE FIRMS IN OTHER PARTS OF THE WORLD (deferred resolution);

[\* To call for the signing and ratifying of the Convention on the Protection of Migrant workers and their families (passed by cabinet and circulated)]

[\* to call for the implementation of a Treaty for Fairness, Equity and

Environmental Soundness" to counteract vested interest economic agreements such at those emanating from OECD and WTO (treaty prepared; by the Green party of Canada and circulated internationally)]

\* TO WORK TOWARD THE INTERNATIONAL IMPLEMENTATION OF HUMANE, ECOLOGICALLY SOUND AND NON-EXPLOITIVE TRADE STANDARDS THROUGH A REVISED GATT (deferred resolution possibly addressed by the above);

\* TO WORK FOR INTERNATIONAL TRADE BASED ON RELATIONSHIPS WITH TRADING PARTNERS SET VIA A MULTI-TIERED TARIFF ARRANGEMENT THAT ASSIGNS TARIFF CLASSES ACCORDING TO THE DEGREE WITH WHICH:

A) WAGE, ENVIRONMENTAL, AND SAFETY STANDARDS ARE ENFORCED;

B) UNION ACTIVITY IS PROTECTED;

C) A TRADING PARTNER HAS A BALANCED ECONOMY; (deferred resolution possibly addressed by the above);

food self sufficiency. Where climatic and other natural limitations restrict the growing of food necessities by Canadians or other peoples, equitable trade will be established

directly between producer and consumers. Cooperatives or similar Green structures would replace transnational food cartels.

\* to complete a national Environment Canada/Agriculture Canada GIS Canada Land Inventory-based map zoned for agricultural and ecological integrated use planning and protection

\* to develop, cooperatively with the provinces, a programme of land use and protection standards and practices, education, incentives, disincentives and expropriation compensation to ensure that land managers utilize and/or protect their lands as per its zoning such that: prime farmland is protected for agriculture from industrial or residential development; endangered plant and animal habitat, and special ecocommunities are given ; farms are generally developed and operated as part of a sustainable natural ecocommunity by protecting and /or restoring native woodlands, grasslands, wetlands and watersheds.

Agribusiness encourages mono-cropping, chemical farming, centralization, over processing, long-distance transportation and decreased employment. Greens seek to preserve crop diversity, reconnect the farmer with the consumer and ensure a supply of locally produced, pesticide-free food. Product labels should indicate the use of pesticides and bio-engineering. (GREEN PARTY OF NEWFOUNDLAND).

- to increase employment through the establishment of small farms; (GPC, 1997)
- to work for consumer support of local farms (GPC, 1997)

## AGRICULTURE IN ONTARIO

The objective of Green agriculture policy is to:

- 1) Reestablish the financial viability of the family farm.
- 2) Assure a supply of locally produced food
- 3) Preservation of ecological diversity
- 4) Stability in social and economic life of a community

### Transitional Policy

-Reestablish import barriers to protect unfair competition from subsidized producers abroad.

-Establish prototype ecological communities incorporating organic agriculture and other sustainable activities as the base for economic activity.

-Remove all subsidies to chemical agriculture such as the P.S.T.

free status of pesticides.

#### Specific Policy Recommendations

-Redirect tax and subsidy programs to support organic techniques as a transition Integrated Pest Management should be encouraged. Based on survey results on nine commodities from 15 different states, and considering practices on only one crop per state, farmers using Integrated Pest Management collectively earned \$579 million more in profits than they would have otherwise. Texas cotton farmers using I.P.M. had net returns per hectare averaging \$282 higher than other cotton farmers. (Postel, 1987, p. 29)

-Tighten the regulation of topsoil removal and sales on a provincial and administrative basis according to the topsoil preservation act.

-Establish a program to set aside 25 % of Ontario's farmlands near Urban centers as community land trusts. These lands would be purchased at a fair market value as they became available and turned over to municipalities with the purpose of establishing local sources of food production. (See Community land trusts)

-Provide Homestead sites on provincially owned lands and interest free loans to unemployed and under employed individuals wishing to establish sustainable cooperatively based communities.

LOW T.H.C. HEMP the Green Party encourages the cultivation of hemp for ecological reasons:

1: Hemp growers in England have a return of \$ 3000 per acre, compared to the \$290 per acre that Canadians farmers get for grain.

2: Hemp can be grown for the production of biomass as a clean alternative to fossil fuels. An estimated 3 million acres of hemp would replace all of Canada's fossil fuel demands.

3: An acre of hemp will produce as much pulp for paper as 4

acres of trees over a twenty-year period. Current paper mills are convertible to hemp. Hemp paper-making process requires no dioxin-producing chlorine bleach and uses 75% less Sulphur-based acid. Until the late 1800s, 80% of all paper was made with hemp fiber.

4: Hemp can be grown in Canada, cotton cannot. Hemp cloth is stronger, more durable, warmer and more absorbent than cotton.

5: Hemp requires no herbicide, fungicide or insecticide applications and will grow in poor soils.

6: No licence should be required to grow Low THC Hemp. ANIMAL

## RIGHTS POLICY

-The Ontario Greens affirm that we must live in harmony with the natural world. Human survival depends on the vitality and health of other plants and animals.

-All species have the intrinsic right to exist without regard to their usefulness to humankind. All animals, whether wild or domesticated, have the right to fair and ethical treatment by human beings.

Killing for Food and Clothing.

-We acknowledge the right to kill animals to provide essentials.

Further consideration must be given to the needs of the aboriginal peoples right to self determine their practices on their lands.

-We feel a vegetarian diet is healthier, more environmentally benign and should be encouraged through education. (ALBERTA GREEN POLICIES, ALBERTA 1997)

The practice of agriculture is one of the cornerstones of human civilization. We encourage agricultural practices which are environmentally sound, economically viable and humane. (ALBERTA GREEN POLICIES, ALBERTA 1997)

## DEPARTMENT OF CITIZENSHIP AND IMMIGRATION

### CITIZENSHIP AND IMMIGRATION

Canada must discontinue socially inequitable and environmentally unsound international investment that contributes to the development of economic and ecological refugees. It would be important for the Department to acknowledge the role that Canada plays in contributing to the displacement of people. The Department must ensure that the Citizenship Act is not unjust and discriminatory and is in compliance with international law. and that the Act incorporates the recommendations of the Coalition for the rights of Immigrants and Refugees. The Act must not (i) discriminate on the grounds of social condition by giving priority to privileges of affluent applicants by bringing government policies in line with "the forces of globalization" (ii) penalize immigrants who may have inadvertently misrepresented her/himself on an application; (iii) discount the time spent in Canada as being counted for residence status; (iv) continue the use of terms such as "crime", abuse" and maintaining the safety of society which send a message that immigrants are dangerous; similarly or such as "illegal" being used to designate refugees; (v) permit excessive new powers of the Minister to annul citizenship or of the Cabinet to refuse citizenship on the basis of undefined 'national interest; (vi) download the costs of language and skills training to community groups and individual immigrants and refugees and their sponsors; (vii) intimidate potential sponsors with threats of law suits when failure to support sponsored immigrants occurs. The Government must implement the Convention for the Protecting of Refugees, and must sign and ratify and implement the Convention for the Protection of Migrant workers and their families.

Department

Immigration and Refugee Board

Proposed: That the words "reducing immigration" be removed from the Green Party of Ontario Policies, Section on Economics,

subsection, Limits to Population. (ONTARIO POLICY KINGSTON, 1997)

\* TO DEVELOP AN IMMIGRATION POLICY LINKED TO FOREIGN AND ENVIRONMENTAL POLICY (deferred resolution)

\* TO FOCUS IMMIGRATION POLICY ON POLITICAL REFUGEES REQUIRING ASYLUM RATHER THAN THE IMMIGRANTS' ABILITY TO PAY;

\* TO ELIMINATE THE \$1000 HEAD TAX (deferred resolution)

\* TO REDUCE THE NEED FOR LARGE SCALE IMMIGRATION DUE TO WAR, POVERTY AND ECOLOGICAL DESTRUCTION (deferred resolution)

\* TO FAIRLY COMPENSATE DEVELOPING COUNTRIES FOR THEIR COMMODITIES; (deferred resolution)

\* TO SUPPORT EMPOWERMENT AND EDUCATION FOR WOMEN, AS THESE APPEAR TO BE SIGNIFICANT FACTORS IN REDUCING POPULATION GROWTH. (Deferred resolution)

78.3.1 Population and Immigration

78.3.1 Population and Immigration

ANNUAL GENERAL MEETING, 1995

78.3.1. a Whereas the circumference of the earth is not increasing; and

78.3.1b Whereas continuation of population growth is killing us; and

78.3.1.c Whereas population multiplied by standard of living equals human impact on the biosphere; and

78.3.1. d Whereas a consumer in Canada consumes 16 times the quantity of resources consumed by a person in the developing world; and

78.3.1. e Whereas current Canadian immigration policy is based on "pay at the door" principles; and

78.3.1. f Whereas an unacceptable portion of people fleeing persecution are turned away from Canada

78.3.1 Resolved that BC seek a special deal for immigration management similar to that between the Canadian and Quebec governments transferring control over immigration from the federal to the provincial government

78.3.2 Further resolved that BC's immigration policy be to welcome political refugees (as determined by international standards) and immigration to re-unify the immediate family of Canadian residents

78.3.3 Further resolved that BC seek to phase in a goal of zero or negative population growth through increased direct aid to improve human rights and living conditions in developing countries and policies to decrease BC's birthrate

78.3.4 Further resolved that a policy of zero or negative population growth be adopted for the over-stressed and overburdened Georgia and Okanagan basins until a scientific audit of these regions' carrying capacity is carried out

78.3.5 Further resolved that we oppose settling on unceded First Nations' land without their approval

78.3.6 Further resolved that growth boundaries be developed for each bioregion

78.4.1 Population Density

78.4.1. a Whereas problems exist in current urban planning

78.4.1 Resolved that municipalities be encouraged to maintain the same aggregate density

## LIMITS TO POPULATION

Is not possible to plan for sustainability without considering population. Greens feel that population levels in Ontario and Canada must be reduced considerably. This should be accomplished through education, providing opportunities for women and reducing immigration. We also suggest removing any tax credits for second and subsequent children, as well as the elimination of all baby bonuses. (GREEN PARTY OF ONTARIO, 1994)

\* TO ENCOURAGE increased densification of residential areas including development of secondary suites to increase the currently insufficient industrial, agricultural and parkland

areas within cities (ANNUAL GENERAL MEETING, 1995)

## NEEDS A COMPREHENSIVE RESOLUTION

## DEPARTMENT OF DEFENCE

### NATIONAL DEFENCE (\$10,304,500,000)

1999 was the culmination of the Decade devoted to the furtherance of international law, and 2000 is the beginning of the Decade of a Culture of Peace. A culture of peace will be achieved through the "force of compliance". Through over 50 years of international agreements, the Canadian government has incurred obligations, made commitments and created expectations related to the promotion of the public trust. In a General Assembly resolution from 1981, for example, expectations were created that governments would reduce the military budget. The Canadian government has the opportunity of being at the forefront of promoting a culture of peace by reducing the military budget by 50% and relocating 3 billion into health care, 1 billion into higher education, 1 billion to Human Resources into an 'Anti-poverty fund for poor children and their families, and 304,500,000, to the department of environment. Two billion could be redirected into conversion programs linked with Just transition programs for affected workers, and 3 billion redirected into a natural and anthropogenic disaster prevention and mitigation training program and into promoting a culture of peace through the "force of compliance". This program could be used to prepare the Canadian military for the expected increase in weather related events brought about through climate change. This program could also be mandated to prevent risks incurred by the Federal government such as the berthing of nuclear armed or nuclear capable vessels, the continued use of bases such as the Nanoose weapons testing range, and the use and disposing of depleted uranium from military activities. 304,500,000 transferred to the department of environment to supplement the cost of restoring sites damaged through military activities.

A Green Party government would undertake:

- \* to enforce the World Court decision which affirmed that the use or threat of nuclear weapons is contrary to international humanitarian law.
- \* to terminate international training exercises with offensive purposes on Canadian soil. This includes low-level flying exercises in Goose Bay, Labrador, cruise missile testing in Cold Lake, Alberta and submarine training in Nanoose Bay, British Columbia.
- \* to convert the manufacturing of arms to sustainable and useful production.
- \* to reduce the military budget by 50% and transfer the savings into achieving a culture of peace-the guaranteeing of human rights, the protecting of the environment, the preventing of conflict, and the creating of socially equitable and environmentally sound work.
- \* to withdraw from the global arms race, including through the phasing out of uranium mining
- \* to promote the banning of nuclear, chemical and biological weapons, and land mines.
- \* to close Canadian waters and ports to nuclear armed and/or powered warships;
- \* to establish a civilian-based national defence program that would train citizens in unarmed national defense initiatives.
- \* to permit the redirection of taxes from the military to promote peace initiatives.

## 90.0 DEFENCE

### 90.1 Nuclear Weapons Free Canada

\*] TO ACT ON ADDRESSING THE ISSUE THAT] the international nuclear industry complex is intimately tied in with the nuclear arms race; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO [INITIATE, PROMOTE] support a nuclear free policy for Canada which includes:

cessation of exploration for and mining of radioactive materials;

the shut down of the nuclear industry including nuclear power plants;

the cessation of trade in nuclear technology inside and outside Canada with the exception (at this time) of that related to medical research; and

the banning of nuclear weapons and nuclear weapons technology from Canadian territory. (B.C. B.C. POLICY CONVENTION, 1988)

\* TO declare Canada a Nuclear Weapons Free Zone and require proof that persons or vehicles wishing to enter Canada ([via] land, sea, or air) are not carrying nuclear weapons; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO endorse the concept of an International Arctic Nordic Nuclear Weapons Free Zone; and (B.C. B.C. POLICY CONVENTION, 1988)

\* TO close Canadian ports and related facilities to all nuclear-powered vessels. (B.C. B.C. POLICY CONVENTION, 1988)

90.2 Peace and Security

(B.C. B.C. POLICY CONVENTION, 1990)

\* [TO MAKE CITIZEN AWARE THAT] the major threats to our security are changing climate, ozone depletion, diminishing resources, and deterioration of air quality, water, and soil; and (B.C. B.C. POLICY CONVENTION, 1990)

\* [TO ENSURE] that the spending of defense budgets and the training and use of defense personnel should address environmental protection and ecological preservation. This could include research of environmental abuse, ensuring environmental legislation is carried out, monitoring toxic storage facilities and organizing clean up programs; (B.C. B.C. POLICY CONVENTION, 1990)

\* TO [ENSURE THAT] defense forces perform treaty verification, search and rescue, and ecological reclamation (B.C. B.C. POLICY CONVENTION, 1990); and

\* TO [ENSURE] that all activities performed by defense forces be done non violently and that

training methods address the [FIND COMPLETION]

JULY JULY1998

COMMENT + ST. LOUIS BIODEVASTATION DECLARATION

From the July 17 -19, 1998, International Bio-devastation I Conference, St. Louis, USA.

Approved in principle in the plenary.

- TO BAN GENETICALLY ENGINEERED FOODS AND CROPS, THE HUMAN GENOME DIVERSITY PROJECT, TERMINATOR GENE AND EXPLOITATION OF THE KNOWLEDGE OF INDIGENOUS PEOPLES FOR PRIVATE PROFIT
- TO INSTITUTE A FAIR AND JUST TRANSITION PROGRAM FOR AFFECTED FARMERS AND COMMUNITIES

MINDFUL THAT;

THE PRECAUTIONARY PRINCIPLE affirms that where there is a threat to human health or to the environment, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent the threat. The precautionary principle has long been a tenet of international customary law and as such is required to be integrated into state law.

THE REVERSE ONUS PRINCIPLE means that where there is a reasonable apprehension that a process or product may pose a significant threat to human health or to the environment, the onus of proof is on the proponent to establish that the product or process is safe, and serves demonstrable public needs, rather than on the opponents to demonstrate harm. Many nations have also undertaken to adhere to this principle.

THE PREVENTION OF DISASTERS PRINCIPLE affirms that extreme care should be taken to prevent consequences that are likely to be unexpected, possibly long-term, and thus difficult to determine through tests. At recent international conferences, the member states of the United Nations have committed themselves to observe the Prevention of Disasters Principle including both natural human caused (anthropogenic) disasters.

THE PREVENTION OF TRANSFER TO OTHER STATES OF HARMFUL SUBSTANCES ensures that substances and activities that are harmful to human health or that cause environmental destruction will not be transferred to other states.

THE PREVENTION OF ACTIVITIES THAT ARE CULTURALLY INAPPROPRIATE PRINCIPLE

ensures that nothing shall be done on the lands of indigenous peoples that would cause environmental harm or be culturally inappropriate.

THE INTERGENERATIONAL EQUITY PRINCIPLE ensures the rights of future generations and the right of a child to a safe environment.

THE NUREMBERG PRINCIPLE holds that citizens are morally obliged to act to oppose unjust laws and unjust state actions.

These principles have been endorsed by the member states of the United Nations. Many governments have disregarded these principles in giving uncritical support to corporations engaged in genetic experimentation and in promoting genetic engineering in agribusiness applications.

AFFIRMING THAT:

The introduction of genetically modified substances is an irresponsible experiment being conducted on the entire planet, with little or no research its effects on the environment or human health. Genetically modified organisms are by definition new life forms which, if released into the natural environment, may well have unanticipated synergistic interactions with an unlimited range of existing organisms. The introduced genes have the potential to spread out of control, both by cross-pollination to related species and horizontal transfer to unrelated species. For instance, pollen from crops carrying the terminator gene -- the gene that renders the seed from a crop infertile -- may disperse and infect crops in other fields, also rendering them infertile. There are also well founded concerns about the unintended effects of introducing foreign genetic material into organisms which are ingested by humans, which may include toxins and allergens.

The introduction of new organisms has potential ramifications which are complex, long-term, and unpredictable. The prevention of anthropogenic disasters must surely include avoiding the introduction of new procedures and substances with such far reaching ramifications, especially where neither the benefits nor the needs for them are yet proven. These complex ramifications may be difficult or impossible to assess with sufficient certainty to justify production.

NOTING THAT: that there is new evidence of hazards:

\* Herbicide resistant transgenes have spread to wild relatives by cross pollination in both oilseed rape and sugar beet (Brookes, 1999) creating many species of potential superweeds. One study shows that transgenes may be up to 30 times more likely to escape than the plant's own genes (Bergelson, J, Purrington, B and Wichmann, G, 1998).

- Bt-toxins engineered into a wide range of transgenic plants already released into the environment may build up in the soil and have devastating impacts on pollinators and other beneficial insects (Crecchi, C and Stotzky, G, 1998)
- Serious doubts over the safety of transgenic foods are raised by new revelations on the results of animal feeding experiments. Potatoes engineered with snowdrop lectin fed to rats caused highly significant reduction in width of many organs, impairment of immunological responsiveness and signs suggestive of viral infection. (Leake, C. and Fraser, L (1999).
- Research from the Netherlands show that antibiotic resistant marker genes from genetically engineered bacteria at a substantial frequency of  $10^{-7}$  in an artificial gut (MacKenzie, D, 1999).

There is sufficient concern about genetically engineered foods and sufficient anticipatory scientific concern about the possible interaction of genetically engineered crops with existing organisms to justify the banning of genetically modified foods and crops. It is possible that no test could be devised that would be comprehensive enough to demonstrate the safety of introducing genetically modified organisms, because of the complexities which can arise from their interaction with existing organisms.

#### CONCERNED THAT

Government representatives at the recent meeting of the Codex Alimentarius in Ottawa ignored citizens' call for urgent action to label existing genetically engineered foods, and to extend the Codex Alimentarius' terms of reference to include a call for banning genetically engineered foods. The representatives of the Codex Alimentarius had the unique opportunity to finally demonstrate that the global community is prepared to prevent future generations from being exposed to the effects of present negligence. In addition, the Global Community failed to negotiate a Biosafety Protocol.

#### WE ARE FURTHER CONCERNED THAT

universities have entered into substantive contracts with agribusiness companies involved with genetically engineered foods; and that many agribusiness companies have been exploiting indigenous peoples' knowledge of esoteric organisms and their medicinal effects;

## AND WE REJECT

The myth perpetuated by Monsanto and the Biotechnology industry that the world cannot be fed without genetic engineering, and that small farmers do not feed the world;

WHILE a considerable percentage of the world's known biodiversity is located in developing countries, any effective mechanism for the protection of and reward for the local custodians of these genetic resources is being stalled by northern, industrialized nations.

## THEREFORE, WE CALL UPON: --

The United Nations to call upon member states of the United Nations:

\* to act immediately to call for the implementation of existing International declarations, conventions, covenants, treaties on human rights and the environment to support the cancellation of the human genome diversity project, the patenting of seeds, and all further commercial exploitation of indigenous peoples and of the knowledge of indigenous

peoples;

• to prevent, under the Convention on Biological Diversity (a) the transfer of all Genetically modified organisms, and (b) the development of pesticide resistant crops;

• to immediately halt the harvesting of genetic material of indigenous peoples and to demand that these efforts be replaced with international dedication to preserving the existence of indigenous peoples and their culture;

• to prevent "bio-prospecting" -- exploiting and patenting the knowledge of indigenous peoples;

• to not defeat the purpose of the Convention on Biological Diversity by failing to invoke the precautionary principle to justify the banning of the production of genetically engineered foods and crops;

\* to recognize that conservation of Biodiversity is antithetical to the development and altering through genetic engineering;

\* to prevent under the Convention on Biological Diversity the transfer of all Genetically modified organisms;

\* to call for an immediate moratorium on research, development, release, and movement of genetically engineered foods and crops; including those modified for producing industrial chemical and pharmaceutical products, XENOTRANPLANTATION RESEARCH AND EXPLOITATION, HUMAN EMBRYO RESEARCH AND EXPLOITATION AND HUMAN CLONING.

- \* to prevent under the Convention on Biological Diversity the development of pesticide resistant crops;
- \* to ban genetically engineered foods and immediately remove all genetically engineered foods from the food distribution system;
- \* to institute an immediate ban on genetically engineered Bovine Growth Hormone, and endorse the campaign to rid rBGH from school milk (passed in plenary);
- \* to keep forests, farms and food safe, and to oppose the genetic engineering of all plants and animals (passed in plenary);
- \* to abolish patents of genetic sequences and living organisms in the form of "intellectual property rights" (passed in plenary);
- \* to stop the national violence initiative project (U.S.), and to immediately halt the drugging of black and Latino children in the name of their supposed "genetic predisposition" to committing crimes because neither behaviour nor intelligence is racially or genetically determined (passed in plenary);
- \* to disband the human genome diversity project and end the colonization of the genes of indigenous people (passed in plenary);
- \* to immediately cease the administration of experimental and genetically engineered drugs to prisoners, people living on American Indian reservations, and people in so-called "third world" countries (passed in plenary);
- to ban "terminator" seed technology and patents, and to immediately cease all "terminator" tests and ban its application (passed in plenary);
- to encourage smaller-scaled organic farming, local food systems, home-scale gardening, and ecosystem restoration and to oppose the consolidation of corporate and monocrop farming and their reliance on genetic engineering and toxic herbicides and insecticides (passed in plenary);
- to urge the Grammeen bank to discontinue all further "partnerships" with Monsanto and its affiliated corporations;
- to discontinue all financial support for agribusiness, and to financially support and promote organic agriculture;
- to ensure that the designation of "organic" does not include genetically engineered food, irradiated food or related practices;
- to prevent the transfer to other state particularly developing states of substances and activities that cause environmental degradation or that are harmful to human health, and to recognize that compliance with this principle from the Rio Declaration would entail the prevention of transfer of genetically modified organisms;
- to condemn the use of genetic screening to discriminate against employees;

- to implement the 1986 UN resolution to ensure that the use of scientific technology is in peace and for the benefit of humanity;
- to guarantee the farmers right to produce seeds and to recognize this as a human right in fulfilling the guaranteed right to food;
- to call upon states to implement the right of citizens to organically grown, affordable, accessible food;
- to ensure that citizens are fed clean, nutritional organically grown food before food is authorized for export;
- to condemn the conversion of sensitive ecosystems for ranches and cattle production;
- to condemn the round table approach to decision making that compromises ethics, that fosters and condones conflict of interest, undermines principle and leads to the lowest common denominator;
- to act on the commitment made in 1972 to eliminate the production of weapons of mass destruction, and to enter into a binding agreement as a Convention for the Elimination of the Production of Biological Weapons, to not allow vested economic interest of biotechnological and genetic engineering industries to thwart the resolve to negotiate this convention;
- to endorse October 15 the Eve of World Food day as the Global Days of Action against Genetically engineered food, and subsequent Global Days of Action against genetically engineered foods and crops. PAGES 5-14 NOT INCLUDED

#### The Nation States:

- to oppose the extension of intellectual property rights to life forms, whether it be for humans, animals, plants, microorganisms, or their genes, cells or other parts;
- to change provisions in patent acts to prevent theft of biodiversity related knowledge;
- to refuse to grant patents to corporations for methods and products based on traditional practices, or other information gleaned from the collective knowledge and wisdom of indigenous peoples with respect to the medicinal use of plants and animals or any other matter without fair royalties being paid to those peoples;
- to refuse to issue patents for life forms and to refuse to recognize life form patents issued elsewhere;
- to oblige corporations to discontinue the use of the "terminator gene" which destroys the fertility of seeds;

- to transfer existing funding and support for agribusiness and for genetically engineered projects to socially equitable and environmentally sound organic agriculture, and to institute a fair and just transition program for farmers and communities affected economically by the banning of genetically engineered crops;
- to implement the 1986 United Nations resolution to ensure that the use of scientific technology is in peace and for the benefit of humanity;
- to deny non-profit and charitable status to NGOs that receive funding from corporations and their affiliates;
- to prevent the collusion between regulatory bodies, universities and corporations;
- to condemn the practice of corporations of requiring farmers to sign gene-licensing agreements, and of hiring informers to report on farming practices;
- to guarantee the farmers right to save seeds;
- to revoke charters and licenses of corporations for violation of human rights, including labour rights, denying social justice, destroying the environment, undermining economic self-sufficiency, or contributing to conflict, violence and war;
- to ensure that regulatory agencies are not promoters of the technology.
- To convert chemically dependent genetically engineered farms to organic farms, and to support a fair and just transition program for affected farmers and communities.

#### The World Bank, IMF, and Development Agencies:

- to refuse to fund all agribusiness and genetically engineered food research and development;
- to fund only socially equitable and environmentally sound organic agriculture;
- to discontinue structural adjustment programs and forgive third world debt;
- to no longer conceive of the refusal to accept genetically engineered foods and seeds as a barrier to trade.

#### The Regulatory Agencies:

- to provide for stiff regulations preventing the development, distribution, patenting etc. of genetically engineered foods;
- to establish regulations which will phase out agribusiness and promote socially equitable and environmentally sound organic agriculture;

- to no longer conceive the refusal to accept genetically engineered foods and seeds as being a barrier to trade.

#### The Universities:

- to discontinue all further support research genetically engineered foods and crops;
- to cancel all existing contracts with corporations that are researching and developing genetically engineered foods and crops;
- to voluntarily put into the public domain all existing research data so that patents based on such findings cannot be obtained.

#### The Wholesale and Retail Industry:

- to communicate to the companies that produce genetically engineered food the refusal to carry genetically engineered foods;
- to move towards supporting and promoting organically grown products;
- to ensure that the produce is not genetically engineered and post notices to that effect;
- to refuse to sell genetically engineered foods and to communicate this refusal to companies that produce such food.

#### The Growers:

- to refuse to purchase seeds from any of the companies that engage in the research and development of genetically engineered foods;
- to ensure a larger gene pool to present seed diversity;
- to work on continued research into crops that are naturally resistant to disease;
- to lobby for the banning of the "terminator" gene.

#### The Non-Government Organizations (NGOs):

- to refuse to accept funding from corporations or corporate affiliations or front groups;
- to ensure that the terms of reference in decision making processes is broad enough to address the issues related to whether the activity or substance should be engaged in or produced in the first place;

- to discourage the undermining of resolve to do what is necessary by being satisfied with what is possible or "reasonable";
- to work with farmers on mutual information and education about the hazards of Genetically engineered foods;
- to refuse to settle for half way measures and partial solutions in the quest for being reasonable.

The Citizens:

- to urge governments, regulatory agencies, universities, and wholesale and retail industry to discontinue all further development and distribution of genetically engineered food;

I had been asked to speak at the final plenary to prepare during the conference I wrote down all the strong statements during the conference. I was continually calling for banning of genetically engineered foods and crops ; others were calling for labeling Near the end, there seemed to be more support for banning

I undertook to draft a declaration based on the notes I had taken during the conference to be presented, along with the representative from the EU, in the last plenary.

EXHIBIT

ST LOUIS

BIODEVASTATION DECLARATION

July 19, 1998

Background:

From July 17 -19, 1998 the First Grassroots Gathering on Bio-devastation: Genetic Engineering took place St Louis, USA. This conference was hosted by the Gateway Green Alliance party, the Pure food Campaign, Social Ecology Institute, and the Edmonds Institute. The Declaration was presented at the panel on Global Organizing for Citizen empowerment, and was adopted in principle in the final plenary on July 19.

The Declaration was formed throughout the Conference as a compilation of concerns expressed and statements of action proposed by the participants at the conference. It is not the final version and needs to be organized, edited and is being circulated for further clarification and strengthening.

In addition in the final plenary, resolutions were passed in calling for (i) Disbanding the Human Genome Project and ending the colonization of the genes of indigenous peoples; (ii) opposing the genetic engineering of all plants and animals; (iii) banning genetically engineered bovine Growth hormone; (iv) banning the terminator gene, and the production of genetically engineered foods; (v) condemning the reliance on genetic engineering and toxic herbicides and insecticides; (vi) Abolishing patents of genetic sequences and living organisms in the form of intellectual property rights

The above resolutions passed at the plenary in final form will form part of the Bio-devastation Declaration.

This Conference has been a basis for the establishment of a global movement against genetically engineered foods and associated issues. It was agreed that every effort will be made to participate in the Global days of action on October 15 —on the eve of the World food day. ADOPTED IN PRINCIPLE CIRCULATED FOR FURTHER COMMENT AND ENDORSEMENT:

## ST LOUIS BIODEVASTATION DECLARATION

TO BAN

GENETICALLY ENGINEERED FOODS,

THE HUMAN GENOME PROJECT, TERMINATOR GENE AND

EXPLOITATION OF THE KNOWLEDGE OF INDIGENOUS PEOPLES FOR PRIVATE PROFIT

MINDFUL THAT THE PRECAUTIONARY PRINCIPLE affirms that where there is a threat to

human health or to the environment, the lack of full scientific

certainty shall not be used as a reason for postponing measures to

prevent the threat. The precautionary principle has long been a tenet

of international customary law and as such is required to be

integrated into state law.

THE REVERSE ONUS PRINCIPLE means that where there is a reasonable

apprehension that a process or product may pose a significant threat to

human health or to the environment, the onus is on the proponent to

establish that the product or process is safe, and serves demonstrable public needs, rather than on the

opponents to demonstrate harm. Many nations have also undertaken to adhere to this principle

THE PREVENTION OF DISASTERS PRINCIPLE affirms that extreme care should be taken to prevent consequences that are likely to be unexpected, possibly long-term, and thus difficult to determine through tests. At recent international conferences, the member states of the United Nations have committed themselves to observe the Prevention of Disasters Principle including both natural human caused (anthropogenic) ecological disasters.

THE PREVENTION OF TRANSFER TO OTHER STATES OF HARMFUL SUBSTANCES ensures that substances and activities that are harmful to human health or that cause environmental destruction will not be transferred to other states

THE PREVENTION OF ACTIVITIES THAT ARE CULTURALLY INAPPROPRIATE PRINCIPLE ensures that nothing shall be done on the lands of indigenous peoples that would cause environmental harm or be culturally inappropriate

THE INTERGENERATIONAL EQUITY PRINCIPLE ensures the rights of future generations and the right of a child to a safe environment

THE NUREMBERG PRINCIPLE holds that citizens are morally obliged to act to oppose unjust laws and unjust state actions.

These principles have been endorsed by the member states of the United Nations.

Many governments have disregarded these principles in giving uncritical support to corporations engaged in genetic experimentation and in promoting genetic engineering in agribusiness applications.

AFFIRMING THAT:

The introduction of genetically modified substances is an irresponsible experiment being conducted on the entire planet, with little or no research on with respect to its effects on the environment or human health. Genetically modified organisms are by definition new

life forms which, if released into the natural environment, may well have unanticipated synergistic interactions with an unlimited range of existing organisms. For instance, pollen from crops carrying the terminator gene- the gene that renders the seed from a crop infertile- may disperse and infect crops in other fields, also rendering them infertile. There are also well founded concerns about the unknown effects of introducing animal genetic material into plants which are ingested by humans.

The introduction of new organisms has potential ramifications which are complex, long-term, uncertain and ambiguous. The prevention of anthropogenic disasters must surely include avoiding the introduction of new procedures and substances with such far reaching ramifications, especially where there has been hardly any effort, let alone sufficient time to determine the nature and extent of the potential deleterious impact on health and on the environment.

Genetically altered foods will have epidemiological and toxicological properties more like drugs than like food. They must therefore be subject to tests for mutagenicity and carcinogenicity, for their effect on fetuses during pregnancy, their long-term side effects, their interactive effects with other drugs chemicals, or GM foods, and so on. In addition, they must be tested on common bacteria of the human (and other animal) microbial ecologies. We must know whether an antibiotic marker gene can pass antibiotic resistance to pathogens, or if it can recombine or transfer to bacteria or viruses, etc. These tests and their complex ramifications may be difficult or impossible to assess with sufficient certainty to justify production.

NOTING THAT:

The absence of proven deleterious consequences on health and the environment must not be used to justify the production of potentially calamitous and untested substances, including genetically engineering foods.

There is sufficient concern about genetically engineered foods and sufficient anticipatory scientific concern about the possible interaction of genetically engineered crops with existing organisms to justify the banning of genetically modified foods and other organisms until their potential interaction with existing organisms has been thoroughly tested in complete isolation from the natural environment. It is possible that no test could be devised that would be comprehensive enough to demonstrate the safety of introducing genetically modified organisms, because of the complexities which can arise from their interaction with existing organisms.

OUTRAGED THAT:

Government representatives at the recent meeting of the Codex Alimentarius in Ottawa ignored citizens' call for urgent action to label existing genetically engineered foods, and to extend the Codex Alimentarius' terms of reference to include a call for banning genetically engineered foods. The representatives of the Codex Alimentarius had the unique opportunity to finally demonstrate that the global community is prepared to prevent future generations from being exposed to the effects of our negligence.

WE ARE FURTHER OUTRAGED that universities have entered into substantive contracts with pharmaceutical and agribusiness companies

involved with genetically modified organisms, including genetically engineered foods; and that many pharmaceutical and agribusiness companies have been exploiting indigenous peoples' knowledge of esoteric organisms and their medicinal effects;

AND WE REJECT the myth perpetuated by Monsanto and the Biotechnology industry that the world cannot be fed without genetic engineering, and that small farmers do not feed the world.

WHILST a considerable percentage of the world's known biodiversity is located in developing countries, any effective mechanism for the protection of and reward for the local custodians of these genetic resources is being stalled by northern, industrialized nations.

THEREFOR, WE CALL UPON:

The United Nations

to call upon member states of the United Nations:

- to act immediately to call for the implementation of existing international declarations, conventions, covenants, treaties on human rights and the environment to support the cancellation of the human genome project, the patenting of seeds, and all further commercial exploitation of indigenous peoples and of the knowledge of indigenous peoples. and also to prevent, under the Convention on Biological Diversity
  - (a) the transfer of all Genetically modified organisms, and
  - (b) the development of pesticide resistant crops
  
- to immediately halt to harvesting genetic material of indigenous peoples and to demand that these efforts be replaced with international dedication to preserving the existence of indigenous peoples and their culture.
  
- to prevent "bio-prospecting" — exploiting and patenting the knowledge of indigenous peoples

- to not defeat the purpose of the Convention on Biological Diversity by failing to invoke the precautionary principle to justify the banning of the production of genetically engineered foods
- to recognize that conservation of Biodiversity is antithetical to the development and altering through genetic engineering
- to prevent under the Convention on Biological Diversity the transfer of all Genetically modified organisms
- to call for an immediate moratorium on research, development, release, and movement of genetically engineered organisms
- to prevent under the Convention on Biological Diversity the development of pesticide resistant crops
- to ban genetically engineered foods and immediately remove all genetically engineered foods from the food distribution system
- to institute an immediate ban on genetically engineered Bovine Growth Hormone, endorsing the campaign to rid rBGH from school milk. (passed in plenary)
- TO KEEP OUR FORESTS, FARMS AND FOOD SAFE, AND OPPOSING THE GENETIC ENGINEERING OF ALL PLANTS AND ANIMALS. (PASSED IN PLENARY)
- TO ABOLISH PATENTS OF GENETIC SEQUENCES AND LIVING ORGANISMS IN THE FORM OF "INTELLECTUAL PROPERTY RIGHTS." (PASSED IN PLENARY)
- TO STOP STOPPING THE NATIONAL VIOLENCE INITIATIVE PROJECT (U.S.), AND AN IMMEDIATE HALT TO THE DRUGGING OF BLACK AND LATINO CHILDREN IN THE NAME OF THEIR SUPPOSED "GENETIC PREDISPOSITION" TO COMMITTING CRIMES. (CONTRARY TO THE ASSUMPTIONS OF THE VIOLENCE INITIATIVE PROJECT, THE CONVENTION ASSERTED, NEITHER BEHAVIOR NOR INTELLIGENCE IS RACIALLY OR GENETICALLY DETERMINED.) (PASSED IN PLENARY)
- TO DISBAND THE HUMAN GENOME DIVERSITY PROJECT AND PUTTING AN END TO THE COLONIZATION OF THE GENES OF INDIGENOUS PEOPLE. (PASSED IN PLENARY)
- TO IMMEDIATELY CESS THE ADMINISTRATION OF EXPERIMENTAL AND

GENETICALLY ENGINEERED DRUGS TO PRISONERS, PEOPLE LIVING ON AMERICAN INDIAN RESERVATIONS, AND PEOPLE IN SO-CALLED "THIRD WORLD" COUNTRIES. (PASSED IN PLENARY)

- TO BAN "TERMINATOR" SEED TECHNOLOGY AND PATENT THE IMMEDIATE CESSATION OF ALL "TERMINATOR" TESTS AND A BANNING OF ITS APPLICATION. (PASSED IN PLENARY)

- TO ENCOURAGE SMALLER-SCALED ORGANIC FARMING, LOCAL FOOD SYSTEMS, HOME-SCALE GARDENING, AND ECOSYSTEM RESTORATION. THE CONVENTION OPPOSED THE CONSOLIDATION OF CORPORATE AND MONOCROP FARMING AND THEIR RELIANCE ON

GENETIC ENGINEERING AND TOXIC HERBICIDES AND INSECTICIDES. (PASSED IN PLENARY)

ADOPTED IN PRINCIPLE CIRCULATED FOR FURTHER COMMENT AND ENDORSEMENT:

1998 ST LOUIS BIODEVASTATION DECLARATION ADOPTED IN PRINCIPLE AT THE PLENARY OF THE CONFERENCE OF THE GREEN PARTIES OF AMERICAS IN OAXACA MEXICO

TO BAN GENETICALLY ENGINEERED FOODS,  
THE HUMAN GENOME PROJECT, TERMINATOR GENE AND  
EXPLOITATION OF THE KNOWLEDGE OF INDIGENOUS PEOPLES FOR PRIVATE PROFIT

MINDFUL THAT

THE PRECAUTIONARY PRINCIPLE affirms that where there is a threat to human health or to the environment, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent the threat. • TO ENCOURAGE SMALLER-SCALED ORGANIC FARMING, LOCAL FOOD SYSTEMS, HOME-SCALE GARDENING, AND ECOSYSTEM RESTORATION. THE CONVENTION OPPOSED THE CONSOLIDATION OF CORPORATE AND MONOCROP FARMING AND THEIR RELIANCE ON

GENETIC ENGINEERING AND TOXIC HERBICIDES AND INSECTICIDES.

(PROPOSED CIRCULATED AND REVISED WITH CONSULTATION, MOVED BY JOAN RUSSOW , SECONDED BY GREEN PARTY REPRESENTATIVE FROM THE EUROPEAN PARLIAMENT AND PASSED IN PRINCIPLE IN THE PLENARY)

( ) THAT in July 1998 I HAD TO MAKE A DIFFICULT DECISION ABOUT THE CLAYOQOT FUND

1998 July 1998 Felix Cruz arrested because of Clayoquot. There was an outstanding warrant for his arrest as a result of Clayoquot. the Green Party had set up a defence fund for the Clayoquot defenders. There was still about 10.000 in the fund. There was continual debate About the fund. The protesters in the Slocan had wanted us to transfer the fund to assist in the protest against Slocan Forest Products. while I supported the campaign in the Slocan ,I felt that the donors had give the money specifically to the defenders of Clayoquot Sound, and given that there were still outstanding warrants for the arrest of some protestors we should keep the fund for its original purpose

Pia Massey. Also had an outstanding warrant some of the fund was sent to her lawyer was Shulaman and her case was solved

Catherine Tyhurst.

( ) THAT in 1998 in July, I was contacted by Catherine Tyhursts, the lawyer for the arrestees told me that there were 40 outstanding warrants, and that she had been successful in ... Felix's case. But she was not able to obtain the names without the permission of the Friends of Clayoquot Sound. I contacted the Friends and I was told that they felt that they were no longer responsible. I guess they were afraid of legal repercussion

( ) THAT in July gave a presentation to VIVA on the Bio-devastation I Conferences

( ) THAT in 1998 July Gave a presentation on the Applicability of International Principles to the Issue of Genetically Engineered Foods and Crops. at the Bio-devastation 1 Conference, St Louis Mo. Drafted and presented the "Bio-devastation Declaration" at the Bio-devastation Conference.

The Unholy Alliance written in the 1998 by Dr Mae-Wan Ho

EXHIBIT

1975

The Unholy Alliance by Dr Mae-Wan Ho Genetic engineering biotechnology is inherently hazardous. It could lead to disasters far worse than those caused by accidents to nuclear installations. In the words of the author, "genes can replicate indefinitely, spread and recombine." For this reason the release of a genetically engineered microorganism that is lethal to humans could well spell the end of humanity. Unfortunately the proponents of this terrifying technology share a genetic determinist mindset that leads them to reject the inherently dangerous nature of their work. What is particularly worrying at first sight is the irresistible power of the large corporations which are pushing this technology. Suddenly, the brave new world dawns. Suddenly, as 1997 begins and the millennium is drawing to a close, men and women in the street are waking up to the realization that genetic engineering biotechnology is taking over every aspect of their daily lives. They are caught unprepared for the avalanche of products arriving, or soon to arrive, in their supermarkets: rapeseed oil, soybean, maize, sugar beet, squash, cucumber ... It started as a mere trickle less than three years ago - the BST-milk from cows fed genetically engineered bovine growth hormone to boost milk yield, and the tomato genetically engineered to prolong shelf life. They had provoked so much debate and opposition; as did indeed, the genetic screening tests for an increasing number of diseases. Surely, we wouldn't, and shouldn't, be rushed headlong into the brave new world. Back then, in order to quell our anxiety, a series of highly publicized "consensus conferences" and "public consultations" were carried out. Committees were set up by many European governments to consider the risks and the ethics, and the debates continued. The public were, however, only dimly aware of critics who deplored "tampering with nature" and "scrambling the genetic code of species" by introducing human genes into animals, and animal genes into vegetables. Warnings of unexpected effects on agriculture and biodiversity, of the dangers of irreversible "genetic pollution", warnings of genetic discrimination and the return of eugenics, as genetic screening and prenatal diagnosis became widely available, were marginalized. So too were condemnations of the immorality of the "patents on life" - transgenic animals, plants and seeds, taken freely by geneticists of developed countries from the Third World, as well as human genes and human cell lines from indigenous peoples. By and large, the public were lulled into a false sense of security, in the belief that the best scientists and the new breed of "bioethicists" in the country were busy considering the risks associated with the new biotechnology and the ethical issues raised. Simultaneously, glossy information pamphlets and reports, which aimed at promoting "public understanding" of genetic "modification" were widely distributed by the biotech industries and their friends, and endorsed by government scientists. "Genetic modification", we are told, is simply the latest in a "seamless" continuum of biotechnologies practised by human beings since the dawn of civilization, from bread and wine-making, to selective breeding. The significant advantage of genetic modification is that it is much more "precise", as genes can be individually isolated and transferred as

desired. Thus, the possible benefits promised to humankind are limitless. There is something to satisfy everyone. For those morally concerned about inequality and human suffering, it promises to feed the hungry with genetically modified crops able to resist pests and diseases and to increase yields. For those who despair of the present global environmental deterioration, it promises to modify strains of bacteria and higher plants that can degrade toxic wastes or mop up heavy metals(contaminants). For those hankering after sustainable agriculture, it promises to develop Greener, more environmentally friendly transgenic crops that will reduce the use of pesticides, herbicides and fertilizers. Unholy Alliance, by Dr Ho Página 1 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 That is not all. It is in the realm of human genetics that the real revolution will be wrought. Plans to uncover the entire genetic blueprint of the human being would, we are told, eventually enable geneticists to diagnose, in advance, all the diseases that an individual will suffer in his or her lifetime, even before the individual is born, or even as the egg is fertilized in vitro. A whole gamut of specific drugs tailored to individual genetic needs can be designed to cure all diseases. The possibility of immortality is dangling from the horizons as the "longevity gene" is isolated. There are problems, of course, as there would be in any technology. The ethical issues have to be decided by the public. (By implication, the science is separate and not open to question.) The risks will be minimized. (Again, by implication, the risks have nothing to do with the science.) After all, nothing in life is without risk. Crossing roads is a risk. The new biotechnology (i.e. genetic engineering biotechnology) is under very strict government regulation, and the government's scientists and other experts will see to it that neither the consumer nor the environment will be unduly harmed. Then came the relaxation of regulation on genetically modified products, on grounds that over-regulation is compromising the "competitiveness" of the industry, and that hundreds of field trials have demonstrated the new biotechnology to be safe. And, in any case, there is no essential difference between transgenic plants produced by the new biotechnology and those produced by conventional breeding methods. (One prominent spokesperson for the industry even went as far as to refer to the varieties produced by conventional breeding methods, retrospectively, as "transgenics". (1) This was followed, a year later, by the avalanche of products approved, or seeking, approval marketing, for which neither segregation from non-genetically engineered produce nor labeling is required. One is left to wonder why, if the products are as safe and wonderful as claimed, they could not be segregated, as organic produce has been for years, so that consumers are given the choice of buying what they want. A few days later, as though acting on cue, the Association of British Insurers announced that, in future, people applying for life policies will have to divulge the results of any genetic tests they have taken. This is seen, by many, as a definite move towards open genetic discrimination. A few days later, a scientist of the Roslin Institute near Edinburgh

announced that they had successfully "cloned" a sheep from a cell taken from the mammary gland of an adult animal. "Dolly", the cloned lamb, is now seven months old. Of course it took nearly 300 trials to get one success, but no mention is made of the vast majority of the embryos that failed. Is that ethical? If it can be done on sheep, does it mean it can be done for human beings? Are we nearer to cloning human beings? The popular media went wild with heroic enthusiasm at one extreme to the horror of Frankenstein at the other. Why is this work only coming to public attention now, when the research has actually been going on for at least 10 years?(2) The public are totally unprepared. They are being plunged headlong, against their will, into the brave new genetically engineered world, in which giant, faceless multinational corporations will control every aspect of their lives, from the food they can eat, to the baby they can conceive and give birth to. (continues after box)

---

I should, right away, dispel the myth that genetic engineering is just like conventional breeding techniques. It is not. Genetic engineering bypasses conventional breeding by using the artificially constructed vectors to multiply copies of genes, and in many cases, to carry and smuggle genes into cells. Once inside cells, these vectors slot themselves into the host genome. In this way, transgenic organisms are made carrying the desired transgenes. The insertion of foreign genes into the host genome has long been known to have many harmful and fatal effects including cancer; and this is born out by the low success rate of creating desired transgenic organisms. Typically, a large number of eggs or embryos have to be injected or Unholy Alliance, by Dr Ho Página 2 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 infected with the vector to obtain a few organisms that successfully express the trans-gene. The most common vectors used in genetic engineering biotechnology are a chimaeric recombination of natural genetic parasites from different sources, including viruses causing cancers and other diseases in animals and plants, with their pathogenic functions 'crippled', and tagged with one or more antibiotic resistance 'marker' genes, so that cells transformed with the vector can be selected. For example, the vector most widely used in plant genetic engineering is derived from a tumour-inducing plasmid carried by the soil bacterium *Agrobacterium tumefaciens*. In animals, vectors are constructed from retroviruses causing cancers and other diseases. A vector currently used in fish has a framework from the Moloney marine leukaemic virus, which causes leukaemia in mice, but can infect all mammalian cells. It has bits from the Rous Sarcoma virus, causing sarcomas in chickens, and from the vesicular stomatitis virus, causing oral lesions in cattle, horses, pigs and humans. Such mosaic vectors are particularly hazardous. Unlike natural parasitic genetic elements which have various degrees of host specificity, vectors used in genetic engineering, partly by design, and partly on account of their mosaic character, have the ability to overcome species barriers, and to infect a wide range of

species. Another obstacle to genetic engineering is that all organisms and cells have natural defence mechanisms that enable them to destroy or inactivate foreign genes, and trans-gene instability is a big problem for the industry. Vectors are now increasingly constructed to overcome those mechanisms that maintain the integrity of species. The result is that the artificially constructed vectors are especially good at carrying out horizontal gene transfer. Let me summarize why rDNA technology differs radically from conventional breeding techniques. 1. Genetic engineering recombines genetic material in the laboratory between species that do not interbreed in nature. 2. While conventional breeding methods shuffle different forms (alleles) of the same genes, genetic engineering enables completely new (exotic) genes to be introduced with unpredictable effects on the physiology and biochemistry of the resultant transgenic organism. 3. Gene multiplications and a high proportion of gene transfers are mediated by vectors which have the following undesirable characteristics: a. many are derived from disease-causing viruses, plasmids and mobile genetic elements - parasitic DNA that have the ability to invade cells and insert themselves into the cell's genome causing genetic damages. b. they are designed to break down species barriers so that they can shuttle genes between a wide range of species. Their wide host range means that they can infect many animals and plants, and in the process pick up genes from viruses of all these species to create new pathogens. c. they routinely carry genes for antibiotic resistance, which is already a big health problem. d. they are increasingly constructed to overcome the recipient species' defence mechanisms that break down or inactivate foreign DNA.

\_\_\_\_\_ Isn't it a bit late in the day to tell us that?, you ask. Yes and no. Yes,

because I, who should, perhaps, have known better, was caught unprepared like the rest. And no, because there have been so many people warning us of that eventuality, who have campaigned tirelessly on our behalf, some of them going back to the earliest days of genetic engineering in the 1970s - although we have paid them little heed. No, it is not too late, if only because that is precisely what we tend to believe, and are encouraged to believe. A certain climate is created - that of being rapidly overtaken by events - Unholy Alliance, by Dr Ho Página 3 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 reinforcing the feeling that the tidal wave of progress brought on by the new biotechnology is impossible to stem, so that we may be paralyzed into accepting the inevitable, No, because we shall not give up, for the consequence of giving up is the brave new world, and soon after that, there may be no world at all. The gene genie is fast getting out of control. The practitioners of genetic engineering biotechnology, the regulators and the critics alike, have all underestimated the risks involved, which are inherent to genetic engineering biotechnology, particularly as misguided by an outmoded and erroneous world-view that comes from bad science. The dreams may already be turning into nightmares. That is why people like myself are calling for an immediate moratorium on further releases and marketing of genetically engineered products, and for an independent public enquiry to be set up to look into the risks and hazards involved, taking into account the most comprehensive, scientific knowledge in addition to the social, moral implications. This would be most timely, as public opposition to genetic engineering biotechnology has been gaining momentum throughout Europe and the USA. In Austria, a record 1.2 million citizens, representing 20 per cent of the electorate, have signed a people's petition to ban genetically engineered foods, as well as deliberate releases of genetically modified organisms and patenting of life. Genetically modified foods were also rejected earlier by a lay people consultation in Norway, and by 95 per cent of consumers in Germany, as revealed by a recent survey. The European Parliament has voted by an overwhelming 407 to 2 majority to censure the Commission's authorization, in December 1996, for imports of Ciba-Geigy's transgenic maize into Europe, and is calling for imports to be suspended while the authorization is re-examined. The European Commission has decided that in the future genetically engineered seeds will be labeled, and is also considering proposals for retroactive labeling. Commissioner Emma Bonino is to set up a new scientific committee to deal with genetically engineered foods, members of which are to be completely independent of the food industry. Meanwhile, Franz Fischler, the European Commissioner on Agriculture, supports a complete segregation and labeling of production lines of genetically modified and non-genetically modified foods. In June this year, President Clinton imposed a five-year ban on human cloning in the USA, while the UK House of Commons Science and Technology Committee (STC) wants British law to be amended to ensure that human cloning is illegal. The STC, President Chirac of France and

German Research Minister Juergen Ruetters are also calling for an international ban on human cloning. Like other excellent critics before me,(3) I do not think there is a grand conspiracy afoot, though there are many forces converging to a single terrible end. Susan George comments, "They don't have to conspire if they have the same world-view, aspire to similar goals and take concerted steps to attain them."(4) I am one of those scientists who have long been highly critical of the reductionist mainstream scientific world-view, and have begun to work towards a radically different approach for understanding nature.(5) But I was unable, for a long time, to see how much science really matters in the affairs of the real world, not just in terms of practical inventions like genetic engineering, but in how that scientific world-view takes hold of people's unconscious, so that they take action, involuntarily, unquestioningly, to shape the world to the detriment of human beings. I was so little aware of how that science is used, without conscious intent, to intimidate and control, to obfuscate, to exploit and oppress; how that dominant world-view generates a selective blindness to make scientists themselves ignore or misread scientific evidence. The point, however, is not that science is bad - but that there can be bad science that ill-serves humanity. Science can often be wrong. The history of science can just as well be written in terms of the mistakes made than as the series of triumphs it is usually made out to be. Science is nothing more, and nothing less, than a system of concepts for understanding nature and for obtaining reliable knowledge that enables us to live sustainably with nature. In that sense, one can ill-afford to give up science, for it is through our proper understanding and knowledge of nature that we can live a satisfying life, that we can ultimately distinguish the good science, which serves humanity, from the bad science that does not. In this view, science is imbued with moral values from the start, and cannot be disentangled from them. Therefore it is bad science that purports to be "neutral" and divorced from moral values, as much as it is bad science that ignores scientific evidence. It is clear that I part company with perhaps a majority of my scientist colleagues in the mainstream, who believe that science can never be wrong, although it can be misused. Or else they carefully distinguish science, as neutral and value-free, from its application, technology, which can do harm or good.(6) This distinction between science and technology is spurious, especially in the case of an experimental science like genetics, and almost all of biology, where the techniques determine what sorts of question are asked and hence the range of answers that are important, significant and relevant to the science. Where would molecular genetics be without the tools that enable practitioners to recombine and manipulate our destiny? It is an irresistibly heroic view, except that it is totally wrong and misguided. It is also meaningless, therefore, to set up Ethical Committees which do not question the basic scientific assumptions behind the practice of genetic engineering biotechnology. Their brief is severely limited, often verging on the trivial and banal - such as whether a pork

gene transferred to food plants might be counter to certain religious beliefs - in comparison with the much more fundamental questions of eugenics, genetic discrimination and, indeed, whether gene transfers should be carried out at all. They can do nothing more than make the unacceptable acceptable to the public. The debate on genetic engineering biotechnology is dogged by the artificial separation imposed between "pure" science and the issues it gives rise to. "Ethics" is deemed to be socially determined, and therefore negotiable, while the science is seen to be beyond reproach, as it is the "laws" of nature. The same goes for the distinction between "technology" - the application of science - from the science. Risk assessments are to do with the technology, leaving the science equally untouched. The technology can be bad for your health, but not the science. In this article, I shall show why science cannot be separated from moral values nor from the technology that shapes our society. In other words, bad science is unquestionably bad for one's health and well-being, and should be avoided at all costs. Science is, above all, fallible and negotiable, because we have the choice, to do or not to do. It should be negotiated for the public good. That is the only ethical position one can take with regard to science. Otherwise, we are in danger of turning science into the most fundamentalist of religions, that, working hand in hand with corporate interests, will surely usher in the brave new world. Bad science and big business What makes genetic engineering biotechnology dangerous, in the first instance, is that it is an unprecedented, close alliance between two great powers that can make or break the world: science and commerce. Practically all established molecular geneticists have some direct or indirect connection with industry, which will set limits on what the scientists can and will do research on, not to mention the possibility of compromising their integrity as independent scientists.(7) The worst aspect of the alliance is that it is between the most reductionist science and multinational monopolistic industry at its most aggressive and exploitative. If the truth be told, it is bad science working together with big business for quick profit, aided and abetted by our governments for the banal reason that governments wish to be re-elected to remain in 'power'.(8) Speaking as a scientist who loves and believes in science, I have to say it is bad science that has let the world down and caused the major problems we now face, not the least among which is by promoting and legitimizing a particular world-view. It is a reductionist, manipulative and Unholy Alliance, by Dr Ho Página 5 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

exploitative world-view. Reductionist because it sees the world as bits and pieces, and denies there are organic wholes such as organisms, ecosystems, societies and community of nations. Manipulative and exploitative because it regards nature and fellow human beings as objects to be manipulated and exploited for gain; life being a Darwinian struggle for survival of the fittest. It is by no means coincidental that the economic theory currently dominating the world is rooted in the same laissez-faire capitalist ideology that gave rise to Darwinism. It

acknowledges no values other than self-interest, competitiveness and the accumulation of wealth, at which the developed nations have been very successful. Already, according to the 1992 United Nations Development Programme Report, the richest fifth of the world's population has amassed 82.7 per cent of the wealth, while the poorest fifth gets a piddling 1.4 per cent. Or, put in another way, there are now 477 billionaires in the world whose combined assets are roughly equal to the combined annual incomes of the poorer half of humanity - 2.8 billion people.(9) Do we need to be more "competitive" still to take from the poorest their remaining pittance? That is, in fact, what we are doing. The governmental representatives of the superpowers are pushing for a "globalized economy" under trade agreements which erase all economic borders. "Together, the processes of deregulation and globalization are undermining the power of both unions and governments and placing the power of global corporations and finance beyond the reach of public accountability."(10) The largest corporations continue to consolidate that power through mergers, acquisitions and strategic alliances. Multinational corporations now comprise 51 of the world's 100 largest economies: only 49 of the latter are nations. By 1993, agricultural biotechnology was being controlled by just (11) giant corporations, and these are now undergoing further mergers. The OECD (Organization for Economic Co-operation and Development) member countries are at this moment working in secret in Paris on the Multilateral Agreements on Investment (MAI), which is written by and for corporations to prohibit any government from establishing performance or accountability standards for foreign investors. European Commissioner, Sir Leon Brittan, is negotiating in the World Trade Organization, on behalf of the European Community, to ensure that no barriers of any kind should remain in the South to dampen exploitation by the North, and at the same time, to protect the deeply unethical "patents of life" through Trade Related Intellectual Property Rights (TRIPS) agreements.(11) So, in addition to gaining complete control of the food supply of the South through exclusive rights to genetically engineered seeds, the big food giants of the North can asset-strip the South's genetic and intellectual resources with impunity, up to and including genes and cell lines of indigenous peoples. There is no question that the mindset that leads to and validates genetic engineering is genetic determinism - the idea that organisms are determined by their genetic makeup, or the totality of their genes. Genetic determinism derives from the marriage of Darwinism and Mendelian genetics. For those imbued with the mindset of genetic determinism, the major problems of the world can be solved simply by identifying and manipulating genes, for genes determine the characters of organisms; so by identifying a gene we can predict a desirable or undesirable trait, by changing a gene we change the trait, by transferring a gene we transfer the corresponding trait. The Human Genome Project was inspired by the same genetic determinism that locates the "blueprint" for constructing the human being in the human genome. It may have been a brilliant political move to capture research funds

and, at the same time, to revive a flagging pharmaceutical industry, but its scientific content was suspect from the first. Genetic engineering technology promises to work for the benefit of mankind; the reality is something else. It displaces and marginalizes all alternative approaches that address the social and environmental causes of malnutrition and ill-health, such as poverty and unemployment, and the need for a sustainable agriculture that could regenerate the environment, guarantee long-term food security and, at the same time, conserve indigenous biodiversity. Unholy Alliance, by Dr Ho Página 6 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 Its purpose is to accommodate problems that reductionist science and industry have created in the first place - widespread environmental deterioration from the intensive, high-input agriculture of the Green Revolution, and accumulation of toxic wastes from chemical industries. What's offer now is more of the same, except with new problems attached. It leads to discriminatory and other unethical practices that are against the moral values of societies and community of nations. Worst of all, it is pushing a technology that is untried, and, according to existing knowledge, is inherently hazardous to health and biodiversity. Let me enlarge on that last point here, as I believe it has been underestimated, if not entirely overlooked by the practitioners, regulators and many critics of genetic engineering biotechnology alike, on account of a certain blindness to concrete scientific evidence, largely as a result of their conscious or unconscious commitment to an old, discredited paradigm. The most immediate hazards are likely to be in public health - which has already reached a global crisis, attesting to the failure of decades of reductionist medical practices - although the hazards to biodiversity will not be far behind. Genetic engineering biotechnology is inherently hazardous According to the 1996 World Health Organization Report, at least 30 new diseases, including AIDS, Ebola and Hepatitis C, have emerged over the past 20 years, while old infectious diseases such as tuberculosis, cholera, malaria and diphtheria are coming back worldwide. Almost every month now in the UK we hear reports on fresh outbreaks: Streptococcus, meningitis, E. coli. Practically all the pathogens are resistant to antibiotics, many to multiple antibiotics. Two strains of E. coli isolated in a transplant ward outside Cambridge in 1993 were found to be resistant to 21 out of 22 common antibiotics.(12) A strain of Staphylococcus isolated in Australia in 1990 was found to be resistant to 31 different drugs.(13) Infections with these and other strains will very soon become totally invulnerable to treatment. In fact, scientists in Japan have already isolated a strain of Staphylococcus aureus that is resistant even to the last resort antibiotic, vancomycin.(14) Geneticists have now linked the emergence of pathogenic bacteria and of antibiotic resistance to horizontal gene transfer - the transfer of genes to unrelated species, by infection through viruses, though pieces of genetic material, DNA, taken up into cells from the environment, or by unusual mating taking place between unrelated species. For example, horizontal gene transfer and subsequent genetic recombination have generated the

bacterial strains responsible for the cholera outbreak in India in 1992,(15) and the Streptococcus epidemic in Tayside in 1993.(16) The E. coli 157 strain involved in the recent outbreaks in Scotland is believed to have originated from horizontal gene transfer from the pathogen, Shigella.(17) Many unrelated bacterial pathogens, causing diseases from bubonic plague to tree blight, are found to share an entire set of genes for invading cells, which have almost certainly spread by horizontal gene transfer.(18) Similarly, genes for antibiotic resistance have spread horizontally and recombined with one another to generate multiple antibiotic resistance throughout the bacterial populations.(19) Antibiotic resistance genes spread readily by contact between human beings, and from bacteria inhabiting the gut of farm animals to those in human beings.(20) Multiple antibiotic resistant strains of pathogens have been endemic in many hospitals for years.(21) What is the connection between horizontal gene transfer and genetic engineering? Genetic engineering is a technology designed specifically to transfer genes horizontally between species that do not interbreed. It is designed to break down species barriers and, increasingly, to overcome the species' defence mechanisms which normally degrade or inactivate foreign genes.(22) For the purpose of manipulating, replicating and transferring genes, genetic engineers make use of recombined versions of precisely those genetic parasites causing diseases including cancers, and others that carry and spread virulence genes and antibiotic resistance genes. Thus the technology will contribute to an increase in the frequency of horizontal gene transfer of those genes that are responsible for virulence and antibiotic resistance, and allow them to recombine to generate new Unholy Alliance, by Dr Ho Página 7 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

pathogens. What is even more disturbing is that geneticists have now found evidence that the presence of antibiotics typically increases the frequency of horizontal gene transfer 100-fold or more, possibly because the antibiotic acts like a sex hormone for the bacteria, enhancing mating and exchange of genes between unrelated species.(23) Thus, antibiotic resistance and multiple antibiotic resistance cannot be overcome simply by making new antibiotics, for antibiotics create the very conditions to facilitate the spread of resistance. The continuing profligate use of antibiotics in intensive farming and in medicine, in combination with the commercial-scale practice of genetic engineering, may already be major contributing factors for the accelerated spread of multiple antibiotic resistance among new and old pathogens that the WHO 1996 Report has identified within the past 10 years. For example, there has been a dramatic rise both in terms of incidence and severity of cases of infections by Salmonella,(24) with some countries in Europe witnessing a staggering 20-fold increase in incidence since 1980. That is not all. One by one, those assumptions on which geneticists and regulatory committees have based their assessment of genetically engineered products to be "safe" have fallen by the wayside, especially in the light of evidence emerging within the past three to four years. However, there is still little

indication that the new findings are being taken on board. On the contrary, regulatory bodies have succumbed to pressure from the industry to relax already inadequate regulations. Let me list a few more of the relevant findings in genetics. We have been told that horizontal gene transfer is confined to bacteria. That is not so. It is now known to involve practically all species of animal, plant and fungus. It is possible for any gene in any species to spread to any other species, especially if the gene is carried on genetically engineered gene-transfer vectors. Transgenes and antibiotic resistance marker genes from transgenic plants have been shown to end up in soil fungi and bacteria.(25) The microbial populations in the environment serve as the gene-transfer highway and reservoir, supporting the replication of the the genes and allowing them to spread and recombine with other genes to generate new pathogens.(26) We have been assured that "crippled" laboratory strains of bacteria and viruses do not survive when released into the environment. That is not true. There is now abundant evidence that they can either survive quite well and multiply, or they can go dormant and reappear after having acquired genes from other bacteria to enable them to multiply.(27) Bacteria co-operate much more than they compete. They share their most valuable assets for survival. We have been told that DNA is easily broken down in the environment. Not so. DNA can remain in the environment where they can be picked up by bacteria and incorporated into their genome.(28) DNA is, in fact, one of the toughest molecules. Biochemists jumped with joy when they didn't have to work with proteins anymore, which lose their activity very readily. By contrast, DNA survives rigorous boiling, so when they approve processed food on grounds that there can be no DNA left, ask exactly how the processing is done, and whether the appropriate tests for the presence of DNA have been carried out. The survival of "crippled" laboratory strains of bacteria and viruses and the persistence of DNA in the environment are of particular relevance to the so-called "contained" users producing transgenic pharmaceuticals, enzymes and food additives. "Tolerated" releases and transgenic wastes from such users may already have released large amounts of transgenic bacteria and viruses as well as DNA into the environment since the early 1980s when commercial genetic engineering biotechnology began. We are told that DNA is easily digested by enzymes in our gut. Not true. The DNA of a virus has been found to survive passage through the gut of mice. Furthermore, the DNA readily finds its way into the bloodstream, and into all kinds of cell in the body.(29) Once inside the cell, the DNA can Unholy Alliance, by Dr Ho Página 8 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 insert itself into the cell's genome, and create all manner of genetic disturbances, including cancer. (30) There are yet further findings pointing to the potential hazards of generating new disease-causing viruses by recombination between artificial viral vectors and vaccines and other viruses in the environment. The viruses generated in this way will have increased host ranges, infecting and causing diseases in more than one species, and hence very difficult to eradicate.

We are already seeing such viruses emerging. Monkeypox, a previously rare and potentially fatal virus caught from rodents, is spreading through central Zaire.(31) Between 1981-1986 only 37 cases were known, but there have been at least 163 cases in one eastern province of Zaire alone since July 1995. For the first time, humans are transmitting the disease directly from one to the other. An outbreak of hantavirus infection hit southern Argentina in December 1996, the first time the virus was transmitted from person to person.(32) Previously, the virus was spread by breathing in the aerosols from rodent excrement or urine. New highly virulent strains of infectious bursal disease virus (IBDV) spread rapidly throughout most of the poultry industry in the Northern Hemisphere, and are now infecting Antarctic penguins, and are suspected of causing mass mortality.(33) New strains of distemper and rabies viruses are spilling out from towns and villages to plague some of the world's rarest wild animals in Africa:(34) lions, panthers, wild dogs, giant otter. None of the plethora of new findings has been taken on board by the regulatory bodies. On the contrary, safety regulations have been relaxed. The public is being used, against its will, as guinea pigs for genetically engineered products, while new viruses and bacterial pathogens may be created by the technology every passing day. The present situation is reminiscent of the development of nuclear energy which gave us the atom bomb, and the nuclear power stations that we now know to be hazardous to health and also to be environmentally unsustainable on account of the long-lasting radioactive wastes they produce. Joseph Rotblat, the British physicist who won the 1995 Nobel Prize after years of battling against nuclear weapons, has this to say. "My worry is that other advances in science may result in other means of mass destruction, maybe more readily available even than nuclear weapons. Genetic engineering is quite a possible area, because of these dreadful developments that are taking place there."(35) The large-scale release of transgenic organisms is much worse than nuclear weapons or radioactive nuclear wastes, as genes can replicate indefinitely, spread and recombine. There may yet be time enough to stop the industry's dreams turning into nightmares if we act now, before the critical genetic "melt-down" is reached. \* \* \* \* \*

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 That is not all. It is in the realm of human genetics that the real revolution will be wrought. Plans to uncover the entire genetic blueprint of the human being would, we are told, eventually enable geneticists to diagnose, in advance, all the diseases that an individual will suffer in his or her lifetime, even before the individual is born, or even as the egg is fertilized in vitro. A whole gamut of specific drugs tailored to individual genetic needs can be designed to cure all diseases. The possibility of immortality is dangling from the horizons as the "longevity gene" is isolated. There are problems, of course, as there would be in any technology. The ethical issues have to be decided by the public. (By implication, the science is separate and not open to question.) The risks will be minimized. (Again, by implication, the risks have nothing to do with the science.) After all, nothing in life is without risk. Crossing roads is a risk. The new biotechnology (i.e. genetic engineering biotechnology) is under very strict government regulation, and the government's scientists and other experts will see to it that neither the consumer nor the environment will be unduly harmed. Then came the relaxation of regulation on genetically modified products, on grounds that over-regulation is compromising the "competitiveness" of the industry, and that hundreds of field trials have demonstrated the new biotechnology to be safe. And, in any case, there is no essential difference between transgenic plants produced by the new biotechnology and those produced by conventional breeding methods. (One prominent spokesperson for the industry even went as far as to refer to the varieties produced by conventional breeding methods, retrospectively, as "transgenics". (1) This was followed, a year later, by the avalanche of products approved, or seeking, approval marketing, for which neither segregation from non-genetically engineered produce nor labeling is required. One is left to wonder why, if the products are as safe and wonderful as claimed, they could not be segregated, as organic produce has been for years, so that consumers are given the choice of buying what they want. A few days later, as though acting on cue, the Association of British Insurers announced that, in future, people applying for life policies will have to divulge the results of any genetic tests they have taken. This is seen, by many, as a definite move towards open genetic discrimination. A few days later, a scientist of the Roslin Institute near Edinburgh announced that they had successfully "cloned" a sheep from a cell taken from the mammary gland of an adult animal. "Dolly", the cloned lamb, is now seven months old. Of course it took nearly 300 trials to get one success, but no mention is made of the vast majority of the embryos that failed. Is that ethical? If it can be done on sheep, does it mean it can be done for human beings? Are we nearer to cloning human beings? The popular media went wild with heroic enthusiasm at one extreme to the horror of Frankenstein at the other. Why is this work only

coming to public attention now, when the research has actually been going on for at least 10 years?(2) The public are totally unprepared. They are being plunged headlong, against their will, into the brave new genetically engineered world, in which giant, faceless multinational corporations will control every aspect of their lives, from the food they can eat, to the baby they can conceive and give birth to. (continues after box)

---

I should, right away, dispel the myth that genetic engineering is just like conventional breeding techniques. It is not. Genetic engineering bypasses conventional breeding by using the artificially constructed vectors to multiply copies of genes, and in many cases, to carry and smuggle genes into cells. Once inside cells, these vectors slot themselves into the host genome. In this way, transgenic organisms are made carrying the desired transgenes. The insertion of foreign genes into the host genome has long been known to have many harmful and fatal effects including cancer; and this is born out by the low success rate of creating desired transgenic organisms. Typically, a large number of eggs or embryos have to be injected or Unholy Alliance, by Dr Ho Página 2 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 infected with the vector to obtain a few organisms that successfully express the trans-gene. The most common vectors used in genetic engineering biotechnology are a chimaeric recombination of natural genetic parasites from different sources, including viruses causing cancers and other diseases in animals and plants, with their pathogenic functions 'crippled', and tagged with one or more antibiotic resistance 'marker' genes, so that cells transformed with the vector can be selected. For example, the vector most widely used in plant genetic engineering is derived from a tumour-inducing plasmid carried by the soil bacterium *Agrobacterium tumefaciens*. In animals, vectors are constructed from retroviruses causing cancers and other diseases. A vector currently used in fish has a framework from the Moloney marine leukaemic virus, which causes leukaemia in mice, but can infect all mammalian cells. It has bits from the Rous Sarcoma virus, causing sarcomas in chickens, and from the vesicular stomatitis virus, causing oral lesions in cattle, horses, pigs and humans. Such mosaic vectors are particularly hazardous. Unlike natural parasitic genetic elements which have various degrees of host specificity, vectors used in genetic engineering, partly by design, and partly on account of their mosaic character, have the ability to overcome species barriers, and to infect a wide range of species. Another obstacle to genetic engineering is that all organisms and cells have natural defence mechanisms that enable them to destroy or inactivate foreign genes, and trans-gene instability is a big problem for the industry. Vectors are now increasingly constructed to overcome those mechanisms that maintain the integrity of species. The result is that the artificially constructed vectors are especially good at carrying out horizontal gene transfer. Let me summarize why rDNA technology differs radically from conventional breeding techniques.

1. Genetic engineering recombines genetic material in the laboratory between species that do not interbreed in nature. 2. While conventional breeding methods shuffle different forms (alleles) of the same genes, genetic engineering enables completely new (exotic) genes to be introduced with unpredictable effects on the physiology and biochemistry of the resultant transgenic organism. 3. Gene multiplications and a high proportion of gene transfers are mediated by vectors which have the following undesirable characteristics: a. many are derived from disease-causing viruses, plasmids and mobile genetic elements - parasitic DNA that have the ability to invade cells and insert themselves into the cell's genome causing genetic damages. b. they are designed to break down species barriers so that they can shuttle genes between a wide range of species. Their wide host range means that they can infect many animals and plants, and in the process pick up genes from viruses of all these species to create new pathogens. c. they routinely carry genes for antibiotic resistance, which is already a big health problem. d. they are increasingly constructed to overcome the recipient species' defence mechanisms that break down or inactivate foreign DNA.

---

\_\_\_\_\_ Isn't it a bit late in the day to tell us that?, you ask. Yes and no. Yes, because I, who should, perhaps, have known better, was caught unprepared like the rest. And no, because there have been so many people warning us of that eventuality, who have campaigned tirelessly on our behalf, some of them going back to the earliest days of genetic engineering in the 1970s - although we have paid them little heed. No, it is not too late, if only because that is precisely what we tend to believe, and are encouraged to believe. A certain climate is created - that of being rapidly overtaken by events - Unholy Alliance, by Dr Ho Página 3 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 reinforcing the feeling that the tidal wave of progress brought on by the new biotechnology is impossible to stem, so that we may be paralyzed into accepting the inevitable, No, because we shall not give up, for the consequence of giving up is the brave new world, and soon after that, there may be no world at all. The gene genie is fast getting out of control. The practitioners of genetic engineering biotechnology, the regulators and the critics alike, have all underestimated the risks involved, which are inherent to genetic engineering biotechnology, particularly as misguided by an outmoded and erroneous world-view that comes from bad science. The dreams may already be turning into nightmares. That is why people like myself are calling for an immediate moratorium on further releases and marketing of genetically engineered products, and for an independent public enquiry to be set up to look into the risks and hazards involved, taking into account the most comprehensive, scientific knowledge in addition to the social, moral implications. This would be most timely, as public opposition to genetic engineering biotechnology has been gaining momentum throughout Europe and the USA. In Austria, a record 1.2 million citizens, representing 20 per cent of the electorate, have signed a people's petition to ban

genetically engineered foods, as well as deliberate releases of genetically modified organisms and patenting of life. Genetically modified foods were also rejected earlier by a lay people consultation in Norway, and by 95 per cent of consumers in Germany, as revealed by a recent survey. The European Parliament has voted by an overwhelming 407 to 2 majority to censure the Commission's authorization, in December 1996, for imports of Ciba-Geigy's transgenic maize into Europe, and is calling for imports to be suspended while the authorization is re-examined. The European Commission has decided that in the future genetically engineered seeds will be labeled, and is also considering proposals for retroactive labeling. Commissioner Emma Bonino is to set up a new scientific committee to deal with genetically engineered foods, members of which are to be completely independent of the food industry. Meanwhile, Franz Fischler, the European Commissioner on Agriculture, supports a complete segregation and labeling of production lines of genetically modified and non-genetically modified foods. In June this year, President Clinton imposed a five-year ban on human cloning in the USA, while the UK House of Commons Science and Technology Committee (STC) wants British law to be amended to ensure that human cloning is illegal. The STC, President Chirac of France and German Research Minister Juergen Ruetters are also calling for an international ban on human cloning. Like other excellent critics before me,<sup>(3)</sup> I do not think there is a grand conspiracy afoot, though there are many forces converging to a single terrible end. Susan George comments, "They don't have to conspire if they have the same world-view, aspire to similar goals and take concerted steps to attain them."<sup>(4)</sup> I am one of those scientists who have long been highly critical of the reductionist mainstream scientific world-view, and have begun to work towards a radically different approach for understanding nature.<sup>(5)</sup> But I was unable, for a long time, to see how much science really matters in the affairs of the real world, not just in terms of practical inventions like genetic engineering, but in how that scientific world-view takes hold of people's unconscious, so that they take action, involuntarily, unquestioningly, to shape the world to the detriment of human beings. I was so little aware of how that science is used, without conscious intent, to intimidate and control, to obfuscate, to exploit and oppress; how that dominant world-view generates a selective blindness to make scientists themselves ignore or misread scientific evidence. The point, however, is not that science is bad - but that there can be bad science that ill-serves humanity. Science can often be wrong. The history of science can just as well be written in terms of the mistakes made than as the series of triumphs it is usually made out to be. Science is nothing more, and nothing less, than a system of concepts for understanding nature and for obtaining reliable knowledge that enables us to live sustainably with nature. In that sense, one can ill-afford to give up science, for it is through our proper understanding and knowledge of nature that we can live a satisfying life, that we

can ultimately distinguish the good science, which serves humanity, from the bad science that does not. In this view, science is imbued with moral values from the start, and cannot be disentangled from them. Therefore it is bad science that purports to be "neutral" and divorced from moral values, as much as it is bad science that ignores scientific evidence. It is clear that I part company with perhaps a majority of my scientist colleagues in the mainstream, who believe that science can never be wrong, although it can be misused. Or else they carefully distinguish science, as neutral and value-free, from its application, technology, which can do harm or good.(6) This distinction between science and technology is spurious, especially in the case of an experimental science like genetics, and almost all of biology, where the techniques determine what sorts of question are asked and hence the range of answers that are important, significant and relevant to the science. Where would molecular genetics be without the tools that enable practitioners to recombine and manipulate our destiny? It is an irresistibly heroic view, except that it is totally wrong and misguided. It is also meaningless, therefore, to set up Ethical Committees which do not question the basic scientific assumptions behind the practice of genetic engineering biotechnology. Their brief is severely limited, often verging on the trivial and banal - such as whether a pork gene transferred to food plants might be counter to certain religious beliefs - in comparison with the much more fundamental questions of eugenics, genetic discrimination and, indeed, whether gene transfers should be carried out at all. They can do nothing more than make the unacceptable acceptable to the public. The debate on genetic engineering biotechnology is dogged by the artificial separation imposed between "pure" science and the issues it gives rise to. "Ethics" is deemed to be socially determined, and therefore negotiable, while the science is seen to be beyond reproach, as it is the "laws" of nature. The same goes for the distinction between "technology" - the application of science - from the science. Risk assessments are to do with the technology, leaving the science equally untouched. The technology can be bad for your health, but not the science. In this article, I shall show why science cannot be separated from moral values nor from the technology that shapes our society. In other words, bad science is unquestionably bad for one's health and well-being, and should be avoided at all costs. Science is, above all, fallible and negotiable, because we have the choice, to do or not to do. It should be negotiated for the public good. That is the only ethical position one can take with regard to science. Otherwise, we are in danger of turning science into the most fundamentalist of religions, that, working hand in hand with corporate interests, will surely usher in the brave new world. Bad science and big business What makes genetic engineering biotechnology dangerous, in the first instance, is that it is an unprecedented, close alliance between two great powers that can make or break the world: science and commerce. Practically all established molecular geneticists have some direct or indirect connection with industry, which will set limits on what the scientists can and will do research on, not to mention the possibility of

compromising their integrity as independent scientists.(7) The worst aspect of the alliance is that it is between the most reductionist science and multinational monopolistic industry at its most aggressive and exploitative. If the truth be told, it is bad science working together with big business for quick profit, aided and abetted by our governments for the banal reason that governments wish to be re-elected to remain in 'power'.(8) Speaking as a scientist who loves and believes in science, I have to say it is bad science that has let the world down and caused the major problems we now face, not the least among which is by promoting and legitimizing a particular world-view. It is a reductionist, manipulative and Unholy Alliance, by Dr Ho Página 5 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

exploitative world-view. Reductionist because it sees the world as bits and pieces, and denies there are organic wholes such as organisms, ecosystems, societies and community of nations. Manipulative and exploitative because it regards nature and fellow human beings as objects to be manipulated and exploited for gain; life being a Darwinian struggle for survival of the fittest. It is by no means coincidental that the economic theory currently dominating the world is rooted in the same laissez-faire capitalist ideology that gave rise to Darwinism. It acknowledges no values other than self-interest, competitiveness and the accumulation of wealth, at which the developed nations have been very successful. Already, according to the 1992 United Nations Development Programme Report, the richest fifth of the world's population has amassed 82.7 per cent of the wealth, while the poorest fifth gets a piddling 1.4 per cent. Or, put in another way, there are now 477 billionaires in the world whose combined assets are roughly equal to the combined annual incomes of the poorer half of humanity - 2.8 billion people.(9) Do we need to be more "competitive" still to take from the poorest their remaining pittance? That is, in fact, what we are doing. The governmental representatives of the superpowers are pushing for a "globalized economy" under trade agreements which erase all economic borders. "Together, the processes of deregulation and globalization are undermining the power of both unions and governments and placing the power of global corporations and finance beyond the reach of public accountability."(10) The largest corporations continue to consolidate that power through mergers, acquisitions and strategic alliances. Multinational corporations now comprise 51 of the world's 100 largest economies: only 49 of the latter are nations. By 1993, agricultural biotechnology was being controlled by just (11) giant corporations, and these are now undergoing further mergers. The OECD (Organization for Economic Co-operation and Development) member countries are at this moment working in secret in Paris on the Multilateral Agreements on Investment (MAI), which is written by and for corporations to prohibit any government from establishing performance or accountability standards for foreign investors. European Commissioner, Sir Leon Brittan, is negotiating in the World Trade Organization, on behalf of the European Community, to ensure that no barriers of any kind

should remain in the South to dampen exploitation by the North, and at the same time, to protect the deeply unethical "patents of life" through Trade Related Intellectual Property Rights (TRIPS) agreements.(11) So, in addition to gaining complete control of the food supply of the South through exclusive rights to genetically engineered seeds, the big food giants of the North can asset-strip the South's genetic and intellectual resources with impunity, up to and including genes and cell lines of indigenous peoples. There is no question that the mindset that leads to and validates genetic engineering is genetic determinism - the idea that organisms are determined by their genetic makeup, or the totality of their genes. Genetic determinism derives from the marriage of Darwinism and Mendelian genetics. For those imbued with the mindset of genetic determinism, the major problems of the world can be solved simply by identifying and manipulating genes, for genes determine the characters of organisms; so by identifying a gene we can predict a desirable or undesirable trait, by changing a gene we change the trait, by transferring a gene we transfer the corresponding trait. The Human Genome Project was inspired by the same genetic determinism that locates the "blueprint" for constructing the human being in the human genome. It may have been a brilliant political move to capture research funds and, at the same time, to revive a flagging pharmaceutical industry, but its scientific content was suspect from the first. Genetic engineering technology promises to work for the benefit of mankind; the reality is something else. It displaces and marginalizes all alternative approaches that address the social and environmental causes of malnutrition and ill-health, such as poverty and unemployment, and the need for for a sustainable agriculture that could regenerate the environment, guarantee long-term food security and, at the same time, conserve indigenous biodiversity. Unholy Alliance, by Dr Ho Página 6 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 Its purpose is to accommodate problems that reductionist science and industry have created in the first place - widespread environmental deterioration from the intensive, high-input agriculture of the Green Revolution, and accumulation of toxic wastes from chemical industries. What's offer now is more of the same, except with new problems attached. It leads to discriminatory and other unethical practices that are against the moral values of societies and community of nations. Worst of all, it is pushing a technology that is untried, and, according to existing knowledge, is inherently hazardous to health and biodiversity. Let me enlarge on that last point here, as I believe it has been underestimated, if not entirely overlooked by the practitioners, regulators and many critics of genetic engineering biotechnology alike, on account of a certain blindness to concrete scientific evidence, largely as a result of their conscious or unconscious commitment to an old, discredited paradigm. The most immediate hazards are likely to be in public health - which has already reached a global crisis, attesting to the failure of decades of reductionist medical practices - although the hazards to biodiversity will not be far behind. Genetic engineering biotechnology is

inherently hazardous According to the 1996 World Health Organization Report, at least 30 new diseases, including AIDS, Ebola and Hepatitis C, have emerged over the past 20 years, while old infectious diseases such as tuberculosis, cholera, malaria and diphtheria are coming back worldwide. Almost every month now in the UK we hear reports on fresh outbreaks: Streptococcus, meningitis, E. coli. Practically all the pathogens are resistant to antibiotics, many to multiple antibiotics. Two strains of E. coli isolated in a transplant ward outside Cambridge in 1993 were found to be resistant to 21 out of 22 common antibiotics.(12) A strain of Staphylococcus isolated in Australia in 1990 was found to be resistant to 31 different drugs.(13) Infections with these and other strains will very soon become totally invulnerable to treatment. In fact, scientists in Japan have already isolated a strain of Staphylococcus aureus that is resistant even to the last resort antibiotic, vancomycin.(14) Geneticists have now linked the emergence of pathogenic bacteria and of antibiotic resistance to horizontal gene transfer - the transfer of genes to unrelated species, by infection through viruses, through pieces of genetic material, DNA, taken up into cells from the environment, or by unusual mating taking place between unrelated species. For example, horizontal gene transfer and subsequent genetic recombination have generated the bacterial strains responsible for the cholera outbreak in India in 1992,(15) and the Streptococcus epidemic in Tayside in 1993.(16) The E. coli 157 strain involved in the recent outbreaks in Scotland is believed to have originated from horizontal gene transfer from the pathogen, Shigella.(17) Many unrelated bacterial pathogens, causing diseases from bubonic plague to tree blight, are found to share an entire set of genes for invading cells, which have almost certainly spread by horizontal gene transfer.(18) Similarly, genes for antibiotic resistance have spread horizontally and recombined with one another to generate multiple antibiotic resistance throughout the bacterial populations.(19) Antibiotic resistance genes spread readily by contact between human beings, and from bacteria inhabiting the gut of farm animals to those in human beings.(20) Multiple antibiotic resistant strains of pathogens have been endemic in many hospitals for years.(21) What is the connection between horizontal gene transfer and genetic engineering? Genetic engineering is a technology designed specifically to transfer genes horizontally between species that do not interbreed. It is designed to break down species barriers and, increasingly, to overcome the species' defence mechanisms which normally degrade or inactivate foreign genes.(22) For the purpose of manipulating, replicating and transferring genes, genetic engineers make use of recombined versions of precisely those genetic parasites causing diseases including cancers, and others that carry and spread virulence genes and antibiotic resistance genes. Thus the technology will contribute to an increase in the frequency of horizontal gene transfer of those genes that are responsible for virulence and antibiotic resistance, and allow them to recombine to generate new

Unholy Alliance, by Dr Ho Página 7 de 11  
<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

pathogens. What is even more disturbing is that geneticists have now found evidence that the presence of antibiotics typically increases the frequency of horizontal gene transfer 100-fold or more, possibly because the antibiotic acts like a sex hormone for the bacteria, enhancing mating and exchange of genes between unrelated species.(23) Thus, antibiotic resistance and multiple antibiotic resistance cannot be overcome simply by making new antibiotics, for antibiotics create the very conditions to facilitate the spread of resistance. The continuing profligate use of antibiotics in intensive farming and in medicine, in combination with the commercial-scale practice of genetic engineering, may already be major contributing factors for the accelerated spread of multiple antibiotic resistance among new and old pathogens that the WHO 1996 Report has identified within the past 10 years. For example, there has been a dramatic rise both in terms of incidence and severity of cases of infections by Salmonella,(24) with some countries in Europe witnessing a staggering 20-fold increase in incidence since 1980. That is not all. One by one, those assumptions on which geneticists and regulatory committees have based their assessment of genetically engineered products to be "safe" have fallen by the wayside, especially in the light of evidence emerging within the past three to four years. However, there is still little indication that the new findings are being taken on board. On the contrary, regulatory bodies have succumbed to pressure from the industry to relax already inadequate regulations. Let me list a few more of the relevant findings in genetics. We have been told that horizontal gene transfer is confined to bacteria. That is not so. It is now known to involve practically all species of animal, plant and fungus. It is possible for any gene in any species to spread to any other species, especially if the gene is carried on genetically engineered gene-transfer vectors. Transgenes and antibiotic resistance marker genes from transgenic plants have been shown to end up in soil fungi and bacteria.(25) The microbial populations in the environment serve as the gene-transfer highway and reservoir, supporting the replication of the the genes and allowing them to spread and recombine with other genes to generate new pathogens.(26) We have been assured that "crippled" laboratory strains of bacteria and viruses do not survive when released into the environment. That is not true. There is now abundant evidence that they can either survive quite well and multiply, or they can go dormant and reappear after having acquired genes from other bacteria to enable them to multiply.(27) Bacteria co-operate much more than they compete. They share their most valuable assets for survival. We have been told that DNA is easily broken down in the environment. Not so. DNA can remain in the environment where they can be picked up by bacteria and incorporated into their genome.(28) DNA is, in fact, one of the toughest molecules. Biochemists jumped with joy when they didn't have to work with proteins anymore, which lose their activity very readily. By contrast, DNA survives rigorous boiling, so when they approve processed food on grounds that there can be no DNA left, ask exactly how the processing is done, and whether the appropriate tests for the presence of DNA have been

carried out. The survival of "crippled" laboratory strains of bacteria and viruses and the persistence of DNA in the environment are of particular relevance to the so-called "contained" users producing transgenic pharmaceuticals, enzymes and food additives. "Tolerated" releases and transgenic wastes from such users may already have released large amounts of transgenic bacteria and viruses as well as DNA into the environment since the early 1980s when commercial genetic engineering biotechnology began. We are told that DNA is easily digested by enzymes in our gut. Not true. The DNA of a virus has been found to survive passage through the gut of mice. Furthermore, the DNA readily finds its way into the bloodstream, and into all kinds of cell in the body.(29) Once inside the cell, the DNA can Unholy Alliance, by Dr Ho Página 8 de 11  
<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 insert itself into the cell's genome, and create all manner of genetic disturbances, including cancer. (30) There are yet further findings pointing to the potential hazards of generating new disease-causing viruses by recombination between artificial viral vectors and vaccines and other viruses in the environment. The viruses generated in this way will have increased host ranges, infecting and causing diseases in more than one species, and hence very difficult to eradicate. We are already seeing such viruses emerging. Monkeypox, a previously rare and potentially fatal virus caught from rodents, is spreading through central Zaire.(31) Between 1981-1986 only 37 cases were known, but there have been at least 163 cases in one eastern province of Zaire alone since July 1995. For the first time, humans are transmitting the disease directly from one to the other. An outbreak of hantavirus infection hit southern Argentina in December 1996, the first time the virus was transmitted from person to person.(32) Previously, the virus was spread by breathing in the aerosols from rodent excrement or urine. New highly virulent strains of infectious bursal disease virus (IBDV) spread rapidly throughout most of the poultry industry in the Northern Hemisphere, and are now infecting Antarctic penguins, and are suspected of causing mass mortality.(33) New strains of distemper and rabies viruses are spilling out from towns and villages to plague some of the world's rarest wild animals in Africa:(34) lions, panthers, wild dogs, giant otter. None of the plethora of new findings has been taken on board by the regulatory bodies. On the contrary, safety regulations have been relaxed. The public is being used, against its will, as guinea pigs for genetically engineered products, while new viruses and bacterial pathogens may be created by the technology every passing day. The present situation is reminiscent of the development of nuclear energy which gave us the atom bomb, and the nuclear power stations that we now know to be hazardous to health and also to be environmentally unsustainable on account of the long-lasting radioactive wastes they produce. Joseph Rotblat, the British physicist who won the 1995 Nobel Prize after years of battling against nuclear weapons, has this to say. "My worry is that other advances in science may result in other means of mass destruction, maybe more readily available even than nuclear weapons.

Genetic engineering is quite a possible area, because of these dreadful developments that are taking place there."(35) The large-scale release of transgenic organisms is much worse than nuclear weapons or radioactive nuclear wastes, as genes can replicate indefinitely, spread and recombine. There may yet be time enough to stop the industry's dreams turning into nightmares if we act now, before the critical genetic "melt-down" is reached. \* \* \* \* \*

which are to be completely independent of the food industry. Meanwhile, Franz Fischler, the European Commissioner on Agriculture, supports a complete segregation and labeling of production lines of genetically modified and non-genetically modified foods. In June this year, President Clinton imposed a five-year ban on human cloning in the USA, while the UK House of Commons Science and Technology Committee (STC) wants British law to be amended to ensure that human cloning is illegal. The STC, President Chirac of France and German Research Minister Juergen Ruetters are also calling for an international ban on human cloning. Like other excellent critics before me,<sup>(3)</sup> I do not think there is a grand conspiracy afoot, though there are many forces converging to a single terrible end. Susan George comments, "They don't have to conspire if they have the same world-view, aspire to similar goals and take concerted steps to attain them."<sup>(4)</sup> I am one of those scientists who have long been highly critical of the reductionist mainstream scientific world-view, and have begun to work towards a radically different approach for understanding nature.<sup>(5)</sup> But I was unable, for a long time, to see how much science really matters in the affairs of the real world, not just in terms of practical inventions like genetic engineering, but in how that scientific world-view takes hold of people's unconscious, so that they take action, involuntarily, unquestioningly, to shape the world to the detriment of human beings. I was so little aware of how that science is used, without conscious intent, to intimidate and control, to obfuscate, to exploit and oppress; how that dominant world-view generates a selective blindness to make scientists themselves ignore or misread scientific evidence. The point, however, is not that science is bad - but that there can be bad science that ill-serves humanity. Science can often be wrong. The history of science can just as well be written in terms of the mistakes made than as the series of triumphs it is usually

made out to be. Science is nothing more, and nothing less, than a system of concepts for understanding nature and for obtaining reliable knowledge that enables us to live sustainably with nature. In that sense, one can ill-afford to give up science, for it is through our proper understanding and knowledge of nature that we can live a satisfying life, that we can ultimately distinguish the good science, which serves humanity, from the bad science that does not. In this view, science is imbued with moral values from the start, and cannot be disentangled from them. Therefore it is bad science that purports to be "neutral" and divorced from moral values, as much as it is bad science that ignores scientific evidence. It is clear that I part company with perhaps a majority of my scientist colleagues in the mainstream, who believe that science can never be wrong, although it can be misused. Or else they carefully distinguish science, as neutral and value-free, from its application, technology, which can do harm or good.<sup>(6)</sup> This distinction between science and technology is spurious, especially in the case of an experimental science like genetics, and almost all of biology, where the techniques determine what sorts of question are asked and hence the range of answers that are important, significant and relevant to the science. Where would molecular genetics be without the tools that enable practitioners to recombine and manipulate our destiny? It is an irresistibly heroic view, except that it is totally wrong and misguided. It is also meaningless, therefore, to set up Ethical Committees which do not question the basic scientific assumptions behind the practice of genetic engineering biotechnology. Their brief is severely limited, often verging on the trivial and banal - such as whether a pork gene transferred to food plants might be counter to certain religious beliefs - in comparison with the much more fundamental questions of eugenics, genetic discrimination and, indeed, whether gene transfers should be carried out at all. They can do nothing more than make the unacceptable acceptable to the public. The debate on genetic engineering biotechnology is dogged by the artificial separation imposed between "pure" science and the issues it gives rise to. "Ethics" is deemed to be socially determined, and therefore negotiable, while the science is seen to be beyond reproach, as it is the "laws" of nature. The same goes for the distinction between "technology" - the application of science - from the science. Risk assessments are to do with the technology, leaving the science equally untouched. The technology can be bad for your health, but not the science. In this article, I shall show why science cannot be separated from moral values nor from the technology that shapes our society. In other words, bad science is unquestionably bad for one's health and well-being, and should be avoided at all costs. Science is, above all, fallible and negotiable, because we have the choice, to do or not to do. It should be negotiated for the public good. That is the only ethical position one can take with regard to science. Otherwise, we are in danger of turning science into the most fundamentalist of religions, that, working hand in hand with corporate interests, will surely usher in the brave new

world. Bad science and big business What makes genetic engineering biotechnology dangerous, in the first instance, is that it is an unprecedented, close alliance between two great powers that can make or break the world: science and commerce. Practically all established molecular geneticists have some direct or indirect connection with industry, which will set limits on what the scientists can and will do research on, not to mention the possibility of compromising their integrity as independent scientists.(7) The worst aspect of the alliance is that it is between the most reductionist science and multinational monopolistic industry at its most aggressive and exploitative. If the truth be told, it is bad science working together with big business for quick profit, aided and abetted by our governments for the banal reason that governments wish to be re-elected to remain in 'power'.(8) Speaking as a scientist who loves and believes in science, I have to say it is bad science that has let the world down and caused the major problems we now face, not the least among which is by promoting and legitimizing a particular world-view. It is a reductionist, manipulative and Unholy Alliance, by Dr Ho Página 5 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

exploitative world-view. Reductionist because it sees the world as bits and pieces, and denies there are organic wholes such as organisms, ecosystems, societies and community of nations. Manipulative and exploitative because it regards nature and fellow human beings as objects to be manipulated and exploited for gain; life being a Darwinian struggle for survival of the fittest. It is by no means coincidental that the economic theory currently dominating the world is rooted in the same laissez-faire capitalist ideology that gave rise to Darwinism. It acknowledges no values other than self-interest, competitiveness and the accumulation of wealth, at which the developed nations have been very successful. Already, according to the 1992 United Nations Development Programme Report, the richest fifth of the world's population has amassed 82.7 per cent of the wealth, while the poorest fifth gets a piddling 1.4 per cent. Or, put in another way, there are now 477 billionaires in the world whose combined assets are roughly equal to the combined annual incomes of the poorer half of humanity - 2.8 billion people.(9) Do we need to be more "competitive" still to take from the poorest their remaining pittance? That is, in fact, what we are doing. The governmental representatives of the superpowers are pushing for a "globalized economy" under trade agreements which erase all economic borders. "Together, the processes of deregulation and globalization are undermining the power of both unions and governments and placing the power of global corporations and finance beyond the reach of public accountability."(10) The largest corporations continue to consolidate that power through mergers, acquisitions and strategic alliances. Multinational corporations now comprise 51 of the world's 100 largest economies: only 49 of the latter are nations. By 1993, agricultural biotechnology was being controlled by just (11) giant corporations, and these are now undergoing further mergers. The OECD (Organization for Economic Co-

operation and Development) member countries are at this moment working in secret in Paris on the Multilateral Agreements on Investment (MAI), which is written by and for corporations to prohibit any government from establishing performance or accountability standards for foreign investors. European Commissioner, Sir Leon Brittan, is negotiating in the World Trade Organization, on behalf of the European Community, to ensure that no barriers of any kind should remain in the South to dampen exploitation by the North, and at the same time, to protect the deeply unethical "patents of life" through Trade Related Intellectual Property Rights (TRIPS) agreements.<sup>(11)</sup> So, in addition to gaining complete control of the food supply of the South through exclusive rights to genetically engineered seeds, the big food giants of the North can asset-strip the South's genetic and intellectual resources with impunity, up to and including genes and cell lines of indigenous peoples. There is no question that the mindset that leads to and validates genetic engineering is genetic determinism - the idea that organisms are determined by their genetic makeup, or the totality of their genes. Genetic determinism derives from the marriage of Darwinism and Mendelian genetics. For those imbued with the mindset of genetic determinism, the major problems of the world can be solved simply by identifying and manipulating genes, for genes determine the characters of organisms; so by identifying a gene we can predict a desirable or undesirable trait, by changing a gene we change the trait, by transferring a gene we transfer the corresponding trait. pathogens. What is even more disturbing is that geneticists have now found evidence that the presence of antibiotics typically increases the frequency of horizontal gene transfer 100-fold or more, possibly because the antibiotic acts like a sex hormone for the bacteria, enhancing mating and exchange of genes between unrelated species.(23) Thus, antibiotic resistance and multiple antibiotic resistance cannot be overcome simply by making new antibiotics, for antibiotics create the very conditions to facilitate the spread of resistance. The continuing profligate use of antibiotics in intensive farming and in medicine, in combination with the commercial-scale practice of genetic engineering, may already be major contributing factors for the accelerated spread of multiple antibiotic resistance among new and old pathogens that the WHO 1996 Report has identified within the past 10 years. For example, there has been a dramatic rise both in terms of incidence and severity of cases of infections by Salmonella,(24) with some countries in Europe witnessing a staggering 20-fold increase in incidence since 1980. That is not all. One by one, those assumptions on which geneticists and regulatory committees have based their assessment of genetically engineered products to be "safe" have fallen by the wayside, especially in the light of evidence emerging within the past three to four years. However, there is still little indication that the new findings are being taken on board. On the contrary, regulatory bodies have succumbed to pressure from the industry to relax already inadequate regulations. Let me list a few more of the relevant findings in genetics. We have been told that horizontal gene transfer is confined to bacteria. That is not so. It is now known to involve practically all species of animal, plant and fungus. It is possible for any gene in any species to spread to any other species, especially if the gene is carried on genetically engineered gene-transfer vectors. Transgenes and antibiotic resistance marker genes from transgenic plants have been shown to end up in soil fungi and bacteria.(25) The microbial populations in the environment serve as the gene-transfer highway and reservoir, supporting the replication of the the genes and allowing them to spread and recombine with other genes to generate new pathogens.(26) We have been assured that "crippled" laboratory strains of bacteria and viruses do not survive when released into the environment. That is not true. There is now abundant evidence that they can either survive quite well and multiply, or they can go dormant and reappear after having acquired genes from other bacteria to enable them to multiply.(27) Bacteria co-operate much more than they compete. They share their most valuable assets for survival. We have been told that DNA is easily broken down in the environment. Not so. DNA can remain in the environment where they can

be picked up by bacteria and incorporated into their genome.(28) DNA is, in fact, one of the toughest molecules. Biochemists jumped with joy when they didn't have to work with proteins anymore, which lose their activity very readily. By contrast, DNA survives rigorous boiling, so when they approve processed food on grounds that there can be no DNA left, ask exactly how the processing is done, and whether the appropriate tests for the presence of DNA have been carried out. The survival of "crippled" laboratory strains of bacteria and viruses and the persistence of DNA in the environment are of particular relevance to the so-called "contained" users producing transgenic pharmaceuticals, enzymes and food additives. "Tolerated" releases and transgenic wastes from such users may already have released large amounts of transgenic bacteria and viruses as well as DNA into the environment since the early 1980s when commercial genetic engineering biotechnology began. We are told that DNA is easily digested by enzymes in our gut. Not true. The DNA of a virus has been found to survive passage through the gut of mice. Furthermore, the DNA readily finds its way into the bloodstream, and into all kinds of cell in the body.(29) Once inside the cell, the DNA can Unholy Alliance, by Dr Ho Página 8 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 insert itself into the cell's genome, and create all manner of genetic disturbances, including cancer. (30) There are yet further findings pointing to the potential hazards of generating new disease-causing viruses by recombination between artificial viral vectors and vaccines and other viruses in the environment. The viruses generated in this way will have increased host ranges, infecting and causing diseases in more than one species, and hence very difficult to eradicate. We are already seeing such viruses emerging. Monkeypox, a previously rare and potentially fatal virus caught from rodents, is spreading through central Zaire.(31) Between 1981-1986 only 37 cases were known, but there have been at least 163 cases in one eastern province of Zaire alone since July 1995. For the first time, humans are transmitting the disease directly from one to the other. An outbreak of hantavirus infection hit southern Argentina in December 1996, the first time the virus was transmitted from person to person.(32) Previously, the virus was spread by breathing in the aerosols from rodent excrement or urine. New highly virulent strains of infectious bursal disease virus (IBDV) spread rapidly throughout most of the poultry industry in the Northern Hemisphere, and are now infecting Antarctic penguins, and are suspected of causing mass mortality.(33) New strains of distemper and rabies viruses are spilling out from towns and villages to plague some of the world's rarest wild animals in Africa:(34) lions, panthers, wild dogs, giant otter. None of the plethora of new findings has been taken on board by the regulatory bodies. On the contrary, safety regulations have been relaxed. The public is being used, against its will, as guinea pigs for genetically engineered products, while new viruses and bacterial pathogens may be created by the technology every passing day. The present situation is reminiscent of the development of nuclear energy which gave us the atom bomb,

and the nuclear power stations that we now know to be hazardous to health and also to be environmentally unsustainable on account of the long-lasting radioactive wastes they produce. Joseph Rotblat, the British physicist who won the 1995 Nobel Prize after years of battling against nuclear weapons, has this to say. "My worry is that other advances in science may result in other means of mass destruction, maybe more readily available even than nuclear weapons. Genetic engineering is quite a possible area, because of these dreadful developments that are taking place there."(35) The large-scale release of transgenic organisms is much worse than nuclear weapons or radioactive nuclear wastes, as genes can replicate indefinitely, spread and recombine. There may yet be time enough to stop the industry's dreams turning into nightmares if we act now, before the critical genetic "melt-down" is reached. \* \* \* \* \*

For those hankering after sustainable agriculture, it promises to develop Greener, more environmentally friendly transgenic crops that will reduce the use of pesticides, herbicides and fertilizers. Unholy Alliance, by Dr Ho Página 1 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 That is not all. It is in the realm of human genetics that the real revolution will be wrought. Plans to uncover the entire genetic blueprint of the human being would, we are told, eventually enable geneticists to diagnose, in advance, all the diseases that an individual will suffer in his or her lifetime, even before the individual is born, or even as the egg is fertilized in vitro. A whole gamut of specific drugs tailored to individual genetic needs can be designed to cure all diseases. The possibility of immortality is dangling from the horizons as the "longevity gene" is isolated. There are problems, of course, as there would be in any technology. The ethical issues have to be decided by the public. (By implication, the science is separate and not open to question.) The risks will be minimized. (Again, by implication, the risks have nothing to do with the science.) After all, nothing in life is without risk. Crossing roads is a risk. The new biotechnology (i.e. genetic engineering biotechnology) is under very strict government regulation, and the government's scientists and other experts will see to it that neither the consumer nor the environment will be unduly harmed. Then came the relaxation of regulation on

genetically modified products, on grounds that over-regulation is compromising the "competitiveness" of the industry, and that hundreds of field trials have demonstrated the new biotechnology to be safe. And, in any case, there is no essential difference between transgenic plants produced by the new biotechnology and those produced by conventional breeding methods. (One prominent spokesperson for the industry even went as far as to refer to the varieties produced by conventional breeding methods, retrospectively, as "transgenics". (1) This was followed, a year later, by the avalanche of products approved, or seeking, approval marketing, for which neither segregation from non-genetically engineered produce nor labeling is required. One is left to wonder why, if the products are as safe and wonderful as claimed, they could not be segregated, as organic produce has been for years, so that consumers are given the choice of buying what they want. A few days later, as though acting on cue, the Association of British Insurers announced that, in future, people applying for life policies will have to divulge the results of any genetic tests they have taken. This is seen, by many, as a definite move towards open genetic discrimination. A few days later, a scientist of the Roslin Institute near Edinburgh announced that they had successfully "cloned" a sheep from a cell taken from the mammary gland of an adult animal. "Dolly", the cloned lamb, is now seven months old. Of course it took nearly 300 trials to get one success, but no mention is made of the vast majority of the embryos that failed. Is that ethical? If it can be done on sheep, does it mean it can be done for human beings? Are we nearer to cloning human beings? The popular media went wild with heroic enthusiasm at one extreme to the horror of Frankenstein at the other. Why is this work only coming to public attention now, when the research has actually been going on for at least 10 years?(2) The public are totally unprepared. They are being plunged headlong, against their will, into the brave new genetically engineered world, in which giant, faceless multinational corporations will control every aspect of their lives, from the food they can eat, to the baby they can conceive and give birth to. (continues after box)

---

I should, right away, dispel the myth that genetic engineering is just like conventional breeding techniques. It is not. Genetic engineering bypasses conventional breeding by using the artificially constructed vectors to multiply copies of genes, and in many cases, to carry and smuggle genes into cells. Once inside cells, these vectors slot themselves into the host genome. In this way, transgenic organisms are made carrying the desired transgenes. The insertion of foreign genes into the host genome has long been known to have many harmful and fatal effects including cancer; and this is born out by the low success rate of creating desired transgenic organisms. Typically, a large number of eggs or embryos have to be injected or Unholy Alliance, by Dr Ho Página 2 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 infected with the vector to obtain a few organisms that successfully

express the trans-gene. The most common vectors used in genetic engineering biotechnology are a chimaeric recombination of natural genetic parasites from different sources, including viruses causing cancers and other diseases in animals and plants, with their pathogenic functions 'crippled', and tagged with one or more antibiotic resistance 'marker' genes, so that cells transformed with the vector can be selected. For example, the vector most widely used in plant genetic engineering is derived from a tumour-inducing plasmid carried by the soil bacterium *Agrobacterium tumefaciens*. In animals, vectors are constructed from retroviruses causing cancers and other diseases. A vector currently used in fish has a framework from the Moloney marine leukaemic virus, which causes leukaemia in mice, but can infect all mammalian cells. It has bits from the Rous Sarcoma virus, causing sarcomas in chickens, and from the vesicular stomatitis virus, causing oral lesions in cattle, horses, pigs and humans. Such mosaic vectors are particularly hazardous. Unlike natural parasitic genetic elements which have various degrees of host specificity, vectors used in genetic engineering, partly by design, and partly on account of their mosaic character, have the ability to overcome species barriers, and to infect a wide range of species. Another obstacle to genetic engineering is that all organisms and cells have natural defence mechanisms that enable them to destroy or inactivate foreign genes, and trans-gene instability is a big problem for the industry. Vectors are now increasingly constructed to overcome those mechanisms that maintain the integrity of species. The result is that the artificially constructed vectors are especially good at carrying out horizontal gene transfer. Let me summarize why rDNA technology differs radically from conventional breeding techniques. 1. Genetic engineering recombines genetic material in the laboratory between species that do not interbreed in nature. 2. While conventional breeding methods shuffle different forms (alleles) of the same genes, genetic engineering enables completely new (exotic) genes to be introduced with unpredictable effects on the physiology and biochemistry of the resultant transgenic organism. 3. Gene multiplications and a high proportion of gene transfers are mediated by vectors which have the following undesirable characteristics: a. many are derived from disease-causing viruses, plasmids and mobile genetic elements - parasitic DNA that have the ability to invade cells and insert themselves into the cell's genome causing genetic damages. b. they are designed to break down species barriers so that they can shuttle genes between a wide range of species. Their wide host range means that they can infect many animals and plants, and in the process pick up genes from viruses of all these species to create new pathogens. c. they routinely carry genes for antibiotic resistance, which is already a big health problem. d. they are increasingly constructed to overcome the recipient species' defence mechanisms that break down or inactivate foreign DNA.

---

\_\_\_\_\_ Isn't it a bit late in the day to tell us that?, you ask. Yes and no. Yes, because I, who should, perhaps, have known better, was caught unprepared like

the rest. And no, because there have been so many people warning us of that eventuality, who have campaigned tirelessly on our behalf, some of them going back to the earliest days of genetic engineering in the 1970s - although we have paid them little heed. No, it is not too late, if only because that is precisely what we tend to believe, and are encouraged to believe. A certain climate is created - that of being rapidly overtaken by events - Unholy Alliance, by Dr Ho Página 3 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 reinforcing the feeling that the tidal wave of progress brought on by the new biotechnology is impossible to stem, so that we may be paralyzed into accepting the inevitable, No, because we shall not give up, for the consequence of giving up is the brave new world, and soon after that, there may be no world at all. The gene genie is fast getting out of control. The practitioners of genetic engineering biotechnology, the regulators and the critics alike, have all underestimated the risks involved, which are inherent to genetic engineering biotechnology, particularly as misguided by an outmoded and erroneous world-view that comes from bad science. The dreams may already be turning into nightmares. That is why people like myself are calling for an immediate moratorium on further releases and marketing of genetically engineered products, and for an independent public enquiry to be set up to look into the risks and hazards involved, taking into account the most comprehensive, scientific knowledge in addition to the social, moral implications. This would be most timely, as public opposition to genetic engineering biotechnology has been gaining momentum throughout Europe and the USA. In Austria, a record 1.2 million citizens, representing 20 per cent of the electorate, have signed a people's petition to ban genetically engineered foods, as well as deliberate releases of genetically modified organisms and patenting of life. Genetically modified foods were also rejected earlier by a lay people consultation in Norway, and by 95 per cent of consumers in Germany, as revealed by a recent survey. The European Parliament has voted by an overwhelming 407 to 2 majority to censure the Commission's authorization, in December 1996, for imports of Ciba-Geigy's transgenic maize into Europe, and is calling for imports to be suspended while the authorization is re-examined. The European Commission has decided that in the future genetically engineered seeds will be labeled, and is also considering proposals for retroactive labeling. Commissioner Emma Bonino is to set up a new scientific committee to deal with genetically engineered foods, members of which are to be completely independent of the food industry. Meanwhile, Franz Fischler, the European Commissioner on Agriculture, supports a complete segregation and labeling of production lines of genetically modified and non-genetically modified foods. In June this year, President Clinton imposed a five-year ban on human cloning in the USA, while the UK House of Commons Science and Technology Committee (STC) wants British law to be amended to ensure that human cloning is illegal. The STC, President Chirac of France and German Research Minister Juergen Ruettggers are also calling for an international

ban on human cloning. Like other excellent critics before me,(3) I do not think there is a grand conspiracy afoot, though there are many forces converging to a single terrible end. Susan George comments, "They don't have to conspire if they have the same world-view, aspire to similar goals and take concerted steps to attain them."(4) I am one of those scientists who have long been highly critical of the reductionist mainstream scientific world-view, and have begun to work towards a radically different approach for understanding nature.(5) But I was unable, for a long time, to see how much science really matters in the affairs of the real world, not just in terms of practical inventions like genetic engineering, but in how that scientific world-view takes hold of people's unconscious, so that they take action, involuntarily, unquestioningly, to shape the world to the detriment of human beings. I was so little aware of how that science is used, without conscious intent, to intimidate and control, to obfuscate, to exploit and oppress; how that dominant world-view generates a selective blindness to make scientists themselves ignore or misread scientific evidence. The point, however, is not that science is bad - but that there can be bad science that ill-serves humanity. Science can often be wrong. The history of science can just as well be written in terms of the mistakes made than as the series of triumphs it is usually made out to be. Science is nothing more, and nothing less, than a system of concepts for understanding nature and for obtaining reliable knowledge that enables us to live sustainably with nature. In that sense, one can ill-afford to give up science, for it is through our proper understanding and knowledge of nature that we can live a satisfying life, that we can ultimately distinguish the good science, which serves humanity, from the bad science that does not. In this view, science is imbued with moral values from the start, and cannot be disentangled from them. Therefore it is bad science that purports to be "neutral" and divorced from moral values, as much as it is bad science that ignores scientific evidence. It is clear that I part company with perhaps a majority of my scientist colleagues in the mainstream, who believe that science can never be wrong, although it can be misused. Or else they carefully distinguish science, as neutral and value-free, from its application, technology, which can do harm or good.(6) This distinction between science and technology is spurious, especially in the case of an experimental science like genetics, and almost all of biology, where the techniques determine what sorts of question are asked and hence the range of answers that are important, significant and relevant to the science. Where would molecular genetics be without the tools that enable practitioners to recombine and manipulate our destiny? It is an irresistibly heroic view, except that it is totally wrong and misguided. It is also meaningless, therefore, to set up Ethical Committees which do not question the basic scientific assumptions behind the practice of genetic engineering biotechnology. Their brief is severely limited, often verging on the trivial and banal - such as whether a pork gene transferred to food plants might be counter to certain religious beliefs - in

comparison with the much more fundamental questions of eugenics, genetic discrimination and, indeed, whether gene transfers should be carried out at all. They can do nothing more than make the unacceptable acceptable to the public. The debate on genetic engineering biotechnology is dogged by the artificial separation imposed between "pure" science and the issues it gives rise to. "Ethics" is deemed to be socially determined, and therefore negotiable, while the science is seen to be beyond reproach, as it is the "laws" of nature. The same goes for the distinction between "technology" - the application of science - from the science. Risk assessments are to do with the technology, leaving the science equally untouched. The technology can be bad for your health, but not the science. In this article, I shall show why science cannot be separated from moral values nor from the technology that shapes our society. In other words, bad science is unquestionably bad for one's health and well-being, and should be avoided at all costs. Science is, above all, fallible and negotiable, because we have the choice, to do or not to do. It should be negotiated for the public good. That is the only ethical position one can take with regard to science. Otherwise, we are in danger of turning science into the most fundamentalist of religions, that, working hand in hand with corporate interests, will surely usher in the brave new world. Bad science and big business What makes genetic engineering biotechnology dangerous, in the first instance, is that it is an unprecedented, close alliance between two great powers that can make or break the world: science and commerce. Practically all established molecular geneticists have some direct or indirect connection with industry, which will set limits on what the scientists can and will do research on, not to mention the possibility of compromising their integrity as independent scientists.(7) The worst aspect of the alliance is that it is between the most reductionist science and multinational monopolistic industry at its most aggressive and exploitative. If the truth be told, it is bad science working together with big business for quick profit, aided and abetted by our governments for the banal reason that governments wish to be re-elected to remain in 'power'.(8) Speaking as a scientist who loves and believes in science, I have to say it is bad science that has let the world down and caused the major problems we now face, not the least among which is by promoting and legitimizing a particular world-view. It is a reductionist, manipulative and Unholy Alliance, by Dr Ho Página 5 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

exploitative world-view. Reductionist because it sees the world as bits and pieces, and denies there are organic wholes such as organisms, ecosystems, societies and community of nations. Manipulative and exploitative because it regards nature and fellow human beings as objects to be manipulated and exploited for gain; life being a Darwinian struggle for survival of the fittest. It is by no means coincidental that the economic theory currently dominating the world is rooted in the same laissez-faire capitalist ideology that gave rise to Darwinism. It acknowledges no values other than self-interest, competitiveness and the

accumulation of wealth, at which the developed nations have been very successful. Already, according to the 1992 United Nations Development Programme Report, the richest fifth of the world's population has amassed 82.7 per cent of the wealth, while the poorest fifth gets a piddling 1.4 per cent. Or, put in another way, there are now 477 billionaires in the world whose combined assets are roughly equal to the combined annual incomes of the poorer half of humanity - 2.8 billion people.(9) Do we need to be more "competitive" still to take from the poorest their remaining pittance? That is, in fact, what we are doing. The governmental representatives of the superpowers are pushing for a "globalized economy" under trade agreements which erase all economic borders. "Together, the processes of deregulation and globalization are undermining the power of both unions and governments and placing the power of global corporations and finance beyond the reach of public accountability."(10) The largest corporations continue to consolidate that power through mergers, acquisitions and strategic alliances. Multinational corporations now comprise 51 of the world's 100 largest economies: only 49 of the latter are nations. By 1993, agricultural biotechnology was being controlled by just (11) giant corporations, and these are now undergoing further mergers. The OECD (Organization for Economic Co-operation and Development) member countries are at this moment working in secret in Paris on the Multilateral Agreements on Investment (MAI), which is written by and for corporations to prohibit any government from establishing performance or accountability standards for foreign investors. European Commissioner, Sir Leon Brittan, is negotiating in the World Trade Organization, on behalf of the European Community, to ensure that no barriers of any kind should remain in the South to dampen exploitation by the North, and at the same time, to protect the deeply unethical "patents of life" through Trade Related Intellectual Property Rights (TRIPS) agreements.(11) So, in addition to gaining complete control of the food supply of the South through exclusive rights to genetically engineered seeds, the big food giants of the North can asset-strip the South's genetic and intellectual resources with impunity, up to and including genes and cell lines of indigenous peoples. There is no question that the mindset that leads to and validates genetic engineering is genetic determinism - the idea that organisms are determined by their genetic makeup, or the totality of their genes. Genetic determinism derives from the marriage of Darwinism and Mendelian genetics. For those imbued with the mindset of genetic determinism, the major problems of the world can be solved simply by identifying and manipulating genes, for genes determine the characters of organisms; so by identifying a gene we can predict a desirable or undesirable trait, by changing a gene we change the trait, by transferring a gene we transfer the corresponding trait. The Human Genome Project was inspired by the same genetic determinism that locates the "blueprint" for constructing the human being in the human genome. It may have been a brilliant political move to capture research funds and, at the same time, to revive a flagging pharmaceutical industry, but its

scientific content was suspect from the first. Genetic engineering technology promises to work for the benefit of mankind; the reality is something else. It displaces and marginalizes all alternative approaches that address the social and environmental causes of malnutrition and ill-health, such as poverty and unemployment, and the need for a sustainable agriculture that could regenerate the environment, guarantee long-term food security and, at the same time, conserve indigenous biodiversity. Unholy Alliance, by Dr Ho Página 6 de 11 <http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 Its purpose is to accommodate problems that reductionist science and industry have created in the first place - widespread environmental deterioration from the intensive, high-input agriculture of the Green Revolution, and accumulation of toxic wastes from chemical industries. What's offer now is more of the same, except with new problems attached. It leads to discriminatory and other unethical practices that are against the moral values of societies and community of nations. Worst of all, it is pushing a technology that is untried, and, according to existing knowledge, is inherently hazardous to health and biodiversity. Let me enlarge on that last point here, as I believe it has been underestimated, if not entirely overlooked by the practitioners, regulators and many critics of genetic engineering biotechnology alike, on account of a certain blindness to concrete scientific evidence, largely as a result of their conscious or unconscious commitment to an old, discredited paradigm. The most immediate hazards are likely to be in public health - which has already reached a global crisis, attesting to the failure of decades of reductionist medical practices - although the hazards to biodiversity will not be far behind. Genetic engineering biotechnology is inherently hazardous According to the 1996 World Health Organization Report, at least 30 new diseases, including AIDS, Ebola and Hepatitis C, have emerged over the past 20 years, while old infectious diseases such as tuberculosis, cholera, malaria and diphtheria are coming back worldwide. Almost every month now in the UK we hear reports on fresh outbreaks: Streptococcus, meningitis, E. coli. Practically all the pathogens are resistant to antibiotics, many to multiple antibiotics. Two strains of E-coli isolated in a transplant ward outside Cambridge in 1993 were found to be resistant to 21 out of 22 common antibiotics.(12) A strain of Staphylococcus isolated in Australia in 1990 was found to be resistant to 31 different drugs.(13) Infections with these and other strains will very soon become totally invulnerable to treatment. In fact, scientists in Japan have already isolated a strain of Staphylococcus aureus that is resistant even to the last resort antibiotic, vancomycin.(14) Geneticists have now linked the emergence of pathogenic bacteria and of antibiotic resistance to horizontal gene transfer - the transfer of genes to unrelated species, by infection through viruses, through pieces of genetic material, DNA, taken up into cells from the environment, or by unusual mating taking place between unrelated species. For example, horizontal gene transfer and subsequent genetic recombination have generated the bacterial strains responsible for the cholera outbreak in India in 1992,(15) and the

Streptococcus epidemic in Tayside in 1993.(16) The E. coli 157 strain involved in the recent outbreaks in Scotland is believed to have originated from horizontal gene transfer from the pathogen, Shigella.(17) Many unrelated bacterial pathogens, causing diseases from bubonic plague to tree blight, are found to share an entire set of genes for invading cells, which have almost certainly spread by horizontal gene transfer.(18) Similarly, genes for antibiotic resistance have spread horizontally and recombined with one another to generate multiple antibiotic resistance throughout the bacterial populations.(19) Antibiotic resistance genes spread readily by contact between human beings, and from bacteria inhabiting the gut of farm animals to those in human beings.(20) Multiple antibiotic resistant strains of pathogens have been endemic in many hospitals for years.(21) What is the connection between horizontal gene transfer and genetic engineering? Genetic engineering is a technology designed specifically to transfer genes horizontally between species that do not interbreed. It is designed to break down species barriers and, increasingly, to overcome the species' defence mechanisms which normally degrade or inactivate foreign genes.(22) For the purpose of manipulating, replicating and transferring genes, genetic engineers make use of recombined versions of precisely those genetic parasites causing diseases including cancers, and others that carry and spread virulence genes and antibiotic resistance genes. Thus the technology will contribute to an increase in the frequency of horizontal gene transfer of those genes that are responsible for virulence and antibiotic resistance, and allow them to recombine to generate new Unholy Alliance, by Dr Ho Página 7 de 11

<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003

pathogens. What is even more disturbing is that geneticists have now found evidence that the presence of antibiotics typically increases the frequency of horizontal gene transfer 100-fold or more, possibly because the antibiotic acts like a sex hormone for the bacteria, enhancing mating and exchange of genes between unrelated species.(23) Thus, antibiotic resistance and multiple antibiotic resistance cannot be overcome simply by making new antibiotics, for antibiotics create the very conditions to facilitate the spread of resistance. The continuing profligate use of antibiotics in intensive farming and in medicine, in combination with the commercial-scale practice of genetic engineering, may already be major contributing factors for the accelerated spread of multiple antibiotic resistance among new and old pathogens that the WHO 1996 Report has identified within the past 10 years. For example, there has been a dramatic rise both in terms of incidence and severity of cases of infections by Salmonella,(24) with some countries in Europe witnessing a staggering 20-fold increase in incidence since 1980. That is not all. One by one, those assumptions on which geneticists and regulatory committees have based their assessment of genetically engineered products to be "safe" have fallen by the wayside, especially in the light of evidence emerging within the past three to four years. However, there is still little indication that the new findings are being taken on board. On the contrary,

regulatory bodies have succumbed to pressure from the industry to relax already inadequate regulations. Let me list a few more of the relevant findings in genetics. We have been told that horizontal gene transfer is confined to bacteria. That is not so. It is now known to involve practically all species of animal, plant and fungus. It is possible for any gene in any species to spread to any other species, especially if the gene is carried on genetically engineered gene-transfer vectors. Transgenes and antibiotic resistance marker genes from transgenic plants have been shown to end up in soil fungi and bacteria.(25) The microbial populations in the environment serve as the gene-transfer highway and reservoir, supporting the replication of the the genes and allowing them to spread and recombine with other genes to generate new pathogens.(26) We have been assured that "crippled" laboratory strains of bacteria and viruses do not survive when released into the environment. That is not true. There is now abundant evidence that they can either survive quite well and multiply, or they can go dormant and reappear after having acquired genes from other bacteria to enable them to multiply.(27) Bacteria co-operate much more than they compete. They share their most valuable assets for survival. We have been told that DNA is easily broken down in the environment. Not so. DNA can remain in the environment where they can be picked up by bacteria and incorporated into their genome.(28) DNA is, in fact, one of the toughest molecules. Biochemists jumped with joy when they didn't have to work with proteins anymore, which lose their activity very readily. By contrast, DNA survives rigorous boiling, so when they approve processed food on grounds that there can be no DNA left, ask exactly how the processing is done, and whether the appropriate tests for the presence of DNA have been carried out. The survival of "crippled" laboratory strains of bacteria and viruses and the persistence of DNA in the environment are of particular relevance to the so-called "contained" users producing transgenic pharmaceuticals, enzymes and food additives. "Tolerated" releases and transgenic wastes from such users may already have released large amounts of transgenic bacteria and viruses as well as DNA into the environment since the early 1980s when commercial genetic engineering biotechnology began. We are told that DNA is easily digested by enzymes in our gut. Not true. The DNA of a virus has been found to survive passage through the gut of mice. Furthermore, the DNA readily finds its way into the bloodstream, and into all kinds of cell in the body.(29) Once inside the cell, the DNA can Unholy Alliance, by Dr Ho Página 8 de 11  
<http://www.geocities.com/RainForest/3621/BIOTECH.HTM> 07/03/2003 insert itself into the cell's genome, and create all manner of genetic disturbances, including cancer. (30) There are yet further findings pointing to the potential hazards of generating new disease-causing viruses by recombination between artificial viral vectors and vaccines and other viruses in the environment. The viruses generated in this way will have increased host ranges, infecting and causing diseases in more than one species, and hence very difficult to eradicate. We are already seeing such viruses emerging. Monkeypox, a previously rare

and potentially fatal virus caught from rodents, is spreading through central Zaire.(31) Between 1981-1986 only 37 cases were known, but there have been at least 163 cases in one eastern province of Zaire alone since July 1995. For the first time, humans are transmitting the disease directly from one to the other. An outbreak of hantavirus infection hit southern Argentina in December 1996, the first time the virus was transmitted from person to person.(32) Previously, the virus was spread by breathing in the aerosols from rodent excrement or urine. New highly virulent strains of infectious bursal disease virus (IBDV) spread rapidly throughout most of the poultry industry in the Northern Hemisphere, and are now infecting Antarctic penguins, and are suspected of causing mass mortality.(33) New strains of distemper and rabies viruses are spilling out from towns and villages to plague some of the world's rarest wild animals in Africa:(34) lions, panthers, wild dogs, giant otter. None of the plethora of new findings has been taken on board by the regulatory bodies. On the contrary, safety regulations have been relaxed. The public is being used, against its will, as guinea pigs for genetically engineered products, while new viruses and bacterial pathogens may be created by the technology every passing day. The present situation is reminiscent of the development of nuclear energy which gave us the atom bomb, and the nuclear power stations that we now know to be hazardous to health and also to be environmentally unsustainable on account of the long-lasting radioactive wastes they produce. Joseph Rotblat, the British physicist who won the 1995 Nobel Prize after years of battling against nuclear weapons, has this to say. "My worry is that other advances in science may result in other means of mass destruction, maybe more readily available even than nuclear weapons. Genetic engineering is quite a possible area, because of these dreadful developments that are taking place there."(35) The large-scale release of transgenic organisms is much worse than nuclear weapons or radioactive nuclear wastes, as genes can replicate indefinitely, spread and recombine. There may yet be time enough to stop the industry's dreams turning into nightmares if we act now, before the critical genetic "melt-down" is reached. \* \* \* \* \*

> AUGUST AUGUST

, I contacted Senator Perreault's office about the possibility of implementing his proposal to permit students to repay their loans through community service, and I sent a letter to Pierre Pettigrew, the then Minister of Human Resources, detailing the community service non- remunerated work that I had done.

EXHIBIT

**1230 St. Patrick St.**

**Victoria, B.C. V8S 4Y4**

**1250-598-0071**

**Hon. Pierre Pettigrew**

**House of Commons, K1A0A6**

**( ) THAT 1998 Thursday on June 4, 1998, resubmitted Friday, August 7, 1998**

**RE FEDERAL STUDENT LOAN \$37,000**

2024

**I will be 60 years old this November, and have received little remuneration for the work I have been doing for over 26 years. During this time, I have been working about 100 hours a week on my education and on unpaid issue-oriented work.**

**From 1972- 1996, while bringing up four children and studying, I had been addressing the interdependence of issues—the guaranteeing of human rights, the protecting and preserving of the environment, the enabling of social justice, the preventing of war and conflict and the providing for socially equitable and environmentally sound employment. Much of the work that I have been doing has been related to attempting to address years of government and industry negligence. Currently, in Canadian society, work that has contributed to environmental destruction through the production of toxic, hazardous and atomic technology, substances and waste, through the production of greenhouse gases and ozone depleting substances, through the depletion of resources including deforestation and over fishing and destruction of fish habitat and through promotion of conflict and war through arms sales and uranium mining etc. receives remuneration; whereas work that attempts to prevent environmental destruction or the escalation of conflict is not deemed to be worthy of remuneration.**

**My commitment to the guaranteeing of human rights, the protecting and preserving of the environment, the preventing of war and conflict, the enabling of social justice and the providing of socially equitable and environmentally sound employment; and my awareness of the discrepancy between what has been agreed to internationally and what is being done at the national and provincial level made it imperative for me to act to address these issues.**

**Today we are living with the consequences of years of negligence.**

**Daily, the serious consequences of institutional collusion between corporations and governments are being seen. Recently, in the case of Hepatitis C, it has been revealed that the "blood industry" lobbied as early as the 1950s to not use the test. Also, recently it has come to light that a toxic bleaching agent used in white bread was banned in the US and UK in 1950 but was still permitted in Canada until 1965. Canada's negligence in uranium mining has resulted in the death of a generation of first nations men in the area of the first uranium mine. Canada was warned not to sell nuclear technology to India, and now Canada is living with the consequences of its complicity in the development of India's nuclear weapons. Now Canada is continued to ignore warnings about electrical transmission and about hormone treated beef and genetically engineered food etc. My work has involved years of "unheeded warnings". Warnings and concern for the public trust receive little remuneration.**

**For over 10 years I have been specifically addressing the issue of Canada failure to live up to promises nationally and internationally. Recently the Commissioner of the Commission on Sustainable Development, Brian Emmet, has corroborated my years of calling for the translation of rhetoric into action. In his report which was released a few months ago he stated that there is a gap between Canada's promises and the acting on these promises, and that the Canadian government has failed to live up to its promises to Canadians and to the global community.**

## **EXHIBIT**

**My concern for addressing these issues meant that I was not able to undertake other employment and the attaining of my degrees was delayed. My participation as a policy analyst at all levels of government addressing the federal and provincial government's failure to implement obligations and commitments has resulted in hours of work that would not have been necessary if the governments had translated their international rhetoric into action. I incurred a \$55, 229.00 federal government loan. I was eligible to receive full remission from the province of up to \$30,000 on completing my doctorate. However, the eligibility for remission only applies to the provincial part. The University divided my loan into \$20,000 provincial and 37,000 federally. I have now received remission for \$20,000. The provincial government bases its remission program on the completion of degrees and on the community service.**

**For two years I have been treated with disrespect and harassed by a provincial collection agency. Finally, I was able to receive remission for the 20,000 BC loan. Yet even with what was described as full remission I have a provincial loans officer harassing me. I applied for deferral of my federal loan on the understanding that I could have an 18-month deferral. On April 8, I received a letter indicating that my outstanding federal load was 35,000 and then at the end of April I am began to be hounded by the federal Collection agency, and told that I had accumulated interest of \$7000 and that I was paying \$8 a day in interest.**

**Several years ago. Senator Ray Perrault proposed that students should have the opportunity of repaying their loans through community services. I have for over 25 years participated in community services.**

**In the subsequent pages I have indicated work when one has been a long-time critic of government, industry and of corporate control of university. I now find myself nearing the age of 60— the time at which many citizens retire. I have to borrow money to just meet basic needs.**

**All levels of government have been using voluntary work throughout the years I have calculated that in the 26 years since 1972 while studying I have**

**served the community for thousands of hours and amounted to approximately \$382,240 if I were paid \$15 an hour up until I completed my Master's Degree, \$20 an hour up until I completed my Doctorate, and \$30 after I completed my Doctorate. In the subsequent pages I have documented the years of work.**

**I urge you to take into consideration my years of service and reassess my loan.**

**Yours very truly**

**Joan Russow Ph.D.**

**cc. Hon Raymond Perrault**

Then Nancy Oden wrote:

Dear All - This is too important to not discuss. We need to take a bit of time to actually read the whole thing, see whether we agree with it all, and then discuss, debate, and decide. I would need at least 2-3 weeks within which to find the time to read it, think about it, and write up comments. How about others? Nancy Oden

\*\*\*\*\*

Then from Don Fitz:

The Gateway Green Alliance considers this an important issue of democratic process. We discussed Joan's resolution and appreciate her good work in putting it together. We think that the document could be one which is very important to discuss and for Green Parties and other groups to endorse and work together to improve.

However, we agreed that it was NOT endorsed in principle by the Grassroots Gathering on Bio-devastation. Nothing as long as this document could be

endorsed by people who had not had a chance to read about it and think about it before they came to the event. It should be described as a discussion document and not something which came out of the Gathering.

And later from Don Fitz:

My other response may not have emphasized enough how much Gateway Greens agree with the importance of this document. I think I am speaking for other GGA members to say we totally agree with Nancy.

And then from Brian:

My understanding is that Joan's resolution, as cumbersome and incomplete as it was, WAS endorsed "in principle" by the plenary. Given that we don't have any kind of ratification in process in place, it still effectively stands as a "discussion document" as you suggested. As awkward as it may have been, I don't think we can revoke the plenary's endorsement.

Brian.

- July 13- 17 1998 attended Bio-devastation I Conference in St Louis  
compiled the Bio-devastation Declaration calling for the Banning  
of Genetically engineered foods and crops. I presented this  
Declaration to the plenary as part of a panel. in the subsequent  
plenary the Declaration was approved in Principle

EXHIBIT

ST LOUIS BIODEVASTATION I DECLARATION

ST LOUIS

BIODEVASTATION DECLARATION

July 19, 1998

Background:

From July 17 -19, 1998 the First Grassroots Gathering on Bio-devastation: Genetic Engineering took place St Louis, USA. This conference was hosted by the Gateway Green Alliance party, the Pure food Campaign, Social Ecology Institute, and the Edmonds Institute. The Declaration was presented at the panel on Global Organizing for Citizen empowerment, and was adopted in principle in the final plenary on July 19.

The Declaration was formed throughout the Conference as a compilation of concerns expressed and statements of action proposed by the participants at the conference. It is not the final version and needs to be organized, edited and is being circulated for further clarification and strengthening.

In addition in the final plenary, resolutions were passed in calling for (i) Disbanding the Human Genome Project and ending the colonization of the genes of indigenous peoples; (ii) opposing the genetic engineering of all plants and animals; (iii) banning genetically engineered bovine Growth hormone; (iv) banning the terminator gene, and the

production of genetically engineered foods; (v) condemning the reliance on genetic engineering and toxic herbicides and insecticides; (vi) Abolishing patents of genetic sequences and living organisms in the form of intellectual property rights

The above resolutions passed at the plenary in final form will form part of the Bio-devastation Declaration.

This Conference has been a basis for the establishment of a global movement against genetically engineered foods and associated issues. It was agreed that every effort will be made to participate in the Global days of action on October 15 —on the eve of the World food day. ADOPTED IN PRINCIPLE CIRCULATED FOR FURTHER COMMENT AND ENDORSEMENT:

ST LOUIS BIODEVASTATION DECLARATION TO BAN GENETICALLY ENGINEERED FOODS AND CROPS,

THE HUMAN GENOME DIVERSITY PROJECT, TERMINATOR GENE AND EXPLOITATION OF THE KNOWLEDGE OF INDIGENOUS PEOPLES FOR PRIVATE PROFIT

MINDFUL THAT

THE PRECAUTIONARY PRINCIPLE affirms that where there is a threat to human health or to the environment, the lack of full scientific certainty shall not be used as a reason for postponing measures to prevent the threat. The precautionary principle has long been a tenet of international customary law and as such is required to be integrated into state law.

THE REVERSE ONUS PRINCIPLE means that where there is a reasonable apprehension that a process or product may pose a significant threat to human health or to the environment, the onus is on the proponent to establish that the product or process is safe, and serves demonstrable public needs, rather than on the opponents to demonstrate harm. Many nations have also undertaken to adhere to this principle

THE PREVENTION OF DISASTERS PRINCIPLE affirms that extreme care should be taken to prevent consequences that are likely to be unexpected, possibly long-term, and thus difficult to determine through tests. At recent international conferences, the member states of the United Nations have committed themselves to observe the Prevention of Disasters Principle including both natural human- caused (anthropogenic) disasters.

THE PREVENTION OF TRANSFER TO OTHER STATES OF HARMFUL SUBSTANCES ensures that substances and activities that are harmful to human health or that cause environmental destruction will not be transferred to other states

THE PREVENTION OF ACTIVITIES THAT ARE CULTURALLY INAPPROPRIATE PRINCIPLE ensures that nothing shall be done on the lands of indigenous peoples that would cause environmental harm or be culturally inappropriate

THE INTERGENERATIONAL EQUITY PRINCIPLE ensures the rights of future generations and the right of a child to a safe environment

THE NUREMBERG PRINCIPLE holds that citizens are morally obliged to act to oppose unjust laws and unjust state actions.

These principles have been endorsed by the member states of the United Nations. Many governments have disregarded these principles in giving uncritical support to corporations engaged in genetic experimentation and in promoting genetic engineering in agribusiness applications.

**AFFIRMING THAT:**

The introduction of genetically modified substances is an irresponsible experiment being conducted on the entire planet, with little or no research on with respect to its effects on the environment or human health. Genetically modified organisms are by definition new life forms which, if released into the natural environment, may well have unanticipated synergistic interactions with an unlimited range of existing organisms. For instance, pollen from crops carrying the terminator gene- the gene that renders the seed from a crop infertile- may disperse and infect crops in other fields, also rendering them infertile. There are also well-founded concerns about the unknown effects of introducing animal genetic material into plants which are ingested by humans.

The introduction of new organisms has potential ramifications which are complex, long-term, uncertain and ambiguous. The prevention of anthropogenic disasters must surely include avoiding the introduction of new procedures and substances with such far reaching ramifications, especially where there has been hardly any effort, let alone sufficient time to determine the nature and extent of the potential deleterious impact on health and on the environment.

Genetically altered foods will have epidemiological and toxicological properties more like drugs than like food. They must therefore be subject to tests for mutagenicity and carcinogenicity, for their effect on fetuses during pregnancy, their long-term side effects, their interactive effects with other drugs chemicals, or GM foods, and so on. In addition, they must be tested on common bacteria of the human (and other animal) microbial ecologies. We must know whether an antibiotic marker gene can pass antibiotic resistance to pathogens, or if it can recombine or transfer to bacteria or viruses, etc. These tests and their complex ramifications may be difficult or impossible to assess with sufficient certainty to justify production.

**NOTING THAT:**

The absence of proven deleterious consequences on health and the environment must not be used to justify the production of potentially calamitous and untested substances, including genetically engineering foods.

There is sufficient concern about genetically engineered foods and sufficient anticipatory scientific concern about the possible interaction of genetically engineered crops with existing organisms to justify the banning of genetically modified foods and other organisms until their potential interaction with existing organisms has been thoroughly tested in complete isolation from the natural environment. It is possible that no test could be devised that would be comprehensive enough to demonstrate the safety of introducing genetically modified organisms, because of the complexities which can arise from their interaction with existing organisms.

**OUTRAGED THAT:**

Government representatives at the recent meeting of the Codex Alimentarius in Ottawa ignored citizens' call for urgent action to label existing genetically engineered foods, and to extend the Codex Alimentarius' terms of reference to include a call for banning genetically engineered foods. The representatives of the Codex Alimentarius had the unique opportunity to finally demonstrate that the global community is prepared to prevent future generations from being exposed to the effects of our negligence.

WE ARE FURTHER OUTRAGED that universities have entered into substantive contracts with pharmaceutical and agribusiness companies involved with genetically modified organisms, including genetically engineered foods; and that many pharmaceutical and agribusiness companies have been exploiting indigenous peoples' knowledge of esoteric organisms and their medicinal effects;

AND WE REJECT the myth perpetuated by Monsanto and the Biotechnology industry that the world cannot be fed without genetic engineering, and that small farmers do not feed the world.

WHILST a considerable percentage of the world's known biodiversity is located in developing countries, any effective mechanism for the protection of and reward for the local custodians of these genetic resources is being stalled by northern, industrialized nations.

**THEREFOR, WE CALL UPON:**

The United Nations

to call upon member states of the United Nations:

- to act immediately to call for the implementation of existing international declarations, conventions, covenants, treaties on human rights and the environment to support the cancellation of the human genome project, the patenting of seeds, and all further commercial exploitation of indigenous peoples and of the knowledge of indigenous peoples. Also, to prevent, under the Convention on Biological Diversity

(a) the transfer of all Genetically modified organisms, and (b) the development of pesticide resistant crops

- to immediately halt to harvesting genetic material of indigenous peoples and to demand that these efforts be replaced with international dedication to preserving the existence of indigenous peoples and their culture. • to prevent "bioprospecting" — exploiting and patenting the knowledge of indigenous peoples • to not defeat the purpose of the Convention on Biological Diversity by failing to invoke the precautionary principle to justify the banning of the production of genetically engineered foods • to recognize that conservation of Biodiversity is antithetical to the development and altering through genetic engineering • to prevent under the Convention on Biological Diversity the transfer of all Genetically modified organisms • to call for an immediate moratorium on research, development, release, and movement of genetically engineered organisms • to prevent under the Convention on Biological Diversity the development of pesticide resistant crops • to ban genetically engineered foods and immediately remove all genetically engineered foods from the food distribution system • to institute an immediate ban on genetically engineered Bovine Growth Hormone, endorsing the campaign to rid RBGH from school milk. (passed in plenary)
- to keep our forests, farms and food safe, and opposing the genetic engineering of all plants and animals. (passed in plenary)
- to abolish patents of genetic sequences and living organisms in the form of "intellectual property rights." (passed in plenary)
- to stop the national violence initiative project (u.s.), and an immediate halt to the drugging of black and latino children in the name of their supposed "genetic predisposition" to committing crimes. (contrary to the assumptions of the violence initiative project, the convention asserted, neither behavior nor intelligence is racially or genetically determined.) (passed in plenary)
- to disband the human genome diversity project and putting an end to the colonization of the genes of indigenous people. (passed in plenary) • to immediately cease the administration of experimental and genetically engineered drugs to prisoners, people living on American Indian reservations, and people in so-called "third world" countries. (passed in plenary)
- to ban "terminator" seed technology and patent. call for the immediate cessation of all "terminator" tests and a banning of its application. (passed in plenary)
- to encourage smaller-scaled organic farming, local food systems, home-scale gardening, and ecosystem restoration. the convention opposed the consolidation of corporate and mono crop farming and their reliance on genetic engineering and toxic herbicides and insecticides. (passed in plenary)

- to urge the Grameen bank to discontinue all further "partnerships" with Monsanto and its affiliated corporations;
- to discontinue all financial support for agribusiness, and to financially support and promote organic agriculture
- to ensure that the designation of "organic" does not include genetically engineered food or irradiated food or related practices
- to prevent the transfer to other state particularly developing states of substances and activities that cause environmental degradation or that are harmful to human health, and to recognize that compliance with this principle from the Rio Declaration would entail the prevention of transfer of genetically modified organisms.
- to condemn the use of genetic screening to discriminate against employees.
- to implement the 1986 UN resolution to ensure that the use of scientific technology is in peace and for the benefit of humanity
- to guarantee the farmers right to produce seeds and to recognize this as a human right in fulfilling the guaranteed right to food
- to call upon states to implement the right of citizens to organically grown, affordable, accessible food
- to ensure that citizens are fed clean, nutritional organically grown food before food is authorized for export
- to condemn the conversion of sensitive ecosystems for ranches and cattle production
- to condemn the round-table approach to decision making that compromises ethics, that fosters and condones conflict of interest, undermines principle and leads to the lowest common denominator
- to act on the commitment made in 1972 to eliminate the production of weapons of mass destruction, and to enter into a binding agreement as a convention for the elimination of the production of biological weapons (to not allow vested economic interest of biotechnological and genetic engineering industries to thwart the resolve to negotiate this convention
- to endorse October 15 the Eve of World Food day as the Global Days of Action against Genetically engineered food

The Nation States:

- to oppose the extension of intellectual property rights to life forms, whether it be for humans, animals, plants, microorganisms, or their genes, cells or other parts
- to change provisions in patent acts to prevent theft of biodiversity related knowledge
- to refuse to grant patents to corporations for methods and products based on traditional practices, or other information gleaned from the collective knowledge and wisdom of indigenous peoples with respect to the medicinal use of plants and animals or any other matter without fair royalties being paid to those peoples
- to refuse to issue patents for life forms and to refuse to recognize life form patents issued elsewhere.
- to oblige corporations to discontinue the use of the "terminator gene" which destroys the fertility of seeds
- to transfer existing funding and support for agribusiness and for genetically engineered projects to socially equitable and environmentally sound organic agriculture;
- to implement the 1986 United Nations resolution to ensure that the use of scientific technology is in peace and for the benefit of humanity
- to deny non profit and charitable status to NGOs that receive funding from corporations and their affiliates
- to prevent the collusion between regulatory bodies universities and corporations
- to condemn the practice of corporations of requiring farmers to sign gene-licensing agreements, and of hiring informers to report on farming practices
- to guarantee the farmers right to save

seeds • to revoke charters and licenses of corporations for violation of human rights, denying social justice, destroying the environment, undermining economic self sufficiency, for contributing to conflict, violence and war. • to ensure that regulatory agencies are not promoters of the technology

The World Bank, IMF and Development Agencies • to refuse to fund all agribusiness and genetically engineered food research and development • to fund only organic socially equitable and environmentally sound agriculture • to discontinue structural adjustment programs and forgive third world debt • to no longer conceive of the refusal to accept genetically engineered foods and seeds as a barrier to trade

The Regulatory Agencies:

- to provide for stiff regulations preventing the development, distribution, patenting etc. of genetically engineered foods
- to establish regulations which will phase out agribusiness and promote socially equitable and environmentally sound organic agriculture;
- to no longer conceive the refusal to accept genetically engineered foods and seeds as being a barrier to trade

The Universities:

- to discontinue all further support research in genetically modified organisms, including genetically engineered foods
- to cancel all existing contracts with corporations that are researching and developing genetically engineered foods
- to voluntarily put into the public domain all existing research data so that patents based on such findings cannot be obtained

The Wholesale and Retail Industry

- to communicate to the companies that produce genetically engineered food the refusal to carry genetically engineered foods
- to move towards supporting and promoting organically grown products
- to ensure that the produce is not genetically engineered and post notices to that effect
- to refuse to sell genetically engineered foods and to communicate this refusal to companies that produce such food

The Growers

- to refuse to purchase seeds from any of the companies that engage in the research and development of genetically engineered foods
- to ensure a larger gene pool to present seed diversity
- to work on continued research into crops that are naturally resistant to disease
- to lobby for the banning of the "terminator" gene

The NGOS

- to refuse to accept funding from corporations or corporate affiliations or front groups
- to ensure that the terms of reference in decision making processes is broad enough to address the issues related to whether the activity or substance should be engaged in or produced in the first place
- to discourage the undermining of resolve to do what is

necessary by being satisfied with what is possible or "reasonable" • to work with farmers on mutual information and education about the hazards of Genetically engineered foods.  
• to refuse to settle for half way measures and partial solutions in the quest for being reasonable.

### The Citizens

- to urge governments, regulatory agencies, universities, and wholesale and retail industry to discontinue all further development and distribution of genetically engineered food, • to decide not to purchase genetically engineered foods and to communicate this decision to agencies, institutions, governments, departments, and to lobby against any wholesale or retail store that carries genetically engineered foods • to demand the right to know:

- what products and substances have been approved for sale by governments, - what processes products and substances have undergone in production; - what regulations are in place -What the reasons are for not have stiff regulations, or for not enforcing regulations, - the nature and extent of the funding in the universities of genetically engineered companies; -the method by which wholesale and retail stores ensure that they are not selling; • the means to ensure that citizens are forewarned about food that has been genetically engineered • to expose the corruption and kick backs in institutional programs such as the World Bank • to expose the level of complicity of institution through interlocking directorships • to document PR statements of firms involved with genetic engineering, to counteract these statements and to disseminate the information • to appropriate corporate language, clarify it and counteract it • to clearly define the opposition

- to participate and support a broad-based principled citizens movement opposing genetically engineering ensuring the constant respect for social justice and human rights • to try to unfold the hidden dimension involved in any struggle every issue has a hidden ecological, human rights, social justice labour dimension. • to link up with other groups but not sacrifice principle • to retain the moral ascendancy

- to set up community trusts where citizens and contribute to the purchase of land, to grow organic food, to support organic farmers and undertake to purchase organic produce • to boycott and "boycott" all companies and their affiliates that are engaged in producing or distributing genetically engineered foods • to participate in the Global days of Action against genetically engineered foods (October 15 and 16) • to engage in direct action

This came soon after the bio-devastation conference from Mitchel Cohen:

From: Mitchel Cohen

2652 Cropsey Ave. #7H

Brooklyn, NY 11214

(718) 449-0037

## ANNOUNCING: THE INTERNATIONAL CAMPAIGN AGAINST BIODEVASTATION/GENETIC ENGINEERING

Representatives of The Greens/Green Party USA joined delegates from around the world on July 17-19, 1998, in St. Louis, Missouri, at the founding meeting of the International Campaign Against Bio-devastation/Genetic Engineering.

At the national Green Party Congress that immediately followed the gathering, the Green Party USA announced plans to make the campaign against genetic engineering its latest coordinated nationwide effort. GPUSA unanimously voted to endorse the International Campaign, instruct its candidates to raise the issues around genetic engineering in their electoral campaigns, and organize mass participation in the movement against genetically engineered agriculture and bio-colonialism.

Represented at the Bio-devastation gathering were concerned scientists and representatives of popular movements from Canada Japan, Ireland, England, Mexico, the European Parliament, India and the United States. Groups represented included Greenpeace, Women's Environmental Network, Pure Food Campaign, Edmonds Institute, Rural Advancement Foundation International, Institute for Social Ecology, National Family Farm Coalition, Family Farm Defenders, Council of Canadians, Genetics Forum (U.K.), Seikatsu Club (Japan), and the Green Parties of Europe, Mexico, Canada and the U.S.A., among others.

The 200 participants called for:

- 1) An immediate ban on genetically engineered Bovine Growth Hormone, endorsing the campaign to rid rBGH from school milk.
- 2) Keeping our forests, farms and food safe, and opposing the genetic engineering of all plants and animals.
- 3) Abolishing patents of genetic sequences and living organisms in the form of "intellectual property rights."
- 4) Stopping the National Violence Initiative Project (U.S.), and an immediate halt to the drugging of Black and Latino children in the name of their supposed "genetic predisposition" to committing crimes. (Contrary to the assumptions of the Violence Initiative Project, the convention asserted, neither behavior nor intelligence is racially or genetically determined.)
- 5) Disbanding the Human Genome Diversity Project and putting an end to the colonization of the genes of indigenous people.
- 6) An immediate cessation of administering experimental and genetically engineered drugs to prisoners, people living on American Indian reservations, and people in so-called "third world" countries.
- 7) A ban on "Terminator" seed technology and patent, the immediate cessation of all "Terminator" tests and a banning of its application.
- 8) Encouraging smaller-scaled organic farming, local food systems, home-scale gardening, and ecosystem restoration. The convention opposed the consolidation of corporate and mono crop farming and their reliance on genetic engineering and toxic herbicides and insecticides.

The delegates held an exciting and colorful rally in front of the World Headquarters of the Monsanto Corporation, a major player in the development of genetically engineered agriculture, including the newly

patented "Terminator" technology.

In addition, the International Campaign Against Bio-devastation/ Genetic Engineering supported the call for world-wide days of action against genetic engineering on October 2-16, 1998, with Oct. 15th as a day of coordinated actions.

The St. Louis gathering formed a coordinating committee, with representation from different regions of the U.S., and announced plans for follow-up meetings in Mexico and India over the next two years.

The Green Party selected Mitchel Cohen of Brooklyn, New York, and Mary Israel of Lake Warty, Florida, to coordinate its work around genetic engineering and its participation in the International Campaign.

For more information: Contact Mitchel at the snail mail address or by phone. Encourage him to get email.

( ) THAT in 1998 January 22, I wrote the following

EXHIBIT

( )

( ) THAT in August 1998 The Green Party of Canada decided to will launching a full investigation into the calculated demise of the Parti vert of Quebec, and into the involvement of the Parti Quebecois. "During this election the Green party was denied a voice in Quebec. The environment was absent from the discussion during the election and the Green Party never had an opportunity of presenting its vision of unity that goes beyond separatism and federalism to achieving a Citizens Public Trust Constitution.

SEPTEMBER SEPTEMBER

( ) THAT IN 1998 on September 13, 1998 Russow attended the meeting of the 50th Anniversary of the Movement National des Quebecoises et Quebecois. In response to the first presentation on separatism, I spoke for sometime in French about the common problems that are shared across Canada and that all the governments in power had never really effectively revised the constitutions to address these problems. i proposed a Citizen's Constitution for Canada drawing upon the highest standards from each

province continually harmonizing upwards, and that if the strongest legislation is less than the international standards, the international standards should prevail. My comment seemed to be well received.

After I spoke Parizeau gave his address and I asked him if there were any actions that could be taken by the rest of Canada that would satisfy him His followers cried fowl and said he should not answer. He responded that my question was extremely important and then responded that "rien". A separatist contacted her after and said that he thought Quebec would separate but that it WAS NOT YET MIDNIGHT and encouraged her to continue with her proposal. The Green Party of Canada will be working on a research project that will analyse the legislation of each province and propose a continual harmonizing upwards. For too long in Canada provincial /corporate self interests have aimed at harmonizing to the lowest common denominator.

**BACKGROUND TO THE EXCLUSION OF THE PARTI VERT IN QUEBEC** For some time now the E candidates, Russow asked if she could please get right back to her about this matter. She did not call back but notified a Green party member in Montreal that there would be a meeting on Sunday November 8th and when he asked if he could attend she said "No"., and she informed him that they would be issuing a communique de presse. In the interim Russow discussed the parti vert with a candidate who had run twice for the party and who claimed that at one time the Parti Quebecois had been worried about the Parti vert and the then leader Parizeau had offered the then leader of the parti vert, Ouimet a 50,000 job and the parti vert was essentially then disintegrated.

After reviewing the constitution of the Green Party of Canada Russow noted that there was a provision for intervening in the various units of the party if there were a good reason. The elected Council of the Green party of Canada was contacted and it was deemed that bringing about the dissolution of the party in a region was deemed to be good reason for intervening and a letter was written to the legal section of Elections Quebec. The letter was sent to elections Quebec with copies to the registered leader and financial agent of "le parti vert". Bernard Cooper the registered financial agent of "le parti vert" as of a few weeks left a message on the answering machine that HE DID NOT APPRECIATE INTERFERENCE FROM ANOTHER COUNTRY.

#### THE GREEN PARTY

( ) THAT IN 1998 in September THE GREEN PARTY EXCLUDED FROM QUEBEC ELECTIONS: POTENTIAL ROLE OF THE PQ TO BE INVESTIGATED SEPTEMBER

As a result of her inquiries, Russow was made aware that the Parti vert had been taken over by a group that had no interest in the Party. When in Montreal Russow contacted a lawyer in Elections Quebec, discussed the letter that had been sent from the Green Party of Canada, and brought to the attention of Elections Quebec that the party had been taken over by a group . Subsequently on Tuesday November 10 th it was brought to Russow's attention that "le parti vert" had issued a press release declaring "death to

the Parti vert, death to all parties and long live anarchy..." She again phoned Elections Quebec and was told that there was nothing that could be done.

When she returned to Victoria she followed up with a phone call to elections Quebec and talked to another lawyer who said that if the Green Party of Canada had sent letter earlier stating that under this unusual circumstance an interim leader should be put in place then it might have been different. Russow informed him that a letter had been sent and there was a suggestion by him that perhaps Elections Quebec had erred.

1998 September GENETICALLY ENGINEERING RALLY 1998

COMMENT;

We dressed in lab coats and went to 8 different supermarkets. At first the plan was to congratulate the shoppers for being part of a global experiment ;there was such a strong negative response to this approach that we decided to just ask if they would be willing to sign a petition. Gwen and Derrick were there. The Raging Grannies were pouring milk in front of the legislature and I spoke about the Bio-devastation I Declaration and Bobby Arbess wrote two plays: one about the terminator gene and the other about the transgenic café

December 2, 1998 a petition was placed on the floor of the House of Commons on. for a petition calling for banning Genetically Engineered food

Find find find Drafted a formal petition to be presented on the floor of the House of Commons calling for the Banning of Genetically Engineered Foods and Crops

20 hours

**COMMENT This petition was signed by environmentalists across the country including Elizabeth May, Catherine Stewart, At the press conference I challenged the Members of Parliament to put the petition on the floor of the house. This message was televised live on CPAC but no one came down**

( ) THAT by September 1998, Unforeseen circumstances have made it impossible to repay my student loan. I had always been determined to repay my outstanding student loan.

( ) THAT NOW MAGAZINE PUBLISHED A N ARTICLE about my being on the RCMP THREAT ASSESSMENT LIST

( ) THAT in 1998, ON September 1, I WALKED on a water walk WITH Eloise Charet FROM ARNPRIOR TO OTTAWA she walked across Canada to raise awareness

About water

COMMENT

THAT in 1998 in August I attended the Green Party conference in Manitoba and I met Eloise Charet who was walking across Canada collecting water samples . At the conference I undertook to walk from Arnprior to Ottawa with her

About the impact of toxic emissions, sewage, over-grazing, and logging

Practices on the quality of Canadian drinking water. I walked with her from Arnprior to Ottawa to parliament.

We held a press conference in front of parliament

¶ Sadly the only member of the media who was there was a photographer from NOW who wanted to take a picture of me for the story on Apec. I asked him to also take a picture of Eloise Charet and myself. We set up a display of the water that Eloise had collected across Canada. We met with Sven Robinson

In the evening we went to the Victoria Island--an island across from the Parliament buildings. It appears that a group of indigenous people entered the island and have been inhabiting it for years [I found out recently that they have been removed] I went to a healing session, and was told that I could only go in if I had a skirt on so I wrapped a scarf around me..

SEPTEMBER SEPTEMBER

( ) THAT In 1998, on September 14 I went to Sherbrooke to help the Green party candidate, Jacques Bousquet in the federal by-election

1998 SEPTEMBER the by-election in Sherbrooke

Tuesday evening picked up by Candidate Jacques Bousquet and billeted in St Hyacinthe, two hours away from Sherbrooke. [ each day we drove 4 hours to and from Sherbrooke]

## SHERBROOKE BY-ELECTION

There were many concurrent events going on as well as visits from various political parties. The Bloc was there almost the whole week for their annual General meeting, and on one of the days the bloc "en bloc" went door to door for the candidate. Alexa McDonagh was there on the Wednesday from 1 to 3. Dion passed by and Bouchard dropped in on the last day of the election. The organization for Parizeau had a meeting on the Saturday.

Tuesday Jacques Bousquet was standing outside the TV Station with a placard pointing out that he and other candidates had been excluded from the debate. The candidates from the Bloc, Liberal, Conservative, Reform and NDP were contacted by the independent candidate and they were asked not to participate in the debate unless all 8 candidates were included

Wednesday met with Bloc associate of Jacques discussed politics, and prepared for the press conference. The two television stations were there and the leading Sherbrooke newspaper. We were on the 6pm news and the clip they took was related to a call for proportional representation and electoral reform.

The newspaper the next day had our pictures and a headline "LE PARTI VERT PORTE PLAINTE AUPRES DU CRTC"

Wednesday night we attended a meeting of the RAP (Rassemblement pour l'alternative politique). This group is a movement more than a political party but is contemplating becoming a political party. I talked to a number of organizers. They denounce the traditional parties, support proportional representation, guaranteed income, popular struggles, and advocated the establishment of a true participatory democracy in Quebec. It seems to be a group bringing together union leaders, educators, academics social activists. Their principles include advocating strong human rights protection, social justice, protection of the environment, promotion of the Quebec Culture, recognition of the right to self determination of Quebec and of first nations peoples. I was told that they have some members from the Green party

Thursday

The day of the public debate at the University of Sherbrooke. This debate included the eight candidates. Possibly the complaint with the CRTC or the Bloc meeting resulted in over 30 members of the media from all over at the debate. It was widely covered although not actually broadcast live. Jacques was quoted in the newspaper for two of his comments; a very powerful statement about democracy and that finally there was evidence of democracy in the election, and a very strong comment questioning why any

women would vote for a liberal after the way the liberals had denied pay equity. Regardless of the politics the Bloc candidate far outshone the Liberal Candidate.

Met with the Marxist Lenin candidate, and with an activist from Quebec city who is working on a proposed constitution for Quebec because he is worried about the absence of real commitments and principles if Quebec does separate. He is interested in working with us. I proposed at that time that we work on a citizens' constitution for Canada drawing upon the highest principles, drawn from the different provinces, related to guaranteeing human rights, to ensuring social justice, protecting the environment and preventing war and conflict; and if the principles were lower than international standards then international standards would be the ones included in the "Citizens Constitution". He seemed interested in working on it with us. He also brought to my attention "The Charter for a people's Quebec" which was put out by the Solidarite Populaire Quebec ( A Quebec People's Movement). This Charter could form a very important base for a "Citizens constitution" for Canada. In the Annex to the Charter is a list of over 300 organizations in Quebec. I will be following up with this group.

Spent hours meeting with people talking politics. Always in French. I hardly spoke any English when I was there.

Friday

Met with people. We had an office in the local activist centre so I had a chance to meet with a number of representatives from different groups. Prepared for the 4 pm rally for pay equity in front of the Liberal candidates office. At this rally they were calling for all of the unions to support the Bloc. We had made the pay equity one of our principal issues but they all felt that the best way of getting the message to the liberals was to vote Bloc.

Saturday

Went to the meeting of about 200 members of the Movement national des Quebecoises et Quebecois a strong sovereignist organization. An academic was speaking on aspects of separation. I spoke for sometime in French about the common problems that we share across Canada that the constitution had never really be revised. I proposed a Citizen's Constitution for Canada drawing upon the highest standards from each province continually harmonizing upwards. After I spoke Parizeau gave his address. I asked him if there were any actions that could be taken by the rest of Canada that would satisfy him. At first some of the now about 400 people suggested that he did not need to respond to me. He said that my question was an extremely important question and then answered that it was too late.

After the meeting we went to the meeting of the Action Democratique du Quebec where I was introduced to the founder and to the current leader Mario Dumont. From the title of the party I thought that it was a left wing party but after reading their booklet "Un vent de changement" I think they have very similar policies to the Reform. This party is the third

strongest party in Quebec. I think that there are many members that might be interested in the Green party.

Sunday

We went into the country to thank a supporter who had actively worked on the Campaign before I arrived. As we were driving along I saw a sign "Roundup ready" in a corn field. Jacques who only speaks French had no idea what it was and neither did many other French Canadians I spoke with. English Quebecers, whom I spoke to, thought that it meant that the field had been prepared for spraying. No one seemed to know that Roundup ready indicated that the seeds have been genetically engineered.

After I got back to Victoria Monday, I contacted Radio Canada in Montreal and the local newspaper in Sherbrooke about the right of Quebecers to know and about the problems related to genetically engineered foods.

My general impression from the trip and the people I talked to was that on the one hand many Quebecers are sick and tired of the referendum question and just want it to be over and on the other hand many Quebecers are consumed with the issue. This time I think there may be over 50% in favour of separation. The NDP candidate came out strongly in favour of Quebec's right to separate and in support of 50 +1. I doubt if that is their national position.

I found that there was quite a bit of interest in the proposal that I made to come up with a citizen's Constitution drawing upon the highest tenable principles across Canada [not harmonizing down to the lowest common denominator as is usually done in Canada].

Results were disappointing. I think Jacques thought that we would get a lot more. We had virtually no money to spend on the Campaign. He paid for everything including my meals. There appeared to be little support from the Green party. David, Julian and Imtiaz sent out requests. It was really embarrassing for me. I kept saying to him that I was hoping to receive some money and would try to pay him back. I think that part of our poor turn out at the polls, apart from the fact that there was so much at stake in the race between the liberals and the bloc, was that we had no money to even print up brochures or publicity. I had thought that given the Green party at the Annual General meeting had urged us to run in Quebec that there would have been support

( ) THAT in 1998 in November, I wrote a comment About resistance to change related to militarism and against GE food. And the promoting of the public trust

Canadian military spending and development of arms industry must end;

Solutions will only arise when we have moved away from the vested economic interest politics to the politics of public trust. The politics of public trust undertakes:

(i) . to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;

- (ii) . to Enable socially equitable and environmentally sound employment;
- (iii). to Achieve a state of peace, justice and security;
- (iv). to Create a global structure that respects the rule of law; and
- (v). to Ensure the preservation and protection of the environment, reduce the ecological footprint and move away from the current model of over-consumptive development

We must protest the violation of civil and political rights by all levels of government in Canada including the rights of those protesting not only at APEC but also in Clayoquot Sound, Slocan Valley, Gustafson Lake, Ipperwash, Oka, Temagami so that never again will citizens be arrested for resisting environmentally unsound practices or violations of First Nations rights

We must protest the continued production and sale of CANDU reactors, the mining of uranium, and the dependence on fossil fuels so that solutions can be found in developing environmental sound energy systems.

We must protest the continued allocation of about \$10 billion to the military budget, which diverts funds from solutions to be found in disarmament and conflict prevention initiatives

We must protest against and call for the banning of Genetically engineered food and crops and transfer the money and subsidies into developing solutions in unadulterated food and organic farming.

We must protest the devolution of power to the corporations and the promotion of corporate competitiveness so that solutions can be found through transferring of deferred taxes and corporate subsidies into ensuring the right to food, right to universal health care and preventive medicine, the right to shelter, right to work in socially equitable and environmentally sound employment, and the right to corporate-free post-secondary education

We must protest the transfer to other states of Canadian produced substances and activities that contribute to environmental degradation or that cause harm to human health so that Canada can contribute not deter from solutions outside of Canada.

For too long Canada has supported practices, in the name of job creation, which are harmful to human health and the environment. Rather than supporting the industries that provide socially equitable and environmentally sound employment, Governments in Canada including the NDP have tolerated, condoned, facilitated and perpetuated the cycle of error. which has resulted in and will continue to result in years of corporate/government negligence.

MEDIA RELEASE COMMUNIQUE DE PRESSE

The Politics of Public Trust: The Green Party of Canada as the "political conscience" of Canada

Victoria -- Monday, September 28 1998

The Green Party of Canada today announces that Dr. Joan Russow, National Leader of the Green party of Canada will be giving a press conference on Tuesday, September 29, 1998, at 3:30 p.m. in the Charles Lynch Room, Parliament.

The following issues will be addressed:

- APEC AND OTHER VIOLATIONS OF CIVIL AND POLITICAL RIGHTS

- follow-up to the petition calling for Canada to seek an advisory opinion from the international court of Justice on the federal Government's compliance with the international Covenant on Civil and Political Rights in the case not only of APEC but also of Clayoquot Sound, Oka, Temagami, Slocan Valley, Gustafson Lake. Other governments in Canada have also violated civil and political rights of Canadian citizens.

Joan Russow has also filed a complaint with the RCMP Commission for having her pass pulled at the APEC conference

- PETITION CALLING FOR THE BANNING OF GENETICALLY ENGINEERED FOODS AND CROPS

- launching of the petition calling for the Banning of genetically engineered foods and crops

2063

Russow was instrumental in having a Declaration calling for the Banning of Genetically Engineered foods and crops endorsed in principle at an international Conference on Genetically Engineered Foods (St. Louis, Mo)

( ) THAT in 1998 in September the Green Party excluded from Quebec elections: potential role of the PQ to be investigated check

#### REPEAT REPEAT

The Green Party of Canada will be launching a full investigation into the calculated demise of the Parti vert of Quebec, and into the involvement of the Parti Quebecois. "During this election the Green party was denied a voice in Quebec. The environment was absent from the discussion during the election and the Green Party never had an opportunity of presenting its vision of unity that goes beyond separatism and federalism to achieving a Citizens Public Trust Constitution. On September 13, 1998, Russow attended the meeting of the 50th **Anniversary of the Movement national des Quebecoises et Quebecois**. In response to the first presentation on separatism, she spoke for sometime in French about the common problems that are shared across Canada and that all the governments in power had never really effectively revised the constitutions to address these problems. She proposed a Citizen's Constitution for Canada drawing upon the highest standards from each province continually harmonizing upwards, and that if the strongest legislation is less than the international standards, the international standards should prevail. After she spoke Parizeau gave his address and she asked him if there were any actions that could be taken by the rest of Canada that would satisfy him. He responded that her question was an extremely important and then responded that "it was too late". A separatist contacted her after and said that he thought Quebec would separate but that it WAS NOT YET MIDNIGHT and encouraged her to continue with her proposal. The Green Party of Canada will be working on a research project that will analyse the legislation of each province and propose a continual harmonizing upwards. For too long in Canada provincial /corporate self interests have aimed as harmonizing to the lowest common denominator.

#### BACKGROUND TO THE EXCLUSION OF THE PARTI VERT IN QUEBEC

For some time now the place of le parti vert in Quebec politics has been under a shadow. At one time le parti vert obtained around 5% of the vote in Quebec, then .1% and then it appeared to disappear into oblivion. Dr Joan Russow, the National Leader of the Green party became concerned when it was brought to her attention that le parti vert would be deregistered if it did not run 20 Candidates in Quebec during this election. Continued inquiries had been made by various members of the Green party outside and inside Quebec about Le parti vert. Judith Brown was listed in elections Quebec as the leader of the Parti vert. Russow contacted her and asked if she was going to run candidates in the Quebec Election and she responded "No". She also responded "No" to running as the leader in the election and stated that she was "leader in name only". Eventually Russow asked if another person would be willing to run as leader would she

be willing to step aside so that the parti vert could remain a party in Quebec. She said that she would have to consult with others. When asked if she knew anyone who was interested in le parti vert in Quebec she passed on the name of Pauline Lussier. Pauline was very enthusiastic about the Green party and would have been willing to run as interim leader, and mentioned that she had been trying to find out about the Parti vert since last April and had received no response to her calls in Quebec. Russow called Judith Brown and left a message that Pauline would be willing to run as interim leader and asked if she would be able to facilitate the transfer so that we could find 20 candidates to run and thus keep le parti vert as a registered party. Given the urgency and the short time before the deadline for registering candidates, Russow asked if she could please get right back to her about this matter. She did not call back but notified a Green party member in Montreal that there would be a meeting on Sunday November 8th and when he asked if he could attend she said "No"., and she informed him that they would be issuing a communiqué de presse.

In the interim Russow discussed the parti vert with a candidate who had run twice for the party and who claimed that at one time the Parti Quebecois had been worried about the Parti vert and the then leader Parizeau had offered the then leader of the parti vert, Ouimet a 50,000 job and the parti vert was essentially then disintegrated.

After reviewing the constitution of the Green Party of Canada Russow noted that there was a provision for intervening in the various units of the party if there were a good reason. The elected Council of the Green party of Canada was contacted and it was deemed that bringing about the dissolution of the party in a region was deemed to be good reason for intervening and a letter was written to the legal section of Elections Quebec. The letter was sent to elections Quebec with copies to the registered leader and financial agent of "le parti vert". Bernard Cooper the registered financial agent of "le parti vert" as of a few weeks left a message on the answering machine that HE DID NOT APPRECIATE INTERFERENCE FROM ANOTHER COUNTRY.

As a result of her inquiries, Russow was made aware that the Parti vert had been taken over by a group which had no interest in the Party. When in Montreal Russow contacted a lawyer in Elections Quebec, discussed the letter that had been sent from the Green Party of Canada, and brought to the attention of Elections Quebec that the party had been taken over by a group. Subsequently on Tuesday November 10th it was brought to Russow's attention that "le parti vert" had issued a press release declaring "death to the Parti vert, death to all parties and long live anarchy..." She again phoned Elections Quebec and was told that there was nothing that could be done.

When she returned to Victoria she followed up with a phone call to elections Quebec and talked to another lawyer Maitre Druisdelle who said that if the Green Party of Canada had sent a letter earlier stating that under this unusual circumstance an interim leader should be put in place then it might have been different. Russow informed him that a letter had been sent and there was a suggestion by him that perhaps Elections Quebec had erred.

( ) THAT on October 26 1998. I circulated a report on how Canada and the United States have failed the climate change exam

EXHIBIT

TO THE ATTENTION OF PRIME MINISTER OF CANADA AND THE PRESIDENT OF THE UNITED STATES

CANADA AND US FAILED CLIMATE CHANGE EXAM

The Green Party of Canada issued a report card on Canada's and United States' non-compliance with the Framework Convention on Climate Change, and other related international documents.

The Canadian and US governments, through activities in Canada and the United States and through activities of international Canadian and US based corporations, have failed to comply with substantive obligations under the Convention, and with commitments made through other international documents.

Copies of this report card will be sent to the Secretariat of the Convention on Climate Change, as well as to the international network of Non-governmental organizations (NGO) and the media.

Canada and the United States along with over 160 member states of the United Nations negotiated, signed and ratified the Framework Convention on Climate Change, and through this Convention willfully undertook legally binding obligations to reduce greenhouse gas emissions, and to conserve carbon sinks.

At the "Changing Atmosphere" Conference held in Toronto, Canada, in 1988, scientists, government leaders and non-governmental organizations (NGOs) endorsed in their conference statement the following assessment of the impact of climate change:

"Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequence could be second only to a global nuclear war. The Earth's atmosphere is being changed at an unprecedented rate by pollutants and wasteful fossil fuel use...These changes ... are already having harmful consequences over many parts of the globe....It is imperative to act now." (Conference statement, from the Changing Atmosphere Conference, 1988).

The Governments of Canada and the United States should be urged to endorse the following position with a program of actions and time-lines at the meeting to be held in Kyoto, Japan, in December.

1. At least a 20% Reduction in CO2 and other Greenhouse gas emissions from 1990 levels by the year 2000

2. Ending of government subsidies for production of fossil fuel and nuclear energy, and implementing a phasing out of the use of fossil fuels and nuclear energy
3. Increasing of programs for energy conservation, energy efficiency, and for renewable sources of energy, and for conserving and restoring carbon sinks.
4. Moving away from car dependency, reducing the ecological footprint, and promoting environmentally sound energy and transportation

Until governments in Canada, and the United States show the political will to embark on the above actions Canada and the United States will continue to fail to comply with their international obligations and commitments to seriously address the urgent global issue of climate change. In addition, the Canadian and US governments, in pursuing their current policy of ignoring their international obligations and commitments are demonstrating disregard for the international rule of law.

#### GLOBAL COMPLIANCE CLIMATE CHANGE REPORT CARD

Under the Climate Change Convention and under the Chapter on Atmosphere in Agenda 21

The Climate Change Convention was signed and ratified by Canada and the United States. Chapter 9 on Atmosphere in Agenda 21 was adopted by consensus by the states represented at UNCED. Chapter 6 on Protection of health in Agenda 21 was adopted by consensus by states represented at UNCED

#### EVALUATION OF CANADA'S AND UNITED STATES' COMPLIANCE WITH INTERNATIONAL OBLIGATIONS UNDER THE CLIMATE CHANGE CONVENTION AND INTERNATIONAL COMMITMENTS UNDER THE ATMOSPHERE CHAPTER OF AGENDA 21, AND THE HABITAT II AGENDA

#### PRECAUTIONARY PRINCIPLE

The Parties should take precautionary measures to anticipate, prevent or minimize the causes of climate change and mitigate its adverse effects. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not

be used as a reason for postponing such measures, taking into account that policies and measures to deal with climate change should be cost-effective so as to ensure global benefits at the lowest possible cost. (Climate Change Convention)

## FAILURE

### COMMITMENT TO ALTERNATIVE TRANSPORTATION AND TO ENVIRONMENTALLY SOUND ENERGY

" develop appropriate pollution control technology on the basis of risk assessment and epidemiological research for the introduction of environmentally sound production processes and suitable safe mass transport 6.42. a) i. Protection of health, Agenda 21). Promoting environmentally sound energy FAILURE

" In many locations around the world the general environment (air, water, and land), workplaces and even individual dwellings are so badly polluted that the health of hundreds of millions of people is adversely affected. This is, inter alia, due to past and present developments in consumption and production patterns and lifestyles, in energy production and use, in industry, in transportation etc. with little or no regard for environmental protection. (6.40, Protection of health, Agenda 21) " "to plan and develop [safe and] more efficient and less polluting transportation systems, especially mass transit to support economic development efforts in an environmentally [safe and] sound way, giving special attention to urban and metropolitan areas. (9.11.b Atmosphere, Agenda 21) FAILURE

### DOCUMENTING SOURCES AND SINKS

Develop, periodically update, publish and make available to the Conference of the Parties, in accordance with Article 12, national inventories of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, using comparable methodologies to be agreed upon by the Conference of the Parties; 4. (a)

### (Climate Change Convention)FAILURECONSERVATION AND ENHANCEMENT OF SINKS

The conservation, sustainable management and enhancement, where appropriate, of all sinks for greenhouse gases; (Atmosphere Chapter, Agenda 21)

d. Promote sustainable management and cooperation in the conservation and enhancement, as appropriate, of sinks and reservoirs of greenhouse gases, including biomass, forests and oceans, as well as other terrestrial, coastal and marine ecosystems. (Atmosphere Chapter, Agenda 21)

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

"Sink" means any process, activity or mechanism which removes a greenhouse gas, an aerosol or a precursor of a greenhouse gas from the atmosphere. (Climate Change Convention)

FAILUR

#### LIMITATION OF ANTHROPOGENIC EMISSIONS

Each of these Parties shall adopt national policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas sinks and reservoirs (Climate Change Convention)

FAILURE

#### MITIGATION OF CLIMATE CHANGE

Each of these Parties shall adopt national policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas sinks and reservoirs. (Climate Change Convention)

FAILURE

RECOGNITION THAT CERTAIN LAND USE PRACTICES WILL IMPACT ON CHANGES IN THE ATMOSPHERE Land-use and resource policies will both affect and be affected by changes in the atmosphere. Certain practices related to terrestrial and marine resources and land use can decrease greenhouse gas sinks and increase atmospheric emissions. 9.19. (Atmosphere Chapter, Agenda 21)

FAILURE

NECESSITY OF TRANSMITTING TO THE PARTIES THE INVENTORIES OF EMISSIONS OF CO<sub>2</sub> Develop, periodically update, publish and make available to the Conference of the Parties, in accordance with Article 12, national inventories of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, using comparable methodologies to be agreed upon by the Conference of the Parties; 4. (a) (Climate Change Convention)

FAILURE

Formulate, implement, publish and regularly update national and, where appropriate, regional programmes containing measures to mitigate climate change by addressing anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change;4. b

Promote sustainable management, and promote and cooperate in the conservation and enhancement, as appropriate, of sinks and reservoirs of all greenhouse gases not

controlled by the Montreal Protocol, including biomass, forests and oceans as well as other terrestrial, coastal and marine ecosystems; (Climate Change Convention)  
FAILURE

REQUIREMENT OF GOVERNMENT TO REPORT IN 6 MONTHS ABOUT POLICIES TO MITIGATE In order to promote progress to this end, each of these Parties shall communicate, within six months of the entry into force of the Convention for it and periodically thereafter, and in accordance with Article 12, detailed information on its policies and measures referred to in subparagraph (a) above, as well as on its resulting projected anthropogenic emissions by sources and removals by sinks of greenhouse gases not controlled by the Montreal Protocol for the period referred to in subparagraph (a), with the aim of returning individually or jointly to their 1990 levels these anthropogenic emissions of carbon dioxide and other greenhouse gases not controlled by the Montreal Protocol. This information will be reviewed by the Conference of the Parties, at its first session and periodically thereafter, in accordance with Article 7; (Climate Change Convention)

FAILURE

DOCUMENTATION OF SCIENTIFIC INFORMATION RELATED TO ANTHROPOGENIC RELEASES OF CO<sub>2</sub>

Calculations of emissions by sources and removals by sinks of greenhouse gases for the purposes of subparagraph (b) above should take into account the best available scientific knowledge, including of the effective capacity of sinks and the respective contributions of such gases to climate change. The Conference of the Parties shall consider and agree on methodologies for these calculations at its first session and review them regularly thereafter; (c) (Climate Change Convention)

In accordance with Article 4, paragraph 1, each Party shall communicate to the Conference of the Parties, through the secretariat, the following elements of information:

A national inventory of anthropogenic emissions by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, to the extent its capacities permit, using comparable methodologies to be promoted and agreed upon by the Conference of the Parties;(12 .1. a) (Climate Change Convention) FAILURE

MOVING AWAY FROM CAR-DEPENDENCY AND REDUCING THE ECOLOGICAL FOOTPRINT (HABITAT II) FAILURE

CANADA FAILS GREENHOUSE GAS EMISSIONS FINAL EXAM

The Green Party of Canada, yesterday issued a report card on Canada's non-compliance with the Framework Convention on Climate Change.

"The Canadian government, through activities in provinces like Alberta, has failed to comply with substantive obligations under the Convention, and with commitments made through other international documents", says Joan Russow, national Green leader.

The Green Party will be submitting the report card (see enclosed card) to the Prime Minister of Canada, to the Minister of External Affairs and to the Minister of Environment. Copies will also be sent to the Secretariat of the Convention on Climate Change, as well as to the international network of Non-governmental organizations (NGO).

Canada along with over 160 member states of the United Nations negotiated, signed and ratified the Framework Convention on Climate Change, and through this Convention willfully undertook legally binding obligations to reduce greenhouse gas emissions, and to conserve carbon sinks.

At the "Changing Atmosphere" Conference held in Toronto in 1988, scientists, government leaders and non-governmental organizations (NGOs) endorsed in their conference statement the following assessment of the impact of climate change:

"Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequence could be second only to a global nuclear war. The Earth's atmosphere is being changed at an unprecedented rate by pollutants and wasteful fossil fuel use...These changes ... are already having harmful consequences over many parts of the globe....It is imperative to act now." (Conference statement, from the Changing Atmosphere Conference, 1988). The Green Party is advocating that Canada takes the following position with a program of actions and time-lines to the meeting to be held in Kyoto, Japan, in December.

1. Reducing CO<sub>2</sub> emissions and other Greenhouse gas emissions by 20% from 1990 levels by the year 2000
2. Ending government subsidies for production of fossil fuel and nuclear energy, and implementing a phasing out of the use of fossil fuels and nuclear energy
3. Increasing programs for energy conservation, energy efficiency, and for renewable sources of energy, and for conserving and restoring carbon sinks
4. Moving away from car dependency, reducing the ecological footprint, and promoting environmentally sound energy and transportation

Joan Russow, National leader of the Green Party of Canada, stated "until governments in Canada are willing to embark on the above actions Canada will continue to fail to comply with its international obligations and commitments to seriously address the urgent global issue of climate change. In addition, the Canadian government, in pursuing its current policy of ignoring its international obligations and commitments is demonstrating disregard for the international rule of law."

OCTOBER OCTOBER

**( ) THAT 1998 in October on thanks giving, we went up to CATFACE MOUNTAIN to support the blockade**

**In 1998 David and I went up to Catface mountain. We had camped there in 1996 when we kayaked in the area. We had been invited up to the blockade by Sergio M from the Friends of Clayoquot. For once we did not have to pack carefully to make sure that we could fit everything into the Kayak because we would be driving up and then taken by boat to the site. We overpacked and unloaded everything on the deck waiting for the boat ride to Catface. We were greeted with surprise and asked if we were sure that we wanted to take everything with us. We said yes we had brought lots of food for everyone. Finally, we were informed that everything we brought with us would have to be carried on our backs up a path that went 8 km up into the mountain. We left almost everything behind and took off. It was a difficult trek. We arrived at the barricade behind which were marooned Interfore trucks.**

**Supposedly the First Nations in the area were opposed to the blockade. Where interfore had already logged was absolutely devastated. Beautiful old growth strewn everywhere. Somehow when they cleared the road it is not so noticeable. ;But this time they left in a hurry and the devastation was more than evident. The camp was fantastic. They even had solar panels for communication. Incredible food. We stayed one night in support and then went back to a party at Michael Mullens who had invited us to stay at his boat in Tofino b.**

**Michael lives on a floating boat an incredible place. Michael is the one who was arrested years ago for burning one of the bridges. He was the one involved in the Mullin vs Macmillan case with the excellent decision related to First Nation's ecological rights which I used in the Clayoquot case.**

**( ) THAT in 1998 on October 15, we organized a series of events supporting the Global Day of Action against Genetically engineered foods and crops Demonstrations in front of grocery stores, MP office, and in front of the legislature.**

**1998 Genetically engineering rally**

**COMMENT:**

**We dressed in lab coats and went to 8 different supermarkets. At first the plan was to congratulate the clients for being part of a global experiment. There was such a strong negative response to this approach that we decided to just ask if they would be willing to sign the petition. Gwen and Derrick and the raging grannies were pouring milk in front of the legislature and I spoke about the Bio-devastation Declaration. Bobby Arbess**

**had written two short plays: one on the terminator gene and the other on the transgenic cafe. Photo photo photo**

( ) THAT in 1998 on October 20 I announced The Green Party APEC Legal Fund

( ) THAT in 1998 VICTORIA, B.C. --on October 20, 1998 -- The Green Party of Canada today launched an APEC Legal Fund For The Promotion of Civil and Political Rights to assist the complainants at the RCMP commission hearings being held in Vancouver.

"The Green Party is establishing this fund because the federal government is derelict in exercising its duty to guarantee the civil and political rights of the complainants. The Green Party challenges other political parties to set up similar funds," said Dr. Joan Russow, Leader, noting that tax payers are in effect paying for the government's and the RCMP's side of the story at the hearings, where as the students and others are left not funded.

As the promotion of civil and political rights is part of the mandate of the Green Party of Canada, contributors to this fund can receive a political contribution tax receipt for which there are significant tax credits. A contribution of up to \$100 may receive a 75% deduction on their tax payable. The deduction is 50% for each dollar contributed over \$100 up to \$450 and 33% of the next \$600.

Citizens who wish to contribute to this fund are asked to make their contribution payable to the "Green Party of Canada APEC Legal Fund" and to send it to the Green Party of Canada, C.P./P.O. Box 397, London, Ontario, N6A 4W1.

----- RELEASE ATTACHMENT ----- APEC Legal Fund

For The  
Promotion of Civil and Political Rights

2074

You Pay \$25 -- Ottawa Pays \$75

Ottawa is paying for legal council to present it,s side of the story, and the RCMP,s side of the story -- but has denied legal funding for the students and others whose civil and political rights were compromised during the APEC summit in Vancouver during the fall of 1997.

The Green Party of Canada has set up an APEC Legal Fund For The Promotion of Civil and Political Rights to assist the complainants at the RCMP commission hearings being held in Vancouver. This fund is modeled after the Green Party,s Clayoquot Defenders Fund that was launched in 1993.

Contributors to this Green Party of Canada fund will be eligible for a political contribution tax receipt which may be used to reduce their income tax payable. A contribution of up to \$100 may deduct 75% at tax time. 50% may be deducted of the next \$450 contributed above \$100 and 33% deducted on the next \$600 after that.

Your Donation	Your Tax Deduction	Your Actual Cost
\$1000.00	\$450.00	\$550.00
\$500.00	\$275.00	\$225.00
\$100.00	\$75.00	\$25.00

Please make contributions payable to the "Green Party of Canada APEC Legal Fund" and send to:

**( ) THAT in 1998 on October 22, 1998**

**Joscha Fischer**

**Minister of Foreign Affairs**

**Dear Joscha.**

**As the National Leader of the Green party of Canada, I would like to congratulate you on your exceptional achievement. Green Parties from around the world will benefit from your success.**

**In Canada the media has reported that the German Green Party will have to compromise, and I know that the Canadian government will do everything that it can to undermine any progressive moves in promoting the "public trust" such as**

- 1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;**
- 2. to Enable socially equitable and environmentally sound employment;**
- 3. to Achieve a state of peace, justice and security;**
- 4. to Create a global structure that respects the rule of law; and**
- 5. to Ensure the preservation and protection of the environment, reduce the ecological footprint, respect the inherent worth of nature beyond human purpose and move away from the current model of over-consumptive development**

**For many years at international conferences such as the women's conference in Beijing, and the Habitat II conference in Istanbul, I have been calling for at least a 50% reduction of the global military budget and for the use of the savings:**

**(a) to guarantee:**

- the right to safe and adequate food, which has been not genetically altered or irradiated, or grown with pesticides**
- the right to safe and affordable shelter,**
- the right to universal health care,**
- the right to safe drinking water,**
- the right to a safe environment,**
- the right to education, and**
- the right to peace;**

**(b) to fund socially equitable and environmentally sound work; and**

**(c) to fund education and research free from corporate direction and control.**

**During the last election in Canada we ran on the call for at least a 50% reduction of the military budget. I was pleased to read that the German Green Party shared this demand. Actually, last February we presented a "Green Public Trust" budget which virtually eliminated the military budget and maintained only a proposal for a civilian training program for assisting in natural disaster relief. In addition, we proposed that the "Criteria of Public Trust" replace the Gross Domestic Product as a means of assessing national well being.**

( ) THATin 1998 in October , I wrote CANADA'S CONSTITUTIONAL REQUIREMENTS: INACTION IS NEGLIGENCE

To Prime Minister Chretien

cc. Canadian media

In 1997, in Kyoto, the global community was faced with the negligence of years of inaction and lack of political will to address the urgency of Climate Change.

In 1992, most of the member states of the United Nations signed the Framework Convention on Climate Change. For over 5 years signatories of the Framework Convention on Climate Change have failed to discharge their obligations under the Convention. Under Article 18 of the Convention of the Law of Treaties signatories of a Convention shall do nothing in the interim between the signing of the convention and its coming into force to defeat the purpose of the Convention.

The Framework Convention on Climate Change is a legally binding agreement whose purpose, among others, was to reduce greenhouse gas emissions to 1990 levels. Since the signing of the Framework Convention on Climate Change, all the signatories were bound not to do anything that would defeat the purpose of the Convention i.e. to not do anything that would interfere with the reduction of greenhouse gas emissions to 1990 levels.

This Convention came into force in the spring of 1993. Under the Convention, the signatories of the Convention were bound to invoke the precautionary principle which in essence affirmed that where there is the threat of environmental harm, lack of full scientific certainty should not be used as a reason for postponing measures to prevent the harm. This principle is now deemed to be a principle of international customary law and as such automatically becomes the law of the signatory state. The corporate sector that has been contributing to climate change has funded several scientists who have been attempting to undermine the widespread agreement of the scientific community on the urgency of the current situation and to obfuscate any resolve to seriously address the Climate Change issue. The precautionary principle is an operative principle that gives justification for rejecting the views of those scientists marginalized by their vested interests. The media, in a misconstrued notion, of "balance" has given credibility to vested interest corporate scientists, and has contributed to the public's confusion.

Canada, as well as the US, Australia, New Zealand, Norway, Japan, and Russia has been opting essentially for inaction in Kyoto. Unfortunately, corporate-sympathetic administrations have caved into the Greenhouse gas producing corporations. Even though at two recent UN conferences every member states of the United Nations agreed to ensure that corporations including transnationals comply with international law including international environmental law (UN Conference on Women (1995); Habitat II, 1996).

The Canadian government as the signatory of the Framework Convention on Climate Change is the responsible wing of government to ensure that Canada discharges its obligations under the Framework Convention. It should be noted that with the Framework Convention on Climate Change, in November 1992, all provinces passed a resolution to ratify the Framework Convention. Thus, all provinces are equally bound by the Convention, and thus the 1937 Supreme Court case, "International Labour Convention Case" would not apply. In that case, the Supreme Court decided in favour of the Provinces because for one reason the provinces had not been consulted prior to the signing and ratifying of the Agreement. That case also turned on the fact that the subject matter of the Convention was not a "new subject". In the case of "climate change" the Supreme Court might decide that it is a "new subject" and that it would quite justifiably fall under the Federal Government's residual powers.

If the urgency of the Climate change issue is to be addressed, the global community must agree:

- a) to support a minimum 20% or more reduction in greenhouse gas emissions by 2005 from the 1990 levels;
- b) to ensure that there are no loopholes, such as "emissions trading", that would allow the countries to escape from having to make any real reductions domestically (e.g. countries could essentially just "buy credits" from developing countries or countries in transition to offset its own continued increase in emissions); and
- c) to not insist on participation by developing countries at this point, although certain of these countries should come into the agreement at the next stage (which in fact will start with the Fourth Conference of the Parties meeting in Buenos Aires in November 1998).
- d) to ensure that civil nuclear energy is no way entertained as an option

( ) THAT in 1998 MONDAY, OCTOBER 26, 1998 I WROTE  
TO THE ATTENTION OF PRIME MINISTER OF CANADA AND  
THE PRESIDENT OF THE UNITED STATES

1998 October CANADA AND US FAILED GREENHOUSE GAS EMISSIONS FINAL  
EXAM

The Green Party of Canada issued a report card on Canada's and United States' non-compliance with the Framework Convention on

Climate Change, and other related international documents.

The Canadian and US governments, through activities in Canada and the United States and through activities of international Canadian and US based corporations, have failed to comply with substantive obligations under the Convention, and with commitments made through other international documents.

Copies of this report card will be sent to the Secretariat of the Convention on Climate Change, as well as to the international network of Non-governmental organizations (NGO) and the media.

Canada and the United States along with over 160 member states of the United Nations negotiated, signed and ratified the Framework

Convention on Climate Change, and through this Convention willfully undertook legally binding obligations to reduce greenhouse gas emissions, and to conserve carbon sinks.

At the "Changing Atmosphere" Conference held in Toronto, Canada, in 1988, scientists, government leaders and non-governmental organizations (NGOs) endorsed in their conference statement the following assessment of the impact of climate change:

"Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequence could be second only to a global nuclear war. The Earth's

atmosphere is being changed at an unprecedented rate by pollutants and wasteful fossil fuel use...These changes ... are already having harmful consequences over many parts of the globe.... It is imperative to act now." (Conference statement, from the Changing Atmosphere Conference, 1988).

The Governments of Canada and the United States should be urged to endorse the following position with a program of actions and time-lines at the meeting to be held in Kyoto, Japan, in December.

1. At least a 20% Reduction in CO<sub>2</sub> and other Greenhouse gas emissions from 1990 levels by the year 2000
2. Ending of government subsidies for production of fossil fuel and nuclear energy, and implementing a phasing out of the use of fossil fuels and nuclear energy
3. Increasing of programs for energy conservation, energy efficiency, and for renewable sources of energy, and for conserving and restoring carbon sinks.
4. Moving away from car dependency, reducing the ecological footprint, and promoting environmentally sound energy and transportation

Until governments in Canada, and the United States show the political will to embark on the above actions Canada and the United States will continue to fail to comply with their international obligations and commitments to

seriously address the urgent global issue of climate change.

In addition, the Canadian and US governments, in pursuing their current policy of ignoring their international obligations and commitments are demonstrating disregard for the international rule of law.

Joan Russow (PhD)

The Leader of the Green Party of Canada

[jrussow@coastnet.com](mailto:jrussow@coastnet.com)

1 (250) 598-0071

The Green Party of Canada will be launching a full investigation into the calculated demise of the Parti vert of Quebec, and into the involvement of the Parti Quebecois. "During this election the Green party was denied a voice in Quebec. The environment was absent from the discussion during the election and the Green Party never had an opportunity of presenting its vision of unity that goes beyond separatism and federalism to achieving a Citizens Public Trust Constitution. On September 13, 1998, Russow attended the meeting of the 50th **Anniversary of the Movement national des Quebecoises et Quebecois**. In response to the first presentation on separatism, she spoke for sometime in French about the common problems that are shared across Canada and that all the governments in power had never really effectively revised the constitutions to address these problems. She proposed a Citizen's Constitution for Canada drawing upon the highest standards from each province continually harmonizing upwards, and that if the strongest legislation is less than the international standards, the international standards should prevail. After she spoke Parizeau gave his address and she asked him if there were any actions that could be taken by the rest of

Canada that would satisfy him. He responded that her question was an extremely important and then responded that "it was too late". A separatist contacted her after and said that he thought Quebec would separate but that it WAS NOT YET MIDNIGHT and encouraged her to continue with her proposal. The Green Party of Canada will be working on a research project that will analyse the legislation of each province and propose a continual harmonizing upwards. For too long in Canada provincial /corporate self interests have aimed as harmonizing to the lowest common denominator.

## BACKGROUND TO THE EXCLUSION OF THE PARTI VERT IN QUEBEC

For some time now the place of le parti vert in Quebec politics has been under a shadow. At one time le parti vert obtained around 5% of the vote in Quebec, then .1% and then it appeared to disappear into oblivion. Dr Joan Russow, the National Leader of the Green party became concerned when it was brought to her attention that le parti vert would be deregistered if it did not run 20 Candidates in Quebec during this election. Continued inquiries had been made by various members of the Green party outside and inside Quebec about Le parti vert. Judith Brown was listed in elections Quebec as the leader of the Parti vert. Russow contacted her and asked if she was going to run candidates in the Quebec Election and she responded "No". She also responded "No" to running as the leader in the election and stated that she was "leader in name only". Eventually Russow asked if another person would be willing to run as leader would she be willing to step aside so that the parti vert could remain a party in Quebec. She said that she would have to consult with others. When asked if she knew anyone who was interested in le parti vert in Quebec she passed on the name of Pauline Lussier. Pauline was very enthusiastic about the Green party and would have been willing to run as interim leader, and mentioned that she had been trying to find out about the Parti vert since last April and had received no response to her calls in Quebec. Russow called Judith Brown and left a message that Pauline would be willing to run as interim leader and asked if she would be able to facilitate the transfer so that we could find 20 candidates to run and thus keep le parti vert as a registered party. Given the urgency and the short time before the deadline for registering candidates, Russow asked if she could please get right back to her about this matter. She did not call back but notified a Green party member in Montreal that there would be a meeting on Sunday November 8th and when he asked if he could attend she said "No"., and she informed him that they would be issuing a communiqué de presse.

In the interim Russow discussed the parti vert with a candidate who had run twice for the party and who claimed that at one time the Parti Quebecois had been worried about the Parti vert and the then leader Parizeau had offered the then leader of the parti vert, Ouimet a 50,000 job and the parti vert was essentially then disintegrated.

After reviewing the constitution of the Green Party of Canada Russow noted that there was a provision for intervening in the various units of the party if there were a good reason. The elected Council of the Green party of Canada was contacted and it was deemed that bringing about the dissolution of the party in a region was deemed to be

good reason for intervening and a letter was written to the legal section of Elections Quebec. The letter was sent to elections Quebec with copies to the registered leader and financial agent of "le parti vert". Bernard Cooper the registered financial agent of "le parti vert" as of a few weeks left a message on the answering machine that HE DID NOT APPRECIATE INTERFERENCE FROM ANOTHER COUNTRY.

As a result of her inquiries, Russow was made aware that the Parti vert had been taken over by a group which had no interest in the Party. When in Montreal Russow contacted a lawyer in Elections Quebec, discussed the letter that had been sent from the Green Party of Canada, and brought to the attention of Elections Quebec that the party had been taken over by a group. Subsequently on Tuesday November 10th it was brought to Russow's attention that "le parti vert" had issued a press release declaring "death to the Parti vert, death to all parties and long live anarchy..." She again phoned Elections Quebec and was told that there was nothing that could be done.

When she returned to Victoria she followed up with a phone call to elections Quebec and talked to another lawyer Maitre DRUISDELLE who said that if the Green Party of Canada had sent a letter earlier stating that under this unusual circumstance an interim leader should be put in place then it might have been different. Russow informed him that a letter had been sent and there was a suggestion by him that perhaps Elections Quebec had erred.

## POTENTIAL ROLE OF THE PQ TO BE INVESTIGATED

### NOVEMBER NOVEMBER

( ) THAT on November 9, I flew to Toronto. Possible meeting about writing chapter on 1997 ELECTION book

( ) THAT on November 10, I held a press conference, in Toronto on climate change with Green Party Members with no members from the press came

( ) THAT on November 10 meeting with Osgoode Hall professors about the Proportional Rep Challenge; I might try to arrange to speak with the editorial boards

( ) THAT on November 11 took train to Montreal, meet to new leader of the Quebec Green party and planed for Press conference on le parti vert

**( ) THAT on November 11, at 6pm I gave talk, organized by Richard Warman on APEC on Civil and Political Rights at the Atrium of the McGill law school**

( ) THAT on November evening 6pm talk at Law School at McGill organized by Richard Warman who has set up a Green party club at McGill

( ) THAT on November 12 about running in the election,

November 12 media conference, and contacting potential candidates

( ) THAT on November 13. I took the train to Windsor where I will be giving a paper at a conference on Human Rights and Globalization. 3 day conference

### EXHIBIT:

**) THAT** in 1998, November I was invited to give a presentation, on human rights and systemic constraints preventing change, at the University of Windsor

Green party of Canada

### EXHIBIT

#### CONDONED RATIONALIZATION THROUGH CONTACT

human rights include the right to a safe environment and right to peace

## URGENCY DENIAL

- \* the failure to recognize that the situation is so urgent that international environmental governance and standards have to be necessary
- \* the refusal of states to accept the rule of international law

## SELECTIVE OBLIGATIONS

- \* the designation of obligations under trade agreements but not under public trust international law
- \* the reluctance to recognize that the urgency of the current global situation requires the summoning up of the international political will to move from "should" to "shall"

## MISCONSTRUED CONSENSUS

- \* the obsession with consensus which may lead to the lowest common denominator rather than striving through collaboration for the highest tenable principles

## UNPRINCIPLED DECISION-MAKING ARENA OF COMPETING VESTED INTERESTS

- \* the revelation of a problem and the presentation of a solution which could have more disastrous or equally disastrous consequences as the problem (nuclear)

## TECHNOLOGICAL FIX SYNDROME

- \* the condoning of technological fixes suggested as solutions:
- \* the revelation of a problem and the presentation of a solution which could have more disastrous or equally disastrous consequences as the problem (nuclear)
- \* Calculated diversion

(While the ecological community is protesting the destruction of one old growth valley, the forest industry continues to destroy many others)

Collective forgetfulness

- \*\* Delusion of public process (the public hearing, not a listening or an attending to)

Nisga'a process

- \* Condoned myopia (unwillingness to link development and disasters,
- \* Disguised concerns expressed in palatable altruistic terms (jobs)
- \* Institutional Collusion
- \* cycle of rectification of error
- \* Euphemistic designations ("share the forests" --loggers and industry)
- \* Feigned altruism

- \* misconstrued notions of "credibility"
- \*\* Misplaced Priorities
- \* Rationalized non-involvement
- \*\* Sanctioned human dominion syndrome (imposition of human purpose)
- \* "Seductive posture" "sustainable development- prescription for continuous rape"
- \* System inertia
- \* Syndrome of expedient omission

Seductive devices, doctrines, dogmas, strategies and fallacies

- \* The "blatant misrepresentation or expedient omission" device

This device involves the convenient exclusion of any part that could be detrimental to one's position.

The IAEA through expedient omission (possibly for advantageous "clarification") has left out a significant section in Agenda 21 which does not include nuclear energy in the list of "safe" technologies for the future.

To "clarify" Agenda 21, the IAEA in its UNCED document stated the following:

The UNCED Agenda 21 notes the need for a transition to environmentally sound energy systems, which will entail major changes in the patterns of energy production and consumption (IAEA Document, p.5, 1992)

In the Atmosphere chapter of Agenda 21, the following [safe] and sound technologies are advocated:

cooperate to increase the availability of capacity, capabilities and relevant technologies ...for utilizing and producing environmentally [safe and] sound renewable energy resources, such as solar, wind, geothermal, hydropower and biomass, ... Each resource should be utilized in a manner that ... minimizes environmental stress and health impacts, .... (Section 9. Subsection 9 g Agenda 21, 1992)

Thus, we see that in the Energy section of Agenda 21, Nuclear energy is not mentioned as being one of the [safe] or sound technology.

- \* The "co-opted terms" strategy

This strategy involves the stipulating of a new definition for a term that would jeopardize one's own argument.

In the Rio Declaration the following precautionary principle was advocated:

Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation." (Rio Declaration, 1992).

In the following statement, the IAEA redefines the important precautionary principle that was agreed to in the Rio Declaration, 1992.

The basic principles for radiation protection and safety in all applications and activities in nuclear science and technology are precautionary (IAEA Document, p. 2, authors emphasis)

The Rio principle, however, if enacted and truly adhered to, would bring about a moratorium on new nuclear power plants while phasing out currently existing ones.

\* The "comparison of convenience" device

This device involves the narrowing down of alternatives so that whatever aspect is compared will appear favourable to the proposed alternative.

In the following statement from the IAEA document, the IAEA narrows the alternatives used for comparison to those which would appear to be favourable within the terms of reference of their comparison. Thus, for example, they compare the relatively low volume of nuclear wastes to the much larger volume of wastes from fossil fuels. However, it is the volume of wastes multiplied by their toxicity that is significant. Merely comparing volumes is a "comparison of convenience." The same false comparison is used to compare fuel requirements for the same energy output.

A nuclear plant would require 27 tonnes of slightly enriched uranium each year, which corresponds to a few truckloads. The corresponding quantity of natural uranium is 160 tonnes.

a coal fired plant would need 2.6 million tonnes of coal each year... which corresponds to the load carried by 5 trains, each transporting 1400 tones every day

an oil-fired plant would require 2 million tonnes of fuel oil per year, which is about 10 supertanker loads. (IAEA document, 1992, p.12)

The nuclear establishment never fails to compare coal and nuclear as competing energy sources, always claiming the inherent superiority of nuclear. Usually this is accomplished by failing to include the entire fuel cycle over its full life of impacts, social and environmental. They conveniently exclude "safety" factors, "production of wastes," "disposability of wastes," "degree of potential for bio-accumulation," lifetimes of wastes, toxicity and proliferation problems associated with nuclear.

Yet no bombs are built of coal, no terrorist is interested in hijacking coal or in the clandestine acquisition of coal weapons, coal plants do not have to be decommissioned and mothballed after some 30 to 50 years of operation, their hazardous wastes do not have to be guarded for 100,000 years, coal dust is easier to contain than radon and coal plants do not require liability subsidies by acts of parliament" (Knelman, 1992)

\* The "lull and lure of the technological fix" syndrome

(the "misleading assurance" device or the fallacy of "technological omnipotence")

This syndrome, device or fallacy involves the revealing of the seriousness of the problem and the offering of a "solution" which is usually worse than the problem

The proponents of a potentially dangerous act indicate that they recognize the danger and focus on one area for which they can offer a technological fix

In the following statement from the Radioactive Wastes section of Agenda 21, into which it appears that the IAEA had input, the following situation is recognized:

Annually about 200,000 m<sup>3</sup> of low-level and intermediate-level waste and 10,000 m<sup>3</sup> of high-level waste (as well as spent nuclear fuel destined for final disposal) is generated world wide from nuclear power production. These volumes are increasing as more nuclear power units are taken into operation, nuclear facilities are decommissioned and the use of radionuclides increases. The high-level waste contains about 99 percent of the radionuclides and thus represents the largest radiological risk. (Agenda 21, Radio Active wastes, 21.1.).

In the IAEA document the authors affirm the certainty of the technological fix.

There is nevertheless a consensus among experts that safe geological disposal of high level wastes, including spent nuclear fuel, is technically feasible. (IAEA Document, p.17)

The view of experts in the field is that safe technological solutions exist for managing the waste. (IAEA Document, 1992, p. 15)

Knelman (1992) points out that

The assumption behind the notion of permanent disposal of High level wastes deep in a stable geological formation is false because this assumption relies on the mistaken belief that anything we do technologically can be permanent. This assumption of permanence is particularly false when we are dealing with the lithosphere over some 100,000 years and when we must first disturb the geological structure by digging a very deep hole. AECL (Atomic Energy of Canada Limited) has dug a deep hole near Lac du Bonnet in Manitoba which is totally inappropriate for such so-called "permanent" disposal. For one thing you must, in all events, avoid water. Yet, The AECL hole must be soaked. Walt Patterson, a nuclear critic described this AECL research as follows: A drunk has lost his keys and is discovered by a police officer crawling around a street light. When questioned, the drunk admitted that he had lost his keys in front of a dark

building, a block away. When asked why the drunk was then searching around the street light, the drunk said " you see, officer, the light is better here" and as Dr Martin Resnikoff, an expert on geological waste disposal has put it " the earth does not stand still. In other words, experts in the relevant fields do not agree. (Knelman, 1992, in progress)

\* The "rhetoric of notwithstanding clause" doctrine.

This doctrine allows for the indulging in strong statements about deep concern and the need for significant change and then including a notwithstanding clause that negates the strong statement.

In the Rio declaration (1992) there is a strong statement about third world dumping:

States should effectively cooperate to discourage or prevent the relocation and transfer to other States of any activities and substances that cause severe environmental degradation or are found to be harmful to human health. (Principle 14 Rio Declaration, 1992)

There are, however, disturbing "notwithstanding clauses" that appear such as in the following statements:

Develop regulatory and non-regulatory measures and procedures aimed at preventing the export of chemicals that are banned, severely restricted, withdrawn or not approved for health or environmental reasons, except when such export has received prior written consent from the importing country or is otherwise in accordance with the PIC procedure; (Section 19. subsection 53 f, Agenda 21, 1992)

In the following statement in the IAEA document, the IAEA energetically adopts the spirit of the "rhetoric of notwithstanding clauses"

The IAEA in 1990 promulgated a Code of Practice on the International Transboundary Movement of Radioactive Waste as a basis for harmonization of national legislation and policies. The code lays down the conditions and principles for international waste transfers, such as that movement must be made in a manner consistent with the international safety standards, that there must be prior notification and consent of the sending, receiving and transit States, and that each State involved should have a regulatory authority... (IAEA Document, 1992, p. 20)

\* The "flamboyant absurdity" doctrine or dogma

This doctrine or dogma carries the concerns of one's opponents to the point where the regulations governing the opponent's concerns should become the standard by which other potentially lesser concerns will be addressed.

The IAEA appears to advocate that, what is considered to be the most dangerous industry, just because it is dangerous, has developed stringent standards, and that they

who contribute to possibly the greatest uncontrollable hazard are the ones who should assist the community in dealing with other hazards.

The basic principles for radiation protection and safety in all applications and activities in nuclear science and technology are precautionary and are so well founded in science and so widely accepted that they are now also being regarded as a source of guidance in controlling pollutants and impacts arising from other human activities. Their wider application would undoubtedly contribute towards sustainable development. (p.2)

\* The "justification through dire consequences of alternatives" device

This device involves the revealing of the dire consequences of the current practices and offering one own practice as the salvation for the problem

In the following statement the IAEA cites the dire consequences of the other alternatives to justify their proposed alternative:

The problem of acid rain, which is linked to emissions from the burning of fossil fuels, has been recognized for decades.... the primary concern about the continued and increasing use of fossil fuels is the problem of CO<sub>2</sub> emission and the potential impact on world climate..... World conference on the Changing Atmosphere... need to reduce CO<sub>2</sub> emissions (IAEA document, p. 5)

climate change in connection with fossil fuels (p. 9)

\*The "benevolent outcome exploitation" strategy

This strategy involves the selection of the outcome which the opposition to the proposed alternative would advocate and the subsequent attempt to demonstrate that the proposed alternative, which the opposition would condemn, would

be the best way of achieving that outcome.

In the following statements from the IAEA document, the IAEA focuses on the desired outcomes of reducing acid rain and limiting greenhouse gas to justify the selection of their proposed alternative:

Several governments have already made commitments to reduce carbon emission, while recognizing that this will be hard to achieve except through drastic policy decisions in the energy sector. (IAEA Document, 1992, p.6)

Nuclear power plants in normal operations cause very little environmental detriment and are beneficial when they replace plants which would emit CO<sub>2</sub>, SO<sub>2</sub>, and NO<sub>2</sub> (p. 12). In this respect they would help to reduce acid rain and limit greenhouse gas emissions (IAEA Document 1992, p. 12)

To accomplish the above, IAEA and other nuclear proponents are recommending the construction of some 4000 to 5000 new commercial nuclear power plants. The combination of the multi- trillion cost and the time required for construction renders this

proposal no less than bewildering. By the 6 to 10-year period required for construction, other sources of climate-altering gases would wipe out all gains. Secondly at 1/7th to 1/10th the above cost, a much greater reduction in CO<sub>2</sub> and other climate-altering gases can be achieved through simple available conservation and efficiency measures.

\* The "flaunting and condoning of the vicious circle principle" strategy

This strategy is best explained by the economic principle that "bad money drives out good."

There are the opportunity costs of nuclear power are unacceptable and prohibitive. Thus, the money spent to subsidize nuclear power is at the expense of the funds required to solve the energy problem with safe alternatives, and consequently, because the research into alternatives will not be effectively carried out, the safe alternatives will not be able to adequately replace the non-renewable forms of energy.

In the 1992 report to UNCED, following was stated:

Nuclear energy has safety risks associated with the entire uranium cycle, from mining through processing to the ultimate disposal of high-level radioactive wastes. In addition, there are safety risks associated with the reactors used to generate electricity from uranium. And the use of fossil fuel to drive conventional thermal generation produces carbon dioxide and waste heat. (Canada's National report UNCED p. 46- 47)

From a domestic consumption point of view, the least environmentally damaging energy option is energy efficiency. (Canada's National report UNCED p. 47)

Despite the above statement, the document concludes:

New, cleaner technologies such as solar energy may help, but the hard fact is that to a large extent we will have to rely on either thermal, hydro, or nuclear energy in the future. In addition, energy projects for both export and domestic supply provide jobs and economic wealth to the country, and are especially important in some regions of Canada" (p. 47. Canada's National report UNCED June, 1992, authors' emphasis)

The Canadian government has invoked the "vicious circle principle" by cutting subsidies to conservation efficiency and renewals. Canada is thus playing an important role in facilitating this not too hidden agenda by using many strategies, devices, doctrines, etc.

## CONCLUSION:

The " nuke speak" and the seductive devices, strategies, syndromes used by the Nuclear Industry involve the language of delusion and distortion. Hopefully, through the continued revealing and categorizing of these words of delusion we could, in some

small way, counteract the impact of the not too-hidden-agenda of the IAEA, and the rest of the nuclear establishment and their government supporters.

*LEST YOU FORGET*

**URGENCY  
OF THE GLOBAL SITUATION  
RECOGNITION OF  
THE URGENCY OF THE GLOBAL SITUATION**

**1.1.** Humanity stands at a defining moment in history. We are confronted with a perpetuation of disparities between and within nations, a worsening of poverty, hunger, ill health and illiteracy and the continuing deterioration of the ecosystem on which we depend for our well being (Preamble, Agenda 21, UNCED, 1992)

**(1)**

**IMPACT OF CONTINUED IMPOSITION OF  
CONSUMPTIVE MODEL OF DEVELOPMENT**

**1.1. Continued stress on global ecosystem from the pattern of over-consumptive development in industrialized countries**

- 1.2. Continued deterioration of the global environment and aggravation of poverty caused by unsustainable patterns of consumption**
- 1.3. Continued failure to reduce the ecological footprint through continued adherence to the consumptive model of development**
- 1.4. Continued elimination of the ecological heritage of future generations**
- 1.5. Continued depletion of resources upon which future generations depend**
- 1.6. Continued political, economic and ecological crises, systemic or de facto discrimination, and other forms of alien domination or foreign occupation**
- 1.7. Continued reliance on economic growth paradigm as the solution to global problems**
- 1.8. Continue negative impact of structural adjustment programs based on the imposition of over-consumptive model of development**
- 1.9. Continued promoting of socially inequitable and environmentally unsound employment and development**
- 1.10. Continued failure to redefine "development" in equitable and ecological terms**

(2)

**INEQUITABLE DISTRIBUTION OF RESOURCES  
AND DENIAL OF BASIC RIGHTS AND NEEDS**

- 2.1. Continued inequitable distribution of natural resources**
- 2.2 Continued inequality/inequity between "developed" , "developing" and "underdeveloped" states**
- 2.3. Continued gravity of the economic and social situation of the least developed countries**
- 2.5 Continued lack of fulfillment of basic needs, and failure to guarantee the right to food, right to shelter, right to education, right to health care**
- 2.6. Continued lack of access to basic sanitation and adequate waste disposal services**
- 2.7. Continued lack of access to food and water**
- 2.8. Continued lack of access of poor to suitable arable land**
- 2.9. Continued increase in the number of people who do not have access to safe, affordable and healthy shelter**
- 2.10. Continued food crisis violating right to life and human dignity**
- 2.11. Increased use of manipulative Biotechnology**
- 2.12. Increased introduction of genetically modified food**
- 2.13. Increased control by Multi-National Agri-Food, Pharmaceutical, and Petro-chemical companies world's food supplies**
- 2.14. Continued unethical patenting of seeds by multinationals**
- 2.15 Continued experimentation in the human genome project**
- 2.16. Increased corporate control of their crop varieties**
- 2.17. Increased modification of seeds for profit**
- 2.18. Increased modification of organisms through "genetically modified organisms"**
- 2.19 Continued widespread unemployment and underemployment**
- 2.20 Continued failure to link health to over-consumption and inappropriate development**

- 2.21 Continued failure to address and prevent environmentally-induced diseases**
- 2.22 Increased deterioration of public health system, public health spending and privatization of health care systems**
- 2.23. Continuing spread of communicable infections**
- 2.24 Continued unequal access to basic health resources**
- 2.25 Continued high birth mortality rate**  
**High percentage of child mortality rate of deaths per live births.**

(3)

**DETERIORATION OF ENVIRONMENTAL QUALITY  
AND IMPLICATIONS FOR HUMAN HEALTH**

- 4.1. Continued impact on health from environmental degradation**
- 4.2. Increased impact on health and environment from toxic and hazardous chemicals**
- 4.4. Increased air, water and land pollution**
- 4.5. Continued adverse health and environmental effects of transboundary air pollution**
- 4.6. Continued transferring and trafficking in toxic, hazardous including atomic substances, activities, and waste that are dangerous to health and to the environment**
- 4.7. Continued risks of damage to human health and the environment from transboundary hazardous waste**
- 4.8. Increased generation and transboundary movement of hazardous waste causing threat to human health and environment**
- 4.9. Continued relocation or transfer to other states of activities and substances that cause severe environmental degradation or are found to be harmful to human health**
- 4,10 Continued disregard for the precautionary principle**
- 4.11. Continued awareness of the harm of exporting banned or withdrawn products on human health**
- 4.12. Increased deterioration of the environment and health through anthropogenic actions**
- 4.13. Continued ecological and human health effects of environmentally destructive model of development**
- 4.14. Continued use of banned and restricted pesticides designated as being hazardous to human or environmental health**
- 4.15. Increased resistance of antibiotics**

(4)

## **ENVIRONMENTAL DEGRADATION AND LOSS OF NATURE**

- 5.1. Continued loss of biological diversity**
- 5.2. Continued threat to genetic diversity**
- 5.3. Increased deforestation and land degradation**
- 5.4. Increased soil erosion**
- 5.5. Increased desertification**
- 5.6. Increased loss and degradation of mountain ecosystems**
- 5.7. Increased erosion and soil loss in river basins**
- 5.8. Increased watershed deterioration**
- 5.9. Increased marine environment degradation**
- 5.10. Increased vulnerability of marine environment to change**
- 5.11. Increased risk of impact from increase in sea level**
- 5.12. Increased of carbon sinks**
- 5.13. Increased impact of global climate change**
- 5.14. Increased potential of climate change**
- 5.15. Increased depletion of the ozone layer**
- 5.15. Increased threats to the ecological rights of future generations**
- 5.16. Increased environmental damage from waste accumulation**
- 5.17. Unprecedented Increase in environmentally persistent wastes**
- 5.18. Continued trafficking in toxic and dangerous products**
- 5.19. Continued export to developing countries of substances and activities that are banned or restricted in country of origin**
- 5.20. Increased generation of nuclear wastes**
- 5.21. Increased Loss of biodiversity through ecologically unsound practices**
- 5.22. Increased ignoring of carrying capacity of ecosystem**
- 5.23. Continued violation of collective human rights through dumping of toxic, hazardous and atomic wastes is a violation**

(5)

**ACKNOWLEDGMENT OF URGENCY  
VIOLATION OF HUMAN RIGHTS**

- 6.1. Continued violation of human rights on the basis of gender, sexual orientation, gender Identity, family structure, disabilities, refugee or immigrant status, aboriginal ancestry, race, tribe, culture, ethnicity, religion or socio-economic conditions**
- 6.2. Continued violations of human rights through the following activities:**
- **Mistreatment, and hasty judicial procedures**
  - **Lack of respect for due process of law (access to a lawyer or visiting rights)**
  - **Arbitrary detentions**
  - **In camera trials**
  - **Detention without charge and notification to next of kin**
  - **Lack of defence counsel in trials before revolutionary courts**
  - **lack of the right of appeal**
  - **Ill-treatment and torture of detainees**
  - **Torture of the cruelest kind and other inhuman practices**
  - **Widespread routine practice of systematic torture in its most cruel forms**
  - **Wide application of the death sentence**
  - **Carrying out of extra-judicial executions**
  - **Orchestrated mass executions and burials**
  - **Extra judicial killings including political killings**
  - **hostage taking and use of persons as 'human shields'**
  - **Constitutional, legislative and judicial protection, while on paper, are revealed as totally ineffective in combating human rights abuses**
  - **Extreme and indiscriminate measures in the control of civil disturbances**

- **Enforced or involuntary disappearances, routinely practiced arbitrary arrest and detention, including women, the elderly and children**
  - **Abuses of political rights and violation of democratic rights**
  - **Unfair elections**
  - **Activity against members of opposition living abroad**
  - **Harassment and suppression of opposition politically**
  - **Suppression of students and strikers**
  - **Targeting by terrorists of certain members of the press, intelligentsia, judiciary and political ranks**
  - **Failure to grant exit permits**
- 6.3. Increased migration of populations of migrants, refugees and displaced persons**
- 6.4. Continued critical situation of children**
- 6.5. Continued concern about discrimination against women continues despite Human Rights instruments**
- 6.6. Continued barriers faced by women**
- 6.7. Continued female genital mutilation and other harmful practices**
- 6.8. Denial of fundamental rights and freedoms**  
**Suppression of freedom of thought, Media and religion and conscience • systemic discrimination**
- 6.9. Continued denial of moral and humanitarian values through religious intolerance and extremism**
- 6.10 Continued massive violations of human rights, ethnic cleansing and systematic rape**
- 6.11. Continued wars of aggression, armed conflicts, alien domination and foreign occupation, civil wars, terrorism and extremist violence**
- 6.12. Continued violation of human rights of women including murder, torture, systematic rape, forced pregnancy**
- 6.13. Continued ethnic cleansing**

- 6.14. Continued xenophobia**  
**Fear and aversion to foreigners continues throughout the world**
- 6.15. Continued violation of human rights during armed conflict**
- 6.16. Continued discrimination of and violence against women**
- 6.17. Continued violation against indigenous peoples**
- 6.18. Increased violations of the rights of refugees**
- 6.19. Continued insufficient protection of the rights of migrant workers**
- 6.20. Continued marginalization of specific women by their lack of knowledge of their rights and redress**
- 6.21. Continued Insufficient protection of the rights of migrant workers**
- 6.22. Continued multiple discrimination against indigenous women**
- 6.23. Continued gender inequities**

(7)

#### DESTRUCTION THROUGH CONFLICT, WAR AND MILITARIZATION

- 7.1. Continued perpetuation of the substantial global expenditures being devoted to production, trafficking and trade of arms
- 7.2. Forcing developing countries to undertake inequitable structural adjustment
- 7.3. Increased poverty
- 7.4. Continued excessive military expenditures while basic needs are not fulfilled
- 7.5. Continued massive humanitarian problems through military intervention
- 7.6. Continued circulation
- 7.7. Continued war crimes against humanity, including genocide ethnic massacres, and “ethnic cleansing”
- 7.8. Increased human and environmental destruction through land mines
- 7.9. Increased war and civilian amputees as a result of land mines
- 7.10. Continued death and displacement of people through war
- 7.11. Continued impact of radiation from nuclear testing on present and future generations

- 7.12. Continued exposure to radiation on present and future generations
- 7.13. Continued mining of uranium for use in nuclear weapons
- 7.14. Continued production, proliferation and testing of nuclear arms
- 7.15. Continued circulating and berthing of nuclear armed or nuclear-powered vessels

( ) THAT in 1998 on November 22, I circulated important analysis by my colleague Martin Khor from the third World Network

ia Oh  
TWN, Penang

=====

Dear friends

We are posting for you four (4) articles giving updated analysis of the investment process at the WTO and UNCTAD. The first two articles provide reports on the state of play of the investment issue in the WTO and UNCTAD. These are provided by courtesy of Mr Chakravarthi Raghavan, the Chief Editor of SUNS. Please circulate widely.

The next two reports critically examine the World Investment Report that was recently published by UNCTAD. These two articles have come from the South North Development Monitor (SUNS), which is produced daily in Geneva.

Please send any comments that you may have to Mr C. Raghavan at SUNS at [suns@igc.org](mailto:suns@igc.org) and to Martin Khor, Third World Network at [twn@igc.apc.org](mailto:twn@igc.apc.org).

Thank you.

Development: Capitalism sans frontier?  
Robert Sutcliffe

-----

From South-North Development Monitor - SUNS #4321 of 11 Nov 1998

Development: Capitalism sans frontier?

by Prof. Bob Sutcliffe\*

Bilbao, Spain Nov 10 -- Thinking about the world economy is dominated by two big questions and the connection between them. The first is globalization; and the second is crisis.

Globalization is usually seen as the conversion of the world into a single economic space, one macroeconomy, or perhaps mega economy, and so, perhaps as a result, into a single seamless society and culture. And crisis today means the sudden onset in 1997 of a series of serious financial tremors starting in Asia, but still spreading and threatening to turn into a modern remake of the 1930s catastrophe movie.

Is the global mega economy really here? Has it caused the present economic earthquake? Who is responsible? Is there a way out and how will it all end? These are the troubling questions which are with us as the century wanes. Is it that not only one of the century's proud technological achievements, the computer, but also the whole human productive system which is hitting some gigantic millennium bug?

It is not part of the brief of UNCTAD's latest annual World Investment Report (WIR98) to answer questions posed this way. But its voluminous empirical content ought to throw light on some of

the answers. In some 400 large pages of numbers, and mostly descriptive academic prose, the report sets out to provide the most complete body of data available on three things: \* the value and location of foreign owned capital;

\* the value and direction of new direct investment flows; and

\* the size and other characteristics of the largest transnational companies (TNCs).

In addition it provides a lot of less systematic data about other aspects of international capital migration along with discussions of various related aspects of government policy and TNC behaviour.

What does all this material tell us about the mysterious and extraordinarily complex international economic system in which and by which we live? And what does it tell us about the organizations which many people argue now rule the world?

The answer to both these queries, I think, is that it tells us many unsurprising things, many surprising things, and not a few perplexing things.

### Measuring globalization

No one will deny that during the last 50 years the world economy has become much more international. There are proportionally more trade, direct investment and financial flows which cross national borders. The protagonists have sought this; and the obstacles to it have been progressively dismantled. Some people say we have arrived at a qualitatively new situation where there is a global (as opposed to just international) economy and where national borders in an economic sense no longer matter: firms think of the world as their sphere of operations and governments have lost control over economic events inside their own borders. WIR98 sheds some light on this question in various ways.

The WIR98 authors agree that globalization has occurred but contend that during the last two decades the world has globalized more rapidly through investment than through trade. Their evidence for this is that since 1980 FDI has risen much more sharply than exports and imports. In fact, trade (exports plus imports) as a share of world production was no more in 1996 than it had been in 1980. In the intervening period it had been less, dipping to a relative minimum in 1986 (Figure I.1, p. 7). If one commodity, oil, were removed from these figures they would show a more steady rise to the present level, but the point is basically correct.

Incidentally, due to careless data manipulation, the report grossly exaggerates the expansion of trade in the decade prior to 1980. The figures used to compile Figure 1.2.c,

allegedly showing this, are totally erroneous and the graph should be ignored. According to the World Development Indicators (World Bank, 1998, CD-ROM), imports plus exports as a share of World GDP was 28% during 1970-72 and not 8% as shown erroneously in WIR Fig 1.2.c. All the national figures are wrong too.

FDI has shown a strong overall upward trend since 1984, accelerating even more after 1992. This is prima facie support for the WIR's argument that globalization is coming more through investment than through trade. Nonetheless, the argument should be evaluated more critically than is done by the WIR98 authors. Their own data shows that the phenomenon is far from universal

and its nature means it may not last.

In 1997 the total flow of FDI was a little more than \$400 billion of which 84% came from developed countries and 58% went to other developed countries. WIR98 estimates the flow of FDI to developing countries in 1997 at \$149 billion, their share of the total continuing to rise. The following 27 countries or entities received more than \$1 billion each: South Africa (considered by WIR a developed country), Nigeria, Argentina, Brazil, Chile, Colombia, Peru, Venezuela, Bermuda (fictitious tax haven investments), Mexico, Kazakhstan (oil and gas), China, Hong Kong, India, Indonesia, South Korea, Malaysia, Philippines, Singapore, Taiwan, Thailand, Vietnam, Czech Republic, Hungary, Poland, Romania, and the Russian Federation. Of these China received 31% of the total, and the top six countries about 70%. Contrary to general impressions the enormous majority of the FDI which goes to China comes directly from the rest of Asia in particular from the Chinese economic area (Hong Kong and Taiwan). Some of this has entered the area from outside but most represents the building of a multinational, ethnically Chinese capitalist class. Hence, if FDI internationally integrates the economies of the world, it does so in a very selective way, even more selective than trade which is somewhat less unequally distributed. In addition, there are reasons to suppose that FDI is a much less effective integrator of economies than trade and to expect the recent surge to be reduced. In the first place, FDI has been much more erratic in the last four decades than trade. And the present crisis can be expected to reduce FDI much more than it reduces trade. Secondly, one of the major determinants of the recent surge of FDI, privatization, is temporary. WIR98 draws attention to the recent wave of privatisation as a cause of the surge of FDI, using statistics which underline its importance but also sow some confusion about it.

According to WIR98 data, a rising share of FDI flows during the 1990s has been accounted for by mergers and acquisitions (M&A) as opposed to new, "green field" investments. In the text, WIR98 says that in 1997, \$236 billion (or 58%) of the total was M&A. So, since much of this is related to the wave of privatization, it cannot be expected to last, once all major state-owned industries have been privatized, which seems only a matter of time. WIR98 attributes a sharp fall in FDI to developing countries

in the first half of 1998 to the financial crisis; but it may well be affected already also by the exhaustion of privatization opportunities.

In any case WIR98's use of these figures is rather perplexing. In the appendix table it gives two different estimates of M&A related FDI: one for deals involving majority purchases (more than 50% of the voting securities) and another for the total of M&A purchases. The figure I quoted above is the majority one. The report does not explain why the 50% criterion is used here when, confusingly, the criterion used to define an affiliate of a TNC is ownership of 10% of the equity. So apparently some foreign firms become affiliates even though the money with which they

were bought by the parent TNC may not be counted as FDI.

But is it counted in FDI? WIR98 says that 58% percent of FDI was for M&A, using the 50% criterion. But the total FDI figures seem to be defined as representing ALL FDI flows, independent of the degree of ownership which results. If that is so then, using the figures for the total M&A flows (Appendix Table B7), as much as 80% of FDI flows must be for M&A, a remarkable figure indeed.

But these apparently arbitrary decisions by the authors about how to count the figures leaves the reader a bit confused. It does not help that in Figure I.13 which summarizes the merger and acquisition figures, a footnote to the title says that the 50% definition has been used, when the contents of the table show that total flow definition has been used.

The trouble with such mistakes in a report whose main purpose is to convey information is that it makes the reader nervous about the rest of the data which is not so easy to crosscheck.

If we put together a few of the facts revealed by WIR98, we must come to a surprising conclusion which its authors do not draw. They say that:

\* FDI as a share of world investment (gross fixed capital formation) has been rising and in 1997 had reached 5.5% of the world total;

\* but between 60 and 80 percent of this FDI is in the form of expenditure on mergers and acquisitions (due to privatization and to a world merger boom in which, incidentally, domestic mergers have been growing faster than cross-border mergers);

\* FDI investors (TNCs) from developed countries are much more inclined to spend on M&A than their counterparts from developing countries, which prefer new "greenfield" investments.

From this we conclude that the 5.5% of world investment which FDI represents is a

rather spurious figure. It is just a way of measuring the level of this rather hybrid concept of FDI. It does not mean that FDI contributes that percentage to capital formation (and so perhaps to economic growth) in the world. Most of it has no direct, immediate part in capital formation from an economic point of view, since it is simply spending to change the ownership of existing assets. That is not investment from the point of view of the economy, only of the investing firm. Part of the transfers of funds due to M&A might end up as new investment, but in a direct sense FDI, it seems, actually contributes no more than one to 2 percent of world capital formation. But interestingly FDI from developing country-based TNCs is more likely to contribute to capital formation and economic growth than FDI from developed country-based TNCs.

*[para in italics]*The evidence of the report, therefore, seems to knock the most common justification of free capital movements and FDI right out of the ball park. On this evidence, it is contributing hardly at all to worldwide growth and development; what it is doing is changing the pattern of ownership of industrial assets towards more concentration in the main developed countries. WIR98 does not breathe a word of such a conclusion, but its data seem to make it irresistible. Here, as elsewhere in the report, the authors' brief clearly does

not extend to drawing evaluative conclusions about the benefits and drawbacks of foreign investment. The report seems implicitly to share the orthodox assumption that all international movement of capital must be good because it represents more efficiency for the firm and more capital for the recipient country.

### Anatomizing TNCs

As always, WIR98 presents a large amount of very interesting and useful information about TNCs, their size, economic activities and structure. Like species of insects, more TNCs are detected by WIR every year and it says that many more are still out there waiting to be discovered. It claims that there are now at least 56,607 TNCs (liberally defined as firms with at least one 10%-owned foreign subsidiary), having nearly half a million foreign affiliates (Table I.2). Especially detailed information is given on the largest 100 of these worldwide (classed according to the value of their foreign assets) and also on the largest 50 whose home country is in the developing world. Two firms, Daewoo (of South Korea) and Petroleros (of Venezuela) are members of both clubs.

A problem with the extremely inclusive definition of the TNC used by WIR is that the category must include many qualitatively different firms, some with internationally integrated production structures, others with little if anything more than a sales branch in a foreign market. As WIR98 makes clear, while there is some correlation between size and degree of internationalization, the category TNC increasingly includes medium and small firms and it is these which seem now to be internationalizing most rapidly (p. 2).

WIR98 allows us to know something about the total of TNCs and even more about the top 100, but information about the rest, the variegated 50,500 or so non-giant TNCs is very scarce. So are hard facts about the market power of the TNCs. WIR98 does not add much to our knowledge of this, aside from quoting one example of the growth of concentration in the market for automobiles (p.26), where the share of world sales of the top four firms rose from 41 to over 44 percent between 1985 and 1995.

What WIR98 does do is expand our knowledge of the weight of TNCs in the world economy. First, how much of the world's productive capacity do the TNCs own? WIR estimates the total accumulated value of their foreign investment at about \$3,500 billion (I will call it estimate A, found in Table I.1). For practical and conceptual reasons no one knows the total value of the world's capital stock of which this is a part. But economists sometimes use a rule of thumb, i.e. that it must be about twice the size of annual production (or perhaps a bit more). Since world production is about \$30,000 billion, that would make the capital stock \$60,000 billion; and that would mean that the 56,000 or so TNCs owned about 6% of the world's capital stock in the form of overseas investments. This is slightly larger than the estimate implicit in recent annual contributions of FDI to world investment (Annex table B.5, and see above).

Is this, admittedly very rough, estimate a little or is it a lot? In the first place, it is very similar to even rougher estimates

made of the same figure for the beginning of the 20th century. In this sense the world economy is certainly more globalized than 50 years ago but may be no more so than 100 years ago. A similar point can be supported about international trade. But that is not the whole story. These figures are very much lower than common perceptions. But the power of firms is not to be measured just by such percentages. Large firms may control much more than they own by virtue of their sheer size, weight and influence, of their many relationships with suppliers and other firms which operate in their orbit and, in this case, from the fact that foreign affiliates have more assets than those which are directly owned by the parent companies. So it is important to try to estimate the total size of the affiliates rather than just the part strictly owned by the TNC parents. In addition to the \$3,500 billion as the total stock of foreign-owned capital, WIR produces an estimate of the total assets of the affiliates of TNCs. These are worth, it calculates, \$12,600 billion (which I will call estimate B). That would be not 5% but 20% of the world's capital stock. So is it a more accurate estimate? WIR98 says it includes assets financed by local shareholders and local loans as well as financial capital (bank balances etc.). So it is a hybrid category of real and financial assets and is not comparable to the world value of real capital nor with the figure for FDI stocks (estimate A). It is also weakly based on no more than the application of a ratio calculated for the USA to the rest of foreign investment.

But WIR98 gives partial data for foreign assets in a third form in its list of the 100

biggest TNCs (Table II.1). Here their foreign assets are listed and the total is \$1860 billion. We are never given a definition of this category which would enable us to know whether it is in principle more comparable to estimate A or to estimate B. Depending on which equivalence is chosen the top 100, which are responsible for 24% of TNC foreign sales, account for either 60% or 17% of the assets of the TNCs. Both figures, for different reasons, seem improbable. WIR98's authors may feel that it would be too tedious to spell out more clearly all the assumptions and definitions which they use in their calculations, but it would make them a good deal more useful to readers who want to draw some conclusions from such a large amount of data.

The report contains several such instances of frustrating searches where you think you have found the fact you were tracking, you grab it only to find that you are holding two different, and what is more, apparently inconsistent facts. Of course, in fairness to the authors, the fact you want may simply not exist. But, in that case, would it not be better to give more prominence in the report to the assumptions, estimation methods and consistency between different figures?

Comparison of some of the different aggregate figures which WIR98 publishes often produce apparent anomalies which do not increase confidence in the data. For instance, what can explain the fact that for all TNCs sales of affiliates were 130% of the value of

assets in 1982 but had fallen to only 75% in 1997 -- when by contrast for the top 100 TNCs foreign sales were 119% of foreign assets and total sales 98% of total assets? (Tables I.4 and II.1). Or is it credible that gross product (value added of foreign affiliates) during the same period dropped from 30% of assets to under 17% in 1997, while gross product has stayed almost exactly the same percent of sales (22-23%) during the whole of the period (Table I.4). There may, of course, be explanations for such strange-seeming results but WIR98 simply gives us the numbers without stopping to notice, let alone speculate. The fact that such major changes in some of the ratios took place without obvious reasons during a relatively short period (15 years) cannot but make one at least wonder about the validity of the estimates.

A much more interesting and promising statistic with which to evaluate the importance of international capital is the value of what foreign affiliates produce. This has often been estimated by means of their gross sales or turnover, figures which grossly inflate their importance in relation to the size of economic aggregates. What is needed is an estimate of the value added which they produce (what they sell minus the inputs they buy from other firms), called by WIR98 'gross product'. This year for the first time estimates are published for the gross output of affiliates over a number of years as a percentage of world economic output: from 1982 to 1997 it fluctuated around a slowly rising trend, starting at 5.3% in 1982 and rising to 6.9% in 1997. This, in principle, is quite a good guide to the relative weight of foreign production, and so is one measure of the degree of globalization of the economy. The 50,000+ TNCs produce more in their

home country than they do abroad. The World Bank last year calculated their total gross product as equal to 22% of total world production. But 50,000 is a lot of firms. The figure for the top 100 is likely to lie in the region 8-10 percent.

Such estimates are new and no doubt will get revised. But it is worth mentioning a few curiosities. According to WIR98 the sales of all foreign affiliates are \$9,500 billion while their gross product is \$2,100 billion. This is a ratio of 4:1 between turnover and value added, one which in comparison with estimates of the usual value of this ratio is exceptionally large, once again arousing suspicions that at least one of the figures may be substantially wrong.

There is a final statistic which may be less subject to question and which produces an interesting result: it is the relation between affiliates' production and their exports. It is now several years since the estimate of the total sales of affiliates surpassed the value of world exports. In 1997 affiliates' sales were valued at \$9,500 billion and world exports at \$6,432 billion. WIR98 comments: "firms use FDI more than they use exports... to service foreign markets" (p.5). This conclusion is unconvincing since the foreign sales have an import content and in many cases represent little more than marketing subsidiaries.

Be that as it may, a common conception of TNCs is that they use FDI plus exports to service the home market, looking for cheap labour and other inputs and importing what used to be produced in the home country. There is no doubt that happens; but WIR98 produces clear evidence that it is not the rule for FDI. The exports of affiliates in 1995 (no later estimate was available) were estimated to be 32% of world exports (a little higher than 13 years previously) and, more pertinently, the share of affiliates' sales which was exported was 23.5%, a figure showing no tendency to change since the early 1980s (Table I.5). In other words more than 76% of affiliates' sales are in the markets of countries where they operate. And the proportion exported to the home country must be much less than 23.5% of sales since the affiliates also export to third countries. But these figures will not lay to rest the fear that there is a difference here between investment in developed and developing countries. The report also presents evidence to show that the share of output exported is sometimes a lot higher in Japanese and US investments in Asia (Table VII.3). The prevalence of export processing zones (Table III.5) also indicates investment is of this kind. And last year's WIR contained evidence of a significant increase since NAFTA in the proportion of the sales of affiliates in Mexico being exported to the USA.

It was several years ago that WIR began to put forward the line that the TNC was a qualitatively new form of enterprise; in other words, that globalization referred in part to the structural nature of firms and their production systems. The new TNC not only traded and invested in countries other than its country of origin but increasingly it created a network of productive units in different countries but all integrated in the same

production system, what WIR calls a "complex integration strategy". That began as an argument without much empirical backing other than a few anecdotal cases, some of which were later abandoned. But the idea carried on and this year WIR98 tries to develop it more. It aims to produce more backing for the idea by quoting the results of a recent survey of the views of 300 TNC managers. About 1/3 of these believed that their companies were fully global or highly coordinated internationally in 1990. By 1996 the proportion had risen to just over 50%; and nearly 80% considered that their companies would be so by the year 2002 (Box II.3). These are, of course, subjective responses and should be placed beside other literature questioning the real degree of global integration of the typical TNC, but they may represent a significant change.

### Democratizing the world

Despite a common tendency to exaggerate the trend, there is no doubt that the world economy has been becoming more internationally integrated. Globalization changes the space within which relevant economic actions take place. And such a change means, as happens more or less continuously in history, economic space and political space may get out of phase with each other. We may find ourselves with institutions and practices at

the political level appropriate for a different ordering of economic space. Globalization means larger economic spaces. The political response to it takes two forms: those who are pessimistic about the possibility of politically democratizing such larger, up to global, spaces either become fatalistic or oppose globalization which they see as the root of all problems; the alternative is to look for ways of democratizing ever larger spaces. I think that it is by no means obvious that it is easier to democratize smaller spaces than larger ones (look at the family!). But it is certainly a daunting task for those who want a more just world to democratize the whole planet so that the new abuses and new problems caused by a more global capitalism can be controlled.

How on earth is such a general politico-philosophical point relevant to WIR98, a dense compilation of statistics? In fact, in several ways of which I will mention three. First, a large section of this year's report (Chapter III) is devoted to an informative discussion of legal regimes governing FDI, especially to actual and proposed multilaterally agreed FDI rules. The kind of multilateral regime governing the rights and duties of foreign investing TNCs which can be established must be a major determinant of the degree of democracy which exists in a more global age. WIR98 describes fully and well the surprisingly large amount of international activity in recent years on this question as governments and others ask such questions as: is there any legal check on the activities of TNCs? should there be special laws governing foreign as opposed to national investment? should TNCs be able to move their assets and money as they wish? should they have any obligations about employing and training local personnel, about wages and working conditions, about repatriating their profits? should TNCs be

protected against nationalization? can TNCs be prevented from having monopoly positions in markets? Just such questions arose in 19th century Europe, as the new industrial capitalism spread within countries and seemed to demand a new role for the embryonic capitalist state. Erratically and ambiguously laws were established to police the capitalist firm, in some cases protecting it and in others curbing its excesses and reducing its freedom.

The most ambitious international attempt to answer these questions so far is the Multilateral Agreement on Investment (MAI) launched (and now perhaps sunk) by the OECD. This international code was debated amid much secrecy -- not surprising in view of the fact that it reads rather like a freedom charter for international capitalists. Its sections are almost all designed to protect firms against governments. It calls on the "hosts" to act more graciously to the guests; but there is virtually no mention in the agreement of the behaviour of the "guests". The implementation of agreements like the MAI would leave firms free of responsibilities and with their assets protected in all circumstances, regardless of their business, employment and other policies and of their market shares. It is, to say the least, ironic that, to judge from WIR98's account, one

of the central demands of foreign investing businesses in these discussions is for openness and transparency in the taking of investment-related decisions by government bureaucracies. With that it is hard to disagree. But capitalist firms are surely among the most non-transparent and undemocratic of the world's institutions. And there is little or no pressure on them to become more transparent. They are in fact often obsessed with the protection of business secrecy. And their internal regimes, if compared to those of states, would put most of them towards the totalitarian end of the spectrum.

Foreign investors also demand freedom to cross borders and non-discrimination (to have exactly the same rights and conditions as national capitalists) when they do so. What would be the reaction, I kept wondering when reading this, if ordinary human beings, rather than major corporations, were to demand such rights to unrestricted crossing of national borders and to non-discrimination? The question is rhetorical because we all know the answer.

WIR98 would not allow itself such ironic comments, but its description of ongoing debates about global governance as it affects migrant capitalists captures well the flavour of the recent debate in which firms and international organizations try to create a regime much more one-sidedly pro-business than exists, at least formally, in most national states. The struggle for a more democratic global business regime will evidently be difficult.

But WIR98 also tells a story which suggests that such struggles are far from hopeless, and here is a second link between global economic democratization and WIR98. Faithful readers of WIR over the years will be quite startled to find in this report a boxed

essay entitled "Defining civil society" (p.60). This is, of course, one of the trendiest subjects of our time. But WIR98 writes about it in the context of the surprisingly successful campaign waged against the MAI - once its contents belatedly came to light. A large coalition of unions, parliamentarians and NGOs collaborated to attack the provisions of the MAI. They forced the OECD to the negotiating table on the issue and their campaign has been one element in the present virtual abandonment of the MAI. The success of this campaign reveals a little of the possibilities of democratizing larger spaces. And WIR98 is to be commended for recognizing its importance for the development of the reality on which they report annually.

WIR in recent years has been among the advocates of a multilateral investment regime and the new report speculates (pp 128-9) that such a regime would on balance increase the amount of FDI. The very tentative tone of this argument, however, may represent some tacit acknowledgement of the strength of the campaign against the MAI. Even so, WIR98's argument is still couched in very limited terms: the effect of the international regime on the quantity of FDI (presumably more equals good). The issue of what effect multilateral investment rules will have on the qualitative impact of FDI, especially its effects on development, are still not among WIR's concerns, though it seems

to me that they ought to be.

The third connection concerns all sources of data about the world economy, including reports like WIR98. One of the keys to democratization at the global, as at all other levels, is information. That means free, independent, critical international media and also a flow of information necessary to analyse, evaluate and plan actions from state and state-like institutions.

There is some information which only a state-like institution can possess and disseminate since it is based on information collected from all the component units. So the state produces national accounts and national labour statistics and national demographic statistics. And for the world that task goes to the many quasi-state institutions which exist at the global level, elements perhaps of a still-to-be-created global state. Along with other specialized agencies of the UN, UNCTAD and the WIR98 authors are in that category. Reports like WIR98 are part of the process of creating an informed global civil society and democratizing the world. Such information does not need to be produced in a critical framework to serve this purpose. It can be useful independently of the ideological and political assumptions of the institutions which produce it. In this sense we are fortunate that a group of experts continue to produce an annual report of high professional quality, containing such detailed information about an important aspect of the activities and structure of the capitalist institutions which dominate the world economy. And with some of the inconsistencies and mysteries removed the report can become increasingly useful. But there are some things which WIR does not do and is unlikely to do and which at the present time no body does

effectively. One of these is to produce information about financial globalization. The IMF and the Bank of International Settlements produce something but there is at present no annual international report which tries to do for migrant finance capital and international banks what WIR98 tries to do for migrant productive capital and TNCs.

Equally there is no sign of an international body which examines not the structure, statistics and policies of TNCs but their abuses: of workers, of the environment, of democratic rights. WIR98 is a long way from being the modern, globalized equivalent of the British factory inspectorate of the 19th century. If the WIR98 authors knew of the kind of abuses which those agents of the 19th century British state used to reveal, their present brief would almost certainly prevent them from saying so. Yet there is quite enough partial, sometimes anecdotal, evidence to suggest that the more global advance of capitalism of recent years has exacerbated many of its abuses and injustices. Some NGOs, critical scholars and journalists have revealed some of these abuses. But they do not have the power to investigate as systematically as the factory inspectors (so often quoted by Marx and other critics of capitalism) did in the 19th century. While UNCTAD's Geneva neighbour the ILO does a certain amount of work of this kind, the factory acts appropriate to a more global

capitalist economy are still a very long way from being enacted.

## THE NEED TO OPPOSE THE EMERGENCE OF AN MAI IN THE WTO

Martin Khor (Third World Network)

The MAI is facing serious difficulties in the OECD. Many OECD countries have submitted long reservation lists. Many issues also remain unresolved. Citizen groups in many OECD countries have launched strong protests against their governments entering an MAI.

Due to these difficulties, the OECD ministerial meeting in Paris at the end of April 1998 decided to suspend the negotiations for six months.

Whilst even mainstream newspapers like Financial Times and the Globe and Mail (Canada) have acknowledged the role played by NGOs in contributing to the derailing (temporarily at least) of the OECD-MAI, there are no grounds for relaxing the campaign.

Indeed, there is now a real possibility and danger that the centre of negotiations will shift to the World Trade Organisation, a move that seems to be favoured by the European Union (and especially by the European Commission). The European Parliament, in their critical resolution on the OECD-MAI, had also called for the negotiations to shift to the WTO.

The OECD ministerial declaration of April 98 states that OECD governments "support the current work programme on investment in the WTO and once the work programme has been completed will seek support of all their partners for the next steps towards the creation of investment rules in the WTO."

More recently, a meeting of the trade ministers of the "Quads" (US, Canada, EU and Japan) on 30 Apr-1 May in Versailles, concluded with a chairman's statement that the WTO ministerial meeting (in May 19-20) should set in motion a process enabling decisions to be taken in 1999 on the scope and modalities of further global trade liberalization.

The EU is championing a new comprehensive "Millennium Round" in the WTO, which presumably would include upgrading the investment issue from the present working group (whose mandate is to "study the relation between trade and investment") to a group negotiating an MAI-like agreement. Japan has also come out in favour of such a new Round.

In recent statements, as the OECD-MAI encountered more problems, the EC and Canada, have been saying that the MAI should now be negotiated in the WTO. To boost this move, the EC has also claimed that at the WTO the developing countries can also participate, and this is thus more participatory. Proponents of an MAI in the WTO can also be expected to claim that labour and environmental issues will be taken care of,

and also that suggestions to balance the rights and obligations of corporations can be considered.

NGOs not be taken in by such an argument and should reject any move to get the WTO to negotiate an investment treaty. Getting the MAI or a similar investment treaty in the WTO would be even

worse for developing countries. This is because:

(1) Most developing countries are members in WTO and if a treaty is concluded there they would have to join it. If the MAI is at the OECD, each developing country can decide whether or not to join.

(2) The WTO is not Democratic or transparent. Developing countries in reality won't have much say in determining the final outcome. Nor will most of them be able to participate in the real negotiations, that often take place in "informal meetings" to which a few key countries may be invited. For example, during the Uruguay Round, although many developing countries opposed many aspects of the TRIPS treaty, in the end the US had its way. Although some developing countries may oppose a MAI-type proposal in the WTO, eventually it is likely they could be isolated and in the end an MAI will emerge.

(3) The WTO's dispute settlement system will be effective in tying down developing countries to implement an MAI there. Countries that don't comply with some parts could face trade sanctions or at least the threat of being taken to a WTO panel. Thus the WTO is popular with the rich countries as they can use it to enforce the rules on the South.

(4) WTO is supposed to be a TRADE organisation. Its mandate should not be expanded to INVESTMENT policies and rules. If an MAI-type treaty is negotiated in WTO, then the existing principles of the WTO such as NATIONAL TREATMENT could quite easily be extended to INVESTMENT (it applies now to goods).

The history of MAI-type investment rules in the WTO is that the rich countries, especially the US, tried to introduce in as part of the TRIMS (trade-related investment measures) negotiations during the Uruguay Round. This attempt failed as there was strong opposition from many developing countries to introduce investment policies and rules per se in the negotiations.

Therefore the TRIMS agreement is now limited only to preventing trade-related investment measures, such as requiring investors to follow a requirement to have a minimum level of local content in their product. (It is argued that local content policy would adversely affect imports and thus distorts trade). Investment policies per se (such

as a country's policy on foreign investment, such as criteria for entry of firms, the conditions for their establishment, whether or not to grant national treatment) are thus excluded from TRIMS. Most developing countries thus maintain their regulatory control over foreign investment.

In 1995-96 the EC led a campaign within the WTO to get a negotiation process going for a MIA (multilateral investment agreement). Many developing countries (including India, Indonesia, Malaysia, Tanzania, Uganda) opposed it. Investment became the biggest and most controversial issue in the run-up to the WTO's first Ministerial Conference in 1996. In the face of the strong opposition from developing countries, the rich countries (including Japan and Canada) then downgraded their demand to creating a working group to STUDY the relation between trade and investment.

This working group for a study process was agreed to at the WTO Ministerial Conference (Singapore - December 1996). There was an

explicit agreement that the working group on trade and investment would only STUDY the relation, and WOULD NOT BE ENGAGED IN NEGOTIATIONS for an investment agreement.

Any decision, if any, to start a negotiation process has to be EXPLICITLY taken by consensus. After 2 years (Dec 1998) the working group will decide how to proceed. The group has been meeting in Geneva for discussion but not for any negotiation.

Now that the OECD process has slowed down, it is likely that the EC (led by Sir Leon Brittan), Canada, the WTO Director General (Renato Ruggiero) will now PUSH VERY HARD to intensify the WTO process. They will push to intensify the discussion in the working group on trade & investment and will propose that this be upgraded to a NEGOTIATION for an investment treaty.

The treaty they have in mind is THE SAME AS THE MAI. This is clear from the EC paper "A Level Playing Field for Foreign Investment Worldwide" (1995) which describes the EC strategy of pushing for an MIA/MAI at both the WTO and the OECD. The main features (including the right to establishment, national treatment, banning of performance requirements, right of entry and exit of funds, etc.) are similar to what emerged in the OECD-MAI.

Therefore NGOs should not be swayed or taken in by arguments from the EC, Canada or other countries, that public concerns (such as labour or environmental issues) and the South's interests would be better taken care of by initiating an agreement at the WTO.

In reality, it would be WORSE for developing countries and for the world because an

MAI in the WTO would have over 130 countries involved.

#### PROPOSALS:

1. Therefore NGOs should OPPOSE strongly now any proposal or pressure to upgrade the present STUDY GROUP in the WTO into a NEGOTIATING GROUP.
2. This opposition should be made clear during the Second WTO Ministerial Conference in Geneva on 18-20 May 1998. There is a possibility the EC and others could use this occasion to PUSH for negotiations on new issues including INVESTMENT, perhaps through a Millennium Round to start in 1999 or 2000.
3. NGOs involved in the MAI issue should take this up as their main issue in the WTO Conference. They could press their Trade Ministers before the meeting to commit that they would not press for the investment issue.
4. NGOS can also contact members of the media covering the event to brief them on the issue and make clear to them that NGOs oppose shifting the MAI to the WTO.
5. Moreover, NGOs should also campaign that the existing working group on trade and investment conclude their discussions with a decision that the WTO should not take up investment policy or rules as part of their mandate, and that the working group itself should be wound up.
6. The European Parliament members should be persuaded to withdraw from their stand (in their resolution on the MAI) that the MAI negotiations should shift to the WTO. In fact, Parliamentarians, citizen groups, municipalities etc. should be informed of the greater dangers of an MAI in the WTO and asked to also oppose such a development from taking place.

#### P.S. BEWARE ALSO OF THE IMF

The IMF Secretariat and some G7 want to amend the IMF Articles of Association to introduce "CAPITAL ACCOUNT LIBERALISATION" as part of the IMF's objectives or operations. This would allow IMF to discipline and pressurise developing countries to increasingly open their doors to capital flows such as portfolio investment, FDI, loans, bonds and the outflow capital funds. This is another route for MAI-type rules on investments. This proposal will continue to be discussed at IMF meetings this year. THIS AMENDMENT SHOULD ALSO BE OPPOSED. (Such an amendment would among other things enable the IMF to have a much stronger hand to discipline developing countries to deregulate financial flows and open up their financial markets, a process that was largely responsible for the East Asian financial crisis. There will be

more Mexican and Asian type crises if the IMF amendment is carried).

reports/articles that are being emailed as separate messages.]

Dear friends

I attach four reports/articles on the investment issue at WTO and UNCTAD.

Please forward to all anti-MAI campaigners. Thank you.

Cecilia Oh  
TWN, Penang

=====

Dear friends

We are posting for you four (4) articles giving updated analysis of the investment process at the WTO and UNCTAD. The first two articles provide reports on the state of play of the investment issue in the WTO and UNCTAD. These are provided by courtesy of Mr Chakravarthi Raghavan, the Chief Editor of SUNS. Please circulate widely.

The next two reports critically examine the World Investment Report that was recently published by UNCTAD. These two articles have come from the South North Development Monitor (SUNS), which is produced daily in Geneva.

## UNCTAD & Multilateral Framework on Investment

by Chakarvarthi Raghavan

WIR-95 broached the idea of a Multilateral Framework on Investment. The near publication draft spoke of an "Agreement", but it was changed just before publication from "Agreement" into "Framework".

In May 1996, UNCTAD-IX asked the Secretariat to analyse the development implications of a possible MFI.

But through 1996 and 1997, seminars and symposia were being held to promote an MFI -- with OECD negotiators and others brought to address the issues.

In 1998, at the UNCTAD-NGO consultations, several NGOs criticized the failure of UNCTAD to address these, to

In a chapter discussing bilateral investment agreements, and regional integration frameworks, the UNCTAD investment report (WIR- 98 Ch IV pp 128-130) discusses the "The potential impact of a possible multilateral framework on investment" and says:

"This section does not deal with the advantages or disadvantages of an MFI, but with a hypothetical question: if there were an MFI, how would it affect the volume and pattern of FDI flows? Since an MFI is only a hypothesis and not a reality - and since there is little information about TNCs would incorporate a variable such an MFI into their locational decisions - answers to this question are unavoidably tentative.

"One conceivable outcome of an MFI is that it would help to increase FDI flows - and perhaps affect other features of such flows as well. Such an outcome is based in part on the assumption that a multilateral agreement would not only consolidate recent changes towards, more liberal policies by many countries, but would incorporate "rollback" provisions - requiring countries to commit themselves to reducing or eliminating existing barriers to FDI and strengthening investment protection and the proper functioning of markets. Even in the absence of further liberalization, a multilateral framework could facilitate investment by providing stronger assurances - as compared with unilateral or even bilateral measures - when it comes to the protection of FDI and the stability of domestic FDI regimes. The presumably greater stability, predictability and transparency resulting from an MFI would create a generally more favourable climate for investors.

The impact on inflows might be greatest for those countries that are not already signatories to bilateral, regional, plurilateral or multilateral investment agreements, and countries whose current policies, even if favourable to FDI, are not considered sufficiently predictable by investors. At the same time, whether or not FDI flows would actually increase - and whether there would be a change in the quality and patterns of flows - would depend on the precise content of an agreement, the nature of national commitments and exceptions to the generalized multilateral rules and, of course, the other FDI determinants that would come into play at that point.

"A second conceivable outcome of an MFI is that it could actually reduce the quantity and quality of FDI flows, because the negotiation of an MFI would take several years, creating uncertainties about the investment climate worldwide and thereby discouraging foreign investors. Further, even if negotiations did produce an agreement, the MFI that would result could conceivably enshrine a less liberal multilateral environment than has already evolved unilaterally or regionally. (However, the extent to which a formal binding of the regulatory framework at a less liberal level would affect FDI flows is unclear.) Such an MFI could also alter the patterns of FDI flows across geographic regions and industries. In particular, an MFI might reduce FDI flows to countries that gain from the currently restrictive policies of their competitors for such investment and increase flows to otherwise desirable locations that are receiving little inward FDI because of uncertainties about policies.

"A third conceivable outcome of a possible MFI is that it would have little or no impact on the quantity and quality of FDI flows, as it would not materially alter the policy framework for FDI. One reason why this might be the result is that there has already been significant liberalization in many countries, in particular in many developing countries and countries in transition, during the 1980s and 1990s (chapter III, table III.2); and this liberalization has contributed to a surge of FDI flows that reached a new record in 1997. Therefore, an MFI that

contains, for example, standstill provisions - requiring countries to commit themselves not to introduce new barriers to FDI, lower standards of investment treatment or measures likely to impair the proper functioning of markets - would essentially maintain the status quo, as far as the openness of economies to FDI, their treatment of foreign affiliates and the functioning of their markets are concerned. Moreover, the extensive network of bilateral investment treaties, which numbered over 1500 by the end of 1997 (chapter III), would provide protection for investors and could be easily extended to additional countries. Finally, there would be no significant effects on the geographic patterns of FDI flows, as they are largely influenced by other FDI determinants.

"On balance, these considerations suggest that an MFI would improve the enabling environment for FDI, to the extent that it would contribute to greater security for investors and greater stability, predictability and transparency in investment policies and rules. This, in turn could encourage higher FDI flows and potentially some redistribution of those flows, particularly to countries whose investment climate would newly reflect the multilateral framework. How much different an MFI would make, however, in terms

of the quantity, quality and patterns of actual FDI flows is difficult to predict because as in the case of BITs, it is precisely the function of an enabling framework to allow other determinants, and especially economic determinants, to assert their influence.

"Expectations, about the impact of an MFI on FDI flows (if it were indeed to be negotiated) in comparison to the current regulatory framework and the direction in which it is developing should therefore not be exaggerated. There are, of course, other issues that need to be considered in connection with a possible MFI -- especially the possible role of such an agreement in providing a framework for intergovernmental cooperation in the area of investment (UNCTAD, 1996a, 1997a) - but these fall outside the scope of the present analysis which is specifically focused on the determinants of FDI flows."

From South-North Development Monitor SUNS #4321 of 11 November 1998

Development: WIR upbeat on FDI, private forecasters differ

Geneva, 10 Nov (Chakravarthi Raghavan) -- Global Foreign Direct

Investment (FDI) flows rose considerably in 1997, and will rise again in 1998 despite the financial crisis, the UN Conference on Trade and Development (UNCTAD) predicted Tuesday, estimating the 1997 inflows at \$400 billion and outflows at \$424 billion.

An UNCTAD press release on the WIR-98 also predicts FDI to rise in 1998, reaching \$430-440 billion - with much of it concentrated in the developed countries, as well as Latin America and the Caribbean, and with FDI flows to Asia and the Pacific "at best remaining the same" as in 1997.

FDI data by their nature are notoriously difficult to come by, and there is not even a common understanding of what is FDI among those who are in the business of collecting and publishing it - even the IMF (balance-of-payments data) and OECD concepts don't match.

And as the review article by Prof. Bob Sutcliffe notes, the WIR-98 data, tables and figures, have some internal inconsistencies, making one unsure of reliability of other data cited.

The 1997 data for individual countries, the notes to the annex to WIR-98 (pp 353-355) make clear, are estimates based on data drawn

from various sources - of which the IMF data is acknowledged as the most authoritative. But the annex also shows that as of 1 July 1998, UNCTAD got national data reports from only 57 countries, and for 11 others estimated from IMF tapes. And as of May 1998 IMF tapes data, for several of the reporting countries, at least one of three components of FDI -- equity investment, reinvested earnings and intra-company loans -- are not available. And for 48 economies, FDI data are said to be not available throughout 1997, and have been estimated.

And the IMF's balance-of-payments data don't "balance", as they ought to at world level. For nearly two decades now there is a \$100 billion hole in this. In the early stages when this imbalance was found, it was got rid of and explained as 'errors and omissions'. But as it began to mount up, explanations were sought, and at first was attributed to "capital flight", corruption and other ills of developing world.

But even the IMF and the World Bank no longer have this view. An IMF 1992 investigation, as an earlier one in 1987, concluded that much of this discrepancy is due to discrepancies in data on investment income -- which in theory could become new FDI (reinvested earnings) or intra-company loans (or even used from Cayman and other isles for hedge fund leveraging loans). And as Chandra Hardy has pointed out (#SUNS 4116) these global imbalances in BOP accounts have been increasing, and in 1994 the unaccounted investment income reached \$124 billion.

In September, just before UNCTAD Trade and Development Report came out with a somber warning about the likelihood of a global recession, if not depression -- a fear that is now shared by most mainstream economists and forecasters -- the WIR team brought out a report cautiously optimistic about FDI projections for Asia, based on information available before the developments in summer, including the Russian meltdown and its impact on private investors -- as US Federal Reserve Chair Alan Greenspan put it, the general risk-aversion of all investors -- throughout the world began to be fully felt.

But the WIR-98 upbeat projections, published now, of FDI flows for 1998 being unaffected by the financial crisis, are in contrast to the somber estimations from two authoritative and leading private sector estimations about capital flows to emerging economies (available on their websites).

In its September estimates about emerging economies, the Washington-based Institute of International Finance (IIF) revised downward its own April estimates. It reduced the 1997 estimates of direct investment flows from a \$122.9 billion made in April this year to \$119.7 in September.

And IIF forecasts for 1998 has been reduced from a \$114.5 billion made in April to

\$105.9 in the September projections, and a further drop to a \$101.8 billion is forecast for 1999.

JP Morgan is even more pessimistic. It estimates, in forecasts made in October, net direct investment flows to emerging economies to fall from a \$133 billion in 1997 to \$102 billion in 1998, and an even sharper fall to \$85 billion or 17% in 1999.

The WIR-98 has been released with much fanfare around the world -- with press conferences in 22 places by staff members of the division of UNCTAD producing the annual report, and in press briefings in 49 other centres, mostly by local government officials. UNCTAD Secretary-General Rubens Ricupero was due to launch the report at Lyon in France, where UNCTAD has organized a week-long event to bring together major TNCs and enterprises and officials and enterprises of developing countries to promote investment in their countries.

But at UNCTAD's headquarters here, Ms. Anne Miroux, recently promoted from another division to be in charge of a branch in the WIR division dealing with trends and data, was assigned to hold a briefing with Mrs Anh Nga Tran-Nguyen, a staffer from another division dealing with portfolio investments. They were unable to answer questions about the basis for their projecting FDI growth in five affected Asian countries in 1998 or on M&A in North America, and asked newsmen to write a letter for answers!

The chief author of the WIR, Mr. Karl Sauvart, who has been travelling to hold briefings at Washington, London and elsewhere, in all his years at UNCTAD here has never appeared before the media (who are more familiar with data from various sources) to brief and answer questions on WIRs.

In WIR-95, UNCTAD had broached the idea of a multilateral framework on investment (the sub-title of the relevant portion calling it ('Towards a Multilateral Agreement on Investment'), viewing the Marrakesh Agreement for WTO as containing elements of such a framework, and referring to the negotiations at the OECD for an MAI, and elsewhere in trade-related regimes - the EU, NAFTA, MERCOSUR and APEC. The WIR-95 had been readied that summer, but Mr. Ricupero, who was Brazil's GATT negotiator during the Uruguay Round and its services negotiations, and who took over at UNCTAD in September of 1995, in signing the overview, made last minute changes to the text by speaking of a multilateral framework on investment.

And in November 1995, the WIR division, organized at Divonne, in France (near Geneva) the first of its many seminars and symposia to address the MAI issue. At that seminar, the invited participants made presentations on the TNC mode of development and promoted the idea of a multilateral WTO agreement for right to invest and investors rights, including a demand that the rights and the multilateral agreement should extend to short-term capital flows. But the comments of some of the key ambassadors participating and the questions raised by them, showed some sharply divided views.

Ricupero, who chaired that seminar, in summing up had then said that there was no consensus on the need for a treaty, the timing and the forum.

At the ninth session of the UNCTAD Conference in Midrand, South Africa, in May 1996, the secretariat was asked "to identify and analyse implications for development of an MFI (Multilateral Framework on Investment), taking into account the interests of developing countries."

After Midrand the division followed up with other seminars and symposia, promoting the idea of multilateral investment regime,

with lead speakers mostly from the OECD and private sector proponents. More recently this year, it held consultations with NGOs.

WIR-98 has some 2-1/2 pages of "analysis" about the "potential impacts of a possible multilateral framework on investment". It then says the MFI is only a hypothesis, but goes on to provide a "discussion at an abstract level" of the advantages and disadvantages of an MFI.

On one set of assumptions of what such a framework could contain (including more liberal FDI policies and rollback provisions of restrictions by host countries), WIR-98 says it would help to increase FDI flows. But a second conceivable outcome, it says, could also reduce the quantity and quality of FDI flows, while a third outcome could be that it would have no impact on quantity and quality of FDI flows.

But on balance, the WIR-98 says, these considerations suggest an MFI would improve the enabling environment for FDI, but that expectations about an MFI on FDI flows should not be "exaggerated".

Perhaps, it should have been called a hypothetical analysis of hypothetical assumptions. For, some of the most ardent advocates of a multilateral investment regime (including in a paper prepared by US academic Stephen Guisinger for an OECD dialogue in 1996 with dynamic emerging market economies of Asia, to promote their joining an MAI) have conceded that "little is known about benefits of FDI liberalization to host economies". Other theorists about FDI liberalization and its benefits have said there is no empirical evidence to construct an investment theory, but "international trade theories" (rooted in immobility of factors of production across borders) could be used as proxies for FDI liberalization.

But 2-1/2 years after Midrand, the secretariat has not published any analysis of development implications of an MFI. But a box in the WIR-98, outlines its work in this area as involving substantive support to the inter-governmental process, preparing some 20 issue papers (that were promised more than a year ago, but yet to be published), holding regional symposia and Geneva-based seminars, dialogue with civil society and training facilities.

At the September 1998 meeting of the UNCTAD Commission dealing with these questions, Mrs. Lynn Mytelka, Director of the Division on Investment, Technologies and Enterprise Development, had explained the delay in producing the analysis of development implications and the issues papers, as due to the fact that the funds for the research and analysis had been raised by the secretariat only in the second half of 1997, that the trust fund had become operational only at end of 1997, and the expert staff had only now been recruited and beginning to join.

Some developing country delegations say that while the efforts of a bureaucracy to use a mandate to expand the staff is understandable, it was puzzling that an organization whose main raison d'etre is development of developing countries has been unable to locate and assign competent staff from within it to undertake a conference mandate. They note that according to UNCTAD's manning table, the WIR division which has been

discussing these questions has a professional staff strength of at least thirteen. Perhaps, delegations suggest, the reason for the delay lies in the secretariat originally proceeding on the basis that an OECD MAI is certain and would be brought up into the WTO, and that it would be best to take the draft OECD MAI and look under each of its provisions for a "development dimension" or exception. In fact this would appear to have been presaged by UNCTAD, as an observer at the WTO Working Group on Trade and Investment, but the comments of some key Third World delegations made clear that this was not what they were looking for.

Meanwhile, several developing country delegations have now begun to look to other sources - inter-governmental and non-governmental - for analytical support and study of the entire range of issues - the pros and cons of FDI on development and the conditions and role of host country governments to maximise benefits and minimise disadvantages, including on such issues like balance-of-payments, transfer pricing, development of indigenous capacities in technology and research and development etc., and the obligations that foreign investors as well as their home countries that would claim a right to take up their case under such a regime should undertake.

More recently, Mr. Ricupero has said that there are many central issues relating to trade, investment and development that need more study and explanations, before people engage themselves in negotiations on multilateral investment rules.

He also said at a press conference at the end of the High-Level segment of the Trade and Development Board, that he had taken serious note of the recent comments and views of Prof. Jagdish Bhagwati, the free trade advocate, who since 1997 (and outbreak of the financial crisis in Asia) has been forthright in criticizing the IMF attempts at capital convertibility or efforts for a multilateral investment liberalisation regime at the WTO to promote the interests of foreign investors.

From South-North Development Monitor - SUNS #4321 of 11 Nov 1998

Development: Capitalism sans frontier?

by Prof. Bob Sutcliffe\*

Bilbao, Spain Nov 10 -- Thinking about the world economy is dominated by two big questions and the connection between them. The first is globalization; and the second is crisis.

Globalization is usually seen as the conversion of the world into a single economic space, one macro-economy, or perhaps mega economy, and so, perhaps as a result, into a single seamless society and culture. And crisis today means the sudden onset in 1997 of a series of serious financial tremors starting in Asia, but still spreading and threatening to turn into a modern remake of the 1930s catastrophe movie.

Is the global Mega economy really here? Has it caused the present economic earthquake? Who is responsible? Is there a way out and how will it all end? These are the troubling questions which are with us as the century wanes. Is it that not only one of the century's proud technological achievements, the computer, but also the whole human productive system which is hitting some gigantic millennium bug?

It is not part of the brief of UNCTAD's latest annual World Investment Report (WIR98) to answer questions posed this way. But its voluminous empirical content ought to throw light on some of

the answers. In some 400 large pages of numbers, and mostly descriptive academic prose, the report sets out to provide the most complete body of data available on three things: \* the value and location of foreign owned capital;

\* the value and direction of new direct investment flows; and

\* the size and other characteristics of the largest transnational companies (TNCs).

In addition it provides a lot of less systematic data about other aspects of international capital migration along with discussions of various related aspects of government policy and TNC behaviour.

What does all this material tell us about the mysterious and extraordinarily complex international economic system in which and by which we live? And what does it tell us about the organizations which many people argue now rule the world?

The answer to both these queries, I think, is that it tells us many unsurprising things, many surprising things, and not a few perplexing things.

### Measuring globalization

No one will deny that during the last 50 years the world economy has become much more international. There are proportionally more trade, direct investment and financial flows which cross national borders. The protagonists have sought this; and the obstacles to it have been progressively dismantled. Some people say we have arrived at a qualitatively new situation where there is a global (as opposed to just international) economy and where national borders in an economic sense no longer matter: firms think of the world as their sphere of operations and governments have lost control over economic events inside their own borders. WIR98 sheds some light on this question in various ways.

The WIR98 authors agree that globalization has occurred but contend that during the last two decades the world has globalized more rapidly through investment than through trade. Their evidence for this is that since 1980 FDI has risen much more sharply than exports and imports. In fact, trade (exports plus imports) as a share of world production was no more in 1996 than it had been in 1980. In the intervening period it had been less, dipping to a relative minimum in 1986 (Figure I.1, p. 7). If one commodity, oil, were removed from these figures they would show a more steady rise to the present level, but the point is basically correct.

Incidentally, due to careless data manipulation, the report grossly exaggerates the expansion of trade in the decade prior to 1980. The figures used to compile Figure 1.2.c, allegedly showing this, are totally erroneous and the graph should be ignored. According to the World Development Indicators (World Bank, 1998, CD-ROM), imports plus exports as a share of World GDP was 28% during 1970-72 and not 8% as shown erroneously in WIR Fig 1.2.c. All the national figures are wrong too.

FDI has shown a strong overall upward trend since 1984, accelerating even more after 1992. This is prima facie support for the WIR's argument that globalization is coming more through investment than through trade. Nonetheless, the argument should be evaluated more critically than is done by the WIR98 authors. Their own data shows that the phenomenon is far from universal

and its nature means it may not last.

In 1997 the total flow of FDI was a little more than \$400 billion of which 84% came from developed countries and 58% went to other developed countries. WIR98 estimates the flow of FDI to developing countries in 1997 at \$149 billion, their share of the total continuing to rise. The following 27 countries or entities received more than \$1 billion each: South Africa (considered by WIR a developed country), Nigeria, Argentina, Brazil, Chile, Colombia, Peru, Venezuela, Bermuda (fictitious tax haven investments), Mexico, Kazakhstan (oil and gas), China, Hong Kong, India, Indonesia, South Korea, Malaysia, Philippines, Singapore, Taiwan, Thailand, Vietnam, Czech Republic, Hungary, Poland, Romania, and the Russian Federation. Of these China received 31% of the total, and the top six countries about 70%. Contrary to general impressions the enormous majority of the FDI which goes to China comes directly from the rest of Asia in particular from the Chinese economic area (Hong Kong and Taiwan). Some of this has entered the area from outside but most represents the building of a multinational, ethnically Chinese capitalist class. Hence, if FDI internationally integrates the economies of the world, it does so in a very selective way, even more selective than trade which is somewhat less unequally distributed. In addition, there are reasons to suppose that FDI is a much less effective integrator of economies than trade and to expect the recent surge to be reduced. In the first place, FDI has been much more erratic in the last four decades than trade. And the present crisis can be expected to reduce FDI much more than it reduces trade. Secondly, one of the major determinants of the recent surge of FDI, privatization, is temporary. WIR98 draws attention to the recent wave of privatization as a cause of the surge of FDI, using statistics which underline its importance but also sow some confusion about it.

According to WIR98 data, a rising share of FDI flows during the 1990s has been accounted for by mergers and acquisitions (M&A) as opposed to new, "green field" investments. In the text, WIR98 says that in 1997, \$236 billion (or 58%) of the total was M&A. So, since much of this is related to the wave of privatization, it cannot be expected to last, once all major state-owned industries have been privatized, which seems only a matter of time. WIR98 attributes a sharp fall in FDI to developing countries in the first half of 1998 to the financial crisis; but it may well be affected already also by the exhaustion of privatization opportunities.

In any case WIR98's use of these figures is rather perplexing. In the appendix table it gives two different estimates of M&A related FDI: one for deals involving majority purchases (more than 50% of the voting securities) and another for the total of M&A purchases. The figure I quoted above is the majority one. The report does not explain why the 50% criterion is used here when, confusingly, the criterion used to define an affiliate of a TNC is ownership of 10% of the equity. So apparently some foreign firms become affiliates even though the money with which they

were bought by the parent TNC may not be counted as FDI.

But is it counted in FDI? WIR98 says that 58% percent of FDI was for M&A, using the 50% criterion. But the total FDI figures seem to be defined as representing ALL FDI

flows, independent of the degree of ownership which results. If that is so then, using the figures for the total M&A flows (Appendix Table B7), as much as 80% of FDI flows must be for M&A, a remarkable figure indeed.

But these apparently arbitrary decisions by the authors about how to count the figures leaves the reader a bit confused. It does not help that in Figure I.13 which summarizes the merger and acquisition figures, a footnote to the title says that the 50% definition has been used, when the contents of the table show that total flow definition has been used.

The trouble with such mistakes in a report whose main purpose is to convey information is that it makes the reader nervous about the rest of the data which is not so easy to crosscheck.

If we put together a few of the facts revealed by WIR98, we must come to a surprising conclusion which its authors do not draw. They say that:

- \* FDI as a share of world investment (gross fixed capital formation) has been rising and in 1997 had reached 5.5% of the world total;

- \* but between 60 and 80 percent of this FDI is in the form of expenditure on mergers and acquisitions (due to privatization and to a world merger boom in which, incidentally, domestic mergers have been growing faster than cross-border mergers);

- \* FDI investors (TNCs) from developed countries are much more inclined to spend on M&A than their counterparts from developing countries, which prefer new "greenfield" investments.

From this we conclude that the 5.5% of world investment which FDI represents is a rather spurious figure. It is just a way of measuring the level of this rather hybrid concept of FDI. It does not mean that FDI contributes that percentage to capital formation (and so perhaps to economic growth) in the world. Most of it has no direct, immediate part in capital formation from an economic point of view, since it is simply spending to change the ownership of existing assets. That is not investment from the point of view of the economy, only of the investing firm. Part of the transfers of funds due to M&A might end up as new investment, but in a direct sense FDI, it seems, actually contributes no more than one to 2 percent of world capital formation. But interestingly FDI from developing country-based TNCs is more likely to contribute to capital formation and economic growth than FDI from developed country-based TNCs.

*[para in italics]*The evidence of the report, therefore, seems to knock the most common justification of free capital movements and FDI right out of the ball park. On this evidence, it is contributing hardly at all to worldwide growth and development; what it is doing is changing the pattern of ownership of industrial assets towards more concentration in the main developed countries. WIR98 does not breathe a word of such a conclusion, but its data seem to make it irresistible. Here, as elsewhere in the report, the authors' brief clearly does

not extend to drawing evaluative conclusions about the benefits and drawbacks of foreign investment. The report seems implicitly to share the orthodox assumption that all international movement of capital must be good because it represents more efficiency for the firm and more capital for the recipient country.

### Anatomizing TNCs

As always, WIR98 presents a large amount of very interesting and useful information about TNCs, their size, economic activities and structure. Like species of insects, more TNCs are detected by WIR every year and it says that many more are still out there waiting to be discovered. It claims that there are now at least 56,607 TNCs (liberally defined as firms with at least one 10%-owned foreign subsidiary), having nearly half a million foreign affiliates (Table I.2). Especially detailed information is given on the largest 100 of these worldwide (classed according to the value of their foreign assets) and also on the largest 50 whose home country is in the developing world. Two firms, Daewoo (of South Korea) and Petroleros (of Venezuela) are members of both clubs.

A problem with the extremely inclusive definition of the TNC used by WIR is that the category must include many qualitatively different firms, some with internationally integrated production structures, others with little if anything more than a sales branch in a foreign market. As WIR98 makes clear, while there is some correlation between size and degree of internationalization, the category TNC increasingly includes medium and small firms and it is these which seem now to be internationalizing most rapidly (p. 2).

WIR98 allows us to know something about the total of TNCs and even more about the top 100, but information about the rest, the variegated \$50,500 or so non-giant TNCs is very scarce. So are hard facts about the market power of the TNCs. WIR98 does not add much to our knowledge of this, aside from quoting one example of the growth of concentration in the market for automobiles (p.26), where the share of world sales of the top four firms rose from 41 to over 44 percent between 1985 and 1995.

What WIR98 does do is expand our knowledge of the weight of TNCs in the world economy. First, how much of the world's productive capacity do the TNCs own? WIR estimates the total accumulated value of their foreign investment at about \$3,500 billion (I will call it estimate A, found in Table I.1). For practical and conceptual reasons no one knows the total value of the world's capital stock of which this is a part. But economists sometimes use a rule of thumb, i.e. that it must be about twice the size of annual production (or perhaps a bit more). Since world production is about \$30,000 billion, that would make the capital stock \$60,000 billion; and that would mean that the 56,000 or so TNCs owned about 6% of the world's capital stock in the form of overseas investments. This is slightly larger than the estimate implicit in recent annual contributions of FDI to world investment (Annex table B.5, and see above).

Is this, admittedly very rough, estimate a little or is it a lot? In the first place, it is very similar to even rougher estimates

made of the same figure for the beginning of the 20th century. In this sense the world economy is certainly more globalized than 50 years ago but may be no more so than 100 years ago. A similar point can be supported about international trade. But that is not the whole story. These figures are very much lower than common perceptions. But the power of firms is not to be measured just by such percentages. Large firms may control much more than they own by virtue of their sheer size, weight and influence, of their many relationships with suppliers and other firms which operate in their orbit and, in this case, from the fact that foreign affiliates have more assets than those which are directly owned by the parent companies. So it is important to try to estimate the total size of the affiliates rather than just the part strictly owned by the TNC parents. In addition to the \$3,500 billion as the total stock of foreign-owned capital, WIR produces an estimate of the total assets of the affiliates of TNCs. These are worth, it calculates, \$12,600 billion (which I will call estimate B). That would be not 5% but 20% of the world's capital stock. So is it a more accurate estimate? WIR98 says it includes assets financed by local shareholders and local loans as well as financial capital (bank balances etc.). So it is a hybrid category of real and financial assets and is not comparable to the world value of real capital nor with the figure for FDI stocks (estimate A). It is also weakly based on no more than the application of a ratio calculated for the USA to the rest of foreign investment.

But WIR98 gives partial data for foreign assets in a third form in its list of the 100 biggest TNCs (Table II.1). Here their foreign assets are listed and the total is \$1860 billion. We are never given a definition of this category which would enable us to know whether it is in principle more comparable to estimate A or to estimate B. Depending on which equivalence is chosen the top 100, which are responsible for 24% of TNC foreign sales, account for either 60% or 17% of the assets of the TNCs. Both figures, for different reasons, seem improbable. WIR98's authors may feel that it would be too tedious to spell out more clearly all the assumptions and definitions which they use in their calculations, but it would make them a good deal more useful to readers who want to draw some conclusions from such a large amount of data.

The report contains several such instances of frustrating searches where you think you have found the fact you were tracking, you grab it only to find that you are holding two different, and what is more, apparently inconsistent facts. Of course, in fairness to the authors, the fact you want may simply not exist. But, in that case, would it not be better to give more prominence in the report to the assumptions, estimation methods and consistency between different figures?

Comparison of some of the different aggregate figures which WIR98 publishes often produce apparent anomalies which do not increase confidence in the data. For instance, what can explain the fact that for all TNCs sales of affiliates were 130% of the value of

assets in 1982 but had fallen to only 75% in 1997 -- when by contrast for the top 100 TNCs foreign sales were 119% of foreign assets and total sales 98% of total assets? (Tables I.4 and II.1). Or is it credible that gross product (value added of foreign affiliates)

during the same period dropped from 30% of assets to under 17% in 1997, while gross product has stayed almost exactly the same percent of sales (22-23%) during the whole of the period (Table I.4). There may, of course, be explanations for such strange-seeming results but WIR98 simply gives us the numbers without stopping to notice, let alone speculate. The fact that such major changes in some of the ratios took place without obvious reasons during a relatively short period (15 years) cannot but make one at least wonder about the validity of the estimates.

A much more interesting and promising statistic with which to evaluate the importance of international capital is the value of what foreign affiliates produce. This has often been estimated by means of their gross sales or turnover, figures which grossly inflate their importance in relation to the size of economic aggregates. What is needed is an estimate of the value added which they produce (what they sell minus the inputs they buy from other firms), called by WIR98 'gross product'. This year for the first time estimates are published for the gross output of affiliates over a number of years as a percentage of world economic output: from 1982 to 1997 it fluctuated around a slowly rising trend, starting at 5.3% in 1982 and rising to 6.9% in 1997. This, in principle, is quite a good guide to the relative weight of foreign production, and so is one measure of the degree of globalization of the economy. The \$50,000+ TNCs produce more in their home country than they do abroad. The World Bank last year calculated their total gross product as equal to 22% of total world production. But \$50,000 is a lot of firms. The figure for the top 100 is likely to lie in the region 8-10 percent.

Such estimates are new and no doubt will get revised. But it is worth mentioning a few curiosities. According to WIR98 the sales of all foreign affiliates are \$9,500 billion while their gross product is \$2,100 billion. This is a ratio of 4:1 between turnover and value added, one which in comparison with estimates of the usual value of this ratio is exceptionally large, once again arousing suspicions that at least one of the figures may be substantially wrong.

There is a final statistic which may be less subject to question and which produces an interesting result: it is the relation between affiliates' production and their exports. It is now several years since the estimate of the total sales of affiliates surpassed the value of world exports. In 1997 affiliates' sales were valued at \$9,500 billion and world exports at \$6,432 billion. WIR98 comments: "firms use FDI more than they use exports... to service foreign markets" (p.5). This conclusion is unconvincing since the foreign sales have an import content and in many cases represent little more than marketing subsidiaries.

Be that as it may, a common conception of TNCs is that they use FDI plus exports to service the home market, looking for cheap labour and other inputs and importing what used to be produced in the home country. There is no doubt that happens; but WIR98 produces clear evidence that it is not the rule for FDI. The exports of affiliates in 1995 (no later estimate was available) were estimated to be 32% of world exports (a little higher than 13 years previously) and, more pertinently, the share of affiliates' sales which was exported was 23.5%, a figure showing no tendency to change since the early

1980s (Table I.5). In other words more than 76% of affiliates' sales are in the markets of countries where they operate. And the proportion exported to the home country must be much less than 23.5% of sales since the affiliates also export to third countries. But these figures will not lay to rest the fear that there is a difference here between investment in developed and developing countries. The report also presents evidence to show that the share of output exported is sometimes a lot higher in Japanese and US investments in Asia (Table VII.3). The prevalence of export processing zones (Table III.5) also indicates investment is of this kind. And last year's WIR contained evidence of a significant increase since NAFTA in the proportion of the sales of affiliates in Mexico being exported to the USA.

It was several years ago that WIR began to put forward the line that the TNC was a qualitatively new form of enterprise; in other words, that globalization referred in part to the structural nature of firms and their production systems. The new TNC not only traded and invested in countries other than its country of origin but increasingly it created a network of productive units in different countries but all integrated in the same production system, what WIR calls a "complex integration strategy". That began as an argument without much empirical backing other than a few anecdotal cases, some of which were later abandoned. But the idea carried on and this year WIR98 tries to develop it more. It aims to produce more backing for the idea by quoting the results of a recent survey of the views of 300 TNC managers. About 1/3 of these believed that their companies were fully global or highly coordinated internationally in 1990. By 1996 the proportion had risen to just over 50%; and nearly 80% considered that their companies would be so by the year 2002 (Box II.3). These are, of course, subjective responses and should be placed beside other literature questioning the real degree of global integration of the typical TNC, but they may represent a significant change.

### Democratizing the world

Despite a common tendency to exaggerate the trend, there is no doubt that the world economy has been becoming more internationally integrated. Globalization changes the space within which relevant economic actions take place. And such a change means, as happens more or less continuously in history, economic space and political space may get out of phase with each other. We may find ourselves with institutions and practices at

the political level appropriate for a different ordering of economic space. Globalization means larger economic spaces. The political response to it takes two forms: those who are pessimistic about the possibility of politically democratizing such larger, up to global, spaces either become fatalistic or oppose globalization which they see as the root of all problems; the alternative is to look for ways of democratizing ever larger spaces. I think that it is by no means obvious that it is easier to democratize smaller spaces than larger ones (look at the family!). But it is certainly a daunting task for those who want a more just world to democratize the whole planet so that the new abuses and new problems caused by a more global capitalism can be controlled.

How on earth is such a general politico-philosophical point relevant to WIR98, a dense compilation of statistics? In fact, in several ways of which I will mention three. First, a large section of this year's report (Chapter III) is devoted to an informative discussion of legal regimes governing FDI, especially to actual and proposed multilaterally agreed FDI rules. The kind of multilateral regime governing the rights and duties of foreign investing TNCs which can be established must be a major determinant of the degree of democracy which exists in a more global age. WIR98 describes fully and well the surprisingly large amount of international activity in recent years on this question as governments and others ask such questions as: is there any legal check on the activities of TNCs? should there be special laws governing foreign as opposed to national investment? should TNCs be able to move their assets and money as they wish? should they have any obligations about employing and training local personnel, about wages and working conditions, about repatriating their profits? should TNCs be protected against nationalization? can TNCs be prevented from having monopoly positions in markets? Just such questions arose in 19th century Europe, as the new industrial capitalism spread within countries and seemed to demand a new role for the embryonic capitalist state. Erratically and ambiguously laws were established to police the capitalist firm, in some cases protecting it and in others curbing its excesses and reducing its freedom.

The most ambitious international attempt to answer these questions so far is the Multilateral Agreement on Investment (MAI) launched (and now perhaps sunk) by the OECD. This international code was debated amid much secrecy -- not surprising in view of the fact that it reads rather like a freedom charter for international capitalists. Its sections are almost all designed to protect firms against governments. It calls on the "hosts" to act more graciously to the guests; but there is virtually no mention in the agreement of the behaviour of the "guests". The implementation of agreements like the MAI would leave firms free of responsibilities and with their assets protected in all circumstances, regardless of their business, employment and other policies and of their market shares. It is, to say the least, ironic that, to judge from WIR98's account, one

of the central demands of foreign investing businesses in these discussions is for openness and transparency in the taking of investment-related decisions by government bureaucracies. With that it is hard to disagree. But capitalist firms are surely among the most non-transparent and undemocratic of the world's institutions. And there is little or no pressure on them to become more transparent. They are in fact often obsessed with the protection of business secrecy. And their internal regimes, if compared to those of states, would put most of them towards the totalitarian end of the spectrum.

Foreign investors also demand freedom to cross borders and non-discrimination (to have exactly the same rights and conditions as national capitalists) when they do so. What would be the reaction, I kept wondering when reading this, if ordinary human beings, rather than major corporations, were to demand such rights to unrestricted crossing of national borders and to non-discrimination? The question is rhetorical because we all know the answer.

WIR98 would not allow itself such ironic comments, but its description of ongoing debates about global governance as it affects migrant capitalists captures well the flavour of the recent debate in which firms and international organizations try to create a regime much more one-sidedly pro-business than exists, at least formally, in most national states. The struggle for a more democratic global business regime will evidently be difficult.

But WIR98 also tells a story which suggests that such struggles are far from hopeless, and here is a second link between global economic democratization and WIR98. Faithful readers of WIR over the years will be quite startled to find in this report a boxed essay entitled "Defining civil society" (p.60). This is, of course, one of the trendiest subjects of our time. But WIR98 writes about it in the context of the surprisingly successful campaign waged against the MAI - once its contents belatedly came to light. A large coalition of unions, parliamentarians and NGOs collaborated to attack the provisions of the MAI. They forced the OECD to the negotiating table on the issue and their campaign has been one element in the present virtual abandonment of the MAI. The success of this campaign reveals a little of the possibilities of democratizing larger spaces. And WIR98 is to be commended for recognizing its importance for the development of the reality on which they report annually.

WIR in recent years has been among the advocates of a multilateral investment regime and the new report speculates (pp 128-9) that such a regime would on balance increase the amount of FDI. The very tentative tone of this argument, however, may represent some tacit acknowledgement of the strength of the campaign against the MAI. Even so, WIR98's argument is still couched in very limited terms: the effect of the international regime on the quantity of FDI (presumably more equals good). The issue of what effect multilateral investment rules will have on the qualitative impact of FDI, especially its effects on development, are still not among WIR's concerns, though it seems

to me that they ought to be.

The third connection concerns all sources of data about the world economy, including reports like WIR98. One of the keys to democratization at the global, as at all other levels, is information. That means free, independent, critical international media and also a flow of information necessary to analyse, evaluate and plan actions from state and state-like institutions.

There is some information which only a state-like institution can possess and disseminate since it is based on information collected from all the component units. So the state produces national accounts and national labour statistics and national demographic statistics. And for the world that task goes to the many quasi-state institutions which exist at the global level, elements perhaps of a still-to-be-created global state. Along with other specialized agencies of the UN, UNCTAD and the WIR98 authors are in that category. Reports like WIR98 are part of the process of creating an informed global civil society and democratizing the world. Such information does not need to be produced in a critical framework to serve this purpose. It can be useful

independently of the ideological and political assumptions of the institutions which produce it. In this sense we are fortunate that a group of experts continue to produce an annual report of high professional quality, containing such detailed information about an important aspect of the activities and structure of the capitalist institutions which dominate the world economy. And with some of the inconsistencies and mysteries removed the report can become increasingly useful. But there are some things which WIR does not do and is unlikely to do and which at the present time nobody does effectively. One of these is to produce information about financial globalization. The IMF and the Bank of International Settlements produce something but there is at present no annual international report which tries to do for migrant finance capital and international banks what WIR98 tries to do for migrant productive capital and TNCs.

Equally there is no sign of an international body which examines not the structure, statistics and policies of TNCs but their abuses: of workers, of the environment, of democratic rights. WIR98 is a long way from being the modern, globalized equivalent of the British factory inspectorate of the 19th century. If the WIR98 authors knew of the kind of abuses which those agents of the 19th century British state used to reveal, their present brief would almost certainly prevent them from saying so. Yet there is quite enough partial, sometimes anecdotal, evidence to suggest that the more global advance of capitalism of recent years has exacerbated many of its abuses and injustices. Some NGOs, critical scholars and journalists have revealed some of these abuses. But they do not have the power to investigate as systematically as the factory inspectors (so often quoted by Marx and other critics of capitalism) did in the 19th century. While UNCTAD's Geneva neighbour the ILO does a certain amount of work of this kind, the factory acts appropriate to a more global

capitalist economy are still a very long way from being enacted.

## THE NEED TO OPPOSE THE EMERGENCE OF AN MAI IN THE WTO Martin Khor (Third World Network)

The MAI is facing serious difficulties in the OECD. Many OECD countries have submitted long reservation lists. Many issues also remain unresolved. Citizen groups in many OECD countries have launched strong protests against their governments entering an MAI.

Due to these difficulties, the OECD ministerial meeting in Paris at the end of April 1998 decided to suspend the negotiations for six months.

Whilst even mainstream newspapers like Financial Times and the Globe and Mail (Canada) have acknowledged the role played by NGOs in contributing to the derailing (temporarily at least) of the OECD-MAI, there are no grounds for relaxing the campaign.

Indeed, there is now a real possibility and danger that the centre of negotiations will shift to the World Trade Organisation, a move that seems to be favoured by the European Union (and especially by the European Commission). The European Parliament, in their critical resolution on the OECD-MAI, had also called for the negotiations to shift to the WTO.

The OECD ministerial declaration of April 98 states that OECD governments "support the current work programme on investment in the WTO and once the work programme has been completed will seek support of all their partners for the next steps towards the creation of investment rules in the WTO."

More recently, a meeting of the trade ministers of the "Quads" (US, Canada, EU and Japan) on 30 Apr-1 May in Versailles, concluded with a chairman's statement that the WTO ministerial meeting (in May 19-20) should set in motion a process enabling decisions to be taken in 1999 on the scope and modalities of further global trade liberalisation.

The EU is championing a new comprehensive "Millennium Round" in the WTO, which presumably would include upgrading the investment issue from the present working group (whose mandate is to "study the relation between trade and investment") to a group negotiating an MAI-like agreement. Japan has also come out in favour of such a new Round.

In recent statements, as the OECD-MAI encountered more problems, the EC and Canada, have been saying that the MAI should now be negotiated in the WTO. To boost this move, the EC has also claimed that at the WTO the developing countries can also participate, and this is thus more participatory. Proponents of an MAI in the WTO

can also be expected to claim that labour and environmental issues will be taken care of, and also that suggestions to balance the rights and obligations of corporations can be considered.

NGOs not be taken in by such an argument and should reject any move to get the WTO to negotiate an investment treaty. Getting the MAI or a similar investment treaty in the WTO would be even

worse for developing countries. This is because:

(1) Most developing countries are members in WTO and if a treaty is concluded there they would have to join it. If the MAI is at the OECD, each developing country can decide whether or not to join.

(2) The WTO is not Democratic or transparent. Developing countries in reality won't have much say in determining the final outcome. Nor will most of them be able to participate in the real negotiations, that often take place in "informal meetings" to which a few key countries may be invited. For example, during the Uruguay Round, although many developing countries opposed many aspects of the TRIPS treaty, in the end the US had its way. Although some developing countries may oppose a MAI-type proposal in the WTO, eventually it is likely they could be isolated and in the end an MAI will emerge.

(3) The WTO's dispute settlement system will be effective in tying down developing countries to implement an MAI there. Countries that don't comply with some parts could face trade sanctions or at least the threat of being taken to a WTO panel. Thus the WTO is popular with the rich countries as they can use it to enforce the rules on the South.

(4) WTO is supposed to be a TRADE organisation. Its mandate should not be expanded to INVESTMENT policies and rules. If an MAI-type treaty is negotiated in WTO, then the existing principles of the WTO such as NATIONAL TREATMENT could quite easily be extended to INVESTMENT (it applies now to goods).

The history of MAI-type investment rules in the WTO is that the rich countries, especially the US, tried to introduce in as part of the TRIMS (trade-related investment measures) negotiations during the Uruguay Round. This attempt failed as there was strong opposition from many developing countries to introduce investment policies and rules per se in the negotiations.

Therefore the TRIMS agreement is now limited only to preventing trade-related investment measures, such as requiring investors to follow a requirement to have a minimum level of local content in their product. (It is argued that local content policy would adversely affect imports and thus distorts trade). Investment policies per se (such as a country's policy on foreign investment, such as criteria for entry of firms, the conditions for their establishment, whether or not to grant national treatment) are thus

excluded from TRIMS. Most developing countries thus maintain their regulatory control over foreign investment.

In 1995-96 the EC led a campaign within the WTO to get a negotiation process going for a MIA (multilateral investment agreement). Many developing countries (including India, Indonesia, Malaysia, Tanzania, Uganda) opposed it. Investment became the biggest and most controversial issue in the run-up to the WTO's first Ministerial Conference in 1996. In the face of the strong opposition from developing countries, the rich countries (including Japan and Canada) then downgraded their demand to creating a working group to STUDY the relation between trade and investment.

This working group for a study process was agreed to at the WTO Ministerial Conference (Singapore - December 1996). There was an

explicit agreement that the working group on trade and investment would only STUDY the relation, and WOULD NOT BE ENGAGED IN NEGOTIATIONS for an investment agreement.

Any decision, if any, to start a negotiation process has to be EXPLICITLY taken by consensus. After 2 years (Dec 1998) the working group will decide how to proceed. The group has been meeting in Geneva for discussion but not for any negotiation.

Now that the OECD process has slowed down, it is likely that the EC (led by Sir Leon Brittan), Canada, the WTO Director General (Renato Ruggiero) will now PUSH VERY HARD to intensify the WTO process. They will push to intensify the discussion in the working group on trade & investment and will propose that this be upgraded to a NEGOTIATION for an investment treaty.

The treaty they have in mind is THE SAME AS THE MAI. This is clear from the EC paper "A Level Playing Field for Foreign Investment Worldwide" (1995) which describes the EC strategy of pushing for an MIA/MAI at both the WTO and the OECD. The main features (including the right to establishment, national treatment, banning of performance requirements, right of entry and exit of funds, etc.) are similar to what emerged in the OECD-MAI.

Therefore NGOs should not be swayed or taken in by arguments from the EC, Canada or other countries, that public concerns (such as labour or environmental issues) and the South's interests would be better taken care of by initiating an agreement at the WTO.

In reality, it would be WORSE for developing countries and for the world because an MAI in the WTO would have over 130 countries involved.

PROPOSALS:

1. Therefore NGOs should OPPOSE strongly now any proposal or pressure to upgrade

the present STUDY GROUP in the WTO into a NEGOTIATING GROUP.

2. This opposition should be made clear during the Second WTO Ministerial Conference in Geneva on 18-20 May 1998. There is a possibility the EC and others could use this occasion to PUSH for negotiations on new issues including INVESTMENT, perhaps through a Millennium Round to start in 1999 or 2000.

3. NGOs involved in the MAI issue should take this up as their main issue in the WTO Conference. They could press their Trade Ministers before the meeting to commit that they would not press for the investment issue.

4. NGOS can also contact members of the media covering the event to brief them on the issue and make clear to them that NGOs oppose shifting the MAI to the WTO.

5. Moreover, NGOs should also campaign that the existing working group on trade and investment conclude their discussions with a decision that the WTO should not take up investment policy or rules as part of their mandate, and that the working group itself should be wound up.

6. The European Parliament members should be persuaded to withdraw from their stand (in their resolution on the MAI) that the MAI negotiations should shift to the WTO. In fact, Parliamentarians, citizen groups, municipalities etc. should be informed of the greater dangers of an MAI in the WTO and asked to also oppose such a development from taking place.

P.S. BEWARE ALSO OF THE IMF

The IMF Secretariat and some G7 want to amend the IMF Articles of Association to introduce "CAPITAL ACCOUNT LIBERALISATION" as part of the IMF's objectives or operations. This would allow IMF to discipline and pressurize developing countries to increasingly open their doors to capital flows such as portfolio investment, FDI, loans, bonds and the outflow capital funds. This is another route for MAI-type rules on investments. This proposal will continue to be discussed at IMF meetings this year. THIS AMENDMENT SHOULD ALSO BE OPPOSED. (Such an amendment would among other things enable the IMF to have a much stronger hand to discipline developing countries to deregulate financial flows and open up their financial markets, a process that was largely responsible for the East Asian financial crisis. There will be more Mexican and Asian type crises Amendment is carried).

ATTENTION: Professor Francesco Francioni,

Dr Von Droste, Chair of the World Heritage Committee

I commend you on having made the following resolutions and urge you to move with haste to call for their implementation:

'Recommendation 1.

The Mission has noted severe ascertained and potential dangers to the

cultural and natural values of Kakadu National Park posed primarily by the proposal for uranium mining and milling at Jabiluka. The Mission therefore recommends that the proposal to mine and mill uranium at Jabiluka should not proceed.'

## 'Recommendation 2

The Mission noted the serious concerns and preoccupations expressed by some of Australia's most eminent scientists as to the unacceptably high degree of scientific uncertainty relating to the Jabiluka mine design, tailings disposal, and possible impacts on catchment ecosystems. The Mission shares these concerns and therefore recommends application of the precautionary principle which requires that mining operations at Jabiluka be ceased.'

I believe that these recommendations reflect the spirit and intent of the Convention for the Preservation of Cultural and Natural Heritage.

I urge you to adopt the report of your Kakadu mission, and to place Kakadu on the 'World Heritage in Danger' List.

Yours very truly

Joan Russow (PhD)

National Leader of the Green Party of Canada

Member of the IUCN Commission on Education and Communication

URGENT! URGENT!12 HOURS TO WORLD HERITAGE BUREAU DECISION FAX  
NOW

+81-75-705-1100

Dear People, FOE Groups, and all,

In about 12 hours from when I write this (and a whole lot less from when you read it), the World Heritage Bureau will have to decide whether even to have Kakadu on its agenda.

Senator Hill has written to Ambassador Koichiro Matsuura, demanding that the matter of Kakadu be removed from the agenda of the Bureau and the Committee.

If the report of the mission to Kakadu remains on the agenda, it is highly likely that Kakadu will be listed as 'in Danger'.

But the Australian government is mounting a desperate attempt at a diplomatic level to have it taken off the agenda.

We need your help in the next 12 hours if possible, and definitely in the next 24 hours.

The message the World Heritage Bureau needs to receive is simple: Please adopt the report of your mission to Kakadu, and do the next logical thing - put Kakadu on the list of World Heritage Sites in Danger.

You will need to address your letters to Ambassador Koichiro Matsuura, Professor Francesco Francioni, and Mr Bernd Von Droste.

The number is +81-75-705-1100.

By the way, FOE's resident nethead did a quick survey of news issues. This is definitely the biggest green issue in terms of media coverage, today or this week, planet- wide.

It's also absolutely the biggest fight the World Heritage Bureau and Committee have ever seen.

Within Australia, with the news of the Mission report, media has gone absolutely crazy, and the phone never stops ringing. Heaps of media done by Alec Marr in Kyoto, Virginia from TWS, and myself.

Every politician has gotten on the bandwagon, - The ALP, the Greens, the Democrats- and with luck we can look for heavy- duty stuff to start happening in the senate. Meanwhile, Senator Hill, our Minister for the Environment is looking like sh\*t... not only in front of Australians, but in front of the whole world.

He deserves it!

Spare a thought for Alec Marr of TWS and the Mirrar people, who are pounding the corridors of the conference centre in Kyoto, to lobby the Bureau and the Committee. They need all the help they can get. Please, give it to them. Now.

I understand from Alec, who was there, that an excellent action with press

conference happened with Mirrar traditional owners present, in front of a World heritage registered temple in kyoto. Congratulations to green action Kyoto who arranged it. There was also I understand, an action in Hiroshima and there will be actions in Madrid and Paris.

Following this is a press release by FOE Sydney, and the letter we wrote just now to the World Heritage Bureau. Feel free to crib shamelessly from this letter.

#### SENATOR HILL SHOOTS UNESCO MESSENGER SAYS FOE

Environment Group Friends of the Earth, now holding its international AGM in Fitzroy Town Hall Melbourne, has said that Senator Hill's response to the report by the World Heritage Mission to Kakadu was a classic case of shooting the messenger. FOE has rejected claims by Senator Hill that the report was biased, not representative of the opinion of people on the mission, and an abuse of process. Senator Hill has written to the World Heritage Bureau, asking that the report be removed from the agenda. FOE believes this to be completely inappropriate.

F  
meeting of the World Heritage Bureau in Kyoto tomorrow, and at the meeting of the World Heritage Committee, the following week, and for it to place Kakadu on the list of World Heritage sites that are in danger immediately.

According to FOE Sydney spokesperson John Hallam,  
"The fact is that the highest and most independent environmental authority on the entire planet has listened to the range of views in the debate, including those of Energy Resources of Australia and Robert Hill's

department, and has concluded that Jabiluka will threaten Heritage values. This is a conclusion which it shares with nominees of the Australian Academy of Science, and representatives of the Australian Academy of Humanities."

"Senator Hill's responsibility as a Minister for the environment is to protect the environment. It is especially to protect unique and valuable places such as Kakadu. Senator Hill is failing in his duty if he does not do so. His clear obligation now is to admit his error, and to withdraw permission for ERA to proceed with the Jabiluka project. Whatever else Senator Hill does, it is completely inappropriate for him to do as he has done, and demand that the report of the mission be removed from the Bureau agenda."

"For Senator Hill to shoot the messenger when what he should be doing is to heed the message, will result only in the literal undermining of Australia's once proud environmental reputation."

"If Senator Hill wishes to avoid having Kakadu listed as 'in Danger', he can do only one thing: He must stop the Jabiluka project immediately."

Contact: John Hallam, (02)9283-2006

HIS EXCELLENCY, AMBASSADOR KOICHIRO MATSUURA, CHAIRMAN, WORLD HERITAGE COMMITTEE

PROFESSOR FRANCESCO FRANCIONI, CHAIRMAN, WORLD HERITAGE BUREAU,

MR BERND VON DROSTE, DIRECTOR, WORLD HERITAGE CENTRE. 0011-81-75-705-1100

Dear Ambassador Matsuura, Professor Francioni, and Bernd Von Droste, I understand that Australia's minister for the environment, Senator Robert Hill, has written to you, asking you to withdraw the issue of Kakadu from the agenda at Kyoto.

I am writing to urge that you please do nothing of the kind.

The issue of the problems relating to uranium mining and other activities in Kakadu and their impact on the World Heritage values of that incomparable place, has in fact been discussed for many years, and was first considered in a formal sense by your committee in Paris last June, when the decision to send a high-level mission was made.

Your mission has done an admirable job, evaluating many very different points of view including that of Senator Hill and his department and the mining company, Energy Resources of Australia, within a relatively short time and under very difficult circumstances.

You have also heard from the very highest scientific authorities in Australia, as well as from the Australian chapters of ICOMOS and IUCN, that Kakadu is indeed faced with very real threats as a result of planned developments.

Finally, it has been clear and I think your Mission has seen for itself, that damage is being done to the World Heritage values of the park right now, and that therefore immediate action is essential if the World Heritage

values of Kakadu are to be protected.

Senator Hill has complained that a first draft of your missions report was not made available to the government.

He says that this represents a breach of process, and that 'The Australian Government was given a clear commitment that it would be provided with a draft copy for comment prior to the finalisation of the report'.

In fact, it is perfectly clear from the letter from Roy Green and John Altman that accompanies Senator Hill's press release (Annex-1), that draft copies were made available to them and were commented on by them. No breach of process as alleged by Senator Hill appears to have occurred, and there is hence no basis for the report to be withdrawn from the agenda.

Senator Hill makes a series of allegations with respect to the report, some of which he needs to reply.

1) The proposed mine is not within the World Heritage area.

In the case of Yellowstone National Park, a proposed gold mine 2.5km outside the external boundaries of the park was considered, in combination with other factors, to be a good enough reason to list Yellowstone as 'in danger'.

The Jabiluka project is within the external boundaries of the park, on a lease excised from the park, but which contains much of the park's heritage value including the Malakunanja-II site.

2) The Ranger mine 'has been operating for 18 years without impact on Kakadu'.

This is not the case: Significant seepage has occurred from Ranger (including a leak less than a week ago), and the cumulative impacts of

Ranger and Jabiluka would be completely unacceptable.

3)The Jabiluka lease has never been part of Kakadu National Park.(See1)

True, but the Jabiluka lease is in every way contiguous with the park, is within the external boundaries of the park, and contains within Australian Heritage Commission areas, much of the cultural values especially, for which the park was initially registered.

The environmental assessment process has not been rigorous at all,(as Senator Hill asserts) and in fact, the appropriateness of mining within a World Heritage national park was specifically excluded from the draft guidelines for that assessment process.

You will doubtless be conscious that it is the first or nearly the first time, that a property has been placed on the list of properties that are 'in danger' without the consent of the government concerned. You may be concerned as to what precedent this may create.

In fact, the precedent it creates is positive, since it demonstrates the independence and integrity of the World Heritage assessment process, and this can only be done if the Bureau and the Committee are prepared to place sites on the list without, and against, the consent of the state involved if need be.

The Australian Government has failed to demonstrate any real commitment to the protection of the World Heritage values of Kakadu. Placing it on the 'In Danger' list sends the clearest possible signal from the international community that Australia has not lived up to its obligations under the World Heritage Convention, and places the utmost pressure on the government

to do so.

On the other hand, failing to place it on the 'in Danger' list at this stage, or removing the report from the Kyoto agenda, will create a terrible precedent, and will seriously compromise the integrity and credibility of the process of World Heritage listing.

I urge you to adopt the report of your Kakadu mission, and to place Kakadu on the 'World Heritage In Danger' List.

John Hallam,  
Nuclear Campaigner, Friends of the Earth, Sydney.

MEDIA RELEASE COMMUNIQUÉ DE PRESSE

Climate change in Canada: 1988—1998 the decade of unheeded warnings, institutional collusion, negligence, and rhetoric

Toronto – November 8, 1998

The Green Party of Canada today announces that Dr Joan Russow the National leader of the Green Party of Canada will be holding a media conference in front of the Ministry of the Environment at 12 noon, Tuesday November, 10. Russow attended 1992 meetings in New York and in Rio related to the drafting and finalization of the Framework Convention on Climate Change. She also was part of a 8 country research project based in Harvard and co-authored a submission on Canada's historical response to Climate change in particular the role of the Science Council of Canada. She participated in the 1997 NGO policy session on climate change preparing the NGO lobbying document for Kyoto.

At the Media conference she will be issuing a report card on Canada's non-compliance with the Framework Convention on Climate Change, introducing an action plan that would bring about compliance, and reporting on the unified "Buenos Aires" position taken by Green parties including those from the European Union, the Federation of Green Parties of the Americas, the Federation of Ecology parties of Africa

"The most authoritative assessment to date concludes that a worldwide carbon dioxide emissions reduction of 50-70 percent is necessary to contain climate change. ..(excerpt from Joint Green Party Statement to the Conference in Buenos Aires) .

## BACKGROUND

Climate change in Canada: 1988—1998 the decade of unheeded warnings, institutional collusion, negligence, and rhetoric

Green Party Climate Change Campaign:

In Toronto, at the Changing Atmosphere conference hosted by Canada in 1988, Canada received this warning:

“Humanity is conducting an unintended, uncontrolled, globally pervasive experiment whose ultimate consequence could be second only to a global nuclear war. the Earth’s atmosphere is being changed at an unprecedented rate by pollutants resulting from

wasteful fossil fuel use ... These changes represent a major threat to international security and are already having harmful consequences over many parts of the globe.... it is imperative to act now. Climate Change in the Conference statement, Changing Atmosphere Conference in 1988.

Canada signed (June 1992) and ratified (December, 1992) the Climate Change Convention. In the Climate Change Convention, Canada through signing and ratifying the Framework Convention on Climate Change incurred obligations to reduce Greenhouse gas emissions, to invoke the precautionary principle, to “conserve and enhance sinks” and “to document sinks”.

After 1992, the federal government traversed Canada “consulting” with “stakeholders” about the five options proposed in the Canadian National Action Program on Climate Change (NAPCC). All of the five options demonstrated lack of political will to seriously address the problem of climate change.

In the 1988 “Changing Atmosphere Conference” climate change was perceived as “a threat,” in the 1994 NAPCC, Climate Change is only perceived to be “ a potential threat”.

The NAPCC document also failed to seriously call for the phasing out of the use of fossil fuels, and the conversion of the infrastructures that support the use of fossil fuels. Although there was a call in the document for renewable energy, there appeared to be little resolve to create a situation, with high mandatory standards and regulations that would attract serious conversion to renewable energy. Most of the document appears to rely on “voluntary initiatives”. Voluntary initiatives from the fossil fuel sector will not be sufficient to drive industry to embrace the principle of renewable energy.

NAPCC carefully ignored the impact of the failure to preserve carbon sinks such as old growth forests, and of the continuation of current forest practices such as clear-cut logging. Since June of 1992, numerous carbon sinks including forests and bogs have been destroyed even before they have been properly documented.

The NAPCC document also under the euphemism of “Electricity and Heat Co-generation Opportunities” keeps the door open for the nuclear power industry to prey on the public concern for climate change.

In the NAPCC document, the Federal Government offered 5 options. All five of these options demonstrated that Canada has caved into the forest, fossil fuel and nuclear industries. If Canada is to seriously address the threat of Climate Change Canada should consider a sixth option.

#### OPTION 6 : THE MISSING OPTION

Adherence to three key principles;

The precautionary principle

Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures (Climate Change Convention, 1992)

Reverse onus principle ( proposed by Minister of Environment, the Hon. Sheila Copps, 1994) The proponent of an intervention into the ecosystem shall have to demonstrate safety, rather than the opponent having to demonstrate harm

Future problem avoidance principle:

The addressing of one environmental problem should not itself be an action that could cause irreversible harm (Standing Committee on Environment “ Out of Balance; The Risks of Irreversible Climate Change, 1991) [the promotion of nuclear energy as the solution to climate change]

Non-transfer of harmful substance principle States shall prevent the transfer to other states of substances or activities that would be harmful to the environment and to human health (Rio Declaration, UNCED)

Social equity and environmentally soundness principle Only BEST (Best Environmentally Sound Transfer) technology should be transferred to other states and Mandatory International Normative Standards/Regulation (MINS) shall require only BEST technology. Emissions trading permits which justify the continuation of environmentally unsound practices in developed states shall be disallowed.

Actions

- 1.. Preserve and enhance sinks (forests and bogs), [as required in the Climate Change Convention] , in particular preserve large areas of original growth and conservation corridors. Cease all further logging of old growth forests
  2. Ban all forest practices such as clear cut logging and broadcast burn that reduce carbon sinks on crown and private lands
  3. Encourage afforestation and restoration of damaged forest ecosystems such as on Not Sufficiently Restocked land
    - 4. . to establish a time –table for phasing our fossil fuel and nuclear energy and for the rapid development of solar and other forms of non-polluting energy, and for more efficient energy use;
- ,(as recommended in the Nobel Laureate Declaration prepared for UNCED) and immediately ban all further development and export of CANDU reactors.
5. Establish and enforce a national dedicated program for energy conservation and efficiency

6. Establish extensive networks of alternative environmentally safe and sound means of transportation (Agenda 21), move away from car-dependency, and cease the construction of all new highways.
7. Reduce the ecological footprint as agreed in Habitat II
8. Synthesize the existing scientific information. No new studies are required to demonstrate that it is necessary to reduce anthropogenic emissions. "Inaction is negligence" (Digby McLaren, Past President of the Royal Society , Global Change Conference, 1991)
9. Adaptive measures shall not be used as a justification for not acting to preserve existing sinks and to prevent anthropogenic sources of greenhouse gases.
10. Prohibit the proposals to seek far-off Southern carbon sinks to justify maintaining northern consumptive patterns. — Buying old growth forests to offset Canada's CO2 emissions)
11. Avoid carbon emissions trading because this practice legitimizes continuing currently harmful emission practices
12. Transfer all energy-directed funding into renewable energies that are ecologically safe and sound
13. Transfer a significant proportion of the \$10 billion military budget to assist in implementing the above measures and in job conversion with a just transition job plan for sunset industries

Canada continues to demonstrate its lack of resolve to seriously address discharge its international obligations, and until Canada is willing to fulfill these obligations through enacting the necessary legislation with mandatory standards and regulations, little substantial change will occur.

( )**THAT** November, I drafted an article countering Dr Keith Martin's position on women's issues

EXHIBIT

TO THE EDITOR

Cindy Harnett

## WOMAN AND FOETUS INSEPARABLE: RIGHT OF WOMAN TO CHOOSE IS PARAMOUNT

### GREEN PARTY'S SUPPORT FOR THE RECENT DECISION ON A WOMEN'S RIGHT TO CHOOSE

It is necessary to :

- recognize the inseparability of the Woman and foetus
- endorse the recognition that only the woman has rights and that the rights of the child begin when born
- acknowledge the disproportionate effect of a legal requirement to seek treatment on groups of women who experience disadvantage based on colour, economic status or ability {paraphrase of Legal Education and Action Fund (LEAF)}.

### ACTIONS NECESSARY TO ADDRESS THE ISSUE

- increased funding for research into and development of safe and healthy birth control measures including support for alternative medicine
- discourage abortion as a means of birth control, but ensure accessibility in all regions of Canada to safe abortions
- remove the stigma and guilt about having an abortion so that women who choose to go to term want to go to term
- Implement educational programs outlining the consequences of not being healthy during pregnancy
  - poor diet
  - substance abuse
  - pharmaceutical abuse
  - exposure to toxic, hazardous, and atomic substances and wastes
  - polluted air, water and food
- Ensure that women would never be turned away from help to overcome substance abuse due to lack of funds, and offer support and counselling proactively.

- Provide for substance abuse treatment programs that include housing for women and children to live together during treatment (often poor women do not opt for treatment because of fear of having their children taken away)

- Ensure that all basic needs are guaranteed

- right to shelter

- right to food organically grown pesticides -free food

- right to social security

- right to health care

- right to a safe environment

- Commit to create and support strong communities, and increase funding for women's centres, transition houses, legal support, and lobbying and political advocacy groups

DECEMBER DECEMBER 1998

( ) THAT in 1998 on December 2, I submitted a petition to parliament, calling for the banning of Genetically engineered food and crops

EXHIBIT

In 1998, I drafted a formal petition calling for banning genetically engineered crops; this petition was placed on the floor of the House of Commons. When I asked Canadian environmentalists to sign the petition many of them indicated to me that they did not know that GE crops were growing in Canada. The CEN representatives had neglected to inform its members of the consultation process and the government decision to release GE. The department of Agriculture began planting test sites for genetically engineered crops as early as 1988

( ) THAT IN 1998 ON DECEMBER 6. I RECEIVED AN E-MAIL about a Council meeting

Given the urgent agenda items and preferences expressed re alternate date it seems we 'll set our meeting back to 600pm PST Sunday Dec06, 1998. We can confirm this toward the end of November and get tel conference codes etc. to you at that time. If you have agenda items please post them here. Thanks, Regards. Harvey

## COMMENT

( )THAT in December 1998, I wrote and circulated a piece:

Inspection of weapons of mass destruction must be done by UN member states with clean hands

## EXHIBIT

In 1945 the United Nations was formed to prevent "the scourge of war" and to "respect the rule of law" not force. In 1972, every member state of the UN made a commitment at the UN Conference on Humans and the Environment (UNCHE) to eliminate the production of weapons of mass destruction. Yet since that time in the past 25 years many member states of the United Nations have continued to produce weapons of mass destruction. Now in 1998, to prevent the possibility of the scourge of war the United Nations must appoint an international inspection team not from countries that themselves have weapons of mass destruction but from countries that have "clean hands". The United Nations must play a leading role in preventing the US from making a "substantive strike" on Iraq, and must ensure that there is a serious inspection of all sites of weapons of mass destruction including those sites belonging to member states of the Security Council.

For the purpose of eliminating these weapons, there must be unconditional access to all sites of weapons of mass destruction. This is a time for reflection and for actions that truly eliminate the existence of weapons of mass destruction so as to remove the threat to use or use of these weapons. No state should be exempt from inspection. Please send name to [jrussow@coastnet.com](mailto:jrussow@coastnet.com). The message will be sent to the UN missions in New York March 2003

( )THAT in 1998 on December 10th the government will be formally celebrating the 50th anniversary of the Universal Declaration of Human Rights and glorifying Canada's role in the development of this document. Yet as we can see, the government is prepared to deny the very rights called for in this declaration and other human rights documents," said Russow. Years later I found out that Humphries and Elenor Roosevelt had undermined a stronger anti racist resolution from being presented to the UN [see section on systemic constraints on web site]

( )THAT on December 10, I participated in a ceremony commemorating the 50<sup>th</sup> anniversary of the UN universal Declaration on Human Rights. At the Ceremony each one of the participants read one article of the Declaration

NOTING that December 10, 1998, was the 50th Anniversary of the Universal Declaration of Human Rights, and that the year 1999 is the culmination of the decade devoted to the furthering of international law;

( ) THAT in 1998 on December 10, I participated in a special ceremony in Victoria where 30 groups were involved; each group read one article

#### **Article 1**

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

In 1998

#### **Article 2**

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

#### **Article 4**

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

#### **Article 5**

No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

#### **Article 6**

Everyone has the right to recognition everywhere as a person before the law.

#### **Article 7**

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

#### **Article 8**

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

#### **Article 9**

No one shall be subjected to arbitrary arrest, detention or exile.

### **Article 10**

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

### **Article 11**

1. Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defence.
2. No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offence was committed.

### **Article 12**

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

### **Article 13**

1. Everyone has the right to freedom of movement and residence within the borders of each state.
2. Everyone has the right to leave any country, including his own, and to return to his country.

### **Article 14**

1. Everyone has the right to seek and to enjoy in other countries asylum from persecution.
2. This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

### **Article 15**

1. Everyone has the right to a nationality.
2. No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

### **Article 16**

1. Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

2. Marriage shall be entered into only with the free and full consent of the intending spouses.
3. The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

#### **Article 17**

1. Everyone has the right to own property alone as well as in association with others.
2. No one shall be arbitrarily deprived of his property.

#### **Article 18**

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

#### **Article 19**

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

#### **Article 20**

1. Everyone has the right to freedom of peaceful assembly and association.
2. No one may be compelled to belong to an association.

#### **Article 21**

1. Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.
2. Everyone has the right of equal access to public service in his country.
3. The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

#### **Article 22**

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

### **Article 23**

1. Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.
2. Everyone, without any discrimination, has the right to equal pay for equal work.
3. Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.
4. Everyone has the right to form and to join trade unions for the protection of his interests.

### **Article 24**

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

### **Article 25**

1. Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.
2. Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

### **Article 26**

1. Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.
2. Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.
3. Parents have a prior right to choose the kind of education that shall be given to their children.

### **Article 27**

1. Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.
2. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

## **Article 28**

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

## **Article 29**

1. Everyone has duties to the community in which alone the free and full development of his personality is possible.
2. In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.
3. These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

## **Article 30**

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

The Green Party of Canada had been instrumental in placing a formal petition before Parliament pointing out the government's failure to discharge its obligations under the International Covenant of Civil and Political Rights. That petition was presented in Parliament on February 17, 1997.

( ) THAT in 1998 on December 17, I circulated a statement by a committee on Middle East

Issues which had been issued prior to the bombing of Iraq

Ironically, the U.S., which has demonstrated the most flagrant disregard for the United Nations, is, in the case of Iraq, the self appointed enforcer, along with England, of the Security Council resolution even in the face of the opposition of the other permanent members of the Security Council.

In 1945, the United Nations was formed to prevent "the scourge of war" and to "respect the rule of law" not force. In 1972, every member state of the UN made a commitment at the UN Conference on Humans and the Environment (UNCHE) to eliminate the production of weapons of mass destruction. Yet since that time in the past 25 years many member states of the United Nations have continued to produce weapons of mass destruction.

Now in 1998, to prevent the possibility of the scourge of war the United Nations must appoint an international inspection team not from countries that themselves have weapons of mass destruction but from countries that have "clean hands". The United Nations must play a leading role in preventing the US from making further substantive strikes on Iraq, and must ensure that there is a serious inspection of all sites of weapons of mass destruction including those sites belonging to the permanent member states of the Security Council. Serious questions have arisen concerning the independence of Richard Butler, the chair of UNSCOM and about the questionable strategic information seeking of the US participants in UNSCOM.

For the purpose of eliminating these weapons, there must be unconditional access to all sites of weapons of mass destruction. This is a time for reflection and for actions that truly eliminate the existence of weapons of mass destruction so as to remove the threat to use or use of these weapons. No state should be exempt from inspection.

Tragically, Governments, such as Canada, by supporting the U.S./GB in the bombing of Iraq have undermined the fundamental role of the United Nations, and have jeopardized their own diplomatic role in this matter.

( ) THAT in 1998 on December 19 I posted 1998 US LATERIALISM

The United States has 24,000 troops in the region, 22 ships and about 200 planes. U.S. officials have said the U.S. forces in the area would be sufficient to launch airstrikes against Iraq.

STEPHEN ZUNES, (415) 422-6981, (831) 425-2975, zunes@usfca.edu

Zunes is chair of the Peace and Justice Studies Program at the University of San Francisco. "No member state of the United

Nations can unilaterally enforce a Security Council resolution without expressed approval by the Security Council," he said. "The U.S. had such authorization in 1991 regarding the expulsion of Iraqi forces from Kuwait -- but it has no such mandate now."

Zunes added: "If the U.S. could unilaterally attack Iraq for its violations of a U.N. Security Council resolution, then Russia could unilaterally bomb Israel for its many violations of U.N. Committee On The Middle East

STATEMENT ISSUED PRIOR TO THE BOMBING OF IRAQ

A unique Association of independent Middle East experts and scholars around the world

### DO NOT BOMB IRAQ

While the U.S. clearly has the military power to further devastate and prostrate Iraq, we strongly believe that the course the U.S. has chosen is not only grossly unjust, but also exceedingly hypocritical and duplicitous. We further believe that though the U.S. may be able to pursue its imperial policies without substantial opposition in the short term, the policies being pursued today, especially the new and massive military assault being prepared against Iraq, are likely to have tremendously negative historical ramifications.

As Middle East experts and scholars many with close and personal ties to this long-troubled and misunderstood region we feel a political, a moral, and a historical responsibility to speak up in clear opposition at this critical time.

### Origins of Today's Imbroglia:

Throughout this century Western countries, primarily the United States and Great Britain, have continually interfered in and manipulated events in the Middle East. The origins of the Iraq/Kuwait conflict can be found in the unilateral British decision during the early years of this century to essentially cut off a piece of Iraq to suit British Empire desires of that now faded era.

Rather than agreeing to Arab self-determination at the end of World War I and the collapse of the Ottoman Empire, Western nations conspired to divide the Arab world into a number of artificial and barely viable entities; to install Arab "client regimes" throughout the region; to make these regimes dependent on Western economic and military power for survival; and then to impose an ongoing series of economic, cultural, and political arrangements detrimental to the people of the area. This is the historical legacy that we live with today.

Throughout the 1930s and the 1940s the West further manipulated the affairs of the Middle East in order to control the resources of the region and then to create a Jewish homeland in an area long-considered central to Arab nationalism and Muslim concerns. Playing off one regime against the other and one geopolitical interest against another became a major preoccupation for Western politicians and their closely associated business interests.

#### Following World War II:

After World War II, and from these policy origins, the United States became the main Western power in the region, supplanting the key roles formerly played by Britain and France. In the 1960s Gamel Abdel Nasser was the target of Western condemnation for his attempt to reintegrate the Arab world and to pursue independent "non-aligned" policies. By the 1970s the CIA had established close working relationships with key Arab client regimes from Morocco and Jordan to Saudi Arabia and Iranian regimes that even then were among the most repressive and undemocratic in the world in order to further American domination and to secure an ever-growing supply of inexpensive oil and the resultant flow of petrodollars.

By the late 1970s the counter-reaction of the Iranian revolution was met with a Western build-up of the very same Iraqi regime that is so condemned today in a vain attempt to use Iraq to crush the new Iranian regime. The result was millions of deaths coming on top of the terrible destruction of Lebanon, itself a country that had been severed from Greater Syria by Western intrigues, as had been the area of southern Syria, then known as Palestine. Additionally the Israelis were given the green light to invade Lebanon, further devastate the Palestinians, and install a puppet Lebanese government an attempt which failed leading to an American and Israeli retreat but ongoing militarism to this day. Meanwhile, throughout all these years Western manipulation of oil supplies and pricing, coupled with arms sales policies, often seriously exacerbated tensions between countries in the region leading to the events of this decade.

## The Gulf Conflict:

It was precisely such American manipulations and intrigues that led to the Gulf War in 1990. Indeed, we would be remiss if we did not note that there is already much historical evidence that the U.S. actually maneuvered Iraq into the invasion of Kuwait, repeatedly suggesting to Iraq that it would become the pivotal military state of the area in coordination with the U.S. Whether true or not the U.S. subsequently did everything in its power to prevent a peaceful resolution of that conflict and for the first time intervened with massive and overwhelming military force in the region creating today's dangerously unstable quagmire.

The initially stated American goal was only to protect Saudi Arabia. Then after the unprecedented military build-up the goal became to expel Iraq from Kuwait. Then the goal evolved to toppling the Iraqi government. And from there the Americans began to impose various limits on Iraqi sovereignty; took over much of Iraqi air space; sent the CIA to repeatedly attempt to topple the Iraqi government; and placed a near-total embargo on Iraq that many including a former Attorney General of the United States have termed near-genocidal. The overall result has been the subjugation and impoverishment of Iraq and the actual death of approximately 5% of the Iraqi people as the direct result of American actions.

With the Clinton Administration, the U.S. began to insist on the "dual containment" of both Iraq and Iran both countries which just a few years ago the U.S. was working very closely with and providing considerable arms to. With few in the press able to remember from one year to the next or to connect one historic event with another, somehow Washington has come to insist on Iraqi disarmament and Iranian strangulation. Furthermore, these policies are being pursued even while Israel and key Arab client states are receiving American weapons in ever larger amounts, with Israel's weapons of mass destruction making her forces 7 to 8 times stronger than all Arab armies combined. Furthermore still, the U.S./Israeli strategic alliance has never been closer, the U.S. has repeatedly helped Israel defy the will of the international community and the United Nations, and the U.S. continues to champion a disingenuous Israeli "peace process" which in reality on the ground continues to dispossess the Palestinians and to corral them onto reservations in their own country!

In a future statement we will move on to the crucial subject of what alternative policies the United States should be pursuing. But at this critical moment we are compelled to come forward and urgently condemn the policies now being pursued. We call for an immediate cessation of the economic embargo against Iraq, an end to U.S.-imposed restrictions on Iraqi sovereignty and airspace, and most of all immediately suspension of all plans to attack Iraq once again with the overwhelming technological and military instruments available to the U.S.

If the U.S. continues to pursue its current policies then we conclude and predict it will not be unreasonable for many in the world to brand the U.S. itself as a arrogant and imperialist state, and if that becomes the historical paradigm, it will be both understandable and justifiable if others pursue whatever means are available to them to oppose American domination and militarism. Such developments could quite possibly lead to still more decades of conflict, warfare, and terrorism throughout the region and beyond.

( )THAT in 1998 I circulated a PETITION TO MEMBER STATES OF THE UNITED NATIONS

EXHIBIT

Re: Towards the immediate active engagement of the International Court of Justice concerning Iraq.

We are gravely concerned with the US-UK attack on Iraq and what appears to be a serious breach of due process in the UN Security Council.

We are not satisfied that the truth and rule of law is being properly upheld in this situation.

We wish to see the whole problem brought under the active jurisdiction of the International Court of Justice

Professor Boyle, an international lawyer the University of Illinois College of Law is ready to present the necessary documents when enabled.

Your help to facilitate that truth and justice will prevail - will be appreciated.

Such developments could quite possibly lead to still more decades of conflict, warfare, and terrorism throughout the region and beyond.

( ) THAT in December 20, I had never been paid for being the Leader of the Green Party of Canada , but I had hoped that at least one of the grant proposals might have been successful. I had to make a decision by the end of the year about whether I should declare bankruptcy for my student loan: after the end of December 1998, I would no longer be able to declare bankruptcy. At this time I decided that I would not declare bankruptcy because my declaring bankruptcy would be a reflection on the Green party of Canada.

And on December 20, I finally decided that I would not declare bankruptcy and face the barrage of credit agencies

.( ) THAT in December 1998, I wrote recirculated a piece:

inspection of weapons of mass destruction must be done by un member states with clean hands

## EXHIBIT

In 1945 the United Nations was formed to prevent "the scourge of war" and to "respect the rule of law" not force. In 1972, every member state of the UN made a commitment at the UN Conference on Humans and the Environment (UNCHE) to eliminate the production of weapons of mass destruction. Yet since that time in the past 25 years many member states of the United Nations have continued to produce weapons of mass destruction. Now in 1998, to prevent the possibility of the scourge of war the United Nations must appoint an international inspection team not from countries that themselves have weapons of mass destruction but from countries that have "clean hands". The United Nations must play a leading role in preventing the US from making a "substantive strike" on Iraq, and must ensure that there is a serious inspection of all sites of weapons of mass destruction including those sites belonging to member states of the Security Council.

For the purpose of eliminating these weapons, there must be unconditional access to all sites of weapons of mass destruction. This is a time for reflection and for actions that truly eliminate the existence of weapons of mass destruction so as to remove the threat to use or use of these weapons. No state should be exempt from inspection. Please send name to [jrussow@coastnet.com](mailto:jrussow@coastnet.com). The message will be sent to the UN missions in New York March 2003

( ) THAT in 1998 on December 6, there was a green party council meeting Given the urgent agenda items and preferences expressed re alternate date it seems we 'll set our meeting back to 60PM PST Sunday Dec06, 1998. We can confirm this toward the end of November and get tele conference codes etc. to you at that time. If you have agenda items please post them here. Thanks, Regards.

>Harvey Scott

( THAT in 1998 on December 10

"On December 10th the government will be formally celebrating the 50th anniversary of the Universal Declaration of Human Rights and glorifying Canada,s role in the development of this document. Yet as we can see, the government is prepared to deny the very rights called for in this declaration and other human rights documents," said Russow.

( ) THAT in 1998 on December 10th, I participated in a ceremony commemorating the 50<sup>th</sup> anniversary of the UN universal Declaration on Human Rights. At the Ceremony each one of the participants read one article of the Declaration

NOTING that December 10, 1998, was the 50th Anniversary of the Universal Declaration of Human Rights, and that the year 1999 is the culmination of the decade devoted to the furthering of international law;

( ) THAT in 1998 on December 10, I participated in a special ceremony in Victoria where 30 groups were involved; each group read one article

### **Article 1**

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

### **Article 2**

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status. Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

### **Article 3**

Everyone has the right to life, liberty and security of person.

### **Article 4**

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

### **Article 5**

No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment.

### **Article 6**

Everyone has the right to recognition everywhere as a person before the law.

### **Article 7**

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

### **Article 8**

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

### **Article 9**

No one shall be subjected to arbitrary arrest, detention or exile.

### **Article 10**

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

### **Article 11**

3. Everyone charged with a penal offence has the right to be presumed innocent until proved guilty according to law in a public trial at which he has had all the guarantees necessary for his defence.
4. No one shall be held guilty of any penal offence on account of any act or omission which did not constitute a penal offence, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offence was committed.

### **Article 12**

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

### **Article 13**

3. Everyone has the right to freedom of movement and residence within the borders of each state.
4. Everyone has the right to leave any country, including his own, and to return to his country.

### **Article 14**

3. Everyone has the right to seek and to enjoy in other countries asylum from persecution.
4. This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

### **Article 15**

3. Everyone has the right to a nationality.
4. No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

### **Article 16**

4. Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.

5. Marriage shall be entered into only with the free and full consent of the intending spouses.
6. The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

#### **Article 17**

3. Everyone has the right to own property alone as well as in association with others.
4. No one shall be arbitrarily deprived of his property.

#### **Article 18**

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance.

#### **Article 19**

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

#### **Article 20**

3. Everyone has the right to freedom of peaceful assembly and association.
4. No one may be compelled to belong to an association.

#### **Article 21**

4. Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.
5. Everyone has the right of equal access to public service in his country.
6. The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

#### **Article 22**

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international co-operation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

### **Article 23**

5. Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.
6. Everyone, without any discrimination, has the right to equal pay for equal work.
7. Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.
8. Everyone has the right to form and to join trade unions for the protection of his interests.

### **Article 24**

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays with pay.

### **Article 25**

3. Everyone has the right to a standard of living adequate for the health and well-being of himself and of his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.
4. Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

### **Article 26**

4. Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.
5. Education shall be directed to the full development of the human personality and to the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.
6. Parents have a prior right to choose the kind of education that shall be given to their children.

### **Article 27**

3. Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.
4. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

### **Article 28**

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

### **Article 29**

4. Everyone has duties to the community in which alone the free and full development of his personality is possible.
5. In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.
6. These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

### **Article 30**

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

The Green Party of Canada had been instrumental in placing a formal petition before Parliament pointing out the government's failure to discharge its obligations under the International Covenant of Civil and Political Rights. That petition was presented in Parliament on February 17, 1997.

( ) THAT in 1998 on December 10, we set up an Apec fund to pay fines of those arrested during APEC

-

----- RELEASE ATTACHMENT ----- APEC Legal Fund

For The  
Promotion of Civil and Political Rights

You Pay \$25 -- Ottawa Pays \$75

Ottawa is paying for legal council to present it,s side of the story, and the RCMP,s side of the story -- but has denied legal funding for the students and others whose civil and political rights were compromised during the APEC summit in Vancouver during the fall of 1997.

The Green Party of Canada has set up an APEC Legal Fund For The Promotion of Civil and Political Rights to assist the complainants at the RCMP commission hearings being held in Vancouver. This fund is modelled after the Green Party,s Clayoquot Defenders Fund that was launched in 1993.

Contributors to this Green Party of Canada fund will be eligible for a political contribution tax receipt which may be used to reduce their income tax payable. A contribution of up to \$100 may deduct 75% at tax time. 50% may be deducted of the next \$450 contributed above \$100 and 33% deducted on the next \$600 after that.

Your Donation	Your Tax Deduction	Your Actual Cost
\$1000.00	\$450.00	\$550.00
\$500.00	\$275.00	\$225.00
\$100.00	\$75.00	\$25.00

Please make contributions payable to the "Green Party of Canada APEC Legal Fund"

and send to:

( ) THAT in 1998 on December 12, impact on municipal governments

impact on municipal governments 1998 December 2<sup>nd</sup> VICTORIA MOTION investigate and analyse the MAI with regard to its impact on municipal governments

It was moved by Councillor Madoff that it be recommended to Council that the federation of Canadian Municipalities; Standing Committee on Policies and Resolutions be requested to fully investigate and analyse the MAI with regard to its impact on municipal governments and that it make the strongest possible representation to the federal government on behalf of municipalities

Passed by Council 98 2 12

Committee of the whole.

UBCM January 30 1998 meeting of the UBCM Executive consider the following report on the MAI. After reviewing the material, the executive concluded it was not convinced of the benefits of the MAI and based on the information available shares the concerns of the Province of B.C.

The executive directed that

the FCM (FEDERATION OF CANADIAN MUNICIPALITIES) National Board of Directors; be resurrected to address this issue at its next meeting (March) and that the issue be discussed at the next FCM conference

- federal officials and other provincial associations be advised of the UBCN position

Following are Ten Good Reason to Oppose the MAI:

call upon the council of oak bay to play a leadership role and urge Canada to not sign this agreement because it could override over 50 years of international public trust

agreements, it would undermine the democratically elected governments through the devolution of power to the corporations

the last thing that the global community and Canada needs is a treaty to enshrine corporate privileges as rights and bestows vested economic obligations on

1. The MAI would cripple our ability to create jobs.
2. It would give new rights to foreign investors and corporations.
3. The MAI would give corporations more power to fight environmental regulations.
4. It would leave our culture at the mercy of U.S. entertainment mega-corporations.
5. The MAI would open up our health care and social programs to multinational corporations.
6. It would threaten our ownership of fisheries, forests, energy and other natural resources.
7. It would give corporations the right to sue our elected governments to protect their profits.
8. All disputes would be decided in secret by trade experts with no public input.
9. The MAI would impose tough unfair rules on developing countries that are not even part of negotiations.
10. We would be locked into a bad deal for 20 years.

### THE POLITICS OF PUBLIC TRUST:

( ) THAT in 1998, on September 28 I responded to Jeff Sallot's / Edward Greenspan's a article

### THE GREEN PARTY OF CANADA — THE POLITICAL CONSCIENCE OF CANADA

#### EXHIBIT

I was interested in Edward Greenspan's and Jeff Sallot's article on "Pragmatic McDonough nudges NDP to Centre" in the September 21, 1998 Globe and Mail. In the article she is quoted as saying "protesting isn't enough, what you need to do is be part of finding the solution." We want to be a political party. We don't want to be a political conscience."

The NDP has been perceived improperly as the political conscience of Canada, and has not sufficiently protested against the destruction of the environment through the production of toxic, hazardous and atomic wastes; against the destruction of forests and watersheds, against the arrests of citizens for protecting land including agricultural land, forest land, and land of first nations; against the maintaining of car-dependency and promotion of the fossil fuel industry; against the Canadian contribution to the development of nuclear arms through the mining of uranium; against the excessive militarism

Judge Selwyn Romilly had once said that the Green Party is the conscience of I would be proud to think of the green party . As the leader of the Green party of Canada I would be proud to claim that the Green Party of Canada was the political conscience of Canada

### MEDIA RELEASE COMMUNIQUE DE PRESSE

The Politics of Public Trust: The Green Party of Canada as the "political conscience" of Canada

Victoria -- Monday, September 28 1998

The Green Party of Canada today announces that Dr. Joan Russow, National Leader of the Green party of Canada will be giving a press conference on Tuesday, September 29, 1998, at 3:30 p.m. in the Charles Lynch Room, Parliament.

The following issues will be addressed:

- APEC AND OTHER VIOLATIONS OF CIVIL AND POLITICAL RIGHTS

- follow-up to the petition calling for Canada to seek an advisory opinion from the international court of Justice on the federal Government's compliance with the international Covenant on Civil and Political Rights in the case not only of APEC but also of Clayoquot Sound, Oka, Temagami, Slocan Valley, Gustafson Lake. Other governments in Canada have also violated civil and political rights of Canadian citizens.

Joan Russow has also filed a complaint with the RCMP Commission for having her pass pulled at the APEC conference

- PETITION CALLING FOR THE BANNING OF GENETICALLY ENGINEERED FOODS AND CROPS

- launching of the petition calling for the Banning of genetically engineered foods and crops

Russow was instrumental in having a Declaration calling for the Banning of Genetically Engineered foods and crops endorsed in principle at an international Conference on Genetically Engineered Foods (St. Louis, Mo)

( )**THAT** in 1998, I filed a complaint with the APEC Complaints Commission but I was never able to appear either to give evidence about the Prime Minister's office interfering with the RCMP, or to correct a misrepresentation made by the Vancouver police

September 29

- ALTERNATIVE TREATY: NEMESIS OF THE MAI

- submission to the government of the Alternative Treaty to the MAI (versions in French and English). This treaty has been drafted by Russow and circulated internationally in English, French and Spanish for over a year. it has been periodically updated and circulated on various UN Anniversaries to the UN Missions in New York

- POLITICS OF PUBLIC TRUST: THE GREEN PARTY AS THE POLITICAL CONSCIENCE OF CANADA

- introduction of the Politics of Public Trust and the Green party as the "political conscience" of Canada

Alexa Mc Dough was quoted in the September 21, 1998 Globe and Mail. In Edward Greenspon's and Jeff Sallot's article "Pragmatic McDonough nudges NDP to Centre" she is quoted as saying "protesting isn't enough, what you need to do is be part of finding the solution." We want to be a political party." We don't want to be a political conscience." Russow has responded that the Green Party is proud to be the political conscience Canada and proposes that changing the current system is a prerequisite to providing solutions. Currently a Charter Challenge of the Elections Act is being initiated to put in place a system of Proportional Representation that will permit the voices of a political conscience to be heard in Parliament.

#### • CANADA'S FAILURE TO COMPLY WITH THE (1992) FRAMEWORK CONVENTION ON CLIMATE CHANGE

Canada signed and ratified the Climate Change Convention in 1992: since then the Canadian governments at all levels have caved into the forest, fossil fuel, automobile, and nuclear industries. Canada is perpetuating the cycle of error rather than acting on the precautionary principle.

#### • CITIZENS CHARTER OF CANADA

- proposal for a Citizens Charter of Canada. The Green party is proposing a Citizens Charter drawing upon the strongest and most stringent principles entrenched in provincial and federal law and where the principles are less than international standards the latter will prevail. Standards and principles shall be constantly harmonized upwards rather than the current practice in Canada of downward harmonization. Russow launched this idea at the meeting the 50 anniversaries of the "Movement national des Quebecoises et Quebecois.

None of the governments in power have seriously addressed the common problems throughout Canada, or have developed a Charter to fully address the following:

- (i) . to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;
- (ii) . to Enable socially equitable and environmentally sound employment;
- (iii). to Achieve a state of peace, justice and security;
- (iv). to Create a global structure that respects the rule of law; and
- (v). to Ensure the preservation and protection of the environment, reduce

the ecological footprint and move away from the current model of over-consumptive development

For further information, please contact:

Joan Russow (Ph.D.), Leader,

Until Tuesday September 29 noon EST in Victoria (250) 598-0071

-30-

( ) THAT on September 28 1998, I was contacted, by G&M Jeff Sallot, about David Orchard's Take-over of the Conservative Party and how he was lobbying Green Party members to take out membership in the Conservative Party and vote for him to be leader

SEPTEMBER 28 1998

Jeff Sallot contacted me about David Orchard urging green party members to take out a membership in the Conservative Party so they could vote for him to be the leader of the Conservative party

I had prepared a response

THE POLITICS OF-TAKEOVER

1998 Rather than engage in historical revisionism of the Conservative party

Inequity, misrepresentation, and historical revisionism: Orchard's attempted take-over of the Conservative party.

Jeff Sallot contacted me about David Orchard urging green party members to take out a membership in the Conservative Party so they could vote for him to be the leader of the Conservative party

these were my rambling notes for an interview with Jeff Sallot. If he contacted me again but he did not

Rather than David orchard's engaging in historical revisionism of the Conservative party

And its Inequity, misrepresentation, militarism, and corporatism he should have started his own party addressing the problems with free trade and promoted fair trade

Tonight, David Orchard revealed that members of the Green party along with other parties have become members of the Conservative Party in order to vote for him

I feel compelled to address what I perceive to be extreme unfairness.

Infiltration and take-overs are not strategies that I as the leader of the Green party of Canada support. The Green party has a similar leadership process we could be infiltrated and taken over in exactly the same way as Orchard is attempted to take over the Conservative Party.

The Green party could be redefined through historical revisionism the way Orchard has done with the conservative party. The term "Green" has been misused by every industry through greenwash and I " feigned altruism".

Orchard's scheme to infiltrate and take over the Conservative party has been ill-conceived. The Conservative party opened up its leader election process which makes it vulnerable to take over

David Orchard has as one member of the Green party put it engaged in a "stunt" a "lark" a "little boy's game". One pamphlet he distributed asked people to "join the federal Conservative party (really you do). It's easy and it's pretty cheap, but you gotta be quick." Presumably joining a political party is an acceptance of the policies and traditions of that party.

Orchard says that he endorses the Conservative record up until Mulroney. Orchard speaks glowingly of Macdonald, Borden and Diefenbaker. [historical revisionism] Orchard has [aligned] put himself in with some pretty [questionable]unsavory and .....characters. He glorifies Sir John A MacDonald; concerned historians must cringe when they think of the hanging of Louis Riel

Borden policies at the start of the Depression is generally considered to have contributed to the severity of its impact on the poor.

Ironically Nationalists that have made careers in opposing NAFTA have in their dedication to demonstrate the failure of NAFTA have failed to give any credibility to international law which should supersede NAFTA.

By focusing on NAFTA and suggesting that "Canada was perfect up to NAFTA see comment "Oh to have a Canada again" suggesting that all was well before NAFTA; this ignores deforestation, excessive use of the automobile, polluter rivers, homelessness, poverty, arms trade, CANDU reactors, uranium mining etc.

The honourable thing would be to form his own party not try to take-over an established party whose policies he claims to adhere to but which many of his supporters do not.

Most citizens with integrity have an aversion to infiltration or take-overs of institutions, organization including political parties. Too often NGOs internationally have been bitterly aware of infiltration and agent provocateurs. corporations set up corporate front groups to attempt to undermine strong NGO resolve to affect the public trust.

Particularly in the case of the Tory leadership race it is unconscionable when the party has set up a new open democratic process which places the party in a vulnerable position, and this process is violated.

No historical revisionism can justify Orchard's excursion into the conservative party. Although he was described by other candidates as a tourist, he is not a tourist, he is trying to take over the Conservative party. A takeover artist is not exactly friendly company if you are one of those who are being taken over by someone on a lark.

At a time where few politicians are perceived to be trustworthy or to have integrity What is needed is a new vision of Canada based on integrity not on taking advantage of another party's vulnerability due to being more open.

David Orchard's material reveals his disrespect for the process " You can vote for orchard to become Tory leader; You need to join the federal Conservative party (really, you do). it's easy and it's pretty cheap, but you gotta be quick"

The federal PC party has abandoned its usual delegate selection process, and will hold an open leadership election in October with a one-person-one vote secret ballot. anyone who buys a party membership can vote for the new leader.

In an unchallenged Globe and Mail editorial proposed that running

Next, the Canadian public, might be entertained by a Green Party leader redefining the history of reform and running for the leader of the reform party

I feel compelled to address what I perceive to be extreme unfairness.

Infiltration and take-overs are not strategies that I as the leader of the Green party of Canada support. The Green party has a similar leadership process we could be infiltrated and taken over in exactly the same way as Orchard is attempted to take over the Conservative Party.

The Green party could be redefined through historical revisionism the way Orchard has done with the conservative party. The term "Green" has been misused by every industrial " feigned altruism".

I have always believed that it there is one thing that the Green party stands for and that David Orchard has as one member of the Green party put it engaged in a "stunt" a "lark" a "little boy's game". One pamphlet he distributed asked people to "join the federal Conservative party (really you do). It's easy and it's pretty cheap, but you gotta be ,quick." Presumably joining a political party is an acceptance of the policies and traditions of that party.

Orchard says that he endorses the Conservative record up until Mulroney. Orchard speaks glowingly of Macdonald, Borden and Diefenbaker. [historical revisionism] Orchard has [aligned] put himself in with some pretty [questionable]unsavory and .....characters. He glorifies Sir John A MacDonald; concerned historians must cringe when they think of the hanging of Louis Riel

Borden policies at the start of the Depression is generally considered to have contributed to the severity of its impact on the poor.

By focusing on NAFTA and suggesting that "Canada was perfect up to NAFTA see comment "Oh to have a Canada again" suggesting that all was well before NAFTA; this ignores deforestation, excessive use of the automobile, polluter rivers, homelessness, poverty, arms trade, CANDU reactors, uranium mining etc.

The honourable thing would be to form his own party not try to take over an established party whose policies he claims to adhere to but which many of his supporters do not.

Most citizens with integrity have an aversion to infiltration or take-overs of institutions, organization including political parties. Too often NGOs internationally have been bitterly aware of infiltration and agent provocateurs. corporations set up corporate front groups to attempt to undermine strong NGO resolve to affect the public trust.

Particularly in the case of the Tory leadership race it is unconscionable when the party has set up a new open democratic process which places the party in a vulnerable position, and this process is violated.

At a time where few politicians are perceived to be trustworthy or to have integrity What is needed is a new vision of Canada based on integrity not on taking advantage of another party's vulnerability due to being more open.

David Orchard's material reveals his disrespect for the process " You can vote for orchard to become Tory leader; You need to join the federal Conservative party (really, you do). it's easy and it's pretty cheap, but you gotta be quick"

The federal PC party has abandoned its usual delegate selection process, and will hold an open leadership election in October with a one-person-one vote secret ballot. anyone who buys a party membership can vote for the new leader.

**Canada**

**TEL/FAX 1 (250) 598-0071**

**Thursday October 22, 1998**

**Joscha Fischer**

**Minister of Foreign Affairs**

**Dear Joscha.**

**As the National Leader of the Green party of Canada, I would like to congratulate you on your exceptional achievement. Green Parties from around the world will benefit from your success.**

**In Canada the media has reported that the German Green Party will have to compromise, and I know that the Canadian government will do everything that it can to undermine any progressive moves in promoting the "public trust" such as**

- 1. to Promote and fully guarantee respect for human rights including labour rights, health rights, and social justice;**
- 2. to Enable socially equitable and environmentally sound employment;**
- 3. to Achieve a state of peace, justice and security;**
- 4. to Create a global structure that respects the rule of law; and**
- 5. to Ensure the preservation and protection of the environment, reduce the ecological footprint, respect the inherent worth of nature beyond human purpose and move away from the current model of over-consumptive development**

**For many years at international conferences such as the women's conference in Beijing, and the Habitat II conference in Istanbul, I have been calling for at least a 50% reduction of the global military budget and for the use of the savings:**

**(a) to guarantee:**

- the right to safe and adequate food, which has been not genetically altered or irradiated, or grown with pesticides**
- the right to safe and affordable shelter,**
- the right to universal health care,**
- the right to safe drinking water,**
- the right to a safe environment,**

- the right to education, and
- the right to peace;
- (b) to fund socially equitable and environmentally sound work; and
- (c) to fund education and research free from corporate direction and control.

**During the last election in Canada we ran on the call for at least a 50% reduction of the military budget. I was pleased to read that the German Green Party shared this demand. Actually last February we presented a "Green Public Trust" budget which virtually eliminated the military budget and maintained only a proposal for a civilian training program for assisting in natural disaster relief. In addition, we proposed that the "Criteria of Public Trust" replace the Gross Domestic Product as a means of assessing national well being.**

**( )THAT** in 1998, I sent a letter to the Committee on Cultural and Natural Heritage about a campaign to protect a site in Australia

( ) THAT in 1998, December. I drafted TREATY OF CORPORATE AND STATE COMPLIANCE

EXHIBIT

1998 TREATY OF CORPORATE AND STATE COMPLIANCE

[proposed General Assembly Resolution to be circulated to governments by their citizens]

Through more than 50 years of concerted effort, the member states of the United Nations have created international obligations, commitments and expectations in which they have undertaken the following:

1. to Promote and fully guarantee respect for human rights and social justice;
2. to Enable socially equitable and environmentally sound development;
3. to Achieve a state of peace, justice and security;
4. to Create a global structure that respects the rule of law; and
5. to Ensure the preservation and protection of the environment.

Concerned that trade organizations such as the World Trade Organization (WTO) and Asia Pacific Economic Cooperation (APEC), and trade agreements such as the North American Free Trade Agreement (NAFTA) and the Multilateral Agreement on Investments (MAI) proposed by the member states of the Organization of Economic Cooperation and Development (OECD), undermine the work of over 50 years in creating obligations, commitments and expectations with respect to the matters set out above;

Recalling the commitment made by all the member states of the United Nations in the Platform of Action at the UN Conference on Women: Equality, Development and Peace (Beijing, 1995) and in the Habitat II Agenda, "to ensure that corporations including transnationals comply with national codes, social security laws, and international law, including international

environmental law";

WE THE MEMBER STATES OF THE UNITED NATIONS UNDERTAKE THE FOLLOWING:

1

- (a) To sign and ratify those international agreements that have not yet been signed and ratified,
- (b) to enact the domestic legislation necessary to implement them and to fulfill the legitimate expectations created by General Assembly resolutions and declarations, and
- (c) to act upon commitments arising from conference action plans;

2. To establish mandatory international standards and regulations (MINS), based on international principles and on the highest and strongest regulations from member states with respect to

- (a) Human rights and social justice,
  - (b) Socially equitable and environmentally sound development, and
  - (c) Protection and preservation of the environment,
- and to harmonize continually upwards;

3. To demand compensation and reparations from corporations, and from administrations that have permitted corporations to, or assisted them in, degrading the environment or violating fundamental human rights, especially where those actions occurred:

- (a) in developed and developing countries, or
- (b) on the lands of indigenous peoples or in the communities of marginalized citizens in either developing or developed countries;

4. To revoke the licences and charters of corporations, including transnational corporations, if those corporations have persistently:

- (a) violated human rights,
- (b) caused environmental degradation,
- (c) disregarded labour rights, or

(d) contributed to conflict and war, or if they fail to pay compensation for past non-compliance with international agreements;

5. To reduce military budgets and use the savings:

(a) to guarantee:

- the right to adequate food,
- the right to safe and affordable shelter,
- the right to universal health care,
- the right to safe drinking water,
- the right to a safe environment,
- the right to education, and
- the right to peace;

(b) to fund socially equitable and environmentally sound work; and

(c) to fund education and research free from corporate direction and control;

6. To increase funding for United Nations agencies and for international, national and regional educational institutions so that their missions will not be undermined by corporate direction or control;

7. To develop criteria for partnership with the United Nations so as to ensure the exclusion of corporations from such a partnership if in any part of their operation they have violated human rights, caused environmental degradation, contributed to war and conflict, or failed to promote socially equitable and environmentally sound development;

8. To distinguish "civil society" from the "market", and to define civil society as those elements of society that serve to guarantee human rights, foster justice, protect and conserve the environment, prevent war and conflict, and provide for socially equitable and environmentally sound

development;

9. To prevent the transfer to other states of substances and activities that cause environmental degradation or that are harmful to human health, as agreed in the Rio Declaration; this prohibition would cover activities such as those related to:

- (a) the import or export of toxic, hazardous, and atomic substances and wastes,
- (b) production and consumption of ozone-depleting substances,
- (c) extraction of resources by environmentally unsound methods,
- (d) production and distribution of questionable genetically-engineered food substances and genetically modified organisms,
- (e) the questionable production and distribution of genetically engineered crop/pesticide systems,
- (f) increased greenhouse gas emissions;

10. To act upon the commitment made at recent United Nations Conferences to move away from the over-consumptive model of development, to reduce the ecological footprint, and to reject the economic dogma that maximum economic growth will resolve the urgency of the global situation;

11. To prohibit all trade zones that have the effect of circumventing obligations and commitments intended to guarantee human rights, including

environment. social justice and labour rights, or to protect, preserve and conserve the

12. To work with banking and finance institutions to terminate all Structural Adjustment Programs (SAPs) which prescribe:

- (a) the indiscriminate privatization of state-owned enterprises,
- (b) the indiscriminate reduction of government expenditures,

- (c) and the indiscriminate liberalization of trade regimes,
- (d) the indiscriminate opening of states to increased foreign investment, especially where this entails the attraction of foreign capital by deregulating markets and offering low wages, high interest rates, and little or no environmental protection, or
- (e) the indiscriminate encouragement of producing of goods for export at the expense of traditional crops, products and services which serve the needs of domestic peoples;

13. To ensure that no state relaxes environmental, health, human rights or labour standards in order to attract industry, and that no corporation allows a branch or subsidiary to engage in:

- (a) practices that are unacceptable in the controlling corporation's state of origin,
- (b) activities that are banned or restricted in the controlling corporation's state of origin, or
- (c) manufacturing or transferring substances that are banned or restricted in the controlling corporation's state of origin.

14. To ensure that no state shall justify trade with a country that violates human rights on the grounds that such trade will lead to a betterment of human rights.

15. To establish an International Court of Compliance where citizens can bring evidence of state and corporate non-compliance with all states' overriding obligations and commitments to:

- (a) protect and advance human rights,
- (b) foster social justice,
- (c) protect and conserve the environment,
- (d) prevent war and conflict, and
- (e) enable socially equitable and environmentally sound development.

'Never doubt that a small group of thoughtful  
committed citizens can change the world,  
indeed, it's the only thing that ever has.'

- Margaret Mead

Dear Caspar

This is a draft of what I have been circulating: Your changes are great. Note that I requested to make a change in 9. From now on I will go with your version plus the changes in 9.

( ) THAT in 1998,I attended the Annual General meeting of Ethical Investments group  
**representing Green Party member unit holders from Saskatchewan, Alberta, and Ethical investments**

**REPORT:**

**Raised issues about misleading screening; for example, the companies must invest in the civil sector but does not say that they must not invest in the military sector. The best of the sector of a bad sector is not necessarily ethical. Misrepresentation of compliance with international law. Also, I raised the issue about weak standards on child labour and about the failure to support Canadian companies re recommendation to support HOME DEPOT**

**Skewed democratic process** If unit holders do not show up or send proxies then all the votes fall back into the hands of the manager. Thus, all the decisions had already been made even then everyone went through the motions of all those in favour all those opposed etc.

**I left the meeting after intervening about seven times saying that I would like to propose on behalf of the Unit holders for which I hold the proxy votes -- a motion of non-confidence in the management of the fund.**

#### NATURE OF MEETING OF UNIT HOLDERS HELD IN VANCOUVER

There were about 70 unit holders and proxy voters at the General meeting of the Ethical Investment Funds Inc. in Vancouver. The expressed purpose of the meeting was to examine a series of resolutions within the 7 different Investment funds.

#### Proxy support by default

It would appear that if the unit holders did not exercise their rights to attend or to assign proxies then the proxies automatically went to the Manager. It was revealed by the Manager—the collective term for the trustees that all the resolutions that we were supposed to be considering were already passed by 90% of the unit holders because 90% of the unit holder votes had reverted to the Manager. The fact that all the resolutions had been passed was revealed when one of the unit holders at the meeting suggested an amendment to the resolution related to the relocation of the office outside of Toronto.

#### Bogus meeting

It was consequently irrelevant whether the unit holders attending the meeting voted in favour or not or even if every unit holder in the room disagreed with the resolution the resolution was still passed; the meeting was designed to be nothing more than a rubber stamping of the resolutions. Given that the resolutions had all been passed I proposed that we use the face-to-face meeting as an opportunity to discuss the nature of the principles and the effectiveness of the existing Ethical Screens for implementing the principles. I was told that there would be an opportunity at the end to discuss the screens. I mentioned that

the screens were far too coarse and major polluters and human rights violators were passing through.

As the meeting progressed fewer and fewer people even bothered to put up their hands for or against the resolutions and it was only when after each resolution had proceeded through the formal vote the Manager asked if there were other business that people spoke about the issues.

#### ISSUES RAISED

#### ADMINISTRATION QUERIES

## Problems:

### 1. Excessive devolution of power to the Trustees

One of the first resolutions was related to taking out the ethical screen from the Declaration of Trust. The apparent implication of taking the screen out of the Declaration of trust was that it would no longer be necessary for the Manager to contact all the unit holders when the screens were changed. I raised a concern about the devolution of power from the unit holders to the manager.

In addition there was a resolution that the Trustees would be collapsed into what was referred to as the Corporate trustee. A unit holder proposed that the Manager reveal the intention behind such a resolution and asked if the intention behind this change to reduce individual liability.

### 2. Unapproved appointment of an auditor

A question was raised from the floor about whether the unit holders would have an opportunity to approve or disapprove the appointment of the auditor, as is usually the practice. The manager said no

### 3. Questionable ties with Credit unions and with Vancity

Vancity initiated the Ethical funds and then it went to Central Credit Union Central which then appointed trustees and linked up with formed the Ethical Investment Inc. The connection between credit unions/ Vancity and the Ethical Investment Inc.

### 4. Disregard for reporting of unit holder concerns

I asked about how they were going to report the meeting. Given that it was irrelevant whether we voted for or against the resolutions then at least would the concerns that we were raising be in the report of the meeting. The response to my query was that the meeting was being taped and a report would be issued but not every private interest would be reported.

**SYSTEMIC CONSTRAINTS THAT NEED TO BE ADDRESSED IF THERE ARE TO BE SOCIALLY EQUITABLE, ENVIRONMENTALLY SOUND ETHICAL FUNDS.**

## **PERPETUATION OF DELUSION THROUGH UNAWARENESS**

The public is unaware or does not want to be aware of whether these funds are in fact ethical, and many are deluded into thinking that these funds are actually supporting ethical companies.

## **ADVOCATING ECONOMIC GROWTH AT ALMOST ANY COST**

## CONDONING OF STATUS QUO

In the Ethical Global Fund, a statement indicates that the funds condone what is described as the “New Paradigm” in a section describes as the Continuation of the ‘New Paradigm’ the following is stated:

In the current (sixth) year of expansion, wage and price gains have been held in check by a variety of forces—some structural and some temporary. Specifically, because of the structural forces of global competition, improvement to information technology, corporate restructuring, deregulation and weakening union power, workers have been reluctant to demand more than moderate wage increases— which was more than offset by increased productivity.

I raised the issue of whether the Ethical Fund supports what they describe as the “new paradigm” and I read the section for them. The manager responded that this section reflected the reality of the global situation.

## THE MISPLACED NOTION OF COMPLETE PICTURE

### CONDONING OF THE ETHICAL FACADE

Rather than insisting that the complete operation abide by the principles the Manager insists that every part of the operation be taken into consideration including charitable projects. Thus in the case of a company like Alcan presumably “Alcan recycling” might be sufficient to justify ignoring the main operation of the company. The whole picture must instead ensure that all the activities of the company are compliant with principles. When I raised this question, the manager failed to adequately respond

### BEST OF THE SECTOR FALLACY

The acceptance of the strategy of classifying as ethical the best in the sector is a flawed strategy because the Best in a bad sector is not good enough from a socially ethical and environmentally sound perspective. When I raised this question, the manager failed to adequately respond

### STATUS QUO- NON PROMOTER OF PREVENTION TECHNOLOGY

The designation of funds as being ethical and “environmentally conscious” would suggest that the fund would be promoting “prevention technology— doing it right the first time. When I raised my concern about the funds not promoting prevention technology I was told that they were responsible to their investors to make a profit and it would be in violation of the securities act because the fund was required to invest only in stocks traded on the market.

## DISREGARD FOR HUMANS RIGHTS VIOLATION

The fund does not have a human rights screen other than for labour practices. In the Asian Pacific fund they invest in countries like Indonesia. When I raised this issue, I was told that the quality of the project justified the investment.

## MISLEADING PRINCIPLES

The principle related to the military is misleading. It states that Companies and economies must: provide products or services for civilian, non-military purposes; it does not however say that the companies must not invest in the military. When I raised the issue that as was reported on Market place the fund had invested in Hereux which had 35% of its business with the military. They responded that they have levels of tolerance they will not invest in companies that produce arms and that they have a 20% tolerance for other military production.

## BIZARRE RATIONALIZATION OF "TOLERANCE"

0 tolerance for arm production companies

20% tolerance for military services or products

Hereux

33%

Similarly, although they claim as a matter of principle to not invest in tobacco companies, some of the companies they invest in are involved in the tobacco industry.

## IMBALANCE IN FAVOUR OF MULTINATIONAL US COMPANIES

North American fund

the investment is predominantly in multinational US companies. Including companies like Wall mart. When I raised this concern, the manager failed to adequately respond

## SELECTIVE COMPLIANCE

One of the principles is that the companies must comply with environmental regulations and be committed to implement environmentally conscious practices. I raised a concern that the investing in oil companies as they do would not contribute to the reduction of greenhouse gases and would encourage non compliance with the Framework Convention on Climate Change. Similarly, governments have made a commitment to move away from auto-dependency; yet the fund has invested in the automobile industry. When I raised this concern, the manager failed to adequately respond.

## COUPLING INDUSTRY RELIANCE

While the manager calls for compliance with regulations they rely on Ethic Scan to determine whether or not the corporations are ethical and ethic Scan works on the

premise of the best of the sector and perpetuates the coupling of the cycle where the polluting corporations promote deregulation and voluntary compliance so that they can continue to produce greenhouse gases, toxic, hazardous wastes and then develop a clean-up “environment industry” technology.

## AVOIDANCE OF ACTIVIST COMPONENTS

One of the unit holders asked if there was an activist component to the funds as there was in some funds in the US. The manager responded that this proposal would be looked into.

## COOPTION OF THE TERM ETHICAL

It would appear that the “term ethical” has been reduced to primarily a relative term. For example the expression “ Environmental Ethics” has been used with the polluting corporations to describe their particular approach to the environment . For example, the environmental ethics of Shell etc.

In conclusion

It would seem that Ethical funds Inc. can be counted on to not invest in the worst of a bad sector, to not invest in companies that have as their primary function production of arms, tobacco, nuclear, to invest in countries that violate human rights providing the project is laudable. Ethical Funds Inc. is thus only marginally better than what have thus been deemed to be “non ethical funds” but is worse because they prey on concerned citizens who have been misled by their notion of what constitutes “ethical”

On leaving the meeting, I commented that if this were a legitimate meeting I would put a Non-confidence motion on the floor and call for the resignation of the Manager and propose that a truly socially equitable, environmentally sound ethical fund be set up.

## EXHIBIT

( ) THAT in 1998 ,December, David and I i traveled to Guatemala and addressed indigenous issues, and other human rights issues such as the fundamentalist church demonizing an indigenous woman by targeting as a sorcerer

**COMMENT** Todos Santos is a predominantly indigenous village in the highest mountain range in Central America. A Dutch anthropologist told me that a woman knowledgeable about local medicinal plants was demonized by the fundamentalist church, as being a sorcerer. A documentary claimed Todos Santos was discovered by the rest of the world in the 60's when a road was put in so as to make Indian labour more available for the coffee and cotton fincas. It also claimed that about 45% of the land is owned by 2 -3 % of the population (ex-military ladinos) while the less desirable land was divided among the indigenous people it also revealed that a Document listing names of the disappeared was found in the military headquarters

( ) THAT in 1998 on December 10, for the 50<sup>th</sup> anniversary of the UNDHR, I worked with others in Victoria, on a ceremony where a representative from each group would read an article from the Declaration

( ) THAT on December 10, for the 50<sup>th</sup> I also wrote and circulated a petition

#### EXHIBIT

NOTING THAT DECEMBER 10, 1998, IS THE 50TH ANNIVERSARY OF THE UNIVERSAL DECLARATION OF HUMAN RIGHTS, WE CALL UPON THE CITIZENS OF THE WORLD

(i) to proceed to the UN Commission on Human Rights and declare that the MAI would violate the International Covenant on Civil and Political Rights. (This Covenant has an optional protocol which allows citizens, once they have exhausted all domestic remedies, to proceed to the UN Commission on Human Rights);

(ii) to work towards ending the negotiations on the MAI and the cancellation of previous free trade agreements such as NAFTA, which also undermine 50 years of International Public Trust Law.

( ) THAT in 1998 on December 27, I wrote “WHO IS FUNDING THE POLITICAL WILL WHEN POLITICIANS LIKE ANDERSON PREFER TO MERELY FIDDLE?”

#### EXHIBIT

It might be painful to remind ourselves that at the start of the '90's, it was being promoted as the “turn-around decade” for the environment? David Anderson's statements impugning the motivation of environmental groups (Globe and Mail, Dec. 27, “Minister, Green Groups Lock Horns over Endangered Species”) is darkly ironic if nothing else. Anderson suggests that environmental groups who oppose his proposed legislation are self-serving, and said, “You don't raise funds by saying your organization is satisfied with the government. People say, ‘Great, that 's good to hear’, and they put away their chequebooks. Tactically this is the traditional approach of Non-Governmental Organizations [NGOS]. You never say you are satisfied. How do you raise money if you are satisfied and you are trying to sell calendars with endangered species on it?”

Anderson should not be allowed to get away with such an unsubstantiated inflammatory statement. It is a cheap shot which condemns all NGOs and suggests that NGOs are traditionally unprincipled and that their primary purpose is one of self-interest. This statement is as inaccurate as saying all political parties accept, as the Liberals do, corporate donations from companies that destroy species habitat. Anderson is right on when he says that funding influences principle. Unfortunately, he is attacking the wrong targets. Corporations and vested interest economic lobby groups have funded the elections of all recent federal and provincial governments.

The truth is that Anderson is reneging on his commitment to link endangered species legislation with habitat protection. Anderson's proposed legislation gives final habitat approvals to Cabinet. Environmental Groups have consistently warned that decisions on habitat protection must be based on scientific considerations and not on political whims and vagaries. Anderson should be reminded that the reason that species become endangered is because uncontrolled and unregulated human activity, condoned by governments, destroys habitats.

Political parties, including those that have formed government federally and provincially - have been negligent by allowing contributions to their parties to determine and direct their "principles". The loss of species habitat throughout Canada has resulted from negligence and lack of political will from years of devolving power to the corporations and other vested economic interest institutions. Governments at all levels have ignored their obligations and commitments to protect species habitat by accommodating, facilitating and promoting environmentally unsound industries. All levels of governments, have caved into the dogma of economic growth at any costs. A recent study of national parks reported in the Globe that only one out of 36 to be pristine, Globe and Mail December 1999). The federal government's commitment to habitat protection is lacking.

The Canadian government signed and ratified the Convention on Biological Diversity in 1992. This mandated governments to identify and conserve biodiversity, invoke the precautionary principle, and carry out environmental assessment reviews of anything which could contribute to the loss or reduction of biodiversity.

Environmental groups including the Sierra Club of Canada, the Sierra Legal Defence Fund, Western Canada Wilderness Committee, Friends of Clayoquot Sound, Greenpeace, ERA Ecological Rights Association and many others have called upon governments at all levels to implement the Convention on Biological Diversity and have exposed the destruction of biodiversity and species habitat in Canada to the global community.

No mention was ever made in the Convention that only the biodiversity on public lands should be conserved. The federal government, however, has not enacted legislation to conserve biodiversity on public lands or on private lands. Under the Fisheries Act, for years it has been a criminal offence to deposit deleterious substances that would destroy fish habitat--rarely has that been enforced. Anderson was Fisheries Minister as well, but failed to act against the logging companies which have contributed to the decline of wild salmon stocks. Legislation has been in place to prevent destruction of habitat but people like Anderson will not move against their corporate donors. Implementation and enforcement of the legislation has been absent.

Anderson's raising of the issue of funding-directed decision making presents the opportunity to examine budget priorities. The federal government has spent billions promoting the biotechnology, and nuclear energy industries and will soon have to spend

billions attempting to reverse the environmental devastation caused by those two industries.

No environmental group calling for protection of habitat of endangered species can be accused of catering to its funders. Unfortunately, as a result of the poor environmental performance of all governments that have been in power across Canada, there is no end to the issues that environmental groups have to deal with and would like to leave behind. For example, David Anderson, when in Victoria during the municipal elections stated that there was no reason to have sewage treatment in Victoria, even though tons of raw waste are pumped into the marine environment daily. The Federal government has just renewed the Nanoose agreement which will continue to allow American nuclear armed and nuclear-powered submarines into Canadian waters. The Federal government also is permitting plutonium, in the form of MOX from dismantled American nuclear weapons, to be tested for use in CANDU reactors. The Federal government through grants and in collaboration with provincial government and corporations has permitted over 4,500 field trials of genetically engineered crops. Anderson and his government are also currently trying to use the WTO to set aside the French ban on imports of Canadian-mined asbestos. It and the provincial governments still permit deforestation, destruction of carbon sinks, contamination through the mining of uranium, disappearance of wild salmon stocks through fish farming, chemical contamination through emissions and effluents, etc.

( ) in 1998, on May 14 , I circulated the following: 1998 NOTE THIS HAS BEEN SENT TO ALL UN MISSION OFFICES IN NEW YORK call for an emergency meeting of UNGA

Thursday May 14. 1998

CALL FOR AN EMERGENCY MEETING OF THE UN GENERAL ASSEMBLY TO CONDEMN ALL

PRODUCTION, AND TESTING OF WEAPONS OF MASS DESTRUCTION

In 1945 the United Nations was formed to prevent "the scourge of war" and to "respect the rule of law", not force. In 1972, every member state of the UN made a commitment at the UN Conference on Humans and the Environment (UNCHE) to eliminate the production of weapons of mass destruction. Yet since that time, in the past 25 years, many member states of the United Nations have continued to produce and test weapons of mass destruction.

Now, in 1998, to prevent the unimaginable horrors of a war fought with weapons of mass destruction, the United Nations General Assembly

must call for universal and complete banning of all production and testing of weapons of mass destruction. All member states of the United Nations must embark upon a truly universal and comprehensive test ban with the abandonment of all those other "technical means" to bypass the current treaty.

"Subcritical tests and computer simulations made possible by huge investment of billions in lab facilities (e.g. Livermore and Barp in France) enabling development of ever more sophisticated nuclear weapons is a vertical proliferation worse than the horizontal one India constitutes. Both, risk closing our window of opportunity for ridding the world of nuclear weapons" (personal communication, Phyllis Creighton)

"India condemned the CTBT as discriminatory, saying that it (the treaty) would do nothing to move the nuclear weapon states towards nuclear disarmament or end weapons development.... India..., however, / has been shown to be correct in many of its claims. The nuclear powers blocked all agreement of even small moves on nuclear disarmament at the nuclear Non-Proliferation Treaty (NPT) preparatory committee meeting last week in Geneva. Rather than pursuing their legal commitment under the NPT to disarm, the nuclear weapon states are continuing with the status quo, testing in laboratories and upgrading their designs." (Niki Kortvelyessy, European Federation of Green Parties, Press release issued May 11, 1998)

The United Nations General Assembly must appoint an international inspection team not from countries that themselves have weapons of mass destruction, but from countries that have "clean hands". The United Nations must play a leading role in condemning all production and testing of weapons of mass destruction, and ensure there is a serious inspection of all sites of weapons of mass destruction including

sites belonging to member states of the Security Council.

In 1970, Canada supplied India with a research reactor, CIRUS, fueled by plutonium which Canada also supplied. On May the 18th, 1974 India exploded a nuclear device about the size of the Nagasaki bomb. The IAEA was unable to monitor the Indian use of CIRUS because it was not safeguarded, i.e. not under the aegis of responsibility of the IAEA.

During various disarmament conferences in the late 1960s the Canadian delegation at the UN was repeatedly warned by other nations of the use to which the CIRUS plutonium was really directed. In the United Nations

Disarmament conferences of May 1965 and July 1965 in Geneva the Indian representative hinted that India's only alternative to the October 1964 Chinese atomic explosion was to build a bomb. In 1971 Prime Minister Trudeau traveled to New Delhi to discuss the issue of the CIRUS reactor with Indian Prime Minister Indira Gandhi. He accepted Indian promises of maintaining a peaceful nuclear energy program. (Information drawn from Dr. Fred Knelman's "Nuclear Energy the Unforgiving Technology" (1978) and Ron

Finch's "Exporting Danger").

For the purpose of eliminating these weapons, there must be unconditional access to all sites of weapons of mass destruction, and the banning of all further export of civil nuclear technology. This is a time for reflection and for actions that truly eliminate the existence of weapons of mass destruction to remove the threat or use of these weapons. No state should be exempt from inspection.

"It is not just nuclear tests which threaten us. It is weapons of mass destruction and war itself. I would advise that the "Middle Size Powers" intervene between the five nuclear powers, India, and Pakistan to resolve this immediate problem. Hopefully the resolution will include genuine

disarmament by the "super" powers, India, and Pakistan in exchange for signing the Nuclear Non-Proliferation Treaty." affirmed Dr. Rosalie Bertell.

"We need a more effective United Nations with a greatly strengthened NGO component that can express the revulsion felt by most citizens of these nations" stated Dr. Eric Fawcett

"In the words of Dr. Helmut Burkhardt, 'True disarmament must have the force of International law', and that's why we are calling for this emergency meeting of the United Nations General Assembly." said Dr. Joan Russow.

( ) THAT in 1998 on December 25 , I circulated

Lest we forget

1998 recirculated 1992 URGENCY OF THE GLOBAL SITUATION

A culture of peace through education is premised on the acknowledgement of the urgency of the global situation.

## URGENCY OF THE GLOBAL SITUATION

SINCE 1992 THERE HAS BEEN CONTINUED RHETORIC AND LITTLE ACTION. THE GLOBAL SITUATION IS INCREASINGLY URGENT:

(1)

### IMPACT OF CONTINUED IMPOSITION OF CONSUMPTIVE MODEL OF DEVELOPMENT

- Continued stress on global ecosystem from the pattern of over-consumptive development in industrialized countries
- Continued deterioration of the global environment and aggravation of poverty caused by unsustainable patterns of consumption

- Continued failure to reduce the ecological footprint through continued adherence to the consumptive model of development
- Continued elimination of the ecological heritage of future generations, and depletion of resources upon which future generations depend
- Continued reliance on economic growth paradigm as the solution to global problems
- Continue negative impact of structural adjustment programs based on the imposition of over-consumptive model of development
- Continued promoting of socially inequitable and environmentally unsound employment and development
- Continued failure to redefine “development” in equitable and ecological terms
- Continued failure to link health to over-consumption and inappropriate development

(2)

## INEQUITABLE DISTRIBUTION OF RESOURCES AND DENIAL OF BASIC RIGHTS AND NEEDS

- Continued inequitable distribution of natural resources
- Continued inequality/inequity between "developed" , “developing” and "underdeveloped" states
- Continued gravity of the economic and social situation of the least developed countries
- Continued lack of fulfillment of basic needs, and failure to guarantee the right to food, right to shelter, right to education, right to health care
- Continued lack of access to basic sanitation and adequate waste disposal services
- Continued lack of access of poor to suitable arable land
- Increased use of manipulative Biotechnology
- Increased introduction of genetically modified food
- Increased control by Multi-National Agri-Food, Pharmaceutical, and Petro-chemical companies world’s food supplies
- Continued unethical patenting of seeds by multinationals

- Continued experimentation in the human genome project
- Increased corporate control of their crop varieties
- Increased production of “genetically modified organisms”<sup>2.20</sup>
- Increased deterioration of public health system, public health spending and privatization of health care systems
- Continuing spread of communicable infections

(3)

### DETERIORATION OF ENVIRONMENTAL QUALITY AND IMPLICATIONS FOR HUMAN HEALTH

- Continued failure to address and prevent environmentally-induced diseases, and continued impact on health from environmental degradation
- Increased impact on health and environment from toxic and hazardous chemicals
- Continued adverse health and environmental effects of transboundary air pollution
- Continued transferring and trafficking in toxic, hazardous including atomic substances, activities, and waste that are dangerous to health and to the environment
- Continued risks of damage to human health and the environment from transboundary hazardous waste
- Increased generation and transboundary movement of hazardous waste causing threat to human health and environment
- Continued relocation or transfer to other states of activities and substances that cause severe environmental degradation or are found to be harmful to human health
- Continued awareness of the harm of exporting banned or withdrawn products on human health
- Increased deterioration of the environment and health through anthropogenic actions
- Continued ecological and human health effects of environmentally destructive model of development
- Continued use of banned and restricted pesticides designated as being hazardous to human and environmental health

- Increased resistance of antibiotics

(4)

#### ENVIRONMENTAL DEGRADATION AND LOSS OF NATURE

- Continued loss of biological diversity
- Continued threat to genetic diversity
- Increased deforestation and land degradation
- Increased soil erosion
- Increased desertification
- Increased loss and degradation of mountain ecosystems
- Increased erosion and soil loss in river basins
- Increased watershed deterioration
- Increased marine environment degradation
- Increased vulnerability of marine environment to change
- Increased risk of impact from increase in sea level
- Increased of carbon sinks
- Increased impact of global climate change
- Increased potential of climate change
- Increased depletion of the ozone layer, and increased ultraviolet radiation
- Increased threats to the ecological rights of future generations
- Increased environmental damage from waste accumulation
- Unprecedented Increase in environmentally persistent wastes
- Continued trafficking in toxic and dangerous products
- Continued export to developing countries of substances and activities that are banned or restricted in country of origin
- Increased generation of nuclear wastes
- Increased Loss of biodiversity through ecologically unsound practices
- Increased ignoring of carrying capacity of ecosystem

- Continued violation of collective human rights through dumping of toxic, hazardous and atomic wastes is a violation

(5)

#### VIOLATION OF HUMAN RIGHTS

- Continued violation of human rights on the basis of gender, sexual orientation, family structure, disabilities, refugee or immigrant status, aboriginal ancestry, race, tribe, culture, ethnicity, religion or socioeconomic conditions
- Continued violations of human rights through the following activities:
  - Mistreatment, and hasty judicial procedures
  - Lack of respect for due process of law (access to a lawyer or visiting rights)
  - Arbitrary detentions
  - In camera trials
  - Detention without charge and notification to next of kin
  - Lack of defence counsel in trials before revolutionary courts and
  - Lack of the right of appeal
  - Ill-treatment and torture of detainees
  - Torture of the cruelest kind and other inhuman practices
  - Widespread routine practice of systematic torture in its most cruel forms
  - Wide application of the death sentence
  - Carrying out of extra-judicial executions
  - Orchestrated mass executions and burials
  - Extra judicial killings including political killings
  - hostage taking and use of persons as 'human shields'
  - Constitutional, legislative and judicial protection, while on paper, are revealed as totally ineffective in combating human rights abuses
  - Extreme and indiscriminate measures in the control of civil disturbances
  - Enforced or involuntary disappearances, routinely practiced arbitrary arrest and detention, including women, the elderly and children

- Abuses of political rights and violation of democratic rights
- Unfair elections
- Activity against members of opposition living abroad
- Harassment and suppression of opposition politically
- Suppression of students and strikers
- Targeting by terrorists of certain members of the press, intelligentsia, judiciary and political ranks
- Failure to grant exit permits
- Increased migration of populations of migrants, refugees and displaced persons
- Continued critical situation of children
- Continued concern about discrimination against women continues despite Human Rights instruments
- Continued barriers faced by women
- Continued female genital mutilation and other harmful practices
- Denial of fundamental rights and freedoms
- Suppression of freedom of thought, Media and religion and conscience
- systemic discrimination
- Continued denial of moral and humanitarian values through religious intolerance and extremism
- Continued massive violations of human rights, ethnic cleansing and systematic rape
- Continued wars of aggression, armed conflicts, alien domination and foreign occupation, civil wars, terrorism and extremist violence
- Continued violation of human rights of women including murder, torture, systematic rape, forced pregnancy
- Continued ethnic cleansing
- Continued xenophobia
- Fear and aversion to foreigners continues throughout the world
- Continued violation of human rights during armed conflict
- Continued discrimination of and violence against women

- Continued violation against indigenous peoples
- Increased violations of the rights of refugees
- Continued insufficient protection of the rights of migrant workers
- Continued marginalization of specific women by their lack of knowledge of their rights and redress
- Continued Insufficient protection of the rights of migrant workers
- Continued multiple discrimination against indigenous women
- Continued gender inequities

(7)

#### DESTRUCTION THROUGH CONFLICT, WAR AND MILITARIZATION

- Perpetuation of the substantial global expenditures being devoted to production, trafficking and trade of arms
- Forcing developing countries to undertake inequitable structural adjustment
- Increased poverty
- Continued excessive military expenditures while basic needs are not fulfilled
- Continued massive humanitarian problems through military intervention
- Continued war crimes against humanity, including genocide ethnic massacres , and “ethnic cleansing”
- Increased human and environmental destruction through land mines
- Increased war and civilian amputees as a result of land mines
- Continued death and displacement of people through war
- Continued impact of radiation from nuclear testing on present and future generations
- Continued exposure to radiation on present and future generations
- Continued mining of uranium for use in nuclear weapons
- Continued production, proliferation and testing of nuclear arms
- Continued circulating and berthing of nuclear armed or nuclear powered vessels

)THAT 1998 on December 31, I circulated proposed resolutions for Prime Minister Jean Chretien

EXHIBIT:

**1998 Circulated proposed resolutions for Jean Chretien's on New Years**

I PROPOSED and circulated RESOLUTIONS TO BE ADDED TO PRIME MINISTER CHRETIEN'S NEW YEAR'S RESOLUTIONS LIST

RESOLUTION 1

I Resolve to uphold the rule of international law in recognition of the year 1999 being the culmination of the decade devoted to the furtherance of international law

(i) I resolve to adhere to the United Nations Charter and work to prevent the scourge of war, and I thus resolve not to support the US in its disregard for international law in the bombing of Iraq and I am willing to take the US to the international Court of Justice to prevent this unilateral action from continuing

(ii) I resolve to discharge obligations under the Non-proliferation of Nuclear Arms treaty by ending the sale of CANDU reactors around the world because I am prepared to acknowledge that the sale of nuclear technology was linked to the development of nuclear arms in India and Pakistan. In addition, I resolve to phase out the mining of uranium acknowledging continued contribution by Canada to the development of nuclear weapons, and I resolve to immediately ban all circulating and berthing of nuclear powered and nuclear armed vessels from Canadian waters

(iii) I resolve to fully implement the International Covenant of Civil and Political Rights and thus to do the following:

a. to support a judicial inquiry into APEC and will respect any summons issued to me.

b. to support a judicial inquiry into Gustafson Lake c. to stop arresting citizens who attempt to enforce international agreements such as the Convention on Biological Diversity by protesting the destruction of significant ecosystems such as old growth forests

(iv) I resolve to fully discharge obligations under the International Covenant of Social, Economic and Cultural Rights by ensuring all citizens' right to adequate, safe and affordable shelter, and food, and the for equal pay for work of equal value

(v) I resolve to discharge obligations under the Convention on Biological Diversity, and thus identify conserve biodiversity, and implement the precautionary principle in order to prevent the loss or reduction of biodiversity, I therefore undertake to:

Including the following

a. Protect Endangered species

b Ban the introduction of non native species c. Place a moratorium on salmon aquaculture d. Avoid and minimize the threat to biodiversity by banning all ecologically unsound practices.

e. Restructure the current environmental assessment review process so that it becomes a legitimate environmental assessment and less a project review mechanism.

f. Ban the export of water

(vi) I resolve to uphold the Food and Drug act, and to implement the precautionary principle in areas such as those related to blood products, breast implants, drugs, human implantation devices, and to hold the Health Protection Branch responsible for years of negligence

(vii) I resolve to discharge Canada's obligations under the Framework Convention on Climate Change by conserving carbon sinks and by reducing greenhouse gas emissions by 20% from 1990 levels by the year 2000 through the following actions:

a. to conserve carbon sinks by preventing all logging in old growth forests b. to discontinue all subsidies to the fossil fuel industries and redirect federal funding to the promotion of environmentally sound renewable energy c. to initiate a nation-wide campaign to move away from car dependency, and to redirect federal funding to the promotion of public transit

(viii) I resolve to discharge Canada's obligations under the Convention on the Elimination of the Production and Consumption of Ozone-depleting substances by phasing out the production and consumption of ozone-depleting substances.

(ix) I resolve to ratify the Law of the Seas because Canada was one of its chief proponents and one of the most influential voices in its formulation and Canada, and Canada has benefited from the agreement and it is unconscionable not to recognize the rights of other nations under the Law of the Seas

(ix) I resolve to sign and ratify the Convention on the Rights of Migrant workers and their Families

(x) I resolve to no longer undermine Convention on the Rights of Indigenous peoples, and work towards strengthening the Convention

(xi) I resolve to extend the term "other status" in the Universal Declaration of Human Rights to include, in the Charter of Rights and Freedoms, the following grounds: sexual orientation, sexual identity, form of family

(xi) I resolve to act on the commitment at UNCED to support the development and use of environmentally sound energy by immediately ceasing all subsidies to the fossil fuel and nuclear industries, and transfer those funds into the development and use environmentally sound energy

(xii) I resolve to act on the commitment from the Rio Declaration to prevent the transfer to other States of substances or activities that are harmful to human health or the environment

(xiii) I resolve to implement the commitment made At the United Nations conference on Environment and Development (UNCED) 1992, to promote a "culture of safety" by preventing disasters. This commitment was reaffirmed at Habitat II (1996) when Canada undertook "to ensure adequate regulatory and other measures to avoid the occurrence of disasters..."

(xiv) I resolve to fulfill an expectation created through a 1981 General Assembly resolution to reduce the military budget and transfer the savings into social programs

## RESOLUTION 2

I resolve to act on the commitment made at the UN conference on Women and the Habitat II conference to ensure that corporations including transnationals comply with international law including international environmental law. In addition, I resolve to discontinue all my corporate junkets where I am often flaunting Canadian industry that most countries do not need, and to seriously address the issues of human rights violations

## RESOLUTION 3

I resolve to act upon a commitment in recent UN Conferences to move away from the over-consumptive model of development, reduce the ecological footprint and reject the notion that economic growth will solve the urgency of the global situation.

## RESOLUTION 4

I resolve to implement the politics of Public Trust by undertaking to do the following: (i). to Promote and fully guarantee respect for human rights including labour

rights, the right to adequate food, shelter and health care, and social justice;

(ii). to Enable socially equitable and environmentally sound development; (iii). to Achieve a state of peace, justice and security; (iv). to Create a global structure that respects the rule of law; and (v). to Ensure the preservation and protection of the environment, respect

the inherent worth of nature beyond human purpose, reduce the ecological footprint and move away from the current model of over-consumptive development;

## RESOLUTION 5

I resolve to revoke charters of corporations that violate human rights, cause environmental degradation, deny social justice and labour rights or contribute to conflict or war, and I resolve to abrogate NAFTA and oppose the MAI and other similar

agreements that exalt economic interests of most Canadians, and that undermine the principles of Public Trust international Law by transferring power from democratically elected government to corporations and “investors”. In addition, I resolve to ensure that corporations operate within the parameters of public principles rather than merely by the pursuit of the greatest profit. Principle and rule must drive corporations rather than being overruled by corporations

#### RESOLUTION 6

I resolve to move away from using the Gross Domestic Product as a measure of economic health and to recognize that it can give a grossly distorted picture of the Economic and social health of the nation unless used in conjunction with broader indicators such as Genuine Progress Indicators or the Criteria of Public Trust

#### RESOLUTION 7

I resolve to redirect budget allocations away from socially inequitable and environmentally unsound practices towards socially equitable and environmentally sound practices. In addition, I resolve to relocate the military budget to increase funding for health care and education.

#### RESOLUTION 8

I resolve to establish a policy across Canada to undertake the following:

- (i) to prevent agribusiness and pharmaceutical companies, along with other corporations involved with biotechnology, and with environmentally unsound practices from sponsoring and influencing the direction of research at University, hospitals and other research facilities
- (ii) (ii to support the efforts of organic and ecological agriculture associations in establishing organic/ecological farm practice codes, standards and certification processes, and in the preservation of seed diversity
- (iii) to phase out Agriculture Canada and other federal research support for large-scale agribusiness chemical, pesticide and genetic and other bioengineering practices and refocus support on the development of family and community scale ecological agriculture models, principles and practices such as biological soil and pest management approaches such as soil rebuilding crop rotations, companion planting, inter-cropping, and perennial polycultures.
- (iv) (iv) to phase-out federal support for college and agency agribusiness educational programmes and refocus supports on family farm and community scale co-agriculture workshops, distance education, undergraduate and graduate and diploma. vi) to increase funding to the CBC so that there will be sufficient funds to do in depth investigative reporting even though it may expose serious problems with government administration

## RESOLUTION 9

I resolve to stop the production in Canada of military armaments and the international sale by Canadians of arms or major components of weapons systems. In addition, I resolve to phase out sunset industries while establishing a fair and just job transition program

## RESOLUTION 10

I resolve to embark upon a “socially equitable and environmentally sound” investment campaign that supports the adherence to socially equitable and environmentally sound principles, and that promotes preventive technology i.e. doing it right the first time, ecologically as well as financially and which discourages investment in any company that does not comply with the principles in all aspects of its operation.

## HAPPY NEW YEAR

Joan Russow PhD

Federal leader of the Green Party of Canada

( ) December 31

1998 comment by Yearning

Could this be the country I had loved, honored, worked for, believed in? The general welfare was forgotten. The land had become a happy hunting ground for adventurers, profiteers, and pirates who called history bunk and used their privileged positions to promote their careers and fill their pockets at the public expense. Peace, progress, and prosperity had become scraps of raw meat, thrown to a pack of venal, military minded ravenous wolves.”

**Buy Portraits & More**

***Biograp***

February

2229

Yearing was a staunch advocate of a "new economics," which insisted that ... economists part company with the ominous pictures of an overpopulated, starving world, prostrate before the throne of "competition," "individual initiative," "private property," or some other pseudo-god, and tell men in simple, straightforward language how they may combine, re-shape, or overcome the laws and utilize them as a blessing instead of enduring them as a burden and a curse.<sup>[13]</sup>
